BARNABAS, EPISTLE OF. The title of this ancient composition is found in the Stichometries (or catalogues of the sacred books) of the ninth century; but from that period to the seventeenth century the work itself remained entirely unknown. Jacob Simond, a Jesuit, in copying the transcript of a Greek manuscript of Polycarp's *Epistle to the Philippians*, which belonged to Turrianus (a member of the same order), discovered another piece appended to it, which proved to be the Epistle (so called) of Barnabas. It was also found in two manuscripts of Polycarp, at Rome, which Cressolius collated. Simond sent a copy to the Benedictine, Hugo Menard, who had not long before found an ancient Latin translation of the Epistle of Barnabas in the Abbey of Corbey. About the same time Andreas Schottus (also a Jesuit) obtained a manuscript containing the Epistles of Polycarp and Barnabas; this was transcribed by Claudius Salmasius, and given, with a copy of the Corbey version, to Isaac Vossius. Vossius shortly after paid a visit to Archbishop Usher, who was then preparing for publication an ancient Latin version of the shorter Ignatian Epistles. It was agreed between them to annex to this work the Epistle of Barnabas. But it had hardly been sent to press when the great fire at Oxford occurred (1644), in

which the manuscript was destroyed, with all the archbishop's notes, and only a few pages saved which were in the corrector's hands. These were afterwards inserted by Bishop Fell, in the Preface to his edition of Barnabas, Oxford, 1685. The first edition of Barnabas appeared at Paris, in 1645; it had been prepared by Menard, but, in consequence of his death, was edited by Luke d'Acherry. In the following year a new and much improved edition was published by Vossius, for which he collated three manuscripts; it was appended to his *editio princeps* of the Ignatian Epistles. In 1672 Cotelier published his magnificent edition of the Apostolic Fathers. Besides the Greek text, and Corbey's version of Barnabas, it contained a new translation and valuable notes by the editor. The reprint, in 1724, contained additional notes by Davis and Le Clerc. In 1685 two additions appeared; Bishop Fell's, already noticed, and one by Stephen le Moyné, at Leyden, in the first volume of his *Varia Sacra*, with copious notes. It is also contained in Russel's edition of the Apostolic Fathers, Lond. 1746, and in the first volume of Galland's *Biblioth. vet. Patrum*, Ven. 1765. A convenient edition is that by Hefele, in his *Patrum Apost. Opera*, Tüb., 1839 and 1842. [The latest is that of Dressel in his *Patr. Apost. Opp.* Lips. 1857.] Four German translations have appeared, by Arnold (1606), Glüsing (Hamb. 1723), Gryncœus (1772), and Möst (1774); it was translated into English, by Archbishop Wake (*The genuine Epistles of the Apostolic Fathers*, etc., Lond. 1693 and 1710); and a French translation by Le Gras is inserted in Desprez's Bible, Paris, 1717. On comparing the Corbey version with the Greek text, it appears that the latter wants four chapters and a half at the beginning, and the former four chapters at the end; thus each supplies the deficiencies of the other. To a very recent period all the Greek manuscripts were found similarly defective; plainly shewing that they were all derived from the same source, and formed only one family of manuscripts; but early in 1859 Tischendorf obtained from the monastery on Mount Sinai an invaluable manuscript, containing about twenty books of the Old Testament, in the Septuagint version, the New Testament complete, and, at the end, *the whole* of the Epistle of Barnabas, and the first part of the Shepherd of Hermas. In his *Notitia ed. Cod. Bib. Sinaitici*, Lipsiæ, 1860, he has given a facsimile of one column of the Epistle of Barnabas, and two of the Shepherd of Hermas.

The Epistle of Barnabas consists of twenty-one chapters. The first part (i. 17) treats of the abrogation of the Mosaic dispensation, and of the types and prophecies relating to Christ; the last four chapters are composed entirely of practical directions and exhortations. The names and residence of the persons to whom it is addressed are not mentioned, on which account, probably, it was called by Origen a *Catholic Epistle* (Origen. *Contr. Cels.* lib. i. p. 49). But if by this title he meant an epistle addressed to the general body of Christians, the propriety of its application is doubtful, for we meet with several expressions which imply a personal knowledge of the parties. It has been disputed whether the persons addressed were Jewish or Gentile Christians. Dr. Hefele strenuously contends that they were of the former class. His chief argument appears to be, that it would be unnecessary to insist so earnestly on the abolition of the

Mosaic economy in writing to Gentile converts. But the Epistle of Paul to the Galatians is a proof to what danger Gentile Christians were exposed in the first ages from the attempts of Judaizing teachers; so that, in the absence of more exact information, the supposition that the persons addressed were of this class, is at least not inconsistent with the train of thought in the Epistle. But more than this: throughout the Epistle we find a distinction maintained between the writer and his friends on the one hand, and the Jews on the other. Thus in chap. iii., 'God speaketh to *them* (the Jews), concerning these things, 'Ye shall not fast as ye do this day,' etc.; but to *us* he saith, 'Is not this the fast that I have chosen?' etc.; and at the end of the same chapter, 'He hath shewn these things to all of *us* that we should not run as *proselytes* to the Jewish law'—'*ante ostendit omnibus nobis ut non incurramus tanquam proselyti ad illorum legem.*' This would be singular language to address to persons who were Jews by birth, but perfectly suited to Gentile converts. In chap. xiii. he says, 'Let us inquire whether the covenant be with *us* or with *them*' (the Jews), and concludes with quoting the promise to Abraham (with a slight verbal difference), 'Behold I have made thee a father of the nations which *without circumcision* believe in the Lord,' a passage which is totally irrelevant to Jewish Christians. For other similar passages, see Jones *On the Canon*, part. iii. chap. 39.

Whether this Epistle was written by Barnabas, the companion of St. Paul, has been a subject of controversy almost ever since its publication in the seventeenth century. Its first editors, Usher and Menard, took the negative, and Vossius the affirmative side of the question. Of modern critics, Hug, Ullman, Neander, Winer, Hefele, and Dressel agree with the former, and Rosenmüller, Geseler, Bleek, Henke, and Rordam with the latter. The external evidence for its genuineness, it may be allowed, is considerable; but besides some conflicting testimonies, criteria furnished by the Epistle itself lead to the opposite conclusion. We shall present a view of both as succinctly as possible.

I. The first writer who alludes to this Epistle is Clement of Alexandria. 1. He quotes a sentence from the tenth chapter, and adds, 'These things saith Barnabas' (*Strom.* ii. 15. sec. 67, vol. ii. p. 165, ed. Klotz. Lips. 1831). 2. A sentence from chap. xxi., of which he says, 'Barnabas truly speaks mystically' (*Strom.* ii. 18. sec. 84, vol. ii. p. 174). 3. Again, quoting chap. x., 'Barnabas says' (*Strom.* v. 8. sec. 52, vol. iii. p. 38). 4. After quoting two passages from chap. i. and ii., he calls the author *the apostle Barnabas* (*Strom.* ii. 6. sec. 31, vol. ii. p. 142). 5. He cites a passage from chap. iv. with the words 'the apostle Barnabas says' (*Strom.* ii. 7. sec. 35, vol. ii. p. 144). 6. He prefaces a passage from chap. xvi. with 'I need not say more, when I adduce as a witness the apostolic Barnabas, who was one of the Seventy, and a fellow-labourer with Paul' (*Strom.* ii. 20. sec. 116, vol. ii. p. 192). 7. He makes two quotations from chap. vi., which he introduces with these words: 'But Barnabas also, who proclaimed the word with the apostle, in his ministry among the Gentiles' (*Strom.* v. 10. sec. 64, vol. iii. p. 46). The name of Barnabas occurs in another passage (*Strom.* vi. 8. sec. 64, vol. iii. p. 136), but probably by a lapse of memory, instead of Clemens Ro-

manus, from whose first Epistle to the Corinthians a sentence is there quoted.* There is also an evident allusion to the Epistle of Barnabas in *Pædag.* ii. 10. sec. 83, vol. i. p. 245, and in some other passages, though the author's name is not mentioned.

II. Origen quotes this Epistle twice. 1. The sentence in chap. v. respecting the apostles, which he says 'is written in the Catholic Epistle of Barnabas' (*Contr. Cels.* i. 49). 2. A passage from chap. xviii.: 'To the same purpose Barnabas speaks in his Epistle, when he says, that 'there are two ways, one of light, the other of darkness,' etc. (*De Princip.* iii. 2).

On these testimonies it has been remarked, that both these Alexandrian fathers have quoted works unquestionably spurious without expressing a doubt of their genuineness: thus Clement refers to the Revelation of Peter, and Origen to the Shepherd of Hermas, which he believed to be inspired ('quæ scriptura valde mihi utilis videtur, et, ut puto, divinitus inspirata,' *In Ep. ad Rom. Comment.* lib. x.); and though Clement speaks of the apostolic Barnabas, he evidently does not treat this Epistle with the same deference as the canonical writings, but freely points out its mistakes. Tertullian calls all the seventy disciples apostles, and in this inferior and secondary sense, as Dr. Lardner observes, Clement terms Barnabas an apostle.

III. Eusebius, in the noted passage of his *Ecclesiastical History* (iii. 25), quoted at length (in the original) by De Wette, in his *Lehrbuch der historisch-kritischen Einleitung in die Bibel*, etc., Berlin, 1840, Theil. i. sec. 32, and translated by Lardner, *Credibility*, part ii. chap. 72), says, 'The Epistle reputed to be written by Barnabas is to be ranked among the books which are "spurious"—ἐν τοῖς ὑβδαῖς κατατεράχθω . . . ἡ φερομένη Βαρνάβα ἐπιστολή; and elsewhere, 'He (Clement of Alexandria) makes use of testimonies from those scriptures that are controverted (ἀπὸ τῶν ἀντιλεγόμενων γραφῶν), that called the Wisdom of Solomon, and of Jesus the Son of Sirach, and the Epistle to the Hebrews, and that of Barnabas and of Clement, and of Jude' (*Hist. Eccles.* vi. 13). He also observes of Clement, 'In his book called Hypotyposes, he gives short explications of all the canonical Scriptures (πάσης τῆς ἐνδιαθήκου γραφῆς),* not neglecting even the controverted books (τὰς ἀντιλεγόμενας), I mean that of Jude and the other Catholic Epistles, the Epistle of Barnabas, and that called the Revelation of Peter.'

IV. Jerome, in his work on illustrious men, or *Catalogue of Ecclesiastical Writers*, thus speaks of Barnabas: 'Barnabas of Cyprus, called also Joseph, a Levite, was ordained, with Paul, an apostle of the Gentiles: he wrote an Epistle for the edification of the church, which is read among the Apocryphal scriptures' (*Catal. Vir. illust.* cap. vi.); and in his *Commentary on Ezekiel* xlii. 19, 'Many parts of the Scriptures, and especially the Epistle of Barnabas, which is reckoned among the Apocryphal Scriptures,' etc. In another place he quotes, as the words of Ignatius, the passage relative to the apostles, which is cited by Origen from the Epistle of Barnabas (Lardner's *Credibility*, pt. ii. ch. 114).

* 'Libri canonici vocantur ἐνδιαθήκοι quia efficiunt utrumque Testamentum (διαθήκην Græci appellant) vetus scilicet et novum' (Suiceri *Theas.* s. v. ἐνδιαθήκος).

It is evident, as Valesius (with whom Lardner and Hefele agree) has remarked, that Eusebius uses the term ὑβδα, not in the strict sense of *spurious*, but as synonymous with ἀντιλεγόμενα, i. e., *disputed, controverted*, and applies it to writings which were received by some, but rejected by others. The term *apocryphal* also, used by Jerome, was applied both by Jews and Christians to works which (though the authors were known) were not considered canonical. The use of these terms, therefore, in reference to the Epistle before us, cannot be deemed as absolutely decisive against its genuineness. The following considerations, however, omitting some of less weight which have been urged by different writers, will, it is believed, go far to prove that Barnabas was not the author of this Epistle.

1. Though the exact date of the death of Barnabas cannot be ascertained, yet from the particulars already stated respecting his nephew, it is highly probable that that event took place before the martyrdom of Paul, A. D. 64. But a passage in the Epistle (ch. xvi.) speaks of the temple at Jerusalem as already destroyed: it was consequently written after the year 70.

2. Several passages have been adduced to shew that the writer (as well as the persons addressed) belonged to the Gentile section of the Church; but waiving this point, the whole tone of the Epistle is different from what the knowledge we possess of the character of Barnabas would lead us to expect, if it proceeded from his pen. From the hints given in the Acts he appears to have been a man of strong attachments, keenly alive to the ties of kindred and father-land; we find that on both his missionary tours his native island and the Jewish synagogues claimed his first attention. But throughout the Epistle there is a total absence of sympathetic regard for the Jewish nation: all is cold and distant, if not contemptuous. 'It remains yet that I speak to you (the 16th chapter begins) concerning the temple; how those miserable men, being deceived, have put their trust in the house.' How unlike the friend and fellow-labourer of him who had 'great heaviness and continual sorrow in his heart for his brethren, his kindred according to the flesh' (Rom. ix. 2).

3. Barnabas was not only a Jew by birth, but a Levite; from this circumstance, combined with what is recorded in the Acts, of the active part he took in the settlement of the points at issue between the Jewish and the Gentile converts, we might reasonably expect to find, in a composition bearing his name, an accurate acquaintance with the Mosaic ritual—a clear conception of the nature of the Old Economy, and its relation to the New Dispensation, and a freedom from that addiction to allegorical interpretation which marked the Christians of the Alexandrian school in the second and succeeding centuries. But the following specimens will suffice to shew that exactly the contrary may be affirmed of the writer of this Epistle; that he makes unauthorized additions to various parts of the Jewish Cultus; that his views of the Old Economy are confused and erroneous; and that he adopts a mode of interpretation countenanced by none of the inspired writers, and to the last degree puerile and absurd. The inference is unavoidable, that Barnabas, 'the Son of Prophecy,' 'the Man full of the Holy Spirit and of faith,' was not the author of this Epistle.

(1.) The writer denies that circumcision was a

sign of the covenant. 'You will say the Jews were circumcised for a sign, and so are all the Syrians and Arabians, and all the idolatrous priests.' Herodotus ii. 104, indeed, says 'the Phœnicians and Syrians of Palestine acknowledge that they learned this custom from the Egyptians;' but Josephus, both in his *Antiquities* and *Treatise against Apion*, remarks that he must have alluded to the Jews, because they were the only nation in Palestine who were circumcised (*Antiq.* viii. 10, sec. 3; *Contr. Apion.* i. 22). 'How,' says Hug, 'could Barnabas, who travelled with Paul through the southern provinces of Asia Minor, make such an assertion respecting the heathen priests?'

(2.) Referring to the goat (chap. vii.), either that mentioned in Num. xix. or Lev. xvi., he says, 'All the priests, and they only, shall eat the unwashed entrails with vinegar.' Of this direction, in itself highly improbable, not a trace can be found in the Bible, or even in the Talmud.

(3.) In the same chapter, he says of the scapegoat, that all the congregation were commanded to spit upon it, and put scarlet wool about its head; and that the person appointed to convey the goat into the wilderness took away the scarlet wool and put it on a thorn-bush, whose young sprouts, when we find them in the field, we are wont to eat; so the fruit of that thorn only is sweet. On all these particulars the Scriptures are silent.

(4.) In chap. viii. our author's fancy (as Mr. Jones remarks) seems to grow more fruitful and luxuriant. In referring to the red heifer (Num. xix.), he says that men in whom sins are come to perfection (*ἐν οἷς ἀμαρτία τέλειται*) were to bring the heifer and kill it; that three youths were to take up the ashes and put them in vessels; then to tie a piece of scarlet wool and hyssop upon a stick, and so sprinkle every one of the people. 'This heifer is Jesus Christ; the wicked men that were to offer it are those sinners who brought him to death; the young men signify those to whom the Lord gave authority to preach his Gospel, being at the beginning twelve, because there were twelve tribes of Israel.' But why (he asks) were there *three* young men appointed to sprinkle? To denote Abraham, Isaac, and Jacob. And why was wool put upon a stick? Because the kingdom of Jesus was founded upon the cross, etc.

(5.) He interprets the distinction of clean and unclean animals in a spiritual sense. 'Is it not (*Ἄρα οὐκ—v.* Dr. Hefele's valuable note, p. 85) the command of God that they should not eat these things?—(Yes.) But Moses spoke in spirit (*ἐν πνεύματι*). He named the swine, in order to say, Thou shalt not join those men who are like swine, who, while they live in pleasure, forget their Lord,' etc. He adds—'Neither shalt thou eat of the hyæna: that is, thou shalt not be an adulterer.' If these were the views entertained by Barnabas, how must he have been astonished at the want of spiritual discernment in the apostle Peter, when he heard from his own lips the account of the symbolic vision at Joppa, and his reply to the command—'Arise, Peter, slay and eat. But I said, Not so, Lord, for nothing common or unclean hath at any time entered into my mouth' (Acts xi. 8).

(6.) In chap. ix. he attempts to shew that Abraham, in circumcising his servants, had an especial reference to Christ and his crucifixion.—'Learn, my children, that Abraham, who first circumcised

in spirit, having a regard to the Son (*in Jesum*, Lat. Vers.), circumcised, applying the mystic sense of the three letters (*λαβών τριῶν γραμμάτων ὀδύματα—den geheime Sinn dreier Buchstaben anwendend*, Hefele). For the Scripture says that Abraham circumcised 318 men of his house. What then was the deeper insight (*γνώσις*) imparted to him? Mark first the 18, and next the 300. The numeral letters of 18 are I (Iota) and H (Eta), I = 10, H = 8; here you have Jesus Ἰησοῦν; and because the cross in the T (Tau) must express the grace (of our redemption), he names 300; therefore he signified Jesus by two letters, and the cross by one.'

It will be observed that the writer hastily assumes (from Gen. xiv. 14) that Abraham circumcised only 318 persons, that being the number of 'the servants born in his own house,' whom he armed against the four kings; but he circumcised his household nearly twenty years later, including not only those born in his house (with the addition of Ishmael), but 'all that were bought with money' (Gen. xvii. 23). The writer evidently was unacquainted with the Hebrew Scriptures, by his committing the blunder of supposing that Abraham was familiar with the Greek alphabet some centuries before it existed.

J. P. Lange, *Das apostolische Zeitalter*, Braunschweig, 1854, ii. 440-448; *A new and full Method of settling the Canonical Authority of the New Testament*, by the Rev. Jeremiah Jones, Oxford, 1827, vol. ii. part iii. ch. 37-43; *Das Sendschreiben des Apostels Barnabas aufs Neue untersucht, übersetzt, und erklärt*, von Dr. Carl Joseph Hefele, Tübingen, 1840; *Patrum Apostolicorum Opera*, editio C. J. Hefele, Tubingæ, 1839; *PP. App. Opp.*, ed. A. R. M. Dressel, Lips. 1857; Lardner's *Credibility*, part ii. ch. i.; Neander, *Allgemeine Gesch. der Christl. Religion und Kirche*, i. 653, 1100, or, *History of the Christian Religion and Church*, translated by Jos. Torrey, 1847, vol. ii. pp. 438-440; *Lives of the most eminent Fathers of the Church*, by William Cave, D.D., Oxford, 1840, vol. i. pp. 90-105.—J. E. R.

BARQANIM (בַּרְקָנִים), translated *briers* in the Auth. Vers., occurs in Judg. viii. 7, 16, where Gideon is described as saying, 'then I will tear your flesh with the *thorns* (*golsini*) of the wilderness, and with *briers* (*barganin*).' The Seventy in their version retain the original name. There is no reason for believing that *briers*, as applied to a rose or bramble, is the correct meaning; but there is nothing to lead us to select any one preferably from among the numerous thorny and prickly plants of Syria as the *barganin* of Scripture. Rosenmüller, however, says that this word signifies 'a flail,' and has no reference to thorny plants.—J. F. R.

BARRENESS is, in the East, the hardest lot that can befall a woman, and was considered among the Israelites as the heaviest punishment with which the Lord could visit a female (Gen. xvi. 2; xxx. 1-23; 1 Sam. i. 6, 29; Is. xliv. 9; xlix. 21; Luke i. 25; Niebuhr, p. 76; Volney, ii. 359). According to the Talmud (*Yeremoth*, vi. 6) a man was *bound*, after ten years' childless conjugal life, to marry another woman (with or without repudiation of the first), and even a third one, if the second proved also barren. Nor is it improbable that Moses

himself contributed to strengthen the opinion of disgrace by the promises of the Lord of exemption from barrenness as a blessing (Exod. xxii. 26; Deut. vii. 14). Instances of childless wives are found in Gen. xi. 30; xxv. 21; xxix. 31; Judg. xiii. 2, 3; Luke i. 7, 36. Some cases of unlawful marriages, and more especially with a brother's wife, were visited with the punishment of barrenness (Lev. xx. 20, 21); Michaelis, however (*Mosaïsches Recht*, v. 290), takes the word עֵרִירִים here in a figurative sense, implying that the children born in such an illicit marriage should not be ascribed to the real father, but to the former brother, thus depriving the second husband of the share of patrimonial inheritance which would otherwise have fallen to his lot if the first brother had died childless.

This general notion of the disgrace of barrenness in a woman may early have given rise, in the patriarchal age, to the custom among barren wives of introducing to their husbands their maid-servants, and of regarding the children born in that concubinage as their own, by which they thought to cover their own disgrace of barrenness (Gen. xvi. 2; xxx. 3). [CHILDREN.]—E. M.

BARRETT, JOHN, D.D., Fellow of Trinity College, Dublin, was born in 1753, and died November 15, 1807. He held several offices in the University, and left behind him a name for great learning, and almost equal eccentricity. He superintended an edition in fac simile of the Dublin Codex Rescriptus of Matthew's Gospel (Codex Z), 4to, Dublin 1801. To this he has prefixed Prolegomena, and has added in an Appendix a collation of the Codex Montfortianus, also preserved in the Library of Trinity College, Dublin. In the Prolegomena Dr. Barrett discusses at considerable length several questions, and among the rest the genealogy of our Lord. The book is an admirable specimen of typography, but with this its praise must end. The fragments of the palimpsest are given in copperplate engravings, and opposite to each is Dr. Barrett's rendering of the uncial letters into those now commonly used in printed Greek. In this he has committed many mistakes; nor has he done justice to the MS. of which he professed to furnish a fac simile. Lachmann has pronounced him 'hominem hujus artis, ultra quam credi potest, imperitum;' and though this judgment is perhaps too severe, it cannot be denied that, in the main, it is just. A much more careful and complete collation of Codex Z has been accomplished by Mr. Tregelles (Davidson, *Biblical Criticism*, ii. 311; Tregelles' *Account of the Printed Text of the N. T.*, p. 166), and of the Cod. Montfort. by Dr. Dobbin, Lond. 1854.—W. L. A.

BARRINGTON, JOHN SHUTE, first Viscount Barrington; born 1678, died 1734; was the youngest son of Benjamin Shute, his mother being a daughter of Caryl, author of the Commentary on Job. He wrote and published various religious treatises, the principal of which was his *Miscellanea Sacra, or a New Method of considering so much of the History of the Apostles as is contained in Scripture; an Abstract of their History; an Abstract of that Abstract, and four Critical Essays*. Lond. 1725, 2 vols. 8vo. His Lordship, in this work, treats on such subjects as the following:—the teaching and witness of the Spirit; the supernatural gifts bestowed on the first preachers; the nature of the apostolic office; the time when Paul

and Barnabas became, and were known to be, apostles; the apostolical decree, Acts xv. 23-30, etc. Throughout the several essays regard is had to the various methods and instrumentalities by which Christianity was originally propagated, and the success resulting from these, the whole being intended to work out a demonstration of the divine origin and truth of the Christian religion. It may be added, that while some very valuable information is given on the various subjects discussed, the erudition displayed is by no means extensive, and the reasoning, though clear, by no means profound. What chiefly delights the student of the *Miscellanea Sacra*, is the author's candour and liberality. These are apparent on every page. The second and complete edition of this work was published by his son Shute, Bishop of Durham, Lond. 1770, 3 vols. 8vo. Lord Barrington took an active part in all questions bearing on toleration, and wrote several anonymous pamphlets on subjects relating to dissenters, to whom, though he left them, he always remained friendly, and generally worshipped with them. As a friend and follower of Locke, such a course was to be expected from him. He was inclined to Arrianism.—W. J. C.

BARSABAS. [JOSEPH BARSABAS; JUDAS BARSABAS.]

BARTACUS (Βαρτάκος), the father of Apame, the concubine of Darius (1 Esdr. iv. 29). He is called ὁ θαυμαστός (Vulg. *mirificus*), which may be an appellation appropriate to his rank (as we say, 'His Worship'); or it may contain some allusion to the meaning of his name. In the Syr. V. we have ܐܪܬܐ ܐܘܪܬܐ, 'the magnate Artac,' a form which calls up a multitude of names beginning with the syllables *Artā* (luminous, or worshipful), in use among the Persians. We may compare Artac with Ἀρτούχας, Xen. *Anab.* iv. 3, 4; Ἀρτακάμας, vii. 8, 25; Ἀρτύκας, Diod. ii. 32; Ἀρταχάλης and Ἀρταίος, Herod. vii. 21, 66, 117, etc. For the *B* in Bartacus, compare Οἰβάριος and Βουβάριος (Herod. vi. 33; v. 21; Aesch. *Pers.* 980, cf. Schol. ap. Schütz, iv. 255).—W. L. A.

BARTHOLIN, THOMAS, a distinguished Danish physician, born at Copenhagen Oct. 20, 1619, and died Dec. 4, 1680. Besides many works of a purely professional character, he wrote some on biblical medicine and antiquities. These are—*De Armillis Veterum*, Hafn. 1647; *Miscellanea Medica*, Ibid. 1672, Francof. 1705; *De Morbis Biblicis*, Hafn. 1672; *De Paralyticis N. T. Comment.* Ibid. 1673, Lips. 1685.—W. L. A.

BARTHOLOMEW (Βαρθολομαῖος בַּר תּוֹלְמַי), i. e., the son of Tolmai: (תּוֹלְמַי) is a name that occurs in the Old Testament (Josh. xv. 14, Sept. Θολαμῖ, Θολμαῖ; Auth. Vers., *Tolmai*; 2 Sam. xiii. 37, Sept. Θολμῖ, Θολομαῖ). In Josephus, we find Θολομαῖος (*Antiq.* xx. 1, sec. 1). The Θολομαῖος in *Antiq.* xiv. 8. 1, is called Πτολεμαῖος in *Bell. Jud.* i. 9, sec. 3, not improbably by an error of the transcriber, as another person of the latter name is mentioned in the same sentence. Bartholomew was one of the twelve apostles, and is generally supposed to have been the same individual who in John's gospel is called Nathanael. The reason of this opinion is, that in the first three gospels Philip and Bartholomew are constantly named together,

while Nathanael is nowhere mentioned; on the contrary, in the fourth gospel the names of Philip and Nathanael are similarly combined, but nothing is said of Bartholomew. Nathanael therefore must be considered as his real name, while Bartholomew merely expresses his filial relation. He was a native of Cana in Galilee (John xxi. 2), and introduced by Philip to Jesus, who, on seeing him approach, uttered that eulogy on his character which has made his name almost synonymous with sincerity: 'Behold an Israelite indeed, in whom is no guile!' (John i. 47).^{*} He was one of the disciples to whom our Lord appeared after his resurrection, at the Sea of Tiberias (John xxi. 2); he was also a witness of the Ascension, and returned with the other apostles to Jerusalem (Acts. i. 4, 12, 13). Of his subsequent history we have little more than vague traditions. According to Eusebius (*Hist. Eccles.* v. 10), when Pantænus went on a mission to the Indians (towards the close of the second century), he found among them the Gospel of Matthew, written in Hebrew, which had been left there by the apostle Bartholomew. Jerome (*De Vir. Illustr.* c. 36) gives a similar account, and adds that Pantænus brought the copy of Matthew's Gospel back to Alexandria with him. But the title of Indians is applied by ancient writers to so many different nations, that it is difficult to determine the scene of Bartholomew's labours. Mosheim (with whom Neander agrees) is of opinion that it was a part of Arabia Felix, inhabited by Jews, to whom alone a Hebrew gospel could be of any service. Socrates (*Hist. Eccles.* i. 19) says that it was the India bordering on Ethiopia; and Sophronius reports that Bartholomew preached the Gospel of this Apostle 'Ἰνδοῖς τοῖς καλούμενοις εὐδαίμοσιν. This apostle is said to have suffered crucifixion at Albanopolis, in Armenia, or, according to Nicephorus, at Urbanopolis in Cilicia. A spurious gospel which bears his name is in the catalogue of apocryphal books condemned by Pope Gelasius (Fabricius, *Cod. Apoc.* i. 137; Mosheim, *Commentaries on the Affairs of the Christians, etc.*, translated by Vidal, vol. ii. pp. 6, 7; Tillemont, *Mémoires, etc.*, i. 960, 1160; Neander, *Allgemeine Geschichte*, i. 113, E. T. i. 112; Cave, *Lives of the Apostles*, Oxford, 1840, pp. 387-392).—J. E. R.

BARTIMÆUS (Βαρτιμαῖος, *i. e.* בַּר טִמְאִי, *son of Tim'ai*), the blind beggar of Jericho whom Christ restored to sight (Mark x. 46).

BARTOLOCCI, JULIO, an Italian scholar, born at Celano in 1613, and died 1st Nov. 1687. He was a monk of the order of St. Bernard, and professor of Hebrew at the college Della Sapienza at Rome. He devoted himself to Jewish literature. His *Bibliotheca Magna Rabbinnica*, 4 vols. fol., Rom. 1675-1693, of which the last was published after his death by one of his pupils, Imbonat, is a storehouse of information in that department,

^{*} We have thus the highest evidence of the falsehood in one instance (and the apostle John is another), of the assertion of the pseudo-Barnabas 'that Jesus selected for his apostles men laden with the greatest sins (ὕπερ πάντων ἀμαρτιῶν ἀνομιτέρους), in order to shew that he came not to call the righteous, but sinners to repentance' (*Ep. Barnab.* ch. v.: Hefele's *Das Sendschreiben, etc.*, p. 160).

though a deficiency of judgment and critical sagacity renders the work less useful than it otherwise might be. A fifth volume was added by Imbonat, which appeared under the title *Bibl. Latina Hebraica* in 1694.—W. L. A.

BARUCH (בְּרֻךְ, *blessed = Benedict*; Sept. Βαροῦχ; Joseph. Βαροῦχος), son of Neriah, and brother of Seraiah, who held a distinguished office in the court of Zedekiah (Jer. li. 59). He was of the illustrious family of Judah, and of distinguished acquirements (Joseph. *Antiq.* x. 9, sec. 1), and is especially known as the faithful friend and amanuensis of the prophet Jeremiah (Jer. xxxii. 12; xxxvi. 4 ff., 32), whose oracles he wrote down twice (B.C. 605) in the reign of Jehoiakim (Jer. xxxvi. 4, 17; xlv. 1). He was imprisoned with Jeremiah by Nebuchadnezzar during the siege of Jerusalem, and when he was released at the capture of that city (B.C. 586) he at first remained at Masphatha, but was afterwards compelled to go to Egypt with 'the remnant of Judah that were returned from all nations' (Jer. xliii. 6; Joseph. *Antiq.* x. 9, sec. 6), where, as St. Jerome tells us, according to the tradition of the Jews, he and the prophet Jeremiah died 'before the destruction of the country by Nebuchadnezzar' (*Comment. in Is.* xxx. 6, 7). According to another tradition, however, he is said to have remained in Egypt till the death of Jeremiah, and then to have gone to Babylon, where he died in the twelfth year after the destruction of Jerusalem. There are two apocryphal books or letters extant which purport to be the productions of Baruch.—C. D. G.

BARUCH, THE FIRST BOOK OR EPISTLE OF, is given in the Paris and London Polyglots in Syriac and Latin.

1. *The Design of this Epistle.*—The design of this epistle is to comfort the nine tribes and a half who were beyond the river Euphrates, by assuring them that the sufferings which they have to endure in their captivity, and which are far less than they deserve, are but for a season, and are intended to atone for their sins, and that God, whose love towards Israel is unchangeable, will speedily deliver them from their troubles, and requite their oppressors. They are, therefore, not to be distracted by the prosperity of their wicked enemies, which is but momentary, but to observe the law of Moses, and look forward to the day of judgment, when all that is now perplexing will be rectified.

2. *The Method or Plan of the Epistle.*—The method which the writer adopted to carry out the design of this epistle will best be seen from a brief analysis of its contents. Being convinced of the unchangeable love of God towards his people (chap. i. 2), and of the close attachment subsisting between all the tribes (3), Baruch feels constrained to write this epistle before he dies (4), to comfort his captive brethren under their sufferings (5), which are far less than they deserve (6), and are designed to atone for (7, 8), as well as to wean them from, their sins (9), so that God might gather them together again. Baruch then informs them, first of all, that Zion has been delivered to Nebuchadnezzar because of the sins of the children of Israel (11, 12). That the enemy, however, might not boast that he had destroyed the sanctuary of the Most High by the strength of his own arm, God sent angels from heaven to destroy the forts and

walls, and also to hide some of the vessels of the temple (13-16); whereupon the enemy carried the Jews as captives to Babylon, and left only few in Zion (17), this being the burden of the epistle (18, 19). But they are to be comforted (20), for whilst he was mourning over Zion, and praying for mercy (21, 22), the Lord revealed words of consolation to Baruch, that he might comfort his brethren, which is the cause of his writing this epistle (23, 24), viz., that the Most High will punish their enemies, and that the day of judgment is nigh (25, 26). The great prosperity of the world (27), its splendid government (28), great strength (29) and glory (30), luxurious life (31), barbarous cruelty (32), and glorious dominion (33), which the Gentiles now enjoy, notwithstanding their wickedness, will speedily vanish, for the day of judgment is at hand (34), when every thought and deed will be examined and made manifest (35, 36). The captive Jews are, therefore, not to envy any of the present things, but patiently to look forward to the promises of the latter days (37, 38), the fulfilment of which is rapidly approaching, and for which they are to prepare themselves, lest, by neglecting this, they might lose both this world and the world to come (39-41). All that now happens tends to this truth (chap. ii. 1-7). This Baruch sets forth to lead his brethren to virtue (8), and to warn them of God's judgment before he dies (9), that they may give heed to the words of Moses, who, in Deut. iv. 26; xxx. 19; xxxi. 28; xxviii., foretold what would befall them for leaving the law (9-12). Baruch also assures them that after they have suffered, and become obedient, they shall receive the reward laid up for them (13, 14), charges them to regard this epistle as a testimony between him and his brethren that they may be mindful of the law, the holy land, their brethren, the covenant of their forefathers, the solemn feasts and Sabbaths (15, 16), to transmit it, together with the law, to their children (17), and to be instant in prayer to God that He may pardon their sins, and impute unto them the righteousness of their forefathers (18, 19), for 'unless God judges us according to the multitude of his mercies, woe to us all who are born' (20). He moreover assures them that notwithstanding the fact that they have now no prophets and holy men in Zion to pray for them, as in former days, yet if they rightly dispose their hearts, they will obtain incorruptible treasures for their corruptible losses (21-27), and admonishes them constantly to remember these things, and prepare themselves, whilst in possession of this short life, for the life that is to come (28-35), when repentance will be impossible, as the judgment pronounced upon every one will be final (36-39); and to read the epistle on the solemn fast (40, 41).

3. *The Unity of the Epistle.*—The foregoing analysis will shew that every part of this epistle contributes to the development of the main design of the writer, thus demonstrating the unity of the whole. This is moreover corroborated by the uniformity of diction which prevails throughout this document. It must, however, be admitted that hypercriticism may find some ground for scepticism in the latter part of it, viz., ii. 21-41. But even if it could be shewn that this is a later addition, it would not interfere with the design of the whole.

4. *The Author, Date, and Canonicity of the Epistle.*—With the solitary exception of the learned and eccentric William Whiston (*A Collection of*

Authentic Records, part i., page 25, London, 1727), this epistle has been and still is regarded by all scholars as pseudepigraphic, and we question whether a critic could be found in the present day bold enough to defend its Baruchic authorship. All that we can gather from the document itself is—1. That it was written by a Jew, as is evident, A, from the Hagadic story, mentioned in i. 13-15, about the destruction of the walls and forts by the angels, and the hiding of the holy vessels (comp. also 2 Macc. ii. 1-4); B, from the solemn admonition strictly to adhere to the law of Moses; C, from the charge that this epistle be transmitted by the Jews to their posterity, together with the law of Moses, and be read in their assemblies at their fasts. And 2, that it was written most probably about the middle of the second century B.C., as appears from the admonition to be patient under the sufferings from the Gentiles, and to wait for the day of judgment which is close at hand (i. 37-41), and the frequent reference to a future life. The canonicity of this epistle has not been defended even by the Romish Church, and yet strange to say, Whiston maintains that it is canonical. But in this, as in the authorship of it, Mr. Whiston, as far as we know, has not been followed by any one.

5. *The Literature on this Epistle.*—We have already remarked that this epistle has only been preserved to us in Syriac, which is printed in the Paris and London Polyglots, and in Latin in J. A. Fabricii *Cod. Pseudepigr. V. T.*, ii. p. 147, etc. Yet strange to say, though numerous expositors, both ancient and modern, have commented upon all the other apocryphal books, this interesting relic has been almost totally neglected. Ewald (*Geschichte des Volkes Israel*, iv., p. 233), and Fritzsche (*Exegetisches Handbuch zu den Apokryphen*, i. p. 175), contemptuously dismiss it in a few lines, and most unjustly regard it as written 'in a prolix and senseless style' by a monk. Whiston, as far as we know, is the only one who has, though faultily, translated it into English (*Collection of Authentic Records*, part i., p. 13, etc.; London, 1727). It is high time that this relic of antiquity should have due attention paid to it, especially as the beautiful edition of the Apocrypha, in Syriac, just published (*Libri Veteris Testamenti Apocryphi Syriace, Recogn.*, Paul. Anton. de Lagarde, Lond., 1861), has made it accessible to all scholars.

BARUCH, THE SECOND BOOK OR EPISTLE OF. This is the document generally known as the apocryphal Book of Baruch; but, as will be seen from the foregoing, it is only one of the two productions which tradition has transmitted to us as the work of Jeremiah's friend.

1. *Title.*—This production is called in the Septuagint τὸ βιβλίον, which, like the Hebrew, כִּפְרָה (2 Sam. xi. 14; 2 Kings x. 6), is here best taken to denote *epistle*, a sense which this expression not unfrequently has, both in the Septuagint and in the New Testament, and which the Syriac ܩܒܠܐ

rightly gives. This is most compatible with the form of this document, as well as with the existence and nature of the foregoing one. We call this epistle the *second*, and the other the *first*, according to the Syriac, which describes them as such.

2. *The Design of this Epistle.*—The design of

this epistle is to exhort the Jews suffering in Palestine under the oppression of their conquerors, to submit patiently to the chastisement they drew upon themselves, because of their departure from the living God, to remind them that in the midst of their afflictions they still have the divine teachings of wisdom revealed unto them in the law of God, which no other nation upon this earth ever had, and to assure them that if they obey the commandments, and return to God in repentance and prayer, the Lord will have mercy upon them, and make Jerusalem and its inhabitants the praise of the whole earth.

3. *The Plan and Contents of this Epistle.*—This document consists of two parts; the first extending from chap. i. 1 to iii. 8; the second from iii. 9 to v. 9. The former of these is the introduction to what is properly the epistle. In the second part the writer admonishes the Jews to listen to wisdom; tells them that their contempt of her, who alone is the fountain of life and happiness, is the cause of all their miseries, and exhorts and encourages them to lay hold of her, since their sufferings are not intended to destroy them, but have come upon them because they have forsaken their Creator and worshipped idols (iii. 9 to iv. 8). Jerusalem is hereupon introduced as a widow bereft of her children, and clothed in sackcloth, mourning to all the cities around her, over her afflictions, recounting her warnings to her disobedient children, and describing their cruel treatment from the Gentiles (9-20). She then comforts her children, assuring them that He who scattered them will soon gather them, and that all the cities round about her which have seen their humiliation shall witness their glory (21-27); exhorts them therefore to suffer patiently, and to pray to God for mercy, who will receive them when they return to him, just as He rejected them when they left him (28, 29). Afflicted Jerusalem is then seconded in her bright hopes by an address from God himself, who is introduced as speaking to her, assuring her that He will comfort her, and afflict all those who bereft her of her children (30-32). Babylon, which rejoiced in her ruin, shall herself mourn over her own destruction (33-35). Encouraged by this comforting assurance on the part of God, Baruch calls upon Jerusalem in words of triumphant joy to look around her, and see already her scattered children flocking to her from all the four corners of the earth (36, 37); bids her change her sable weeds for festive garments (v. 1, 2); and depicts to her in glowing terms, worthy of an Isaiah, the restoration of her children, and their future never-ending glory (3-9). For the sixth chapter, which contains the epistle of Jeremiah, we must refer to JEREMIAH, EPISTLE OF.

4. *The Unity of this Epistle.*—That this epistle forms one whole is evident from the gradual but steady development of its plan, which is manifest throughout, and will hardly be questioned when we consider the beautiful adjustments of its constituent parts, as shewn in the foregoing analysis of its contents. The greater flow of language, and the more graphic description, in the second part, are owing to its more inspiring theme, as well as to the fact that the writer therein reaches his climax, and are fully balanced by the pathetic prayer of the first part. The diction of every portion is in harmony with its subject, and shews both the skill and the good taste of the author.

5. *The Author, Date, and Original Language of*

the Epistle.—That Baruch, the companion of Jeremiah, is the *personated* and not the *real* author of this epistle is evident from its historical inaccuracies and contradictions, of which neither Baruch, nor any one else contemporary with the circumstances therein described, would have been guilty, as will be seen from the following instances:—1. The epistle is dated *the fifth year* after the destruction of Jerusalem, whereas Baruch was at that time in Egypt with Jeremiah (Jer. xliii. 3, 6, etc.). 2. Jerusalem is said to have been burnt with fire in the reign of Jeconiah (2, 3), whereas it was only captured. 3. Jeconiah is described as present in the great assembly, before which Baruch read this epistle (3), whereas he was in prison till the beginning of Evil-Merodach's reign (2 Kings xxv. 27). 4. Joahim is mentioned as high-priest at Jerusalem (i. 7), whereas Jehozadak filled this office in the fifth year after the destruction of Jerusalem (1 Chron. vi. 15). 5. In chap. i. 2, Jerusalem is described as burnt with fire, whereas according to i. 2, it is only *the fifth* year of their captivity. 6. Israel is addressed in iii. 10, as 'waxen old in a strange country,' whereas according to i. 2, it is only *the fifth* year of their captivity. 7. The writer uses the Septuagint translation of Jeremiah, which was made several centuries after Baruch (comp. i. 9 with Jer. xxiv. 1; ii. 4 with Jer. xl. 11 (Sept. xlix.), 18; ii. 23 with Jer. xxxiii. (xl.) 10, 11; ii. 25 with Jer. xxxvi. (xliii.) 30). 8. He moreover uses portions of the Old Testament which were written after Baruch (comp. i. 15-17, with Dan. ix. 7-10; Neh. ix. 32; ii. 1, 2, with Dan. ix. 12, 13; ii. 7-19, with Dan. ix. 13-18, Neh. ix. 10). The fact that the writer used the Septuagint translation of Jeremiah and Daniel, shews that this epistle is of a late date, and was most probably written, as Keil remarks, about the middle of the second century, B. C. The opinion that the original language of this epistle was Hebrew (Huet, Calmet, Movers, Hitzig, de Wette, Herzfeld, Ewald, etc.), or that only the first part (i.-iii. 8) was written in Hebrew (Fritzsche, Rüttschi, Davidson, etc.) is regarded by Grotius, Eichhorn, Berthold, Havernick, and Keil, as having very little to sustain it, and is contradicted by St. Jerome (*Pref. in Vers. Jer., Pref. in Expos. Jer.*), and Epiphanius (*De mens. et pond.*, c. 5). The Hebraisms simply prove that it was written by a Greek speaking Hebrew, whilst the so-called Greek mis-translations from the Hebrew are more apparent than real, and have been ably refuted by Keil (*Einleitung*, p. 729).

6. *The Canonicity of this Epistle.*—This epistle is neither quoted in the New Testament nor by the apostolic Fathers; it is not given in the Jewish catalogues of their canon (Baba Bathra, 15); nor is it mentioned by the Fathers who reproduce these catalogues (e. g., Melito, Gregory Nazianzen, Epiphanius, etc.) It does not exist in Hebrew, and was regarded as uncanonical by those Fathers who were best acquainted with the Hebrews and their sacred literature. Thus St. Jerome remarks, 'Libellum Baruch, qui vulgo editioni Septuaginta copulatur, nec habetur apud Hebræos; et ψευδοπιγραφον epistolam Jeremiæ nequaquam censui disserendam' (*Pref. in Expos. Jer.*, comp. also *Pref. in Vers. Jer.*), and Epiphanius (*De mens. et pond.* c. 5), οὐ κείναι ἐπιστολαὶ (Βαρούχ) παρ' Ἑβραίων. It is true that it was quoted by many Fathers, both in the east and in the west, since the time of Ire-

næus, as *sacred* and *scripture*, but they used these terms in a general sense, as John Driedo, one of the chief Roman Catholic writers, who also disputes the canonicity of this epistle, remarks:—‘Cyprianus, Ambrosius, ceterique patres citant sententias ex libro Baruch, et 3 et 4 Esræ, non tanquam ex canonicis libris, sed tanquam ex libris continentibus quædam pia, iuvantia et non contraria sed consona potius fidei nostræ’ (*De Cat. Script.* lib. i. c. 4 *ad Difficult.* II. *Opp. Lovan* 1550, t. i., p. 22). So also Melchior Canus, ‘Nam ut in secundo libro docuimus, libellum Baruch non adeo explore et firmari in sacrorum numero ecclesia reposuit, ut aut illum esse sacrum fidei catholice veritas expedita sit, aut non esse sacrum hæresis expedita sit’ (*Opp. Colon.*, 1605, p. 588; see also Whitaker’s *Disputation on Scripture*, p. 67, etc., Parker Society edition).

7. *Literature on the Epistle.*—Arnald, *A Critical Commentary upon the Apocryphal Books*; Herzfeld, *Gesch. des Volkes Israel von der Zerstörung des ersten Tempels, etc.*, 1847, pp. 317-19; Ewald, *Gesch. des Volkes Israel*, iv. pp. 230-233; De Wette, *Einleitung in die Bibel*, 1852, p. 424, etc.; Davidson, *The Text of the Old Testament Considered, etc.*, p. 103, etc.; *Kurzgefasstes Exegetisches Handbuch zu den Apocryphen des A. T.*, i., p. 167, etc.; Keil, *Einleitung, etc.*, 1859, p. 725, etc.—C. D. G.

BARZEL (בַּרְזֵל; Sept. σιδηρος; Vulg. *ferrum*), except where it gives an explanatory translation, as ‘falcatus currus’ (Judg. iv. 3), though it sometimes gives the literal translation of the same term, as ‘ferreus currus’ (Josh. xvii. 18). In the A. V. it is always translated *Iron*. The use of the Greek and Latin words, in classical authors of every age, fixes their meaning. That σιδηρος means iron, in Homer, is plain from his simile derived from the quenching of iron in water, which he applies to the hissing noise produced in piercing the eye of Polyphemus with the pointed stake (*Odys.* ix. 391). Much stress has been laid upon the absence of iron among the most ancient remains of Egypt; but the speedy decomposition of this metal, especially when buried in the nitrous soil of Egypt, may account for the absence of it among the remains of the early monarchs of a Pharaonic age (Wilkinson’s *Ancient Egypt*, iii. 246). Tubal-Cain is the first-mentioned smith, ‘a forger of every instrument of iron’ (Gen. iv. 22). From that time we meet with manufactures in iron of the utmost variety (*some* articles of which seem to be anticipations of what are commonly supposed to be modern inventions); as iron weapons or instruments (Num. xxxv. 16; Job xx. 24); barbed irons, used in hunting (Job xli. 7); *an iron bedstead* (Deut. iii. 11); chariots of iron (Josh. xvii. 16, and elsewhere); iron weights (shekels) (1 Sam. xvii. 7); harrows of iron (2 Sam. xii. 31); iron armour (2 Sam. xxiii. 7); tools (1 Kings vi. 7; 2 Kings vi. 5); horns (1 Kings xxii. 11); nails, hinges (1 Chron. xxii. 3); fetters (Ps. cv. 18); bars (Ps. cvii. 16); iron bars used in fortifying the gates of towns (Ps. cvii. 16; Is. xlv. 2); *a pen of iron* (Job xix. 24; Jer. xvii. 1); a pillar (Jer. i. 18); yokes (Jer. xxviii. 13); pan (Ezek. iv. 3); trees bound with iron (Dan. iv. 15); gods of iron (Dan. v. 4); threshing-instruments (Amos i. 3); and in later times, an iron gate (Acts xii. 10); the actual cautery (1 Tim. iv. 2); breastplates (Rev. ix. 9).

The mineral origin of iron seems clearly alluded

to in Job xxviii. 2. It would seem that in ancient times it was a plentiful production of Palestine (Deut. viii. 9). There appear to have been furnaces for smelting at an early period in Egypt (Deut. iv. 20). The requirement that the altar should be made of ‘whole stones over which no man hath lift up any iron,’ recorded in Josh. viii. 31, does not imply any objection to iron as such, but seems to be merely a mode of directing that, in order to prevent idolatry, the stones must not undergo any preparation by art. Iron was prepared in abundance by David for the building of the temple (1 Chron. xxii. 3), to the amount of one hundred thousand talents (1 Chron. xxix. 7), or rather ‘without weight’ (1 Chron. xxii. 14). Working in iron was considered a calling (2 Chron. ii. 7). [SMITH.] Iron seems to have been better from some countries, or to have undergone some hardening preparation by the inhabitants of them, such as were the people called Chalybes, living near the Euxine Sea (Jer. xv. 12); to have been imported from Tarshish to Tyre (Ezek. xxvii. 12), and ‘bright iron’ from Dan and Javan (ver. 19). The superior hardness of iron above all other substances is alluded to in Dan. ii. 40. It was found among the Midianites (Num. xxxi. 22), and was part of the wealth distributed among the tribes at their location in the land (Josh. xxii. 8).

Iron is *metaphorically* alluded to in the following instances:—affliction is signified by the furnace for smelting it (Deut. iv. 20); under the same figure, chastisement (Ezek. xxii. 18, 20, 22); reducing the earth to total barrenness by turning it into iron (Deut. xxviii. 23); slavery, by a yoke of iron (Deut. xxviii. 48); strength, by a bar of it (Job xl. 18); the extreme of hardness (Job xli. 27); severity of government, by a rod of iron (Ps. ii. 9); affliction, by iron fetters (Ps. cvii. 10); prosperity, by giving iron for stones (Is. lx. 17); political strength (Dan. ii. 33); obstinacy, by an iron sinew in the neck (Is. xlvi. 4); giving supernatural fortitude to a prophet, making him an iron pillar (Jer. i. 18); destructive power of empires, by iron teeth (Dan. vii. 7); deterioration of character, by becoming iron (Jer. vi. 28; Ezek. xxii. 18), which resembles the idea of the iron age; a tiresome burden, by a mass of iron (Ecclus. xxii. 15); the greatest obstacles, by walls of iron (2 Macc. xi. 9); the certainty with which a real enemy will ever shew his hatred, by the rust returning upon iron (Ecclus. xi. 10). Iron seems used, as by the Greek poets, metonymically for the sword (Is. x. 34), and so the Sept. understands it, μάχαρα. The following is selected as a *beautiful comparison* made to iron (Prov. xxvii. 17), ‘Iron (literally) uniteth iron; so a man uniteth the countenance of his friend,’ gives stability to his appearance by his presence. A most graphic *description of a smith at work* is found in Ecclus. xxxviii. 28.—J. F. D.

BARZILLAI (בַּרְזַיִל; Sept. Βαρζελλαι), a wealthy old Gileadite of Rogelim, who distinguished himself by his loyalty when David fled beyond the Jordan from his son Absalom. He sent in a liberal supply of provisions, beds, and other conveniences for the use of the king’s followers (2 Sam. xvii. 27; xix. 32). On the king’s triumphant return, Barzillai attended him as far as the Jordan, but declined, by reason of his advanced age, to proceed to Jerusalem and receive the favours to which he had entitled himself.—J. K. [Two others of this

name are mentioned in the O. T., viz., Barzillai the Meholahite (2 Sam. xxi. 8), and a priest who married one of the daughters of Barzillai the Gileadite, and was called by their name (Ez. ii. 61; Neh. vii. 63)].

BASAM (בַּשָּׂם) or BOSEM (בֹּשֶׂם), *the balsam-tree*. The name balsam is no doubt derived from the Arabic بلسان *balsan*, which is probably also the origin of the βάλσαμον of the Greeks. Forskal informs us that the balsam-tree of Mecca is there called Aboosham, *i.e.* perodora. The word بشام *basham*, given by him, is the name of a fragrant shrub growing near Mecca, with the branches and tufts of which they clean the teeth, and is supposed to refer to the same plant. These names are very similar to words which occur in the Hebrew text of several passages of Scripture, as in the Song of Solomon, v. 1, 'I have gathered my myrrh with my spice' (*basam*); ver. 13, 'His cheeks are as a bed of spices' (*basam*); and in vi. 2, 'gone down into his garden to the beds of spices' (*basam*). The same word is used in Exod. xxxv. 28, and in 1 Kings x. 10, 'There came no more such great abundance of spices (*basam*) as those which the Queen of Sheba gave to King Solomon.' In all these passages *basam* or *bossem* בַּשָּׂם and בֹּשֶׂם, though translated 'spices,' would seem to indicate the 'balsam-tree,' if we may infer identity of plant or substance from similarity in the Hebrew and Arabic names. But the word may indicate only a fragrant aromatic substance in general. The passages in the Song of Solomon may with propriety be understood as referring to a plant cultivated in Judæa, but not to spices in the general sense of that term. Queen Sheba might have brought balsam or balsam-trees, as well as spices, for both are the produce of southern latitudes, though far removed from each other.

124.

The balsam-tree was one of the most celebrated and highly esteemed among the ancients. Pliny (*Hist. Nat.* xii. 25) says, 'Sed omnibus odoribus præfertur balsamum, uni terrarum Judææ concessum. Ostendere arbusculam hanc urbi imperatores Vespasianî.' Pompey the Great also boasted of having had it borne in triumph. Justin the

historian (xxxvi. 3) says, 'Opes genti Judaicæ, ex vectigalibus opobalsami crevere, quod in his tantum regionibus gignitur. Est namque vallis, etc., nomine Hierichus dicitur. In ea valle sylvæ est, et ubertate, et amœnitate arborum insignis; siquidem palmæ et opobalsami distinguitur.' So Strabo and Dioscorus Siculus. Dioscorides states that it is found in one valley of Judæa, and also in Egypt. At a much earlier period Theophrastus was aware of the fact that the balsamum tree was found in a valley of Syria, and that it was cultivated only in two gardens, one of twenty acres, the other much smaller, as is also stated by Pliny. Josephus informs us 'that the balsam is produced only in the plains of Jericho. Abdollatif ('Memorabilia of Egypt,' as quoted by Rosenmüller) says that he has read in Galenus that the best balsam is produced in Palestine: but now (in Abdollatif's age,) he says, that no more balsam is found in that country; also that he knew of it only as 'carefully reared at Ain-Shames in Egypt, in an enclosed piece of ground.' Prosper Alpinus informs us that Messoner, a eunuch, governor of Cairo in 1519, caused to be brought from Arabia forty plants, which he placed in the garden of Matareah. Belon, in the early part of the sixteenth century, saw the shrubs in the balsam gardens of Matareah, a village near Cairo, and his description of them agrees very well with that given by Abdollatif. Hence it would appear from ancient authors that the plant yielding balsam was never very common in Palestine—in fact, that it was confined to one locality, where it was found only as a plant in cultivation, though it may have been, and probably was, introduced at a very early period. That it has long disappeared from thence is evident from the authors we have just quoted, as well as from the testimony of all travellers in Palestine. That it was a southern plant we may believe from its being cultivated in the warm southern valley of Jericho, and that it was introduced into that locality we have the testimony of Josephus (*Antiq.* viii. 6), who says that it was brought thither by Queen Sheba. Strabo, moreover, states that myrrh, frankincense, and the balsam-tree, were produced in the country of the Sabæans.

The balsam-tree, or balm of Gilead tree, as it is also very generally called, is not a native of that region, nor indeed does it appear ever to have been cultivated there. The true balsam, we have seen, was cultivated near Jericho, and at a later age in Egypt. From that country it has been traced to Arabia. Thus Gerlach, as quoted by Bergius, relates that the tree which produces the balsam of Mecca grows near Bederhunin, a village between Mecca and Medina, in a sandy rocky soil, confined to a small tract, about a mile in length. Strabo, we have found, was aware that the balsam-tree grows on the coast near Saba, in the happy land of the Sabæans. Bruce identifies this spot with that part of the African coast near the straits of Babelmandel, which now bears the name of Azab; and he further states, that among the myrrh-trees behind Azab all along the coast to the straits of Babelmandel is the native country of the balsam-tree. It grows to above fourteen feet high, spontaneously and without culture, like the myrrh, the coffee, and frankincense tree, all equally the wood of the country, and occasionally cut down and used for fuel. It was no doubt early transplanted into

Arabia, that is, into the southern part of Arabia Felix, immediately fronting Azab: the high country of Arabia was too cold for it, being all mountainous, and water freezing there. The first plantation that succeeded seems to have been at Petra, the ancient metropolis of Arabia, now called Beder, or Beder Hunein. Bruce has, moreover, given two figures of the balsam-tree,—one of the whole tree, the other of a single branch, with the dissection of the fruit. These, he says, may be depended on, as being carefully drawn, after an exact examination, from two very fine trees brought from Beder Hunein. Salt also found it on the west coast of the Red Sea, and Mr. Brown, having examined his specimen, is sufficient evidence of its authenticity.

The balsam-tree, having been seen by Bruce and Salt, and figured by the former as well as by Nees von Esenbeck, and introduced into India, has been described by the first and by Wight and Arnott, and is now pretty well known. It forms a middle-sized tree, with spreading branches and a smooth ash-coloured bark, but which is no doubt rough in the older parts, as represented by Bruce. The ultimate branches are short, and thorn-like, with small very short abortive branchlets, bearing at their extremities the leaves and flowers. The fruit is pointed, fleshy, with a viscid pulp; nut 4-angled; 1—2-celled, containing one perfect seed.

This species is now considered to be identical with the *Amyris opobalsamum* of Forskal, found by him in Arabia, in the neighbourhood of the caravanserai of Oude, not far from Has, where it is called أبووشام *aboosham*, *i. e.*, *perodora*; and

the wounded bark of which yields opobalsamum, or balsam of Mecca. It is as highly esteemed by all Orientals in the present day as it was by the civilized nations of antiquity. Another species, discovered by Forskal, and called by him *Amyris*

Kāfal, from its Arabic name, قفل, is now also referred to the genus *Balsamodendron*. It is a tree with reddish-coloured wood, and with branches rather spinous. The younger leaflets are described as being villous and acute, the old ones smooth, often obtuse; the berry compressed, with an elevated ridge on each side, the apex forming a black prominent point. The wood he describes as forming an article of considerable commerce, especially to Egypt, where water-vessels are impregnated with its smoke. It is probably the twigs of this species which are taken to India, and there sold under the name of aod-i balessan; that is, the wood of the balsam-tree, and therefore analogous to the *xylobalsamum* of the ancients. *Carpobalsamum* was probably only the fruit of one of these species. *Opobalsamum*, or juice of the balsam, is generally described as the finest kind, of a greenish colour, and found in the kernel of the fruit. *Carpobalsamum* is said to have been made by the expression of the fruit when in maturity, and *xylobalsamum*, by the expression or decoction of the small new twigs, which are of a reddish colour. But the ancients probably employed both the fruit and the wood for macerating in oil, which would extract the odour. The greatest quantity of balsam, and the best in quality, must in all times have been produced by an incision into the bark when the juice is in its strongest circulation, in July, August, and

the beginning of September. It is then received into a small earthen bottle, and every day's produce is poured into a larger, which is kept closely corked. The whole quantity collected is but small.

From these considerations we conclude that the probability is, that the balsam would be noticed in some part of the Old Testament, as we find it is, in the above passages of the Canticles, Exodus, and Kings.—J. F. R.

BASCA, or BASCAMA, a town near Bethshan, where Jonathan Maccabæus was killed (1 Macc. xiii. 23).

BA'SHAH (בַּשָּׁה, from בָּשָׂה, *to be worthless or corrupt, to stink*), the name of a plant or weed of a worthless or noxious kind (Job xxxi. 40). From the connection in which it is introduced, it is probable that some particular and well-known herb is intended. The LXX. render it by *βάρως*, *bramble*; the Vulg. has *spina, thorn*; and so the Targ. and Syr. and Ar. versions. Fuerst pronounces it a useless, noxious, and spinose herb of the cockle or darnel species. Celsius (*Hierobot.*

ii. 201) makes it a poisonous plant, the *ביש* of the Arabic writers, a species of *aconite*. Lee (*Lex. s. v.*) suggests *hemlock* as the probable synonyme. Zunz gives *tolch*, and Renan (*Livre de Job* in loc.) *ivraie*. [See also Supplement, p. 884.]

BASHAN, בַּשָּׁן and הַבַּשָּׁן; Samaritan Vers. בתנין; Targ. בִּתְנִין, Ps. lxxviii. 15, also מִתְנִין; the latter Buxtorf suggests may have originated in the mistake of a transcriber, yet both are found in Targ. Jon.; Deut. xxxiii. 22; v. *Lex. Talm.* col. 370; Sept. *Basán* and *Basavírus*; Josephus and Eusebius, *Baravala*. *El Bottein* is the modern name. The word probably denotes the peculiar fertility of the soil: in the ancient versions, instead of using it as a proper name, a word meaning *fruitful or fat* is adopted. Thus in Ps. xxii. 13, for *Bashan*, we find in Sept. *πλοves*; Aquila, *λιπαροί*; Symmachus, *στρωτοί*; and Vulg. *Pinguis* (Ps. lxxvii. 16) (*lxviii. 15*) for *hill of Bashan*; Sept. *ὄρος πῖον*; Jerome (v. Bochart, *Hierozoicon*, pars i. col. 531), *mons pinguis*. The sacred writers include in Bashan that part of the country eastward of the Jordan which was given to half the tribe of Manasseh, situated to the north of Gilead. Bochart incorrectly places it between the rivers Jabbok and Arnon; and speaks of it as the allotment of the tribes of Reuben and Gad (Num. xxxii. 33). The first notice of this country is in Gen. xiv. 5. Chedorlaomer and his confederates 'smote the Rephaim in Ashtaroth Karnaim.' Now Og, king of Bashan, dwelt in Ashtaroth, and 'was of the remnant of the Rephaim' ('giants' Auth. Vers.), Joshua xii. 4. When the Israelites invaded the Promised Land, Argob, a province of Bashan, contained 'sixty fenced cities, with walls and gates and brazen bars, besides unvalled towns a great many' (Deut. iii. 4, 5; 1 Kings iv. 13). These were all taken by the Israelites, and Og and his people utterly destroyed. Golan, one of the cities of refuge, was situated in this country (Deut. iv. 43; Josh. xx. 8; xxi. 27). Γαυλαβάν ἐν τῇ Βαβαλαίᾳ (Joseph. *Antiq.* iv. 7. sec. 4). Solomon appointed twelve officers to furnish the monthly supplies for the royal household, and allotted the region of Argob to the son of Geber (1 Kings iv.

13). Towards the close of Jehu's reign, Hazael invaded the land of Israel, and smote the whole eastern territory, 'even Gilead and Bashan' (2 Kings x. 33; Joseph. *Antiq.* ix. 8. sec. 1); but after his death the cities he had taken were recovered by Jehoash (Joash) (2 Kings xiii. 25), who defeated the Syrians in three battles, as Elisha had predicted (2 Kings xiii. 19; Joseph. *Antiq.* ix. 8. sec. 7). After the captivity the name *Batanæa* was applied to only a part of the ancient Bashan; the rest being called Trachonitis, Auranitis, and Gaulanitis (v. Lightfoot's *Chorographical Notes* upon the places mentioned in St. Luke: Works, vol. x. p. 282). All these provinces were granted by Augustus to Herod the Great, and on his death *Batanæa* formed a part of Philip's tetrarchy (Joseph. *De Bell. Jud.* ii. 6. sec. 3; *Antiq.* xviii. 4. sec. 6). At his decease, A. D. 34, it was annexed, by Tiberius, to the province of Syria; but in A. D. 37 it was given by Caligula to Herod Agrippa, the son of Aristobulus, with the title of king (Acts xii. 1; Joseph. *Antiq.* xviii. 6. sec. 10). From the time of Agrippa's death, in A. D. 44, to A. D. 53, the government again reverted to the Romans, but it was then restored by Claudius to Agrippa II. (Acts xxv. 13; Joseph. *Antiq.* xx. 7. sec. 1).

The richness of the pasture-land of Bashan, and the consequent superiority of its breed of cattle, are frequently alluded to in the Scriptures. We read in Deut. xxxii. 14, of 'rams of the breed (Heb. *sons*) of Bashan'; and in Ezek. xxxix. 18, 'Rams, lambs, goats, and bullocks, all of them fatlings of Bashan.' The oaks of Bashan are mentioned in connection with the cedars of Lebanon (Is. ii. 13; Zech. xi. 2). In Ezekiel's description of the wealth and magnificence of Tyre it is said, 'Of the oaks of Bashan have they made thine oars' (xxvii. 6). The ancient commentators on Amos iv. 1, 'the kine of Bashan,' Jerome, Theodoret, and Cyril, speak in the strongest terms of the exuberant fertility of Bashan (Bochart, *Hierozoicon*, pars i. col. 306), and modern travellers corroborate their assertions (v. Burckhardt's *Travels in Syria and the Holy Land*, pp. 286-288; Buckingham's *Travels in Palestine*, through the countries of Bashan and Gilead, London, 1822, vol. ii. pp. 112-117).—J. E. K.

BASHEMATH, or **BASEMATH** (בִּשְׁמַת, *fragrant*; Sept. *Basēudō*), 1. one of the wives of Esau (Gen. xxxvi. 3, 4, 13), and the daughter of Ishmael. In another passage *Bashemath*, the wife of Esau, is called the daughter of Elon the Hittite (Gen. xxvi. 34), and the same parentage is ascribed to Adah, also the wife of Esau (Gen. xxxvi. 2). This would seem to lead to the conclusion that Adah and *Bashemath* were different names of the same person; but there is a difficulty in the way of this, from *Bashemath* being mentioned *along with* Adah in the list of Esau's wives given Gen. xxxvi. 2, 3. The Samaritan Vers. avoids this by reading *Mahalath* in place of *Bashemath* here; and as *Mahalath* is elsewhere found as the name of one of Esau's wives, and as the same parentage is there ascribed to her as here to *Bashemath* (Gen. xxviii. 9), this is probably the correct reading. If we do not conclude that Esau had five wives, which is improbable, as only three are mentioned in Gen. xxxvi. 2, 3, where we have a formal genealogical record, we must regard two of his three wives as having each a double name. We would range

them thus: Adah or *Bashemath*; *Aholibamah* or *Judith*; and *Mahalath*. 2. A daughter of Solomon, and wife of Ahimaaz, one of that king's officers (1 Kings iv. 15).—W. L. A.

BASHUYSEN, HEIN. JAK., a German Orientalist, was born at Hanau, 26th Oct. 1679, and died 31st Dec. 1738. He was professor of theology and Oriental languages, and rector of the Gymnasium at Herlat. He established a printing press in his own house, for the purpose of issuing, under his own immediate superintendence, the best Rabbinical Commentaries on the Scriptures. From this issued *Abarbanelis Comment. in Pentateuchum cum addit. locorum Bibl. et Talmud*, Hanau, 1710, fol.; *Psalterium Davidis cum notis rabbinicis*, Han. 1710, in 12mo; *Clavis Talmudica Maxima*, Han. 1714, in 4to (a new edition, with additions by L'Empereur, appeared in 1740 in 4to). He published also *Commentaria Scripturarum*, Han. 1707; *Observationes Sacrae*, Frankf. 1708, Herlat, 1714, 2 vols. 4to; *Systema Antiqq. Hebb.* Svo Han. 1715.—W. L. A.

BASILA, RAFAEL, a learned Jew, born at Mantua, who flourished in the early part of the last century. He issued an edition of the Hebrew Bible, with the critical commentary of Sal. Norzi (completed in 1626), with additions and annotations, 2 vols. 4to, Mantua, 1742. At the end is a list of various readings, 900 in number, and a critical estimate of their comparative value. The corrections of Norzi are introduced into the text. This valuable work has been often more than once reissued. The best edition is that of George Holzinger, in 4 vols. 4to, Vien. 1816. The commentary on the Pentateuch alone was printed in the great edition of the Pentateuch, issued at Dobrowne in 1804.—W. L. A.

BASILIUS, Bishop of Cæsarea, surnamed the Great, was born at Cæsarea in Cappadocia, in 329, and died 1st Jan. 379. His name stands high among the Fathers of the Church as one of the most eloquent, energetic, and spiritual of their number. A considerable number of Homilies, partly on ethical subjects, partly of an expository character, from his pen remain to us. The most important as respects biblical interests of these are his *Hexæmeron*, which consists of nine discourses on the History of Creation in Genesis, and his Homilies on the Psalms. He avoids carefully, and on principle, the allegorising method of interpreting Scripture; and charges those who follow it with seeking 'to add reverence to Scripture, from their own thoughts.' A copious, though somewhat rhetorical eloquence pervades these homilies, and one often comes on a rich vein of thought; and striking descriptions both of natural phenomena and moral relations abound. Some treatises from his pen are of a dogmatical character, but here, it must be confessed, he is less felicitous. We owe to Basil, in conjunction with Gregory of Nazianz, the collection of extracts from Origen's works, entitled *Philocalia*, which is printed at the end of Spencer's edition of that Father's treatise *Contra Celsum*, and was first edited from a MS. in the Royal Library at Paris by Tarinus in 1618, 4to. Several editions of Basil's collected works have appeared; the best is that by Garnier, Paris, 1721-30, in 3 vols. fol.—W. L. A.

BASIN. [**BASON**.]

BASKET. There are several words in the Hebrew Scriptures by which different kinds of baskets appear to be indicated:—

1. **דוד** *dad*, which occurs in 2 Kings x. 7, where the heads of Ahab's sons are sent from Samaria to Jezreel in baskets; Jer. xxiv. 2, as containing figs; and Ps. lxxxi. 6 (rendered *pots*); where deliverance from the baskets means deliverance from the bondage of carrying burdens in baskets. In fact, very heavy burdens were thus carried in Egypt, as corn in very large baskets from the field to the threshing-floor, and from the threshing-floor to the granaries. They were carried between two men by a pole resting on their *shoulders*; which agrees with the previous clause of the cited text, 'I removed his shoulder from the burden.' This labour and form of the basket are often shewn in the Egyptian sculptures.

125.

2. **טבה** *teba*, which occurs in connection with agricultural objects, 'the basket and the store' (Deut. xxvi. 2, 4; xxviii. 5, 17), and would therefore appear to have been somewhat similar to the above; and, in fact, the Egyptian sculptures shew different baskets applied to this use.

3. **כלוב** *kelub*. From the etymology, this appears to have been an interwoven basket, made of leaves or rushes. In Jer. v. 27, however, it is used for a bird-cage, which must have been of open-work, and probably not unlike our own wicker bird-cages. The name is also applied to fruit-

126. Ancient Egyptian.

baskets (Amos viii. 1, 2), Egyptian examples of which are presented in figs. 2 and 4 (which contain pomegranates) of the annexed cut.

4. **סלסלות**, *salsilloth*, occurs only in Jer. vi. 9,

where it obviously denotes baskets in which grapes were deposited as they were gathered. The form of the baskets used for this purpose is often shewn on the Egyptian monuments, and is similar to that represented in fig. 4, cut 126.

5. In all the other places where the word basket occurs, we are doubtless to understand a basket made of rushes, similar both in form and material to those used by carpenters for carrying their tools. This is still the common kind of basket throughout Western Asia; and its use in ancient Egypt is shewn by an actual specimen which was found in a tomb at Thebes, and which is now in the British Museum. It was, in fact, a carpenter's basket, and contained his tools (fig. 1).

The specimens of Egyptian baskets in the British Museum, represented in our cut, convey a favourable idea of the basket-work of ancient times. Some of these are worked ornamentally with colours (figs. 3, 5, cut 126; also the modern examples, figs. 2, 7, cut 127). And besides these the monuments exhibit a large variety of hand-baskets, of different shapes, and so extensively employed as to shew the numerous applications of basket-work in the remote times to which these representations extend. They are mostly manufactured, the stronger and larger sorts of the fibres, and the finer of the leaves of the palm-tree, and not infrequently of rushes, but more seldom of reeds.

127. Modern Oriental.

In the preceding cut of examples of modern Oriental baskets, many are of the same form, and mostly of the same materials, as those found in the Egyptian tombs or pictured on their walls. We doubt not that the three engravings taken together furnish examples of all the different kinds of baskets in use among the Israelites.

BASMATH (**בַּשְׁמַתָּה**), the daughter of Solomon and wife of Ahimaaz (1 Kings iv. 15). The name is the same as Bashemath.

BASON. This appears as the rendering in the A. V. of—1, the Heb. **כַּף** (Exod. xii. 22; 2 Sam. xvii. 28; 1 Kings vii. 50; Jer. lii. 19), elsewhere rendered *cup* (Zech. xii. 2); 2, **כַּבֵּיִר** (1 Chron. xxviii. 17; Ezra i. 10; viii. 27); 3, **אֵפֶן** (Exod. xxiv. 6), rendered *goblet* (Song vii. 3); *cups* (Is. xxii. 24); 4, **מִזְרֵק** (1 Kings vii. 40, 45; 2 Chron. iv. 8, 11; Numb. iv. 14), translated *bowl* (Num. vii. 13, 19, 25), and, 5, of the Gr. **συστήρ** (John xiii. 5). That all these were hollow vessels, adapted

to receive and contain liquids, is certain, but what was their general form, and wherein the peculiarity of each consisted, we have no means of determining. On the Nineveh monuments are sculptures of vessels resembling a porringer or large modern tea-cup, others approaching more to the form of a saucer, in some cases with a projecting handle, and others more of a vase shape. It is probable that

128. Basons from Nineveh Monuments.

the vessels of the Jews were much the same, only some of the vessels above mentioned, such as the bason which held the blood of the sacrifice, and the bason used by our Lord when He washed His disciples' feet, must have been of a larger size, in respect both of depth and of circumference. Of the basons above mentioned several are expressly described as of metal, silver, gold, and brass; those for more common use were doubtless of earthenware or stone. On the tomb of Rameses IV., there is a representation of a golden vase, which, as it is

129. Bason of Metal—Nineveh.

introduced among the trophies of that monarch's conquest of the Philistines or Canaanites, may probably supply a specimen of a vessel in use among the Jews. In Mr. Layard's *Discoveries in the Ruins of Nineveh and Babylon*, p. 509 ff, there is

130. Philistian Vase—Egypt.

a description, with drawings, of a set of very curious bowls of terra cotta, with inscriptions around the inner margin in the ancient Chaldean language, written in characters previously unknown in Europe; these were found on the banks of the Euphrates and in the ruins of ancient Babylonia, and are undoubtedly of Jewish origin. They are from 4½ inches in diameter, and not more than 2 inches in depth. The writer of this has in his possession a stone basin of modern workmanship, round the inside of which is an Arabic inscription in two lines; it is a little more than 3 inches

in diameter and 1 inch in depth. [BOTTLE.]—W. L. A.

131. Inscribed Basons—Babylonia.

BASTARD. By this word the Auth. Vers. renders the Hebrew פְּטוּרָה, which occurs only in Deut. xxiii. 2, and Zech. ix. 6. But Michaelis (*Mos. Recht*, ii. sec. 139) reads the word with a different punctuation, so as to make it a compound of two words פְּטוּרָה, meaning *stain*, *defect* of a *stranger*, implying the stain that would be cast upon the nation by granting to such a stranger the citizen-right. Some understand by it the offspring of prostitutes, but they forget that prostitutes were expressly forbidden to be tolerated by the law of Moses (Lev. xix. 29; Deut. xxiii. 17). The most probable conjecture is that which applies the term to the offspring of heathen prostitutes in the neighbourhood of Palestine; since no provision was made by Moses against their toleration (Potter, *Archæol.* i. 354), and who were a sort of priestesses to the Syrian goddess *Astarte* (comp. Num. xxv. 1, sq.; Gesenius, *Comment. on Isaiah*, ii. 339; Hos. iv. 14; 1 Kings xiv. 24; xv. 12; xxii. 46; 2 Kings xxiii. 7; Herodot. i. 199).

That there existed such bastard offspring among the Jews, is proved by the history of Jephthah (Judg. xi. 1-7), who on this account was expelled, and deprived of his patrimony.—E. M.

BAT. [ATALLEPH.]

BATANÆA. [BASHAN.]

BATE, JULIUS. A clergyman of the Church of England; born 1711, died 1771. He was a devoted follower of Hutchinson, whose works he edited, and whose system he defended in a multitude of publications. With some learning and acumen, and indefatigable powers of labour, he was at the same time so deficient in judgment and temper, and held views so whimsical and baseless, that he produced little impression in his own day, and is now known only by name. He attacked, with some success, Warburton's position 'that the doctrine of a future state of rewards and punishments is not to be found in, nor did make part of, the Mosaic dispensation;' and he made a futile attempt to oppose Dr. Kennicott's critical labours on the text of the Old Testament. He prepared a Hebrew-English Dictionary, which Parkhurst (a disciple also of the Hutchinsonian school) frequently refers to with approbation; and he was engaged, at the time of his death, on a new translation of the Scriptures, the completed part of which—Genesis to 2 Kings—was published after his death. 'As a translation it greatly fails in perspicuity, smoothness, and grammatical accuracy; the notes are full of the peculiarities of his system, and discover no correct acquaintance with the principles of philology or enlightened criticism' (Orme)—W. L. A.

BATH, BATHING (בִּרְחָץ). The numerous ceremonial washings required by the Mosaic law, to secure the proper cleanliness of the priests (Lev. viii. 6; Exod. xxviii. 4), and to serve as a purification from the various kinds of Levitical or actual defilement (Lev. xii.-xx), or as a symbolical representation of innocence (Deut. xxi. 1-9; Matt. xxvii. 24), will be found described under **ABLUTION**. These religious ordinances were, however, closely connected with the ordinary rules of cleanliness, to which they wisely gave a religious sanction. It was not until a late period of Jewish history that the Pharisaical spirit of formalism obscured their moral significance by attaching to them that intrinsic value, and insisting on that scrupulous and exaggerated attention to their smallest particulars, which was exposed and discouraged by our Lord (Mark vii. 1-5; Matt. xxiii. 25; Luke xi. 39, etc.)

The practice of bathing, which was thus inculcated as a civil and religious obligation, is in the East not only important, but necessary as the only sure preventive of cutaneous and other diseases (Lev. xiv. 8; xv. 5, etc.) The extreme heat and consequent perspiration, the arid and burning soil, the bites of insects, and the abundance of dust and sand, make bathing a pleasure as well as a duty. Accordingly we find traces of the practice at all periods of Jewish history. In Egypt the bathing in the water of the Nile was universal (Exod. ii. 5; vii. 15; Herod. ii. 37), and with the Egyptians, as with the Hindus, it partook of the character of an act of worship. The obvious advantage of washing in a running stream, caused the Hebrews to resort to it when practicable (Lev. xv. 13; 2 Kings v. 11); but as the streams of Judea are few and small, often disappearing altogether at the hottest season of the year (Job vi. 15, 19, etc.), their place was supplied, as far as possible, by housebaths (2 Sam. xi. 2; Susan. xv.), and by public pools. Women, as in modern times, usually anointed themselves after the bath (Ruth iii. 3) with oil (2 Sam. xiv. 2), or sweet odours (Esth. ii. 12; Judith x. 3), and the use of oil for this purpose was also very general among men. [**ANointing.**] We are told in the Mischna that women sometimes used bran as well as water (Pesach. ii. 7, quoted in Herzog *Encykl.* s. v.) The Arabs to this day sometimes use earth for a similar purpose, but it is most improbable that there is any reference to such a custom in 2 Kings v. 17. (Winer, *Realwört.* s. v., *Baden.*)

The pools (κολυμβήθραι) of Hezekiah and of Solomon were probably public baths (Neh. ii. 14; iii. 16; 2 Kings xx. 20; Joseph. *de Bell. Jud.* v. 4. 2), as were also Siloam (John ix. 7) and Bethesda.* The latter, from its healing virtue, was adorned, like modern Oriental baths, with five colonnades for the protection of those who resorted to it. From Neh. iv. 23 we see that the use of the bath was not omitted even in times of great danger. Large buildings for bathing purposes, like those in

* John v. 2. 'The Rabbis and Chald. paraphrast on Ecclesiastes make the words פְּרִיבְטָאוֹת and פְּרִיבְטָאוֹת (the Greek προβατικῆ, John v. 2, ἐπὶ τῇ προβατικῆ) mean *baths*; and the word פְּרִיבְטָאוֹת, a bath-servant.'—Jahn's *Bibl. Archaeol.* E. T., sec. 198.

use among the Romans, were probably unknown to the Jews, until they were introduced with other heathen customs in the time of Antiochus (Joseph. *Antiq.* xix. 7. 5). We must assume that a bath formed part of the *Ephæbeum* built by Jason, the apostate high-priest, at Jerusalem (2 Mac. iv. 9, 13). Similar baths were built on a great scale by the Herods, at the hot springs of Tiberias, Gadara, and Calirrhoe. The medicinal value of sulphurous springs in bathing was known at a very early period, and the discovery of some, to the east of the Dead Sea, by Anah, one of the Dukes of Edom, is mentioned in Gen. xxxvi. 24 (where כְּמִים should be rendered 'hot springs,' not 'mules,' as in A. V.) The promiscuous use of these public baths led the Jews, in some cases, to feel ashamed at the badge of their national covenant, and to obliterate its effects (1 Macc. i. 15; Joseph. *Antiq.* xii. 5. 1; 1 Cor. vii. 18). The art of swimming was generally known, but is not often alluded to (Is. xxv. 11; Ezek. xlvi. 5; Acts xxvii. 42).

The constant washing of the feet, rendered necessary by the use of sandals and the nature of the soil, is mentioned in Gen. xviii. 4; xxiv. 32; xliii. 24. Like the 'pouring water on the hands' (2 Kings iii. 11), it was usually performed by servants or inferiors (1 Sam. xxv. 41; 1 Tim. v. 10; John xiii. 5, 6).—F. W. F.

BATH. [WEIGHTS AND MEASURES.]

BATH (בַּת), the Hebrew word for daughter, is often used as the first element in a proper name, in which case what follows stands to it in the relation of the genitive in the Indo-European languages. In this respect its usage is analogous to that of Ben (which see).

BATH KOL (בַּת קוֹל daughter of the voice).

Under this name the *Talmud*, the later Targums, and the Rabbinical writers, make frequent mention of a kind of oracular voice, constituting the fourth grade of revelation, which, although it was an instrument of divine communication throughout the early history of the Israelites, was the most prominent, because the sole, prophetic manifestation which existed during (and even after) the period of the second Temple. The *Midrashim* and the *Gemara*, cited in Reland's *Antiq. Sacr.* pt. ii. ch. ix., severally affirm that the Bath Kol is the voice which spoke to Abraham, Moses, David, Nebuchadnezzar, and others; and the Targums of Jonathan and of Jerusalem make the Bath Kol appear in Gen. xxxviii. 26; Num. xxi. 6; and in other places. The treatise *Sanhedrin*, cited in Vitranga's *Obser. Sacr.* ii. 338, uses the words:—
'From the death of Haggai, Zechariah, and Malachi, the Holy Spirit [רוח הקודש], which, according to the Jewish distinction, is only the second degree of the prophetic gift] was withdrawn from Israel; but they nevertheless enjoyed the use of the Bath Kol.'

The Jewish authorities are not agreed as to what the Bath Kol was, nor as to the precise reason of its designation. It is disputed whether the persons hearing the Bath Kol heard the very voice from heaven, or only a daughter of it—an *echo* of it; whether, as thunder is often mentioned as a sign of the Divine presence, and as the word *voice* appears to be used for thunder in Exod. ix. 23; Jer. x. 13; Ps. xxix. 3, the Bath Kol may not signify

an articulate voice proceeding out of the thunder; or whether, according to the explanation of Maimonides, 'the Bath Kol is when a man has such a strong imagination that he believes he hears a voice from without himself.' As to the meaning of the name itself, passages are cited in Buxtorf's *Lex. Talm.* s. v. כּוֹל, and in Reland's *Antiq. Sacr.* l. c., which shew that the daughter of the voice sometimes means the echo of a sound, and sometimes merely a primary sound itself. It is certain that the *Peshito* has sometimes rendered the simple Greek φωνή by 'daughter of the voice,' as in Acts xii. 22; 1 Tim. vi. 20; Heb. iii. 15. It is necessary, however, to remark that, according to a fundamental law of all Syro-Arabian grammar, these two words must either stand to each other in the relation of *apposition*, or of the *state construct*. But as apposition can only take place between equivalent and convertible terms, which 'daughter' and 'voice' are not, accordingly the alternative rendering of *daughter voice* proposed by Prideaux (which Horne also has adopted, *Introduct.* iv. p. 149) violates that rule; because, in such an English combination, the word 'daughter' has the force of an *adjective*; and the Hebrew language, possessing but few adjectives, would have expressed the sense of *daughter voice* (if that had been the sense intended to be conveyed by Bath Kol) by making Bath the *last* word, depending as a genitive on the former. For instance, when we render the Holy Spirit is literally 'the spirit of holiness' in Hebrew. Thus '*daughter voice*' is not an apposition in English, nor is it the translation of a state construct according to the Hebrew order; but of a state construct in which Prideaux has taken the liberty of transposing the dependent word, *i. e.*, of making 'daughter of the voice' become, in effect, 'voice of a daughter.' Jennings also, in his *Jewish Antiq.* b. i. c. 6, when he renders Bath Kol by '*plia vox, seu filia vocis*,' only commits, in the first case, the same error more palpably; and is guilty of quite as great a violation of the first principle of Hebrew Grammar, as he would be, in the case of Latin, were he to translate *filia vocis* by 'voice of the daughter.'

The occasions on which it is alleged that the Bath Kol was heard after the death of Malachi are of very various degrees of solemnity or significance. Supposing the instances mentioned in Josephus (*Antiq.* xiii. 10. 3), of the voice which announced to Hyrcanus that his sons had conquered Antiochus, and (*De Bell. Jud.* vi. 5. 3) of the awful voice which was heard in the Temple, just before the capture of Jerusalem, to exclaim, Μεταβαλνωμεν ἐν τῷ θεῷ!—not to belong to the Bath Kol (as it is to be observed that the pseudo-Josephus ben Gorion has, in these cases, merely used the Hebrew word for *voice*), most of the other recorded instances fall far short of these in dignity; and some appear irreconcilable to even very credulous notions of the limits of Divine interposition. Only a few of them, however, can be classed with quite as trivial a species of divination as the Sortes Virgilianæ, which is done in the unfair statement of Prideaux (*Connex.* ii. p. 354). The fact is, that most Christian writers who have treated of the Bath Kol have not been able to divest themselves of an undue desire to discredit its pretensions, in consequence of their fearing any comparison which might be instituted between it and the voices from heaven mentioned in the New Testament. Indeed,

Lightfoot (in his *Hor. Hebr.* ad Matth. iii. 17) considers all cases of Bath Kol to be either Jewish fables or devices of the devil. Instances of voices from heaven, on occasions outwardly very analogous to some among the Jews, are recorded in the history of the early Christian church; as the voice which was instrumental in making Alexander bishop of Jerusalem, and that which exhorted Polycarp to be of good courage (Eusebii *Hist. Eccles.* vi. 11; iv. 15).

Two very learned dissertations on the Bath Kol may be found in Vitringa's *Obscr. Sacr.* ii. pp. 341-363; and (by Danz) in Meuschen's *Nov. Test. ex Talmude illustratum*, pp. 351-378.—J. N.

BATH-RABBIM. In the Song of Solomon (vii. 5 [4]), the eyes of the bride are compared to 'the fish-pools in Heshbon, at the gate of Bath-rabbim' (שְׁעַר בַּת־רַבִּיּוֹם). This must have been the name of a gate of the town of Heshbon, looking towards, or giving access to the road which led to, Bath-rabbim, on each side of which was a pool or tank (not necessarily a *fish*-pool). It is commonly supposed that Bath-rabbim is Rabbah, the chief town of the Ammonites, still known as Ammân. This lies to the north of the present Hesbân, on which side of the town, however, no tank or pool remains, though there is one on the opposite side. The Sept. and Vulg. translate the appellation; Συγατρος πολλῶν, *filia multitudinis*.—W. L. A.

BATH-SHEBA [בַּת־שֶׁבַע], daughter of Eliam, grand-daughter of Ahitophel, and wife of Uriah. She was seduced and became pregnant by King David during the absence of her husband, who was then engaged at the siege of Rabbah (2 Sam. xi. 4, 5; Ps. li. 2). [Perhaps in this lay the reason of Ahitophel's enmity to David, and David's remorseful dread of him.] The child thus born in adultery became ill and died (2 Sam. xii. 15-18). After the lapse of the period of mourning for her husband, who was slain by the contrivance of David (xi. 15), she was legally married to the king (xi. 27), and bore him Solomon (xii. 24; 1 Kings i. 11; ii. 13). In 1 Chron. iii. 5 she is called Bath-Shua [בַּת־שׁוּא];

and her father, Ammiel, instead of Eliam (comp. Matt. i. 6). The other children of Bath-sheba are named in 2 Sam. v. 14; 1 Chron. iii. 5. She is afterwards noticed only in consequence of her good-natured intercession for Adonijah; which incidentally displays the respect with which she was treated by king Solomon, her son (1 Kings ii. 19). [DAVID, ADONIJAH.] The Rabbins describe Bath-sheba as a woman of a highly cultivated mind, [and ascribe to her the counsels contained in Prov. xxxi.]—E. M.

BATH-SHUA. [BATH-SHEBA.]

BATH-ZACHARIAS. [BETH-ZACHARIAS.]

BATTLE, SYSTEM OF. Though the Hebrews, in their mode of conducting warlike operations, varied somewhat in the course of ages, and are elsewhere shewn to have been swayed by the practice of greater and more military nations, still, from the period when the institution of royalty gave rise to an organized system, it was a maxim to spare the soldiers all unnecessary fatigue before an engagement, and to supply them liberally with food. Their arms were enjoined to be in the best order, and when drawn up for battle they formed a line

of solid squares of a hundred men, each square being ten deep, and with sufficient interval between to allow of facility in movements, and the slingers to pass through. The archers may have occupied the two flanks, or formed in the rear, according to the intentions of the commander on the occasion; but the slingers were always stationed in the rear until they were ordered forward to impede a hostile approach, or to commence the engagement, somewhat in the manner of modern skirmishers. Meantime, while the trumpets waited to sound the last signal [the priests in the earlier ages (Deut. xx. 1-4), subsequently the king, accompanied with priests and levites (2 Chron. xiii. 4-12; xx. 20, 21), and still later, the general in command (1 Macc. iv. 8-11), delivered an address, by which, either directly or indirectly, the soldiers might be animated to do their duty courageously. The king went to battle in his royal costume] except when he wished to remain unknown, as at Megiddo (2 Chron. xxxv. 22). It was now, we may suppose, when the enemy was at hand, that the slingers would be ordered to pass between the intervals of the line of solid squares, open their order, and with shouts, let fly their stone or leaden missiles, until by the gradual approach of the opposing fronts they would be hemmed in, and be recalled to the rear, or to cover a flank. Then would come the signal to charge, and the great shout of battle; the heavy infantry, receiving the order to attack, would, under cover of their shields and levelled spears, press direct upon the front of the enemy; the rear ranks might then, if so armed, cast their second darts, and the archers from the rear shoot high, so as to pitch the arrows over their own main line of spearmen into the dense masses beyond them. If the enemy broke through the intervals, we may imagine that a line of charioteers in reserve, breaking from their position, might in part charge among the disordered ranks of the foe, drive them back, and facilitate the restoration of the oppressed masses, or wheeling round a flank, fall upon the enemy, or be encountered by a similar manœuvre, and perhaps repulsed. The king, meanwhile, surrounded by his princes, posted close to the rear of his line of battle, and in the middle of the showered missiles, would watch the enemy, and remedy every disorder. In this position it was that several of the sovereigns of Judah were slain (2 Chron. xviii. 33, and xxxv. 23), and that such an enormous waste of human life took place; for the shock of two hostile lines of masses, at least ten in depth, advancing under the confidence of breastplate and shield, when once engaged hand to hand, had difficulties of no ordinary nature to retreat; because the hindermost ranks, not feeling personally the first slaughter, would not, and the foremost could not, fall back; neither could the commanders disengage the line without a certainty of being defeated. The fate of the day was therefore no longer within the control of the chief, and nothing but obstinate valour was left to decide the victory. Hence, from the stubborn character of the Jews, battles fought among themselves were particularly sanguinary; such, for example, as that in which Jeroboam, king of Israel, was defeated by Abijah of Judah (2 Chron. xiii. 3, 17), wherein, if there be no error of copyists, there was a greater slaughter than in ten such battles as that of Leipzig, although on that occasion three hundred and fifty thousand combatants were engaged for three successive days, provided with all the implements of

modern destruction in full activity. Under such circumstances defeat led to irretrievable confusion; and where either party possessed superiority in cavalry and chariots of war, it would be materially increased; but where the infantry alone had principally to pursue a broken enemy, that force, laden with shields, and preserving order, could overcome very few who chose to abandon their defensive armour, unless they were hemmed in by the locality. Sometimes a part of the army was posted in ambush, but this manœuvre was most commonly practised against the garrisons of cities (Josh. viii. 12; Judg. xx. 38). In the case of Abraham (Gen. xiv. 16), when he led a small body of his own people suddenly collected, and fell upon the guard of the captives, released them, and recovered the booty, it was a surprise, not an ambush; nor is it necessary that he should have fallen in with the main army of the enemy. At a later period, the Hebrew armies formed into more than one line of masses; but there is evidence that they always possessed more valour than discipline.—C. H. S.

BATTLEMENT. [HOUSE.]

BAUER, GEO. LORENZ, Professor of Biblical Exegesis and Oriental Languages at Heidelberg, was born 14th August 1755, and died 12th January 1806. He was a voluminous writer on biblical and theological subjects. His hermeneutical works are his most valuable. Along with Dathe he edited *Glassii Phil. Sac. nostris temporibus accommodata*, of which the second volume especially is his, Lips. 1796. He wrote also *Entwurf einer Hermeneutik des A. und N. T.*, Leipz. 1799; which contains the substance of an earlier work, *Hermeneutica V. T.*, Lips. 1797. These works are deeply tinged with neologianism; but, apart from this, are valuable. The edition of Glass's work ought rather to have appeared as a new work; for it omits much which that author would have deemed essential, and introduces much that would have filled him with indignation. Of the *Hermeneutik des A. und N. T.*, Dr. Davidson says, 'It exhibits good arrangement, great perspicuity, an unusual power of condensation, and no small acuteness. Unhappily, however,' he adds, 'the neology of the author is apparent' (*Hermen.* p. 702). Bauer wrote also *Die Kleinen Proph. ubers. und mit comment. erläutert*, 2 vols., Leipz. 1786-90; *Theologie des A. T. oder Abriss der relig. Begriffe der Alten Hebräer*, Leipz. 1796; *Biblische Theologie des N. T.*, 4 vols., Leipz. 1800-2; and several works on biblical antiquities and theology. Bauer was the first openly to apply the term mythology to the divine revelations of Scripture, and to speak of the biblical narratives as myths. He even went the length of issuing a work entitled *Hebräische Mythologie des A. und N. T. mit parallelen aus der Mythol. anderen Völkern*, etc., 2 vols., Leipz. 1802. These works of the 'audacious author' (*dreiste verfasser*), as Tholuck calls him (*Vermischte Schr.* ii. 141) have long since ceased to command any respect. A translation into English of his *Theology of the Old Testament* appeared in 1838, but it excited no attention, and was felt to be simply offensive.—W. L. A.

BAUER, KARL LUDWIG, born at Leipsic 18th July 1730, died 7th September 1799 at Hirschberg, in Silesia, where he was rector of the Gymnasium. He wrote *Philologia Thucydidea-Paulina*, Halle, 1773; *Logica Paulina*, *ibid.*, 1774; *Rhetorica*

Paulina, 2 vols., *ibid.* 1782. These works are worthy of notice; they unite solid learning with acuteness and precision.—W. L. A.

BAUMGARTEN, SIGISMUND JAKOB, D.D., was born at Wollmirstadt 14th March 1706. He was educated at Halle, first in the Orphan House, afterwards at the University. After passing through various subordinate offices he became Professor of Theology in that University in 1743. He was the most famous theological professor of his day, having usually as many as from 300 to 400 students attending his lectures, and so casting all his colleagues into the shade that when he announced his intention to lecture on any branch, it was tantamount to an intimation that none of them need attempt to venture into the same field, as they had no chance of an audience. He was an indefatigable student and lecturer, and his published works relate to almost every department of theological inquiry. In theology he followed the method of Wolf; reducing all the dogmas of the science to the most rigid schematism, and presenting theology as bare of life and spirit as it is possible to conceive. Though himself orthodox in his teachings, he occupied a position of antagonism to the Pietist school, and introduced a spirit of rationalising in religion, which, carried out to its full extent by his pupil and admirer Semler, led to that revolution in German theology from which its students are as yet only beginning to return. His exegetical writings are his feeblest productions, unless perhaps we except his sermons. He wrote *Auslegung der Briefe Pauli an die Gal., Eph., Phil., Col. und Thess.*, edited by Semler, Halle, 1767; *Ausleg. der Br. Pauli an die Römer*, Halle, 1749; *Ausleg. der Briefe an die Cor.*, edited by Noesselt, Halle, 1761; *Erklärung der Br. an die Heb.*, edited by Maschen and Semler, Halle, 1763; and a work on Hermeneutics. He died at Halle 4th July 1757.—W. L. A.

BAUMGARTEN-CRUSIUS, LUDWIG FRIED. OTTO, D.D., was born at Merseburg 31st July 1788, and died at Jena, where he was Professor of Theology and Principal of the University, 31st May 1843. He was a man of great natural powers and of ample scholarship; and had his life been longer spared to complete the plans he had before his mind, he might have rendered service of the highest kind to the cause of scientific theology. Of the works which he published during his lifetime, the most valuable are his *Einleitung in das Stud. der Dogmatik*, 1820; his *Grundzüge der Bibl. Theologie*, Jena, 1828; and his *Compendium der Dogmengeschichte*, of which only the first part was issued by himself in 1840, the work being completed by Hase in 1846. He was engaged at the time of his death on a *Theologische Auslegung der Johannischen Schriften*, of which he published the first part in 1843. A second part, prepared from his MSS. by Kimmel, appeared in 1845. Since then his Comments on the epistles to the Romans, Galatians, Ephesians, Colossians, Philippians, and Thessalonians, collected partly from the notes of his students, have been published. These are full of useful hints, but as a whole they are disappointing. Even his first volume on John's writings is hardly worthy of his reputation. One cannot, however, but notice the impartiality and earnestness with which he seeks to ascertain the meaning of his author, irrespective of schools and systems. Belonging to no party, he has been blamed by the

orthodox for his tendency to rationalism, and by the rationalists for his leanings towards orthodoxy.—W. L. A.

BAXTER, RICHARD, an eminent nonconforming divine, was born at High Ercall, in Shropshire, on November 12, 1615, and after a life of herculean labour amidst almost constant suffering, died 8th December 1691. His works, which are very numerous, consist chiefly of polemical and practical treatises. His only biblical work is his *Paraphrase on the New Testament, with notes, doctrinal and practical*: Lond. 1685, 4to; 1695, 8vo. This work the author designed for the use of 'religious families in their daily reading of the Scriptures, and of the poorer sort of scholars and ministers who want further help.' In accordance with this design, it is practical rather than strictly expository; but the meaning of the passage is often given with much felicity, and the work is full of useful suggestions. Some of his Annotations appended to the Paraphrase are valuable specimens of condensed and sound interpretation, especially in the Pauline epistles.—W. L. A.

BAYER, FRANCISCO PERES, a Spanish antiquary, born at Valencia in 1711, died 1794. He wrote *De Numis Hebræo-Samaritanis*, Valent. 1781, and *Numm. Heb. Sam. Vindiciae*, 1790. These are standard works on the subject to which they relate.—W. L. A.

BAYLY, ANSELM, LL.D., an English clergyman, sub-dean of the Chapel Royal. He issued an edition of *The Old Testament in English and Hebrew, with remarks, critical and grammatical, on the Hebrew, and corrections of the English*. Lond. 1774. In this edition the authorised version, with a few alterations, chiefly in the punctuation, is printed so as to face the Hebrew; a few notes are added of an explanatory kind; the k'ri readings are conveniently placed on the margin; and summaries of the books are appended. The work is of little value, except as it supplies a legible Hebrew text. The text is pointed, but only the *athnach* and *soph-pasuk* accents are inserted. Dr. Bayly published also a Hebrew grammar.—W. L. A.

BAYNE, PAUL, a Puritan divine who died in 1617. He was a fellow of Christ College, Cambridge, and succeeded Perkins in the lecture at St. Andrews, Cambridge. He wrote *A Commentary on the 1st and 2d chapters of St. Paul to the Colossians; together with divers places of Scripture briefly explained*; 4to, Lond. 1634; *An entire Com. on the Epistle to the Ephesians*; fol., Lond. 1643. These display learning and acuteness.—W. L. A.

BAY-TREE. [EZRACHI.]

BDELLIUM. [BEDOLACH.]

BEALOTH (בְּעֹלוֹת), a town in the southern part of the tribe of Judah (Josh. xv. 24).

BEAN. [POL.]

BEÄN, CHILDREN OF (*בְּנֵי בַאדָן*), the name of a tribe, predatory in their habits, destroyed by Judas Maccabeus (1 Macc. v. 4, 5). In the margin of the A. V. they are identified with the Benei Ja'aqan (Num. xxxiii. 31).

BEAR. [DOB.]

BEARD. With the Jews, as with all Oriental nations, the beard was an object of care and importance. They viewed it as the special mark of manly dignity, and the loss of it as a disgrace or degrading punishment (2 Sam. x. 4; Is. vii. 20; Ezra v. 1-5). They encouraged its growth, and were careful to trim it, dress it, and anoint it with perfumed unguents (Ps. cxxxiii. 2). Where intimacy permitted, the beard was the object of salutation, and Joab availed himself of this to deceive Amasa (2 Sam. xx. 9). Only in seasons of sorrow and calamity did they neglect their beards; in deep affliction they cut them off, or tore them out, or covered them up (2 Sam. xix. 24; Is. xv. 2; Jer. xli. 5; Ezra ix. 3; Ezek. xxiv. 17, 22). They were forbidden by Moses to round off the corners of their beards (Lev. xix. 27; xxi. 5), a practice which was common among the Arabians, and had with them an idolatrous significance (Herod. iii. 8), on which account, doubtless, it was forbidden to the Jews. There is a reference to this practice as a characteristic of heathenism in Jer. ix. 25; xxv. 23 (See Henderson *Comment.* on the places). The preservation of the beard established a distinction between the descendants of Abraham and the Egyptians, among whom they sojourned, as the latter shaved off the beard entirely, though they

132.

adopted the singular practice of fastening false beards upon their chins (Wilkinson, *Anc. Egypt.* iii. 362). [* In cut 132 is a curious collection of bearded heads of foreigners obtained from the

133.

Egyptian monuments, and, without doubt, including the beards, head-dresses, and physiognomies of

most of the nations bordering on Egypt and Palestine. In nearly all of them we see that the upper edges of the beard were shaven off, and apparently the hair of the upper lip. In the cut 133, fig. 1 represents the head and beard of a Babylonian figure; fig. 2 is the regal Persian beard, curiously curled and tressed; fig. 3 is a somewhat similar beard from the recently-discovered sculptures of Xanthus in Asia Minor; and fig. 4 is Græco-Syrian, from the sculptures at Palmyra. With these it may be useful to compare the principal varieties of the beard among the modern Orientals, whose tastes in this matter are in general much less fantastic than those of their predecessors. In the following cut the first figure is that of a modern Egyptian

134.

(Copt), and the second that of a Persian, exhibiting a remarkable contrast between the amplitude of the one beard and the scantiness of the other. The other two figures we offer with pleasure, as presenting, in all probability, correct resemblances of such beards as were worn by the ancient Israelites. Fig. 3 is that of an Arab sheikh, and fig. 4 that of a Syrian Jew.—J. K.] (D'Arvieux, *Coutumes des Arabes*; Niebuhr, *Descr. of Arabia*, Sec. xxii. ch. 4; Harnar, *Eastern Customs*, II. 357-360; Horne, *Introd.*, vol. iii., pt. 4, chap. 2.)—W. L. A.

BEAST. In the Bible, this word, when used in contradistinction to *man* (Ps. xxxvi. 6), denotes a brute creature generally; when in contradistinction to *creeping things* (Lev. xi. 2-7; xxvii. 26), it has reference to four-footed animals; and when to

wild mammalia, as in Gen. i. 25, it means domesticated cattle.

BEATING. [PUNISHMENTS.]

BEAUSOBRE, ISAAC DE, a French Protestant minister, was born at Nivort, 8th March 1659. Driven from France at the time of the revocation of the edict of Nantes, he fled to Holland, whence he passed to Berlin, and spent the rest of his days there as pastor of one of the French churches in that city. His pen was occupied in many literary labours. That by which he is now chiefly remembered is one which he undertook by order of the king of Prussia, in conjunction with Lenfant, *Le Nouveau Testament de N. S. Jesus Christ traduit en Français sur l'original Grec, avec des notes literales pour éclaircir le texte*; Amst. 2 vols. 4to, 1718, of which a new and greatly improved edition appeared in 1741. Of this work Beausobre executed the latter part, beginning with the epistle to the Romans. After his death, which took place in June 1738, there appeared from his pen *Remarques historiques crit. et philol. sur le N. T.*, 2 vols. 4to, La Haye, 1742. These biblical labours of Beausobre are valuable; the translation of the N. T. is one of the best in the French language, and his notes are always judicious, often felicitous. He was a man of undoubted learning and ability, which he devoted to the worthiest pursuits. In conjunction with his son, Charles Louis, he prepared *Discours sur la Bible de Saurin*, which appeared without date. Four volumes of sermons, which partake very much of the nature of comments, were published after his death in 1755. The rest of his works are devoted to church history.—W. L. A.

BEBAI (בְּבַי; Sept. Βαβαί, Βαβί, Βηβί, Βηβαί).

The name of a man whose son, Zechariah, was the leader of twenty-eight men who went up with Ezra from Babylon to Jerusalem (Ezr. viii. 11); and who was at the head of a large body of persons called 'the sons of Bebai,' of whom upwards of 600 (623 Ezr. ii. 11; 628 Neh. vii. 16) had gone up on a previous occasion with Zerubbabel. Four of these had taken strange wives (Ezr. x. 28). The name of Bebai occurs among those of the men that signed the covenant (Neh. x. 15).—W. L. A.

BECHAIM (בְּכַיִם). [The name of a tree which

has not been satisfactorily identified. It occurs only in the plural, the sing. being בֶּכֶה 2 Sam. v. 23, 24, and 1 Chron. xiv. 14, 15, 'And let it be, when thou hearest the sound of a going in the tops of the mulberry trees, that thou shalt bestir thyself.'

Neither the *mulberry* nor the *pear-tree*, considered to be the bechaim of the Scriptures, satisfies translators and commentators, because they do not possess any characters particularly suitable to the above passages. With regard to the mulberry, Rosenmüller justly observes, that this interpretation is countenanced neither by the ancient translators nor by the occurrence of any similar term in the cognate languages. We should expect, however, some notice in Scripture of a tree which must have been common, and always esteemed for its fruit [SYCAMINE]. Rosenmüller prefers pear-trees in the preceding passages, as being the oldest rendering of the words. But the correctness of this

translation is not confirmed by any of the cognate dialects; nor is the pear-tree more appropriate than the mulberry. [Celsius (*Hierobot.* i. 335) sug-

gests the Arabic بَكَا *baka*, a tree from which exudes a gum in drops; hence the name from the verb to *weep*; but this tree is unknown.]

The tree alluded to in Scripture, whatever it is, must be common in Palestine, must grow in the neighbourhood of water, have its leaves easily moved, and have a name in some of the cognate languages similar to the Hebrew *Baca*. The only one with which we are acquainted answering to these conditions is that called *bak* by the Arabs, or rather *shajrat-al-bak*—that is, the *fly* or *gnat* tree. It seems to be so called from its seeds, when loosened from their capsular covering, floating about like gnats, in consequence of being covered with light silk-like hairs, as is the case with those of the willow. In Richardson's *Arabic Dictionary* the bak-tree is considered to be the elm, but to us it appears to be the poplar. The willow and the poplar are well known to have the same kind of seed, whence they are included by botanists in the group of Salicinææ.

As it seems to us sufficiently clear that the bak-tree is a kind of poplar, and as the Arabic 'bak' is very similar to the Hebrew 'Baca,' so it is probable that one of the kinds of poplar may be intended in the above passages of Scripture. And it must be noted that the poplar is as appropriate as any tree can be for the elucidation of the passages in which bechaim occurs, as no tree is more remarkable than the poplar for the ease with which its leaves are rustled by the slightest movement of the air; an effect which might be caused in a still night even by the movement of a body of men on the ground, when attacked in flank or when unprepared. That poplars are common in Palestine may be proved from Kitto's *Palestine*, p. 114: 'Of poplars we only know, with certainty, that the black poplar, the aspen, and the Lombardy poplar grow in Palestine. The aspen, whose long leaf-stalks cause the leaf to tremble with every breath of wind, unites with the willow and the oak to overshadow the watercourses of the Lower Lebanon, and, with the oleander and the acacia, to adorn the ravines of southern Palestine: we do not know that the Lombardy poplar has been noticed but by Lord Lindsay, who describes it as growing with the walnut-tree and weeping-willow under the deep torrents of the Upper Lebanon.'—J. F. R.

BECHER (בְּכֶר; Sept. Βοχέρ and Βαχ(ρ); Genesius (*Thez.* p. 206) connects this word with

בְּכֶר and Arabic بَكْر *bakr*, a young camel. In older

Onomastica (e. g., in Walton, *Polyglot*, vol. vi., *sub. fin.*), it is referred to the root בְּכֶר, and connected with בְּכֹר *primgenitus*, first-born.' The same origin of this word seems to be given by Fuerst (*Onomast. Sac.*, in Concordance, p. 1271); who compares בְּכֶר which he translates *Frühgebörner* with the Greek names Archigenes, Protogenes. Other derivations have been suggested, but have found little favour.

This proper name occurs in (1) Gen. xli. 21;

(2) 1 Chron. vii. 6, 8, twice; and (3) in Num. xxvi. 35. In (1) and (2), Becher has the second place among the sons of the patriarch Benjamin; but in (3), the same name is given to one of the sons (again the second in order) of Ephraim, son of Benjamin's brother Joseph. Becher is further here described as the head of 'the family' (A. V.), or rather *clan* or *gens* 'of the Bachrites' מִשְׁפַּחַת הַבְּכָרִי (*Mishpachath Habbakri*).

Although this is all that can be alleged with certainty of this name, yet the purposes of this work would not be answered were we to ignore the difficulties with which the subject of this article is beset, owing to the apparent discrepancies of the genealogical lists. There are four such lists connected more immediately with Becher; the three occurring in the passages which have been already mentioned, and the fourth in 1 Chron. viii. 1. It is important to observe that these documents were not only drawn up at different times by different writers, but actually refer to various periods of the national history. The first of them enumerates that interesting group of seventy, the nucleus of the future nation, which migrated with the venerable patriarch to Egypt; the second (which seems to be the exactest of the four, and to have been derived from public records) purports to be a census taken some 250 years afterwards, on the plains of Moab, when the nation, now fully organised, was about to enter the Promised Land; the third and the fourth have all the appearance of less exactness, they are portions of a long genealogy of a fragmentary and supplemental character, derived by the author, not from the public archives which must have been destroyed at the period of the captivity and the fall of Jerusalem, *temp.* Zedekiah, but from private sources (*Keil, Apol. Versuch üb. d. Bücher d. Chronik.* 198). This opinion coincides with the fact that these genealogies relate mainly to that part of the nation which returned from captivity, including the tribe of Benjamin, which has a remarkable prominence in these lists. These third and fourth lists occur indeed in consecutive chapters (1 Chron. vii. 6, 12, and viii. 1, etc.), but it by no means follows that they refer to continuous periods of time. J. D. Michaelis assigns the former to the age of David (to which verse 2 refers the census of 'the sons of Issachar' therein adduced; but this date need not be extended to the other genealogical fragments of the same chapter); whereas Keil (*Apol. Versuch*, p. 186) suggests its reference to a time previous to the calamitous Benjamite war, which is narrated in Judg. xx. xxi., on the strong ground of the extreme improbability that at any subsequent period so many as 60,000 'mighty men of valour' could have been forthcoming from three clans only of this tribe.

This view, which we accept as the most probable, throws back our list to an early date, for the Benjamite war took place in the time of Phinehas (see Judg. xx. 28), not long after the death of Joshua. It will be obvious at once, then, that a long interval intervenes between this genealogical fragment and our fourth and last register, which is generally referred to either a later period of the kingdom of Judah, or to the age of the Return from Captivity (1 Chron. ix. 1). With these dates of our four genealogies in mind, we now proceed to indicate their variations in reference to the subject of this article. In the first

list (Gen. xlv. 21), Benjamin's sons amount to no less than *ten*, Becher being the second; in the next list (Num. xxvi. 35), he entirely disappears from the catalogue of the patriarch's sons, now reduced to *seven*, including two of his grandsons; while in the third list, Becher resumes his place as second; again, however, to disappear in the first verse of the very next chapter, from the enumeration of Benjamin's sons, *five* of whom are mentioned this time, and in *preciser* terms than anywhere before: 'Now Benjamin begat Bela his first-born, Ashbel the second, and Aharah the third, Nohah the fourth, and Rapha the fifth.' In these diversities lies the difficulty in which the name of Becher is involved. Before we proceed to offer what appears to us the least objectionable solution of it, we will notice some of the expedients which have been proposed for meeting the discrepancy. It has been a frequent resource among Commentators to attribute these genealogical variations to textual corruption, and this has been resorted to in order to rectify the genealogical discrepancy in the use of our word Becher. Thus in the fourth of our lists, 1 Chron. viii. 1, where the text reads, 'Now Benjamin begat Bela his first-born, Ashbel the second, and Aharah the third, etc.' The word בכור ('his first-born'), is reduced to בכר (Becher), and the pronominal suffix ו is transformed into, the conjunction, and prefixed to the next word אַשְׁבֵּל, thus producing the sense, 'Benjamin begat Bela, Becher, and Ashbel,' in agreement with Gen. xlv. 21. But this conformity is secured only by a mutilation of our verse, and in direct opposition to the peculiarity of its precise structural form. Three names are mentioned in it, with the express addition of the ordinals, *first-born, the second, the third*, etc. It is contrary to sound criticism to remove on mere conjecture the first of these ordinals, retaining still the others, which would in that case become inapplicable and untrue, for Ashbel would be no longer 'the second,' nor Aharah 'the third,' etc. Moreover, Kennicott alleges a large amount of MS. evidence in favour of the *plene scriptum* in this word בכורו, thus raising an additional obstacle in the way of the proposed change. (See Kennicott's *Vet. Test. Hebr.* ii. p. 565.) We feel bound to prefer the text as it stands to such an amendment as this. Another mode of reconciling the difficulties of these tables, is based on the alleged and undoubted fact, that the members of the Jewish families bore more than one name each, and that the same individual appears in one list under one name, and in another list under another name. (See Carpozvii *Introductio in V. T.*, vol. i. pp. 292, 293.) This is not the place to examine this theory fully; suffice it to say in passing, that it can only be applied with safety now and then. Some of BECHER'S brothers (Genesis), or else nephews (Numbers and Chronicles), appear with double names, or rather the same names slightly altered; e.g., אחי *Ehi*, in Gen. v. 21, is lengthened into אחירם *Ahiram*, in Num. v. 38; while the תפים *Huppim*, of Gen. v. 21, becomes תופם *Hupham*, in Num. v. 39, and חוּוּם *Huwam*, in Chron. viii. 3. Again, by transposition and abridgment, ארר *Ar*, in Gen. v. 21, becomes ארר *Addar*, in Chron. viii. 3, and שפופם *Shephupham*, in Chron. viii. 5, becomes שופם *Shupham*, in Num., and שפם *Shupim*, in Chron. vii. 12. These, however, are mild conjectures, and may be accepted without hesitation.

Other attempts at reconciliation are not so acceptable, as when Junius and Malvenda (Poli. *Synop.* on 1 Chron. viii.) make *Jediael*, the third son of Benjamin according to Chron. vii. 6, the same as *Ashbel* the second son of the next chapter, and who identify also Becher, whom the former passage mentions as Jediael's elder brother, with Nohah who is mentioned in the latter passage as younger by two degrees than Ashbel. Another class of variations is easily reconciled by a careful discrimination of the word בן (*son*). This noun is often used in these lists to designate any *lineal descendant*. When, therefore, in Gen. xli. 21, Naaman and Ard occur in the same category with Bela and Becher as sons of Benjamin in the first degree, while the parallel place in Numbers registers them as the sons of his son, *i.e.*, his sons in the second degree, this to the intelligent reader will not seem an inconsistency, but a very proper, and it may be a profound use of language; for let him consider the different character of these two lists, and remember the division of the nation into (1.) Tribes; (2.) *Mishpachoth* or clans, etc. (Josh. vii. 14). Now, as a general rule, the *grandsons* of Jacob are regarded as the founders of the minor divisions, the institution of the larger ones being invariably attributed to his literal and adopted *sons*. Whatever names therefore occur in our two lists in common, designate the same persons in different relations: the first refers all its names upward, first to Jacob as the symbol of the nation's *unity*, and then to his sons as representing the simplest and highest *plurality*, that of the Tribes; whereas the second refers all its names downwards towards the subdivisions of clans, etc. Thus in the case of Benjamin, all the names which in the list of Genesis are classed under this patriarch are simply the names of persons who are to be regarded as integral members of the tribe of Benjamin; but in the list of Numbers this relation is no longer considered, the same persons are now mentioned in the new and wider relation of founders of *Mishpachoth* or clans; *i.e.*, no longer בני בנימן (*B'ney Binyamin*), 'sons of Benjamin,' members of his tribe merely; but בני בנימן למשפחתם (*B'ney Binyamin l' mishp'chotham*), 'sons of Benjamin after (or in relation to) their families' or clans. We now approach the gist of the difficulty. Why is BECHER's name absent from Num. xxvi. 35, when not only his elder brother, Bela, but probably four younger brothers and two nephews appear in the eminent position of heads and founders of 'families' or clans? Keil (*Biblischer Commentar über das A. T.*) is one of the latest writers who has noticed the difficulty. He acknowledges the force of it, as a genealogical discrepancy of more than a formal kind; and he suggests the same solution which had occurred to older commentators (see Bishop Patrick on Num. xxvi. 38). 'Becher, Gera, and Rosh,' says he, referring to the three names which disappear from the second list, 'are here wanting, for no other reason, undoubtedly, than because they either died childless, or at any rate did not leave behind them a progeny sufficiently numerous to form independent clans or families.' Now, however applicable this view may possibly be to the case of the others, it can hardly be true of Becher. Our third list (1 Chron. vii. 8, 9) attributes to him an offspring scarcely less numerous, and not at all less conspicuous in military prowess, than his eldest brother's, who is ever mentioned as the fore-

most man of the senior clan of the tribe which was pre-eminent in Israel for warlike energy and enterprising activity. 'The sons of Becher [were] Zemira, and Joash, and Eliezer, and Elioenai, and Omri, and Jerimoth, and Abiah, and Anathoth, and Alameth. All these are the sons of Becher. And the number of them, after their genealogy by their generations, heads of the house of their fathers, mighty men of valour, was twenty thousand and two hundred.' This statement occurs in our third genealogical document, which belongs (at the very earliest period assigned to it) to an age subsequent to the date of our second genealogy by some fifty or sixty years at least. Becher, therefore, must not be excluded through incapacity or want of offspring from the muster-roll of the plains of Moab; but our belief is, that he was not in fact excluded on that occasion. We have already noticed, at the beginning of this article, that (three verses only previous to the register of the sons of Benjamin) in Numb. xxvi. the name Becher actually occurs with a מִשְׁפַּחַת הַבְּכָרִי, a *gens*, or clan, of Bachrites, amongst 'the sons of EPHRAIM' (verse 35).

This name has by some been identified with the *Bered* of 1 Chron. vii. 20, but without reason as it seems; for Bered is the son of Shuthelah according to that passage, and not the son of Ephraim, as Becher is represented in Num. xxvi. Now, except this, no other name has been attempted to be identified with Becher as an Ephraimite from any other genealogy. Under these circumstances, then, conjecture, which we would never lightly resort to, may be allowed; for if it be allowable at any time, it is surely when it originates an alteration which, though slight in itself, squares well with the many conditions of a case otherwise inextricably complicated. We would therefore propose to transfer from the 35th verse* to the 38th of Num. xxvi., the

* The ancient Hebrew text, from which the LXX. version was made, does not seem to have read BECHER (or any name like it) among the sons of Ephraim. We transcribe from Tischendorf's last edition of the LXX., tom. i., p. 187, that portion of the census which pertains to the Ephraimites:—Καὶ οὗτοι υἱοὶ Ἐφραΐμ· τῷ Σουθαλά, δῆμος ὁ Σουθαλαί· τῷ Τανάχ, δῆμος ὁ Ταναχί· οὗτοι υἱοὶ Σουθαλά—τῷ Ἐδέέν, δῆμος ὁ Ἐδεέν· οὗτοι δῆμοι Ἐφραΐμ ἐξ ἐπισκέψεως αὐτῶν, δύο καὶ τριάκοντα χιλιάδες καὶ πεντακτασίαι. According, then, to this ancient reading, the total of 32,500, which were numbered to the Ephraimites on the plains of Moab, were comprised in the clans of *two sons only*, and a grandson of Ephraim; whereas in the Masoretic Hebrew text, from which our version comes, the same total is derived from *three sons* and a grandson; if, then, we eliminate, as we have proposed to do, the name and family of Becher from where it lies (like a waif and stray) in an unsuitable context, and transfer it to its natural position among the families of Benjamin, we shall not only reconcile discrepancies which baffle every other resource, but restore an agreement *pro hęc vice* with the Septuagint. We need hardly say that no other name *but that of Becher* can be removed from the text; Σουθαλά squares exactly with שוּתְלַח, Τανάχ, per metathesis, becomes תַּחַן (Tachan), Ἐδέέν, by change of γ for ר (which is very frequent in these names) becomes עֵרָן (*Eran*).

clause, 'Of Becher the family of the Bachrites,' inserting it in its natural place between Bela and his family and Ashbel and his family; the 38th verse would then stand thus—'The sons of Benjamin, after their families: of Bela, the family of the Belaites; of Becher, the family of the Bachrites: of Ashbel, the family of the Ashbelites,' etc., etc. This would produce an agreement with both the preceding and the succeeding lists, which we have seen the facts of the case to require.

The occurrence of Becher's name among the Ephraimites has been accounted for, by supposing that 'Becher [the Benjamite] or his heir and head of his house, married an Ephraimitish heiress, a daughter of Shuthelah (1 Chron. vii. 20, 21), and so that his house was reckoned in the tribe of Ephraim, just as Jair,' etc. (See Smith's *Dictionary of the Bible*, vol. i., p. 175.) We have not space here to state in full our grounds of dissatisfaction with this view. Whether Jair's adoption as a Manassite were *ex jure hereditatis*, according to Num. xxxvi. 6 (which is certainly doubtful),* or his transjordanic property accrued to him, as a successful adventurer, and only in right of conquest (as seems probable from Deut. xii. 12-15, and Num. xxxiii. 41), it is difficult, at any rate, to make his case parallel to Becher's. The assumption that Becher married Shuthelah's daughter, and so became incorporated into the tribe of Ephraim by the law of succession just referred to, cannot be sustained. No daughter of Shuthelah as an Ephraimite heiress would be likely to appear on Moses' register, contrary to his specific law, as giving right of inheritance to a Benjamite; moreover, that Becher and his family of Bachrites should remain by the side of Shuthelah and the family of the Shuthelahites is quite incompatible with the terms of the assumption itself, according to which Becher, as becoming the heir of Shuthelah, instead of retaining a *status* of his own, would merge into that of Shuthelah. But what need is there of argument in a case so plain? Becher, as we have seen, did not cease to be the head of a Benjamite *Mishpachah* long after the census of the plain of Moab (1 Chron. vii. 6-9). That his family subsequently became insignificant (if not extinct), either by some calamity like the Benjamite war of extermination, which probably fell heavy upon this particular branch of the tribe, or else by the Captivity, we conclude from the omission of his name and family from the fourth of our genealogies. There is an ominous blank throughout that lengthy catalogue (see 1 Chron. viii. throughout), touching the subject of our article, who does not appear again elsewhere. †

* See Selden *De Successionibus*, c. 18, for the Rabbinical opinion of relaxing the law of Numbers xxxvi. 6; and Grotius, *Annotations* on Matthew i. 16, for the opposite view, who refers to the high authority of Josephus and Philo, in favour of the perpetual obligation of that law; but, after all, JAIR'S disqualification in the tribe of Judah was the illegitimacy of his father Segub (Kurtz' *Old Covenant*, vol. iii. p. 468).

† After bestowing the attention which is due to whatever proceeds from the pen of the author of the art. BECHER in Smith's *Dictionary of the Bible*, we regret to find ourselves at variance with him on his opinion of King Saul's descent from Becher. In this art., and more fully in his work, *On the Genealogies of our Lord*, pp. 213, 214, he gives a

For BECHER, said to be the son of Ephraim, in our text and version of Num. xxvi. 35, but now shewn to be probably the same as the Becher of Gen. xlv. 21, and 1 Chron. vii. 6, 8, see preceding article *passim*.—P. H.

BECHOR-SHOR, JOSEPH, also called, by way of abbreviation, *Harbash*, הרב בכור שור = הרב בכור שור, the Rabbi Bechor-Shor, flourished about A. D. 1170, and was the last representative of the Germano-French school of biblical commentators founded by the celebrated Rashi. His commentary on the Pentateuch shews that he was a sound exponent of scripture, and a worthy disciple of his school. Its chief merit consists in its setting forth, in a very striking manner, the connection, and evolving the meaning of this important portion of the Old Testament without entering into verbal criticism. As in all the exegetical productions of this famous school, we sometimes meet, in the commentary of Bechor-Shor, beautiful and rational explanations side by side with some Hagadic and puerile remarks. A few specimens will suffice to shew its value. Gen. iv. 4, 5 is explained according to the Hagada, that the acceptance of Abel's sacrifice and the rejection of Cain's were indicated by fire coming down from heaven consuming the one and leaving the other. This interpretation is also adopted by Rashi, and accounts for Theodotus's rendering, and St. Jerome's explanation of this passage. The words לקרא בשם יהוה (Gen. iv. 26), which have caused so much difficulty to commentators, he explains:—'Seth's goodness is here shewn in naming his son Enosh, *i.e.*, frail man (comp. Ps. viii. 4), although in his generation men began to name themselves by the name of the Almighty, mixing up God's name with theirs, as for instance, Mehujael (Gen. iv. 18). *i.e.*, the smitten of God; Mahalaleel (Gen. v. 12), *i.e.*, the praise of God.' Upon ונח מצא חן (Gen. vi. 8), Bechor-Shor beautifully remarks:—'There is frequently a play upon words in the Hebrew by transposing the letters of the name of a good man to his advantage, and of a bad man to his disadvantage. Thus it is said 'Er, Judah's first-born, was wicked' (Gen. xxxviii. 7), where *wicked* (רע) is obtained by a transposition of the letters *Er* (ער); so also here we have חן, *grace*, by a transposition of the letters in the name נח, *Noah*.'

Bechor-Shor's style is very clear, simple, and easy, and his commentary will be understood even by tyros in Hebrew. The commentary was published in 1520, Constantinople, but has become so very scarce that very few persons have known any thing about it. The laborious Dr. Adolph Jelinek, to whom biblical literature is so much indebted for bringing to light many mediæval productions, is republishing it from a MS. in the Munich library, and the first part, containing

tabular scheme of the posterity of Becher to Saul. We cannot (to begin with) grant him the identity of Becher and Bechorath, nor of Abiah and Aphiah. We fail to discover, in either of the genealogical fragments which give Saul's descent, 1 Chron. viii. 29-33, and 1 Chron. ix. 35-39, after careful comparison with 1 Sam. ix. 1, the soundness of the opinion, which connects the first king of Israel with the subject of our article.

Genesis and *Exodus* has already appeared in Leipzig, 1856.—C. D. G.

BECK, CHRISTIAN DANIEL, D.D., Prof. of Greek and Latin literature at Leipsic, was born 22d Jan. 1757, and died 13th Dec. 1832. His attention was devoted chiefly to classical literature, in which department he enjoys a high reputation; but he gave himself also to sacred studies, and in the department of hermeneutics especially, has rendered important service by his *Monogrammata Hermen. Libb. N. F.*, of which only the first part, containing *Hermen. N. F. universa*, has been published; Lips. 1803. The author's familiarity with ancient literature, his sound views of the proper method of dealing with works written in dead languages, and his general perspicacity of thought and expression, render this a work of great value to the student of Scripture.—W. L. A.

BECK, MATTHIAS FRED., a Lutheran minister at Augsburg, born 23d May 1649, died 2d Feb. 1701, was the editor of *Paraph. Chald. I. Libri Chroniconum hactenus inedita, nunc vero e codice MS. Bibl. Erfurt. exscripta*, 4to, Augs. 1680; *Par. Chald. II. Lib. Chron. etc.*, 4to, *ibid.* 1683.

BED. The manner of sleeping in warm Eastern climates is necessarily very different from that which is followed in our colder regions. The present usages appear to be the same as those of the ancient Jews, and sufficiently explain the passages of Scripture which bear on the subject. Beds of feathers are altogether unknown, and the Orientals generally lie on a hard couch. Poor people who have no certain home, or when on a journey, or employed at a distance from their dwellings, sleep on mats, or wrapped in their outer garment, which from its importance in this respect was forbidden to be retained in pledge over night (D'Arvieux, iii. 257; Gen. ix. 21, 23; Exod. xxii. 27; Deut. xxiv. 13). Under peculiar circumstances a stone covered with some folded cloth or piece of dress is often used for a pillow (Gen. xxviii. 11). The more wealthy classes sleep on mattresses stuffed with wool or cotton, which are often no other than a quilt thickly padded, and are used either singly or one or more placed upon each other. A similar quilt of finer materials forms the coverlet in winter, and in summer a thin blanket suffices; but sometimes the convenient outer garment is used for the latter purpose, and was so among the Jews, as we learn from I Sam. xix. 13, where Michal covers with a כַּנֵּף, cloak or mantle (corresponding to the modern *abba* or *hyk*), the image which was to represent her husband sleeping. The difference of use here is, that the poor wrap themselves up in it, and it forms their whole bed; whereas the rich employ it as a covering only. A pillow is placed upon the mattress, and over both, in good houses, is laid a sheet. The bolsters are more valuable than the mattresses, both in respect to their coverings and material: they are usually stuffed with cotton or other soft substance (Ezek. xiii. 18, 20); but instead of these, skins of goats or sheep appear to have been formerly used by the poorer classes and in the hardier ages. These skins were probably sewed up in the natural shape, like water-skins, and stuffed with chaff or wool (I Sam. xix. 13). It is not unlikely that the Israelites were acquainted with those wooden crescent-shaped bolsters of wood, which were

common in ancient Egypt (see cut 136); the comfort in the use of which is not very apparent, till one tries the experiment and realizes the complete repose which is obtained by resting the nape of the neck and base of the skull upon some similar contrivance.

It has been doubted whether the couches of the Jews for repose and for the use of the sick, called מִטָּה *mittah* (Gen. xlvii. 31; I Sam. xix. 13; 2 Sam. iv. 7; 2 Kings i. 4), מִשְׁכַּב *mishebab* (Exod. xxi. 18; 2 Sam. xiii. 5; Cant. iii. 1), or עֵרֶשׁ *'eres* (Job vii. 13; Cant. i. 16, properly 'bedstead,' comp. Deut. iii. 11), were actually bedsteads of different sorts, or simply the standing and fixed divans such as those on which the Western Asiatics commonly make their beds at night. We feel satisfied that the different Hebrew words answer to and describe different arrangements, although we may be unable now to assign to the several words their distinctive applications to still subsisting things.

The divan, or daïs, is a slightly elevated platform at the upper end and often along the sides of the room. On this are laid the mattresses on which the Western Asiatics sit cross-legged in the day-time, with large cushions against the wall to support the back. At night the light bedding is usually laid out upon this divan, and thus beds for many persons are easily formed. The bedding is removed in the morning, and deposited in recesses in the room, made for the purpose. This is a sort of general sleeping-room for the males of the family and for guests, none but the master having access to the inner parts of the house, where alone there are proper and distinct bed-chambers. In these the bedding is either laid on the carpeted floor, or placed on a low frame or bedstead. This difference between the public and private sleeping-room, which the arrangement of an Eastern household renders necessary, seems to explain the difficulties which have perplexed readers of travels, who, finding mention only of the more public dormitory, the divan, have been led to conclude that there was no other or different one.

The most common bedstead in Egypt and Arabia is of this shape, framed rudely of palm-

135.

sticks. It was used in ancient Egypt, and is figured in the mural paintings. In Palestine, Syria, and Persia, where the palm-tree is not common, and where timber is more plentiful, a bed-frame of similar shape is made of boards. This kind of bedstead is also used upon the house-tops during the season in which people sleep there. It is more than likely that Og's bedstead was of this description (Deut. iii. 11). In the times in which he lived the palm-tree was more common in Palestine than at present, and the bedsteads in ordinary use were probably formed of palm-sticks. They would therefore be incapable of sustaining any undue weight without being disjointed and bent awry; and this would dictate the necessity

of making that destined to sustain the vast bulk of Og, rather of rods of iron than of the mid-ribs of the palm-fronds. These bedsteads are also of a length seldom more than a few inches beyond the average human stature (commonly 6 feet 3 inches); and hence the propriety with which the length of Og's bedstead is stated, to convey an idea of his stature—a fact which has perplexed those who supposed there was no other bedstead than the divan, seeing that the length of the divan has no determinate reference to the stature of the persons reposing on it.

It is not necessary to suppose that the bedsteads were all of this sort. There are traces of a kind of portable couch (1 Sam. xix. 15), which appears to have served as a sofa for sitting on in the day-time (1 Sam. xxviii. 23; Ezek. xxiii. 41; Amos vi. 4); and there is now the less reason to doubt that the ancient Hebrews enjoyed this convenience, as we find such couches in use among the neighbouring nations, and figured on their monuments. The subjoined example is from

136.

ancient Egypt. The elegance of shape in this and other specimens, shews the perfection to which the manufacture of these articles had been brought among that people. Persons are represented sitting on such sofas in the day-time; and that they were used by single persons for sleeping on at night, is shewn by the wooden pillow placed thereon, as well as by the steps for ascent that occur beside some of the specimens (as at present) which stand higher than the others. Such couches were capable of receiving those ornaments of ivory which are mentioned in Amos vi. 4; which of itself shews that the Hebrews had something of the kind, forming an ornamental article of furniture.

The next cut shews another variety of couch-

137.

bed, from the sculptures discovered by Mr. Fellows in Asia Minor.

A bed with a tester is mentioned in Judith xvi. 23, which, in connection with other indications, and the frequent mention of rich tapestries hung upon and about a bed for luxuriousness and ornament, proves that such beds (represented in the annexed cut) as are still used by royal and dis-

138.

tinguished personages were not unknown under the Hebrew monarchy (comp. Esth. i. 6; Prov. vii. 16, seq.; Ezek. xxiii. 41).

It is evident that the ancient Jews, like the modern inhabitants of their land, seldom or never changed their dress on going to bed. Most people only divest themselves of their outer garment, and loosen the ligatures of the waist, excepting during the hottest part of the summer, when they sleep almost entirely unclad.—J. K.

BEDA, or BEDE, designated the Venerable, was born A.D. 673, and died in 735. His life was spent almost entirely in the seclusion of the cloister at Wearmouth, and his time devoted to study. He wrote a multitude of works, of which the most valuable is his *Hist. Eccles. Gentis Anglorum*. At an early period he commenced the practice of extracting from the writings of the Fathers their interpretations of Scripture, and from this source his exegetical works are principally derived. These comprehend the whole of the N. T., most of the O. T., and part of the Apocrypha. On the N. T. he follows chiefly Augustine; on the Old he draws also from Basil and Ambrose. His expositions, especially of the O. T., are guided by an allegorising spirit; indeed, he avows that it is by this process alone that the full meaning of Scripture can be elicited. 'He who knows how to interpret allegorically,' says he (*Praef. in Tobiam, Opp. iv. 347*), 'will see that the inner sense excels the simplicity of the letter as apples do leaves.' In his comment on the Catholic Epistles, 1 John v. 7 is omitted. His works have been collected in 6 vols. folio, Paris 1544, 1545, 1554, editions now of great rarity, in 8 vols. fol. Basil 1563, and in 8 vols. fol. Cologne 1612 and 1688 (Wright, *Biog. Brit. Liter., Anglo-Saxon Period*, pp. 263, 288).—W. L. A.

BEDAN (בִּדְאֵן). In 1 Sam. xii. 11, we read that the Lord sent as deliverers of Israel—Jerubbaal, *Bedan*, Jephthah, Samuel. Three of these we know to have been judges of Israel, but we nowhere find *Bedan* among the number. The Targum understands it of Samson, and so Jerome and the generality of interpreters; but this interpretation goes on the supposition that בִּדְאֵן should be rendered *in Dan*, i. e., one in Dan, or of the tribe of Dan, as Samson was. In this sense, as Kimchi observes, it would have the same force as Ben-Dan, a son of Dan, a Danite. Such an intermixture of proper names and appellatives, however, is very doubtful, and it is to be noted that *Bedan* is mentioned before Jephthah, whereas Samson was after him. The Septuagint, Syriac, and Arabic have *Barak*, which many think the preferable reading (comp. Heb. xi. 32). A man of the name of *Bedan* occurs, however, among the posterity of Manasseh (1 Chron. vii. 17), and Junius, followed by some others, thinks that the judge *Jair* is meant, and that he is here called *Bedan* to distinguish him from the more ancient *Jair*, the son of Manasseh. The order in which the judges are here named is not at variance with this view (Num. xxxii. 41; Judg. x. 3, 4); but surely if *Jair* had been really intended, he might have been called by that name without any danger of his being, in this text (where he is called a deliverer of Israel, and placed among the judges), confounded with the more ancient *Jair*. [Gesenius thinks *Bedan* is the same as *Abdon*, Judg. xii. 13, 15, 'the *v* being dropped, as was often the case with the Phœnicians in the word עֲבֹד.' *Lex. in v.*]

BEDELL, WILLIAM, D.D., successively Provost of Trinity College, Dublin, and Bishop of Kilmore and Ardagh, was born at Black Notley in Essex, in 1570, and died 7th Feb. 1642. He was an eminent scholar, and was devoted to biblical studies. To him the Irish are indebted for the translation of the whole Scriptures into the Erse tongue. Having acquired a knowledge of that language himself, the bishop employed Mr. Mortogh O'Cionga or King, and the Rev. Dennis O'Sheridan, to translate the O. T. into it, reserving for himself the task of comparing their rendering with the Hebrew and LXX. The N. T. had been previously translated by Dr. Daniel, assisted by King, and published at Dublin in 1602. The troubled state of the country prevented the printing of Bishop Bedell's translation of the O. T. before his death, and after that it was neglected, and lay in MS. for many years. It was at length printed, chiefly through the munificence of the Hon. R. Boyle, and issued in two vols. 4to, in 1786. Bedell enjoyed the respect and esteem of men of all parties during his life, and was followed to the grave by universal regret. 'Sit anima mea cum anima Bedelli,' is said to have been the exclamation of a Roman Catholic priest who was present at his funeral.—W. L. A.

BEDIL (בִּדִּיל Sept. *κασσιτροπος*), translated in the A. V. *tin*, is used to denote both that metal in a pure state, and the alloy of that, or lead, with silver. It occurs first in Num. xxxi. 22 among the metals which had been taken from the Midianites, and were to be purified by passing through the fire; and in Ez. xxvii. 12, it is mentioned as

one of the articles received by the Tyrians from Tarshish. In Zech. iv. 10 it is used to designate an instrument for measuring (הַאֲבֵן הַבְּדִיל *the stone, the tin*, i. e., *the plummet*); and in Is. i. 25 any kind of alloy that may be mixed up with a precious metal. Tin is a bluish white metal, lustrous and fusible; the fused metal crystallizes in regular octahedrons. It is not found native.—W. L. A.

BEDOLACH (בְּדֹלַח). This word occurs in Gen. ii. 12, and Num. xi. 7. Its meaning has been much disputed. In the Sept. it is considered as a precious stone, and translated (Gen. ii. 12) by ἄνθραξ, and (Num. xi. 7) by κρύσταλλος; while Aquila, Symmachus, Theodotion, and the Vulgate, render it *bdellium*, a transparent aromatic gum from a tree growing in Arabia. Of this opinion also is Josephus (*Antiq.* iii. 1. 6), where he describes the manna—*ἄμοιον τῆ τῶν ἀρωμάτων βδέλλα*, i. e., similar to the aromatic *bdellium* (Num. xi. 7). In the Syriac version it is

ܒܘܠܚܘܐ *brulcho*, evidently for ܒܘܠܚܘܐ *bdulcho*, the two letters *r* and *d* being so similar as to be easily confounded with one another in transcribing. We find the same translation in the Samaritan and Chaldee, while the precious stones given by the Sept. and others bear with them a different name, פְּקוּלָה or פְּקוּלָה.

The Jewish Rabbins, however, followed by a host of their Arabian translators, and to whom Bochart (*Hieroz.* iii. p. 593, *sq.*), and Gesenius (*Thesaur.* i. 181), accede, translate *bedolach* by *pearl*, and

consider *Havilah* (הַוִּילָה) as the part of Arabia near Catipha and Bahrein on the Persian Gulf, where the pearls are found.

Those who regard *bedolach* as some kind of precious stone, rest their argument on the fact that it is placed (Gen. ii. 12), by the side of שֹׁהַם *shoham*, which is a precious stone, and occurs several times in the Scriptures, and that they are both mentioned as belonging to the productions of the land *Havilah*. But, if this meaning were intended, the reading ought to be שֹׁהַם אֲבֵן, and not, as it actually stands, הַבְּדִיל וְהַשֹּׁהַם; expressly excluding *bedolach* from the mineral kingdom.

Those who translate *bedolach* by 'pearl' refer to the later Jewish and Arabian expounders of the Bible, whose authority, if not strengthened by valid arguments, is but of little weight. It is, moreover, more than probable that the *pearl* was as yet unknown in the time of Moses, or he would certainly not have omitted it from the costly contributions to the tabernacle, the priestly dresses, or even the *Urim* and *Thummim*, while its fellow *shoham*, though of less value, was variously used among the sacred ornaments (Exod. xxv. 7; xxxv. 9, 27; xxviii. 20; xxxix. 13). Nor do we find any mention of pearl in the times of David and Solomon. In the opinion of some, the pearl occurs under its true Arabic name, in Esth. i. 6, דָּר (dar), Arab. لؤلؤ [but this is doubtful, *see* DAR]; in the New Testament it is very frequently mentioned under the Greek name μαργαρίτης.

It is, therefore, most probable that the Hebrew

bedolach is the aromatic gum *bdellium*, which issues from a tree growing in Arabia, Media, and the Indies. Dioscorides (i. 80) informs us that it was called *μαδάλακον* or *βολχόν*, and Pliny (xii. 19) that it bore the names of *brochon*, *malacham*, and *mal-dacon*. The frequent interchange of the μ and the β brings the form very near to that of the Hebrew word; nor is the similarity of name in the Hebrew and Greek, in the case of natural productions, less conclusive as to the nature of the article, since the Greeks probably retained the ancient Oriental names of productions coming from the East. Pliny's description of the tree from which the *bdellium* is taken makes Kæmpfer's assertion (*Amœn. Exot.* p. 668) highly probable, that it is the sort of palm-tree (*borassus flabelliformis*, Linn. ci. 6. 3, *Trigynia*) so frequently met with on the Persian coast and in Arabia Felix. The term *bdellium*, however, is applied to two gummy-resinous substances. One of them is the *Indian bdellium*, or *false myrrh* (perhaps the *bdellium* of the Scriptures), which is obtained from *Amyris* (balsamodendron?) *Commiphora*. Dr. Roxburgh (*Flor. Ind.* ii. 245) says that the trunk of the tree is covered with a light-coloured pellicle, as in the common birch, which peels off from time to time, exposing to view a smooth green coat, which in succession supplies other similar exfoliations. This tree diffuses a grateful fragrance, like that of the finest myrrh, to a considerable distance around. Dr. Royle (*Illustr.* p. 176) was informed that this species yielded *bdellium*; and in confirmation of this statement, we may add that many of the specimens of this *bdellium* in the British Museum have a yellow pellicle adhering to them, precisely like that of the common birch, and that some of the pieces are perforated by spiny branches—another character serving to recognise the origin of the *bdellium*. Indian *bdellium* has considerable resemblance to myrrh. Many of the pieces have hairs adhering to them.

The other kind of *bdellium* is called *African bdellium*; and is obtained from *Heudelotia Africana* (Richard and Guillemain, *Fl. de Senégambie*). It is a natural production of Senegal, and is called by the natives, who make toothpicks of its spines, *niottout*. It consists of rounded or oval tears, from one to two inches in diameter, of a dull and waxy fracture, which, in the course of time, become opaque, and are covered externally by a white or yellowish dust. It has a feeble but peculiar odour, and a bitter taste. Pellitier (*Ann. de Chim.* lxxx. p. 39) found it to consist of resin 59.0; soluble gum, 9.2; bassorin, 30.6; volatile oil and loss, 1.2. Resin of *bdellium* (African *bdellium*?) consists, according to Johnstone, of carb. 40, hydr. 31, oxyg. 5.—E. M.

BEE. [DEBORAH.]

BEEF. [FOOD.]

BEELIADA (בעלי־אדָ) The name of one of David's sons (1 Chron. xiv. 5). In Sam. v. 16, and 1 Chron. iii. 6, he is called Eliada, and so the LXX. and some codices give the name in 1 Chron. xiv. 5. Eliada may have been his original name, and for some reason connected with his history may have been changed into Beeliada; the former signifying *God-known*, the latter *Baal-known*. It is more probable, however, that the

variation is owing only to the transcribers, as the proper antinome to Beeliada is not Eliada but Jehoiada.—W. L. A.

BEELZEBUB. [BAAL-ZEBUB.] In the N. T. Beelzebub is the name given, according to the Text. Rec., the Syr., the Itala, and the Vulg., which Luther, Diodati, and the A. V. follow, to the prince of the demons (Matt. xii. 24; al.) But this reading is not supported by the best authorities, and is consequently rejected in all critical editions. It was doubtless an exegetical correction of the original reading Beelzebub. Doderlein (*Inst. Theol. Chr.* i. 443), following Castell, takes Beelzebub to be the Chal. בעל דבבה *B'el d' bhabha*, and the Syr. ܒܥܠ ܕܒܘܒܐ *B'el d' bobo*, inimicus; and to have no connection with Baalzebub.—W. L. A.

BEELZEBUL (Βεελζεβούλ). Of this word, which is the true reading of the name given in the N. T. to the prince of the demons (Matt. x. 25; xii. 24, 27; Mark. iii. 22, 27; Luke xi. 15, 18, 19), different explanations have been offered. 1. It has been supposed to be a contemptuous play on the name Beelzebub, and to mean *Dominus stercoris*, *Dirt-God*, from ܒܘܠ *filth*, and ܒܥܝܠ the Chaldaic form of בעל. This view has the support of Buxtorf (*Lex. Talm.* (ובל), Selden (*De Diis Syr.* Synt. ii. c. 6), Winer (*R. W. B.*, s. v.), and many besides; indeed this may be regarded as the prevailing view. In support of it is alleged the notorious fact, that the Jews were in the habit of expressing contempt by such changes in the spelling of words; comp. *Sychar* for *Sychem*, *Bethaven* for *Bethel*, etc.; and it is inferred that they could not more forcibly express hatred and contempt for an idol than by calling him by such a name as *Dominus stercoris*. Having thus constructed the name, it is further supposed that they applied it to Satan as the chief of all uncleanness, the pre-eminently impure. The objections to this are—(1), That it does not appear how the local deity of the Ekronites came to be of such importance as to give his name in a corrupted form to the prince of the demons; and (2), That there is no such noun as ܒܘܠ in the sense of *stercus* in Hebrew, the word for *stercus* being גלל (*galal*). Of this last objection Winer makes light on the ground that, 'in word-plays unusual, may new forms will be used.' This is true, but it is irrelevant, the objection being, not that ܒܘܠ is a new or unusual word, but that it is not a word at all, at least with this meaning. 2. Drusius (*Comment. ad voces Ebr. N. T.* s. v.) proposes to take ܒܘܠ as the participle passive of ܒܘܠ (*Zabhal*) *stercoravit* (so used in the Talm.), so that Beelzebub would mean *Dominus stercoratus*, *Zeus κομψώδης*. This gives a very forcible meaning to the name; but whilst it leaves unexplained why this name should be given to the prince of the demons, it is exposed to the still more serious objection of being incompatible with the usage of the language, in which to express *Dominus stercoratus* we should

have הבעל הובל. 3. By some ܒܘܠ is taken in the sense of *dwelling* or *house*, which is its proper meaning in Hebrew. According to Michaelis,

house is here used in an astrological sense, in allusion to the supposed mansions of the planets, which were objects of idolatrous worship, a meaning which may be compared with that of Movers, who understands by the word Saturn, as occupier of a dwelling in the seventh heaven (*Phönizier*, I. 260). Gousset (*Comment. Ling. Heb.* p. 223), takes it to refer to the habitation of demons (*Tartarus*, according to Paulus), of which one was the chief or prince; an interpretation with which Meyer substantially agrees (*Krit. Exeg. Hd. Buch.* on Matt. x. 25). Jahn (*Archaeol.* iii. Th. 490), explains it of the region of the air, of which Satan is the prince of the power (Eph. ii. 2); Lange adopts the explanation of Gousset, and suggests that the name was not a current one among the Jews for Satan, but was used by our Lord with special reference to the case of persons possessed by demons, for the sake of contrasting himself as the true *οκοδεσποτης* with that usurping spirit, by whose aid his enemies represented Him as working (*Theol. Homil. Bibelwerk* on Matt. x. 25, comp. Schleusner *Lex.* in v.) This view accords well with the context of this passage, and also throws great light on the use of the term in the other passages, where the subject is the occupancy of the soul of man by the powers of evil. This view further accounts for the noticeable fact that it is only in these passages in the Gospel that this name occurs; in the copious demonology of the Rabbins it is not found, which is hardly to be accounted for, had it ever been current among the Jews as a name for Satan. On the other hand, however, if Beelzebub was not a name in use among the Jews for the evil spirit, how are we to account for their saying that our Lord cast out demons by the power of this arch-demon? and if Beelzebub means no more than *οκοδεσποτης*, why should the one be more a name of reproach to our Lord than the other?

It appears to us somewhat singular, that in the discussion of this question more notice has not been taken of the opinion of Lightfoot, and of the fact established by him (*Hor. Heb. in Matt.* xii. 24; *Luc.* xi. 15), that *זבול* occurs in the Talmudic writers in the sense of *stercus*, and is by them in this sense applied to idols. This seems an important fact, for it proves—1. That *זבול* in this sense is a Hebrew word, which may have been, and probably was in good credit in the best days of the language, though it does not occur in the sacred writings; 2. That in this sense the Jews applied it as a designation of idols; and 3. That as idols were regarded by them as demons (1 Cor. x. 19, 20), Beelzebub, the chief of abomination, *i. e.*, the idol of idols, would be a very natural appellation of the prince of the demons (qu. 'Dæmon dæmonissimus,' Lightfoot). This interpretation falls in with the fact that the Jews charged our Lord with seeking to introduce idolatry; indeed it was on this charge that they put him to death (John xix. 7; comp. Whately, *Kingdom of Christ*, Ess. i.); so that they might well apply to him the name Beelzebub, and say that his miracles were done by the power, and for the furtherance of the cause of this wicked spirit. In this case the word has no connection with Beelzebub. As to the absence of any reference to Beelzebub in the Talmud, that is sufficiently accounted for by the fact that though this may have

been a current description of the prince of the demons, it was not the name of any demon in particular.*—W. L. A.

BEER (בְּאֵר; Sept. τὸ φρέαρ). Two places occur in the O. T. having this as their designation. 1. A place in the land of Moab which received its name from a well dug there by the chiefs of Israel, and celebrated in a song preserved by Moses (Num. xxi. 16). This was one of the stations of the Israelites, and according to tradition the water that filled the well which the princes dug was the last appearance of the water which had followed the Israelites through the wilderness. 2. A town in the tribe of Judah, to which Jotham the son of Gilead fled from Abimelech (Judg. ix. 21). Since the time of Maundrell (*Journey*, Mar. 25) it has been identified with El-Bireh in the plains of Judah, between Jerusalem and Bethel. But this does not tally with the locality assigned to it by Eusebius (*Onom.* s. v. Βηρά), who places Beer nine Roman miles to the north of Eleutheropolis. There is, however, another El-Bireh in the southern part of the province of Ramleh, which corresponds with the locality assigned in the Onomasticon, and is probably the Beer of the Judges (Robinson, ii. 132, note 1; iii. App. B., Pt. i. No. 6, 1).—W. L. A.

BEER-ELIM (בְּאֵר אֱלִים) *Well of heroes*, Sept. φρέαρ τοῦ Ἀλδαίου, a place mentioned (Is. xv. 8) as on the borders of Moab. Junius conjectured that it is the same as Beer, mentioned Num. xxi. 16-18, and this is followed by Vitringa, Gesenius, Rosenmüller, Henderson, Knobel, etc.—W. L. A.

BEERI (בְּאֵרִי; *fontanus*, Gesen.; *Erläuterer*, Fürst; Sept. Βηρ, Βηρπελ.) 1. The father of Judith, one of the wives of Esau (Gen. xxvi. 34). 2. The father of the prophet Hosea (Hos. i. 1).

BEER-LAHAI-ROI (בְּאֵר לַחַי רֹאִי) *Well of life of vision*, Gesen.; *well of the living sight*, Hengstenb.; *puteus Dei viventis qui me intuitus est*, Fürst; Sept. φρέαρ οὐ ἐνώπιον εἶδον φρέαρ τῆς ὁράσεως), a well or fountain spring between Kadesh and Bered (Gen. xvi. 14; xxiv. 62; xxv. 11), so named because Hagar had there a vision of God and yet lived. Near to this well was the usual residence of Isaac. At Moyle, Moilahi or Muweilah, a station to the south of Beersheba, there is said to be a well called by the Arabs Moilahi Hagar (Tuch. *Comment.* in loc.; Knobel, *Do.*; Ritter, *Erdrkunde*, xiv. 1086).—W. L. A.

BEEROTH (בְּאֵרוֹת Sept. Βηρώτ, Βηρθόθ), one of the cities of the Hivites who made a league with Joshua, and so were not destroyed by the Israelites (Josh. ix. 1-18). Beeroth was allotted to the tribe of Benjamin (2 Sam. iv. 2); it is mentioned along with other Benjamite cities among the places whose inhabitants returned with Zerubbabel (Ezra ii. 25; Neh. vii. 29). Eusebius places it seven miles from Jerusalem, on the road to Nicopolis (*Onom.* in Βηρθόθ); whilst Jerome says it was the same distance on the road to Neapolis. It is com-

* It is somewhat noticeable that Lightfoot is invariably cited as approving the first of the above explanations of Beelzebub; whereas he all but expressly repudiates it (*Hor. Heb. ad Luc.* xi. 15).

monly identified with El-Bireh, between Jerusalem and Bethel) Robinson, ii. 132; Wilson, ii. 39; Stanley, 213; Nugent, ii. 111). There is, however, a difficulty here which has not been obviated. If el-Bireh be Beeroth, then Jerome is right in placing the latter on the road to Neapolis, but he is wrong as to the distance from Jerusalem. Again, if Eusebius be right in placing Beeroth on the road to Nicopolis, it cannot possibly be el-Bireh, which lies to the north of Jerusalem. Robinson tries to obviate this by saying—'the traveller, on emerging from the hills into the plain round el-Jib, sees el-Bireh on his right after a little more than two hours from Jerusalem' (ii. 132). But Eusebius says nothing of seeing it 'on the right'; he says that it is a village near to Jerusalem, *κατὶνῶν ἐπὶ Νικόπολι.* The locality assigned by Eusebius is confirmed by the connection of Beeroth with Chephirah and Kirith-jaarim (Josh. ix. 17; Ezra ii. 25); both of which lay to the north-west of Jerusalem, on the way to Nicopolis (Arnold in Herzog's *Encycl.* xiv. 732).

Another Beeroth, described as that 'of the children of Jaakan,' is mentioned (Deut. x. 6) as one of the stations of the Israelites in the desert. In Num. xxxiii. 31, 32, the place is called simply Bene-jaakan. It has not been identified. [BENE-JAAKAN.]—W. L. A.

BEERSHEBA *בְּאֵר שֶׁבַע*, *Well of the oath*;

Sept. *Βηρσαβέ*),* a place in the southernmost part of Canaan, celebrated for the sojourn of the patriarchs. It seems to have been a favourite station of Abraham, and here he planted one of those 'groves' which formed the temples of those remote times (Gen. xxi. 33). A town of some consequence afterwards arose on the spot, and retained the same name. It was first assigned to the tribe of Judah (Josh. xv. 28), and afterwards transferred to Simeon (Josh. xix. 2), but was still popularly ascribed to Judah (2 Sam. xxiv. 7). As it was the southernmost city of the land, its name is of frequent occurrence, being proverbially used in describing the extent of the country, in the phrase 'from Dan (in the north) to Beersheba' (in the south), and reversely, 'from Beersheba unto Dan' (Judg. xx. 1; 2 Sam. xvii. 11; 1 Chron. xxi. 2; 2 Chron. xxx. 5). When the land was divided into two kingdoms, the extent of that of Judah was in like manner described by the phrase 'from Beersheba to Mount Ephraim' (2 Chron. xix. 4). It was at Beersheba that Samuel established his sons as judges for the southernmost districts (1 Sam. viii. 2): it was from thence that Elijah wandered out into the southern desert (1 Kings xix. 3): here was one of the chief seats of idolatrous worship in the time of Uzziah (Amos v. 5; viii. 14); and to this place, among others, the Jews returned after the captivity (Neh. xi. 27, 30). This is the last time its name occurs in the Old Testament. In the New Testament it is not once mentioned; nor is it referred to, as then existing,

* [This word appears in two forms in the original, *Beershaba* and *Beersheba* (Gen. xxi. 31; xxvi. 33). The former means *well of seven*; the latter *oath well*; but both refer to the oath which signalled the place, the verb *נִשְׁבַּע* being derived from *שֶׁבַע* *seven*, and meaning literally to *seven oneself*, i. e., to take an oath before seven witnesses, or on seven victims.]

by any writer earlier than Eusebius and Jerome in the fourth century, who describe it as a large village (Euseb. *κώμη μεγάλη*; Jerome, *vicus grandis*), and the seat of a Roman garrison. In the centuries before and after the Moslem conquest it is mentioned among the episcopal cities of Palestine (Reland, *Palæst.* i. 35); but none of its bishops are anywhere named. The site seems to have been forgotten till the 14th century, when Sir John Maundeville, Rudolf de Suchem, and William de Baldensel, recognised the name at a place which they passed on their route from Sinai to Hebron. It was then uninhabited, but some of the churches were still standing. From that time till the recent visit of Dr. Robinson, the place remained unvisited and unknown, except for the slight notice obtained by Seetzen from the Arabs (Zach's *Monatl. Corresp.* xvii. 143). Dr. Robinson says:—'In three-quarters of an hour we reached Wady es-Leba, a wide watercourse or bed of a torrent, running here W.S.W., upon whose northern side, close upon the bank, are two deep wells, still called Bir-es-Leba, the ancient Beersheba. We had entered the borders of Palestine! These wells are 55 rods apart. They are circular, and stoned up very neatly with masonry, apparently very ancient. The largest of them is 12½ feet in diameter, and 44½ feet deep to the surface of the water, 16 of which, at the bottom, are excavated in the solid rock. The other well is 5 feet in diameter by 12 feet deep. 'The water in both is pure and sweet, and in great abundance; the finest, indeed, we had found since leaving Sinai. Both wells are surrounded with drinking-troughs of stone for camels and flocks, such as were doubtless used of old by the flocks which were fed on the adjacent hills' (Robinson, i. 301). No ruins were at first visible; but, on examination, foundations of former dwellings were traced, dispersed loosely over the low hills, to the north of the wells, and in the hollows between. The site of the wells is nearly midway between the southern end of the Dead Sea and the Mediterranean at Raphæa, or twenty-seven miles south-east from Gaza, and about the same distance south-by-west from Hebron. Its present Arabic name, Bir-es-Seba, means 'well of the seven,' or 'of lions.'—J. K.

BEESTHERAH (*בְּעֵשְׂתָרָה*, Sept. *ἡ Βοορὰ*, var. *Βεεθρά*), a Levitical town in the eastern part of Manasseh (Josh. xxi. 27), called simply Ashtaroth (1 Chron. vii. 71). The word is doubtless a contraction of *בֵּית עֵשְׂתָרָה* (Gesén., *Theis.* p. 176, 193, 195; Winer, *R. W. B. s. v.*)—W. L. A.

BEETLE. [CHARGOL.]

BEEVES. [BAQAR, SHOR, PAR.]

BEGGARS. [ALMS.]

BEHEADING. [PUNISHMENTS.]

BEHEMOTH, the designation of an animal, a description of which is given, Job. xl. 15-24. Opinions are divided between the hippopotamus and the elephant as the animal intended in this passage. We shall consider—1. *The word itself.* If *בהמות* (*behemoth*) is to be taken as a pure Hebrew word, it is the plural of *בהמה* (*behemah*) *cattle, beasts of burden, wild beasts.* This plural occurs as designating animals collectively, whether tame or wild (Gen. vii. 14; Lev. xxv. 7; Deut.

xxxii. 24; Hab. ii. 17); but here it is plainly used to denote some specific animal well known to the writer. Gesenius calls this an instance of the plural of majesty, and so it is often stated; but it is rather an instance of the intensive plural, and this name is bestowed on the animal in question because in it the idea of the brute creation is most perfectly developed; it stands to the mind of the writer as the concentration of animality (qu. *brutissimum brutorum*). The question has been raised, however, whether this is a pure Hebrew word; and since Jablonski suggested that it is a Coptic word, *P-che-mout*, signifying *water-ox*, conformed to Hebrew analogy, many scholars have embraced this view (Jablonski *Opusc.* ed. te Water, i. 52; Gesenius *Thes.* and *Lex.* in voc.; Ffirst, *Hdwörterb.* in voc.) Before this is admitted, however, one would like to see it made out a little more satisfactorily that such a word as *P-che-mout* ever existed, or that it is good Coptic. Dr. Lee has adduced some serious objections to it (*Lex.* in voc.; comp. Hengstenberg, *Die Auth. des Pentateuch.* i. 258); and, at any rate, it is no true induction to apply for the solution of a problem what has not been first shewn to exist as a *vera causa* (Newton, *Principia*, p. 388, Lond. 1726).—2. *Reasons of those who hold behemoth to be the rhinoceros.* One of these is the supposed Coptic origin of the name just mentioned; and, undoubtedly, if it could be made out that the rhinoceros was ever called in Egypt by the word *P-che-mout*, signifying *water-ox*, as the Italians call it *Bo-marino*, a strong reason would be found in this for giving this signification to the behemoth of Job. As the case stands, however, there is no real force in this reason. Other reasons have more weight. The context, it is said, requires us to recognise an *amphibious* animal here, both because the enumeration in ch. xxxviii. xxxix. is confined to land animals and birds, and because the description is essentially that of an amphibious animal (comp. ver. 15, 21, 22, with ver. 23, 24). Again, the conjunction of behemoth with leviathan (assumed to be the crocodile) favours this supposition, both being natives of Egypt, and both constantly mentioned together by ancient authors (F erod. ii. 67-71; Diod. Sic i. 35; Plin. xxviii. 8). And, in fine, the mention of his *tail* (ver. 17) is more appropriate to the rhinoceros than to the elephant (Bochart, *Hieroz.* pt. ii. bk. 5, ch. 15; Ludolf, *Hist. Aeth.* i. 11; Gesen. *Thes.* 183).—3. *Reasons of those who hold behemoth to be the elephant.* 1. The great muscular strength and power of traction ascribed to this animal (16, 18); 2. The description of the habits of the animal (20, 21, 22), which agree with those of the elephant; 3. The incompatibility of the statement in ver. 20 with the habits of the rhinoceros (Schultens, *Comment.* in loc.; Grotius, in loc.) The advocates of these two opinions are strong against each other, but weak for their own side. The description of Job, taken as a whole, will apply to neither the hippopotamus nor the elephant. This has led some to think that the animal here described is now extinct (Mason Good, Wemyss, Ad. Clarke); that it is fabulous (Renan, Ffirst also, apparently, *Hdwb.* p. 169; comp. 2 Esdr. vi. 49 ff.); that it is a general description of the brute creation (Lee, *Job*, p. 518), with the idea of the hippopotamus predominant. (C. H. S. in former edition.)—W. L. A.

BEKAH half a shekel. [WEIGHTS.]

BEL (בֵּל, contracted from בֵּלְבַל, the Aramaic form of בַּעַל; Sept. Βήλ and Βήλος) is the name under which the national god of the Babylonians is cursorily mentioned in Is. xlvi. 1; Jer. l. 2; li. 44. Besides these passages in the Bible, there are notices of this deity in Bar. vi. 40, and the apocryphal addition to the book of Daniel, in the Sept., xiv. 1, sq., where we read of meat and drink being daily offered to him, according to a usage occurring in classical idolatry, and termed *Lectisternia* (Jer. li. 44?) For fuller information we must turn to the testimonies of profane writers. A particular account of the pyramidal temple of Bel, at Babylon, is given by Herodotus, i. 181-183. It is there also stated that the sacrifices of this god consisted of adult cattle (πρόβατα), of their young, when sucking (which last class were the only victims offered up on the golden altar), and of incense. The custom of providing him with Lectisternia may be inferred from the table placed before the statue, but it is not expressly mentioned. Diodorus (ii. 9) gives a similar account of this temple; but adds that there were large golden statues of Zeus, Hera, and Rhea on its summit, with a table, common to them all, before them. Gesenius, in order to support his own theory, endeavours to shew that this statue of Zeus must have been that of *Saturus*, and that that of Rhea represented the sun. Hitzig, however, in his note to Is. xvii. 8, more justly observes that Hera is the female counterpart to Zeus-Bel, that she is called so solely because it was the name of the chief Greek goddess, and that she and Bel are the moon and sun. He refers for confirmation to Berossus (p. 50, ed. Richter), who states that the wife of Bel was called *Omora*, which means *moon*; and to Ammian. Marcell. xxiii. 3, for a statement that the moon was, in later times, zealously worshipped in Mesopotamia. The classical writers generally call this Babylonian deity by their names, *Zeus* and *Jupiter* (Herod. and Diod. l. c.; Plin. *Hist. Nat.* vi. 30); by which they assuredly did not mean the planet of that name, but merely the chief god of their religious system. Cicero, however, (*De Nat. Deor.* iii. 16), recognizes *Hercules* in the Belus of India, which is a loose term for Babylonia. This favours the identity of Bel and Melkarth.

The question whether the sun or the planet Jupiter was the power of nature adored under the name of Bel, is discussed under the article BAAL.

The following engraving, taken from a Babylonian

139.

cylinder, represents, according to Münster, the sun-god and one of his priests. The triangle on the top of one of the pillars, the star with eight rays, and the half moon, are all significant symbols.—J. N.

BEL AND DRAGON. [DANIEL, APOCRYPHAL ADDITIONS TO.]

BELA (בלע, *destruction*). I. One of the cities of the plain. [ZOAR.]

2. A king of Edom, whose capital was named Dinhabah (qu. די נהבה, *lord*, i. e., *place of plundering*, Gesen.—a dubious etymology), Gen. xxxvi. 32; 1 Chron. i. 43.

3. The eldest son of Benjamin, Gen. xlv. 21 (A. V. *Belak*). From him came the family of the Belaites, Num. xxvi. 38.

4. The son of Azaz, a Reubenite, who dwelt in Aroer, 1 Chron. v. 8.—W. L. A.

BELIAL (בליעל). This word, which in the O. T. is constantly but erroneously rendered as a proper name, is an adjective derived from בלי 'not,' and יעל advantageous (*non-frugi*), and denotes 'worthlessness,' like the Latin *nequitia*; the other derivations proposed, as from בלי and עול (absque jugo, Fischer, *De Vers. V. T.*, p. 93), and that approved by Ewald from the Arabic ('qui non eminet,' *Heb. Gram.*, sec. 348-458; Michaelis, *Suppl. ad Lowth.*, p. 1119), are not so probable (Rosenmüller, *ad Deut.* xiii. 14). The translation of Belial as a proper name arose from the solitary instance of its use in the N. T. (2 Cor. vi. 15), and from the expression 'floods of Belial,' in Ps. xviii. 4, which by some interpreters has been fancifully and incorrectly explained of the 'streams of the underworld.' The LXX, Aquila, and Symmachus, rightly translate it by ἀνόμημα, ἀνομία, παράνομος, ἀποστασία, λοιμός, and only one Greek version, that of Theodotion, in a single verse, by Βελλιαλ (Judg. xix. 22). Hence we find in Suidas—Βαλλιαλ, τῆ Ἐβραίων φωνῇ τὸν ἀποστάτην δηλοῦ. The Vulgate also translates it 'injusta,' 'impia,' 'iniqua,' 'flagitium,' and once (1 Kings xxi. 10) 'diabolus.' Nor can it be argued that Belial is a proper name from the fact that it is constantly qualified by the words בן 'a son of,' and איש, or אדם 'a man of' (as in Deut. xv. 9; 1 Sam. xx. 25; Prov. vi. 12, etc.), any more than we should argue that חיל (*chail*) is a proper name from the phrase אנשי חיל בני חיל 'men of,' or 'sons of strength,' i. e., 'strong men' (Rosenmüller, *Schol. ad Ps.* xviii. 5). The word Belial is ofte: used without any adjunct for a wicked and lawless man, by metonymy of the abstract for the concrete, like the Latin 'Scelus!' (2 Sam. xxiii. 6; Job xxxiv. 18; Nah. i. 11). The meanings 'Orcus' or 'destruction,' attributed to the word by commentators in Ps. xviii. 5, Nah. i. 11, are incapable of being substantiated.

The name Belial, and the conception of his character as a prince of evil spirits, arose after the close of the O. T. canon, as we see from 2 Cor. vi. 15—Τὴς συμφύσεως Χριστῶ πρὸς Βελλιαρ. In this sense Belial is frequently used in the Fathers, the Pseudo-sibylline books, and the Apocryphal gospels, from which the modern notion of Belial as an impure and apostate spirit has been derived. St. Paul (*l. c.*) appears to use the name as an equivalent to 'the wicked one' (Grotius, *ad loc.*) Castell invents for it the derivation בל יער, 'a wood demon;' and others, deriving it from a Syriac root, make it equivalent to τὸν ἀρχοντα τῆς ἐξουσίας τοῦ αἵρου in Eph. ii. 2 (Gesen. *Thes.*, p. 210; Donald-

son, *Jashar.*, p. 47); but Βελλιαρ is only another form of the word Βελλιαλ by the substitution of ρ for λ, which is common in many languages (*e. g.*; Chinese), and is found in many words (*e. g.*, γούραρος for γούληρος, *color colo*, apòtre from apostolus, etc. See T. Hewitt *Key On the Alphabet*).

The word is discussed and explained by Gesenius, *Thes.* s. v.; Schlessner, *Lex. N. T.*, s. v.; Rosenmüller, *Schol. ad Ps.* xviii. 5; Ewald, *Krit. Gram.*, p. 515; Ammon, *de Orco ad Hebr. notionem*, in Paul, *Memor.* iv. 200; Michaelis, *Suppl.*, p. 1119; Eichhorn, *Biblioth. Univ. Lit. Bibl.* iv. 120, and especially Böttcher, *de Inferis*, p. 87.—F. W. F.

BELL. Bells of gold (פעמוני זהב), Sept. *kôdôwes*) were attached to the lower part of the blue robe (the robe of the ephod) which formed part of the dress of the high-priest in his sacerdotal ministrations (Exod. xxviii. 33, 34; comp. Eccclus. xlv. 9). They were there placed alternately with the pomegranate-shaped knobs, one of these being between every two of the bells. The number of these bells is not mentioned in Scripture; but tradition states that there were seventy-two (*Gemara Sevach.* 10). We need not seek any other reason for this rather singular use of bells than that which is assigned: 'His sound shall be heard when he goeth into the holy place before the Lord, and when he cometh out, that he die not' (Exod. xxviii. 35); by which we may understand that the sound of the bells manifested that he was properly arrayed in the robes of ceremony which he was required to wear when he entered the presence-chamber of the Great King; and that as no minister can enter the presence of an earthly potentate abruptly and unannounced, so he (whom no human being could introduce) was to have his entrance harbingered by the sound of the bells he wore. This sound, heard outside, also notified to the people the time in which he was engaged in his sacred ministrations, and during which they remained in prayer (Luke i. 9, 10). [It is probable, however, that these bells had a *symbolical* meaning, like all the other parts of the high-priest's dress. The pomegranate was the emblem of *fulness* and the bell of *announcement*; and the alternation of these on the *meil* indicated the wearer's function as the preserver of the divine word in its fulness, and the announcer of it to the people. (See Bähr, *Symb. d. Mos. Cultus*, ii. 126.)] It is remarkable that there is no appearance of bells of any kind in the Egyptian monuments.—J. K.

BELLS OF THE HORSES (מַעֲלִים), Zech. xiv. 20, have been supposed to denote bells fixed to the foreheads or bridles of horses trained for war, to accustom them to noise; but this seems foreign to the design of the passage. With more probability, it has been suggested that these were 'small metallic plates suspended from the necks of horses or camels, for the sake of ornament, and making a tinkling noise by striking against each other like cymbals' (Henderson *in loc.*) The meaning of the passage is that true religion would so prevail that even the horses, formerly the instruments of luxury and pride, would now become consecrated to God (Hitzig *in loc.*); and, in general, that all things should be used so as to glorify Him.—W. L. A.

BELLOWS (מַבְּחָה), Sept. *φυστήρηρ*). This word only occurs in Jer. vi. 29, and is there employed with reference to the casting of metal. As fires in

the East are always of wood or charcoal, a sufficient heat for ordinary purposes is soon raised by the help of fans, and the use of bellows is confined to the workers in metal. Such was the case anciently; and in the mural paintings of Egypt we observe no bellows but such as are used for the forge or furnace. They occur as early as the time of Moses, being represented in a tomb at Thebes which bears the name of Thothmes III. They consisted of a

140.

leathern bag, secured and fitted into a frame, from which a long pipe extended for carrying the wind to the fire. They were worked by the feet, the operator standing upon them with one under each foot and pressing them alternately, while he pulled up each exhausted skin with a string he held in his hand. In one instance it is observed from the painting, that when the man left the bellows they were raised as if filled with air, and this would imply a knowledge of the valve (Wilkinson's *Anc. Egyptians*, iii. 338).—J. K.

BELLY. Among the Hebrews and most ancient nations, the belly was regarded as the seat of the carnal affections, as being, according to their notions, that which first partakes of sensual pleasures (Tit. i. 12; Phil. iii. 19; Rom. xvi. 18). It is used likewise symbolically for the heart, the innermost recesses of the soul (Prov. xviii. 8; xx. 27; xxii. 18). The expression *embittering* of the belly signifies all the train of evils which may come upon a man (Jer. ix. 15; xxiii. 15; comp. Num. v. 27; Rev. x. 9).—J. K.

BELSHAM, THOMAS, a Socinian theologian of considerable note, born at Bedford, April 15, 1750, o. s., was educated at the academy at Daventry, and appointed its principal tutor in 1781. From this he retired in 1789, on embracing Socinian opinions, and became tutor at Hackney, where he succeeded Dr. Priestley as minister in 1794. In 1805 he succeeded Dr. Disney, in Essex Street, London. He died at Hampstead 1829. He wrote many works, among which *The Epistles of Paul the Apostle translated, with an Exposition and Notes*, 4 vols. 8vo, 1822, is the most important in a biblical respect. He also had a principal share in *An Improved Version of the New Testament*, put forth by the Unitarians, and which made its appearance in 1808. The work excited great attention at the time. It was criticised by Dr. Nares (*Remarks on the Version of the N. T. lately edited by the Unitarians*, etc., 2d ed., 1814; see also Smith, *Script. Testimony, passim*).

BELSHAZZAR (בֶּלְשַׁצְצָר, Dan. v. 1; בֶּלְשַׁצְצָר, vii. 1, Βαλζάζαρ), the last king of the Chaldees, under whose rule Babylon was taken by Cyrus, according to Daniel. The narrative of this event given by Daniel tallies in its main points with

that given by profane historians (see Hengstenberg, *Beiträge*, p. 321 ff.); but there is an apparent difference between them and Daniel as to the person during whose reign this took place. From the narrative of Daniel, taken by itself simply, it would appear as if Belshazzar was the immediate successor of Nebuchadnezzar on the throne of Babylon; whereas profane historians make no mention of Belshazzar, and name several princes as occupying the throne between Nebuchadnezzar and the close of the Chaldean dynasty. Of these, two are elsewhere mentioned in Scripture, viz., Evil-merodach (2 Kings, xxv. 27; Jer. lii. 31); and Nergal-shar-ezer (Jer. xxxix. 3, 13), called Neriglissor, by Berosus; Neriglissar, by Abyducus; Nerigassolassar, by Ptolemy; but properly Nergal-shar-uzur, as given by Rawlinson from the monuments. The other names mentioned by the historians are Labrosoarchad and Nabonnedus or Labynetus; the former of whom was slain when a mere child in a conspiracy. As Daniel does not profess to record the history of the Babylonish empire, but only notices such facts as concern his nation and his prophecies, it is easy to reconcile his narrative with that of the others so far, by interpolating between the names of Nebuchadnezzar and Belshazzar those of Evil-merodach (son of Nebuchadnezzar), Nergal-shar-ezer, Labrosoarchad, and Nabonnedus (Nabu-nahit). The real difficulty emerges when we come to the last of these. Was he the same as Belshazzar? If not, then Daniel and the profane historians are entirely at variance in their statements, for while he says that Babylon was taken in Belshazzar's reign, they declare it was taken in that of Nabonnedus. But it is impossible to regard them as the same. The two names have no affinity or resemblance, nor can the one be regarded as the Hebrew representative of the other. Besides, the historians not only make Nabonnedus the reigning monarch when Babylon was taken, but they declare that he was not himself at Babylon, but at Borsippa, when that event took place, and that he was not slain by the Persians. It is clear, therefore, that he cannot be identified with the Belshazzar of Daniel. Happily, the discovery of certain inscriptions by Col. Rawlinson in 1854 at Mugheir, the ancient Ur, has enabled him completely to reconcile these conflicting accounts. From these it appears that Nabonnedus associated with him on the throne, during the later years of his reign, his son Bil-shar-uzur, and allowed him the title of king. To effect a perfect agreement, then, between the sacred and the profane narratives, we have only to suppose that this is the King Belshazzar of Daniel; that he was at Babylon, and was slain there when the city was sacked by the Persians, while King Nabonnedus was shut up in Borsippa, and on the taking of his capital surrendered, and was suffered by the conqueror to live. There still remains, however, it is true, the difficulty that Daniel calls Belshazzar the son of Nebuchadnezzar; but this may be easily removed by supposing that, according to Hebrew usage, son stands here for grandson, in which relation Belshazzar might stand to Nebuchadnezzar, through Nabonnedus having married the daughter of that king. As it would appear that Nabonnedus or Labynetus was an usurper (Megasthenes, ap. Euseb. *Chron. Arm.* p. 60), nothing is more probable than that he would seek to strengthen his position by a marriage with one of the princesses of the

family whose honours he had usurped. (See Rev. George Rawlinson, *Translation of Herodotus*, i. 525; *Bampton Lecture for 1859*, p. 166, ff.)—W. L. A.

BELTESHAZZAR. [DANIEL.]

BELUS, TEMPLE OF. [BABEL, TOWER OF.]

BEN (בן, *son*) is often found as the first element of proper names; in which case the word which follows it is always to be considered dependent on it, in the relation of our genitive. The word which follows *Ben* may either be of itself a proper name, or be an appellative or abstract, the principle of the connection being essentially the same in both cases. As for the first class, as the Syro-Arabian nations are all particularly addicted to genealogy, and as they possess no surnames, nor family names in our sense, they have no means of attaching a definite designation to a person, except by adding some accessory specification to his distinctive, or, as we would term it, *Christian*, name. This explains why so many persons, both in the Old and New Testaments, are distinguished by the addition of the names of their father. The same usage is especially frequent among the Arabs; but they have improved its definiteness by adding the name of the person's child, in case he has one. In doing this they always observe this arrangement—the name of the child, the person's own name, and the name of his father. Thus the designation of the patriarch Isaac would, in Arabic, run thus—Father of Jacob, Isaac, son of Abraham (Abû Ja'qûb, Ishâq, ben Ibrahim). As for the latter class, there is an easy transition from this strict use of *son* to its employment in a figurative sense, to denote a peculiar dependence of derivation. The principle of such a connection not only explains such proper names as Ben Chésed (son of mercy), but applies to many striking metaphors in other classes of words, as sons of the bow, a son of seventeen years (the usual mode of denoting age), a hill, the son of oil (Is. v. 2), and many others, in which our translation effaces the Oriental type of the expression. All proper names which begin with Ben belong to the one or the other of these classes. Ben Abinadab, Ben Gaber, and Ben Chésed (1 Kings iv. 10, 11, 13) illustrate all the possibilities of combination noticed above. In these names, Ben would, perhaps, be better not translated, as it is in our version; although the Vulgate has preserved it, as the Sept. also appears to have once done in ver. 8, to judge by the reading there.

These remarks apply also in part to BAR, the Aramaic synonyme of Ben, as in the name Bar-Abbas.—J. N.

BEN-AIAH (בניהו or בנייהו; Sept. *Bavalas*), son of Jehoiada, and commander of David's guard (the Cherethites and Pelethites, 2 Sam. viii. 18). His exploits were celebrated in Israel. He overcame two Moabitish champions ('lions of God'), slew an Egyptian giant with his own spear, and went down into an exhausted cistern and destroyed a lion which had fallen into it when covered with snow (2 Sam. xxiii. 20, 21). Benaiah (doubtless with the guard he commanded) adhered to Solomon when Joab and others attempted to set up Adonijah; and when that attempt failed, he, as belonged to his office, was sent to put Joab to death, after which he was appointed commander-in-chief in his place (1 Kings i. 36; ii. 29). [The name,

either in the full form Benaiahu, or in the form Benaiah, occurs frequently in Scripture. Besides the Benaiah above noticed, we have Benaiah the Pirathonite, one of David's thirty mighty men (2 Sam. xxiii. 30), and captain of the eleventh division of the army (1 Chron. xxvii. 14); several priests and Levites (1 Chron. xv. 18, 24; 2 Chron. xx. 14; xxxi. 13); two princes (1 Chron. iv. 36; Ezr. xi. 1, 13; and four men who, after the return from the captivity, had taken to themselves strange wives (Ezra x. 25, 30, 35, 43).]

BEN-AMMI (בן עמי, *son of my people*), the son of the younger daughter of Lot by her father; and of whose incestuous birth the name was intended to be a memorial (Gen. xix. 38). The LXX. make his name Ammon; giving the passage thus:—καὶ ἐκάλεσε τὸ ὄνομα αὐτοῦ Ἀμμὼν, λέγουσα Τῆς γένους μου, and this the Vulg. follows. He was the ancestor of the Ammonites or Beni-Ammon.—W. L. A.

BEN-HADAD (בן חדרר, *son of Hadad*; Sept. *vîds "Adep*), the name of three kings of Damascus-Syria. As to the latter part of this name, Hadad, there is little doubt that it is the name of the Syrian god ADAD. The expression *son of Hadad*, which denotes dependence and obedience, not only accords with the analogies of other heathen names, but is also supported by the existence of such terms as 'sons of God' among the Hebrews (cf. Ps. lxxxii. 6).

1. The king of Syria, who was subsidised by Asa king of Judah to invade Israel, and thereby compel Baasha (who had invaded Judah) to return to defend his own kingdom (1 Kings xv. 18). [ASA.] This Ben-hadad has, with some reason, been supposed to be Hadad the Edomite who rebelled against Solomon (1 Kings xi. 14, *seq.*)

2. King of Syria, son of the preceding. His earlier history is much involved in that of Ahab, with whom he was constantly at war [AHAB]. He owed the signal defeat in which that war terminated to the vain notion which assimilated JEHOVAH to the local deities worshipped by the nations of Syria, deeming Him 'a God of the hills,' but impotent to defend his votaries in 'the plains' (1 Kings xx. 1-30). Instead of pursuing his victory, Ahab concluded a peace with the defeated Ben-hadad, which was observed for about twelve years, when the Syrian king declared war against Jehoram the son of Ahab, and invaded Israel; but all his plans and operations were frustrated, being made known to Jehoram by the prophet Elisha (2 Kings vi. 8, *ad fin.*) After some years, however, he renewed the war, and besieged Jehoram in his capital, Samaria, until the inhabitants were reduced to the last extremities and most revolting resources by famine. The siege was then unexpectedly raised, according to a prediction of Elisha, through a panic infused into the besiegers, who concluding that a noise which they seemed to hear portended the advance upon them of a foreign host procured by Jehoram, thought only of saving themselves by flight. The next year Ben-hadad, learning that Elisha, through whom so many of his designs had been brought to nought, had arrived at Damascus, sent an officer of distinction, named Hazael, with presents, to consult him as to his recovery from an illness

under which he then suffered. The prophet answered, that his disease was not mortal, but that he would nevertheless die. This was accomplished a few days after by this very Hazael, who smothered the sick monarch in his bed, and mounted the throne in his stead, B. C. 884 (2 Kings viii. 7-15). [Calmet suggests that the wet cloth which was laid by Hazael on the face of Ben-hadad, was intended to relieve him from the heat of the fever, and that his death was accidental. This is more probable than the supposition that Hazael was the intentional murderer of the king. Ewald proposes to render the verb כָּח indefinitely, 'some one took,' and thinks Ben-hadad was strangled by his servants in the bath; but this is both forced and not in harmony with the context (Thenius, *in loc.*) Though not intending to murder the king, it is quite in keeping with Hazael's character that he should allow him to die when accidentally exposed to this.] [ELISHA; HAZAEL; JEHORAM.]

3. King of Syria, son of the Hazael just mentioned [and his successor on the throne of Syria]. He was thrice defeated by Jehoash, king of Israel, who recovered from him all the cities [Jeroboam completed what Jehoash had commenced, and restored to the kingdom of Israel the possession of its former domains beyond the Jordan], which Hazael had rent from the dominion of Israel (2 Kings xiii. 3, 24, 25; xiv. 25; Amos i. 4, 5).

BENJAMIN. This occurs both as a proper name and as a Gentile; in the former case it is always written as one word, בְּנֵימִין (Sept. *Beniamin, Beniamelin*).

The first who bore this name was the youngest son of Jacob, by his beloved Rachel. The mother, dying in giving birth to her son, called him Benoni, a name expressive of calamity [BENONI]; but Jacob changed this for Benjamin (Gen. xxxv. 16-18). This word (from בֵּן *ben* and יָמִין *yamin*) signifies *son of the right hand*, an expression which some explain as denoting *felicity, success* in the sense of *good fortune*, so that Benjamin = son of luck or felicity (Gesenius, *filius fortuna*; Fürst, *Gluckssohn*); others as meaning *power*, and *success* as the result of effort (Lee). In either case the name was intended to convey Jacob's desire or prophetic anticipation that, notwithstanding the unpromising circumstances of his birth, the future career of his son should be prosperous and happy. The Samaritan version and text have יָמִין instead of בֵּן, thus making the name mean 'son of days,' *i. e.*, of his father's old age; but this cannot be regarded as the true interpretation, because the context evidently requires that the one name should be in antithesis to the other.*

The notices of Benjamin's personal history preserved by Moses, are few, and throw little light on his character or conduct. That he was the cherished favourite of his father, especially after

* 'The name,' it has been said (Smith, *Dict. of the Bible*, i. 187) 'is not so pointed as to agree with any interpretation founded on 'son of,' being בֵּן and not בְּנֵן.' But the substitution of *Hireq parvum* for *Tsere* here is a mere euphonic change, resulting from the two words being written and pronounced as one; when they are separated the *a* sound returns, except in I Sam. ix. 1, where, however, there is a K'ri.

the loss of his brother Joseph, and that his gentle and amiable qualities gained the affections even of his elder brothers, appears very clearly on the surface of the narrative. The impression left on one's mind in regard to him is, that he wanted force of character; that he was one of those quiet and somewhat apathetic spirits who give little offence, and take kindness from others very much as a matter of course; who submit to strong outbursts of affection on the part of their more susceptible friends and relatives, but are never moved to such themselves. So much is this the impression left on the mind by what is recorded of him, especially of his experiences in Egypt, his interviews with his brother Joseph, and his whole conduct on that occasion, that people generally have carried away the idea that he was at this time still a child, a mere lad, who could not be expected to act any very decided or demonstrative part; whereas he was a man approaching at least to midlife, and the father of a large family.

When Jacob and his posterity went down to Egypt, Benjamin's household consisted of ten persons (Gen. xlv. 21), of whom some were sons and some grandsons (comp. Num. xxvi. 38; I Chron. viii. 1) [BECHER]. From this time his history merges in that of his tribe.

This appears in Scripture sometimes under the simple designation of 'Benjamin' (Judg. xx. 39, 40); sometimes as 'the children of Benjamin' (בְּנֵי בִנְיָמִין, *B'nei Binjamin*, Num. i. 36); sometimes as 'the tribe of Benjamin' (טִבְיָמָן, *Matteh B.*, Josh. xxi. 4, 17); and sometimes in the form of 'Benjamite' (בְּרִימִינִי, *Ben-yemini*, or בְּנֵי יָ, *B'nei-yem.*, אִישׁ יָ, *Ish-yem.*), which are not 'as if the patriarch's name had been originally Yamin' (Smith's *Dict. of the Bible*, s. v.), but are either the Gentile form of the word (see Gesen. *Heb. Gr.*, sec. 85, 6; Lee, *Heb. Gr.*, art. 166), or an abbreviated form, אִישׁ בֵּן יָ being for אִישׁ בְּנֵי יָ.

Gesenius compares the Arabic بَكْرِي *Bakri*, for أبو بكر *Abubeker*.

From the first this tribe was smaller and of less importance than the rest. On the numbering of the people by Moses, in the second year of their deliverance from Egypt, the tribe of Benjamin numbered 35,400 capable of going to war (Num. i. 37), and before their entrance into Canaan this had grown to 45,600 (Num. xxvi. 41). During the journey through the wilderness the tribe of Benjamin appears as subordinated to that of Ephraim in the arrangements of the camp (Num. ii. 18, 22); they had, however, their own captain (נָשִׂיא, *prince or chief*, in this case *phylarch*), whose name was Abidan. In the division of Canaan the portion allotted to Benjamin was in proportion to the size of the tribe; its boundaries are accurately defined (Josh. xviii. 11-28). Though of limited extent, and in many parts rocky, it had many rich valleys, and on the whole was a fertile, well-watered territory (see Robinson, *ii. pl. locc.*; Stanley, ch. iv.); it contained twenty-six towns, with their dependent villages. This territory lay between that of Ephraim and that of Judah, which in part accounts for the vacillating course between these two pursued by the Benjamites. At first they sided with Ephraim on the separation of the tribes, after the death of Saul (2 Sam. ii. 9); and

the bitterest enemies of David came from this tribe; but when David made Jerusalem his capital, the affections of the Benjamites seem to have been gradually drawn towards Judah; and though, on the revolt of the ten tribes, part of Benjamin (1 Kings xii. 29; xvi. 34) joined the Ephraimite confederacy, the greater part of the tribe adhered to the house of David (1 Kings xii. 21). After the captivity Judah and Benjamin became one people (Ezra i. 5; iv. 1; x. 9; comp. Ezek. xxxvii. 15, ff.)

Mild and gentle as the founder of the tribe may have been, his father saw with prophetic eye that this would not be the characteristic of his descendants; and therefore he said of him, as represented by them, 'Benjamin shall ravin as a wolf: in the morning he shall devour the prey, and at night he shall divide the spoil' (Gen. xlix. 27). The character implied by this description the tribe seems fully to have borne out. We hear little of them except in connection with war or bloodshed. In the time of the Judges they involved themselves in a war with the rest of Israel, in consequence of their refusing to execute justice on a portion of their tribe who had violated the rights of hospitality in the case of a Levite, and the rights of humanity by abusing his concubine until she died (Judg. xix., xx.) For a season they sustained alone and successfully the attacks of the combined forces of Israel, but ultimately they were overcome and almost extirpated. Six hundred men alone escaped, who took refuge in the rocky fortresses of their country. Peace was at length restored, and the Benjamites being supplied with wives, partly from the sack of Jabesh Gilead, partly through an expedient like that by which the early settlers at Rome found wives from among the Sabines (Judg. xxi. 8-24), the strength of the tribe was speedily recovered. In the time of Asa it numbered 280,000 men that bore shields and drew bows (2 Chron. xiv. 8). The men of this tribe were famous as slingers (Judg. xx. 16) and as bowmen, and in general as 'mighty men of valour' (1 Chron. viii. 40; xii. 2; 2 Chron. xiv. 8); their superiority in the use of the sling and the bow arose from their being ambidextrous. It is probable also that they availed themselves of the facilities which the physical peculiarities of their district afforded for marauding expeditions (2 Sam. iv. 2). 'In his mountain passes—the ancient haunts of beasts of prey—Benjamin 'ravined as a wolf in the morning,' descended into the rich plains of Philistia on the one side, and of Jordan on the other, and 'returned in the evening to divide the spoil'' (Stanley, *Sin. and Pal.*, p. 200).

In the course of its history several honourable distinctions fell to the lot of this tribe; as if 'little Benjamin' still occupied the place of the favourite child among the tribes of Israel. During the march through the desert, this tribe seems to have held the place of honour next to the ark of the Lord (Deut. xxxiii. 12; comp. Von Lengerke, *Kanaan*, p. 477); from them came forth the first deliverer of Israel in the time of the Judges, Ehud, the son of Gera, who destroyed their Moabish oppressors, and presided over Israel for a lengthened period, distinguished by unusual prosperity (Judg. iii. 13-30); and to them belonged the honour of giving the first king to Israel in the person of Saul, the son of Kish, an honour which, as Mr. Stanley observes, 'to the latest times they could never for-

get' (p. 201). But to us the most eminent and memorable distinction of this tribe is, that out of it came the great Apostle of the Gentiles, who, even after he had renounced Judaism for Christ, could not repress the feeling of satisfaction with which he contemplated himself as 'of the stock of Israel, of the tribe of Benjamin, an Hebrew of the Hebrews' (Phil. iii. 5).

Two other persons are mentioned in Scripture bearing this name, one a near descendant of the patriarch (1 Chron. vii. 10); the other one of the Israelites who, in the time of Ezra, had married strange women (Ezra x. 32).—W. L. A.

BEN-ONI (בֶּן אֹנִי). The name given by the dying Rachel to her child (Gen. xxxv. 18). The LXX. render it *vñs ððvñs μου*, and this is the meaning commonly given in the Onomastica and Lexicons. Knobel (*Exeg. Hdb.* in loc.) takes אֹן in its proper sense of nothingness or nought, and renders 'son of my nothingness,' i. e., whose birth brings me death. Delitzsch (*Gen.* in loc.) prefers 'son of my misfortune' with the same meaning. Hiller's derivation from אֹן, *strength*, as if Ben-oni = my expiring effort (*Onom.* 300), is wholly untenable.—W. L. A.

BENEI, the plural of Ben, is also used in proper names.

BENEI-BERAK (בְּנֵי-בִרְקָה *B'nei-B'rak*; Sept. Βαυβαράδ, Alex. Βαρηβαράκ), one of the cities of the tribe of Dan (Josh. xix. 45). The name means *sons of lightning*, but it is impossible now to determine to what the use of such a name is to be traced. Scholz (*Reise*, p. 256) proposes to identify the place with the modern ابن أبرق *Ibn Abrak*, a few miles from Jehudiah.—W. L. A.

BENEI-JAAKAN (בְּנֵי-יַעֲקֹב *B'nei-Jaaqan*, Sept. Βαβαλα, Alex. Βαυκών), the name of a tribe to which belonged certain wells [BEROTH], where the Israelites encamped (Deut. x. 6; Num. xxxiii. 31, 32). In Gen. xxxvi. 27 mention is made of a Horite chief, called there עֲקָן *Aqan*, who in 1 Chron. i. 42 is called יַעֲקָן *Jaaqan*. In all probability the B'nei Jaaqan descended from him.—W. L. A.

BENEI-KEDEM (בְּנֵי קֵדֶם *B'ney-Kedem*). This Hebrew appellation (with its English, LXX., and Vulgate versions) occurs in the passages following:—(1.) Genesis xxix. 1, *The people of the East, anatólai* (terra), *orientalis*; (2.) Judges vi. 3, *The children of the East, oi viot anarotaw, ceteri orientaliun nationum*; (3.) Judg. vi. 33; (4.) vii. 12; (5.) viii. 10, *The children of the East, oi viot anarotaw, orientales populi*; (6.) 1 Kings iv. 30, *The children of the East country, αρχαιοι ανθρωποι, orientales*; (7.) Job i. 3, *The men of the East, oi af' ηλλου anarotaw, orientales*; (8.) Is. xi. 14, *They of the East, oi af' ηλλου anarotaw, filii orientis*; (9.) Jer. xlix. 28, *The men of the East, oi viot Kedem, filii orientis*; (10.) Ezek. xxv. 4; (11.) xxv. 10, *The men of the East, oi viot Kedem, filii orientales*.

Under the general designation קֵדֶם, *Kedem*, the sacred writers include the whole tract of country east of Palestine, and not only so much as is coextensive with the Holy Land itself in latitude, and immediately contiguous with it, but the trans-

uphratean Mesopotamia, north, and the upper* parts of the Arabian peninsula, south. In the first passage *Kedem* (called also *Aram*—LXX. *Συπλα*—in Hosea xii. 12) refers to Haran, in Mesopotamia, whither Jacob fled to his mother's kindred, who had settled there when Terah migrated from Ur of the Chaldees, and who are here included among the *B'ney Kedem*. In the four next passages (in Judges) the *B'ney Kedem* appear conspicuous among the oppressors of the children of Israel whom Gideon destroyed. The Midianites, who were at the head of this formidable confederacy, were probably very near akin to the *B'ney Kedem*. From Gen. xxv. 6, it would appear that the descendants of Abraham and Keturah (the sons of Midian being included) migrated eastward,

אֶל-הַיְדֵן קְדֵם, *to the land of Kedem*, or the East; accordingly in one of our passages (Judg. viii. 10) the appellation *B'ney Kedem*, used in a generic sense, actually includes the Midianites as well as the Amalekites, whereas in the preceding passages they are specifically mentioned apart from these latter nations. The prominence given in the sacred history to the hostile relations of these nations with the children of Israel is apt to make us forget their near kindred to them. This affinity, and their proximity of residence, would naturally account for that identity or similarity of language in an early age, previous to dialectic divergence, which is indicated in the remarkable incident narrated in Judg. vii. 11-15. In the sixth passage the wisdom of King Solomon is described as excelling the wisdom of all the *B'ney Kedem*. Now as the countries of the East in general, especially the Chaldeans (Dan. i. 20; iv. 7), are noted for wisdom, it is not obvious at once what people the *B'ney Kedem* here indicate. Not to say, however, that 'the wisdom' of the Chaldeans was probably undeveloped at so early a period as Solomon's, it is certain that Arabia was the home of that *proverbial* philosophy for which the wise king of Israel is celebrated (see Freytag, *Arabum Proverbia*, tom. iii. *pref.*, who says:—'Apud Arabes proverbiorum origo usque ad tempora antiquissima . . . præcipue sapientibus, poetis, heroibusque regibusque vindicantur); we conclude, therefore, that the קְדֵם בְּנֵי, whose wisdom Solomon excelled, were the Arabian tribes east of the Israelites, stretching, it may be, to the Euphrates in one direction, and south-east into the peninsula, in another. These are they whom Baruch (iii. 23) calls 'the Hagarenes, that seek after wisdom upon earth, the merchants of Meran and of Theman, the authors of fables and the searchers out of un-

* And even more than the upper parts, as it would seem from 'the mount Sephar' (Gen. x. 30), being by the sacred writer expressly called הַר הַקְּדֵם, 'a mount of the east,' or *Kedem*. Under this designation Fresnel, in Gesenius, *Thes.* 1193, understands the highlands of the central

Nejed, النجد (El Nejd). While others place Mount Sephar still further south in El Yemen (see Forster's *Arabia*, ii. 154). However far down in its latitude we put this סְפָרָה, its description as being in *Kedem* is still allowable, reckoning longitudinally; for the most western position assigned to it is some 500 miles still to the east of Jerusale-

derstanding.' But the LXX. renders בְּנֵי קְדֵם, in this our sixth passage, by ἀρχαίοι ἀνθρώποι, putting Solomon in comparison with ancient worthies; and accordingly Abarbanel makes the phrase refer to men of old who used to live to a greater age. Although *Kedem* has this *temporal* meaning (and even oftener than the *local*, see Fuerst, *Concord.*, sub voce), it would be a very forced construction so to render it here. In our seventh passage, Job is described as 'the greatest of all the *B'ney Kedem*. Job was of the land of Uz; and Uz is placed in the neighbourhood of the Sabæans, the Chaldeans, and the Edomite and Arab tribes of Teman, Naama and Shuah (see Job i. 15, 17; ii. 11, compared with Lam. iv. 21). These notices fix Job's residence with tolerable precision, and justify the statement of Rosenmüller (on i. 3), that by בְּנֵי קְדֵם here, are meant those miscellaneous tribes, especially Arabian, which lie between Egypt and the Euphrates (see also Winer, *Bibl. Realwört.*, s. v. Uz). Ewald places Uz a little more north, in the district south of Bashan. M. J. E. Müller reconciles these slight discrepancies of opinion by supposing Uz to have been a large country of tripartite division; the first part near Damascus, the second (where he supposes Job to have in fact lived) near Chaldea, on the eastern border of the Arabian desert, and the third in the region of Arabia Petræa: thus making the whole land of Uz of equivalent meaning with KEDEM, as we defined it at first (see Müller, *De Terra Jobi*, largely quoted in Forster's *Geogr. of Arabia*, ii. 61). We come now to the last four passages, from the prophets, which mention the *B'ney Kedem*. We observe at once this great difference among the said passages, that in those from Isaiah and Jeremiah the *B'ney Kedem* are the *spoiled*, whereas in the two from Ezekiel they are the *spoilers*. The first passage is unconnected with the others, and refers to the ultimate triumphs of Israel when they shall be victorious over western and eastern enemies alike (in this sense the *B'ney Kedem* are opposed to the *Philistines of the west*). In the three other passages the two prophets announce the downfall of the Ammonites, Moabites, Edomites, and (under the name Kedar and Hazor, cf. Gen. xxv. 13) the contiguous Arab nomade tribes, which dwelt east of the children of Israel, and had been ever their malignant foes. The mention of 'their tents,' 'their flocks,' 'their camels,' etc., is quite suitable in a description of these wandering nations. But the remarkable point is, that the appellation בְּנֵי קְדֵם ('men of the east') is now shifted from those who are most naturally designated by it in Jeremiah, namely the Arabs whom Nebuchadnezzar smites and spoils, to the spoilers themselves in the places of Ezekiel. We cross the river at last (as we did at first, only farther south), and bring our *B'ney Kedem* again from beyond the Euphrates; for undoubtedly Nebuchadnezzar and his Chaldees are now the 'children of the East,' the swift avengers of God upon the nations which had so lately exulted over the fall of Judah. (So Jarchi and Grotius; and substantially similar St. Jerome, as quoted by Rosenmüller on Ezekiel xxv. 4. See also Fairbairn's *Ezekiel*, p. 274.)—P. H.

BEN appears also in the proper names of modern Jews.

BEN-ASHER, AARON B. MOSES, of Tiberias or Moeziah (מִמְזִיחַ), as this town was then

called, immortalized his name by his accurate edition of the text of the Hebrew Bible, which is the present *Textus receptus*. He flourished about A.D. 900 to 960, up to which time the Massoretic text was in a very unsettled state, as is evident from *the Theological Decisions* of Mar-Zemach b. Chajim, who was Gaon from A.D. 889 to 896, where we are told that the various readings of the Babylonian and Palestinian codices were then not confined to unimportant points, such as plene and defective, great pauses which require the beginning of a fresh paragraph, and small pauses which only require a little space between the two sentences, accents, and orthography, but even to the division of verses; as well as from the fact that Saadia Gaon (A.D. 892-942) still followed readings and divisions of verses in his translations of the Bible different from what we now have. Impressed with the importance of having a settled and uniform text, Ben-Asher, who was a consummate grammarian, and thorough master of the Massoretic rules, devoted the greater part of his life to collating and editing the Hebrew Scriptures, which he executed with such care and minuteness, and in so masterly a manner, that notwithstanding Saadia's opposition to it [SAADIA] and Ben Naphtali's strictures upon it [BEN NAPHTALI], his revision superseded all other editions, was soon regarded as sacred, and became the standard text from which copies were made, both in Jerusalem and Egypt. So great was its reputation, that the great luminary Maimonides (A.D. 1135-1204) in his treatise upon writing the sacred Scriptures, sets forth Ben-Asher's revision of the text as the most correct; and tells us that after examining other revisions, and finding them differing greatly from each other, he himself adopted it as his model, 'because,' says he, 'I saw that there is great confusion in all the codices which I have consulted with regard to these matters; and even the Massorites, who wrote and compiled works to shew which sections are to begin new paragraphs, and which not, are divided upon these matters according to the authorities they leaned upon, I found myself necessitated to write thus all the sections of the law, both those which begin new paragraphs and those which do not, as well as the forms of the accents, so that all copies might be made according to it. Now, the codex which is followed in these matters, is the one well known in Egypt, which contains the four-and-twenty Sacred Books, which was in Jerusalem for many years, that all the codices might be corrected after it, and whose text all adopted, because Ben-Asher corrected it, and laboured over it many years, and revised it many times; it is this codex which I followed in the copy of the law I wrote.'—(*Mishne Thora, Hilchoth Sefer Thora*, sec. viii. p. 96), and it is this revision from which also our Hebrew Bibles of the present day are printed.

Ben-Asher also wrote, I. A work called **מחברת בראשון**, treating upon the doctrine of the Hebrew vowel points in their practical application to the Scriptures, as well as upon the accents and Massora; the latter point was also set forth in a

separate treatise called **מאמר על הפסוק**. From this work emanated **בני אשור ובני בני הלופים**, the various readings of the vowels, consonants, and accents, printed in the Venice and

Basle editions of the Rabbinic Bibles, as well as in other editions, and in Fürst's valuable concordance. II. **קונטרס הפסוק**, Treatises upon the doctrine of the Hebrew accents, vowels, etc. This contains the following sections, not marked:— 1. **סדר סוד הטעמים**, on the accents. 2. **סדר הפקרא**, on the order, titles, and peculiarities of each portion of the Bible. 3. **אלה תולדות האותיות**, on the Hebrew letters, their classification, etc. 4. **אם נעניא קשורה** and **סימן ששלא**, a fragment on the doctrine of the accents. 5. **טעמי אמת**, on the peculiar accents of the Psalms, Proverbs, and Job. 6. **הרה אולא**, a fragment also treating upon the accents. This was reprinted in the Rabbinic Bible, Venice, 1518, under the title **שער הטעמים**, with the inscription **זה ספר מדרוגי הטעמים**, omitting, however, sections 3 and 5, and making some transpositions. It has also been re-edited, with corrections and additions, after a manuscript in the possession of Luzzatto, as well as with a valuable introduction, notes, and supplements, by Leopold Dukes, Tübingen, 1846. III. **שמונים וזנין**, a treatise upon assonances, in which Ben-Asher gives eighty Hebrew words, resembling in sound, but differing in sense. (Comp. Graetz, *Geschichte der Juden*, v. p. 344; Fürst's *Bibliotheca Judaica*, i. p. 100.)—C. D. G.

BEN CHAYIM. [IBN CHAYIM.]

BEN JOSEPH, AHARON, a Jewish rabbi in Constantinople, who wrote a philosophical commentary on the Pentateuch, in a condensed and somewhat obscure style, entitled **ספר המבחר**. It was written in 1294, and printed for the first time, with a commentary on it, by Joseph Salomo Jerushalmi, at Kosloff, about thirty years ago. Some excerpts from it were published, with a Latin translation, and notes, in 4to, by J. Lud. Frey, Basil, 1705. Ben Joseph was also the author of a tract on Hebrew Grammar, **בליל ופי**, Constant. 1581. He was a leader among the Karaites, a sect who bound their belief to the letter of the Hebrew Scriptures.

BEN-NAPHTALI, MOSES, was a contemporary of Ben-Asher, and hence flourished about A.D. 900 to 960. He distinguished himself by his edition of a revised text of the Hebrew Scriptures in opposition to Ben-Asher, in which he had no great success, inasmuch as the different readings he collated and proposed are very insignificant, and are almost entirely confined to the vowel points and accents. We subjoin his deviations from Ben-Asher in the first nine chapters of Genesis, in order to enable the reader to form some idea of their nature.

 אֵת-כָּל הַיְקוּם
 וּבְכֹל דְּנֵי הַיָּם

When we add that the most important deviation of Ben-Naphtali from Ben-Asher is that he reads *יְה* as two words (Song of Songs, viii. 6); whilst the other has *יְהִיבְתִּיה* in one word, which, after all, makes no difference in the meaning; the insignificance of his strictures upon the revision he opposes will at once be apparent. A complete list of his different readings is appended to the Rabbinic Bibles and Fürst's *Concordance*, p. 137, sec. 48, under the title of *חֲלוּפֵי בֵּין בְּרֵאֲשֶׁר וּבֵין בְּנַפְתָּלִי*, the difference between Ben-Asher and Ben-Naphtali.—C. D. G.

BEN-ZEB, JEHUDAH LEB. B. Benjamin-Zeb, a distinguished grammarian and lexicographer; he was born in a small town in Poland, not far from Cracow, in 1766, and died at Vienna, February 25, 1811. Having devoted himself to the study of philosophy and philology, he resorted in 1787 to Berlin, where, at the age of 21, he published the work of Saadia Gaon, *אֲמוּנוֹת וְדַעוֹת*, on *Religion and Philosophy*, with a twofold commentary. He then went to Breslau, where he remained about ten years, and published, in 1796, his highly-esteemed *הַלְמוֹד לְשׁוֹן עִבְרִי Hebrew Grammar*, written in Hebrew, of which improved editions appeared in Vienna, 1806, 1818, and 1825, and a German translation, in a condensed form, by Landau, Prague, 1827. Two years later (1798) he issued from the press *הַכְּמַת יְהוֹשֻׁעַ בֶּן סִירָא*, the *issud of Joshua, the son of Sirach*, in Syrac, with Hebrew letters, a Hebrew and German translation, and a Hebrew commentary, of which improved editions appeared in Vienna, 1807, 1818, 1828, and 1844; and twelve months after this, *מִגֵּלַת יְהוּדִית*, the *Book of Judith*, translated into Hebrew and German, with a Hebrew commentary (Vienna, 1799), of which another edition appeared in 1819. He then changed his residence from Breslau to Vienna, where he published his famous school book *בֵּית הַיִּפְּרָר*, composed of two parts, *a*, *מִסְלַת הַלְמוֹד*, *Method of learning Hebrew* (the first edition of this had already appeared in 1793), and *b*, *לְמוֹדֵי מִשְׁרֵיב*, *Ethics*, of which improved editions appeared in 1809, 1825, and 1842. In all these labours, however, Ben-Zeb prepared himself and gathered materials for the publication of a Hebrew lexicon, as up to his time the only lexicon used by Jews, and also to a great extent by Christians, was that of Kimchi. Ben-Zeb, making Kimchi's lexicon his basis, published, in 1797-1798, his excellent *אוֹצֵר הַרְשִׁיב*, *Hebrew Lexicon*, in three volumes, with the following improvements. 1. In the references to the different significations of the words according to their inflections. 2. In giving appropriate verbs as predicates of subjects. 3. In references to such

ideas as are only expressed by peculiar phrases. 4. In putting together, in the third volume (which is German Hebrew), all the synonymous words. 5. In tracing the forms which developed themselves in the progress of the language. 6. In adding various exegetical matter; and 7. In giving a table of all the roots. Improved editions of it appeared in 1804, 1807, 1816, and 1839-1840. M. Letteris, the editor of the last edition, has greatly enriched it by introducing into it the labours of Gesenius, Rosenmüller, De Wette, Hitzig, Reggio, Luzzatto, Zunz, etc. He also wrote *מְבוֹא אֵל-מְקָרְאֵי קִשְׁשׁ*, *An Introduction to the Old Testament*, which appeared in Vienna 1810, and has since been printed in the Vienna Bible Work, in nineteen volumes, Vienna, 1832-1836.—C. D. G.

BENGEI, JOHANN ALBRECHT, prelate in Würtemberg, was born at Winnenden, 24th June 1687, the birthday of his great ancestor Johann Brenz, whose great-granddaughter his mother was. His first lessons were received from his father, after whose death, which happened in 1693, he became a pupil at the Gymnasium of Stuttgart. In 1703, he entered the University of Tübingen, where he devoted himself to the study of philosophy and theology, but especially to that of the Scriptures in the original tongues. Having been led to use Fell's edition of the Greek N. T., Oxon. 1675, he was arrested by the various readings collected by that writer, and this seems to have first strongly turned his attention to the criticism of the sacred text. After filling several subordinate situations, both as a pastor and as an academic teacher, Bengel was in 1741 made prelate of Herbrechtingen, and in 1749 he was advanced to be prelate of Alpirsbach, with a residence at Stuttgart. In 1751, he received the tardy honour of a diploma creating him D. D., from the University of Tübingen. From this time, his time and energies were chiefly occupied in the manifold duties of his diocese. He died 2d November 1751, gently falling asleep with the words 'Lord Jesus, I am thine, living or dead,' on his lips. Few names stand so high as Bengel's in the annals of biblical literature. In 1734 he issued his edition of the Greek N. T. in 4to and 8vo, prepared from a collation, not only of the previously printed editions, but of twenty-four Greek and several Latin MSS., several of the ancient versions, and other sources; and to this he appended an Apparatus Criticus, in which he unfolds his critical principles and method, discusses the principal various readings, and obviates objections which may be brought against his work, and such efforts in general. By this work the author greatly advanced the cause of sound biblical criticism. He has not, it is true, added much to the materials for settling the text of the N. T.; his various readings were mostly borrowed from Mill, with the exception of the not very important codices which he himself collated; and he timidly refused to admit into the text any alteration, however strongly supported by critical authority, if it had not already appeared in some printed edition. But his sagacity and discernment enabled him to bring out clearly certain principles of criticism, which all subsequent labourers in this field have recognised as canonical and indispensable. He was the first to see clearly that the extant MSS. are of different classes or families; he was

the first to discern fully the importance of classifying readings according to their relative worth; he was the first who laid down clearly the necessity of fixing some criterion by which to test the antiquity of readings apart from the mere antiquity of the codex in which they were found; and he was the first to adopt the practice of giving the evidence against a reading as well as the evidence for it. In determining the relative worth of readings, his great law was 'proclivi scriptioni præstat ardua,' a principle which he certainly was not the first to enunciate or employ, but to which he gave such prominence and establishment, that it has been ever since one of the most useful helps to the settling of the sacred text.

Having by this labour endeavoured to set forth a correct text, Bengel next employed himself in an effort to expound its meaning. This he issued under the title of *Gnomon Novi Testamenti, in quo ex nativa verborum vi simplicitas, profunditas, concinnitas, salubritas sensuum celestium indicatur*, of which the first edition appeared at Tübingen in 1742, 4to. This work has been repeatedly reprinted (1759, 1773, 1788, 1835 [edited by Steudel], 1850); it has been translated into German by E. J. Werner, Stuttgart, 1853, and into English under the editorship of the Rev. A. R. Fausset, 5 vols. 8vo Edin., and its value has been acknowledged by scholarly theologians of every school. The notes are short, but often condense in a few words a whole paragraph of meaning, and by a single happy phrase dispense with the necessity of a minute exegesis.

These are Bengel's best-known works. They are not, however, his only contributions to biblical literature which deserve to be noticed. In 1741 he published *Ordo temporum a principio per periodos æconomie divinæ historicæ atque propheticas ad finem usque ita deductus ut tota series ex V. et N. T. proponatur*, of which a second edition appeared at Stuttgart in 1770. Connected with this work in purpose and principle, is his *Verklärte Offenbarung Johannis*, Stuttgart 1740, of which many editions have been printed, and this was followed by his *Erbaulichen Reden über die Offenbarung Johannis*, 1747, also frequently reprinted. These works are of great value to the apocalyptic interpreter, both as settling principles of interpretation, and as furnishing specimens of the application of these. Like many others who have ventured to fix a date for the fulfilment of the apocalyptic symbols, Bengel has been proved by time to have been an erring prophet; but waiving this, his writings on the Apocalypse are worthy of most attentive study for their exegetical merits as well as for the rich vein of pious thought and feeling by which they are pervaded. In 1753 Bengel published a translation of the N. T. with notes, under the title *das N. T. nach d. revidirten Grundtext übersetzt, und mit dienlichen Anmerk. begleitet*. He wrote also on the Harmony of the Four Gospels (*Richtige Harm. der 4 Evangg.*, 8vo, Tüb. 1736, 1747, 1766). Bengel's life has been written by his son, prefixed to the third edition of the *Gnomon*, and at large by his grandson J. C. F. Burk, translated into English by R. F. Walker, M. A., Lond. 1837.—W. L. A.

BENSON, GEORGE, D.D., a learned nonconformist divine, was born at Great Salkeld in Cumberland, 5th September 1699, and died 7th April

1763. He was successively minister at Abingdon in Berkshire, at St. John's Court, London, and at Crutched Friars, London, where he was the colleague of Dr. Lardner. He commenced his public career as a Calvinist, but afterwards lapsed into Arian views. He was a man of solid learning, of clear and acute judgment, and of indefatigable industry; of which we have the fruits in several elaborate works. The most important of these are—1. *Paraphrase and Notes on Six of the Epistles of St. Paul, viz., 1 and 2 Thesalonians, 1 and 2 Timothy, Philemon, and Titus*, published originally separately, but in 1752, collected in one vol. 4to; 2. *Paraphrase and Notes on the Seven Catholic Epistles*, 4to, 1749, 1756; 3. *History of the First Planting of the Christian Religion, taken from the Acts of the Apostles and their Epistles*, 2 vols. 4to, 1735, best edit., 3 vols. 4to, 1756; 4. *History of the Life of Jesus Christ, taken from the New Testament*, 4to, 1764, a posthumous work. As an interpreter, Benson avowedly follows Locke, and his commentary is intended, with that of Locke, and that of Pierce, to furnish a complete commentary on the epistles of the N. T. His two other works above cited, may be viewed also in the light of commentaries, the one on the Acts, the other on the Gospels. All Benson's writings are heavy and lifeless; not a spark of enthusiasm, of genius, or of sympathy, relieves the dense masses of frigid narrative, exposition, or reasoning, with which they are filled. But they are learned, accurate, and judicious. His exegesis, though occasionally perverted by a dogmatical element, and betraying the superficiality of the school to which he belonged, is on the whole correct; his practical remarks are in general apt and sensible; and his historical illustrations are always admirable. His works are interspersed with dissertations, some of which are very valuable, especially for the clearness and accuracy with which conflicting views are stated. Several of his works were translated into German, and he enjoyed for long a considerable reputation on the Continent.—W. L. A.

BENTLEY, RICHARD, D.D., was born at Oulton in Yorkshire, 27th Jan. 1661. Having received his elementary education at the schools of Methley and Wakefield, he passed in 1676 to Cambridge, where he was admitted sub-sizar of St. John's College in his 15th year. Having taken his M.A. degree in July 1683, he resided for some time in London, engaged chiefly in philosophical pursuits. After the Revolution, he settled at Oxford, having been admitted to the degree of M.A., *ad eundem*; and there, surrounded by the splendid literary treasures of that university, he spent several years of diligent study. On his receiving deacon's orders in 1689, he became chaplain to Bishop Stillingfleet; shortly after, he was appointed the first preacher of the Boyle Lecture; in 1692 he was ordained priest, and became a prebendary of Worcester; in 1693 he was appointed keeper of the royal library at St. James's; and in 1694 he was a second time Boyle Lecturer. Having taken his degree of D.D. in 1696, he was in 1700 advanced to the dignity of Master of Trinity College, Cambridge, an office which occasioned him much trouble, and led to his spending the rest of his life in an almost continual conflict. This, however, did not interrupt his literary labours, for it is during this period of

his life that some of his most valuable works were issued. His last piece of preferment was the archdeaconry of Ely, to which he was collated in 1701. He died 14th July 1742.

All subsequent scholars have united in lauding Bentley's abilities, his attainments as a scholar, and his skill as a critic. 'Erat,' says Hermann in his *Opuscula*, 'vir infinitæ doctrinæ, acutissimi sensus, acerrimi iudicii; et his tribus omnis laus et virtus continentur critici.' He has not, however, contributed much *directly* to biblical learning. His *Strictures on Free-thinking*, in reply to Collins, published in 1713, under the name of Philaleutherus Lipsiensis, contains some valuable observations on various readings, and on the critical principles on which the settling of a correct text depends, as well as a thorough demolition of the flimsy argument which Collins had founded on the various readings of the N. T. against the authority of that book. In 1716 Bentley addressed a letter to Archbishop Wake, containing a proposal to restore the text of the Greek N. T. to the same state in which it was at the time of the Council of Nice. With this view he had collated the Codex Alexandrinus with great care, and he employed Wetstein, who had shewn him some extracts made by himself from the Cod. Ephræmi, to recollate that MS. for him. In his letter to Wake, he dwells on the accordance between the oldest MSS. of the Vulgate and the two Greek codices of which he had collations; and professes to be able from ancient witnesses alone, without 'altering a letter of his own head,' to restore the text as it had been in the best copies current at the time of the Council of Nice. For some time this design was enthusiastically pursued by him; John Walker, Fellow of Trinity College, Cambridge, was sent to Paris to collate MSS. for the proposed edition; and on his return, Bentley issued proposals to the public, accompanied by the last chapter of the Book of Revelation as a specimen. These were violently attacked by Dr. Conyers Middleton, and Bentley was for some time involved in a hot controversy with that writer. This, with other circumstances of an unfavourable kind, prevented his ever carrying his design into execution; but at his death he left considerable materials which he had collected for the work, among the most valuable of which was a collation of the Vatican Codex, afterwards published by Ford, from the transcription of Woide, in 1799. This edition, 'although never published, is of no small importance in the *history* of the text of the N. T. For the time had arrived when it was possible to use some discrimination in the choice and application of Greek MSS. to purposes of criticism. Bentley saw that the *ancient* MSS. are the witnesses to the *ancient* text; and after this had been *proved* from the *general accordance* of such documents with the ancient versions and the early citations, he was ready to discard from consideration, on a question of evidence, the whole mass of the modern copies. This limited the field of inquiry, and reduced it within tangible and practicable bounds' (Tregelles, *Account of the printed text of the Greek N. T.*, p. 66). Bentley's proposal to reproduce from ancient authorities alone, the text of the N. T., as it appeared at the time of the Council of Nice, has been carried out more completely than he had the means of doing, by Lachmann. If the contributions thus made directly to the stores of biblical learning are comparatively

slender, it is not to be forgotten that to Bentley we stand indirectly indebted for the most splendid results of modern biblical criticism and exegesis, inasmuch as to him belongs the honour of founding the modern school of philology, to which all departments of ancient learning owe so much.—W. L. A.

BENZEL, ERIC, D.D. Two Swedish scholars of this name, father and son, have distinguished themselves in biblical literature. The father was born in 1642, and after filling various offices both in the church and the university, became archbishop of Upsala, in 1700. He wrote *Breviarium Hist. Eccles. V. ac N. T.*, 12mo, Upsala, 1714, several treatises in theology and church history, and a Latin translation of some homilies of Chrysostom. He superintended the edition of the Swedish Bible, issued by order of Charles XII. in 1703, an edition prepared with much care, and which still forms the standard text, according to which all copies of the Scriptures printed in Sweden are conformed (Paterson, *Book for every Land*, p. 114). He died in 1709.

Eric Benzel, the younger, was born 27th Jan. 1675, and died archbishop of Upsala, in 1743. He wrote several works, but is chiefly known by the share he had in preparing the edition of the Gothic version of the Gospels issued by Lye. This is a carefully executed edition, collated with the famous Codex Argenteus, preserved in the library at Upsala, of which Benzel for some years had the charge. Besides a valuable preface, Benzel furnished a Latin version and critical notes. After his death, the publication of the work was undertaken by Edward Lye, who added a Gothic grammar and a few notes. It appeared with the following title; *Sacrorum Evangeliorum Versio Gothica ex Cod. Argent. emendata atque suppleta, cum interpretatione Latina et annotationibus Erici Benzeli*, etc. *Edidit, observationes suas adiecit et Gram. Goth. præmisit, Edvardus Lye, A.M.*, Oxon. 1750. Until the edition of Zahn, Weissenfels 1805, this was the best edition of the Gothic Gospels; it is still the most splendid.—W. L. A.

BEOR (בְּעוֹר; Sept. Βεώρ). 1. The father of Bela, an Edomite chief (Gen. xxxvi. 32). 2. The father of Balaam (Num. xxii. 5, Sept. Cod. Al. Βαώρ), etc.; called Bosor in the N. T. (2 Pet. ii. 15). [BALAAM].

BE-RAB, JACOB, b. Moses, b. Israel. Be-Rab was born in Maqueda (Μακρη), not far from Toledo, in 1464. He emigrated from Spain with the 300,000 of his co-religionists, in consequence of the persecution of Isabella and Ferdinand, in 1492, when he was 18 years old, and immediately after became Rabbi in Fas, over a community of 5000 families. He afterwards left his charge and went to Egypt, thence to Safet, where he became the colleague of Ob. Bertinoro, and died in 1546. He is well known to biblical students from his לקיטני שלשנים brief but terse glosses upon Isaiah, Jeremiah, Ezekiel, and some of the minor prophets, which are printed in the third volume of M. Frankfurter's Great Rabbinic Bible, Amsterdam, 1724-1727, 4 vols. fol.—C. D. G.

BERACHAH (בְּרַכָּה, *blessing*), the name of a valley (עמק), so called because in it Jehoshaphat

and his people assembled to bless the Lord, in gratitude for the deliverance which had been achieved for them from the combined assault of the Ammonites, Moabites, and Edomites (2 Chron. xx. 26). The LXX. give it *αὐλῶνα τῆς εἰσορίας*. It has been identified with a valley lying between Tekua and the road leading from Bethlehem to Hebron, and still bearing the name of *Wady Berikut*; it stretches to the north of the village of Beit Hajar (Robinson, iii. 275; Wilson i. 386).—W. L. A.

BERACHIAH. [BERECHIAH.]

BEREA (Βέροια), Acts xvii. 10, a city of Macedonia, in the northern part of that province (Plin. *Hist. Nat.* iv. 10), and in that part of it called *Æmathia* (Ptol. *Geog.* iii. 13). It was on the river *Astræus*, not far from Pella, towards the southwest, and near Mount Bermius. It is now known by the name of Verria. Paul and Silas withdrew to this place from Thessalonica; and the Jewish residents are described as more ingenuous, and of a better disposition (not 'more noble,' as in the A. V.) 'than those of Thessalonica' (*οἱ τοῦ δὲ ἦσαν εὐγενέστεροι τῶν ἐν Θεσσαλονικῆ*), in that they diligently searched the Scriptures to ascertain the truth of the doctrines taught by the Apostles (Acts xvii. 11). [Sopater, a native of this town, accompanied Paul to Asia (Acts xx. 4). Two other places of this name are mentioned in the books of the Maccabees (1 Maccab. ix. 4; 2 Maccab. xiii. 4). The latter is the modern Haleb or Aleppo; the former seems to have been near Jerusalem.]

BERECHIAH (בְּרֵכְיָהוּ or בְּרִיָּהוּ, *blessed of Jehovah*; Sept. Βαρχία), a proper name borne by several persons mentioned in Scripture. 1. One of the sons of Zerubbabel, of royal descent (1 Chron. iii. 20); 2. The father of Asaph the singer (1 Chron. vi. 39; xv. 17); 3. A Levite of the line of Elkaneh (1 Chron. ix. 16); 4. A doorkeeper for the ark (1 Chron. xv. 23); 5. One of the chief men of the tribe of Benjamin, in the time of Ahaz (2 Chron. xxviii. 12); 6. The father of the prophet Zechariah (Zech. i. 1, 7).—W. L. A.

BERED (בְּרֵד, *hail*; Sept. Βαράδ), a place mentioned Gen. xvi. 14, between which and Kadesh was the well of Lahai-roi. It is the same as Shur, comp. ver. 7, and the Targ. of Onkelos, where it is rendered הַגְּרָה (*Hagra*), the name elsewhere given to Shur in the Targum (see Gen. xx. 1; xxv. 18, etc.).—W. L. A.

BERENICE or BERNICE (Βερνίκη), eldest daughter of Herod Agrippa I., and sister of the younger Agrippa (Acts xxv. 14, 23; xxvi. 30). She was married to her uncle Herod, king of Chalcis; and after his death, she lived not without suspicion of incest with her brother Agrippa. She afterwards became the wife of Polemon, king of Cilicia. This connection being soon dissolved, she returned to her brother, and afterwards became the mistress of Vespasian and Titus (Joseph. *Antiq.* xix. 5. 1; xx. 7; 2. 3; Tacit. *Hist.* ii. 81; Suet. *Tit.* 7).—J. K.

BERITH (Judg. ix. 46). [BAAL-BERITH.]

BERODACH-BALADAN. [MERODACH-BALADAN.]

BEROSH (בְּרוֹשׁ) occurs in several passages of Scripture, as in 2 Sam. vi. 5; 1 Kings v. 8; vi. 15, 34; ix. 11; 2 Kings ix. 23; 2 Chron. ii. 8; iii. 5; Ps. civ. 17; Is. xiv. 8; xxxvii. 24; xli. 19; lv. 13; lx. 13; Ezek. xxvii. 5; xxxi. 8; Hos. xiv. 8; Nah. ii. 3; Zech. xi. 2), and BEROETH (בְּרוֹת), which is said to be only the Aramæan pronunciation of the same word, in Cant. i. 17. In most of these passages Eres and Berosh, translated cedar and fir in the A. V., are mentioned together, as 1 Kings v. 8, 'And Hiram sent to Solomon saying, I will do all thy desire concerning timber of cedar, and concerning timber of fir'; Is. xiv. 8, 'Yea, the fir-trees rejoice at thee, and the cedars of Lebanon.' But Rosenmüller says, 'In most of the passages where the Hebrew word occurs, it is by the oldest Greek and the Syriac translators rendered *cypress*.' Celsius, on the contrary, is of opinion that *Berosh* indicates the cedar of Lebanon, and that *Eres*, which is usually considered to have the same meaning, is the common pine (*pinus sylvestris*), apparently because he conceives Berosh to be changed from *sherbin*, the Arabic name of *pine*. Others have thought that Berosh is the box, ash, juniper, etc.

The word *berosh* or *beroth* is slightly varied in the Syriac and Chaldee versions, being written *berutho* in the former, and *berath* in the latter. All these are closely allied to *bruta*, a name of the Savine plant, which is the βρόδν, βράδν, and βαπαθους of the Greeks, and which the Arabs have converted into *burase* and *buratee*. By them it is applied to a species of juniper, which they call *abhu* and *arus* or *orus*. It appears to us that many of these terms must be considered generic, rather than specific in the modern sense, when so much care is bestowed on the accurate discrimination of one species from another. Thus *arus*, applied by the Arabs to a juniper, indicates a pine-tree in Scripture, whether we follow the common acceptance and consider it the cedar, or adopt the opinion of Celsius, that the *pinus sylvestris* is indicated. So *buratee* may have been applied by the Arabs, etc., not only to the Savine and other species of juniper, but also to plants, such as the cypress, which resemble these. In many of those cases, therefore, where we are unable to discover any absolute identity or similarity of name, we must be guided by the nature of the trees, the uses to which they were applied, and the situations in which they are said to have been found. Thus, as we find Eres and Berosh so constantly associated in Scripture, the former may indicate the cedar with the wild pine-tree, while the latter may comprehend the juniper and cypress tribe.

Of *Juniperus*, the ἀρκυθος of the Greeks and *abhu* of the Arabs, there are several species in Syria. Of these J. *Oxycedrus* and J. *Phoenicea* are the only species which could have been the Berosh of Scripture. Some are of opinion that the wood of J. *Oxycedrus*, rather than that of the so-called cedar of Lebanon, is the cedar-wood so famed in ancient times for its durability, and which was therefore employed in making statues. It is to the wood of certain species of juniper that the name of cedar-wood is now specially applied.

Cupressus, the κνάρισσος of the Greeks and the *suroo* of the Arabs, called also by them *shujrut-al-hyat*, or tree of life, is the *Cupressus sempervirens*, or the evergreen cypress of botanists. This tree is

well known as being tapering in form, in consequence of its branches growing upright and close to the stem, and also that in its general appearance it resembles the Lombardy poplar, so that the one is often mistaken for the other when seen in Oriental drawings. In southern latitudes it usually grows to a height of 50 or 60 feet. Its branchlets are closely covered with very small imbricated leaves, which remain on the tree for 5 or 6 years. This cypress may be seen on the coast of Palestine, as

141. [Cypress—*Cupressus sempervirens*.]

well as in the interior, as the Mohammedans plant it in their cemeteries. That it is found on the mountains of Syria is attested by Cyril of Alexandria (*In Esai.*, p. 848) and Jerome (*In Hos.* xiv. 6). The cypress being so common, we should expect it to be frequently mentioned in Scripture; but this does not appear to be the case, if we judge by the A. V., as it occurs there only once, in Is. xlv. 14, 'He heweth him down cedars and taketh the cypress and the oak,' for the purpose of making idols. The word here translated 'cypress' is *tirza*, which there does not appear to be any other authority for identifying with the cypress. But the cypress is expressly mentioned in the Apocrypha (*Ecclus.* xxiv. 13), where it is described as growing upon the mountains of Hermon; and it has been observed by Dr. Kitto, that if this be understood of the great Hermon, it is illustrated by Pococke, who tells us that it is the only tree which grows towards the summit of Lebanon. In *Ecclus.* i. 10 the high-priest is compared to a 'cypress towering to the clouds,' on account of his tall and noble figure. 'The wood of the cypress is hard, fragrant, and of a remarkably fine close grain, very durable, and of a beautiful reddish hue, which Pliny says it never loses' (*Plin.* xvi. 40). This wood was used for a variety of purposes, as for wine-presses, poles, rafters, and joists. Horace says (*Ars.* P. 332), whatever was worthy of being handed down to remote posterity was preserved in cypress or cedar-wood; and Virgil refers to it in these lines (*Georg.* ii. 442)—

————— 'dant utile lignum
Navigis pinos, domibus cedrumque cupressosque.'
In all the passages of Scripture, therefore, the

cypress will be found to answer completely to the descriptions and uses of the Berosh; for it is well adapted for building, is not subject to destruction, and was therefore very likely to be employed in the erection of the Temple, for the decks of ships, and even for musical instruments and lances. [J. E. Faber conjectures that the Hebrew name Berosh included three different trees which resemble each other, viz., the evergreen cypress, the thyme, and the savine (see Rosenmüller, *Bot. of the Bible*, Trans., p. 260).—J. F. R.]

BEROTHAI (בְּרוֹתַי, 2 Sam. viii. 8), or BERTHOLDT (בְּרוֹתַה, Ezek. xlvii. 16), a town on the northern boundary of Palestine, rich in brass, which was taken from Hadadezer, king of Zobah, by David. In both places where the word occurs it is mentioned in connection with Hamath and Damascus; but from this nothing further can be inferred than simply that it was somewhere not far from these cities. It is by most identified with Berytus, the modern Beirut; but for this there is nothing except the similarity of sound in the name, and the circumstance that in 1 Chron. xviii. 8 it is called בְּרוֹן, which some suppose to be for בְּרוֹן, Saturn, by whom, according to an ancient tradition, Berytus was built (Stephan. Byzant., p. 164). There is little in this; and on the other hand, there is its being placed by Ezekiel by the side of Hamoth in the boundary line, which indicates that it was not, as Berytus is, by the sea (Wilson, ii. 205; iii. 441; comp. Rosenmüller, *Bib. Geogr.* ii. 265, E. T.) Faber (*Observations on the East*, pt. ii. p. 210) suggests Birah, the Birtha of Ptolemy (v. 19, 3) as the ancient Berothai; but this, situated on the Euphrates, is too far east. Van de Velde proposes Tell el Byruth, between Tadmor and Hamath, which is worthy of consideration. The LXX. give in both places ἐκ τῶν ἐκλεκτῶν πόλεων.—W. L. A.

BERRIMAN, JOHN, a London clergyman of the Church of England, born 1688, died 5th December 1768. He wrote *A Critical Dissertation upon 1 Tim. iii. 16, wherein rules are laid down to distinguish in various readings which is genuine; an account is given of above 100 Greek MSS. of St. Paul's epistles, etc.; and the common reading of that text 'God was manifest in the flesh' is proved to be the true one, etc.*, Lond. 1741. The substance of this work was delivered at the Lady Moyer's lecture in 1737 and 1738. It is pronounced by Dr. Henderson (*The Great Mystery of Godliness incontrovertible, etc.*, Lond. 1830, p. 93) a 'valuable work.'—W. L. A.

BERTHOLDT, LEONHARD, D.D., Professor of Theology at Erlangen, was born at Enskirchen, 8th May 1774, and died 31st March 1822. He belonged to the rationalist school, and was an active propagator of their views. He wrote *Daniel aus dem Heb. Aram. übersetz. u. erklärt mit einer einleitung u. histor. u. exeget. excursen*, 2 vols. 8vo, Erl. 1806-8; *Christologia Judeorum Jesu apostolorumque aetate in compend. red. observationibusque aucta*, 8vo, Erl. 1811; *Histor. Krit. Einleitung in Sämmtliche Kanonische u. apocryph. Schriften des A. und N. T.*, 6 vols. 8vo, Erl. 1812-19; besides many minor pieces (*Opuscula Acad. exeget. potius argum. collegit*, ed. G. B. Winer, Lips. 1824), and a number of works in other departments of sacred literature. To Bertholdt cannot be denied the praise of learning and acuteness, but his works are

ill arranged and prolix, and are wanting in depth and solidity.—W. L. A.

BERYL. [TARSHISH; SHOHAM.]

BESOR (בִּישׁוֹר; Sept. Βοσόρ), a brook mentioned in I Sam. xxx. 9. Sanutus derives its course from the interior Carmel, near Hebron, and states that it enters the sea near Gaza (*Liber secretorum*, p. 252). It is without doubt the same that Richardson crossed on approaching Gaza from the south, and which he calls Oa di Gaza (Wady Gaza). The bed was thirty yards wide, and its stream was, early in April, already exhausted, although some stagnant water remained.

BETAH, properly BETACH (בֵּתַח; Sept. Μερεβάκ; var. Μαρβάχ), a city, rich in brass, taken by David from Hadadezer (2 Sam. viii. 8). In I Chron. xviii. 8 it is called Tibhath (טִּבְחַת, Tibhchath; Sept. Μαραβέθ). It has not been identified.—W. L. A.

BETANE (Βετάνη, var. Βαιτάνη, Judith i. 9), a town in South Palestine, between Jerusalem and Cades, according to Reland the Βηθανίη of Eusebius, four Roman miles from Hebron; the same as Ain in the tribe of Judah (Josh. xxi. 16). Simonis (*Onom.* 41) identifies it with Beten; Hyde (*De Rel. Vet. Pers.* 541) with *Batanah*, i. e., the Syrian Ecbatana, which Pliny (v. 17) places on Carmel (Winer, *Realk.* s. v.)

BETEN (בֵּתֵן) Josh. xix. 25), a town belonging to Asher, called Bethbeten by Eusebius and Jerome, and placed by them eight miles east of Ptolemais.

BETH (בֵּית, *house*) is often found as the first element of proper names of places in the Bible. It is only necessary to observe that, in all such compounds, as Bethel, etc., the latter part of the word must be considered, according to our Occidental languages, to depend on the former in the relation of the *genitive*; so that Bethel can only mean 'house of God.' The notion of *house* is, of course, capable of a wide application, and is used to mean temple, habitation, place, according to the sense of the word with which it is combined.—J. N.

BETH-ABARA (Βηθαβαρά). In the Text. Rec. this is the name given to the place where John was baptizing when Jesus came to him (John i. 28). In all the ancient MSS., however, and versions, the reading is Βηθανία, and this has accordingly been placed in the critical editions. The substitution of the one reading for the other is due to Origen, who tells us that the reading found in almost all the codices was Βηθανία, but that he, knowing the localities, altered it to Βηθαβαρά. Most of the Fathers follow Origen in this, even those best acquainted with Palestine. From this it may fairly be inferred that there was a place on the Jordan called Bethabara, probably some much frequented ford (the word Bethabara, בֵּית עַבְרָה, meaning *House*, i. e., *Place of crossing*); to which John resorted as a suitable situation for his labours as a preacher of the kingdom of heaven. Assuming this, it may be asked—1. Might not this also be called *Bethany*? In reply to this, it may be observed, that the Greek word Βηθανία here may represent the Hebrew בֵּית אֵינַי, which signifies *House*, or *place of a ship*, and would, therefore, be

a very appropriate name for a ford. In this case Bethabara and Bethania have substantially the same meaning; so that it is not improbable that the place which originally bore the name of Bethany may have come at a later period to be known by the name of Bethabara; or it may have had both names in popular usage, and the necessity of distinguishing it from the Bethany on the Mount of Olives may have led to the dropping of this name. It is no objection to this that the etymology of the word above stated will not apply to this Bethany, for the Greek Βηθάνια may represent two different Hebrew words. 2. Is this Bethabara the Bethbarah of Judg. vii. 24? There exist no means of satisfactorily answering this question, but the probability is that the two were different. Bethbarah was on 'the waters,' which, whatever they were, are expressly distinguished from the Jordan; whereas Bethabara was a ford of the Jordan. It is, besides, improbable that the pursuit of the Midianites should have extended so far south as the scene of John's baptizing, to which the inhabitants of Jerusalem went out in such numbers, must be placed. Van de Velde thinks he has found the Bethabara of John in the ford by which the Jordan is crossed by the highway from Nablus to Es-Salt (ii. 271).—W. L. A.

LETH-ANATH (עֵנַת 'בֵּי; Sept. Βαιθαπέ, Βαιθανάχ, Βαιθενέθ), one of the fenced cities that fell to the lot of Naphtali (Josh. xix. 38), and from which the Canaanites were not driven out (Judg. i. 33). In the *Onomasticon* it is called Villa Bathanaea, fifteen Roman miles from Caesarea (i. e., Diocaesarea Sepphoris; see Reland, *Palaest.* p. 629), and said to have medicinal baths (Λουτρὰ ἰάσιμα). Van de Velde (i. 170) thinks it may be the modern 'Ain-ata north-east from Bint Djebeil; but this does not agree with the locality in the *Onomasticon*.—W. L. A.

BETH-ANOTH (בֵּי עֵנוֹת; Sept. Βαιθανάμ), a city belonging to the tribe of Judah, and situated in the mountains (Josh. xv. 59). Wolcott (*Bibl. Sac.* for 1843, p. 57) suggests Beit 'Ainûm to be a place to the north-east of Hebron, and on the road from this to Tekua, as its modern representative. In this Robinson (iii. 281, ed. 1856) and Wilson (i. 384) concur.—W. L. A.

BETHANY (Βηθανία). 1. Lightfoot (*Opp.* ii. 202) derives this name from the Aramaic compound בֵּית הַיְיִ, 'house of dates'; others affirm that it is from בֵּית-עֵינָה, 'house of sorrow' (Simon. *Onom.* s. v.). The former is the more probable derivation. Bethany is mentioned in connection with *Beth-phage*, 'house of figs.' We also know that *palm trees* were plentiful in the environs of Bethany (John xii. 13) and on the Mount of Olives (Neh. viii. 15); while they were sufficiently rare in Palestine to give to each locality where they were found a distinctive name (comp. Gen. xiv. 7; Deut. xxxiv. 3; Judg. iv. 5). It is worthy of note how the several places here take their names from their peculiar products. We have the 'Mount of Olives'; *Beth-phage*, 'the house of figs'; and *Bethany*, 'the house of dates.'

The village of Bethany is unquestionably ancient, though it was probably so small, and its situation so retired, that it never came into notice until the

time of our Lord. Then, however, it became the scene of two events which have served to place it in the highest rank among the sacred towns of Palestine. At Bethany Christ raised Lazarus from the dead (John xi.); and at Bethany, during His last interview with His disciples, He ascended into heaven (Luke xxiv. 50). This little quiet village appears to have been the home of our Lord during His periodical visits to Jerusalem (John xii.; Mark xi. 12; Matt. xxi. 17). Some of the most interesting and affecting incidents in His private life occurred here (Matt. xxvi. 6, *sq.*; Mark xiv. 3; John xi. 2). What Capernaum was in Galilee (Matt. iv. 13), Bethany was in Judæa. After the

labours of the day in the great city, after the turmoil of its crowded thoroughfares, and the wanton insult and persecution of its fanatical populace, it must have been sweet and soothing to the Saviour's troubled soul to walk over Olivet in the still evening or starry night, and seek repose and sympathy in the peaceful homes and genial society of Bethany.

Bethany was never afterwards lost sight of by Christian scholars and travellers. The Bourdeaux pilgrim who visited Palestine in A. D. 333 mentions the crypt in which Lazarus was buried as being shewn in Bethany (*Itin. Hieros.*, ed. Wessel. p. 596). And Jerome, writing nearly a century later, says that a church then marked the site of the miracle

142. Bethany.

(*Onomast. s. v. Bethania*). A few centuries later, piety or superstition added other churches, with convents for both monks and nuns, and discovered or invented numerous 'holy places' (see *Early Travels in Palestine*, Bohn, pp. 6, 28, 44). The churches and convents, like most others in Palestine, were destroyed when Mohammedanism became triumphant. One church was used for a time as a mosque, and thus outlived the others; but in the 16th century nothing remained of any of them except a few fragments of massive walls and heaps of rubbish (Robinson's *Bib. Res.* i. 433).

Bethany still exists, though it has long lost its old name. It is a remarkable fact that its new name serves to distinguish it as the site of Christ's great miracle. It is called *El-Azartyeh*, which may be rendered 'the place of Lazarus.' It is $1\frac{3}{4}$ mile distant from Jerusalem, on the opposite, or

eastern side of the Mount of Olives; and about a mile below the summit of the mount. The village consists of some twenty wretched houses, huddled together on the side of a shallow rocky glen, which runs down the declivity. The slopes around are almost covered with bare crowns and jagged fragments of gray limestone; but among these are still some straggling fig-orchards, intermixed with olive and carob trees. Bethany stands on the border of the desert. Beyond it there is not, and apparently never was, any inhabited spot. It seems as if excluded from the world of active life, and one would suppose, from the look of its inhabitants, that they had given up industry in despair. The view from it is dreary and desolate. Olivet shuts out Jerusalem and the country westward; and the eye roams eastward down the bare, gray, 'wilderness of Judæa' into the deep valley of the Jordan,

and then up again to the long wall of the Moab mountains on the distant horizon. The houses are massive and rude, built chiefly of old hewn stones. On the top of a scarped rock to the south is a heavy fragment of ancient masonry, which may be part of one of the old churches. The tomb of Lazarus is still shewn. It is a deep vault, partly excavated in the rock, and partly lined with masonry. Of course there is nothing to connect it with the great miracle of our Lord except the imagination of the people.

The leading, and indeed the only, road from Jerusalem to Jericho runs past Bethany. It is one of the dreariest in all Palestine, and it is now, as it was in the time of our Lord, one of the most dangerous (Luke x. 30). The road does not proceed direct from the Holy City to this village; it winds round the south side of the Mount of Olives; thus making the distance as nearly as possible fifteen furlongs (John xi. 18). It was up that road through the wilderness from Jericho Christ came to raise Lazarus; and on it, without the village, the weeping sisters met Him (comp. John x. 40, and xi. 1-20). It was along that road to Jerusalem He went in triumphal procession, and from the 'palm trees' in the adjoining fields the multitudes cut down branches (Mark xi. 1-11; John xii. 13). A steep and rugged footpath leads from Jerusalem to Bethany over the summit of Olivet. It was probably by it Jesus 'led out' His disciples 'as far as to Bethany'—the same place where He was often wont to retire—and there 'He lifted up His hands and blessed them. And while He blessed them He was parted from them, and received up into heaven' (Luke xxiv. 50, 51). By the same path the disciples returned to Jerusalem (Acts i. 12). It is a singular fact, and one calculated to shew the value that ought to be attached to eastern traditions, that a tradition as old as the beginning of the 4th century fixes the scene of the ascension on the summit of the Mount of Olives, and there, in honour of it, the Empress Helena built a church (Eusebius, *Vit. Const.* iii. 43); yet Luke distinctly states that this event occurred at Bethany. (The fullest accounts of Bethany are given in Robinson's *Biblical Researches*; Wilson's *Lands of the Bible*; Stanley's *Sinai and Pal.*; Murray's *Handbook for Syria and Palestine*.)—J. L. P.

2. Bethany on the Jordan. [BETHABARA.]

BETH-ARABAH (בֵּית הָעֲרָבָה; Sept. Βαυθαράβα, Θαραβαδμ, Βηθαράβα), a town in one place ascribed to Judah (Josh. xv. 61), in another to Benjamin (xviii. 22). It lay on the border line of the two (xv. 6; xviii. 18), 'in the wilderness' (עֲרָבָה), *i. e.*, in the valley or plain of the Jordan and Dead Sea. Hence its name = *House of the wilderness*.—W. L. A.

BETH-ARAM (בֵּית הָרָם; *House of the lofty*; Sept. Βαυθαράβρα). In describing the allotted territory of the tribe of Gad (Josh. xiii. 24-28), Moses first mentions those towns which lay on the high 'plateau' (מִישֹׁר) east of the Jordan Valley, and afterwards those situated in the 'valley' itself (עֲמֹק), beginning at the southern end. The first of the latter towns is Beth-Aram (ver. 27). We conclude, therefore, that Beth-Aram was situated on the low flat plain on the east bank of the river, and not far from its mouth. The 'valley' (Emek), mentioned in ver. 27, is manifestly the Jordan

valley, sometimes called *Arabah* (Josh. xviii. 18), and is to be distinguished from the 'plain' or 'plateau' (*Mishor*) of ver. 21. The ravine of Heshbon, which descends from the Moab mountains into the Jordan valley, about three miles north of the Dead Sea, was the boundary between Reuben and Gad (comp. Josh. xiii. 17, 23, and 26); so that Beth-Aram, being a town of Gad, must have been to the north of Wady Heshbon. It is manifestly the same place which is called *Beth-haran* (בֵּית הָרָן, Sept. Βαυθαράν), in Num. xxxii. 36; the only difference in the Hebrew being the change of ר into ך, not an uncommon occurrence. Eusebius and Jerome tell us that the Syrians called this town *Bethramtha* (it is so named also in the Talmud, see Reland. *Palest.*, p. 642); but that Herod changed its name to *Livia*, in honour of the celebrated Livia, the wife of Augustus. (*Onomast.* s. v. *Betharam*.) We learn from Josephus, that when Livia took the name of *Fulia*, the name of this town was likewise changed (*Ant.* xviii. 2. 1). Jerome describes it as lying eastward of Jericho, on the road to Heshbon, five miles south of Bethnimrah (*Onom.* s. v. Βηθαράβραν; see also Reland. *Pal.*, pp. 496, 650). The site of Beth-aram has never yet been accurately identified. The writer of this article heard of ruins a few miles east of the Jordan, near the place above indicated, to which, he was informed, the Arabs give the name *er-Ram*; but he was unable either to visit them, or to obtain any satisfactory description. They may probably be the ruins of Beth-Aram. On Van de Velde's map of Palestine, Beth-haran (*Livias*) is laid down, on what authority does not appear.—J. L. P.

BETH-ARBEL (בֵּית אַרְבֵּל), a place mentioned only in Hos. x. 14; and supposed with some probability to be the same as the Arbela of Josephus. This was a village in Galilee, near which were certain fortified caverns. They are first mentioned in connection with the march of Bacchides into Judæa, at which time they were occupied by many fugitives, and the Syrian general encamped there long enough to subdue them (*Antiq.* xii. 11. 1; 1 Maccab. ix. 2). At a later period these caverns formed the retreats of banded robbers, who greatly distressed the inhabitants throughout that quarter. Josephus gives a graphic account of the means taken by Herod to extirpate them (*Antiq.* xiv. 15. 4, 5; *De Bell. Jud.* i. 16. 2-4). These same caverns were afterwards fortified by Josephus himself against the Romans during his command in Galilee. In one place he speaks of them as the caverns of Arbela, and in another as the caverns near the lake of Gennesareth (Joseph. *Vita*, sec. 37; *De Bell. Jud.* ii. 20. 6). According to the Talmud, Arbela lay between Sepphoris and Tiberias (Lightfoot, *Chorog. Cent.* c. 85). These indications leave little doubt that Arbela of Galilee, with its fortified caverns, may be identified with the present Kulat ibn Maan and the adjacent ruins now known as Irbid (probably a corruption of Irbil, the proper Arabic form of Arbela). The best description of the neighbouring caves is that of Burckhardt (p. 331), who calculates that they might afford refuge to about 600 men.—J. K.

Addendum.—About two miles from the western shore of the Sea of Galilee, and three miles and a half from the town of Tiberias, are the ruins of

Irbid. They are situated on the edge of the plateau of Hattin, where a deep and wild ravine breaks down from it into the fertile vale of Genesaret, now called *el-Ghuweir*. The ruins are not very extensive. They consist chiefly of rubbish, and foundations of hewn stones. Among them are the remains of a large and beautiful Synagogue, perhaps of the fifth or sixth century. A fine portal with sculptured ornaments still stands complete, and in the interior are several columns with Corinthian capitals. There can be no reasonable doubt that this is the Arbela of Josephus, and the *Beth-Arbel* of Hosea. The situation, the name, and the singular fortified caverns in the neighbouring ravine, indicate the identity. The Arabic *Irbid* is a corruption of the Hebrew *Arbel*. About three-quarters of a mile down the ravine are the caverns referred to by Josephus, and which, in all probability, led Hosea to mention Beth-Arbel as a place of great strength (ch. x. 14). The sides of the ravine are here cliffs of naked rock, rising to a height of nearly 600 feet. About half-way up that on the right, are extensive and singular excavated chambers, capable of containing several hundred men. Some of them are placed one above the other, like the stories of a house; some are walled up in front, having doors and windows. It would seem that the caves are partly natural, but greatly enlarged by art, and united by rock-hewn doors and passages. Within them are several large cisterns, into which the rain water was conducted from the hills and cliffs around by little channels. These caves, if only well-provisioned, might be defended by a few resolute men against an army. (Reland, *Palaest.* p. 575; Wilson, *Lands of the Bib.* ii. 308; Robinson's *Bib. Res.* iii. 342).—J. L. P.

BETH-AVEN (בֵּית אַוֵּן, *House of vanity*, or *falsehood*; Sept. Βαυθῆλ and Βαυθαρῶν, etc.), a town in the mountains of Benjamin, near Ai, and a short distance east of Bethel (Josh. vii. 2). It gave its name to a section of that rocky wilderness which extends from the summit of the mountain range down to the Jordan valley (Josh. xviii. 12). It is described in 1 Sam. xiii. 5, as lying to the west of Michmash (comp. ch. xiv. 23). The region between Michmash and Bethel is among the wildest in all Palestine. Bleak rounded hill-tops are thickly studded with jagged, protruding rocks of gray limestone, and strewn with innumerable fragments of the same. Ravines, like huge fissures, intersect them, and rend the mountain sides below. There is scarcely any verdure; and there is no sign of cultivation, except here and there a little patch of corn among the rocks, or a few fig trees nestling in the bottom of a glen, or clinging to the sides of a cliff. Joshua might with truth name it the 'Wilderness of Bethaven.' Among the rocks are numerous aromatic herbs and shrubs, which make it a favourite pasture-ground for goats; hence, perhaps, its name מִדְבַּר. The writer saw, and visited several runs between Michmash and Bethel, any one of which might be the site of Beth-Aven; but he could hear nothing of the ancient name.

The prophet Hosea mentions the name Beth-Aven three times, but it is evident he applies it in contempt to Bethel (Hos. iv. 15; v. 8; x. 5). This is quite characteristic of eastern writers. It was suggested partly by the proximity of the two towns; partly perhaps by the fact that Beth-Aven

was already in ruins, and Bethel's doom was also sealed; partly, too, by the appropriateness of the name to Bethel, after Jeroboam had set up the golden calf there. Before that time it was the 'House of God' (*Bethel*); then it was made the 'house of idols' (*Beth-Aven*). Amos has a still more striking and beautiful play upon the name Beth-Aven, when predicting the final overthrow of Bethel; 'Seek not Bethel, nor enter into Gilgal . . . for *Bethel* shall come to nought.' It shall come to אָוֵן (*Aven*), which signifies 'idolatry,' and also 'nothingness' (See Jerome, *Onom.* s. v. *Bethel*). It would appear that Beth-Aven fell to ruin at a very early period, and was never rebuilt. There is no mention of it after the captivity. Eusebius refers to it, but not as a place then existing (*Onom.* s. v.). The Septuagint sometimes renders it Βαυθῆλ (Josh. vii. 2); sometimes Βαυθάρ (Josh. xviii. 12); sometimes Βαυθῶν; and in Hos. iv. 15, οἶκος Ἶδω. This proves that the place and name were alike unknown to the translators of that version.—J. L. P.

BETH AZMAVETH (Neh. vii. 28). [AZMAVETH.]

BETH-BAAL-MEON. [BAAL MEON.]

BETH-BARAH (בֵּית בָּרָה, perhaps for בֵּית עֲבָרָה, 'house of passage'; Sept. Βαυθμρά); a town on the bank of the Jordan. The site has never been identified; but its position is pretty accurately indicated by the reference in Judg. vii. 24, the only place where it is found in Scripture. Gideon, on the defeat of the Midianites, sent to the inhabitants of Mount Ephraim, ordering them to intercept the flying foe by occupying 'the waters unto Beth-barah and Jordan.' The battle took place in the valley of Jezreel. The Midianites fled down it into the great plain of the Jordan. Their object would naturally be to cross the river by the nearest and best fords, so as to retreat into the fastnesses of the eastern mountains. Gideon knew those fords, and resolved to seize them. Hence his message to the Ephraimites. We would conclude from this, that Beth-barah must have been situated opposite or nearly so to the valley of Jezreel. If the conjecture of Gesenius be right as to the meaning of the name ('House of Passage'), then, in all probability, Beth-barah was situated at the ford of the Jordan near Succoth, where we know Gideon and his little army crossed the river in pursuit of the enemy (Judg. viii. 4, 5). The ford at this place is one of the best on the river; an island dividing the stream, and a bar connecting it with each bank (Robinson's *Bib. Res.* iii. 316).—J. L. P.

BETH-BIREI (בֵּית בִּרְיָ). A town of Simeon (1 Chron. iv. 31), for which Beth-lebaath is found in Josh. xix. 6. It is called also Lebaath in Josh. xv. 32, where it is reckoned among the cities of Judah. Reland (*Palaest.* p. 648) suggests that it may stand connected with the toponymy of Beth-leptephena (Pliny, *H. N.* v. 15), or of the Beth-leptephena (Joseph. *B. Jud.* iv. 8. 1). From the name Lebaath (*lionesses*), it has been supposed to have been situated in the wild district to the south of Judah.—W. L. A.

BETH-CAR (בֵּית כָּר, *House of pasture*, or of a *lamb*; Sept. Βαυθχάρ; Vulg. *Beth-char*). This place is only once mentioned in the Bible (1 Sam. vii. 11).

and there are no very distinct data to enable us to fix its site. It was on the side of a hill, or rising ground, on the borders of Judah and the plains of Philistia. The Israelites under Samuel having overthrown the Philistine army at Mizpeh (a few miles north of Jerusalem), pursued them 'until they came *under* Beth-car.' Close to this spot the Israelites halted, and set up a stone, naming it *Ebenezer*, which, Jerome affirms, was near to (*juxta*) Bethshemesh (*Onomast.* s. v. *Abenezzer*). Now Bethshemesh stands on a low ridge on the south side of the rich valley of Sorar. On the opposite side of this valley, on a rising ground, about three miles north-west of Bethshemesh, are the ruins of an old village called *Beit-far*. The situation answers in every respect to that assigned to Beth-car; and the name may possibly be an Arab corruption of the latter. It lies in the direct route from Mizpeh to the plain of Philistia, and is just on the borders of the latter province where a pursuing army would naturally halt.—(*Handbook for Syr. and Pal.* p. 283.)—J. L. P.

BETH-DAGON (בֵּית־דָּגוֹן, *House of Dagon*,

the god of the Philistines, mentioned in Judg. xvi. 23, and other places. See this etymology defended against the older one (which Fürst retains *Heb. u. Chald. H.W.B.*, p. 286) in Gesenius, *Monument. Phœn.*, p. 387, and *Thes.*, p. 294). This collocation of the Hebrew nouns, BETH and DAGON, occurs in six passages—(1.) Josh. xv. 41; (2.) xix. 27; (3.) I Sam. v. 2; (4.) v. 5; (5.) I Chron. x. 10; (6.) I Maccab. x. 83.

In the third and fourth of these passages it is certain that nothing else than *the house* (or temple) of the god *Dagon* is meant [DAGON]. The others claim our attention here—I. BETHDAGON, (LXX. Βαγδαθήλ; Cod. Al. Βηθδαγών), in Josh. xv. 41, was one of the second group of 'sixteen cities with their villages,' which the sacred writer places in

the lowlands (שפלה) of the tribe of Judah, apparently on the actual plain which stretches westward towards the Philistine coast from 'the hill country,' so often mentioned. A doubt has been expressed (see Reland, *Palæstina*, 636, and Smith's *Dictionary*, s. v.), whether, in the absence* of the conjunction י, this name Bethdagon should not be joined, as an epithet of distinction, to the preceding word Gederoth, so as to form the compound appellation, *Gederoth-bethdagon*. But then this group of sixteen cities would be defective by one; moreover, the name Gederoth occurs *alone* in 2 Chron. xxviii. 18, with the same description as it has in this place, as one of the cities of the lowlands of Judah. Gesenius and Fürst† identify this Bethdagon with the Caphar-dagon, which in the time of Eusebius was a very large village ‡ (κώμη μεγάλη, inter Jammiam et Diospolin; *Onomast.* s. v.) in the neighbourhood of Joppa; but modern research has shewn that this latter place, of which still remain some traces in *Beit Dejan*, a village be-

tween Yâfa and Ludd, is considerably above the northern boundary of Judah. Our Beth-dagon, indeed, no longer exists (Robinson, iii. [1st ed.], p. 30, note 2; Van de Velde's *Map of Palestine and Memoir*, p. 294). The same must be said of our (2.) BETH-DAGON, mentioned in Josh. xix. 27 (LXX. Βαθρεγυέθ; Cod. Al. Βηθδαγών) as one of the *border* cities of the tribe of Asher. Though, however, no modern landmark points out the site of this north Beth-dagon, it is not difficult to discover, from the precise topographical statement of the sacred writer, that this city was situated at the point where the boundary line of the tribe, after crossing the ridge south of the promontory of Carmel towards the east, intersects the stream of the Kishon, on the confines of Zebulun. It is remarkable that, as there is a modern *Beit Dejan* in the south which yet cannot be identified with, but is far to the north-west of, the southern Beth-dagon; so there is still, in the central district of the Holy Land, a second *Beit Dejan*, which is equally far distant from our northern Beth-dagon, only in the opposite direction of south-east. In the fertile and beautiful plain of Sâlim, a little to the east of Nâbulus (Shechem), Dr. Robinson described at the east end of it, on some low hills, a village called *Beit Dejan*. (*Bibl. Researches*, vol. iii., p. 102; *Later Researches*, p. 298*.) This *Beit Dejan*, Robinson thinks, has no counterpart in the Beth-dagons of the Bible. The French traveller, De Saulcy, is not of this opinion, but identifies this village near Nâbulus with our *fifth* Beth-dagon. 'I am very much inclined to believe,' he says, 'that the Beth-dagon of the passage just quoted (I Chron. x. 10) is no other than our *Beit Dejan*, because this village is only one day's march from Djilboun, the locality in the mountain to the north-east of Djénin, which was unquestionably the scene of Saul's disaster' (*Dead Sea and Bible Lands*, i. 101). If his conjecture be right, we must indicate this as the (3.) BETHDAGON (LXX. οἶκος Δαγών) in the western half tribe of Manasseh (some distance from Mount Gilboa), where the Philistines after their victory placed Saul's head in the temple of their god—his body and those of his sons having been carried (the same distance north-east) to Bethshan, whence the Jabesh-Gileadites afterwards rescued them. It no doubt aids this view, that we are not otherwise informed *where* the temple was in which they deposited their ghastly trophy; moreover, the phrase (in ver. 9) בְּאַרְצֵי סָבִיב, denoting a *circuit* of the adjacent country, which had been evacuated by Israel, and was then occupied by the enemy (ver. 7), very well suits with the relative positions of this *Beit Dejan* and Bethshan, equally distant from the fatal field, and in different directions. We have now only left the place mentioned in our *sixth* and last passage, I Maccab. x. 83. Both Gesenius

* In Smith's *Dictionary of the Bible* (s. v. BETHDAGON 3) occurs this sentence:—'In addition to the two modern villages mentioned above' [but one only appears to have been mentioned] 'as bearing this ancient name, a *third* has been found by Robinson (iii. 298), a few miles east of *Nabulûs* (*sic*). This is certainly an error, arising from the writer not observing that this eastern *Beit Dejan* is described *twice* by Dr. Robinson (see the references in the text above). There are only two modern villages of this name mentioned by this traveller.

* The copulative *van* is not always prefixed to names of cities in this series (cf. *inter alia*, verses 35, 55, and 58).

† Gesenius, *Thesaurus*, p. 194; and Fürst, *Handwörterbuch*, p. 286. See also Reland, *Palæstina*, 635, and V. Raumer, *Palästina*, 178.

‡ 'Caphar,' כַּפָּר, meaning κώμη or hamlet. See Stanley's *Palæstine*, p. 527.

(*Theo.* 194) and Winer (*Realwört.* 168) express themselves doubtfully whether this passage means only Dagon's temple at Azotus, or a Bethdagon, a town so-called in the neighbourhood. We share in the doubt; but after consideration of the words of the 84th verse, as compared with those of the 85th verse, we are inclined to regard this as a (4.) BETHDAGON, a city in the vicinity of Azotus (or Ashdod), answering probably to Dr. Robinson's western *Beit Dejan*, and Eusebius' Caphar-dagon, already mentioned. It will be observed that in the 84th verse Bethdagon occurs as a proper name, as it also does in the original, Βηθδαργών, whereas in the next verse, the temple of the Philistine god is described by the appellative τὸ ἱερὸν Δαργών. But be this as it may, Ashdod, with its neighbourhood, seems to have been the chief seat (cf. this passage with 1 Sam. v. 1, 2) of a worship which was widely spread, not only among the Phœnician cities of the coast, but in inland towns, as is attested both by the names of these ancient and modern places, and still more remarkably (and perhaps unexpectedly) by the remains of Kouyunjik. [See DAGON in this work; also Layard's *Nineveh and Babylon*, pp. 343, 344, with the accompanying illustration.]—P. H.

BETH-DIBLATHAIM. [DIBLATHAIM.]

BETH-EDEN (בֵּית עֵדֵן, *House of pleasure*, Amos i. 5). It is doubtful whether this should be taken as a proper name or as an appellative. If the former, it may be the modern *Eden* on Lebanon, or Beit-el-Djanneh, on the east declivity of the Antilibanus, near Damascus. The former of these is called by Ptolemy παραδείσιος (*Geog.* v. 14).—W. L. A.

BETH-EKED (בֵּית עֶקֶד). This name occurs 2 Kings x. 12, where it is rendered in the A. V. as an appellative, 'shearing house;' Luther, 'Hirtenhaus.' The *Onomasticon* makes it a proper name, Βαθακάθ, *Bethachad*, and places it twelve Roman miles from Legio, on the great plain. Robinson found a village between Jezreel and Samaria called *Beit-kad* (ii. 316, 2d ed.), which Ewald thinks was probably Bethoked (*Gesch. Isr.* iii. 1, p. 241).—W. L. A.

BETH-EL (בֵּית אֵל, Sept. Βαθὴλ), originally LUZ (לֹז; Sept. Λουζά), an ancient town which Eusebius places twelve R. miles north of Jerusalem, on the right hand of the road to Shechem. Jacob rested here one night on his way to Padan-Aram, and commemorated the vision with which he was favoured by erecting and pouring oil upon the stone which had served him for a pillow, and giving to the place the name of Beth-el (*place or house of God*), which eventually superseded the more ancient designation of Luz (*Gen.* xxviii. 11-19). Under that name it is mentioned proleptically with reference to the earlier time of Abraham (*Gen.* xii. 8; xiii. 3). After his prosperous return [Jacob again received a divine communication at this spot, which he commemorated as in the former case, by setting up a stone, which he anointed with oil, and again named the spot Bethel. Here also] he buried Deborah; received the name of Israel for the second time, and promises of blessing; and accomplished the vow which he had made on his going forth (*Gen.* xxxv. 1-15; comp. xxxii. 28, and xxviii. 20-22). It seems not to have been a town in those early times; but at the conquest of the land, Bethel

is mentioned as a royal city of the Canaanites (*Josh.* xii. 16).* It became a boundary town of Benjamin toward Ephraim (*Josh.* xviii. 22), and was actually conquered by the latter tribe from the Canaanites (*Judg.* i. 22-26). At this place, already consecrated in the time of the patriarchs, the ark of the covenant was, apparently, for a long while deposited [ARK], and probably the tabernacle also (*Judg.* xx. 26; comp. 1 Sam. x. 3). It was also one of the places at which Samuel held in rotation his court of justice (1 Sam. vii. 16). After the separation of the kingdoms Bethel was included in that of Israel, which seems to shew, that although originally in the formal distribution assigned to Benjamin, it had been actually possessed by Ephraim in right of conquest from the Canaanites—which might have been held by that somewhat unscrupulous tribe to determine the right of possession to a place of importance close on their own frontier. Jeroboam made it the southern seat (Dan being the northern) of the worship of the golden calves; and it seems to have been the chief seat of that worship (1 Kings xii. 28-33; xiii. 1). The choice of Bethel was probably determined by the consideration that the spot was already sacred in the estimation of the Israelites, not only from patriarchal consecration, but from the more recent presence of the ark; which might seem to point it out as a proper seat for an establishment designed to rival that of Jerusalem. This appropriation, however, completely desecrated Bethel in the estimation of the orthodox Jews; and the prophets name it with abhorrence and contempt—even applying to it, by a sort of *jeu de mot*, the name of Bethaven (*house of idols*) instead of Bethel (*house of God*) (*Amos* i. 5; *Hos.* iv. 15; v. 8; x. 5, 8). The town was taken from Jeroboam by Abijah, king of Judah (2 Chron. xiii. 19); but it again reverted to Israel (2 Kings x. 29). After the Israelites were carried away captive by the Assyrians, all traces of this illegal worship were extirpated by Josiah, king of Judah, who thus fulfilled a prophecy made to Jeroboam 350 years before (2 Kings xiii. 1, 2; xxiii. 15-18). The place was still in existence after the Captivity, and was in the possession of the Benjamites (*Ezra* ii. 28; *Neh.* vii. 32). In the time of the Maccabees Bethel was fortified by Bacchides for the king of Syria (*Joseph. Antiq.* xiii. 1. 3). It is not named in the New Testament; but it still existed, and was taken by Vespasian (*Joseph. Bell. Jud.* iv. 9. 9). It is described by Eusebius and Jerome as a small village (*Onomast.* s. vv. *Aggai* and *Luzai*); and this is the last notice of it as an inhabited place. Bethel and its name were believed to have perished until within these few years; yet it has been ascertained by the protestant missionaries at Jerusalem that the name and a knowledge of the site still existed among the people of the land. The name was indeed preserved in the form of Beitn—the Arabic termination *in* for the Hebrew *el* being not an unusual change.—J. K.

Addendum.—Jerome describes it as a village

* [There is reason to doubt if the Bethel mentioned *Josh.* xii. 16, or that mentioned 1 Sam. xxx. 27, be the Bethel of the other passages. It was apparently more to the south than the latter; probably the Bethul or Bethuel of *Josh.* xix. 4, and 1 Chron. iv. 30. (See *Smith's Dict. of the Bible*, s. v.)]

still inhabited; and he defines with accuracy its situation, twelve miles from Jerusalem, on the right of the road to Shechem (*Onomast.* s. v. *Bethel*). This is the last notice of Bethel in ancient history. There can be no doubt that it continued to exist, and even to flourish for several centuries afterwards, as there are remains of churches and buildings on the site, which cannot be much older than the time of the Crusades. Its name in the Arabic form, *Beitîn*, was probably not recognized by the foreign pilgrims and native residents; and the Bethel of Scripture was sought for far northwards. From the 4th century till the 19th, the true site of Bethel remained unnoticed, and indeed appears to have been altogether unknown. Dr. Robinson was the first who gave a full description of the site and ruins, and a full statement of its claims to be the Bethel of Scripture, though its identity had been recognized by several others before his visit. *Beit* is the Arabic form of the Hebrew *Beth*; and it is no unusual thing to find *l* and *n* interchanged in the two languages. (*Bib. Res.* i. 449.)

Though Bethel is one of the oldest of Palestine's sanctuaries, and though a host of sacred associations cluster round it, yet there is no grandeur or beauty to distinguish the site, and there is no richness in the surrounding country, such as one should expect to attract early settlers. The whole region is singularly bleak, and even forbidding in aspect. Jacob could scarcely have found any spot there on which a 'pillow' of stone was not ready laid for his head. Grey jagged rocks everywhere crop up over the scanty soil. The hills are rounded, and are alike destitute of features and of verdure; and the vales which divide them are neither deep nor picturesque. The ruins are spread over the shelving point and sides of a low rocky ridge between two converging valleys, which run off southward into the ravine of Suweinît. Higher ridges encompass it on all sides except the south; in which direction, from the northern part of the ruins, a distant view is gained of the top of Mount Moriah and the Great Mosque. The hill to the eastward is the loftiest and most conspicuous in the neighbourhood. Its summit is broad and flat, with one culminating point, round which a few olive trees are sprinkled. This is a spot of singular interest, and it is one of those places which are described with so much minuteness and accuracy in the Sacred Writings, that it is impossible to mistake them. It was upon this 'mountain, on the east of Bethel, Abraham pitched his tent, having Bethel on the west and Hai on the east; and there he builded an altar unto the Lord, and called upon the name of the Lord' (Gen. xii. 8). How much vividness does a knowledge of the position and commanding elevation of this mountain give to the parting scene of Abraham and Lot! The two patriarchs stood upon its summit. The whole land was before them (Gen. xiii. 9). The hill country was bleak and rocky; but Lot looked down the long grey declivities of the wilderness, and saw in the distance the verdant meadows, and shady groves, and sparkling waters of the Jordan. The fire of heaven had not yet blasted that lovely plain; volcanic convulsions had not yet distorted its attractive features—'it was well watered everywhere . . . even as the Paradise of Jehovah, like the Land of Egypt' (Gen. xiii. 10). And Lot made his unfortunate choice. Abraham remained after Lot had gone, and the Lord said

to him; 'Lift up now thine eyes, and look from the place where thou art, northward, and southward, and eastward, and westward, for all the land which thou seest, to thee will I give it,' etc. (Gen. xiii. 14-18). What singular minuteness of detail, and what wondrous graphic power do we find in the Sacred Writings!

In the valleys and cliffs around Beitîn are numerous rock-hewn tombs, the very same, doubtless, which king Josiah saw as he turned away from executing judgment on a guilty city, and from which he 'took the bones and burned them upon the altar' (2 Kings xxiii. 16).

The ruins of Bethel cover a space of three or four acres. They consist of ancient foundations, and heaps of hewn stones and rubbish. On the highest point are the remains of a square tower; and towards the south are the shattered walls of a church, perhaps the same which Jerome alludes to as built upon the spot where Jacob slept (*Onomast.* s. v. *Aggai*.) Amid the ruins are about a score of miserable huts, in which, when the writer last visited it (1857), a few poor families and a few flocks of goats found a home. In the western valley is a large and very ancient cistern. It is now in ruins; but the two springs which fed it of yore, bubble and sparkle as when the maidens of Sarah filled their pitchers from them, and the herdsmen of Abraham and Lot quarrelled about their waters. The desolation of Bethel, and the shapeless ruins scattered over its site, are not without their importance even yet—they are silent witnesses to the truth of Scripture, and the literal fulfilment of prophecy. Amos said many centuries ago; 'Seek not Bethel, nor enter into Gilgal, for Gilgal shall surely go into captivity, and Bethel shall come to nought' (ch. v. 5).—J. L. P.

BETH-EMEK (בֵּית־עֵמֶק, *House of the valley*), a place on the borders of Asher (Josh. xix. 27). Robinson suggests a place called now Amkha, about eight miles to the north east of Akha, as its probable representative.

BETHER (בֵּיתֵר). The Mountains of Bether are mentioned only in Cant. ii. 17, and no place called Bether occurs elsewhere. The word means, properly, *dissection*. The mountains of Bether may therefore be *mountains of disjunction, of separation*, etc., that is, mountains cut up, divided by ravines, etc. [Comp. LXX. *δρη κοιλωμάτων*; 'super montes vallibus discissos,' Heiligstedt ap. Maurer, *Comment. in V. T.*, in loc. Others give the rendering 'the mountains of separation,' i.e., which separate us (Hitzig, in loc.) The Syriac version substitutes בֵּיתֵר בְּשֵׁם for בֵּיתֵר from the parallel passage, viii. 14, and translates 'm. of spices.' For this there is no authority.]

BETHESDA (Βηθεσδά; from [Syr. ܒܝܬ ܥܡܝܢ = בית המדע, *House of mercy*, according to some, while others derive it from Heb. בֵּית מַעְוָה, *House or place of effusion*, i.e., of waters] a pool (κολυμβήθρα) at the Sheep-gate of Jerusalem, built round with porches for the accommodation of the sick who sought benefit from the healing virtues of the water, and upon one of whom Christ performed the healing miracle recorded by St. John (v. 2-9). That which is now, and has long been pointed out as the Pool of Bethesda, is a dry

basin or reservoir outside the northern wall of the enclosure around the Temple Mount, of which wall its southern side may be said to form a part. The east end of it is close to the present gate of St. Stephen. The pool measures 360 feet in length, 130 feet in breadth, and 75 in depth to the bottom, besides the rubbish which has accumulated in it for ages. Although it has been dry for above two centuries, it was once evidently used as a reservoir, for the sides internally have been cased over with small stones, and these again covered with plaster; but the workmanship of these additions is coarse, and bears no special marks of antiquity. The west end is built up like the rest, except at the south-west corner, where two lofty arched vaults extended westward, side by side, under the houses that now cover this part. Dr. Robinson was able to trace

143. [Pool of Bethesda.]

the continuation of the work in this direction under one of these vaults for 100 feet, and it seemed to extend much farther. This gives the whole a length of 160 feet, equal to one-half of the whole extent of the sacred-enclosure under which it lies; and how much more is unknown. It would seem as if the deep reservoir formerly extended farther westward in this part; and that these vaults were built up, in and over it, in order to support the structures above. Dr. Robinson considers it probable that this excavation was anciently carried quite through the ridge of Bezetha, along the northern side of Antonia to its north-west corner, thus forming the deep trench which separated the fortress from the adjacent hill (*Bib. Researches*, i. 433, 434). The mere appearance of the place, and its position immediately under the wall of the sacred enclosure, strongly support this conjecture, so that we are still left to seek the Pool of Bethesda, if indeed any trace of it now remains. Dr. Robinson himself, without having any definite conviction on the subject, asks whether the Pool of Bethesda may not in fact be the 'Fountain of the Virgin?' The question was suggested to his mind by the exceedingly abrupt and irregular plan of that fountain. He remarks—'We are told that an angel went down at a certain season into the pool and troubled the water;' and then whosoever first stepped in was made whole (John v. 2-7). There seems to have been no special medicinal virtue in the water itself, and only he who first stepped in after the troubling was healed. Does not this troubling of the water accord with the irregular plan of this

fountain? And as the Sheep-gate seems to have been situated not far from the Temple (Neh. iii. 1, 32), and the wall of the ancient Temple probably ran along this valley; may not that gate have been somewhere in this part, and the Fountain of the Virgin correspond to Bethesda? the same as the 'King's Pool' of Nehemiah, and the 'Solomon's Pool' of Josephus? (*Bibl. Researches*, i. 508). For the latest investigations of this subject, see *Narrative of a Journey round the Dead Sea*, by F. De Saulcy, London, 1854. [SILOAM, POOL OF.]-J. K.

BETH-GAMUL (בֵּית גַּמּוּל, *House of the weaned*

camel-house, Fürst]; Sept. οἶκος Γαμύλλ). This place is only once mentioned in the Bible (Jer. xlviii. 23). It is said to be in 'the plain country' of Moab, or more literally 'in the land of *Mishor*.' Along the eastern side of the Jordan and the Dead Sea, runs a mountain ridge of uniform elevation, having an altitude of about 3000 feet above the valley. On its summit is a great plateau, which extends, with a gentle slope, far eastward, till it joins the desert of Arabia. This is the *Mishor*, the character and boundaries of which will be considered elsewhere. [MISHOR]. Some would confine it to a narrow strip along the brow of the ridge overhanging the Dead Sea; and they affirm that all the towns enumerated by Jeremiah are there to be sought for. But for this there is no evidence, and the words of the passage are opposed to it—'Judgment is come upon the land of *Mishor* . . . upon Bethgamul . . . and upon Kerioth, and upon Bozrah, and upon all the cities of the land of Moab, far and near' (Jer. xlviii. 21-24). These three cities still exist, not very far distant from each other, on the north-eastern section of the *Mishor*; and they retain their old names in an Arabic form. The writer saw them all, and visited two of them (Bozrah and Kerioth). The town of *Um-el-Jemal*, which seems to be, without reasonable doubt, the modern representative of Beth-gamul, stands in the open plain, some eight or ten miles south-west (not north-west as represented on Van de Velde's map) of Bozrah. It is one of the most remarkable places in Syria. It was visited for the first time in 1858 by Mr. C. Graham. It is surrounded by walls, and contains many massive houses, such as are found in the towns of Bashan. They are built of large blocks of basalt, roughly hewn; the roofs are formed of long slabs of the same material; and the doors and gates are all of stone! These buildings are evidently of remote antiquity; and though the place has been deserted for many centuries, the houses, streets, and walls, seem as if the town had been inhabited until within the last few years. Looking at this large deserted town, and the utter desolation of the surrounding plain, we can truly say with the prophet, 'judgment is come upon the land of *Mishor*, and upon all the cities of Moab far and near' (*Camb. Essays*, 1858; *Four. Geog. Soc.*, vol. xxviii).-J. L. P.

BETH-GILGAL. [GILGAL.]

BETH-GEDER. [GEDERAH.]

BETH-HACCEREM (בֵּית הַחֲצֵרִים, *House of the vineyard*). This name occurs twice, Jer. vi. 1 and Neh. iii. 14; from the former passage

we have some evidence of the situation of Beth-haccerem, while the latter drops a hint of its importance. 'O ye children of Benjamin,' says Jeremiah, 'gather yourselves to flee out of the midst of Jerusalem, and blow the trumpet in Tekoa, and set up a sign of fire in Beth-haccerem: for evil appeareth out of the north.' Flight from a northern foe would seem to indicate a *southern* direction from Jerusalem. With this agrees the following comment of St. Jerome, *in loc.* Writing from his monastery of Bethlehem, he says:—'Thecua' (so designating Tekoa) 'we daily see before our eyes, a village lying on a hill some twelve miles from Jerusalem; and between them both there is another village (vicus), also situated on a mountain, the name of which in Syriac and Hebrew is *Bethacharna*' (S. Hieronymi *Opera*, ed. Bened. iv. 882). With this version of the name exactly agrees the LXX. (in Jer. vi. 1), which in the text of the *Alex. Ald. Vat.* and *Complut.* editions reads Βαθσαχαρμᾶ, while the Cod. Al. has Βηθσαχαρμ, and the Vulgate *Bethacarem*. This authority of St. Jerome has led some modern travellers to identify this place with the well-known eminence, called by the natives *Jebel-el-Fureidis*,* and by Europeans 'the Frank Mountain.' If this identity † be correct, the site of *Beth-haccerem* has been the scene of many a remarkable change. Two great kings, in different ages and different ways, probably adorned it with magnificent works. From their lofty city the old inhabitants must have seen stretched before them, up the green vale of Urtās, the beautiful gardens and fountains of King Solomon, which suggested to the royal poet some of the exquisite imagery of the Canticles; and nearly a thousand years later, Herod the Great erected, probably on this very hill of Beth-haccerem, 'a fortress with its round towers, and in it royal apartments of great strength and splendour' (Josephus, *Antiq.* xv. 9. 4); making it serve as an acropolis amidst a mass of other buildings and palaces at the foot of the hill (*Bell. Jud.* i. xxi. 20). To this city, called after him Herodium, the Idumean tyrant was brought for burial from Jericho, where he died (*Antiq.* xvii. 8. 3). The locality still yields its evidence of both these eras. Solomon's reservoirs yet remain (Stanley, 165); and the present state of 'the Frank Mountain' well agrees with the ancient description of Herodium (Robinson, ii. 173). In Neh. iii. 14, the name BETH-HACCEREM (LXX. Βηθσαχαρμᾶ, Vulg. *Bethacarem*) occurs, with these additional facts, indicative of its importance at the period of the return from the captivity (somewhat more than midway between the ages of Solomon and Herod), that it constituted, with its neighbourhood, a district or ward, called

* Connected with פְּרָדִים and παράδεισος; and given to this once highly-cultivated hill from its vicinity to Solomon's gardens, to which, in Eccles. ii. 5, this word *Par'des* (or *Par'ades*) is expressly applied (Stanley, p. 518; Robinson, iii., *Arabic Index*, p. 210).

† It was suggested by Pococke (ii. 42, fol.); it is affirmed by Wilson, i. 396; Bonar (*Mission to the Jews*), 150, 185; and Stanley, p. 166; and is admitted by Robinson to be a not improbable conjecture (*Researches*, 1st edition, ii. 174). For the identification with HERODIUM see also Robinson, p. 173, and the authorities quoted in the notes; also V. Raumer, p. 223, art. *Teckoa*.

in Hebrew בֵּית הַפְּרָדִים, presided over by its prefect or mayor בֵּית הַפְּרָדִים, and appearing, in this respect, on a par with Jerusalem itself* (cf. Neh. iii. 12). Ewald, indeed, after the Chaldee Targum and Kimchi, regards Beth-haccerem, in Jer. vi. 1, as an appellative noun only, and renders it *Weinbergshause*, in allusion to Isaiah v. 2; as if the call were to raise the fire beacon on the towers of the vineyards. This acceptance will hardly stand in the face of the LXX., which always treats Beth-haccerem as a proper name—which it unquestionably is in Neh. iii. 14 (Ewald, *Die Proph. d. Alt. Bundes*. ii. 47).

Between verses 59 and 60 of Josh. xv., the LXX. of the *Codd. Al.* and *Vat.* inserts a group of eleven cities; among them one is called Καρέμ. Even if the passage be authentic (which Keil, *Joshua*, Clark's Tr. p. 389, gives good reasons for believing), the *Karem* mentioned in it must not be confounded with our Beth-haccerem. Robinson and Van Velde place it immediately † west of Jerusalem, and identify it with the modern 'Ain Kârim, a flourishing village with fountain, the Franciscan convent of St. John Baptist being in the midst of it (see Robinson's *Later Researches*, p. 272).—P. H.

BETH-HARAM or BETH-HARAN (בֵּית הָרָם or הָרָן), a town in the tribe of Gad (Num. xxxii.

36; Josh. xiii. 27). It is called in the Syr. ܒܝܬ ܗܪܝܡܐ } *Beth-Othim* (Josh. xiii. 27), but Eusebius says Bethramphtha was the name the Syrians gave it in his day. In the Talmud it is also called בֵּית רִמְתָּא. Josephus calls it Βηθραμφθᾶ, and says it was fortified by Herod, and called by him Julia, after the wife of the emperor (*Antiq.* xviii. 2. 1). In the *Onomast.* it is called Libias, or Livias, which was probably the earlier name.—W. L. A.

BETH-HOGLA (בֵּית הַגְּלָה, *partridge-house*), a town on the border of Judah in Benjamin (Josh. xv. 6; xviii. 19, 21); probably Bethagla (Reland), now 'Ain Hajla.

BETH-HORON (בֵּית הָרוֹן) *The house of the hollow*; Sept. Ὠροῦν, and Βηθωρόν, and Βαθωρόν. There are two towns of this name, distinguished on account of their situation as 'Beth-horon the upper,' and 'Beth-horon the nether.' They both lay on the southern border of Ephraim (Josh. xvi. 3, 5), close to the territory of Benjamin (Josh. xviii. 13, 14). Beth-horon the nether formed the north-west angle of the latter tribe. One of the towns, probably 'the nether,' as Eusebius suggests, was allotted out of the tribe of Ephraim to the Levites (Josh. xxi. 22). The situation of these two towns is thus clearly defined in the Bible; and still more clearly by Josephus and Eusebius. The former places them 100 stadia from Jerusalem (*Anl.* xx. 5. 4, with *B. J.* ii. 12. 2); and the latter twelve miles from Jerusalem on

* This is said on Reland's authority (*Palestina*, ii. 641); but it would seem from the phrase בֵּית הַפְּרָדִים rendered in A. V. 'ruler of the half part of Jerusalem' (iii. 12), that Jerusalem comprised two such wards or districts. Beth-haccerem may be more safely compared with Mizpah (v. 15); and Bethzur and Keilah with Jerusalem (cf. verses 16, 17 with 12).

† Four English miles west, whereas Beth-haccerem (if on Jebel el Fureidis) is eight miles south.

the great road to Nicopolis (*Onomast.* s. v. *Beth-horon*). At the exact distance here indicated, on the ancient leading road from Jerusalem to the western plain, the line of which can still be traced, stands the little village of *Beit 'Ur* distinguished as *el-fôka*, 'the upper;' and a mile and a half farther, near the foot of the mountains, is *Beit 'Ur et-tahta*, 'the lower.' There cannot be a question that these are identical with the 'upper' and 'nether' Beth-horon.

The situation of these two villages, and the topography of the surrounding region are highly interesting, as tending to illustrate some of the most remarkable events in Jewish history. Beth-horon the upper stands on the summit of a conical hill, the culminating point of a long narrow ridge that shoots out westward from the central chain of Judæa. On both the north and south sides of the ridge are deep glens, which gradually converge and meet about a mile west of the village, forming by their junction the celebrated 'valley of Ajalon.' In front, just beneath the apex on which the village stands, the ridge breaks down abruptly, and in places precipitously, to the point of junction; and a short distance west of this point, on a rocky eminence, is situated Beth-horon the nether. The deep valley between the two places may perhaps account for the name, 'The house of the hollow.' The ancient road led through both villages. Ascending from the plain of Philistia, it crossed the low hills to the nether Beth-horon, from which there is a short descent into the valley. The main ascent to the mountain region here begins. The road winds up the mountain side in a zigzag line, in many places cut in the rock, until it reaches the point on which the upper Beth-horon is perched; then after a sharp descent of a few hundred yards, there is an easy ascent of some two miles more to the top of the rounded ridge, from which the road descends gradually into the beautiful plain or basin, in whose centre, on a rocky eminence, stands the old town of Gibeon. The pass of Beth-horon is rugged and difficult, yet it is the only one by which an army could approach Jerusalem from the coast; and the two villages completely command it. This shews why the wise Solomon 'built Beth-horon the upper, and Beth-horon the nether, fenced cities, with walls, and gates, and bars' (2 Ch. viii. 5).

Beth-horon is chiefly celebrated in Scripture from its having been the scene of Joshua's victory over the Amorites; and the remarkable incidents of that victory will be more easily understood if read in connection with the foregoing topographical details. The banded kings assembled around Gibeon. Joshua made a rapid night-march from Jericho, and attacked them in the early morning. They were at once driven back along the way 'that goeth up (from the plain of Gibeon) to Beth-horon' (Josh. x. 10). The steep and difficult pass was now before them. As they fled, 'and were in the going down to Beth-horon, the Lord cast down great stones from heaven upon them' (ver. 11). When Joshua reached the crest of the hill, and saw the enemy rushing down the pass, and the wearied Israelites in pursuit, he feared they might escape as night approached; and then he uttered that wondrous command of faith—'sun, stand thou still upon Gibeon; and thou, moon, in the valley of Ajalon' (ch. x. 12). Gibeon was behind him, and the forenoon sun stood over it. Ajalon lay in front, and the waning moon stood over it. 'And

the sun stood still, and the moon stayed, until the people had avenged themselves upon their enemies.'

In the time of the Maccabees Seron, the general of Antiochus marched against Jerusalem. The warlike Judas having occupied with a few hundred men the pass of Beth-horon, attacked and routed the foe, 'and pursued them from the going down of Beth-horon unto the plain' (1 Maccab. iii. 13-24; Jos. *Antiq.* xii. 7. 1). Two centuries later, Cestius Gallus, the Roman proconsul, when approaching Jerusalem by the pass, also sustained a disastrous defeat. Thus was the same spot the scene of one of the first, and one of the last victories that crowned the Jewish arms (Jos. *Bell. Jud.* ii. 19, 2; Stanley, *Sin. and Pal.* p. 208; Robinson, *Bib. Res.* ii. p. 252).

In the 4th century, the two villages of Beth-horon were known to Jerome. From that time till our own day their names disappeared from history; although the crusaders more than once approached the holy city by this pass. They are both small villages still, with some traces of strong fortifications and departed greatness in and around them.—J. L. P.

BETH-JESIMOTH (בֵּית הַיְשִׁמוֹת, 'House of the deserts'; Sept. *Αἰσιμῶθ* and *Βαυθαερευῶθ*), a town in the low valley (עַרְבָה, the distinctive name of the 'Jordan valley') of Moab, on the east side of the Jordan. It marked the southern limit of the last encampment of the Israelites east of the river (Num. xxxiii. 49). We learn from Josh. xii. 3, that it stood on or close to the shore of the Dead Sea, and under Ashdodth-Pisgah, or 'the cliff of Pisgah.' From these combined references it would appear to have been situated at the base of the mountains, at the north-east angle of the Dead Sea (comp. Josh. xii. 3; Deut. iii. 17, and iv. 49). It was allotted to the tribe of Reuben (Josh. xiii. 20); but subsequently fell into the hands of the Moabites (Ezek. xxv. 9). The name 'House of the deserts' is descriptive of the locality. The valley at that place is singularly barren, and above it rise the bare gray cliffs which form the buttresses of the Moab mountains. Beth-Jesimoth is mentioned by Eusebius, who places it ten miles south of Jericho (it ought to be south-east), on the shore of the Dead Sea. He seems to have confounded it with *Jeshimon* to which David fled from Saul (1 Sam. xxiii. 24, *Onomast.* s. v. *Bethiesemoth* and *Isimoth*); but the latter was near Maon, some thirty miles from Jericho. The site of Beth-jesimoth has never been identified.—J. L. P.

BETH-LEAPHRAH (בֵּית לֵעֹפְרָה; Sept. *οἶκος κατὰ γλεῖστρα*, *House of Aphrah*, A. V.), a town in Judah or Benjamin (Mic. i. 10), probably the same as Ophrah (which see). The name is properly Beth-Aphrah, the \aleph being merely the sign of the genitive. Gesenius translates *House of the farm*, taking the latter word to be עַפְרָה; First derives it from עַפְרָה, dust, and translates *dust-hole* (*Schuttort*), with which Hitzig (*Die Kleine Pr.* in loc.) agrees.—W. L. A.

BETH-LEHEM (בֵּית לֶחֶם, 'House of bread'; Sept. and N. T. *Βηθλεέμ*; Arabic بیت لحم, 'House of flesh'). 1. Bethlehem and its eventful history have been before the world for nearly 2000

years. In sacred interest it is only second to Jerusalem. Yet there is nothing in the village itself, or the surrounding scenery, to attract attention, if we except the shrines which superstition has erected over the sites of apocryphal holy places.

Bethlehem is five miles south of Jerusalem, a little to the east of the road to Hebron. It occupies part of the summit and sides of a narrow ridge which shoots out eastward from the central chain of the Judæan mountains, and breaks down abruptly into deep valleys on the north, south, and east. The steep slopes beneath the village are carefully terraced; and the terraces sweep in graceful curves round the ridge from top to bottom. In the valleys below, and on a little plain to the eastward, are some corn-fields, whose fertility, doubtless, gave the place its name, *Beth-lehem*, 'house of bread;' while the dense foliage of the olives and fig-trees ranged in stately rows along the hill sides, and the glistening leaves of the vines that hang in festoons over the terrace banks, serve to remind us, amid the desolations of the whole land, and especially in contrast with the painful barrenness of the neighbouring desert, that this little district is still *Ephrath*, 'the fruitful.' Immediately beyond these fields and terraced gardens is 'the wilderness of Judæa.' It is in full view from the heights of Bethlehem. White limestone hills thrown confusedly together, with deep ravines winding in and out among them, constitute its chief features. Not a solitary tree, or shrub, or tuft of green grass, is anywhere to be seen. The village contains about 500 houses. The streets are narrow and crooked; but being here and there arched over, and having the rude balconies of the quaint houses projecting irregularly along their sides, they have a picturesque mediæval look about them. On the eastern brow of the ridge, separated from the village by an open esplanade, is the great convent, grim and massive as an old baronial castle. It is built over and around the traditional sanctuary of Bethlehem. The buildings composing the convent are large and splendid. They are all encompassed by a lofty wall, whose huge buttresses rest on the shelving rocks far below. The nucleus of the whole is a rock-hewn cave, measuring 38 feet by 11 feet; at one end of which is the following inscription:—'*Hic de virgine Maria Jesus Christus natus est.*' Over the cave stands the splendid Basilica of Helena, the oldest monument of Christian architecture in the world. It is now sadly out of repair; but its four rows of marble Corinthian columns are still grand and imposing.

Bethlehem is first mentioned in connection with the death of Rachel. A mile north of the village, on the main road from Jerusalem and Bethel, is a little building, which marks to this day the place of her sepulture. The position of this tomb serves at once to illustrate a touching incident of gospel history, and to explain a difficult point of sacred geography. We read in Matt. ii. 16, that Herod 'slew all the children that were in Bethlehem, and in all the coasts thereof.' Bethlehem is in Judah; but the southern border of Benjamin extended to the tomb of Rachel (1 Sam. x. 2); and a part of that tribe thus fell within 'the coasts' of Bethlehem. The infants there were included in the massacre. With singular pathos the evangelist adapts the words of Jeremiah to this calamity:—'In Ramah there was a voice heard . . . Rachel weeping for her children,' etc. Why should the

mother of Benjamin weep for the murdered infants of the tribe of Judah? The reason is now obvious. Many of Rachel's own offspring were included in the massacre; and her spirit is represented as it rising from the tomb and rending the air with cries, which are heard in Ramah, one of Benjamin's chief cities.

In the enumeration of the towns of Judah, in Josh. xv., the name of Bethlehem does not appear. This has occasioned some surprise and controversy, especially as the Septuagint version has a clause attached to ver. 59, containing the names of twelve towns, among which we find *Εφραθά, αὐτῆ ἐστὶ Βαιθλέεμ*. Jerome affirms that these towns were purposely omitted by the Jews (*Comm.* Mic. v. 1); and Kennicott maintains that the passage in the Septuagint is genuine. The vast weight of evidence, however, is against it; and we must regard the clause as an interpolation, however it may have crept in (see Reland, *Palæst.*, p. 644).

The story of Ruth forms an interesting episode in Bethlehem's history. It was in the cornfields below the village that Ruth gleaned; and probably on one of those threshing-floors we still see beside the fields, she slept at the feet of Boaz (Ruth ii. 3, *sq.*) The traveller who may chance to visit the village in the time of 'barley harvest' (April), will witness (as the writer has done) on those fields many a scene calculated to recall the story of Ruth. The reapers, the gleaners, the threshing-floors, the very salutations, are just what they were 3000 years ago.

Bethlehem was a fit training ground for the future poet, warrior, and king of Israel. Amid the wildness and grandeur of those ravines which break down into the Dead Sea, and amid the unbroken solitude of the wilderness, the poet would be naturally led to closer communion with God, to contemplation of his wondrous works in nature and in providence. At night, when watching his flock, all the glory of the starry heavens would be made familiar to him. It was only amid scenes like these that such psalms as the 23d, 19th, 29th, and 42d, could have been composed. Then Bethlehem is a mountain village; and its inhabitants were thorough mountaineers, accustomed from childhood to vigorous exercise, inured to fatigue, trained to unceasing watchfulness against wild beasts and robbers, and ever prepared bravely to defend both their flocks and their lives. Under such training David learned to use his sling with such effect; and his 'mighty men,' the chief of whom were Bethlehemites, learned to wield sword and spear.

About a quarter of a mile north of the gate of the modern village is a 'well,' which is now pointed out as that for whose waters David longed when in 'the hold' of Adullam. It is a cistern, as the Hebrew word (בֹּאֵר) would seem to indicate. It is situated at the head of a ravine; and one can easily understand how three active and resolute men could approach stealthily, then burst suddenly through the surprised host, fill a water-skin, and escape (2 Sam. xxiii. 15; 1 Chron. xi. 17, 18).

Bethlehem was fortified by Rehoboam, perhaps to defend Jerusalem against attack from the south (2 Chron. xi. 6). It would appear that the names *Bethlehem* and *Ephrath* were both applied to the same village in the time of the patriarchs; though the latter was probably more correctly given to the district [see EPHRATH]. Hence Micah calls the

village *Bethlehem Ephratah*, to distinguish it from Bethlehem of Zebulun. It was also called *Bethlehem Judah*. Both appellations continued to be used; but at length the latter became general. Hence when Matthew quotes the words of Micah, he changes the name, using 'Bethlehem, land of Judah,' as that which was best known to those he addressed (Matt. ii. 6; Mic. v. 2).

It was probably on the little plain to the east of the village that the shepherds were watching their flocks by night when the angels announced the birth of Christ. They climbed the hill, and ran to the stable, and there saw the babe 'lying in a manger.' Then followed the visit of the magi, the flight to Egypt, and the massacre. It is a remarkable and significant fact that the scene of the nativity was never honoured, never even incidentally alluded to afterwards by the sacred writers. It was not until *sense* began to usurp its degrading ascendancy over *spirit*, that 'holy places' were sought out and fitted up as sanctuaries for a mistaken devotion. It is not till the time of Justin Martyr, 150 years after the nativity, that Bethlehem is again alluded to. He states that Christ was born in a grotto near the village. Over this grotto the Empress Helena erected that Basilica which still stands. Towards the close of the 4th century Jerome took up his abode in a convent adjoining the church. His cell—a grotto hewn in the rock—is still shewn. There he wrote most of his commentaries, and there he prepared one of the very best of our ancient versions of Scripture, the *Latin Vulgate*. In the beginning of the 11th century, Bethlehem was captured by the crusaders, and Baldwin I. erected it into an episcopal see. The title remained long in the Latin church, but the actual occupancy of the bishopric was short. (Justin., *Dial. c. Tryph.* 78; Euseb., *d. vit. Const.* iii. 43; Will. Tyr., *Hist.* xi. 12.)

The present inhabitants of Bethlehem are all Christians; and though somewhat turbulent, they are industrious, cultivating their fields and vineyards with much care. Many of them are skilful carvers, and prepare beads, crucifixes, models of the holy sepulchre, and other ornaments, for sale to the pilgrims and travellers. (Full descriptions of Bethlehem may be seen in the following works:—Robinson's *Bib. Res.*; Ritter, *Palästina und Syrien*; Stanley, *Syr. and Pal.*; *Handbook for Syr. and Pal.*)

2. A town of Zebulun (Josh. xix. 15; Sept. *Βαθμάν*); probably the birthplace of the Judge Ibzan (Judg. xii. 8; Sept. *Βηθλεέμ*). It is simply mentioned by Jerome (*Onomast. s. v.*) It still exists as a small wretched village, situated about seven miles west of Nazareth, among the wooded hills of Galilee (Robinson, *Bib. Res.* iii. 113; *Handbook for S. and P.* p. 385).—J. L. P.

BETH-MAACHAH (בֵּית מַעֲכָה; Sept. *Βεθμαχά*). A comparison of 2 Sam. xx. 14, 15 with 2 Kings xv. 29 would seem to indicate that this was the name of a district, though sometimes applied also to a town in that district whose proper name was *Abel* (ABEL-BETH-MAACHAH). Beth-maachah and Abel are represented in the Hebrew text of 2 Sam. xx. 15 as two distinct places; and both the Sept. and Vulg. so render the passage. [The Cod. Al., however, has ἐν Ἀβελ ἐν Βηθμαχά.] (See also Reland. *Pales.* p. 519.) The town lay south of Ijon (2 Kings xv. 29), the site of which is now marked by the ruins of Ayûn. At the southern extremity of the beautiful little plain of Ayûn, and

four miles west of the site of Dan, is the village of *Ibil*, occupying a commanding position on the top of a tell or little hill. There cannot be a doubt that this is the ancient Abel. The district of Beth-maachah lay around it, including the whole section of the valley between Lebanon and Hermon. Probably it also included a part of the latter mountain range, as the Maacathites bordered upon the Geshurites, who inhabited the defiles of Trachonitis (*Handbook for S. and P.* p. 506).—J. L. P.

BETH-MARCABOTH (בֵּית הַמְּרַבּוֹת; 'House of chariots'; Sept. *Βαθμαχερῆθ* and *Βαθαμμαρχασβῶθ*), a town on the extreme southern border of Judah. It was finally allotted to the tribe of Simeon (Josh. xix. 5). On comparing Josh. xix. 5 with xv. 31, we find that this same town is called Madmannah (Sept. *Μαχαρίμ*). It is probable that the latter was the proper name of the town, and that Beth-marcaboth was an appellative given to it because it was a posting 'house' (*Beth*) for chariots. Jerome and Eusebius represent Madmannah as a little town, called in their time *Menois*, and situated near Gaza; yet they strangely confound it with the Madmena of Is. x. 31, which lay north of Jerusalem (*Onomast. s. v. Medemana*). If their account be correct, then Beth-marcaboth lay on the main road from Jerusalem to Egypt. Perhaps it may have been one of those cities in which Solomon kept his chariots (which ran to and from Egypt (1 Kings ix. 19 with x. 26–29)).—J. L. P.

BETH-MEON. [BAAL-MEON.]

BETH-MILLO (בֵּית מִלּוֹא; *Wall-house*; Sept. *Βηθμααλώ*, *H. of Millo*, A. V.). 1. A fort, or (according to the Talmud) a village near to Shechem (Judg. ix. 20). In verses 46 and 49, it seems to be identified with the מִגְדָּל שֵׁכֶם, which leads to the conclusion that it formed part of the fortifications of that city. 2. A fort or tower, with the adjoining quarter in Jerusalem, on Mount Sion (2 Kings xii. 20; Sept. *οίκος Μαλλώ*). It is called most frequently simply Millo (2 Sam. v. 9, LXX. ἡ ἄκρη; 1 Kings ix. 15, 24; xi. 27; 1 Chron. xi. 8; 2 Chron. xxxii. 5, LXX. τὸ ἀνάστημα τῆς πόλεως Δαυὶδ). David found a tower or fort on Mount Sion, which he took from the Jebusites, and round which he gradually built houses towards the centre of the city. Solomon repaired this fort; and at a later period it was repaired by Hezekiah. It is described as הֵיכָל הַיִּירָר, *that slopes down to Silla, or that leads down to the steps* (Ewald, *Ges. Isr.* iii. 70); a description now of somewhat uncertain meaning. [SILLA.]—W. L. A.

BETH-NIMRAH (בֵּית הַנְּמֵרָה; 'House of pure water'; Sept. *Ναμράμ* and *Βαυθαναβρά*), a town in the valley (*Emek*) of the Jordan, on the east side of the river, north of Beth-aram (Josh. xiii. 27). It was built by the tribe of Gad, and lay near their southern border (Num. xxxii. 33–36). It is subsequently referred to by Isaiah (lv. 6) and Jeremiah (xlviii. 34), under the form Nimrim, and in connection with the judgment of Moab. The Moabites were never entirely expelled from their ancient country; and it appears that when the tribes of Reuben and Gad were taken captive by Tilgath-pilneser (1 Chron. v. 26), the Moabites occupied their whole territory.

About two miles east of the Jordan, opposite Jericho, are the ruins of Nimrim. They are situated on the banks of Wady Shaib, down which a winter torrent runs; and there is also a fountain beside them (Robinson, *Bib. Res.* i. 551). This fact both accounts for the name, and illustrates the peculiar reference of Isaiah, 'The waters of Nimrim shall be desolate. The whole plain round the ruins is now utterly desolate; and near the fountain, and in the bottom of the Wady, there is still some verdure.—J. L. P.

BETH-PEOR (בֵּית פְּעוֹר; 'House of Peor,' Sept.

οἶκος Φοργώρ, and Βαῖθφοργώρ). This town probably got its name from having been the chief seat of the worship of the Moabite god, *Baal-peor* (Num. xxv. 3-5; xxiii. 28; xxxi. 16). It was situated on, or beside, Mount Peor, and close to the valley where the Israelites encamped immediately before descending into the plain of the Jordan (Deut. iii. 29). It was in this valley—apparently the modern Wady Hesbân—Moses was buried (Deut. xxxiv. 6); and Mount Pisgah, on which he died, could not have been far distant to the south. With this agree the notices of Eusebius and Jerome, who state that Beth-peor lay six miles above Livias, on the road to Heshbon. The valley of Heshbon has never been fully explored. Whatever traveller may succeed in doing so will be rewarded by the discovery of the ruins of Beth-peor, and the closest approximation that has yet been made to the place of Moses' sepulture.—J. L. P.

BETH-PALET (בֵּית פַּלֵּט; Sept. Βαιφαλάθ), a town in the south of Judah (Josh. xv. 27). It is the same place as Beth-Phelet, mentioned Neh. xi. 26, as one of the places inhabited by the Jews after the Captivity. From this comes the Gentile *בֵּית פַּלְטִי*, the *Paltite*, 2 Sam. xxiii. 26.—†

BETHPHAGE (Βηθφαγή; Aram. בֵּית פִּינָה, 'House of figs'), a village on the eastern declivity of the Mount of Olives (Matt. xxi. 1), on the leading road to Jericho, and not far from Bethany (Mark xi. 1). Our Lord, in journeying from Jericho to Jerusalem, is said to have come 'unto Bethphage and Bethany, at the Mount of Olives.' From this some have concluded that the former lay to the east of the latter; but the words are by no means definite, as may be seen by comparing Mark xi. 1 with Luke xix. 29. The villages appear to have stood in close proximity.

It appears from the Talmud that a portion of the eastern suburb of Jerusalem was called Bethphage, and Lightfoot hence infers that there was no village of that name on Olivet, but that some buildings beyond the walls of the city were so called (*Opp.* ii. 44, ed. *Roterod.*) This, however, is opposed to the plain statement of the gospels, where a village is unquestionably referred to. The allusion in the Talmud is easily explained. The large cities in the East—Damascus for example—are divided into 'quarters;' and it is not unusual to find those quarters which lie on the outskirts bearing the names of villages near them. So the quarter of Jerusalem lying next the village of Bethphage bore its name (see the quotations from the Talmud in Lightfoot, *Opp.* ii. 198). We would therefore conclude from the references in the Talmud, that Bethphage was situated between Bethany and Jeru-

salem; and so Jerome states (Reland. *Palast.* p. 653). Von Raumer defines its position with great minuteness—'Descending about 100 steps from the top of the Mount of Olives; the place is seen where Bethphage stood, though no ruin remains at this day to mark the spot; fifteen stadia farther down, or a short half-hour from Jerusalem, we reach Bethany' (see Lange on *St. Matt.* xxi. 1). The latter measurement is manifestly wrong; and for the site of Bethphage he has no better authority than monkish tradition. Dr. Olin (*Travels*, ii. 321) discovered what he supposed to be the site of Bethphage about a quarter of a mile north of Bethany. The writer has examined the spot. If any village ever stood there, which is uncertain, it was most probably Bahurim.

There is just one ancient site between Bethany and Jerusalem which might possibly be that of Bethphage. It is about one-third of a mile west of Bethany, and about 200 yards to the left of the road. It is separated from Bethany by a low ridge and a deep glen. If we suppose Jesus to have gained the top of the intervening ridge when He said to His disciples, 'Go into the village over against you;' and if that village, as it seems, was Bethphage, then these ruins on the opposite bank of the glen would answer well to the description (*Handbook for S. and P.* p. 189). In the glen and on the adjoining ridges are many fig trees, to remind us of the appropriateness of the name 'house of figs,' and of the remarkable incident recorded in Matt. xxi. 19.—J. L. P.

BETH-RAPHA (בֵּית רַפְּאָה; Sept. Βαθρατα, *House of Rapha* or *Giant*), the son of Eshton, of the posterity of Judah (1 Chron. iv. 12).

BETH-REHOB (בֵּית רְהוֹב; Sept. οἶκος 'Ραάβ, and 'Ροάβ). A town beside the valley of the upper Jordan, not far distant from Laish (Judg. xvii. 28). It was an ancient stronghold of the Syrians, and apparently the capital of one of their little principalities (2 Sam. x. 6). It is the same place which in Num. xiii. 21 is called Rehob (Sept. ver. 22, 'Ροάβ or 'Ροάβ), and is described as on the way to Hamath. Now the leading road to Hamath from the south lay up the Jordan valley, and its continuation Coele Syria. This Rehob must not be confounded with the two other cities of the same name in the tribe of Asher, a mistake into which Winer (*R. W. s. v.*), and Gesenius (*Thesaur.*) have fallen. The whole territory of Naphtali lay between the valley of the Jordan and Asher. Jerome and Eusebius would identify Beth-rehob with a village called Rooba, four miles from Scythopolis (*Onomast. s. v. Roob*); but this is nearly fifty miles too far south, for Beth-rehob was near Laish, the site of which is well-known. Bochart, on the other hand, places it too far north, near Hamath (*Opp.* i. p. 79; ed. 1712). Only one historical notice of Beth-rehob has come down to us. Its inhabitants were hired by the Ammonites against David, and were defeated by Joab (2 Sam. x. 6-13).

On the eastern declivity of Lebanon, above the great plain of Hûleh, is the little village of Hunin. It contains the ruins of one of the strongest fortresses in northern Palestine, exhibiting evidences in the peculiarity of its bevelled masonry, not merely of the highest antiquity, but of its Phœnician origin. It must have been a place of note in past ages, though both its history and name have long been

lost. Dr. Robinson was the first to suggest that this may mark the site of Beth-rehob (*B. R.* iii. 371). The situation certainly answers in every respect to the incidental notices in Scripture. It is on the leading route from the south to Hamath; it is upon the northern border of Palestine, beyond which it does not appear that the spies sent out by Moses penetrated. 'They searched the land, from the wilderness of Zin unto Rehob, as men come to Hamath' (*Nu. m.* xiii. 21); it is also near Laish, the site of which lies eight miles eastward, in the plain of Hüleh. The writer visited it in 1858, and was struck, when looking down from the old castle walls into the deep valley far below, with the accuracy of the description given of Laish—'it was far from Zidon; and it was in the deep valley (*emek*) that lieth by Beth-rehob' (*Judg.* xviii. 28).—*J. L. P.*

BETHSAIDA (*Βηθσαιδα*; *Aram.* ܒܝܬ ܨܝܕܐ, 'house of fishing.') The various notices of Bethsaida in the New Testament and in Josephus, once formed a subject of great difficulty to geographers. They were thought to be, and in one sense they actually were, irreconcilable. Reland was the first to suggest a proper solution of the mystery (*Pal.* p. 653). He shewed that there were two towns of the same name; one in Galilee west of the lake, the other in Gaulonitis, east of it; though he thought the former only was referred to in the Gospels. A careful comparison of the following passages proves that both are mentioned. *Mark* viii. 10, 13, and 22:—from these verses we learn that the Bethsaida alluded to was on the opposite side of the sea of Galilee from Dalmanutha, which we know lay on the western shore. *Luke* ix. 10, with *Mark* vi. 32 and 45:—we here find that the disciples were in a desert place at or near Bethsaida, east of the lake; and yet Jesus sent them in a ship across the lake to Bethsaida. There must, therefore, have been two cities of the same name, one on the western, the other on the eastern shore of the lake. The former is called by John, Bethsaida of Galilee (*xii.* 21); the latter, Josephus tells us, had its name changed to Julias (*Antiq.* xviii. 2. 1).

1. *Bethsaida of Galilee.* This town (*πόλις*, *John* i. 44; the other Bethsaida is called *κώμη*, *Mark* viii. 23, comp. *Jos. Antiq.* xviii. 2. 1) stood on the western shore of the Sea of Galilee, not far from Capernaum, and between it and Chorazin (*Matt.* xi. 21-23; *John* vi. 17). It was also near to the plain (or 'land') of Gennesaret (*Mark* vi. 45-53). Bethsaida is merely mentioned by Eusebius and Jerome as being upon the lake of Gennesaret (*πρὸς τῇ Γεννησαρίτῃ λίμνῃ*, *Onomast.* s. v. *Bethsaida*). The narrative of St. Willibald, who visited this region in the eighth century, is important as tending to fix the relative positions of several towns mentioned in the Gospels. We are told that he went from Tiberias by Magdala to Capernaum; thence to Bethsaida, where 'there is now a church on the site of the house' of Andrew and Peter (*Early Travels in Pal.* Bohn, p. 16, sq.) Tiberias is known. Magdala is still represented by the little village of Mejdal at the southern border of the plain of Gennesaret; and Capernaum has been identified with Khan Minyeh at its northern border (CAPERNAUM). Between this place, therefore, and the mouth of the Jordan, on the shore of the lake, we must seek for the sites of Bethsaida and Chorazin. The true sites of the

three last places have formed subjects for lengthened discussion among travellers and geographers. Pococke (*II.* i. p. 68) says he heard the ruins of Irbid (BETH-ARBEL) called Baisida; but no other person has ever heard it, and the site is too far from the lake. Seetzen affirms that he heard the name Bat-szaida applied to the ruins at Khan Minyeh, and he places Bethsaida there. Dr. Robinson could not hear anything of such a name, and the writer, though he visited the whole region repeatedly, and made many inquiries, never heard from a native resident the name Beit-saida. Ritter (*Pal. und Syr.* ii. 334), and Van de Velde (*ii.* 395), follow Seetzen. De Saulcy affirms there was but one Bethsaida, and he places it at Tell Hum (CHORAZIN, *Travels*, ii. 441, sq.); and Thomson agrees with him, but he locates his Bethsaida at the mouth of the upper Jordan (*Land and Book*, p. 374). But neither of these latter theories bears the test of sound criticism.

The incidental allusions to Bethsaida by the Evangelists, Jerome, Eusebius, and St. Willibald, lead to the conclusion that it was situated on the shore of the lake, a little to the north of Capernaum. About half a mile north of Capernaum is a beautiful little bay, with a broad margin of pearly sand. At its northern extremity are fountains, aqueducts, and half-ruined mills; and scattered round them are the remains of an old town called Tâbig-hah. There is every reason to believe that this is the site of Bethsaida (Robinson, *Bib. Res.* iii. 358, sq.) No site along the whole shores seems so admirably adapted for a fishing town. Here is a bay sheltered by hills behind, and projecting bluffs on each side; and here is a smooth sandy beach, such as fishermen delight to 'ground' their boats upon. The strand forms a pleasant promenade, and so far answers to the description in *Matt.* iv. 18-22. The locality also suits the details given in *Luke* v. 1-11,—the boats stranded; the fishermen beside them washing their nets; the eager multitude pressing upon Jesus as he stood on the shore. Then Jesus steps into one of the boats, pushes out a few yards, and preaches to the people who lined the curved beach.

Another incident in the Gospel narrative is illustrated by the topography of this region. After Jesus had fed the multitude near the Bethsaida which stood on the north-east shore, he told his disciples to cross over in a boat 'unto Bethsaida,' as *Mark* says (*vi.* 45), or 'toward Capernaum,' according to *John* (*vi.* 17). There is no contradiction. Both places are in the same direction, and within less than a mile of each other. The storm drove the boat a little southward, and so they landed on the coast of Gennesaret beyond Capernaum.

Bethsaida was 'the city of Andrew and Peter' (*John* i. 44); and this little quiet bay beside it was probably the scene of the remarkable incident recorded in *John* xxi. 1-24. Some of Christ's disciples, after the Crucifixion, returned on a visit to their homes, and resumed their old occupation. Peter and Thomas, James and John, after a night of fruitless fishing on the Sea of Galilee, saw an apparent stranger standing alone upon the shore—it was Jesus. At his bidding they 'cast the net' and were rewarded by another 'miraculous draught' in the same place as the first; and they drew the full nets up on the smooth beach (comp. *Luke* v. 4-7).

A 'woe' was pronounced upon Bethsaida because of the infidelity of its inhabitants; and now

its prostrate ruins, and its lonely, desolate shore, are painful evidences that the 'woe' has come (Matt. xi. 21).—J. L. P.

2. *Bethsaida of Gaulonitis.* Christ fed the 5000 'near to a city called Bethsaida' (Luke ix. 10); but it is evident from the parallel passages (Matt. xiv. 13; Mark vi. 32-45) that this event took place not in Galilee, but on the eastern side of the lake. It has been shewn above that there were two Bethsaidas, one on the western, and the other on the north-eastern border of the lake. The former was undoubtedly 'the city of Andrew and Peter'; and, although Reland did not think that the other Bethsaida is mentioned in the New Testament, it has been shewn by later writers that it is in perfect agreement with the sacred text to conclude that it was the Bethsaida near which Christ fed the five thousand, and also, probably, where the blind man was restored to sight. This, and not the western Bethsaida (as our English writers persist in stating), was the Bethsaida of Gaulonitis, afterwards called Julias, which Pliny (*Hist. Nat.* v. 15) places on the eastern side of the lake and of the Jordan, and which Josephus describes as situated in lower Gaulonitis, just above the entrance of the Jordan into the lake (*De Bell. Jud.* ii. 9. 1; iii. 10. 7). It was originally only a village, called Bethsaida, but was rebuilt and enlarged by Philip the Tetrarch not long after the birth of Christ, and received the name of Julias in honour of Julia the daughter of Augustus (Luke iii. 1; Joseph. *Antiq.* xviii. 2. 1). Philip seems to have made it his occasional residence; and here he died, and was buried in a costly tomb (*Antiq.* xviii. 4. 6). At the northern end of the lake of Gennesareth, the mountains which form the eastern wall of the valley through which the Jordan enters the lake throw out a spur or promontory, which extends for some distance southward along the river. This is known by the people on the spot by no other name than et-Tell (the hill). On it are some ruins, which were visited by the Rev. Eli Smith, and proved to be the most extensive of any in the plain. The place is regarded as a sort of capital by the Arabs of the valley (the Ghawarineh), although they have lost its ancient name, and now occupy only a few houses in it as magazines. The ruins cover a large portion of the Tell, but consist entirely of unhewn volcanic stones, without any distinct trace of ancient architecture (Robinson, *Bibl. Researches*, ii. 413; Winer, *Bibl. Realwört.* s. v. 'Bethsaida').—J. K.

BETH-SHAN, BETH-SHEAN (בֵּית שֵׁן)

House of rest, or Rest-Town; Sept. Βαθσάν), a city belonging to the half-tribe of Manasseh, west of the Jordan. It is on the road from Jerusalem to Damascus, and is about four miles from the Jordan, eighteen from the southern end of Lake Gennesareth, and twenty-three from Nazareth. It also bore the name of Scythopolis, perhaps because Scythians had settled there in the time of Josiah (B. C. 631), in their passage through Palestine towards Egypt (Herod. i. 105; comp. Pliny, *Hist. Nat.* v. 16, 20; Georg. Syncellus, p. 214). This hypothesis is supported by 2 Maccab. xii. 30, where mention is made of 'Jews who lived among the Scythians (in Bethshan)'; and by the Septuagint version of Judg. i. 27; Βαθσάν, ἢ ἐστὶ Σκυθῶν πόλις. In Judith iii. 10, the place is also called Σκυθῶν πόλις, and so likewise by Josephus and

others. The supposition that these were descendants of the Scythians in Palestine, renders more intelligible Col. iii. 11, where the Scythian is named with the Jew and Greek; and it also explains why the ancient Rabbins did not consider Scythopolis as a Jewish town, but as one of an unholy people (Havercamp. *Observat. ad Joseph. Antiq.* v. i. 22). On coins the place is called Scythopolis and Nysa, with figures of Bacchus and the panther (Eckhel, pp. 438-440; comp. Reland, p. 993, sq.) As Succoth lay somewhere in the vicinity, east of the Jordan, some would derive Scythopolis from Succothopolis (Reland, p. 992, sq.; Gesenius in Burckhardt, p. 1053, German edit.) It is also supposed by some to be the same as Beth-Sitta (Judg. vii. 22).

Josephus does not account Scythopolis as belonging to Samaria, in which it geographically lay, but to Decapolis, which was chiefly on the other side of the river, and of which he calls it the largest town (*De Bell. Jud.* iii. 9. 7).

Although Bethshan was assigned to Manasseh (Josh. xvii. 11), it was not conquered by that tribe (Judg. i. 17). The body of Saul was fastened to the wall of Bethshan by the Philistines (1 Sam. xxxi. 10); Alexander Jannæus had an interview here with Cleopatra (Joseph. *Antiq.* xiii. 13. 3); Pompey marched through it on his way from Damascus to Jerusalem (xiv. 3. 4); and in the Jewish war 13,000 Jews were slain by the Scythopolitans (*De Bell. Jud.* ii. 18. 3). In the middle ages the place had become desolate, although it still went by the name of *Metropolis Palestine tertia* (Will. Tyr. pp. 749, 1034; Vitricus, p. 1119). We find bishops of Scythopolis at the councils of Chalcedon, Jerusalem (A. D. 536), and others. During the Crusades it was an archbishopric, which was afterwards transferred to Nazareth (Raumer's *Palästina*, pp. 147-149).—J. K.

Addendum.—Beisân, the modern representative of the Hebrew Bethshean, occupies a noble site at the mouth of the valley of Jezreel, where it breaks down, by an abrupt descent of some 300 feet, into the low plain of the Jordan. From its terraced rock one can look down the plain as far south as the fords of Succoth, where Gideon intercepted the Midianites; and he can see, on the opposite side of the river, the picturesque range of Gilead, and can mark also the ravine where Jabesh stood, which Saul once saved from a cruel enemy. The ruins of Bethshean cover a space about three miles in circuit. No less than four streams flow through the site, so that the old city must have consisted of several sections, separated by ravines with brawling torrents leaping over ledges of black rock. Between the principal streams rises a dark volcanic tell to the height of nearly 200 feet. From its southern base the ground ascends gradually for about half a mile; and on this slope the great body of the city stood; and here stands the modern village, containing some fifty wretched houses, grouped round a square tower, apparently of Phœnician origin. Dr. Robinson well remarks that Scythopolis must have been a city of temples (*Bib. Res.*, iii. 328). It was early a chief seat of the Philistine god Dagon, who had a temple in it (1 Chron. x. 10). No less than four temples were clustered at the base of the tell, and several others are seen elsewhere; and about thirty columns still remain erect beside their prostrate walls. One of

the most perfect as well as interesting ruins is the theatre, situated in the valley south-west of the tell. Though the outer walls are shattered, all the interior doors and passages are almost perfect. Here we are told a number of poor Christians were massacred during the reign of the apostate Julian (Amm. Marc. *Hist.* xix. 12). The citadel stood on the summit of the tell, and must have been a place of great strength. A massive wall encircled the level top, and the sides, naturally steep, appear in places to have been scarped. It was probably on the wall of this stronghold the Philistines hung up the bodies of Saul and Jonathan (1 Sam. xxxi. 10). One can understand, from the position of the city, how the daring inhabitants of Jabesh could carry off the bodies. Along the northern base of the tell runs a deep and rugged glen, down which a torrent descends from the fountain of Jezreel (or 'well of Harod', Judg. vii. 1) to the Jordan. The 'valiant men of Jabesh' crossed the Jordan in the night by the ford, crept up the glen, scaled the steep side and wall of the Acropolis, took the bodies, and escaped. On the north bank of the ravine, opposite the citadel, are a number of rock tombs. This was the cemetery of Scythopolis.

The site of Bethsnean is magnificent, commanding the deep, broad valley of the Jordan, abounding with water, and in the midst of one of the richest districts of Palestine. The natural strength of its citadel explains why the tribe of Manasseh were unable to drive out its old inhabitants. The extent and splendour of the existing ruins testify to its ancient importance, and shew that it was worthy to hold the first place in Decapolis. In ancient times the whole of this region was infested annually by the wild tribes of the east. It is so still. The writer has seen the black tents of the eastern Bedawin thickly clustered round the fountain of Jezreel, while the valley, and the grassy slopes of Beisan, were covered with their flocks (comp. Judg. vii. 12).—J. L. P.

BETHSHEMESI (בֵּית שֶׁמֶשׁ, 'House of the Sun'; Sept. πόλις ἡλίου, and Βαιθσαμῆς). There are four places of this name mentioned in Scripture.

1. A very ancient Canaanitish town situated on the eastern side of the Shepheleh, or plain of Philistia, and close to the foot of the mountains. It lay on the northern border of Judah, and in those 'marches' so often the scene of the struggles between the Israelites and Philistines (Josh. xv. 10; 2 Chron. xxviii. 18). In this border-land the tribe of Dan had a territory allotted out of that of Judah, and among their towns we find *Irshemesh*, which is identical with Bethshemesh (comp. Josh. xix. 41; 1 Kings iv. 9; 2 Chron. xxviii. 18). The town is called both 'the house (בֵּית) of the sun,' and 'the city (עִיר) of the sun' (Sept. πόλις Σαυμαῆς). Though within Dan's territory, it was assigned to the priests in connection with Judah (Josh. xxi. 16; 1 Chron. vi. 59). Reland thinks the two places were distinct, but the weight of evidence is against him (*Pal.* p. 656; see Robin. *B. R.* ii. 225). Eusebius and Jerome place Bethshemesh in Benjamin, though they rightly describe its position ten miles from Eleutheropolis, east of the road to Nicopolis (*Onomast.* s. v. *Bethsannis*).

At the place indicated by the notices in Scripture and Eusebius, is the ruin of *Ain esh-Shems*,

'Fountain of the Sun,' which we can have no difficulty in identifying with Bethshemesh. It is singular that the very same change of *Ain* ('fountain') for *Beth* ('house'), has taken place in regard to the Egyptian Bethshemesh. The ruins are beautifully situated on the rounded point of a low ridge, having on the north Wady Swiar, and on the south a smaller Wady. The two unite below the ridge, forming a broad fertile vale which runs away westward into the plain of Philistia. Immediately behind the ruins, rise up the steep sides of the Judæan mountains. The name *Ain esh-Shems* is now given to the ruins of a modern village; but west of these, on the very point of the ridge, is the site of the ancient town. Little of it is left. There are some confused heaps of stones and rubbish, some fragments of old walls, and a few indistinct traces of massive foundations, covering a space three or four acres in extent. A luxuriant crop of thistles almost concealed these when the writer visited the spot in the spring of 1857. The thistles, however, were of various hues, and were intermixed with multitudes of bright marigolds and scarlet poppies, so that the whole ridge resembled, at a little distance, a great flower bank.

Bethshemesh is chiefly celebrated as the place to which the Philistines brought the ark from Ekron; and one cannot but observe, when standing on the spot, the minute accuracy of Biblical topography. Round Bethshemesh are some low hills, spurs of the mountain range. Through these runs the wide and beautiful vale of Sorar, and opens into the plain about three miles westward. Ekron is ten miles distant in the same direction, but is hid by an intervening swell. Standing on the site of Bethshemesh, one can trace the line of the old road to Ekron for miles through the valley. Along that road the ark was brought. The people of Bethshemesh were reaping in the valley below the town, 'and they lifted up their eyes and saw the ark,' they could see it in the distance. It was brought to the fields and laid upon a 'great stone;' and the Philistine lords, having given it up, 'returned to Ekron the same day' (1 Sam. vi. 9, 16).

The fatal result of the curiosity of the Bethshemites in looking into the ark, forms one of the difficulties of the Bible. The construction of the Hebrew is peculiar, and the meaning is not very clear: 'And he smote of the men of Bethshemesh because they looked into the ark of Jehovah; And he smote of the people seventy men, fifty thousand men' (1 Sam. vi. 19). The translation in the A. V. is not agreeable to the original, nor can it be in accordance with fact. Bethshemesh was a small town. It never could have contained more than four or five thousand inhabitants. If the text be pure as it now stands, the meaning may be, as given in the Vulgate; 'et percussit de populo septuaginta viros, et quinquaginta millia plebis.' It has been found, however, that five ancient MSS. omit the words 'fifty thousand men;' Josephus also omits them. Some able critics have hence concluded that these words were interpolated (see Kennicott, *Bib. Heb.*; De Rossi, *Var. Lect.*; Barrett, *Syn. Crit.*). The Targum of Jonathan appears to support this view.*

* [Probably the original reading was v , a various reading on the margin was v^2 , and some one

In later times, Bethshemesh was the residence of one of Solomon's twelve purveyors (1 Kings iv. 9). It was the scene of the battle between Judah and Israel, in which Amaziah was taken prisoner (2 Kings xiv. 11). After its capture by the Philistines in the reign of Ahaz, it appears no more in history. (Robinson, *B. R.*, ii. 223, sq.; *Handbook for S. and P.*, 281, sq.)

2. A town of Issachar not far distant from Tabar, apparently to the eastward (Josh. xix. 22). The site is unknown.

3. A town in the territory of Naphtali. It appears to have been situated among the mountains, and probably in a strong position, as the Israelites were unable to expel the ancient inhabitants. (Josh. xix. 38; Judg. i. 33).

4. An ancient city of Egypt referred to by Jeremiah (Sept. Ἡλιουπόλις ἐν Ὄνι, Jer. xliii. 13). It was one of the chief seats of Egyptian idolatry and learning. It is the same place which is called On in Gen. xli. 45, where Joseph's father-in-law was priest. Hence the rendering of the Septuagint both in Jeremiah and Genesis is the same. Arab geographers give to it the name Ain esh-Shems, and that name is still attached to a well amid the ruins. [ON.]—J. L. P.

BETH-SHITTAH (בֵּית שִׁטָּה, Sept. Βηθεεδ ΑΙ. ἡ Βασεεττα), a town in the north of Palestine, to which the Midianites fled before Gideon (Judg. vii. 22). Josephus says that Gideon drove the Midianites into a hollow place surrounded by torrents (*Antiq.* v. 6. 5). This would lead to the conclusion that Beth-shittah lay in the valley of the Jordan, where Abel-meholah, with which it is conjoined in Judg. vii. 22, also probably lay. Robinson (ii. 356) connects it with a place called شطتا Shetta, north-west from Beisân; but this is uncertain.—W. L. A.

BETH-TAPPUAH (בֵּית תַּפּוּא, 'House of apples'; Sept. Βαιθαχοῦ), a town in the mountains of Judah, not far from Hebron (Josh. xv. 53). It is only once mentioned in the Bible. There is a Tappuah referred to in Josh. xv. 34, but it lay at the western base of the mountains. Jerome regards the two as identical, and locates the town near the borders of Egypt (*Onomast.* s. v. *Bethaphu ana Thaffu*). The name and the site of this ancient town remained unknown both to history and geography for nearly 3000 years; and yet when Dr. Robinson visited Palestine in 1838 he discovered the old name and the old site. Five miles west of Hebron, perched on the crest of one of the highest ridges in Palestine, stands the village of *Teffûh*, the Arabic form of Tappuah. Among its modern houses are several fragments of massive old walls and towers. The place has still a thrifty look, probably because its position gives it some degree of security. It is encompassed by olive groves; and the old terraces on the hill sides beneath it are clad with vines and fig-trees (Robinson, *B. R.* ii. 71).—J. L. P.

BETHUEL (בֵּיתוּאֵל, *Man of God*; Sept. Βουήλ), the son of Nahor, Abraham's brother, and father of Laban and of Rebecca (Gen. xxii. 23;

xxiv. 15, 24, 47, 50; xxv. 20; xxviii. 2, 3). Though thus frequently mentioned, it is only on one occasion that he appears in the narrative in person, and even there he occupies the second place to his son Laban (Gen. xxiv. 50), who, indeed, throughout the whole narrative, appears the principal agent. This has led to various conjectures. Josephus says (*Antiq.* i. 16, 2) that Bethuel was dead at the time of his daughter's betrothal; but this is directly in the face of the statement in Gen. xxiv. 50, unless we suppose, with some, that the Bethuel there mentioned was not the father, but a younger brother of Laban; for which, however, there is not a vestige of authority. The Targum of Jonathan B. Uziel (xxiv. 33, 55) says that he died on the morning after the betrothal from partaking of pottage which had been poisoned, so that the care of Rebecca passed into Laban's hands; Rashi infers, from Laban's being mentioned first in the matter of the betrothal, that he was a disrespectful son who sought to set aside his father; but Abarbanel suggests that Bethuel spoke last, because he was the more venerable; while Blunt conjectures that he may have been somewhat imbecile (*Coincidences*, i. sec. 4). Perhaps, however, Laban's prominence throughout this transaction is simply referable to the feeling and usage which gave a brother a special interest in the reputation and disposal of his sister (comp. xxxiv. 5, 11, 25; Judg. xxi. 22; 2 Sam. xiii. 20 ff.)—W. L. A.

BETHUEL, OR BETHUL (בֵּיתוּל; Sept. Βουήλ, Βουλά, v. r. Βαθούλ). The former name occurs 1 Chron. v. [iv.] 30; the latter Josh. xix. 4, as the name of a place belonging to the tribe of Simeon, 'within the inheritance of the children of Judah.' In Josh. xv. 30, the name כְּסִיל *K'sil* (*Chesil*) appears instead of Bethul among the towns of Judah. This Chesil has been supposed to be the modern Khalasa (Williams, *Holy City*, i. 464), the Elusa of Dr. Robinson (i. 333). This may be, though the affinity of the two names is not close. Von Raumer (*Pal.* 180), with less probability, suggests the identity of Bethul with the *Babēla* of Sozomen (*Hist. Eccl.* v. 15), and of Chesil with the Tell el-Hasi, lying southwest from Beit Djibûir.—†

BETHULIA (בֵּיתוּלִיָּה, Βετυλοῦσα). The position of this city, which is only mentioned in the apocryphal book of Judith, has occasioned much discussion and conjecture. One tradition fixes it at Safed; another at the Frank mountain south of Jerusalem; while Schultz has recently attempted to identify it with the village of Beith Ilfa on Mount Gilboa (Ritter, *Pal. and Syr.* ii. 423). But none of these sites agree with the descriptions in Judith. Bethulia lay south of the plain of Esdraelon, not far from Dothan; and it was situated on the top of a hill commanding one of the leading passes to Judæa (Judith iv. 6, 7; vii. 6–21). There is one place which appears to answer all these particulars. The old castle of *Sanûr* stands on the top of a steep hill, directly over the leading road from Esdraelon to Jerusalem; and it is only four miles south of Dothan. It is one of the strongest fortresses in central Palestine, and has stood several long sieges. This is, in all probability, the long-lost Bethulia (see Raumer, *Paläst.*)—J. L. P.

BETH-ZACHARIA (Βαιθαζαχαρια), a town in

thinking this was an omission, introduced it into the text, and so made the whole "j" and y.

Judah where a battle was fought between the troops of Judas Maccabæus and those of Antiochus Eupator (1 Maccab. vi. 32, 33 : comp. Joseph. *Antiq.* xii. 9. 4; *De Bell. Jud.* i. 1. 5). It lay, according to Josephus (xii. 9. 4), seventy stadia from Bethzur, northwards towards Jerusalem. It has been identified by Robinson with *Beit-Sakârieh*, south-west from Bethlehem (*Lat. Res.* 284).—W. L. A.

BETH-ZUR (בֵּית צוּר; Sept. Βηθσοῦρ), a town in the tribe of Judah (Josh. xv. 58), twenty Roman miles from Jerusalem, in the direction of Hebron (*Onomast.* s. v. 'Beth-sur'). It was fortified by Rehoboam (2 Chron. xi. 7). The inhabitants assisted in building the walls of Jerusalem (Neh. iii. 16). Lysias was defeated in the neighbourhood by Judas Maccabæus, who fortified the place as a stronghold against Idumæa (1 Maccab. iv. 29, 61; 2 Maccab. xi. 5; comp. 1 Maccab. vi. 7, 26). It was besieged and taken by Antiochus Eupator (1 Maccab. vi. 31, 50), and fortified by Bacchides (ix. 52), whose garrison defended themselves against Jonathan Maccabæus (x. 14); but it was taken and fortified by his brother Simon (xi. 65, 66; xiv. 7, 33). Josephus calls Beth-zur the strongest fortress in Judea (*Antiq.* xiii. 5. 6).

Four miles north of Hebron, on the side of the road leading to Jerusalem, is a copious fountain, round which are seen some massive foundations, hewn stones and heaps of rubbish marking the site of an ancient town. The fountain is called Ain Dirweh. Eusebius and Jerome refer to it, and state that it was here Philip baptized the Ethiopian eunuch (*Onomast.* s. v. *Bethsur*). The present traditional fountain of Philip is in Wady-el-Werd, five miles south-west of Jerusalem, and is that which Maundrell and Poccoke visited. A short distance from Ain Dirweh, on the west side of the road, stands a half-ruined tower. Its foundations are Jewish, but the upper walls are more modern—perhaps of the age of the Crusaders. It is called *Beit Sâr*, in which we at once recognise the Hebrew Beth-zur. As if to place the question of identity beyond all doubt, the village of Halhul stands about a mile to the east, and Jedûr three miles north-west. Joshua, in enumerating the towns in this region, joins 'Halhul, Beth-zur, and Gedor' (Josh. xv. 58). There are no extensive ruins about either the tower or the fountain; but there are, just over the fountain, and beside the old paved road, traces of some very strong buildings, which probably mark the site of the fortress spoken of by Josephus. It was intended to defend the chief approach to Jerusalem from the south. There are also several tombs hewn in the surrounding rocks, such as are found near all the old cities of Palestine (Robinson, *Bib. Res.* iii. 277).—J. L. P.

BETONIM (בֵּטוֹנִים, Sept. Βοτανίμ), a town in the tribe of Gad, on their northern boundary (Josh. xiii. 26).

BETZAL (בֵּצַל, in the plural בֵּצָלִים *betzalim*) occurs in Numb. xi. 5, where the Israelites 'murmur for the leeks, and the onions (*betzalim*), and the garlic' of Egypt. There can be no doubt that Betzal means the common onion, the Allium Cepa of botanists. This is proved by its Arabic name, and its early employment as an article of diet in

Egypt. In the present day the onion, distinguished from other species of Allium by its fistular leaves and swelling stalks, is well known to be cultivated in all parts of Europe and in most parts of Asia. Its native country is not known; but it is probable that some part of the Persian region may have first produced it in a wild state, as many species of Allium are found in the mountainous chain which extends from the Caspian to Cashmere, and likewise in the Himalayan Mountains. It is common in Persia, where it is called *piaz*, and has been long introduced into India, where it receives the same name. By the Arabs it is called *بصل* *basl* or *bassal*, under which name it is described in their works on *Materia Medica*, in which the description of *κρόμμυον* given by Dioscorides (ii. 181) is adopted. The Arabic is too similar to the Hebrew name to allow us to doubt that both were originally the same word.

The onions of warm dry countries grow to a considerable size, and, instead of being acrid and pungent in taste, are comparatively bland, and mild and nutritious articles of diet. The onions of Egypt, which the Israelites desired, were doubtless of this sort, for Egypt is famed for the production of fine onions, as stated by Hasselquist: 'Whoever has tasted onions in Egypt, must allow that none can be had better in any part of the universe. Here they are sweet; in other countries they are nauseous and strong. Here they are soft; whereas in the northern and other parts they are hard, and their coats are so compact, that they are difficult of digestion. Hence they cannot in any place be eaten with less prejudice and more satisfaction than in Egypt.'—J. F. R.

BETZER (בֵּצֵר), the designation of some article of value (Job xxii. 24, 25). The ancient versions give us no help in determining its meaning here, as they seem to have followed some different reading. The A. V. translates it by 'gold;' Rosenmüller, Hirzel (*Comment.* in loc.), and others, prefer 'silver;' and Gesenius and Fürst unite the two by making it 'gold' or 'silver-ore.' Lee, on the other hand, denies that it is a metal at all, and contends that it properly means *crop*, *vintage* (from *בצר vindemiavit*), and by metonymy *wealth* generally (*Lex.* s. v.) This has the merit of fixing on the word a meaning derived from a proximate etymology; but it is a meaning foreign to the passage in which the word occurs. On the whole, the view of Gesenius seems that to be preferred. In the Arab. *تبر*, *tibr*, means a *piece of gold* or *silver-ore*, from a verb signifying *to break off*, as if broken off from the mine. Now, though the Hebrew verb *בצר* has not this meaning, yet, as it occurs in the sense of *cutting off* where there is no reference to vines (comp. Ps. lxxvi. 12), it may have been used to denote the process by which a piece of ore was detached from the rest in the mine. Certainly the parallelism of the whole passage is best preserved by this meaning:—

Cast on the dust the precious ore,
And [gold of] Ophir among the stones of the brook;
And the Almighty shall be thy precious ore,
And silver of splendours unto thee.

(Ewald, *Die Poet. Büch. des A. B.* iii. 213.)—W. L. A.

BE-USHIM (בְּשִׁימ, used only in the plural), a species of plant, or kind of fruit, mentioned Is. v. 2, 4. The LXX. give ἀκάνθας as the Greek equivalent; which is certainly a mistake, unless they had some other reading of the original text. The rendering of Aquila is σάμπλα, that of Symmachus ἀελή; both of which give rather the etymological meaning or force of the original word than translate it into its Greek equivalent as a significant appellation. The rendering of Jerome is *labrusca*; and this has been followed by Luther, *herlinge*, and the A. V., *wild grapes*. The species of plant intended has been supposed by some to be the *Vitis Labrusca*, a plant which produces small berries of a dark red colour when ripe, but sour to the taste; Hasselquist suggests the *Solanum incanum*, or *Grey Nightshade*; and Celsius contends for the *Aconitum napellus*, *Wolfsbane*. It seems more probable, however, that no specific plant is referred to in the passage of the prophet; but that the word he uses is simply used as an adjective with its substantive understood, as a designation of bad or worthless grapes. The Lord expected that his vineyard should produce grapes, but it produced only *B'-ushim*, vile, uneatable grapes. (See Rosenmüller, *Bibl. Bot.* E. T., p. 111; and *Comment.* in loc.; Gesenius, Henderson, Knobel, in loc.; Fürst, *HWB.*, in voc.)—W. L. A.

BEZA, THEODORE DE, was born at Vézelay, 24th June 1519. He was a scion of one of the ancient aristocratic stocks of Burgundy, the proper name of which was Bèze, or rather Besze. His father was Prêfet of Vézelay, and his mother, Mary de Bourdelot, was also of gentle birth. No pains were spared on his education; he was sent first to Paris when very young, and in the close of 1528 he was placed at Orleans, under Melchior Volmar, whose instructions exercised a lasting influence on his future life. With him he studied literature and philosophy, and made some progress in the study of law, to the practice of which it was intended he should devote himself. For a season, however, he was diverted from this, and all other serious pursuits, by the love of gaiety and of light literature, to which his natural temper inclined him, and for which his circumstances and social position gave him facilities. A fit of sickness was the instrument of turning him from the perilous course on which he had entered; and an honourable attachment which he had formed for a young woman of a rank inferior to his own, determined him to resign the ecclesiastical preferments which by favour he held, though not an ecclesiastic, and to yield himself to a life of domestic virtue and public usefulness. In 1548 he accordingly removed to Geneva, where he was married to the object of his affections, with whom he lived happily for forty years. In 1549 he became professor of Greek at Lausanne, where he continued for ten years. Whilst there he published his translation of the N. T. into Latin (Oliva R. Stephani, 1556, fol.), of which numerous editions have since appeared. In 1559 he removed to Geneva, where he became associated with Calvin both as pastor and teacher; and on the death of Calvin in 1564, Beza assumed the place held by him, and was recognised as the head of the protestant community in Geneva. He

did not, however, continue long to reside in that city; for having occasion, in 1568, to visit France on some family business, he was brought into relations with the Protestants there, which ultimately led to his making that country the place of his stated residence, and the centre whence his influence was spread abroad. He occupied the place of leader of the Reformed party in France with great vigour for several years; but his health beginning to fail, he, in 1600, retired into private life, though still continuing to take a lively interest in religious affairs, and aiding, by his counsels, the deliberations of his brethren. His death took place 13th October 1605, in his 88th year. Beza was greater as a dogmatic and polemical theologian than as a biblical critic; but his services to the cause of biblical learning were such as to demand for him an honourable place among the chiefs in that department. Besides his Latin translation of the N. T., he completed Marot's version of the Psalms in French verse, and aided in the French translation of the Bible published at Geneva in 1588. But his most important contribution to biblical literature is his edition of the Greek N. T., which he issued first in 1565, under the title, *Testamentum Novum, Sive Novum Fœdus J. C. D. N., cujus Græco contextui respondent interpretationes due, una vetus, altera Theod. Bezae*, fol. This work, of which several subsequent editions appeared, contains also Annotations by Beza, and a dedication to Queen Elizabeth, in which the author explains the principles on which he proceeded, especially in his translation. Beza's is the first edition of the Greek text which can be called *critical*; he made use of seventeen MSS., to which were added, for the third edition, two others, the Cambridge and Clermont Codices, both uncials, together with the Peshito and the Arabic versions. 'It has been Beza's lot,' says Hug, 'to be frequently much commended, and frequently much censured; both with equal reason. His emendations are often sensible; but his means for such an undertaking were too scanty, and no principles were as yet established in respect to their application' (*Introd.* Fosdick's trans., p. 187). The truth is, Beza was not much of a textual critic. In settling the text, his mind was more influenced by dogmatical than by critical reasons. At the time, however, when his work appeared, he did good service to the cause of N. T. criticism. The part of his work which possesses most permanent interest is that containing his Annotations. Doddridge pronounces them 'an invaluable treasure,' an estimate which can hardly be accepted; but all who have used them will feel safe in assenting to him, when he adds that they 'deserve to be read with the utmost attention.' [CRITICISM, BIBLICAL; COMMENTARY.]—W. L. A.

BEZALEEL (בְּזַלְאֵל, Sept. Βεσαλειλ), the name of an artificer of the tribe of Judah, to whom was intrusted the construction of the tabernacle and its furniture in the wilderness (Exod. xxxi. 1-11; 1 Chron. ii. 3, 20). For this work he was specially fitted by divine inspiration, in reference both to the planning of the work and to its execution. Aholiab and the others who were associated with him seem to have acted under his instructions. The name is supposed by Gesenius to be a compound of ב, זל, and אל, and to signify *in the shadow of God*; but Fürst takes the ב to be for בן, *son*,

and renders *son of the protection of God*. Another of this name is mentioned among the Israelites who had taken strange wives (Ezra x. 30).—†

BEZEK (בֶּזֶק; Sept. Βεζέκ). Eusebius and Jerome mention two towns of this name close together, seventeen miles from Neapolis in Shechem, on the road to Bethshan. 1. A city over which Adoni-bezek was king (Judg. i. 4, *sq.*). 2. The place where Saul numbered the people before going to the relief of Jabesh-Gilead (1 Sam. xi. 8).

BEZER (בְּצֵר; Sept. Βοσόρ), a city of refuge in the territory of Reuben. Its situation is described in Deut. iv. 43, as 'in the wilderness (מִדְבָּר), in the land of Mishor' (A. V. 'plain country'). In Josh. xx. 8 it is said to lie eastward of Jericho. Josephus says it was on the borders of Arabia (*Ant.* iv. 7. 4). From these combined notices we conclude that it was situated on the high plain, or plateau, of Moab; probably somewhere to the south-east of Heshbon, on the borders of the desert of Arabia, near the ruins of Um-er-Rusas. Eusebius and Jerome would identify Bezer with Bostra, the capital of Arabia (*Onomast.* s. v. *Bosor*); but the latter lay much too far to the north-east to have answered the purposes of a city of refuge for the tribe of Reuben.—J. L. P.

BEZETHA. [JERUSALEM.]

BIBLE, βιβλία, *libelli* (the small books), a name to denote the collective volume of the sacred writings, the use of which cannot be traced above the 4th century. The word occurs in the Prologue to Ecclesiasticus, 'the Law, the Prophets, and the rest of the books' (βιβλία), and 2 Tim. iv. 13, 'and the books' (βιβλία). Before the adoption of this name the more usual terms in the Christian Church by which the sacred books were denominated were, the Scripture or writing (γραφή), the *Scriptures* (γραφαί), the sacred writings (γραφαί ἁγία), and the *sacred letters* (ἐπερὰ γράμματα). These names are thus frequently applied to the sacred books of the Old Testament by Josephus and Philo, as well as by the writers of the New Testament (2 Pet. i. 20; Matt. xxii. 29; Rom. i. 2; 2 Tim. iii. 15). Jerome substitutes for these expressions the term *Bibliotheca Sancta* (see Hieronymi *Opera*, ed. Martianay, vol. i. Proleg. sec. 1), a phrase which this learned father probably borrowed from 2 Maccabees, ii. 13, where Nehemiah is said, in 'founding a library' (βιβλιοθήκη), to have 'gathered together the acts of the kings, and the prophets, and of David, and the epistles of the kings concerning the holy gifts.' But although it was usual to denominate the separate books in Greek by the term βιβλίον or βίβλος, which is frequently so applied by Josephus, we first find it simply applied to the entire collection by St. Chrysostom in his *Second Homily*, 'The Jews have the books (βιβλία), but we have the treasure of the books; they have the letters (γράμματα), but we have both spirit and letter.' And again *Hom.* ix. in *Epist. ad Coloss.*, 'Provide yourselves with books (βιβλία), the medicine of the soul, but if you desire no other, at least procure the new (καινή), the Apostolos, the Acts, the Gospels.' He also adds to the word βιβλία the epithet *divine* in his *Tenth Homily on Genesis*: 'Taking before and after meals the divine books' (τὰ θεία βιβλία), or, as we should now express it, the Holy Bible. This

name, in the course of time, superseded all others both in the Eastern and Western Church, and is now everywhere the popular appellation. The sacred books were denominated by the Jews the *writing* (chetib or mikra), a name of the same character as that applied by the Mahometans (korawn) to denote their sacred volume.

The Bible is divided into the Old and New Testaments, ἡ παλαιά, καὶ ἡ καινὴ διαθήκη. The name Old Testament is applied to the books of Moses by St. Paul (2 Cor. iii. 14), inasmuch as the former covenant comprised the whole scheme of the Mosaic revelation, and the history of this is contained in them. This phrase, 'book of the covenant,' taken probably from Exod. xxiv. 7; 1 Maccab. i. 57 (βιβλίον διαθήκης), was transferred in the course of time by a metonymy to signify the writings themselves. The word *διαθήκη*, which we now translate *testament*, signifies either a testament or a covenant, but the translators of the old Latin version have by a Grecism always rendered it, even when it was used as a translation of the Hebrew *Berith* (covenant), by the word *Testamentum*. The names given to the Old Testament were, the *Scriptures* (Matt. xxi. 42), *Scripture* (2 Pet. i. 20), the *Holy Scriptures* (Rom. i. 2), the *sacred letters* (2 Tim. iii. 15), the *holy books* (*Sanhed.* xci. 2), the *law* (John xii. 34), the *law, the prophets, and the psalms* (Luke xxiv. 44), the *law and the prophets* (Matt. v. 17), the *law, the prophets, and the other books* (Prol. *Ecclus.*), the *books of the old covenant* (Neh. viii. 8), the *book of the covenant* (1 Maccab. i. 57; 2 Kings xxiii. 2).

The other books (not in the canon) were called apocryphal, ecclesiastical, and deutero-canonical. The term New Testament has been in common use since the third century, and is employed by Eusebius in the same sense in which it is now commonly applied (*Hist. Eccles.* iii. 23). Tertullian employs the same phrase, and also that of 'the Divine Instrument' in the same signification. [CANON; CRITICISM, BIBLICAL; SCRIPTURE, HOLY.]—W. W.

BIBLIANDER, THEODOR, a Swiss theologian, whose name was properly Buchmann, born at Bischoffzell, in 1504, and died of the plague at Zürich, 24th Sept. 1564. He occupied the chair of theology at Zürich, but devoted himself chiefly to oriental literature. He superintended the publication of the *Tigurine Version*, as it is called, of the Bible; a version commenced by Leo Judah, and completed by Bibliander, Cholinus, Erasmus, and Gualtherus, and first published by Froshover, at Zürich, in 1543, fol. Of this version the part done by Bibliander comprised Ezek. xli. to xlvi., Daniel, Job, Psalms cii. to cl., Ecclesiastes, and Canticles. [LEO JUDAH.] Bibliander published also a *Commentary on Micah*, Zürich, 1534; notes and dissertations appended to a translation of the Koran, published at Bâsle in 1543; a *Hebrew Grammar*, Bâsle, 1535; and a multitude of dissertations on biblical chronology and theology.—W. L. A.

BIEL, JOHANN CHRISTIAN, was born at Brunswick in 1687, and died there, 18th October 1745. He was pastor of the Lutheran Church of St. Ulrich and St. John in that city. He left, in a somewhat unfinished state, a *Lexicon in LXX. et alios Interpp. et Scriptores Apocr.*, which was published by Müntzenbecher in 3 vols., Hag. Com.

1779-80, and which forms the basis of the more complete work of Schleusner.—†

BIER. [BURIAL.]

BIGTHAN (בִּגְתָן; Sept. Βιγθάν, Βιγθάν, *terder*), the name of—I. A Horite chief, the son of Ezer (Gen. xxxvi. 27; 1 Chron. i. 42); 2. One of the sons of Jediael, the son of Benjamin (1 Chron. vii. 10).

BIGVAI (בִּגְוַי; Sept. Βαγουέ, Βαγουάϊ). One of those who came up with Zerubbabel (Ezr. ii. 2; Neh. vii. 7), and who signed the covenant (Neh. x. 16). He was apparently a leader of the people, and may have been chief of 'the children of Bigvai,' of whom a large body (2056, Ezr. ii. 14; 2067, Neh. vii. 19) returned at the same time, and seventy at a later date (Ezr. viii. 14). The name appears elsewhere in the form Bago (1 Esd. viii. 40), and Bagoi (1 Esd. v. 14).—W. L. A.

BILDAD (בִּלְדָד; Sept. Βαλδᾶδ), the Shuhite, one of the friends of Job, and the second of his opponents in the disputation (Job ii. 11; viii. 1; xviii. 1; xxv. 1). The Shuah, of which the Septuagint makes Bildad the prince, or patriarch (Βαλδᾶδ ὁ Σαυχέων πύρανος), was probably the district assigned to Shuah, the sixth son of Abraham by Keturah, and called by his name. This was doubtless in Arabia Petraea, if Shuah settled in the same quarter as his brothers, of which there can be little doubt; and to this region we are to refer the town and district to which he gave his name, and in which Bildad was doubtless a person of consequence, if not the chief. [SHUAH.] Wemyss (*Job and his Times*, p. 111) remarks:—'Bildad attacks the poor sufferer with more keenness than Eliphaz, but with less acerbity than Zophar. He renews the charge which Eliphaz had advanced, but with less eloquence and less delicacy. His second address is full of imagery, and wrought up to a high pitch of terror. He is filled with resentment against Job, merely because the latter defends himself from their criminations; and he uses provoking and taunting expressions. His denunciations are furious and awful; yet he is rather elevated than sublime, and more passionate than energetic.'

BILEAM (בִּלְעָם; Sept. Ἰεμβλάαν, AL. Ἰβλάαμ), a town of Manasseh, situated in the vicinity of Megiddo (1 Chron. vi. 70. Comp. 2 Kings ix. 27, where, as in Josh. xvii. 11, it is called *Ib-leam*.) It was one of the cities assigned to the Kohathites.—†

BILGAH (בִּלְגָה; Sept. ὁ Βελγάς, Βελγαῖ). 1. A priest in the time of David, to whom was allotted the headship of the 16th course in the temple service (1 Chron. xxiv. 14); 2. A priest who went up with Zerubbabel and Joshua (Neh. xii. 5, 18). He is called Bilgai, Neh. x. 8.—†

BILHAH (בִּלְהָה; Sept. Βαλλά), the handmaid whom the childless Rachel bestowed upon her husband Jacob, that through her she might have children. Bilhah became the mother of Dan and Naphtali (Gen. xxx. 1-8). [2. A town of the sons of Simeon, one of the residences of the family of Shimei (1 Chron. iv. 29). It is called Baalah, Sept. Βααλά, Josh. xv. 29, and Balah, xix. 3.]

BILHAN (בִּלְחָן; Sept. Βαλαμ, Βαλαάν, *terder*), the name of—I. A Horite chief, the son of Ezer (Gen. xxxvi. 27; 1 Chron. i. 42); 2. One of the sons of Jediael, the son of Benjamin (1 Chron. vii. 10).

BILLROTH, JOH. GUSTAV. FRIED., Doctor and Professor extraordinary of Philosophy at Halle, was born at Lübeck 11th Feb. 1808, died 12th March 1836. Though devoted principally to philosophy, Billroth was also a philologist of the first rank, and was drawn to biblical studies by the interest he felt in religion and in Christian truth. Before he had completed his twenty-fifth year, he published his *Commentar zu den Briefen des Paulus an die Corinthier*, Leipzig, 1833, a work which at once established for him a high place among biblical scholars, and is referred to by all subsequent writers on these epistles as a standard exposition of them. At the time this appeared, the author was struggling to support himself as a Privat-docent at Leipzig, and his privations during this and the earlier stages of his career laid the basis of the disease which soon after cut him off. After his death, Professor Erdmann edited, from his papers, *Vorlesungen üb. Religionsphilosophie*, Leipzig, 1837, the fragmentary utterances of a great thinker. His work on the Corinthians has been translated into English, and forms two volumes of the Edinburgh Biblical Cabinet.—W. L. A.

BINNUI (בִּנְוִי; Sept. Βανῆ, Βανῆ, Βανου), the name of several men. 1. The father of Noadiah (Ezr. viii. 33); 2, 3. Two of those who had taken strange wives (Ezr. x. 30, 38); 4. One of those who assisted in the rebuilding of Jerusalem under Nehemiah (Neh. iii. 24); 5. The chief of a clan or sept, 'the children of Binnu' (Neh. vii. 15; called Bani, Ezr. ii. 10). The name is derived from בנה, to build, and signifies *building*, or *family-state*.—†

BIRCH, ANDREAS, D.D., Bishop at Aarhus, and formerly Professor of Theology at Copenhagen; died 1829. He made extensive preparations for a critical edition of the New Testament, travelling for this purpose through Italy and Germany, that he might collate the MSS. deposited in the libraries of these countries. Having made extensive collections of various readings, he commenced to carry out his design, and in 1788 issued *Quatuor Evangelia Græce cum variantibus a textu lectionibus Codd. MSS., etc., Jussu et sumtibus regis*, Havniae, 1788, 4to. In the Prolegomena he describes the MSS. used by him, especially the Vatican Codex B. The text is printed from the third edition of Stephen's, and the various readings are placed below. At the end are specimens in fac-simile of several Syriac codices, and of two of the Vatican codices of the Greek. A fire in the royal printing office prevented Birch from completing this work as he had designed; but he issued subsequently the various readings he had collected on the remaining parts of the New Testament, those on the Acts and Epistles in 1798, and those on the Apocalypse in 1800. Until lately this work was of peculiar value, from containing the fullest and most reliable collation of the Vatican Codex B.; but since the publication of that codex its value has decreased. Its importance, however, in the history of the printed text, still remains. The typography is

worthy of all praise. [CRITICISM, BIBLICAL.] Birch also commenced to issue an *Auclarium Cod. Apoc. N. T. Fabriciani*, of which only the first part appeared; Havn. 1804.—W. L. A.

BIRDS may be defined oviparous vertebrated animals, organized for flight. The common name צפור *tsippor* is used of small birds generally, and of the sparrow in particular; עוף *'oph*, translated 'fowl' (Gen. i. 21), properly means flyer; איה *ait*, a bird of prey (ἀετός, an eagle) in Gen. xv. 11, Job xxviii. 7, and Is. xviii. 6, rendered 'fowls;' in Jer. xii. 9, 'bird;' and in Is. xlvi. 11, and Ezek. xxxix. 4, 'ravenous birds.' ברבורים *barburim* occurs only in 1 Kings iv. 23, and is there translated 'fowls' in the A. V., which is a mistake. [BARBURIM.]

In the Mosaic law birds were distinguished as clean and unclean; the first being allowed for the table, because they fed on grains, seeds, and vegetables; and the second forbidden, because they subsisted on flesh and carrion. The birds anciently used in sacrifice were turtle-doves and pigeons. (See Kitto's *Physical History of Palestine*, Stanley's *Sim. and Pal.*, p. 427, 429; Thomson's *Land and Book*, passim). [FOWLING.]—C. H. S.

BIRDS'-NESTS. [FOWLING.]

BIRTH. In Eastern countries child-birth is usually attended with much less pain and difficulty than in our northern regions; although Oriental females are not to be regarded as exempt from the common doom of woman, 'in sorrow shalt thou bring forth children' (Gen. iii. 16). It is however uncertain whether the difference arises from the effect of climate or from the circumstances attending advanced civilization; perhaps both causes operate, to a certain degree, in producing the effect. Climate must have some effect; but it is observed that the difficulty of child-birth, under any climate, increases with the advance of civilization, and that in any climate the class on which the advanced condition of society most operates finds the pangs of child-birth the most severe. Such consideration may probably account for the fact that the Hebrew women, after they had long been under the influence of the Egyptian climate, passed through the child-birth pangs with much more facility than the women of Egypt, whose habits of life were more refined and self-indulgent (Exod. i. 19). There were, however, already recognised Hebrew midwives while the Israelites were in Egypt; and their office appears to have originated in the habit of calling in some matron of experience in such matters to assist in cases of difficulty. A remarkable circumstance in the transaction which has afforded these illustrations (Exod. i. 16) has been explained under ABNAIM.

The child was no sooner born than it was washed in a bath and rubbed with salt (Ezek. xvi. 4); it was then tightly swathed or bandaged to prevent those distortions to which the tender frame of an infant is so much exposed during the first days of life (Job xxxviii. 9; Ezek. xvi. 4; Luke ii. 7, 11). This custom of bandaging or swathing the newborn infant is general in Eastern countries. It was also a matter of much attention with the Greeks and Romans (see the citations in Wetstein, at Luke ii. 7), and even in our own country was not abandoned till the last century, when the repeated remonstrances of the physicians seem to have led to its discontinuance.

It was the custom at a very ancient period for the father, while music celebrated the event, to take the new-born child upon his knees, and by this ceremony he was understood to declare it to be his own (Gen. i. 23; Job iii. 12; cf. Ps. xxii. 10). This practice was imitated by those wives who adopted the children of their handmaids (Gen. xvi. 2; xxx. 3-5). The messenger who brought to the father the first news that a son was born unto him was received with pleasure and rewarded with presents (Job iii. 3; Jer. xx. 15), as is still the custom in Persia and other Eastern countries. The birth of a daughter was less noticed, the disappointment at its not being a son, subduing for the time the satisfaction which the birth of any child naturally occasions.

Among the Israelites, the mother, after the birth of a son, continued unclean seven days; and she remained at home during the thirty-three days succeeding the seven of uncleanness, forming altogether forty days of seclusion. After the birth of a daughter the number of the days of uncleanness and seclusion at home was doubled. At the expiration of this period she went into the tabernacle or temple, and presented a yearling lamb, or, if she was poor, two turtle doves and two young pigeons, as a sacrifice of purification (Lev. xii. 1-8; Luke ii. 22). [CHILDREN.]—J. K.

BIRTH-DAYS. The observance of birth-days may be traced to a very ancient date; and the birthday of the first-born son seems in particular to have been celebrated with a degree of festivity proportioned to the joy which the event of his actual birth occasioned (Job i. 4, 13, 18). The birth-days of the Egyptian kings were celebrated with great pomp as early as the time of Joseph (Gen. xl. 20). These days were in Egypt looked upon as holy; no business was done upon them, and all parties indulged in festivities suitable to the occasion. Every Egyptian attached much importance to the day, and even to the hour of his birth; and it is probable that, as in Persia (Herodot. i. 133; Xen. *Cyrop.* i. 3, 10), each individual kept his birth-day with great rejoicings, welcoming his friends with all the amusements of society, and a more than usual profusion of delicacies of the table (Wilkinson, v. p. 290; comp. Plato, *Alc.* I. 121 c.) In the Bible there is no instance of birth-day celebrations among the Jews themselves. The example of Herod the tetrarch (Matt. xiv. 6), the celebration of whose birth-day cost John the Baptist his life, can scarcely be regarded as such, the family to which he belonged being notorious for its adoption of heathen customs.* In fact, the later Jews at least regarded birth-day celebrations as parts of idolatrous worship (Lightfoot, *Hor. Hebr. ad Matt.* xiv. 6); and this probably on account of the idolatrous rites with which they were observed in honour of those who were regarded as the patron gods of the day on which the party was born.

BIRTH-RIGHT (בְּבוֹרָה; Sept. πρῶτογένεια).

This term denotes the rights or privileges belonging to the first-born among the Hebrews. The

* [It is probable that the day celebrated by Herod was not his birth-day, properly so called, but the day of his accession to the throne. Cf. Joseph. *Antiq.* xv. 8. sec. 1-3; Lightfoot, *Hor. Heb. ad Matt.* xiv. 6.]

particular advantages which these conferred were the following:—

1. A right to the priesthood. The first-born became the priest in virtue of his priority of descent, provided no blemish or defect attached to him. Reuben was the first-born of the twelve patriarchs, and therefore the honour of the priesthood belonged to his tribe. God, however, transferred it from the tribe of Reuben to that of Levi (Numb. iii. 12, 13; viii. 18). Hence the first-born of the other tribes were redeemed from serving God as priests, by a sum not exceeding five shekels. Being presented before the Lord in the temple, they were redeemed immediately after the thirtieth day from their birth (Numb. xviii. 15, 16; Luke ii. 22). It is to be observed, that only the first-born who were *fit for the priesthood* (i. e., such as had no defect, spot, or blemish) were thus presented to the priest.

2. The first-born received a double portion of his father's property. There is some difficulty in determining precisely what is meant by a double portion. Some suppose that half the inheritance was received by the elder brother, and that the other half was equally divided among the remaining brethren. This is not probable. The Rabbins believe that the elder brother received twice as much as any of the rest; and there is no reason to doubt the correctness of this opinion. When the first-born died before his father's property was divided, and left children, the right of the father descended to the children, and not to the brother next of age.

3. He succeeded to the official authority possessed by his father. If the latter was a king, the former was regarded as his legitimate successor, unless some unusual event or arrangement interfered.

After the law was given through Moses, the right of primogeniture could not be transferred from the first-born to a younger child at the father's option. In the patriarchal age, however, it was in the power of the parent thus to convey it from the eldest to another child (Deut. xxi. 15-17; Gen. xxv. 31, 32).

It is not difficult to perceive the reason why the first-born enjoyed greater privileges than the rest of the children. Apart from reasons common to all mankind, the first born among the Hebrews was viewed as having reference to the Redeemer, the first-born of the virgin. Hence in the epistle to the Romans, viii. 29, it is written concerning the Son, 'that he might be the *first-born* among many brethren;' and in Col. i. 18, 'who is the beginning, the *first-born* from the dead; that in all things he might have the pre-eminence' (see also Heb. i. 4, 5, 6). As the first-born had a double portion, so the Lord Jesus, as Mediator, has an inheritance superior to his brethren; he is exalted to the right hand of the Majesty on high, where he reigns until all his enemies shall be subdued. The universe is his rightful dominion in his mediatorial character. Again, he alone is a true priest: he fulfilled all the functions of the sacerdotal office; and the Levites, to whom, under the law, the priesthood was transferred from all the first-born of Israel, derived the efficacy of their ministrations from their connection with the great high priest (Jahn's *Biblical Archaeology*, sec. 165).—S. D.

BISCOE, RICHARD, M. A., a divine of the Church of England, was born about the end of the 17th century. He was educated for the dissenting ministry, and ordained 1716; but he subsequently

conformed to the Church of England, and received deacon and priest's orders in 1726. Presented to the rectory of St. Martin's, Outwich, London, 1727, he shortly afterwards became prebendary of St. Paul's. The only work for which he claims notice here is entitled, *The History of the Acts of the Holy Apostles, confirmed from other authors, and considered as full evidence for the truth of Christianity: with a prefatory discourse upon the nature of that evidence.* 8vo, Oxford, 1840. The work contains the substance of sermons delivered in the years 1736-1738, at the Boyle Lecture, and was originally published 1742, in 2 vols. 8vo. Besides affording valuable information on the various topics of which it treats, it demonstrates with great force the truth of Christianity. Dr. Doddridge, and other equally competent authorities, have commended it as 'an elaborate and valuable work.' It was translated into German, and published in 4to, at Magdeburg, 1751. Biscoe died in 1748.—W. J. C.

BISHLAM (בִּשְׁלָם). This appears in the A. V. as the name of a man (Ez. iv. 7); but the LXX. translate it *ἐν ἐρήμῳ*, and with this agree the Arab. and Syr. versions, and the margin of the A. V. If it is a Semitic pr. n., it is probably = בִּן-שָׁלֵם, *son of peace*; but Fürst thinks it is probably old Persic.—W. L. A.

BISHOP. The active controversy in which the subject of episcopacy has been involved, although it has not reconciled conflicting opinions, has brought out the historical facts in their fullest clearness. The able and candid on opposite sides can scarcely be said to differ as to the facts themselves; but they differ in their estimate of them.

The Apostles originally appointed men to superintend the spiritual, and occasionally also the secular wants of the churches (Acts. xiv. 23; xi. 30; see also 2 Tim. ii. 2), who were ordinarily called *πρεσβύτεροι*, *elders*, from their age, sometimes *ἐπίσκοποι*, *overseers* (bishops), from their office. They are also said *προϊστασθαι*, to *preside* (1 Thess. v. 12; 1 Tim. v. 17), never *ἄρχων*, to *rule*, which has far too despotic a sound. In the Epistle to the Hebrews (xiii. 7, 17, 24) they are named *ἡγούμενοι*, *leading men* (comp. Acts xv. 22); and, figuratively, *ποιμένες*, *shepherds* (Ephes. iv. 11). But that they did not always teach is clear from 1 Tim. v. 17; and the name Elders proves that originally age, experience, and character, were their most necessary qualifications. They were to be married men with families (1 Tim. iii. 2, 4), and with converted children (Tit. i. 6). In the beginning there had been no time to train teachers, and teaching was regarded far more in the light of a gift than an office; yet St. Paul places 'ability to teach' among episcopal qualifications (1 Tim. iii. 2; Titus. i. 9; the latter of which passages should be translated, 'that he may be able both to exhort men by sound teaching, and also to refute opposers'). That teachers had obtained in St. Paul's day a fixed official position, is manifest from Gal. vi. 6, and 1 Cor. ix. 14, where he claims for them a right to worldly maintenance; in fact, that the *shepherds* ordered to 'feed the flock,' and be its 'overseers' (1 Pet. v. 2), were to feed them with knowledge and instruction, will never be disputed, except to support a hypothesis. The *leaders* also, in Heb. xiii. 7, are described as 'speaking unto you the word of God.'

Ecclesiastical history joins in proving that the two offices of teaching and superintending were, with few exceptions, combined in the same persons, as, indeed, the nature of things dictated.

That during St. Paul's lifetime no difference between elders and bishops yet existed in the consciousness of the church, is manifest from the entire absence of distinctive names (Acts xx. 17-28; 1 Pet. v. 1, 2). The mention of bishops and deacons in Phil. i. 1, and 1 Tim. iii., without any notice of elders, proves that at that time no difference of *order* subsisted between bishops and elders. A formal ceremony, it is generally believed, was employed in appointing elders, although it does not appear that as yet any fixed name was appropriated to the idea of ordination. (The word *ordained* is questionably interpolated in the English version of Acts i. 22: In Tit. i. 5 the Greek word is *καταστήσας, set, or set up*; and in Acts xiv. 23 it is *χειροτονήσαντες, having elected*, properly by a shew of hands; though, abusively, the term came to mean simply, *having chosen or nominated* (Acts x. 41); yet in 2 Cor. viii. 19, it seems to have its genuine democratic sense). In 1 Cor. xvi. 15 we find the house of Stephanas to have volunteered the task of 'ministering to the saints;' and that this was a ministry of 'the word,' is evident from the Apostle's urging the church 'to submit themselves to such.' It would appear then that a formal investiture into the office was not as yet regarded as *essential*. Be this as it may, no one doubts that an ordination by laying on of hands soon became general or universal. Hands were first laid on not to bestow an office, but to solicit a spiritual gift (1 Tim. iv. 14; 2 Tim. i. 6; Acts xiii. 3; xiv. 26; xv. 40). To the same effect Acts viii. 17; xix. 6;—passages which explain Heb. vi. 2. On the other hand, the absolute silence of the Scriptures, even if it were not confirmed, as it is, by positive testimony, would prove that no idea of consecration, as distinct from ordination, at that time existed at all; and, consequently, although individual elders may have really discharged functions which would afterwards have been called episcopal, it was not by virtue of a second ordination, nor, therefore, of episcopal rank.

The Apostles themselves, it is held by some, were the real *bishops* of that day, and it is quite evident that they performed many episcopal functions. It may well be true, that the only reason why bishops (in the modern sense) were then wanting was, because the Apostles were living; but it cannot be inferred that in any strict sense prelates are *co-ordinate in rank with the Apostles*, and can claim to exercise their powers. The later 'bishop' did not come forward as a successor to the Apostles, but was developed out of the presbyter; much less can it be proved, or alleged with plausibility, that the Apostles took any measures for securing substitutes for themselves (in the high character of Apostles) after their decease. It has been with many a favourite notion that Timothy and Titus exhibit the episcopal type even during the life of Paul; but this is an obvious misconception. They were attached to the person of the Apostle, and not to any one church. In the last Epistle written by him (2 Tim. iv. 9), he calls Timothy suddenly to Rome, in words which prove that the latter was not, at least as yet, bishop, either of Ephesus or of any other church. That Timothy was an *evangelist* is distinctly stated (2 Tim. iv. 5), and that

he had received spiritual gifts (i. 6, etc.); there is then no difficulty in accounting for the authority vested in him (1 Tim. v. 1; xix. 22), without imagining him to have been a bishop; which is in fact disproved even by the same Epistle (i. 3). That Titus, moreover, had no local attachment to Crete, is plain from Titus iii. 13, to say nothing of the earlier Epistle, 2 Cor. *passim*. Nor is it true that the episcopal power developed itself out of wandering evangelists any more than out of the Apostles.

On the other hand, it would seem that the bishop began to elevate himself above the presbyter while the Apostle John was yet alive, and in churches to which he is believed to have peculiarly devoted himself. The meaning of the title *angel*, in the opening chapters of the Apocalypse, has been mystically explained by some; but its true meaning is clear from the nomenclature of the Jewish synagogues. In them, we are told, the minister who ordinarily led the prayers of the congregation, besides acting as their chief functionary in matters of business, was entitled *נְגִי'ה הַצְּבוּר* [SYNAGOGUE], a name which may be translated literally *nuncius ecclesie*, and is here expressed by the Greek *ἄγγελος*. The substantive *מְלַאכֵה* also (which by analogy would be rendered *ἄγγελα*, as *מְלַאכֵה* is *ἄγγελος*) has the ordinary sense of *opus, ministerium*, making it almost certain that the 'angels of the churches' are nothing but a harsh Hebraism for 'ministers of the churches.' We therefore here see a single officer, in these rather large Christian communities, elevated into a peculiar prominence, which has been justly regarded as episcopal. Nor does it signify that the authorship of the Apocalypse is disputed, since its extreme antiquity is beyond a doubt; we find, therefore, the germ of episcopacy here planted, as it were, under the eyes of an Apostle. (Neander, *Pflanzung und Leitung*, p. 186-90, 2d ed.; Stanley, *Apost. Age*, p. 63 f.)

Nevertheless, it was still but a germ. It is vain to ask, whether these angels received a second ordination and had been promoted from the rank of presbyters. That this was the case is possible, but there is no proof of it; and while some will regard the question as deeply interesting, others will think it unimportant. A second question is, whether the angels were overseers of the congregation only, or of the presbyters too; and whether the church was formed of many local unions (such as we call parishes), or of one. Perhaps both questions unduly imply that a set of fixed rules was already in existence. No one who reads Paul's own account of the rebuke he uttered against Peter (Gal. ii.), need doubt that in those days a zealous elder would assume authority over other elders, officially his equals, when he thought they were dishonouring the Gospel; and, *à fortiori*, he would act thus towards an official inferior, even if this had not previously been defined or understood as his duty. So again, the Christians of Ephesus or Miletus were probably two numerous ordinarily to meet in a single assembly, especially before they had large buildings erected for the purpose; and convenience must have led at a very early period to subordinate assemblies (such as would now be called 'chapels-of-ease' to the mother church); yet we have no ground for supposing that any sharp division of the Church into organic portions had yet commenced.

Episcopalians, Presbyterians, and Congregationalists agree in one point, viz., that (because of its utility and general convenience) it is lawful for Christians to take a step for which they have no clear precedent in the Scripture, that of breaking up a church, when it becomes of unwieldy magnitude, into fixed divisions, whether parishes or congregations. The question then arises, whether the organic union is to be still retained at all. To this (1) Congregationalists reply in the negative, saying that the congregations in different parts of a great city no more need to be in organic union, than those of two different cities; (2) Presbyterians would keep up the union by means of a synod of the elders; (3) Episcopalians desire to unite the separate churches by retaining them under the supervision of a single head—the bishop. It seems impossible to refer to the practice of the Apostles as deciding in favour of *any one* of these methods; for the case had not yet arisen which could have led to the discussion. The city churches had not yet become so large as to make subdivision positively necessary; and, as a fact, it did not take place. To organize distant churches into a fixed and formal connection by synods of their bishops, was, of course, quite a later process; but such unions are by no means rejected, even by Congregationalists, as long as they are used for deliberation and advice, not as assemblies for ruling and commanding. The *spirit* of Episcopacy depends far less on the episcopal form itself, than on the size and wealth of dioceses, and on the union of bishops into synods, whose decisions are to be authoritative on the whole church: to say nothing of territorial establishment and the support of the civil government. If, under any ecclesiastical form, either oppression or disorder should arise, it cannot be defended; but no form is a security against such evils. Our experience may, in these later times, possibly shew us which of these systems is on the whole preferable; but the discussion must belong to ecclesiastical history, and would be quite out of place here.—F. W. N.

BITHIAH (בִּיתְיָהּ, *daughter*, i. e., *worshipper of Jehovah*, Sept. *Berthia*), the wife of Mered, and the daughter of Pharaoh (1 Chron. iv. 18). By some this 'Pharaoh' is taken to be a Jewish name (Hiller *Onomast.*, Patrick in loc., Michaelis in loc.); but it seems much more likely that it is the designation of an Egyptian king, to whose daughter the name Bithiah was probably given, because she had become a convert to the service of the true God. The whole passage in Chronicles is in confusion, and it is impossible to make sense of it as it stands. The most probable hypothesis is that the latter part of ver. 18 has been transposed from ver. 17, and that the whole should read thus:—'And the sons of Ezra were Jether, and Mered, and Ephraim, and Jalon. And these are the sons of Bithiah, the daughter of Pharaoh, which Mered took; and she bare Miriam, and Shammai, and Ishbah, the father of Eshtemoa. And his wife Jehudijah,' etc. According to this, Bithiah was the first wife of Mered, and Jehudijah his second. So Piscator, Junius, Calovius, Patrick, and Bertheau.—W. L. A.

BITHRON (הַבְּתְרוֹן, *the section or cut up region*), the name of a district—בְּתְרוֹן, 'all the Bithron'—lying on the east of the Jordan, apparently between it and Mahanaim, as through this Abner and

his men passed after crossing the Jordan, on their way to Mahanaim (2 Sam. ii. 29). The LXX. render it *ὄλην τὴν παρατείνουσαν*; Aquila makes it *Βεθωρών*, which Jerome follows. This is an evident mistake, as Bethhoron was on the west of Jordan. Thenius and Fürst identify it with Bethharan; but the use of the word 'all' forbids our understanding it of any town.—†

BITHYNIA (*Βιθυνία*), a province of Asia Minor, on the Euxine Sea and the Propontis; bounded on the west by Mysia, on the south and east by Phrygia and Galatia, and on the east by Paphlagonia [Strabo, xii. 563]. The Bithynians were a rude and uncivilized people, Thracians who had colonized this part of Asia, and lived in large town-like villages (*κυμοτολεύς*, Strabo, p. 566). That Christian congregations were formed at an early period in Bithynia, is evident from the Apostle Peter having addressed the first of his Epistles to them (1 Pet. i. 1; cf. the famous letter of Pliny to Trajan). The Apostle Paul was at one time inclined to go into Bithynia with his assistants Silas and Timothy, 'but the Spirit suffered them not' (Acts xvi. 7).—J. K.

BITTER, BITTERNESS. Bitterness (Exod. i. 14; Ruth i. 20; Jer. ix. 15) is symbolical of affliction, misery, and servitude. It was for this reason that, in the celebration of the Passover, the servitude of the Israelites in Egypt was typically represented by *bitter herbs*. [Comp. *Odys.* iv. 153; *Soph. El.* 654 D; *Eur. Bacch.* 634 D.] On the *day of bitterness* in Amos. viii. 10, comp. Tibullus, ii. 4. [5] 11—

'Nunc et amara dies, et noctis amarior umbra est. In Habak. i. 6 the Chaldeans are called 'that bitter and swift nation;' which Schultens illustrates by remarking that the root *Merer* in Arabic (answering to the Hebrew word for *bitter*) is usually applied to strength and courage.

The *gall of bitterness* (Acts viii. 23) describes a state of extreme wickedness, highly offensive to God, and hurtful to others.

A *root of bitterness* (Heb. xiii. 15) expresses a wicked or scandalous person, or any dangerous sin leading to apostasy (Wemyss's *Clavis Symbolica*, etc.)

BITTER HERBS (מְרִירִים; literally *bitters*; Sept. *πικράδες*; Vulg. *lactuca agrestes*). There has been much difference of opinion respecting the kind of herbs denoted by this word. On this subject the reader may consult Carpzov, *Apparat.* p. 404, sq.

It, however, seems very doubtful whether any particular herbs were intended by so general a term as *bitters*; it is far more probable that it denotes whatever bitter herbs, obtainable in the place where the Passover was eaten, might be fitly used with meat. This seems to be established by the fact that the first directions respecting the Passover were given in Egypt, where also the first Passover was celebrated (Ex. xii. 1-8); and as the esculent vegetables of Egypt are very different from those of Palestine, it is obvious that the bitter herbs used in the first celebration could scarcely have been the same as those which were afterwards employed for the same purpose in Canaan. According to the Mishna (*Pesachim*, ii. 6), and the commentators thereon, there were five sorts of bitter herbs, any one or all of which might be used on this occasion. There were —1. *חֲזֵרֵת* *chazereth*, supposed to be wild lettuce, which the Septuagint and Vulgate make stand for

the whole. 2. *עולשין* *ulshin*, endives; or, according to some, wild endives. 3. *תמכה* *thamca*, which some make the garden endive, others horehound, others tansy; others the green tops of the horse-raddish, while, according to De Pomis, in *Zemach David*, it is no other than a species of thistle (*carduus marianum*). 4. *חרחבינה* *charchabina*, supposed to be a kind of nettle. 5. *מרר* *marar*, which takes its name from its bitterness, and is alleged by the Mishnic commentators to be a species of the most bitter coriander. All these might, according to the Mishna, be taken either fresh or dried; but not pickled, boiled, or cooked in any way.—J. K.

BITTERN. [KIPPOD.]

BITUMEN. [CHEMAR.]

BIZJOTHJAH (*בִּזְיֹתְיָהּ*), a town in the southern part of Judah (Josh. xv. 28).

BLACK. Although the Orientals do not wear black in mourning, they, as did the ancient Jews, regard the colour as a symbol of affliction, disaster, and privation. In fact, the custom of wearing black in mourning is a sort of visible expression of what is in the East a figure of speech. In Scripture blackness is used as symbolical of afflictions occasioned by Providential visitations (Job xxx. 30; Is. xxiv. 11; Jer. xiv. 2; Lam. iv. 8; v. 10).

In Mal. iii. 14 we read, 'What profit is it that we keep his ordinances, and that we have walked in blackness (A. V. 'mournfully') before the Lord of Hosts;' meaning that they had fasted in sackcloth and ashes. 'Black' occurs as a symbol of fear in Joel ii. 6—'All faces shall gather blackness,' or *darken* with apprehension and distress. This use of the word may be paralleled from Virgil, *Æn.* ix. 719, 'Atrunque timorem;' and *Georg.* iv. 468,

'Caligantem nigra formidine lucum.'

The same expression which Joel uses is employed by Nahum (ii. 10) to denote the extremity of pain and sorrow.

In connection with this subject it may be remarked that black is studiously avoided in dress by all Orientals, except in certain garments of hair or wool, which are naturally of that colour. Black is also sometimes imposed as a mark of humiliating distinction by dominant nations upon subject or tributary tribes, the most familiar instance of which is the obligation laid upon the Jews in Turkey of wearing black turbans.—J. K.

BLAINS. [DISEASES; EGYPT, PLAGUES OF.]

BLANCHINUS, JOSEPH (*Bianchini Giuseppe*), a priest of the oratory at Rome, was born at Verona, 9th September 1704. He devoted himself to archaeological studies, chiefly to paleography. From his pen we have *Vindicie Canoniarum Scripturarum Vulg. Lat. editionis*, Rom. 1740, fol. vol. i.; and he edited *Evangeliarum Quadruplex Latinae Versionis antiquæ, seu veteris Italicæ, edit. ex Codd. MSS. plusquam millenariæ antiquitatis*, Rom. 1749, 2 vols. fol.; his other works belong more to ecclesiastical than to biblical literature. The *Evangeliarum* is a most splendid and costly work, presenting a transcript of the four codices of the Itala version, the Verceilian, the Veronian, the Corbejan, and the Brixian, with that of a corrected codex of the Vulgate. (See Michaelis, *Einleit.* p. 469; *E. T.*, vol. ii., p. 100.)—†.

VOL. I.

BLASPHEMY (*בְּקָבִי שִׁמּוֹת*; Sept. *βλασφημία*).

The Greek word *βλασφημία* is *generic*, denoting verbal abuse proceeding from an evil disposition. It is equivalent to *defamation* or *slander*, involving an attempt to lessen the character of others, with the intention of doing them injury. All kinds of abusive language, whether called *imprecation*, *calumny*, or *reviling*, come under the term.

The English word *blasphemy* is more restricted in its signification. It refers to God only. In like manner when *βλασφημία* is directed against the Supreme Being, or when Jehovah is the object of it, it is specific. In these circumstances it corresponds to the English *blasphemy*. The Greek *βλασφημία* is employed in reference to the defamation of men or angels equally with the Deity; but it is proper to use the term *blasphemy* only when God is spoken against. Thus the Greek and English words are not coextensive in import.

Our English translators have not adhered to the right use of the term. They employ it with the same latitude as the Greek; but it is generally easy to perceive, from the connection and subject of a passage, whether *blasphemy* properly so called be meant, or only defamation. It would certainly have been better to have employed *detraction* or *calumny* than *blasphemy* where man is the object; reserving the latter for that peculiarly awful slander which is directed against the ever-blessed God.

Blasphemy signifies a false, irreverent, injurious use of God's names, attributes, words, and works. Whenever men *intentionally* and *directly* attack the perfections of Jehovah, and thus lessen the reverence which others entertain for him, they are *blasphemers*. If the abusive language proceed from ignorance, or if it be dishonouring to the majesty of Heaven only in the consequences deduced from it by others, *blasphemy* has no existence. It is *wilful* calumny directed against the name or providence of God that alone constitutes the crime denoted by the term.

Examples of the general acceptance of *βλασφημία* in the N. T. are common, where the objects of it are men, angels, or the devil, as in Acts xiii. 45; xviii. 6; Jude 9. The restricted sense is found in such passages as Luke v. 21; John x. 36.

By the Mosaic law *blasphemy* was punished with death (Lev. xxiv. 10–16); and the laws of some countries still visit it with the same punishment. Fines, imprisonment, and various corporal inflictions are annexed to the crime by the laws of Great Britain. It is matter, however, of sincere satisfaction, that there are very few instances in which these enactments require to be enforced.

Much has been said and written respecting *the blasphemy* against the Holy Ghost, usually but improperly denominated *the unpardonable sin* against the Holy Ghost. Some refer it to continued opposition to the Gospel, *i. e.*, obstinate impenitence or final unbelief. In this view it is unpardonable, not because the blood of Christ is unable to cleanse from such a sin, nor because there is anything in its own nature which separates it from all other sins and places it beyond forgiveness, but because, as long as man continues to disbelieve, he voluntarily shuts himself out from the forgiving mercy of God. By not receiving the Gospel, he refuses pardon. In the same manner, *every sin* might be styled unpardonable, as long as an individual continues to indulge in it.

We object to this opinion, because it generalizes the nature of the sin in question. On the contrary, the Scripture account narrows it to a particular sin of a special kind, discountenancing the idea that it is of frequent occurrence and marked by no circumstances of unwonted aggravation. Besides, all the notices which we have refer to not so much to a state of mind, as to the outward manifestation of a singularly malignant disposition *by the utterance of the lips*.

The occasion on which Christ introduced his mention of it (Matt. xii. 31, etc.; Mark iii. 28, etc.), the subsequent context, and, above all, the words of Mark iii. 30 ('because they said, He hath an unclean spirit') indicate, with tolerable plainness, that the sin in question consisted in attributing the miracles wrought by Christ, or his apostles in his name, to the agency of Satan. It was by the power of the Holy Ghost, given to the Redeemer without measure, that he cast out devils; and whoever maligned the Saviour, by affirming that an unclean spirit actuated and enabled him to expel other spirits, maligned the Holy Ghost.

There is no connection between the description given in the Epistle to the Hebrews, vi. 4-6, and this unpardonable blasphemy. The passages in the Gospels which speak of the latter are not parallel with that in the Epistle to the Hebrews: there is a marked difference between the states of mind and their manifestations as described in both. The sins ought not to be identified: they are altogether dissimilar.

It is difficult to discover the 'sin unto death' noticed by the apostle John (1 John v. 16), although it has been generally thought to coincide with the blasphemy against the Holy Spirit; but the language of John does not afford data for pronouncing them one and the same. The first three gospels alone describe the *blasphemy* which shall not be forgiven: from it the 'sin unto death' stands apart. (See Lücke's *Commentar über die Briefe des Evangelisten Johannes*, Zweyte Auflage, pp. 305-317; Campbell's *Preliminary Dissertations to the Gospels*, Dissertat. ix., part ii.; Meyer's *Kommentar* on Matt. xii. 31, and the writers there referred to.—S. D.

BLASTUS (Βλάστος), a man who was *cubicularius* to King Herod Agrippa, or who had the charge of his bed-chamber (Acts xii. 20). Such persons had usually great influence with their masters, and hence the importance attached to Blastus's favouring the peace with Tyre and Sidon.—J. K.

BLAYNEY, BENJAMIN, D.D., regius professor of Hebrew at Oxford, and rector of Polshot. He was educated at Oxford; was installed to the former of these offices in 1787; and died 20th September 1801. As a Hebrew scholar and critic Blayney had few equals in his day. He took special pains in correcting the text of the English version of the Bible, printed in 1769, 4to, and which has been followed since as the standard. The marginal references were also greatly improved by him. Unfortunately, a large number of the impression was destroyed by fire, and copies of the book are now very scarce. His other works, and by which he is now best known, are the following:—1. *Jeremiah and Lamentations: a new translation, with notes, critical, philological, and explanatory*; first published in 1784, 4to; the third and best edition, London, 1836, 8vo. This work was intended as a continua-

tion of Bishop Lowth's on Isaiah, and though perhaps not less able as a work of sacred criticism, it yet falls considerably short of its eminent predecessor in the matter of taste and acute poetical discernment. Considered by itself, however, it is a valuable commentary. The student will observe, in consulting it, that Blayney, in his arrangement of several parts of Jeremiah, differs considerably from the printed Hebrew text. If the notes are not always clear and satisfactory, they yet shew, as Orme remarks, that he had studied the subject profoundly, and with all the aids usually employed in critical investigation. 2. *Zechariah: a new translation, with notes, critical, philological, and explanatory; and an Appendix in reply to Dr. Eveleigh's Sermon on Zech. ii. 8-11. To which is added* (a new edition, with alterations), *a dissertation on Daniel ix. 20-27*; 4to, Oxford, 1797. The observations made on the preceding commentary apply equally to this. The most valuable of its notes will be found inserted in the edition of the Minor Prophets, by Newcome, published by Boothroyd in 1809. The dissertation added bears also, as part of its title, an inquiry into the import and application of Daniel's vision, usually called Daniel's Prophecy of the Seventy Weeks. Throughout will be found occasional remarks on Michaelis's letter on the same subject. Besides these works, and some smaller pamphlets and single sermons of a critical nature, Dr. Blayney published, in 1790, an edition of the *Pentateuchus Hebræo-Samaritanus*, in Hebrew letters, with various readings, 8vo.—W. J. C.

BLEMISHES. There were various kinds of blemishes, *i. e.*, imperfections or deformities, which excluded men from the priesthood, and animals from being offered in sacrifice. These blemishes are described in Lev. xxi. 17-23; xxii. 19-25; Deut. xv. 21. We learn from the Mishna (*Zebachim*, xii. 1; *Bechoroth*, vii. 1), that temporary blemishes excluded a man from the priesthood only as long as those blemishes continued. The rule concerning animals was extended to imperfections of the inward parts: thus if an animal, free from outward blemish, was found, after being slain, internally defective, it was not offered in sacrifice. The natural feeling that only that which was in a perfect condition was fit for sacred purposes, or was a becoming offering to the gods, produced similar rules concerning blemishes among the heathen nations (Conf. Pompon. Læt. *De Sacerdot.* cap. 6; Herodot. ii. 38; *Iliad*, i. 65; Servius ad *Virg. Æn.* vi. 38, 39; Ovid, *Met.* xv. 130).—J. K.

BLESSING. The terms 'blessing' and 'to bless' occur very often in the Scriptures, and in applications too obvious to require explanation or comment. The patriarchal blessings of sons form the exception, these being, in fact, prophecies rather than blessings, or blessings only in so far as they for the most part involved the invocation and the promise of good things to come upon the parties concerned. The most remarkable instances are those of Isaac 'blessing' Jacob and Esau (Gen. xxvii.); of Jacob 'blessing' his twelve sons (Gen. xlix.); and of Moses 'blessing' the twelve tribes (Deut. xxxiii.)

BLESSING, VALLEY OF. [BERACHAH.]

BLINDING. [PUNISHMENTS.]

BLINDNESS. The frequent occurrence of blindness in the East has always excited the astonishment of travellers. Volney says that, out of a hundred persons in Cairo, he has met twenty quite blind, ten wanting one eye, and twenty others having their eyes red, purulent, or blemished (*Travels in Egypt*, i. 224). This is principally owing to the Egyptian ophthalmia, which is endemic in that country and on the coast of Syria. This disease commences with such a violent inflammation of the conjunctiva, that, in a few hours, the whole of that membrane, which lines the anterior surface of the eye and the internal surface of the eyelids, is covered with red fleshy elevations, resembling granulations, and secreting a purulent discharge. The inflammation spreads rapidly over the eyeball; the delicate internal tissues are destroyed and converted into pus; the outer coats ulcerate through; and the whole contents of the eye are evacuated. In its acute and most virulent form, the disease runs its course in three to seven days; otherwise it may continue for as many weeks or months. It is to be ascribed to those peculiar conditions of the atmosphere which are termed miasmatic, of which, however, nothing is known, except that they exert a specific influence on the body, different from the ordinary effects of cold and damp. The variety of causes assigned by travellers for this disease, such as the suspension of fine dust and saline particles in the atmosphere, the custom so prevalent amongst the inhabitants of all Eastern countries of sleeping on the roofs of the houses, southerly winds, bad diet, shaving the head, etc., can only be regarded as secondary or occasional causes; and amongst these bad diet, great fatigue, and exposure to the night dews, are the most important. The Egyptian ophthalmia is contagious; but it is not often communicated from one individual to another. It is not confined to the East, but appears here and there throughout Europe; and during the last war, probably on account of the practice of bivouacking in the open air, and the great hardships to which the troops were often exposed, it was a dreadful scourge to most of the European armies, more particularly to the Prussians during the campaigns of 1813 and 1814, although that army had never left Europe (Jüngken's *Augenkrank.* p. 336). The French and English suffered greatly from it while they were in Egypt, and subsequently.

Small-pox is another great cause of blindness in the East (Volney, *l. c.*)

In the N. T. blind mendicants are frequently mentioned (Matt. ix. 27; xii. 22; xx. 30; xxi. 14; John v. 3). The blindness of Bar Jesus (Acts xiii. 6) was miraculously produced, and of its nature we know nothing. Winer (s. v. *Blindheit*) infers that it was occasioned by specks on the cornea, which were curable, because the same term, ἀχλὺς, is made use of by Hippocrates (Προρρητικόν, ii. 215, ed. Kühn), who says that ἀχλὺς will disappear, provided no wound has been inflicted. Before such an inference can be drawn, we must be sure that the writers of the N. T. were not only acquainted with the writings of Hippocrates, but were also accustomed to a strict medical terminology. The haziness implied by the expression ἀχλὺς may refer to the sensation of the blind person, or to the appearance of the eye, and, in both cases, the cause of the haziness may have been referrible to any of the

other transparent media, as well as to the cornea. Tobit's blindness (Tobit ii. 10) was attributed to sparrows' dung having fallen into his eyes. If the story be considered true (which we are by no means required to believe), his cure must be regarded as altogether miraculous. Though the gall of a fish was an old remedy for diseases of the eyes (Plin. *Hist. Nat.* xxxii. 24), and has been frequently used in modern times (Richter, *Anfangsgr. d. Wundarzneik.* iii. p. 130), it cannot be supposed to have had any medicinal effect in Tobit's case; for not only was the cure instantaneous, but the specks which impeded vision were seen to escape from the corners of his eyes; which plainly shews that the whole process, if not the disease itself, was of a kind which does not fall under the province of science. Examples of blindness from old age occur in Gen. xxvii. 1; 1 Kings xiv. 4; 1 Sam. iv. 15. The Syrian army that came to apprehend Elisha was suddenly smitten with blindness in a miraculous manner (2 Kings vi. 18); and so also was St. Paul (Acts ix. 9). The Mosaic law has not neglected to inculcate humane feelings towards the blind (Lev. xix. 14; Deut. xxvii. 18). Blindness is sometimes threatened in the Old Testament as a punishment for disobedience (Deut. xxviii. 28; Lev. xxvi. 16; Zeph. i. 17).—W. A. N.

BLOOD. There are two respects in which the ordinances of the Old and New Testaments concerning blood deserve notice here—the prohibition of its use as an article of food, and the appointment and significance of its use in the ritual of sacrifice; both of which appear to rest on a common ground.

In Gen. ix. 4, where the use of animal food is allowed, it is first absolutely forbidden to eat 'flesh with its soul, its blood;' which expression, were it otherwise obscure, is explained by the mode in which the same terms are employed in Deut. xii. 23. In the Mosaic law the prohibition is repeated with frequency and emphasis; although it is generally introduced in connection with sacrifices, as in Lev. iii. 17; vii. 26 (in both which places blood is coupled in the prohibition with the *fat* of the victims); xvii. 10-14; xix. 26; Deut. xii. 16-23; xv. 23. In cases where the prohibition is introduced in connection with the lawful and unlawful articles of diet, the reason which is generally assigned in the text is, that 'the blood is the soul,' and it is ordered that it be poured on the ground like water. But where it is introduced in reference to the portions of the victim which were to be offered to the Lord, then the text, in addition to the former reason, insists that 'the blood expiates by the soul' (Lev. xvii. 11, 12).* This strict injunction not only applied to the Israelites, but even to the strangers residing among them. The penalty assigned to its transgression was the being 'cut off from the people;' by which the punishment of death appears to be intended (cf. Heb. x. 28), although it is difficult to ascertain whether it

* We can only for brevity refer the reader to Bähr's *Symbolik*, ii. 207, for the philological reasons for this rendering. He there shews that נפש, which is generally rendered as the mere *object* of the verb, must, instead, be the instrument; so that the sense is, in that the soul is in the blood, therefore the blood atones; or, the blood atones by means of the soul, *its* soul.

was inflicted by the sword or by stoning. It is observed by Michaelis (*Mos. Recht.* iv. 45) that the blood of *fishes* does not appear to be interdicted. The words in Lev. vii. 26 only expressly mention that of birds and cattle. This accords, however, with the reasons assigned for the prohibition of blood, so far as fishes could not be offered to the Lord; although they formed a significant offering in heathen religions. To this is to be added, that the Apostles and elders, assembled in council at Jerusalem, when desirous of settling the extent to which the ceremonial observances were binding upon the converts to Christianity, renewed the injunction to abstain from blood, and coupled it with things offered to idols (Acts. xv. 29). It is perhaps worthy of notice here, that Mohammed, while professing to abrogate some of the dietary restrictions of the Jewish law (which he asserts were imposed on account of the sins of the Jews, Sura iv. 158), still enforces, among others, abstinence from blood and from things offered to idols (*Qurân*, Sur. v. 4, vi. 146, ed. Flügel).

In direct opposition to this emphatic prohibition of blood in the Mosaic law, the customs of uncivilized heathens sanctioned the cutting of slices from the living animal, and the eating of the flesh while quivering with life and dripping with blood. Even Saul's army committed this barbarity, as we read in 1 Sam. xiv. 32; and the prophet also lays it to the charge of the Jews in Ezek. xxxiii. 25.* This practice, according to Bruce's testimony, exists at present among the Abyssinians. Moreover, pagan religions, and that of the Phœnicians among the rest, appointed the eating and drinking of blood, mixed with wine, as a rite of idolatrous worship, and especially in the ceremonial of swearing. To this the passage in Ps. xvi. 4 appears to allude (cf. J. D. Michaelis, *Critisch. Colleg.* p. 108, where several testimonies on this subject are collected).

The appointment and significance of the use of blood in the ritual of sacrifice belongs indeed to this head; but their further notice will be more appropriately pursued in the article SACRIFICE.—J. N.

BLOOD AND WATER (John xix. 34) are said to have issued from our Lord's side when the soldier pierced him on the cross. The only natural explanation that can be offered of the fact is to suppose that some effusion had taken place in the cavity of the chest, and that the spear penetrated below the level of the fluid. Supposing this to have happened, and the wound to have been inflicted shortly after death, then, in addition to the water, blood would also have trickled down, or, at any rate, have made its appearance at the mouth of the wound, even though none of the large vessels had been wounded. It is not necessary to suppose

that the pericardium was pierced; for, if effusion had taken place there, it might also have taken place in the cavities of the pleura; and, during health, neither the pericardium nor the pleura contains fluid, but are merely lubricated with moisture on their internal or opposing surfaces, so as to allow of free motion to the heart and lungs.

It may be objected to this view of the question, that, according to the longest computation, our Lord died in six hours, and that this is too short a time to occasion effusion. Indeed, reasoning from experience alone, it is very difficult to understand the *physical* cause of our Lord's death. The crucifixion is quite inadequate to account for it; for, even if the impression produced by this torture on a weak nervous system was sufficient to annihilate consciousness and sensibility, the death of the body, or what physiologists have termed *organic* death, could not have taken place in so short a time, as long as the brain, lungs, and circulation, the so-called *atria mortis*, had sustained no material injury. In other words, the functions of respiration, circulation, secretion, and nutrition must have continued for a far longer time. In fact, we learn from Eusebius (*Hist. Eccles.* viii. 8) that many of the Egyptian martyrs perished from hunger on the cross, although they were crucified with their heads downwards. According to Richter, some survive on the cross for three, four, and even for *nine* days (Winer's *Bibl. Realwört.* s. v. *Jesus*). Our Lord's death could not have been occasioned by tetanus, or else it would have been mentioned; and even this disease, though the sufferer be racked with the most frightful convulsions without intermission, most rarely puts an end to life in less than twelve hours. Nor can we attribute it to the wound inflicted by the soldier; for although, when it is said he 'expired, and the soldiers saw that he was dead,' our Lord might have merely fainted, yet it is impossible to suppose that the soldier would not have perceived his error the moment he inflicted the wound, provided it was mortal; for then would have commenced the death struggle, which, in cases of death by asphyxia and hemorrhage, is very severe, and would have struck the most careless spectator.

Schuster (in Eichhorn's *Bibl. Biblioth.* ix. 1038) is of opinion that, as blood is known to separate into a red coagulium and a watery fluid, the expression 'blood and water' is to be understood as an *hendiadys*, meaning nothing more than blood. To this it must be objected that blood is only observed to separate in that way when it is allowed to coagulate in a vessel, and that therefore the opportunities for observing it must have been a great deal too rare to allow of such figurative language being employed and understood. That it certainly was not so understood is clear; for some of the fathers (Orig. *Contr. Cels.* ii. 82) interpreted the expression literally, and looked upon the fact as a miracle, and a proof of our Lord's divine nature. According to Strauss (*Leben Jesu*, ii. 571), the evangelist recollected that dead blood separates in the manner just mentioned, and, as he wished to bring forward the strongest proof of our Lord's death, he asserted that blood and water issued from the wound, meaning thereby that our Lord's blood had already undergone that change which is only observed when it is removed from the body and deprived of its vitality. This hypothesis is wholly untenable; for, if we

* The use of the preposition *by* in this passage has been entirely misunderstood by Spencer, who (*De Leg. Hebr.* ii. 11) adduces much testimony from profane sources for the existence of the rite of feasting *over* the blood of the victim. Nevertheless, that this preposition also has the sense of *with*, in addition to, *insuper*, is established by Gen. xxxii. 12; Exod. xii. 9 (Ewald's *Hebr. Gram.* sec. 524); as well as by the recurrence of the whole phrase in 1 Sam. xiv. 32. Deyling has refuted Spencer in a special dissertation (*Observ. Sacr.* ii. 25).

suppose the evangelist so well acquainted with the separation of blood, he would have known that the coagulum, which, according to the hypothesis, is designated by the term *blood*, could not, on account of its solidity, have issued from the wound. Moreover, St. John must have known, what every one knows, that the fact of no blood at all being seen would have been a far better proof of our Lord's death. Indeed, the appearance of blood and water could not have been regarded as a proof of death, but rather as something wonderful and inexplicable; for the words of Origen, τῶν ἀλλῶν νεκρῶν σωματίων τὸ αἷμα πηγνύται, καὶ ὕδωρ καθαρὸν οὐκ ἀπορρέει (*l. c.*), express a fact which every one in those days must have known from personal experience. St. John then must have entirely failed in his object, and merely from his ignorance of the most vulgar opinions.

It has been asserted by some (as by Winer) that, when deep incisions are made in the body after death, the blood will be found separated into crur and serum. This is incorrect. Even in the heart and large vessels the serum cannot be distinguished, because it readily transudes, and is imbibed by the surrounding tissues. In many cases coagulation takes place very imperfectly after death.

It must not be supposed that the fact of blood coming from the wound at all militates against the idea that our Lord was dead at the moment he was pierced. This argument is, indeed, made use of by Strauss (*l. c.*); but it can be refuted by the most ordinary experience. It is well known that, even many days after death, blood will trickle from deep incisions, especially where any of the large veins have been wounded. The popular opinion that blood will not flow from a corpse, must be taken in a relative, and not absolute sense. It certainly will not flow as it does from a living body; and, when the wound is small and superficial, sometimes not a drop will be seen.

The three other evangelists do not mention the circumstance.—W. A. N. [Comp. Stroud, *Physical Cause of the Death of Christ*, Lond. 1847.]

BLOOD, AVENGER OF. [KINSMAN.]

BLOOD, ISSUE OF (Matt. ix. 20; Mark v. 25; Luke viii. 43). The disease here alluded to is hæmorrhagia; but we are not obliged to suppose that it continued unceasingly for twelve years. It is a universal custom, in speaking of the duration of a chronic disease, to include the intervals of comparative health that may occur during its course; so that when a disease is merely stated to have lasted a certain time, we have still to learn whether it was of a strictly continuous type, or whether it intermitted. In the present case, as this point is left undecided, we are quite at liberty to suppose that the disease did intermit; and can therefore understand why it did not prove fatal even in twelve years. [In the other passages where this expression occurs, it refers to the *fluxus uteri*, to which women are subject (רַם זֹבַח, Lev. xv. 19-30). This entailed a ceremonial uncleanness for seven days, or longer when the discharge was abnormally protracted.]

Bartholinus (*De Morb. Bibl.* p. 61) quotes a case in which hæmorrhage is said to have occurred for upwards of two years without cessation; but the details necessary to render such an extraordinary case credible are not given.—W. A. N.

BLOODY FLUX. This is the rendering in the A. V. (Acts xxviii. 8) of what Luke designates by its more proper appellation, *dysenter* (δυσεντερία).

BLOODY SWEAT. According to Luke xxii. 44, our Lord's sweat was 'as great drops of blood falling to the ground.' Michaelis takes the passage to mean nothing more than that the drops were as large as falling drops of blood (*Anmerk. für Ungelehrte*, ad loc.) This, which also appears to be a common explanation, is liable to some objection. For, if an ordinary observer compares a fluid which he is accustomed to see colourless, to blood, which is so well known and so well characterized by its colour, and does not specify any particular point of resemblance, he would more naturally be understood to allude to the colour, since it is the most prominent and characteristic quality.

There are several cases recorded by the older medical writers, under the title of bloody sweat. With the exception of one or two instances, not above suspicion of fraud, they have, however, all been cases of general hæmorrhagic disease, in which blood has flowed from different parts of the body, such as the nose, eyes, ears, lungs, stomach, and bowels, and, lastly, from various parts of the skin. When blood oozes from the skin, it must reach the external surface through orifices in the epidermis, which have been produced by rupture, or, we must suppose that it has been extravasated into the sweat-ducts. But, even in this latter case, we must no more consider hæmorrhage of the skin to be a modification of the function of sweating, than bleeding from the nose to be a modification of the secretion of mucus. The blood is simply mixed with the sweat, precisely in the same way as, when spit up from the lungs, it is mixed with mucus and saliva in passing through the air-tubes and mouth. It is, therefore, incorrect to suppose that hæmorrhage from the skin indicates a state of body at all analogous to that which occasions sweating. If this distinction had been clearly understood, and clearly stated by medical writers, it would have been seen at once how far their experience went to illustrate the case before us.

The greater number of cases described by authors were observed in women and children, and sometimes in infants. Mental anxiety we have found mentioned as a cause or as a concomitant symptom only in one case, which will be noticed below. The case of a young lady who was afflicted with cutaneous hæmorrhage is detailed by Mesaportiti in a letter to Valisneri. She is noticed to have been cheerful, although she must have suffered greatly from debility and febrile symptoms (*Phil. Trans.* No. 303, p. 2114). The case of an infant, only three months old, affected with the same disease, is related by Du Gard (*Phil. Trans.* No. 109, p. 193). A similar case is described in the *Nov. Act. Acad. Nat. Cur.* tom. iv. p. 193. See also *Eph. Acad. Nat. Cur.* obs. 41; and, for other references, Copeland's *Dict. of Med.* ii. p. 72. Where hæmorrhagic diathesis exists, muscular exertion is a powerful exciting cause of all kinds of hæmorrhage, and must likewise give rise to the cutaneous form of the disease. A most remarkable case of the kind, occurring in a horse, is mentioned by Dr. Copeland. His friend Dr. W. Hutchinson had a fine Arabian horse, whose sweat was sanguineous after

moderate exertion, and almost pure blood upon violent exertion (*Dict. of Med.*, l. c.)

Bloomfield (*Greek Test.* note on Luke xxii. 44) says that Aristotle adduces a case of bloody sweat from extreme agitation, in his *Hist. Anim.* iii. 19. This statement, however, is incorrect. Aristotle is merely speaking of the blood in a general way; and says, 'si sanguis immodice humescit, morbus infestat: sic enim in speciem saniei diluitur et adeo serescit, ut jam nonnulli sudore cruento exundarint.' There is no allusion made to any case, nor a word said about extreme agitation. There is, however, a case of this kind recorded by Durius, a German physician (*Miscell. cur. Ephemerid.* p. 354, obs. 179). A student was put into prison, 'propter insolentias nocturnas et alia tentata,' when he was seized with such fear and agitation that drops of blood burst forth, here and there, from his hands, chest, and arms. Durius was ordered by the magistrate, who was informed of the circumstance, to visit the prisoner; and he witnessed all that had been related to him. The prisoner was of course immediately released, and was restored to his former state of health as soon as the cause of his anxiety had been removed. If this was really a fact, the student must have been affected with hæmorrhagic disease, or have had a very strong tendency to it: but the story does not deserve the slightest credence. The author does not appear to have imagined, for a moment, that it was a case of imposition, or that it might be afterwards suspected to be such. His account is, therefore, confined to the bare statement of the fact, and affords no evidence of the correctness of his observation. It is highly improbable that a student of such habits should feel great alarm at being put in prison; while nothing is more conceivable than that he should attempt to impose on the credulity of his attendants, in order to obtain his release, and that he should even succeed in deceiving a physician. Medical experience abounds in cases of successful imposition of a far more extraordinary nature (*Bartholinus, Hist. Anat. rar.*, cent. i. hist. 52).

While, then, on the one hand, experience teaches that cutaneous hæmorrhage, when it does occur, is the result of disease, or, at any rate, of a very peculiar idiosyncrasy, and is in no way indicative of the state of the mind, we have, on the other, daily experience and the accumulated testimony of ages to prove that intense mental emotion and pain produce on the body effects even severer in degree, but of a very different nature. It is familiar to all that terror will blanch the hair, occasion momentary paralysis, fainting, convulsions, melancholy, imbecility, and even sudden death. Excessive grief and joy will produce some of the worst of these. Sweat is caused by fear, and by bodily pain; but not by sorrow, which excites no secretion except tears.

It is very evident, then, that medical experience does not bear at all upon the words of St. Luke. The circumstances connected with our Lord's sufferings in the garden must be considered by themselves, without any reference to actual observation; otherwise, we shall be in danger of rendering a statement, which may be easily received on its own grounds, obscure and contradictory.

It may be remarked that the passage in question only occurs in St. Luke, and is omitted in the two oldest MSS., A. and B., and three others.—W. A. N.

BLUE. [COLOURS.]

BOANERGES (*Βοανεργῆς*, explained by *ὑιοὶ Βροντῆς*, sons of thunder, Mark iii. 17), a surname given by Christ to James and John, probably on account of their fervid, impetuous spirit (comp. Luke ix. 54, and see Olshausen thereon). The word *boanerges* has greatly perplexed philologists and commentators. It seems agreed that the Greek term does not correctly represent the original Syro-Chaldee word, although it is disputed what that word was. Many, with Jerome, think that the true word is *Βεβερελιμ*, from the Hebrew *בני רעם benei-ra'am*, as in Hebrew *רעם* constantly denotes thunder. But this varies too much from the *vestigia literarum*. Others derive it from the Hebrew *בני רעש benei-ra'ash*, which deviates still further, and only signifies—sons of tumult or commotion. Recent interpreters therefore incline to the derivation of Caninius, De Dieu, and Fritzsche, who take it from *בני רגש benei-regesh*, for *רגש*, which in Hebrew signifies a crowd, a tumult, in Syriac and Arabic signifies thunder. Thus the word *boanerges* would seem to be a slight corruption from *boane-regesh*, the *boane* being very possibly the Galileean pronunciation instead of *bene* (comp. Bloomfield's *New Test.* on Mark iii. 17; and Robinson's *Gr. Lex.* s. v. *Βοανεργῆς*).—J. K.

BOAR. [CHAZIR.]

BOAT (*πλοῖον*), John vi. 22, 23, was probably put for a smaller boat than the fishing craft, *πλοῖα*, employed on the sea of Tiberias. The people, perceiving that Jesus had not gone with his disciples, supposed he was still on the east side of the sea, as there was not even a boat, *πλοῖον*, by which he could have crossed. But when they found he was gone, they availed themselves of such boats, which had returned from Tiberias, to go in quest of him. The boat, *σκάφη* (Acts xxvii. 16), was the jolly-boat of the ship. [SHIP.]

BOAZ (*בועז*, *alacritas*: Sept. *Βοῶζ*), i. a wealthy Bethlehemite, and near kinsman of the first husband of Ruth, whom he eventually espoused under the obligations of the Levirate law, which he willingly incurred. The conduct of Boaz—his fine spirit, just feeling, piety, and amenity of manners—appears to great advantage in the book of Ruth, and forms an interesting portraiture of the condition and deportment of what was in his time the upper class of Israelites. By his marriage with Ruth he became the father of Obed, from whom came Jesse, the father of David. He was thus one of the direct ancestors of Christ, and as such his name occurs in Matt. i. 5. There are some chronological difficulties respecting the time of Boaz and his genealogical connections; but as these are involved in the considerations which determine the time of the book of Ruth, they will be more advantageously examined in connection with that larger subject. [RUTH; GENEALOGY.]

2. The name given to one of the two brazen pillars which Solomon erected in the court of the Temple. [TEMPLE.]

BOCHART, SAMUEL, a French protestant pastor, was born at Rouen in 1599. He was educated at Paris and Sedan, and probably also he studied theology at Saumur. The masters to whose instructions he was chiefly indebted were

two Scotchmen, Dempster and Cameron, then resident in France. When the college at Saumur was broken up, Bochart followed Cameron to England, where he spent some time, chiefly at Oxford, and where he laid the foundation of that immense Oriental erudition for which his name is so famous. After leaving England he was for some time at Leyden studying Arabic under Erpenius, and at length settled at Caen as pastor of the protestant congregation there. Here the rest of his life was spent, and here his great works were composed. In 1646 he published his *Geographia Sacra seu Phaleg et Canaan*, a work of vast and varied learning, and from which, as from a storehouse, all subsequent writers on biblical geography and ethnography have drawn; though, as might have been expected, the greater acquaintance with eastern localities and relations obtained since his day, has led to extensive departures from, or modifications of, the results at which he arrived. The work is divided into two parts, Phaleg and Canaan. The former comprises four books, of which the first consists of various discussions of a preliminary nature, the second is devoted to the posterity of Shem, the third to that of Japheth, and the fourth to that of Ham. The second part comprises two books, of which the former is occupied with the colonies of the Phœnicians, the latter with the Phœnician and Punic languages. Bochart's next great work was his *Hierozoicon, sive Bipartitum opus de animalibus Scripture*, Lond. 1663, fol., in which he treats, with an immense profusion of learning, of all the animals, quadrupeds, birds, reptiles, and insects mentioned in Scripture. Of this work an edition was published by Rosenmüller, in three vols. 4to. Lips. 1793-6. His collected works were edited by Leusden and Villemand, in 3 vols. fol., Leyden and Utrecht, 1692, and again 1712. Other editions have appeared, but these are the best. Bochart died suddenly 16th May 1667.—W. L. A.

BOCHIM (הַבְּכִים, *the weepings*; Sept. ὁ κλαυθρῶν, *κλαυθρῶνες*), the name given to a place (probably near Shiloh, where the tabernacle then was) where an 'angel of the Lord' reproved the assembled Israelites for their disobedience in making leagues with the inhabitants of the land, and for their remissness in taking possession of their heritage. This caused the bitter weeping among the people for which the place took its name (Judg. ii. 1, 5).

BODE, CHRIST. ANG., professor of Oriental languages at Helmstädt, was born 28th Dec. 1722, at Wernigerode, and died 7th March 1796. He devoted himself to Oriental studies, and especially to the Oriental versions of Scripture. He published *Fragmenta V. T. ex Vers. Aethiop. Interp. ut et alia quadam opusc. Aethiop. in Latinam translata*. Helmst. 1755, 4to; *Evang. sec. Matt. ex vers. Persici Interp. editum. in Lat. trans., etc.; Ev. sec. Marc., etc.; Ev. sec. Luc.; Ev. sec. Johān.*, Helmst. 1751, 4to; *Pseudo-Critica Millio-Bengeliana, sive Tractatus Criticus quo versionum sac. orient. allegationes pro variis N. T. Gr. lectionibus a Millio et Bengelio frustra plene recensentur, refutantur et eliminantur, insertis earund. Vers. veris allegationibus*, 2 vols. 8vo. Halan, 1767-9. This last work is of considerable value. Bode shews that the various readings alleged by Mill and

Bengel from the Oriental versions in the Polyglott, are very often incorrectly alleged, and he supplies the true varieties. Great care and accurate scholarship distinguish the book, though it is pervaded by a needless amount of acrimony; and the style in which it is written is so rugged and obscure, that to read it is a task. All subsequent editors of the Greek text have been deeply indebted to Bode's patient and exact examination of the Oriental versions.—W. L. A.

BOEHME, CHRISTIAN FRED., D.D., a Lutheran pastor at Altenburg and Lucka, was born 3d Oct. 1766, at Eisenberg. He was the author of *Epist. Pauli ad Romanos Gr. cum comment. perpet.* Lips. 1806; *Ep. ad Hebræos lat. vert. atque comment. perpet. instruxit.*, Lips. 1825; and of several treatises of dogmatical and polemical character. Of his commentary on the Hebrews, Delitzsch says, 'that it is philologically strong, but in style disagreeable; independent, acute, and, though not thoroughgoing, theologically, yet rich in what is suggestive and stimulating' (*Commentar zum Br. an die Heb.*, p. xxxviii).—W. L. A.

BOHAN (בֹּהַן, *a thumb*; Sept. Βαύων), a Reubenite, in whose honour a stone was erected which afterwards served as a boundary-mark on the frontier between Judah and Benjamin (Josh. xv. 6; xviii. 17). It does not appear from the text whether this stone was a sepulchral monument, or set up to commemorate some great exploit performed by this Bohan in the conquest of Canaan. Bunting (*Itinerar. tot. S. Script.* p. 144), mentioning Bahurim, says that near to it, in the valley, is a stone called *Bohan*, of extraordinary size, and shining like marble. This wants confirmation, and no authority is given.

BOHLEN, PETER VON, ordinary professor of Oriental languages at Königsberg, was born 9th March 1796, at Wöppels, in Westphalia, and died at Halle, 6th Feb. 1840. He contributed *Symbola ad interp. sac. codicis ex lingua Persica*, Lips., 1822, 4to; and wrote a translation of Genesis, with notes, *Die Gen. übers. mit Anmerk.* Leipz. 1835. He belonged to the extreme rationalist school, and his criticism is wholly destructive. The character of his investigations is chiefly negative, and inimical to the Pentateuch in respect of its antiquity as well as of its credibility; he does not offer any clear or definite view on the proper origin of the book' (Bleek *Einleit. in d. A. T.* p. 176). This work has found a translator into English.—W. L. A.

BOND, BONDAGE. [SLAVE.]

BONFRERE, JACQUES, a Jesuit, professor of Hebrew at Douay, was born in 1573 at Divant, and died 9th May 1643 at Tournay. He edited the *Onomasticon* of Eusebius and Jerome, and accompanied it with valuable notes. Amst. 1707, fol. He wrote also *Pentateuch. Moysis comment. illust.* Antw. 1625, fol.; *Josue, Judices et Ruth comment. illustr. Accessit Onomasticon, S.S.*, Paris, 1631, 1659, fol.; *Comment. in Libros Regum et Paralip.*, Thom. 1643, fol.—W. L. A.

BOOK. [WRITING.]

A sealed book (Isa. xxix. 11; Rev. v. 1-3) is a book whose contents are secret, and have for a

very long time been so, and are not to be published till the seal is removed.

A book or roll written within and without, i. e., on the back side (Rev. v. 1), may be a book containing a long series of events; it not being the custom of the ancients to write on the back side of the roll, unless when the inside would not contain the whole of the writing (comp. Horace, *Ep.* i. 20, 3).

To eat a book signifies to consider it carefully and digest it well in the mind (Jer. xv. 16; Rev. x. 9). A similar metaphor is used by Christ in John vi., where he repeatedly proposes himself as 'the Bread of Life' to be eaten by his people.

BOOK OF LIFE. In Phil. iv. 3 Paul speaks of Clement and other of his fellow-labourers, 'whose names are written in the book of life.' On this Heinrichs (*Annotat. in Ep. ad Philipp.*) observes that as the future life is represented under the image of a *πολιτευμα* (citizenship, community, political society) just before (iii. 20), it is in agreement with this to suppose (as usual) a catalogue of the citizens' names, both natural and adopted (Luke x. 20; Rev. xx. 15; xxi. 27), and from which the unworthy are erased (Rev. iii. 5). Thus the names of the good are often represented as registered in heaven (Luke x. 20). But this by no means implies a certainty of salvation (nor, as Doddridge remarks, does it appear that Paul in this passage had any particular revelation), but only that at that time the persons were on the list, from which (as in Rev. iii. 5) the names of unworthy members might be erased. This explanation is sufficient and satisfactory for the other important passage in Rev. iii. 5, where the glorified Christ promises to 'him that overcometh,' that he will not blot his name out of the book of life. Here, however, the illustration has been sought rather in military than in civil life, and the passage has been supposed to contain an allusion to the custom according to which the names of those who were cashiered for misconduct were erased from the muster-roll.

When God threatened to destroy the Israelites altogether, and make of Moses a great nation—the legislator implored forgiveness for them, and added—'if not, blot me, I pray thee, out of thy book which thou hast written' (Exod. xxxii. 32). By this he meant nothing so foolish or absurd as to offer to forfeit eternal life in the world to come—but only that he, and not they, should be cut off from the world, and brought to an untimely end. This has been regarded as an allusion to the records kept in the courts of justice, where the deeds of criminals are registered, and hence would signify no more than the purpose of God, with reference to future events; so that to be cut off by an untimely death is to be blotted out of this book.

BOOTH (כֶּהָ *succah*; pl. כִּבּוֹת *succoth*), a hut made of branches of trees, and thus distinguished from a tent properly so called. Such were the booths in which Jacob sojourned for a while on his return to the borders of Canaan, whence the place obtained the name of Succoth (Gen. xxxiii. 17); and such were the temporary green sheds in which the Israelites were directed to celebrate the Feast of Tabernacles (Lev. xxiii. 42, 43). [**TABERNACLES, FEAST OF.**]

BOOTHROYD, BENJAMIN, D.D., a laborious and learned minister of the Independent body, and an eminent Hebrew scholar, was born in 1768 of the humblest origin. Having come under religious convictions, he forthwith applied himself with heroic energy and perseverance to studies designed to fit for the christian ministry, and after the usual academic training, he was ordained to the ministry. His first settlement was at Pontefract, where he added to his income by pursuing the business of a bookseller and printer; and printed his two valuable editions of the Bible. The first was the *Biblia Hebraica, or the Hebrew Scriptures of the O. T., without points, after the text of Kennicott; with the chief various readings selected from his collation of the Hebrew MSS., from that of De Rossi, and from the ancient versions; accompanied with English notes, critical, philological, and explanatory, etc.*, Pontefract, 1810-1816, 2 vols. 4to. It was no ordinary merit for Dr. Boothroyd to have been at once the editor, printer, and annotator of this work. The text is well printed, and the notes, for the most part selected from the works of the best Biblical scholars to which he had access, are generally very judicious and appropriate. It had the merit, for a time, of being the most useful Hebrew Bible published for common use, and though not always correct, it was sufficiently so for general purposes. The other and English edition of the Bible published by Dr. Boothroyd, was entitled, *A New Family Bible, and improved version from corrected texts of the Originals; with notes, critical and explanatory*, Pontefract, 1818, 3 vols. 4to. This translation is excellent, and will be found an important help to the student in ascertaining the import of the Bible. The notes are judicious, useful, and practical. A second edition was published at Huddersfield, 1824. Also a condensed edition in one royal 8vo vol. In 1818, after 24 years at Pontefract, Dr. B. removed to Huddersfield to become minister of Highfield Chapel. Here he remained 18 years, until his death in 1836, aged 68.—W. J. C.

BOOTY. [AKROTHINION.]

BORGER, ELIAS ANNÆUS, D.D., professor of Belles Lettres, formerly of theology, at Leyden, was born at Joure in Friesland in 1785, and died 12th October 1820. He wrote *Interpretatio Ep. Pauli ad Galatas*, Leyd. 1807; *De constanti et æquabili Jesu Christi indole, doctrina ac docendi ratione, sive comment. de Evang. Joannis cum Matt. Marc. et Luc. evangeliiis comp.* P. I. Hag. 1816. These works are valuable; they are marked by great clearness and accuracy of statement; and the author usually establishes his conclusions satisfactorily. He wrote also a work of great ability and value, entitled *De Mysticismo*, Hag. 1820.—His early death is said to have been occasioned by grief on account of the loss successively of his two wives.—W. L. A.

BORITH (בִּרְיִית) occurs in two passages of Scripture, Jer. ii. 22, and Malachi iii. 2. From neither of these passages does it distinctly appear whether the substance referred to by the name of borith (A. V. 'sope'), was obtained from the mineral or from the vegetable kingdom. But it is evident that it was possessed of cleansing properties; and this is confirmed by the origin and

signification of the word, which is thus illustrated by Celsius: 'à verbo בָּרַר Barar, *purificavit*, quæ vox etiam apud Chaldaeos, Syros, Arabes in usu fuit, descendit nomen בָּר *Bor*, *puritas*' (*Hierobot.* i. p. 449). So Maimonides, on the Talmud, tract *Shemitah*, 'Species ablutionibus aptæ, uti sunt Borith et Ahal.'

The word *borith* is very similar to the *boruk* of the Arabs, written *baurakh* in the Latin translations of Serapion and Avicenna; and translated nitrum—that is, natron, or carbonate of soda. Boruk appears, however, to have been used in a generic rather than in a specific sense, as in the Persian works on *Materia Medica*, derived chiefly from the Arabic, which we have collated, we find that no less than six different kinds of boruk (Persian *booreli*) are enumerated; of which some are natural, as the Armenian, the African, etc.; others artificial, as that obtained from burning the wood of the poplar; also that employed in the preparation of glass. Of these it is evident that the two last are, chemically, nearly the same, being both carbonates of alkalis; the incineration of most plants, as well as of the poplar, yields the carbonate of potash (commonly called potash, or pearlash); while carbonate of soda, or barilla, is the alkali used in the preparation of glass. Previous to the composition of bodies having been definitely ascertained by correct chemical analysis, dissimilar substances were often grouped together under one general term; while others, although similar in composition, were separated on account of some unimportant character, as difference of colour or of origin, etc. It is unnecessary for our present purpose to ascertain the other substances included by the Arabs under the general term of *boruk*, and which may have been also included under the nitrum of the Greeks. It is evident that both the carbonate of soda and of potash were comprehended under one name by the former. It would be difficult, therefore, to distinguish the one from the other, unless some circumstances were added in addition to the mere name. Thus, in the above passage of Jeremiah we have *neter* (nitre) and *borith* (sope) indicated as being both employed for washing, or possessed of some cleansing properties; and yet, from occurring in the same passage, they must have differed in some respects. The term natron we know was, in later times, confined to the salt obtained chiefly from the natron-lakes of Egypt, and *neter* may also have been so in earlier times. Since, therefore, the natural carbonate of soda is mentioned in one part of the verse, it is very probable that the artificial carbonates may be alluded to in the other, as both were in early times employed by Asiatic nations for the purposes of washing. The carbonate of potash, obtained from the burning of most plants growing at a distance from the sea or a saline soil, might not have been distinguished from the carbonate of soda, produced from the ashes of plants growing on the shores of the sea or of salt-water lakes.

Hence it is probable that the ashes of plants, called boruk and boreh by Asiatic nations, may be alluded to under the name of borith, as there is no proof that soap is intended, though it may have been known to the same people at very early periods. Still less is it probable that borax is meant, as has been supposed by some authors, apparently from the mere similarity of name.

Supposing that the ashes of plants are intended by the word borith, the next point of inquiry is, whether it is to be restricted to those of any particular plants. The ashes of the poplar are mentioned by Arabian authors, and of the vine by Dioscorides; those of the plantain and of the *Butea frondosa* by Sanscrit authors: thus indicating that the plants which were most common, or which were used for fuel, or other purposes, in the different countries, had also their ashes, that is, impure carbonate of potash, employed for washing, etc. Usually the ashes only of plants growing on the sea-shore have been thought to be intended. All these, as before mentioned, would yield barilla, or carbonate of soda. Many of them have been burnt, for the soda they yield, on the coasts of India, of the Red Sea, and of the Mediterranean. They belong chiefly to the natural family of the Chenopodæ and to that of the Mesembryanthemums. In Arabic countries, the plant yielding soda is said to be called *ishnan*, and its Persian name is stated to be *ghasool*, both words signifying 'the washer' or 'washing-herb.' Rauwolf points out two plants in Syria and Palestine which yield alkaline salts. Hasselquist considered one of them to be a Mesembryanthemum. Forskal has enumerated several plants as being burned for the barilla or soda which they afford: as *Mesembryanthemum geniculatum* and *nodiflorum*, both of which are called *ghasool*. *Salsola kali*, and his *Suæda monoica*, called *asul*, are other plants, especially those last named, which yield sal-alkali. So on the coasts of the Indian Peninsula, *Salicornia Indica* and *Salsola nudiflora* yield barilla in great abundance and purity, as do *Salsola sativa*, *Kali*, *Soda*, and *Tragus*; and also *Salicornia annua*, on the coasts of Spain and of the South of France.—J. F. R.

BORROWING. [LOAN.]

BOS, LAMBERT, professor of Greek at Franeker, was born 23d November 1760, at Workum, and died 6th January 1717. Bos was a Greek scholar of the first rank, and in his numerous works has rendered most important service to ancient philology, both classical and sacred. His *Ellipses Græcæ*, Franek. 1702 (best edition, London, 1825), is a storehouse of sound learning and acute observation, of which much has a direct relation to the interpretation of Scripture. He has also collected much valuable material for the illustration of the N. T. in his *Exercitationes Philologicae, in quibus N. F. loca nonnulla e profanis maxime auctoribus Græcis illustrantur*, 1700; and his *Observationes Miscellanæ ad loca quadam tum N. T., tum exterorum scriptorum Græcorum*, Fran. 1707. One seldom consults Bos in vain on a philological peculiarity or difficulty. But his most enduring contribution to Biblical learning is his *Vetus Testamentum ex versione LXX. interpretum, secundum exemplar Vaticanum, Romæ editum, accuratissime denuo recognitum; una cum Scholiis ejusd. edit., variis MS. codd. veterumque, Exempl. lectionibus, necnon Fragmentis Verss. Aquila, Symmachi et Theodotionis*, Franek. 1709, 4to. This is a beautiful and correct edition. It does not, however, present the Roman text 'accuratissime;' the author follows rather the London Polyglott, as in all the places where this differs from the Roman edition Bos agrees with the former.—W. L. A.

BOSOM. It is usual with the western Asiatics to carry various sorts of things in the bosom of their dress, which forms a somewhat spacious depository, being wide above the girdle, which confines it so tightly around the waist as to prevent anything from slipping through. The things carried in the bosom are such as Europeans would, if in the East, carry in their pockets; and this mode of carrying valuable property may indicate the origin of the figurative phrase, *into the bosom*, without requiring us to suppose that everything described as being given *into the bosom* really was deposited there.

To *have one in one's bosom* implies kindness, secrecy, intimacy. Christ is in the *bosom of the Father*; that is, possesses the closest intimacy with, and most perfect knowledge of, the Father (John i. 18). The expression, *leaning on Jesus' bosom*, referred to St. John (John xiii. 23), is explained under the articles ACCUBATION, BANQUETS.

BOSOR (Βοσόρ). 1. A town mentioned among the 'cities strong and great' in the land of Galaad (Gilead), in which the Jews were shut up, and which were taken by Judas Maccabeus (1 Maccab. v. 26, 36). It may be Bezer, which the LXX. call Bosor, as does also the Onomasticon.—2. [BEOR.]

BOSORA. [BOZRAH.]

BOSES, the thickest and strongest parts, the prominent points of a buckler. [ARMS, ARMOUR.]

BOSTON, THOMAS, was born at Dunse, 17th March 1676, and died 20th May 1732, at Ettrick, where he was minister. He occupies an important place among Scottish divines; his writings on doctrinal and practical theology, which have been recently collected, in 12 vols., 8vo, London, 1852, have long been highly esteemed, especially his *Fourfold State*; and among pious families in the north his name is 'a household word.' He was one of the few in the Scottish church who have been distinguished as Hebrew scholars. He attached great importance to accents in Hebrew, and prepared a treatise on them, which he wrote first in English, and afterwards in Latin, which was published with the title *Tractatus Stigmologicus Ebraeo-Biblicus*, after his death at Amsterdam, in 1738, with a preface by the learned David Millius. Of this work the editor speaks in high terms, as 'most useful,' and containing a 'perspicuous and accurate treatment of the subject.' Boston left also in MS. a 'two-fold version of the original text of the first twenty-three chapters of Genesis; the one more literal, the other more smooth and free, but both with due regard to stigmologism.'—W. L. A.

BOTANY (BIBLICAL). The study of biblical botany is not an extensive one, and mainly consists in the *identification* of trees and plants mentioned in Scripture. The whole number of vegetable productions specifically alluded to in the Bible does not exceed 280. With botany as a science the Jews were wholly unacquainted, and the properties of plants were only studied by them superficially for medicinal purposes. Of natural philosophy they knew nothing, and even to natural history their writings contain but few allusions. We are vaguely told, as an illustration of the wisdom of Solomon, that 'he *spoke of trees* from the cedar tree that is in Lebanon, even unto the hyssop that

springeth out of the wall' (1 Kings iv. 33); but the example of the great king seems rather to have been admired than imitated. No Hebrew book on the subject of the vegetable world exists; and although it has been asserted that Solomon wrote about plants, it is clear, from the language of Josephus, that the Jews did not know of any such writing, for after enumerating Solomon's 1005 βιβλία on songs and music, and his 3000 βιβλοι of proverbs and images, Josephus merely adds, that he drew moral *instruction* from the phenomena of the animal and vegetable kingdoms (καθ' ἑκαστον εἶδος δένδρου παραβολὴν εἶπεν κ. τ. λ. Jos. *Antiq.* viii. 2. 5). It is exactly this metaphorical and illustrative use of the simplest facts of vegetable physiology which we find in the Bible. The want of scientific knowledge in no way precluded the Hebrews from an enthusiastic and almost passionate appreciation of the outward world; and although we do not belong to the number of those who consider that science deadens the sense of beauty, it is clear from history that it is possible for men, without any technical or systematical knowledge, to become proficient students in the school of nature. Many of the grandest psalms derive their beauty from the noble yet unscientific interpretation of every-day phenomena. As specimens of fine ethic illustration derived from trees and plants, we may refer to Job xxiv. 20; Ps. i. 3; cxiv. 12; Prov. xi. 30; Eccles. xi. 3; Is. lxx. 22; Matt. iii. 10; Luke xii. 27; Phil. i. 11; Eph. iii. 17, etc.

Flowers in the Bible are similarly treated. Very few species are mentioned; and although their beauty is once or twice alluded to in descriptive passages (sometimes under the general term 'grass,' Matt. vi. 30; Cant. ii. 12; v. 13), they are seldom introduced, except in the single pathetic analogy which they afford to the transitory life and glory of mankind (Job xiv. 2; Ps. ciii. 15; Is. xxviii. 1; xl. 6; Jam. i. 10; 1 Pet. i. 24). Gardens (גַּנִּים, גַּנוּז, פֶּרְדֵּס, παραδείσος), were in use among orientals from the earliest times (Gen. xiii. 10; Deut. xi. 12, etc.); but although they were planted with flowers and fragrant herbs (Cant. vi. 2; iv. 16), often chosen for their beauty and rarity (Is. xvii. 10), yet they appear to have been chiefly cultivated for useful and culinary purposes (Jer. xxix. 5; Cant. vi. 11; iv. 13; Deut. viii. 8, etc.)

But it must not be supposed that biblical botany is an easy as well as a limited study. 'The botanical artist,' says Sir Thos. Browne, in his *Miscellaneous Tracts*, 'meets everywhere (in the Bible) with vegetables, and from the fig-leaf in Genesis to the star wormwood in the Apocalypse, are variously interspersed expressions from plants, elegantly advantaging the significance of the text: whereof many being delivered in a language proper to Judea and neighbour countries, are imperfectly apprehended by the common reader, and now doubtfully made out even by the Jewish expositor. And even in those which are confessedly known, the elegance is often lost in the apprehension of the reader unacquainted with such vegetables, or but nakedly knowing their natures: whereof, holding a pertinent apprehension, you cannot pass over such expressions without some doubt or want of satisfaction in your judgment.' These remarks of the learned physician well express the nature of the research necessary to a knowledge of Scripture plants, and are the preface

to some ingenious disquisitions on many of the more obscure kinds (Sir T. Browne's *Works*, Bohn's ed., iii. 154). As an example of the extreme vagueness of nomenclature which makes it often impossible to identify with certainty a scripture tree or plant, we may take the words El, Elah, Elon, Ilan, Allah, Allon, about the rendering of which words the utmost doubt is entertained, as the different versions fluctuate unaccountably between ὄρος, βάλανος, τερέβινθος, πλάτανος, δένδρον, convallis, and quercus; while in the A. V. they are rendered sometimes 'oak' (Is. i. 30), sometimes 'teal tree' (Is. vi. 13), 'elms' (Hos. iv. 13), 'plain' (Gen. xii. 6, etc.), and 'trees' (Is. lxi. 3. See Stanley's *Sinai and Palestine*, p. 519, seq.); and, to add to our confusion, not only are these words apparently interchangeable, but even Eshel, 'a tamarisk,' stands in one place (1 Sam. xxxi. 13) for Elah, 'an oak' (1 Chron. x. 12). Hence there is nothing impossible, whatever improbability there may be in the identification, by some writers, of the Allon-Bachuth of Gen. xxxv. 8, with the palm-tree of Judg. iv. 3; xx. 33, and the tree (A. V. plain) mentioned in 1 Sam. x. 3. As another instance we may mention the word Armon (עֲרֹמוֹן) in the rendering of which name the versions waver inconsistently between πλάτανος, LXX. (Gen. xxx. 37), platanus, *Vulg.* chestnut-tree, A. V., while in Ezra xxxi. 8, the LXX. render it by πῖρος, and some modern writers have taken it for the maple or the beech.

We have now only to mention all the most important works on the botany of the Bible. One of the earliest is the *Arboretum Biblicum* of Joh. Henr. Ursinus (*Norib.* 1663), continued in 1665 under the title of *Phytologia Sacra et Hortus Aromaticus*, in which the author treated of all the odoriferous plants, etc., of Scripture (on which the fullest treatise is the *Myrothecium* of Scacchius). A still earlier work was that of Levinus Lecanius, in which he explained the various similes and parables drawn from plants (Frankfort, 1591). To these we may add, among the earliest books specially dealing with the subject, Sir T. Browne's tract already quoted, the *Historia Sacra Plantarum* of A. Cocquius, and the *Herbarium Spirituale* of W. Sarcerius (Frankf. 1573; see Fabricius *Bibl. Antiq.* p. 357).

The five most important works on Biblical botany are the *Hierobotanicon sive de plantis S.S. dissertationes breves* of Oliver Celsius, a theological professor at Upsala (1745); the *Hierophyticon* of Mth. Hiller, a professor at Tubingen (Utrecht, 1725); the *Historia Naturalis Ægypti* of Prosper Alpinus (Venice, 1592); the *Flora Ægypto-Arabica* of Peter Forskål (1775), edited by Mth. Vahl, *Symbol botan.* 1790; and Hasselquist's *Travels in the Holy Land* (Stockholm, 1757), translated from the Swedish into German by T. H. Gadebusch, 1762, and into French (Paris, 1769). The three latter works are especially valuable, because their authors lived and studied in the countries about which they wrote. Alpinus was a doctor and professor at Padua, but he lived for years in Egypt; Forskål was the coadjutor and fellow-traveller of Niebuhr, who edited his works; he died in 1763 at Jerim, in Arabia; Hasselquist travelled for scientific purposes, and died at Smyrna in 1752. A most valuable series of monographs was contributed to this cyclopædia by Dr. Royle, the author of *Himalayan Botany*, etc., who also had the advantage of studying eastern products in eastern countries.

Besides these treatises, we may mention Scheuchzer's *Physica Sacra*, Augsb. 1731; Rosenmüller's *Bibl. Alterthumsk.* Bd. iv. (*Bibl. Naturgeschichte*, translated in Clark's Theological Series, under the title of *Script. Botany and Mineralogy*); Dr. T. M. Harris's *Nat. Hist. of the Bible*, Boston, 1826; Prof. Paxton's *Illustr. of Scripture* (vol. ii.); Carpenter's *Script. Nat. History*, 1828; and Balfour's *Plants of the Bible*. Among special treatises on single plants are Biel's *Exercitatio de lignis ex Libano petitis* (Brunswick, 1740), and J. R. Forster's *De Byssio Antiquorum*.

Finally, long and valuable dissertations on separate trees, herbs, etc., are to be found in various books of travel and geography, as Reland's *Palestine*, Sir W. Ouseley's *Trav. in the East* (especially the chapter on *sacred trees*), Russel's *Nat. History of Aleppo*; Burckhardt's, Niebuhr's, and Wellsted's *Travels in Arabia*; Salt's *Voy. to Abyssinia*; Rae Wilson's *Travels in the Holy Land*, and many other volumes, which will be constantly referred to in articles upon separate subjects.—F. W. F.

BOTNIM (בֹּטְנִים) occurs only in Gen. xliii. 11,

where Jacob, wishing to conciliate the ruler of Egypt, desires his sons on their return to 'take of the best fruits in the land in their vessels, and carry down the man a present,' and along with other articles mentions 'nuts and almonds.' Here the word rendered nuts is *botnim*. Among the various translations of this term Celsius enumerates walnuts, hazel-nuts, pine-nuts, peaches, dates, the fruit of the terebinth-tree, and even almonds; but there is little doubt that *pistachio-nuts* is the true rendering. From the context it is evident that the articles intended for presents were the produce of Syria, or easily procurable there. Hence they were probably less common in Egypt, and therefore suitable for such a purpose.

The Hebrew word *botnim*, reduced from its plural form, is very similar to the Arabic بطم

batam, which we find in Arabian authors, as Rhases, Serapion, and Avicenna. It is sometimes written baton, boton, botin, and albotin. The name is applied specially to the terebinth-tree, or Pistacia terebinthus of botanists, the *τέρεβινθος* or *τερέβινθος* of the Greeks. This is the turpentine-yielding pistacia, a native of Syria and of the Greek Archipelago, which has already been described in the article ALAH. The tree, as there mentioned, is remarkable for yielding one of the finest kinds of turpentine, that usually called of Chio or of Cyprus, which, employed as a medicine in ancient times, still holds its place in the British pharmacopœias. From being produced only in a few places and from being highly valued, it is usually adulterated with the common kinds of turpentine. In many places, however, where the tree grows well, it does not yield turpentine, which may account for its not being noticed as a product of Palestine; otherwise we might have inferred that the turpentine of this species of pistacia formed one of the articles sent as a present into Egypt. This seems to have been the view of the translators of the Sept., who render botnim by *τερέβινθος*. The name batam is applied by the Arabs both to the turpentine and to the tree. It appears, however, to be sometimes used generically, as in some Arabic works it is applied to a tree of which the

kernels of the seeds are described as being of a green colour. This is the distinguishing characteristic of another species of pistacia, the *P. vera* of botanists, of which the fruit is well known to the Arabs by the name of fistuk, which seems to be derived from the Persian *pisteh*. This, no doubt, gave origin to the Greek *πιστάκια*, said by Dioscorides to be produced in Syria, and to be like pine nuts. Besides these edible kernels, the pistacia-tree is described in the Arabic works on Materia Medica as yielding another product somewhat similar to the turpentine of the battam, but which is called *'aluk-al-anbat*, a resin of the *anbat*, as if this were another name for the pistacia-tree. This brings it much nearer the botnism of Scripture. The *Botna* of the Talmud is considered by annotators to be the pistacia (Celsius, *Hierobot.* i. p. 26). Bochart for this and other reasons considered botnism to be the kernels of the pistacia-tree.

The pistachio-nut-tree is well known, extending as it does from Syria to Afghanistan. From the latter country the seeds are carried as an article of commerce to India, where they are eaten in their uncooked state, added to sweetmeats, or as a dessert fried with pepper and salt, being much relished by Europeans for the delicacy of their flavour. The pistacia-tree is most common in the northern, that is, the cooler parts of Syria, but it is also found wild in Palestine in some very remarkable positions, as Mount Tabor, and the summit of Mount Attarous (Nebo?) (*Physical Palestine*, p. 323). This tree is said to have been introduced from Syria into Italy by Lucius Vitellius in the reign of Tiberius. It delights in a dry soil, and rises to the height of 20, and sometimes 30 feet. As it belongs to the same genus as the terebinth-tree, so like it the male and female flowers grow on separate trees. It is therefore necessary for the fecundation of the seed that a male tree be planted among the female ones. It is probably owing to the flowers of the latter not being fecundated, that the trees occasionally bear oblong fruit-like but hollow bodies, which are sometimes described as galls, sometimes as nuts, of little value. The ripe seeds are inclosed in a woody but brittle whitish-coloured shell, and within it is the seed-covering, which is thin, membranous, and of a reddish colour. The kernel is throughout of a green colour, abounds in oil, and has a sweetish agreeable taste. Pistachio-nuts are much eaten by the natives of the countries where they are grown, and, as we have seen, they form articles of commerce from Afghanistan to India—a hot country like Egypt. They are also exported from Syria to Europe in considerable quantities. They might therefore have well formed a part of the present intended for Joseph, notwithstanding the high position which he occupied in Egypt.—J. F. R.

BOTTLE. Natural objects, it is obvious, would be the earliest things employed for holding and preserving liquids; and of natural objects those would be preferred which either presented themselves nearly or quite ready for use, or such as could speedily be wrought into the requisite shape. The skins of animals afford in themselves more conveniences for the purpose than any other natural product. When an animal had been slain, either for food or sacrifice, it was easy and natural to use the hide for enveloping the fat or other sub-

stances, and with very little trouble the parts of the skin might be sewed together so as to make it hold liquids. The first bottles, therefore, were probably made of the skins of animals. Accordingly, in the *Iliad* (iii. 247) the attendants are represented as bearing wine for use in a bottle made of goat's skin, *'Ασκῶ ἐν αἰγέλει*. In Herodotus also (ii. 121) a passage occurs by which it appears that it was customary among the ancient Egyptians to use bottles made of skins; and from the language employed by him it may be inferred that a bottle was formed by sewing up the skin and leaving the projection of the leg and foot to serve as a cock; hence it was termed *ποδεῶν*. This aperture was closed with a plug or a string. In some instances every part was sewed up except the neck; the neck of the animal thus became the neck of the bottle. This alleged use of skin-bottles by the Egyptians is confirmed by the monuments, on which such various forms as the following occur. Fig. 1 is curious as shewing the mode in which they were carried by a yoke: and as it balances a large bottle in a case, this skin may be presumed to have contained wine. Fig. 7 is such a skin of water as in the agricultural scenes is suspended from the bough of a tree, and from which the labourers occasionally drink. Figs. 2 and 3 represent two men with skins at their backs, belonging to a party of nomades entering Egypt.

144

The Greeks and Romans also were accustomed to use bottles made of skins, chiefly for wine. Some interesting examples of those in use among the Romans are represented at Herculaneum and Pompeii, and are copied in the annexed engraving (cut 145).

Skin-bottles doubtless existed among the Hebrews even in patriarchal times; but the first clear notice of them occurs Joshua ix. 4, where it is said that the Gibeonites, wishing to impose upon Joshua as if they had come from a long distance, took 'old sacks upon their asses, and wine-bottles *old and rent and bound up*.' So in the 13th verse of the same chapter: 'these bottles of wine which we filled were new; and behold, they be *rent*;' and these our garments and our shoes are become old by reason of the very long journey.' Age, then, had the effect of wearing and tearing the bottles in question, which must

consequently have been of skin. To the same effect is the passage in Job xxxii. 19, 'My belly is as wine which hath no vent; it is ready to burst like new bottles.' Our Saviour's language (Matt. ix. 17; Luke v. 37, 38; Mark ii. 22) is thus clearly explained: 'Men do not put new wine into old bottles; else the bottles break and the wine

145.

runneth out, and the bottles perish; 'New wine must be put into new bottles, and both are preserved. To the conception of an English reader who knows of no bottles but such as are made of clay or glass, the idea of bottles breaking through age presents an insuperable difficulty; but skins may become 'old, rent, and bound up;' they also prove, in time, hard and inelastic, and would in such a condition be very unfit to hold new wine, probably in a state of active fermentation. Even new skins might be unable to resist the internal pressure caused by fermentation. The passage just cited from Job presents no inconsistency, because there 'new' means not 'fresh,' but new to this use.

As the drinking of wine is illegal among the Moslems who are now in possession of Western Asia, little is seen of the ancient use of skin-bottles for wine, unless among the Christians of Georgia, Armenia, and Lebanon, where they are still thus employed. In Georgia the wine is stowed in large ox-skins, and is moved or kept at hand for use in smaller skins of goats or kids.

146.

But skins are still more extensively used throughout Western Asia for water. Their most usual forms are shewn in the above cut (146), which also displays the manner in which they are carried. The water-carriers bear water in such skins and in this manner.

It is an error to represent bottles as being

made exclusively of dressed or undressed skins among the ancient Hebrews. Among the Egyptians ornamental vases were of hard stone, alabaster, glass, ivory, bone, procelain, bronze, silver or gold; and also, for the use of the people generally, of glazed pottery or common earthenware. As

147.—1, 2. Gold. 3. Cut glass. 4. Earthenware. 5, 7. Porcelain. 6. Hard stone. 8. Gold, with plates and bands. 9. Stone. 10. Alabaster, with lid.

early as Thothmes III., assumed to be the Pharaoh of the Exodus, B. C. 1490, vases are known to have existed of a shape so elegant and of workmanship so superior, as to shew that the art was not, even then, in its infancy.

Many of the bronze vases found at Thebes and in other parts of Egypt are of a quality which cannot fail to excite admiration, and which proves the skill possessed by the Egyptians in the art of working and compounding metals. Their shapes are most various—some neat, some plain, some grotesque; some in form not unlike our cream-jugs, others as devoid of elegance as the wine-bottles of our cellars or the flower-pots of our conservatories. They had also bottles, small vases, and pots, used for holding ointment or for other purposes connected with the toilet, which were made of alabaster, glass, porcelain, and hard stone. The

148.—1, 3. Earthenware. 2, 5, 6, 7. Green glass. 4. Blue glass. 8, 11. Alabaster. 9, 10. Porcelain.

reader is here presented with a view of some of these vases and bottles, from actual specimens in the British Museum.

The subjoined representation of a case containing bottles, supported on a stand, is among the Egyptian antiquities in the Berlin Museum, and is supposed to have belonged to a medical man or to the toilet of a Theban lady (Wilkinson, ii. 217). It forms a suitable conclusion to this set of illustrations.

149.

The perishable nature of skin-bottles led, at an early period, to the employment of implements of a more durable kind; and it is to be presumed that the children of Israel would, during their sojourn in Egypt, learn, among other arts practised by their masters, that of working in pottery-ware. Thus, as early as the days of the Judges (iv. 19; v. 25), bottles or vases composed of some earthy material, and apparently of a superior make, were in use; for, what in the fourth chapter is termed 'a bottle,' is in the fifth designated 'a lordly dish.' Isaiah (xxx. 14) expressly mentions 'the bottle of the potters,' as the reading in the margin gives it, being a literal translation from the Hebrew, while the terms which the prophet employs shew that he could not have intended anything made of skin—'he shall break it as the breaking of the potter's vessel that is broken in pieces, so that there shall not be found in the bursting of it a sherd to take fire from the hearth, or to take water out of the pit.' In the nineteenth chap. ver. 1, Jeremiah is commanded, 'Go and get a potter's earthen bottle;' and (ver. 10) 'break the bottle;,' 'Even so, saith the Lord of Hosts (ver. 11), will I break this people and this city as one breaketh a potter's vessel, that cannot be made whole again' (see also Jer. xiii. 12-14). Metaphorically the word bottle is used, especially in poetry, for the clouds considered as pouring out and pouring down water (Job xxxviii. 37), 'Who can stay the bottles of heaven?' The cut already given in p. 284 affords an illustration of a passage in the Psalms (lvi. 8), 'Put thou my tears into thy bottle'—that is, 'treasure them up'—'have a regard to them as something precious.' It was, as appears from the cut at p. 284, customary to tie up in bags or small bottles, and secure with a seal, articles of value, such as precious stones, necklaces, and other ornaments.—J. R. B.

BOUNDARIES. [PALESTINE.]

BOW. [ARMS.] The bow is frequently men-

tioned symbolically in Scripture. In Ps. vii. 12 it implies victory, signifying judgments laid up in store against offenders. It is sometimes used to denote lying and falsehood (Ps. lxxiv. 4; cxx. 4; Jer. ix. 3), probably from the many circumstances which tend to render a bow inoperative, especially in unskilful hands. Hence also 'a deceitful bow' (Ps. lxxviii. 57; Hos. vii. 16); with which compare Virgil's 'Perfidus ensis frangitur' (Aen. xii. 731).

The bow also signifies any kind of arms. The bow and spear are the most frequently mentioned, because the ancients used these most (Ps. xlv. 6; xlv. 9; Zech. x. 4; Josh. xxiv. 12).

In Habak. iii. 9, 'thy bow was made quite naked,' means that it was drawn out of its case. The Orientals used to carry their bows in a case hung on their girdles.

In 2 Sam. i. 18 the A. V. has 'Also he (David) bade them teach the children of Judah the use of the bow.' 'Here,' says Professor Robinson (*Addit. to Calme.*), 'the words 'the use of' are not in the Hebrew, and convey a sense entirely false to the English reader. It should be 'teach them the bow,' i. e., *the song of THE BOW*, from the mention of this weapon in verse 22. This mode of selecting an inscription to a poem or work is common in the East; so in the Korán the second Sura is entitled *the cow*, from the incidental mention in it of the red heifer (comp. Num. xix. 2). In a similar manner, the names of the books of the Pentateuch in the Hebrew Bibles are merely the first word in each book.' So perhaps, *in the bush* (Mark xii. 26).

BOWELS are often put by the Hebrew writers for the internal parts generally, the inner man, and so also for *heart*, as we use that term. Hence the bowels are made the seat of tenderness, mercy, and compassion; and thus the Scriptural expressions of the bowels being moved, bowels of mercy, straitened in the bowels, etc. By a similar association of ideas, the bowels are also sometimes made the seat of wisdom and understanding (Job xxxviii. 36; Ps. li. 10; Isa. xvi. 11). [BELLY.]

BOWING. [ATTITUDES.]

BOWL. This is the rendering in the A. V. of six different Hebrew words. 1. כַּף, 1 Kings vii. 50, elsewhere rendered by *bason* or *cup* (see Exod. xii. 22; Jer. lii. 19; Zech. xii. 2). 2. כַּפֵּל (Judg. vi. 38, 'a (lordly) dish;' v. 25). 3. נֶגֶל (Eccl. xii. 6; Zech. iv. 2, 3). 4. בְּנֵי עֵץ (Exod. xxv. 31; elsewhere rendered *cup*, Gen. xlv. 2 ff, and *pot*, Jer. xxxv. 5). 5. מְנִיקִית, used only in the pl. מְנִיקִיּוֹת (Exod. xxv. 29; xxxvii. 16; Numb. iv. 7). 6. מְזֻרָק (Numb. iv. 14, in marg.; vii. 13; Amos vi. 6).

It is impossible to determine with any accuracy the difference between the vessels bearing these names. As the כַּף was used to hold the blood in which the branch of hyssop was to be dipped, we may conclude that it was a vessel somewhat of the bason form. The נֶגֶל, from the etymology (נָגַל, *to roll*), and from its being used as a reservoir for the oil which fed the lamp, we may conclude to have been of a goblet shape. The מְנִיקִיּוֹת, Sept. *κυδοθαι*, were sacrificial vessels, used

chiefly for libations. The ספֿל (Sept. *λεκάνη*, Vulg. *concha*), from its being formed from a root, signifying to lie low, and from its being used to designate a dish on which butter was presented, was probably simply a deep plate or shallow bason. The נִבְיִי (Sept. *κρατήρ*) was evidently a large vessel, either a goblet or flagon, which served as a reservoir for oil to the lamp, or from which wine was poured into smaller vessels for drinking. [BASON.]—W. L. A.

BOWYER, WILLIAM, a celebrated English printer, distinguished for his scholarship, was born 19th December 1699, in Whitefriars, London. Having completed his education at Cambridge, he entered the printing establishment of his father, where, in superintending in particular the literary and critical department of the business, he was enabled to take the fullest advantage of his accurate and extensive scholarship in correcting for the press, emendating, etc., the various important and learned works which passed through his hands. He at once won distinction for the Bowyer press, and greatly enhanced the value of many of the works which he published. The works in connection with which he is now best known are the *Origin of Printing*, and his *Critical Conjectures and Observations on the New Testament, collected from various authors, as well in regard to words as pointing, with the reason on which both are founded*. It is for the last of these works that he claims notice here. He prepared it at first in connection with an excellent edition of the Greek text, which he issued in 1763. The writers from whom the collection is principally made, besides Bowyer himself, are Bishop Barrington, Mr. Markland, Professor Schultz, Michaelis, Dr. Henry Owen, Dr. Woide, Dr. Gosset, and Mr. Weston. While the best that can be said of the conjectures is, that they are often ingenious, the alterations in pointing, not being altogether conjectural, may for the most part be safely relied on. The work received the highest commendations from the most eminent Greek scholars, and was translated into German by Dr. Schultz, professor of theology and Oriental languages at Leipzig. It was enlarged in 1773; published in 1782 in 4to, but the fourth and best edition appeared in 1812. Mr. Bowyer died 18th November 1777, in his 78th year. For fuller account see *Literary Anecdotes of the Eighteenth Century*, comprising memoirs of William Bowyer, printer, F.S.A., and many of his learned friends, by John Nichols, F.S.A., in 9 vols., 8vo.—W. J. C.

BOX-TREE. [TEASHUR.]

BOYD, ROBERT, of Trochrig, was born in Glasgow in 1578. He was educated in Edinburgh, where he studied theology under Rollock. He repaired to France for the prosecution of his studies, and after having acted as pastor of the church at Verteuil, he received an appointment in 1606 to a professorship in the University of Saumur. He afterwards became professor of divinity in the same college, and the fame of his ability and learning reaching his native country, he was offered by King James, and accepted, the principalship of the University of Glasgow. He resigned his office when he could not accede to the views of the government in favour of Episcopacy. He afterwards became for a brief period principal

of the University of Edinburgh, but this situation also, at the bidding of conscience, he was obliged to relinquish. He was appointed to Paisley, but the anxieties of a troubled time taking effect upon a weak constitution, he was seized with a complication of diseases, and after seeking in vain relief from medical skill in Edinburgh, he died in that city on January 5, 1627. The chief work for which he is celebrated as an author, is his *Commentary on the Epistle to the Ephesians*. It was published in 1652 at the expense of the Stationers' Society. The work narrowly escaped destruction; for a copy of it, sent in manuscript to Dr. Ruet, in order to be printed at Geneva, on the capture of the ship in which it was sent, fell into the hands of the Jesuits, who refused to give it up. The original, however, still existed, and the book, in a dense folio, issued from the London press in 1652. It is a specimen of laborious and valuable commentary. Besides an analysis of the passage, an exposition of the doctrine contained in it, and practical observations, it gives special treatises, such for instance as one on Predestination, discussing the more prominent doctrines to which the epistle refers. It is evangelical and instructive. Principal Baillie does not hesitate to rank it above the commentaries of Calvin, Zanchius, Rollock, and Bayne, on the same portion of Scripture. It will be found that he follows to a great extent in the wake of Zanchius. The work cannot be said to be very diffuse in style; but on the principle of crowding into it an expression of his views on every theological topic that came up in the course of his exposition, Boyd discusses at great length matters that had but slender connection with his duties as an exegete. In reference to his copiousness in the treatment of any subject, it was the witty remark of Du Plessis, 'necessarium ei esse jugerum terræ, in quo se comode verteret!'—W. H. G.

BOZEZ (בֹּזֵז) one of two sharp rocks (Heb. *tooth of a rock* = sharp crag, comp. Fr. *Aiguille*), between which Jonathan sought to pass into the garrison of the Philistines (1 Sam. xiv. 4). Genesis gives *shining* as the meaning of the word; Fürst, *height*.—W. L. A.

BOZKATH or BOSCATH (בִּצְתָה; Sept. *Βασθηθ*; Al. *Μασχάθ*, *Βασουρθ*), a place in the plain of Judah (Josh. xv. 39); the residence of Adaiah, the father of Jedidah, the mother of king Josiah (2 Kings xxii. 1).—W. L. A.

BOZRAH (בִּצְרָה, 'An enclosure' or 'fortification'; Sept. *Βοσροβα*, and *Βοσροβ*). There are two cities of this name mentioned in the Bible.

1. A chief town of Edom, and one of its principal strongholds (Gen. xxxvi. 33; Is. lxiii. 1). Though referred to in various parts of Scripture, no indication is given of its geographical position. Eusebius merely tells us that it lay in the mountains of Idumæa (*Onomast. s. v. Bosor*).

About twenty-five miles south by east of the Dead Sea, in the district of Jebâl, the ancient Gebal, is the village of *Buseirih*, 'little Busrah.' It contains about fifty poor houses, clustered together on the side of a hill. On the top of the hill is a strong fortress, to which the inhabitants, who are greatly oppressed by the Bedawîn, retire when danger threatens (comp. Jer. xlix. 22). This appears to be the site of the Bozrah of Edom. It stands in

the centre of that country, and occupies a strong position among the mountains. This helps to illustrate that sublime passage in Isaiah (lxiii. 1) where the Lord is represented as returning in triumph from the destruction of His enemies in their very stronghold. To this day Buseirah is the centre of a pastoral region. The people are all shepherds, and their whole wealth consists in their flocks of sheep and goats. The allusion of Micah is thus very appropriate, 'I will put them together as the sheep of Bozrah;' and the language of Isaiah derives from this fact greater significance (Mic. ii. 12; Is. xxxiv. 6). See Burckhardt, *Trav. in Syr.* p. 407; Irby and Mangles, *Travels*, p. 443; Robinson, *B. R.* ii. 167.

2. A city of Moab, mentioned only by Jeremiah, and said to be in 'the land of Mishor'—that is, in the great plateau east of the Jordan valley, extending to the desert of Arabia (Jer. xlviii. 24). Some have held that this city is the same as the Bozrah of Edom (Gesenius, *Heb. Lex.*; Robinson, *B. R.* ii. 167); but that it was a distinct city can be easily

150. Bozrah.

proved. This Bozrah is in the *Mishor*, which is the distinctive name of the level plateau of Moab—a name which never was, nor could be given to any part of Edom (Deut. iii. 10; iv. 43; see Stanley, *S. and P.* p. 484). Again, prophetic curses are pronounced by Jeremiah upon both cities, and they cannot be applicable to the same place (comp. Jer. xlviii. 21–24, 47; and xlix. 13). Others affirm that Bozrah of Moab must have stood on the plateau east of the Dead Sea, and not far distant from Heshbon. For this there is no evidence. It is true some of the cities mentioned by Jeremiah were situated there; but then the passage indicates that the cities were scattered over a wide region—'Judgment is come . . . upon all the cities of the land of Moab, far and near' (xlviii. 24), and besides, when the towns of the *Mishor near the Dead Sea* are enumerated in other places, Bozrah is not included (Numb. xxxii. 37, 38; Josh. xiii. 15, *sq.*) Jeremiah puts three towns together—'Bethgamul, Kerioth, and *Bozrah*;' and on the north-eastern section of the *Mishor* we now find the ruins of three large cities, only a few miles distant from each other, whose names at once indicate their identity—Um el-Jemal, Kureiyeh, and *Busrah*. A careful consideration of the preceding statements leaves little room for doubt that *Busrah* is the Bozrah of Moab.

Busrah stands in the midst of a rich plain, on the southern boundary of Hauran. It was one of the largest and most splendid cities east of the Jordan. Its walls are four miles in circuit, and they do not include the suburbs. On its southern side is the citadel or castle, of great size and strength, still nearly perfect, though evidently of very ancient origin. This stronghold, which has long been celebrated in Syria, may account for the name Bozrah. Within the castle are the remains of a beautiful theatre, and in the town are the ruins or many temples, churches, and mosques; testifying to its wealth and prosperity under Pagan, Christian, and Mohammedan rule. Now the walls are shattered, the sanctuaries roofless, the houses nearly all prostrate, and the rich plain is desolate. The castle alone has defied time and neglect; and within its dreary walls about half a dozen poor families find an asylum from the wild Arabs of the desert.

Bostra, so called by the Greeks and Romans, was a strong city in the time of the Maccabees (1 Maccab. v. 26, *sq.*) On the conquest of this country by the Romans, Bostra was made the capital, and when Christianity was established in the empire it became the metropolis of a large ecclesiastical province (*Geog. Sac.* ed. Holst. 1704, p. 295). Under the Muslims it rapidly declined, and now it is a dreary ruin. The words of Jeremiah are fulfilled—'Judgment has come upon . . . Bozrah.' (A full description of the ruins, and a sketch of the history of Bozrah, are given in Porter's *Damascus*, ii. 142, *sq.* See also Burckhardt's *Trav. in Syr.* p. 226, *sq.*)—J. L. P.

BRACELET. This name, in strict propriety, is as applicable to circlets worn on the upper part of the arm as to those worn on the wrist; but as it has been found convenient to distinguish the former as **ARMLETS**, the term bracelet must be restricted to the latter. These are, and always have been, much in use among Eastern females. Many of them are of the same shape and patterns as the armlets, and are often of such considerable weight and bulk as to appear more like manacles than ornaments. Many are often worn one above another on the same arm, so as to occupy the greater part of the space between the wrist and the elbow. The materials vary according to the condition of the wearer, but it seems to be the rule that bracelets of the meanest materials are better than none. Among the higher classes they are of mother-of-pearl, of fine flexible gold, and of silver, the last being the most common. The poorer women use plated steel, horn, brass, copper, beads, and other materials of a cheap description. Some notion of the size and value of the bracelets used both now and in ancient times may be formed from the fact that those which were presented by Eliezer to Rebecca weighed ten shekels (Gen. xxiv. 22). The bracelets are sometimes flat, but more frequently round or semicircular, except at the point where they open to admit the hand, where they are flattened. They are frequently hollow, giving the show of bulk (which is much desired) without the inconvenience. Bracelets of gold twisted ropewise are those now most used in Western Asia; but we cannot determine to what extent this fashion may have existed in ancient times.—J. K.

BRAMBLE. [ATAD, CHOACH.]

BRANCH. As trees, in Scripture, denote great men and princes, so branches, boughs, sprouts, or plants denote their offspring. In conformity with this way of speaking, Christ, in respect of his human nature, is styled a rod from the stem of Jesse, and a branch out of his roots (Is. xi. 1), that is, a prince arising from the family of David. This symbol was also in use among the ancient poets (Sophocles, *Electra*, 422; Homer, *Il.* xxii. 87; *Od.* vi. 157; Pindar, *Olymp.* ii. 45 (80), etc. 'And so even in our English tongue (remarks Wemyss) the word *imp*, which is originally Saxon, and denotes a plant, is used to the same purpose, especially by Fox the martyrologist, who calls King Edward the Sixth an imp of great hope; and by Thomas Cromwell, Earl of Essex, in his dying speech, who has the same expression concerning the same prince.'

A branch is the symbol of kings descended from royal ancestors, as branches from the root (Ezek. xvii. 3, 10; Dan. xi. 7). In Ezek. xvii. 3, Jehoiachin is called the *highest branch* of the cedar, as being a king. As only a vigorous tree can send forth vigorous branches, a branch is used as a general symbol of prosperity (Job viii. 16).

From these explanations it is easy to see how a *branch* becomes the symbol of the Messiah (Is. xi. 1; iv. 2; Jer. xxiii. 5; Zech. iii. 8; vi. 12; and elsewhere).

Branch is also used as the symbol of idolatrous worship (Ezek. viii. 17), probably in allusion to the general custom of carrying branches as a sign of honour.

An *abominable branch* (Is. xiv. 19) means a tree on which a malefactor has been hanged.

BRASS. This word occurs in the Authorized Version. But brass is a factitious metal, not known to the early Hebrews, and wherever it occurs, *copper* is to be understood [NECHOSHETH]. That copper is meant is shewn by the text, 'Out of whose hills thou mayest dig brass' (Deut. viii. 9), it being of course impossible to dig a factitious metal, whether brass or bronze, out of mines. That compound of copper and zinc, which forms our brass, does not appear to have been known to the ancients; but we have every evidence that they knew and used *bronze* arms, implements of that metal having been found in great abundance among ancient tombs and ruins. This, instead of pure copper, is probably sometimes, in the later Scriptures, meant by the word נְחֹשֶׁת.

Brass (to retain the word) is in Scripture the symbol of insensibility, baseness, and presumption or obstinacy in sin (Is. xlvi. 4; Jer. vi. 28; Ezek. xxii. 18). Brass is also a symbol of strength (Ps. cvii. 16; Mic. iv. 13). So in Jer. i. 18 and xv. 20, brazen walls signify a strong and lasting adversary or opponent.

The description of the Macedonian empire as a *kingdom of brass* (Dan. ii. 39) will be better understood when we recollect that the arms of ancient times were mostly of bronze; hence the figure forcibly indicates the warlike character of that kingdom. The *mountains of brass*, in Zech. vi. 1, are understood by Vitringa to denote those firm and immutable decrees by which God governs the world, and it is difficult to affix any other meaning to the phrase (comp. Ps. xxxvi. 6).—J. K.

BRASS, SERPENT OF. On their journey from VOL. I.

Mount Hor to compass the land of Edom, the Israelites, disheartened by the fatigues and perils of their journey, murmured against God and Moses; and as a punishment for this they were visited by fiery flying serpents, probably the *dyfás*, whose bite occasions a burning pain, accompanied with a fiery eruption, distressing thirst, swelling of the body, ending in death (Nicander, *Theriac.* 334; Lucan, *Phars.* ix. 791; Solinus, xxvii. 32; Aelian. *Hist. An.* vi. 51). From the bite of these serpents many of the people died, and the rest, humbled and alarmed by the visitation, having besought Moses to intercede for them, the Lord directed him to make a serpent of brass, resembling doubtless those by which the people had been bitten, and to elevate it on a pole (D), a *signal post*, like a flagstaff with us, so that it might be easily visible to all. 'And it came to pass that if a serpent had bitten any man, when he beheld the serpent of brass he lived' (Num. xxi. 4-9). This serpent the Israelites carried with them to Canaan; and it was preserved till the time of King Hezekiah, who, finding that the people were regarding it with superstitious veneration, caused it to be destroyed. (2 Kings xviii. 4.)

The fact of the preservation of the brazen serpent till the time of Hezekiah, is, as Bunsen remarks, a sufficient guarantee not only for the historical truth of the narrative in Numbers, but also for the religious significance of the symbol; for had it been, as some have supposed, an image of Satan, it would not have been suffered by David or Solomon to remain (*Bibelwerk* v. 217). The fact also that it is referred to by our Lord, as in some sense resembling Him, not only vouches for the same things, but further imposes on us the duty of seeking in it a deeper significance than that which the mere narrative of Moses would lead us to attach to it. We may, therefore, dismiss at once all the attempts of rationalists to resolve the facts of the Mosaic narrative into mere ordinary occurrences; such as that of Bauer, who finds in the cure of the Israelites by looking at the brazen serpent only an instance of the curative power of the imagination (*Hebr. Gesch.* ii. 320), or that of Paulus, who thinks that the brazen serpent being at some distance from the camp, and the sight of it moving the Israelite who had been bitten to walk to it, the motion thereby produced tended to work off the effects of the poison, and so tended to a cure (*Comment.* iv. 1, 198 ff.); or that of Hofmann, who ingeniously suggests that the brazen serpent was the title of a rural hospital, where medicine and doctors were to be found by those who had faith to go for them. These, as Winer, from whom the above citations are taken, justly observes (*R. W. B.* in voc.) are simply ridiculous (*lächerlich*)*. We may pass over also the notion of Marsham, according to whom the serpent of brass was an implement of magic or incantation borrowed from the Egyptians, who he says 'imprimis *μαγεία τῶν ἐπιτοπίων* ob serpentum incantationem celebrantur' (*Canon Chron.* p. 148); for though this is not ridiculous, it is so purely gratuitous, and so opposed to the narrative of Moses,

* It is sad to see a man like Bunsen falling back on the old exploded rationalistic explanation of this occurrence. 'The fixing of the gaze on the image brought the mind to a state of repose, and so made the bodily cure possible' (*Bibelwerk*, v. 217), as if this were all!

as well as the religious principles and feelings which he sought to inculcate (comp. Lev. xix. 26), that it must be at once rejected (see Deyling, *Obs. Sac.* II. 210 ff.) The traditional belief of the ancient Jews is that the brazen serpent was the symbol of salvation, and that healing came to the sufferer who looked to it, as the result of his faith in God, who had appointed this method of cure. Thus the author of the Wisdom of Solomon says (xvi. 6, 7), that it was *σύνβολον σωτηρίας*, and adds, that 'he that turned himself towards it was not saved by the thing that he saw, but by Thee that art the Saviour of all (*διὰ σὲ τὸν πάντων σωτήρα*).' So also the Targumist Jonathan B. Uziel adds, as conditioning the cure, that 'the heart was intent on the name of the word of Jehovah (*לשׁוֹן מִיְמוּרָה דֵי*);' and the Jerusalem Targum expresses the same by saying that their faces were to be intent on their father who is in heaven (*גַּב אֲבוּי דְבִשְׁמַיָא*). The Arab. V. also makes *penitence* a condition of the cure. This view is substantially correct; it fully accords with the spirit of the Mosaic religion, and it alone enables us to receive the Mosaic narrative in its integrity by preserving the providential character of the cure. Without this all attempts to retain the historical character of the narrative are futile. It is vain to remind us that the serpent has been in many nations the symbol of life and healing; this is true, but granting that this was familiar to the Hebrews, it will not account for the fact that they actually were healed by looking at the serpent. This can be accepted as historical only by admitting the agency of God in the matter; and this is plainly what the narrator means to intimate. As Knobel remarks, 'the author has no thought of a magic operation of the image, but he has God's help in view, who willed to connect this result with the looking' (*Kurzgef. Exeget. Hdb.*, 13th lief. p. 111). But is this the *whole* of what the brazen serpent was designed to effect? Was it not also a designed type, a symbolical adumbration of Christ, the great deliverer and Saviour? That it was, is the conclusion to which many have come; moved thereto partly by our Lord's words before referred to, partly by the numerous analogies which may be traced between the transaction narrated by Moses and the salvation from the penal consequences of sin obtained by those who look in faith to Christ (Deyling, *Obs. Sac.* II. p. 210 ff.; Witsius, *Oeconom. Fœd.* Bk. iv., ch. 10, sec. 66-70; Vitringa, *Obs. Sac.*, Bk. ii., ch. 11; etc.) But our Lord's words do not necessarily intimate more than the existence of a resemblance of some sort between his being lifted up on the cross, and the lifting up of the serpent by Moses on the pole; and the mere fact that analogies may be traced between some person or thing or act belonging to the ancient dispensation, and something belonging to the Person or Work of Christ, has been adjudged by the best writers on Typology to afford no adequate ground for holding the former to be a type of the latter (Marsh on *Interpretation*, Lect. vi.) In the absence, therefore, of the requisite evidence of the brazen serpent having had any typical significance, it seems best to content ourselves with assigning to it a mere symbolical meaning as a sign of deliverance or healing. Our Lord, recognising this as its meaning, employs it as illustrative of that higher deliverance which was to be effected through his being raised upon the cross (Ad. Clarke, *Commentary*, in loc.; Chevallier on *the Historical Types*, Lect. xi.)—W. L. A.

BRAUN, JOHANN, Professor of Theology and Oriental languages at Gröningen, was born at Kaiserslautern in 1628, and died at Gröningen in 1709. His works are *Selecta Sacra*, Libb. 5, Amst. 1700, 4to; *De Vestitu Sacerdotum Hebr.*, ibid. 1701, 2 vols. 4to; *Commentarius in Ep. ad Hebræos*, ibid. 1705, 4to. All these works display extensive learning, especially in the department of biblical archæology and Jewish literature. The work on the Dress of the Hebrew priests may be regarded as a commentary on Exod. xxviii. and xxix. His commentary on the Hebrews is chiefly valuable for its archæological illustrations; it is in its theology vigorously anti-Socinian and anti-Remonstrant.—†

BREAD. The word 'bread' was of far more extensive meaning among the Hebrews than with us. There are passages in which it appears to be applied to all kinds of victuals (Luke xi. 3); but it more generally denotes all kinds of baked farinaceous articles of food. It is also used, however, in the more limited sense of bread made from wheat or barley, for rye is little cultivated in the East. Barley being used chiefly by the poor, and for feeding horses [SEORIM], *bread*, in the more limited sense, chiefly denotes the various kinds of cake-like bread prepared from *wheaten* flour.

Corn is ground daily in the East [MILL]. After the wheaten flour is taken from the hand-mill, it is made into a dough or paste in a small wooden trough. It is next leavened; after which it is made into thin cakes or flaps, round or oval, and then baked.

The *kneading-troughs*, in which the dough is prepared, have no resemblance to ours in size or shape. As one person does not bake bread for many families, as in our towns, and as one family does not bake bread sufficient for many days, as in our villages, but every family bakes for the day only the quantity of bread which it requires, only a comparatively small quantity of dough is prepared. This is done in small wooden bowls; and that those of the ancient Hebrews were of the same description as those now in use appears from their being able to carry them, together with the dough, wrapped up in their cloaks, upon their shoulders, without difficulty. The Bedouin Arabs, indeed, use for this purpose a leather which can be drawn up into a bag by a running cord along the border, and in which they prepare and often carry their dough. This might equally, and in some respects better answer the described conditions; but, being especially adapted to the use of a nomade and tent-dwelling people, it is more likely that the Israelites, who were not such at the time of the Exode, then used the wooden bowls for their 'kneading-troughs' (Exod. viii. 3; xii. 34; Deut. xxviii. 5, 7). It is clear, from the history of the departure from Egypt, that the flour had first been made into a dough by water only, in which state it had been kept some little time before it was leavened; for when the Israelites were unexpectedly (as to the moment) compelled in all haste to withdraw, it was found that, although the dough had been prepared in the kneading-trough, it was still unleavened (Exod. xii. 34; comp. Hos. vii. 4); and it was in commemoration of this circumstance that they and their descendants in all ages were enjoined to eat only unleavened bread at the feast of the Passover.

The dough thus prepared is not always baked at

home. In towns there are public ovens and bakers by trade; and although the general rule in large and respectable families is to bake the bread at home, much bread is bought of the bakers by unsettled individuals and poor persons; and many small households send their dough to be baked at the public oven, the baker receiving for his trouble a portion of the baked bread, which he adds to his day's stock of bread for sale. Such public ovens and bakers by trade must have existed anciently in Palestine, and in the East generally, as is evident from Hos. vii. 4 and Jer. xxxvii. 21. The latter text mentions the bakers' street (or rather bakers' place or market), and this would suggest that, as is the case at present, the bakers, as well as other trades, had a particular part of the bazaar or market entirely appropriated to their business, instead of being dispersed in different parts of the towns where they lived.

For their larger operations the bakers have ovens of brick, not altogether unlike our own; and in large houses there are similar ovens. The ovens used in domestic baking are, however, usually of a portable description, and are large vessels of stone, earthenware, or copper, inside of which, when properly heated, small loaves and cakes are baked, and on the outer surface of which thin flaps of bread, or else a large wafer-like biscuit may be prepared.

Another mode of baking bread is much used, especially in the villages. A pit is sunk in the middle of the floor of the principal room, about four or five feet deep by three in diameter, well lined with compost or cement. When sufficiently heated by a fire kindled at the bottom, the bread is made by the thin pancake-like flaps of dough being, by a peculiar knack of hand in the women, stuck against the oven, to which they adhere for a few moments, till they are sufficiently dressed. As this oven requires considerable fuel, it is seldom used except in those parts where that article is somewhat abundant, and where the winter cold is severe enough to render the warmth of the oven desirable, not only for baking bread, but for warming the apartment.

Another sort of oven, or rather mode of baking, is much in use among the pastoral tribes. A shallow hole, about six inches deep by three or four feet in diameter, is made in the ground; this is filled up with dry brushwood, upon which, when kindled, pebbles are thrown to concentrate and retain the heat. Meanwhile the dough is prepared; and when the oven is sufficiently heated, the ashes and pebbles are removed, and the spot well cleaned out. The dough is then deposited in the hollow, and is left there over night. The cakes thus baked are about two fingers thick, and are very palatable. There can be little doubt that this kind of oven and mode of baking bread were common among the Jews. Hence, Hezel very ingeniously, if not truly, conjectures (*Real-Lexicon*, art. 'Brod') comes the סלי חורי of Gen. xl. 16, which he renders, or rather paraphrases, 'baskets full of bread baked in holes,' not 'white baskets,' as in the Authorized Version, nor 'baskets full of holes,' as in our margin; nor 'white bread,' as in most of the continental versions, seeing that all bread is white in the East. As the process is slower and the bread more savoury than any other, this kind of bread might certainly be entitled to

the distinction implied in its being prepared for the table of the Egyptian king. That the name of the oven should pass to the bread baked in it, is not unusual in the East, just as the modern *tadsheen* (*pan*) gives its name (say *pan*-cake) to the cake baked by it. Hezel's conjecture that the oven in question is called a hole, חור in Hebrew, and that the bread baked by it is called therefrom *holebread*, is corroborated by, if not founded upon, a passage cited by Buxtorf in his *Lex. Talmud*: 'Faciunt חור foramen, vel cavitatem in terra, et calefaciunt eam igni coquantque in ea panem, qui vocatur חררה, à חרר cavitate illa in qua coctus est.'

There is a baking utensil called in Arabic *tajen*

(طاجين) which is the same word (τηγάρον) by

which the Septuagint renders the Hebrew מַחֲבַת *machabath*, in Lev. ii. 5. This leaves little doubt that the ancient Hebrews had this *tajen*. It is a sort of pan of earthenware or iron (usually the latter), flat, or slightly convex, which is put over a slow fire, and on which the thin flaps of dough are laid and baked with considerable expedition, although only one cake can be baked in this way at a time. This is not a household mode of preparing bread, but is one of the simple and primitive processes employed by the wandering and semi-wandering tribes, shepherds, husbandmen, and others, who have occasion to prepare a small quantity of daily bread in an easy off-hand manner. Bread is also baked in a manner which, although apparently very different, is but a modification of the principle of the *tajen*, and is used chiefly in the houses of the peasantry. There is a cavity in the fire-hearth, in which, when required for baking, a fire is kindled and burnt down to hot embers. A plate of iron, or sometimes copper, is placed over the hole, and on this the bread is baked.

Another mode of baking is in use chiefly among the pastoral tribes, and by travellers in the open country, but is not unknown in the villages. A smooth clear spot is chosen in the loose ground, a sandy soil—so common in the Eastern deserts and harder lands—being preferred. On this a fire is kindled, and when the ground is sufficiently heated the embers and ashes are raked aside, and the dough is laid on the heated spot, and then covered over with the glowing embers and ashes which had just been removed. The bread is several times turned, and in less than half an hour is sufficiently baked. Bread thus baked is called in Scripture עֲנַה *'uggah* (Gen. xviii. 6; 1 Kings xvii. 13; Ezek. iv. 12), and the indication, 1 Kings xix. 6, is very clear עֲנַה רִצְפִים *'uggath retzafim* (*coal-cakes*), i. e., cakes baked under the coals. The Septuagint expresses this word *'uggath* very fairly by ἑγκυφλας, panis subcinericius (Gen. xviii. 6; Exod. xii. 39). According to Bosqueius (*Lim.* p. 36), the name of *Hugath*, which he interprets *ash-cakes*, or *ash-bread*, was in his time still applied in Bulgaria to cakes prepared in this fashion; and as soon as a stranger arrived in the villages, the women baked such bread in all haste, in order to sell it to him. This conveys an interesting illustration of Gen. xviii. 6, where Sarah, on the arrival of three strangers, was required to bake 'quickly' such ash-bread—though not for sale, but for the hospitable entertainment of the unknown travellers. The bread thus prepared is good and palatable, although the outer rind, or crust, is apt to smell and taste of the smoke

and ashes. The necessity of turning those cakes gives a satisfactory explanation of Hos. vii. 8, where Ephraim is compared to a cake not turned, *i. e.*, only baked on one side, while the other is raw and adhesive.

The second chapter of Leviticus gives a sort of list of the different kinds of bread and cakes in use among the ancient Israelites. This is done incidentally for the purpose of distinguishing the kinds which were and which were not suitable for offerings. Of such as were fit for offerings we find—

I. *Bread baked in ovens* (Lev. ii. 4); but this is limited to two sorts, which appear to be, 1st., the bread baked inside the vessels of stone, metal or earthenware, as already mentioned. In this case the oven is half filled with small smooth pebbles, upon which, when heated and the fuel withdrawn, the dough is laid. Bread prepared in this mode is necessarily full of indentations or holes, from the pebbles on which it is baked; 2d, the bread prepared by dropping with the hollow of the hand a thin layer of the almost liquid dough upon the outside of the same oven, and which, being baked dry the moment it touches the heated surface, forms a thin wafer-like bread or biscuit. The first of these Mose appears to distinguish by the characteristic epithet of *הלות*, *perforated*, or *full of holes*; and the other by the name of *רקים*, *thin cakes*, being, if correctly identified, by much the thinnest of any bread used in the East. A cake of the former was offered as the first of the dough (Lev. viii. 26), and is mentioned in 2 Sam. vi. 19, with the addition of 'bread,'—*perforated bread* (*הלות להם*). Both sorts, when used for offerings, were to be unleavened (perhaps to secure their being prepared for the special purpose); and the first sort, namely, that which appears to have been baked inside the oven, was to be *mixed up* with oil, while the other (that baked outside the oven), which from its thinness could not possibly be thus treated, was to be only smeared with oil. The fresh olive oil, which was to be used for this purpose, imparts to the bread something of the flavour of butter, which last is usually of very indifferent quality in Eastern countries.

II. *Bread baked in a pan*—1st, That which, as before described, is baked in, or rather on, the *tajen*. This also as an offering was to be unleavened and mixed with oil. 2d, This, according to Lev. ii. 6, could be broken into pieces, and oil poured over it, forming a distinct kind of bread and offering. And in fact the thin biscuits baked on the *tajen*, as well as the other kinds of bread, thus broken up and re-made into a kind of dough, form a kind of food or pastry in which the Orientals take much delight, and which makes a standing dish among the pastoral tribes. The ash-cake answering to the Hebrew *'usgah* is the most frequently employed for this purpose. When it is baked, it is broken up into crumbs, and re-kneaded with water, to which is added, in the course of the operation, butter, oil, vinegar, or honey. Having thus again reduced it to a tough dough, the mass is broken into pieces, which are baked in smaller cakes and eaten as a dainty. The preparation for the Mosaic offering was more simple; but it serves to indicate the existence of such preparations among the ancient Israelites.

III. *Bread baked upon the hearth*—that is to say,

baked upon the hearth-stone, or plate covering the fire-pit which has already been mentioned. This also was to be mixed with oil (Lev. ii. 7).

As these various kinds of baked breads were allowed as offerings, there is no question that they were the best modes of preparing bread known to the Hebrews in the time of Moses; and as all the ingredients were such as Palestine abundantly produced, they were such offerings as even the poorest might without much difficulty procure.

Besides these there are two other modes of preparing bread indicated in the Scriptures, which cannot with equal certainty be identified by reference to modern usages.

One of these is the *נקודים* *nikuddim* of 1 Kings xiv. 3, translated 'cracknels' in the Authorized Version, an almost obsolete word denoting a kind of crisp cake. The original would seem by its etymology (from *נקר*, speckled, spotted), to denote something spotted or sprinkled over, etc. Buxtorf (*Lex. Chald. et Talm.*) writes under this word: 'Orbiculi parvi panis instar dimidii ovi, *Teramoth*, c. 5;' and in another place (*Epit. rad. Hebr.* p. 554), 'Et bucellata, 1 Reg. xiv. 3, quæ biscocta vulgo vocant, sic dicta, quod in frusta exigua rotunda, quasi puncta conficerentur, aut quod singularem forma interpunctarentur.' It is indeed not improbable that they may have been a sort of biscuit or small and hard baked cakes, calculated to keep (for a journey or some other purpose), by reason of their excessive hardness (or perhaps being *twice baked*, as the word *biscuit* implies). Not only are such hard cakes or biscuits still used in the East, but they are, like all biscuits, *punctured* to render them more hard, and sometimes also they are sprinkled with seeds; either of which circumstances sufficiently meets the conditions suggested by the etymology of the Hebrew word. The existence of such biscuits is further implied in Josh. ix. 5, 12, where the Gibeonites describe their bread as having become as *hard as biscuit* (not 'mouldy,' as in the Authorized Version), by reason of the length of their journey.

The other was a kind of fancy bread, the making of which appears to have been a rare accomplishment, since Tamar was required to prepare it for Amnon in his pretended illness. (2 Sam. xiii. 6). As the name only indicates that it was some favourite kind of cake, of which there may have been different sorts, no conjecture with reference to it can be offered. See Hezel, *Real-Lexicon*, art. 'Brod;' Burckhardt, *Notes on the Bedouins*; and the various travellers in Palestine, etc., particularly Shaw, Niebuhr, Monconys, Russell, Lane (*Modern Egyptians*), Perkins, Olin, etc., compared with the present writer's personal observations.—J. K.

BREAD OF THE PRESENCE. [SHEW BREAD.]

BREASTPLATE, a piece of defensive armour. [ARMS; ARMOUR.]

BREASTPLATE OF THE HIGH-PRIEST, a splendid ornament covering the breast of the high-priest. It was composed of richly embroidered cloth, in which were set, in four rows, twelve precious stones, on each of which was engraven the name of one of the twelve tribes of Israel (Exod. xxviii. 15-29; xxxix. 8-21). [PRIESTS, DRESS OF.]

BREECHES. [PRIESTS, DRESS OF.]

BREITINGER, JOH. JAK., professor of Hebrew

and Greek at Zürich, was born there 1st March 1701, and died 15th December 1776. He is known to biblical students as the editor of a corrected reprint of Grabe's edition of the LXX. from the Alexandrian codex, with the various readings of the Vatican codex appended at the foot of the page, Tiguri, 1730-32, 4 vols. 4to. This edition is commended for the beauty of its typography, and in critical value it occupies a high place. Michaelis pronounces it the best edition of the LXX. published up to his time. Breitingger promised a fifth volume, with critical dissertations, and various readings from MSS. at Basle, Zürich, and Augsburg, but this never appeared. He published a monogram *De antiquissimo Turicensi Biblioth. Græco Psalmorum libro in membrana purpurea tit. aur. ac litt. arg. exarato, etc.* Turici, 1748.—†

BRENTANO, DOMINIC VON, D.D., a Roman Catholic divine, who died in 1797. He commenced a translation of the O. T. into German, with notes, of which he completed the first 12 vols. These were published after his death, with the title *Die Heilige Schriften des A. T.*, Frankf.-a.-M., 1797-1832. The work has been completed by Dereser and Scholz, the latter of whom has superintended a new edition of the earlier volumes. Dr. Pye Smith often refers to this translation in his *Scripture Testimony to the Messiah*. The notes of Dereser are especially valuable.—†

BRENZ (BRENTIUS), JOHANN, was born at Weil 24th June 1499, and died 11th September 1570, at Stuttgart. A disciple of Luther, yet without implicitly adopting all his opinions, Brenz was an actor in most of the religious movements which characterized his age and country. He rendered important service in the organization of the ecclesiastical and educational establishments of Württemberg. At the time of his death he was Provost of Stuttgart. Of all the Lutheran divines of his day, he was the best Hebrew scholar, and he devoted much attention and labour to the exposition of the O. T. His theological works fill 8 vols. fol. (Tüb. 1576-90); of which the first four contain his Commentaries on the Pentateuch and the other historical books, with the exception of Chronicles, on Psalms, Job, Ecclesiastes, Isaiah, Jeremiah, Hosea, Amos, Jonah, and Micah. These commentaries are chiefly dogmatic, but they contain also very much that is valuable exegetically.—W. L. A.

BRETHREN OF OUR LORD. [JESUS CHRIST.]

BRETSCHNEIDER, KARL GOTTLIEB, was born at Gersdorf, 11th Feb. 1776. Having finished his preparatory studies he became a privat-docent, first at Leipzig, and after that at Wittenberg, where he read lectures in the university on logic and metaphysics, and on the proof passages in the O. T. In 1806 he became pastor at Schneeberg, where he continued only two years, leaving it to become superintendent in Annaberg; in 1816 he was appointed general superintendent at Gotha, which situation he retained till his death. He died 22d Jan. 1848. Bretschneider's literary activity was very great, and his published works belong to almost every department of sacred science. To the biblical scholar he is chiefly known by his *Lexicon Manuale Gr. Lat. in N. T.*, 2 vols. 8vo, Lips. 1824, sec. ed. 1829, 3d 1840, 1 vol.; his *Lexici in interp. Gr.*

V. T. maxime script. apocryph. spicilegium, Lips. 1805; and his *Liber Jesu Sirac. Gr. ad fidem codd. et vers. emend. et perpetua annot. illustr.*, Regensburg, 1806. In 1820 he published *Probabilia de Evang. et Epp. Joannis indole et origine*; in which he endeavours to raise doubts as to the genuineness of these writings. This excited considerable sensation, and called forth a number of replies, which fully established the position he had sought to overturn, as he himself admits in the preface to the second edition of his *Handbuch der Dogmatik*, where he says that he threw out doubts as to their genuineness only for the sake of having the evidence of this more thoroughly established than it had been. It is not easy to define his position in relation to the different schools of theology among which his countrymen are distributed, as he sided wholly with no party. His orthodoxy, however, was of so cold and formal a type, and he admitted so many sceptical positions in relation to the sacred books, that he must be ranked as inclining rather to the Rationalist than to the Evangelical party.—W. L. A.

BRETT, THOMAS, LL.D., was born at Bettishanger, Kent, in 1667, and educated at Cambridge, being admitted to Queen's College in 1684, and to Corpus Christi in 1689. He was chosen lecturer in 1691; and appointed rector, first of Bettishanger, in 1703, and afterwards of Ructing, in 1705. In 1715 he resigned his livings, and entered into communion with the non-jurors, in connection with whom he died in 1743. His writings, chiefly controversial, are very numerous. He is noticed here as the author of *A Dissertation on the Ancient Versions of the Bible; shewing why our English translation differs so much from them, and the excellent use that may be made of them towards attaining the true reading of the Holy Scriptures in doubtful places*. This work, published from the author's MS. after his death in 1760, was a greatly enlarged edition of what he originally published under the title of *A Letter Shewing, etc.*, 8vo. 1743. The Dissertation has been republished by Bishop Watson in his Collection of Theological Tracts, vol. 3. In a brief notice prefixed, he recommends it as 'an excellent dissertation, which cannot fail of being very useful to such as have not leisure or opportunity to consult Dr. Hody's book, *De Bibliorum Textibus*.'—W. J. C.

BRICK. [The bricks mentioned in the Bible are of two sorts. 1. Brick formed of a whitish chalky clay, compacted with straw and dried in the sun (לֵבָנָה, from לָבַן to be white. Sept. λευκός.) It is this sort which is chiefly mentioned in the Scriptures; and the making of such formed the chief labour of the Israelites when bondsmen in Egypt (Exod. i. 13, 14). This last fact constitutes the principal subject of Scriptural interest connected with bricks; and leads us to regard with peculiar interest the mural paintings of that country, which have lately been brought to light, in which scenes of brick-making are depicted.

The use of crude brick, baked in the sun, was universal in Upper and Lower Egypt, both for public and private buildings; and the brick-field gave abundant occupation to numerous labourers throughout the country. These simple materials were found to be particularly suited to the climate, and the ease, rapidity, and cheapness with which they

were made, afforded additional recommendations. Inclosures of gardens or granaries, sacred circuits encompassing the courts of temples, walls of fortifications and towns, dwelling-houses and tombs, in short, all but the temples themselves were of

151. Egyptian Brickmaking.

crude brick; and so great was the demand, that the Egyptian government, observing the profit which would accrue from a monopoly of them, undertook to supply the public at a moderate price, thus preventing all unauthorized persons from engaging in the manufacture. And in order the more effectually to obtain this end, the seal of the king, or of some privileged person, was stamped upon the bricks at the time they were made. This fact, though not positively mentioned by any ancient author, is inferred from finding bricks so marked both in public and private buildings; some having the ovals of a king, and some the name and titles of a priest, or other influential person: and it is probable that those which bear no characters belonged to individuals who had obtained a licence or permission from the government, to fabricate them for their own consumption. The employment of numerous captives who worked as slaves, enabled the government to sell the bricks at a lower price than those who had recourse solely to free labour; so that, without the necessity of a prohibition, they speedily became an exclusive manufacture; and we find that, independent of native labourers, a great many foreigners were constantly engaged in the brick-fields at Thebes and other parts of Egypt. The Jews, of course, were not excluded from this drudgery; and, like the captives detained in the Thebaid, they were condemned to the same labour in Lower Egypt. They erected granaries, treasure-cities, and other public buildings, for the Egyptian monarch: the materials used in their construction were the work of their hands; and the constant employment of brick-makers may be accounted for by the extensive supply required and kept by the government for sale' (Wilkinson's *Ancient Egyptians*, ii. pp. 97, 98).

Captive foreigners being thus found engaged in brick-making, some have jumped to the conclusion that these captive foreigners were Jews, and that the scenes represented were those of their actual operations in Egypt. Sir J. G. Wilkinson satisfactorily disposes of this inference by the following remark: 'To meet with Hebrews in the sculptures cannot reasonably be expected, since the remains in that part of Egypt where they lived have not been preserved; but it is curious to discover other foreign captives occupied in the same manner, and overlooked by similar 'task-masters,' and perform-

ing the very same labours as the Israelites described in the Bible; and no one can look at the paintings of Thebes, representing brick-makers, without a feeling of the highest interest. . . . It is scarcely fair to argue that, because the Jews made bricks, and the persons here introduced are so engaged, they must necessarily be Jews; since the Egyptians and their captives are constantly required to perform the same task; and the great quantity made at all times may be justly inferred from the number of buildings which still remain, constructed of these materials: but it is worthy of remark that *more bricks bearing the name of Thothmes III. (who is supposed to have been the king at the time of the Exode) have been discovered than at any other period, owing to the many prisoners of Asiatic nations employed by him, independent of his Hebrew captives.*

The process of manufacture indicated by the representations in cut 151, does not materially differ from that which is still followed in the same country. The clay was brought in baskets from the Nile, thrown into a heap, thoroughly saturated with water, and worked up to a proper temper by the feet of the labourers. And here it is observable that the watering and tempering of the clay is performed entirely by the light-coloured labourers, who are the captives, the Egyptians being always painted red. This labour in such a climate must have been very fatiguing and unwholesome, and it consequently appears to have been shunned by the native Egyptians. There is an allusion to the severity of this labour in Nahum iii. 14, 15. The clay, when tempered, was cut by an instrument somewhat resembling the agricultural hoe, and moulded in an oblong trough; the bricks were then dried in the sun, and some, from their colour, appear to have been baked or burned, but no trace of this operation has yet been discovered in the monuments (Dr. W. C. Taylor's *Bible Illustrated*, p. 82). The writer just cited makes the following pertinent remarks on the order of the king that the Israelites should collect the straw with which to compact (not burn) their bricks: 'It is evident that Pharaoh did not require a physical impossibility, because the Egyptian reapers only cut away the tops of the corn [AGRICULTURE]. We must remember that the tyrannical Pharaoh issued his orders prohibiting the supply of straw about two months before the time of harvest. If, therefore, the straw had not been usually left standing in the fields, he would have shewn himself an idiot as well as a tyrant; but the narrative shews us that the Israelites found the stems of the last year's harvest standing in the fields; for by the word 'stubble' (Exod. v. 12) the historian clearly means the stalks that remained from the last year's harvest. Still the demand that they should complete their tale of bricks was one that could scarcely be fulfilled; and the conduct of Pharaoh on this occasion is a perfect specimen of Oriental despotism.' [Bricks of this sort were used principally for building purposes, but being of a flat shape, they were also used for receiving inscriptions, which were engraved on them (Ezek. iv. 1, where the A. V. has *tile*).

[2. The bricks used in the building of the Tower of Babel were burnt bricks, which were cemented by bitumen (Gen. xi. 3). These were, doubtless, the same as those of which Babylon was built, and which were made of the clay dug out of the trench, and burnt in kilns (Herod. I. 179). Of such bricks

abundant specimens still remain in the ruins of Nineveh and Babylon. They were sometimes covered with a thick enamel or glaze, on which figures in different colours were traced; of those which were used for ornament many specimens have also been found (Layard, *Nin. and Bab.* 507, etc.) Some seem also to have been coloured in the clay, without glaze. These bricks were flat and slightly oblong.]

BRIDE, BRIDEGROOM. [MARRIAGE.]

BRIDGE. It is somewhat remarkable that the word bridge does not occur in all Scripture, although there were without doubt bridges over the rivers of Palestine, especially in the country beyond the Jordan, in which the principal perennial streams are found. There is mention of a military bridge (2 Maccab. xii. 13) which Judas Maccabæus intended to make, in order to facilitate his operations against the town of Caspis, had he not been prevented. There are traces of ancient bridges across the Jordan, above and below the lake of Gennesareth, and also over the Arnon and other rivers which enter the Jordan from the east; and some of the winter torrents which traverse the westernmost plain (the plain of the coast) are crossed by bridges. But the oldest of these appear to be of Roman origin, and some of more recent date. It would be useless, in a subject so little biblical, to trace the contrivances which were probably resorted to in the ruder and more remote ages. Such contrivances, before the stone bridge is attained, are progressively the same in most countries, or varied only by local circumstances. The bridges which existed in the later ages of Scriptural history are probably not very different from those which we still find in and near Palestine; and under this view the following representations of existing bridges are introduced.

152. Jacob's Bridge.

The principal existing bridge in Palestine is that shewn in cut 152. It crosses the upper Jordan about two miles below the lake Houle. The river here flows rapidly through a narrow bed; and here from the most remote ages has lain the high road to Damascus from all parts of Palestine; which renders it likely that a bridge existed at this place in very ancient times, although, of course, not the one which is now standing. The bridge is called Jacob's Bridge (*fissr Yakoub*), from a tradition that it marks the spot where the patriarch Jacob crossed the river on his return from Padan-Aram. But it is also sometimes called *fissr Beni Yakoub*, the Bridge of Jacob's Sons, which may suggest that the name is rather derived from some Arab tribe

called the Beni Yakoub. The bridge is a very solid structure, well built, with a high curve in the middle like all the Syrian bridges; and is composed of three arches, in the usual style of these fabrics. Close by it, on the east, is a khan much frequented by travellers, built upon the remains of a fortress which was erected by the Crusaders to command the passage of the Jordan. A few soldiers are now stationed here to collect a toll upon all the laden beasts which cross the bridge.

153. Bridge at El Sak.

No. 153 is a bridge or arch thrown over a ravine at El Sak, the antiquity of which is evinced by the sculptured cliffs with which it is connected.

154. Bridge of St. Anthony.

Somewhat similar to this is the bridge next

represented (No. 154), which is in many respects a curious and remarkable structure. It leads to a convent (of St. Anthony) among the mountains; which explains the Christian symbols that have been placed upon it.

No. 155 is an ancient bridge, at Tchavdere, in Asia Minor. It is introduced as a fair specimen of

155. Bridge at Tchavdere.

many ancient bridges of one arch, by which winter torrents and small streams are crossed in Syria and Asia Minor.

Bridges, such as the following (No. 156), also entirely unfenced, frequently occur.

156. Unfenced Bridge.

No. 157 is a Persian bridge; but it is here introduced as a very fair specimen of the general

157. Persian Bridge.

character of the bridges which are met with in all parts of Western Asia.

BRIERS. [BARQANIM; CHEDEK; SARAB; SHAMIR; SILLON; SIRPAD.]

BROOK (נהל; Sept. χεμαρρος); the original word thus translated might better be rendered by *torrent*. It is applied, 1. to small streams arising from a subterraneous spring, and flowing through a deep valley, such as the Arnon, Jabboc,

Kidron, Sorek, etc.; and also the brook of the willows, mentioned in Is. xv. 7; 2. to winter-torrents, arising from rains, and which are soon dried up in the warm season (Job vi. 15, 19). Such is the noted river (brook) of Egypt, so often mentioned as at the southernmost border of Palestine (Num. xxxiv. 5; Josh. xv. 4, 47), and, in fact, such are most of the brooks and streams of Palestine, which are numerous in winter and early spring, but of which very few survive the beginning of the

summer. [3. The word נהל is also employed frequently to denote the valley through which a brook flows; comp. Gen. xxvi. 17; Num. xiii. 23, 24, etc. (A. V. *brook*, marg. *valley*), xxxii. 9; Deut. i. 24; Judg. xvi. 4; etc.]

BROTHER (אָהב; New Test. Ἀδελφός). This term is so variously and extensively applied in Scripture, that it becomes important carefully to distinguish the different acceptations in which it is used.

1. It denotes a brother in the natural sense, whether the offspring of the same father only (Matt. i. 2; Luke iii. 1, 19), or of the same father and mother (Luke vi. 14, etc.) 2. A near relative or kinsman by blood, cousin (Gen. xiii. 8; xiv. 16; Matt. xii. 46; John vii. 3; Acts i. 14; Gal. i. 19). 3. One who is connected with another by any tie of intimacy or fellowship: hence, 4. One born in the same country, descended from the same stock, a fellow-countryman (Matt. v. 47; Acts iii. 22; Heb. vii. 5; Exod. ii. 11; iv. 18). 5. One of the same sort or character (Job xxx. 29; Prov. xviii. 9; Matt. xxiii. 8). 6. Disciples, followers, etc. (Matt. xxv. 40; Heb. ii. 11, 12). 7. One of the same faith (Amos i. 9; Acts ix. 30; xi. 29; 1 Cor. v. 11); from which and other texts it appears that the first converts to the faith of Jesus were known to each other by the title of Brethren, till the name of Christians was given to them at Antioch (Acts xi. 26). 8. An associate, colleague in office or dignity, etc. (Ezra iii. 2; 1 Cor. i. 1; 2 Cor. i. 1; etc.)—9. One of the same nature, a fellow-man (Gen. ix. 5; xix. 7; Matt. v. 22, 23, 24; vii. 5; Heb. ii. 17; viii. 11). 10. One beloved, *i. e.*, as a brother, in a direct address (2 Sam. i. 26; Acts vi. 3; 1 Thess. v. 1).—J. K.

BROUGHTON, HUGH, an eminent Hebrew and rabbinical scholar, was born in 1549 at Oldbury in Shropshire, and died near London in 1612. His life was spent amidst difficulties and vexations occasioned chiefly by his own inordinate vanity and his quarrelsomeness; but his great scholarship procured for him the friendship of some of the most learned men of his day, both at home and abroad. Among the rest was Dr. Lightfoot, who edited Broughton's writings after his death, under the title, 'The works of the Great Albanian Divine, renowned in many nations for rare skill in Salem's and Athens' tongues, and familiar acquaintance with all rabbinical learning, Mr. Hugh Broughton, fol. 1662.' Some of these writings are in Hebrew, and they all indicate familiarity with Jewish learning. The language is, however, 'curt, harsh, and obscure,' as his editor admits, and his works, it must be confessed, are now, as Orme says, 'more an object of curiosity than of respect.' (*Bib. Bib.*)—†.

BROWN, JOHN. In regard to this expositor of

Scripture, no vestige of information can be discovered either as to his parentage or place of birth. The first allusion to him appears in certain letters of Samuel Rutherford, dated 1637. When he came to be settled as minister of the parish of Wamphray, in Annandale, he justified, by his exemplary diligence and devotedness, the high expectations which Rutherford had formed of his future usefulness in the Church. After the Restoration, he became obnoxious to the dominant party, and was thrown into prison in Edinburgh, where he was denied even the necessaries of life. On the 23d December 1662, he was liberated on the condition that he would go at once into exile. He retired to Holland, where he became minister of the Scotch church at Rotterdam. In 1676, at the instigation of Archbishop Sharp, the English Government insisted on the expulsion of Mr. Brown, together with some other exiles from the provinces, but the Dutch States honourably refused compliance with this demand. He assisted at the ordination of the celebrated Richard Cameron. His death seems to have taken place about the close of 1679. To judge from his works, and from the testimonies borne to his character by competent authorities—such as the learned Leydecker, Spanheim, and the historian Wodrow—he must have been a man of singular piety—an earnest and faithful preacher, sound and evangelical in his views, and remarkable for his acuteness and discrimination. His works, if collected, would fill nearly ten octavo volumes. They are mostly of a polemical and dogmatical character, some bearing his name, while others are anonymous. His chief expository work is on the Epistle to the Romans. It is constructed on the principle of giving first a brief view of the connection and scope of the text. A series of observations follows, deduced from the passage when so expounded. The commentary is still of some value. It is rather diffuse in language, and supplies no help in the elucidation of critical difficulties. But giving in a short compass the scope of the passage, and judicious inferences from it, this commentary of Brown will be found in some respects more useful, especially for the devotional studies of Scripture, than many productions of greater length and more elaborate character.—W. H. G.

BROWN, JOHN, Minister of the Gospel at Haddington, and for many years professor of divinity to the Associate Burgher Synod, was born at Carpow, Perthshire, in 1722, and died 19th June 1787. Though to a great extent self-educated, and that in the face of great difficulties, he proved himself a scholar among scholars. As a minister and professor of divinity he stands high among the worthies of the religious body to which he belonged; and, as an author, his works have commanded wide circulation, and continue to the present day to be in constant demand and good reputation. They are numerous, and embrace several departments of religious knowledge. His works on the Bible are, *A Dictionary of the Bible*, 2 vols. 8vo, 1769; *The Self-Interpreting Bible*, 2 vols. 4to, 1778; *A brief Concordance to the Holy Scriptures*, 1783; *Sacred Typology; or a brief view of the figures and explication of the metaphors contained in Scripture*, 1768; *An Evangelical and Practical view of the Types and Figures of the Old Testament*

Dispensation, 1781; *The Harmony of Scripture Prophecies, and History of their Fulfilment*, 1784. The chief value of these works now lies in their popular character. The Bible Dictionary is very much an abridgment of Calmet; and the Self-Interpreting Bible interprets chiefly by copious marginal references, as the notes are almost wholly practical and reflective.—†

BROWN, JOHN, D.D., born at Burnhead, in the parish of Whitburn and county of Linlithgow, in 1784, was the grandson of John Brown of Haddington, through his eldest son of the same name, many years minister of the Burgher Secession Church in Whitburn. He received his education at the University of Edinburgh; after which he studied divinity under Dr. Lawson of Selkirk. He was settled in 1806 at Biggar, Lanarkshire, where he laid the foundation of his theological eminence, by profound and accurate exegetical studies, which were then much neglected. In 1822 he was translated to Edinburgh, and was appointed professor of exegetical theology to the United Secession Church in 1834. His expository works had been slowly matured during forty years, and repeatedly in substance delivered from the pulpit and the theological chair. They display a very wide range of hermeneutical reading, combined with strong native sagacity and independent judgment, and a clear and vigorous style. Some of them are more practical, others more didactic and argumentative, but all bear the stamp of solid and thorough investigation. The most original and important are an *Exposition of the Epistle to the Galatians*, published in 1833, and an *Analytical Exposition of the Epistle to the Romans*, which appeared in 1857. The first of these works contains the learned apparatus necessary to scientific interpretation; the second is merely an outline of the course of thought,—Dr. Brown having found it impossible to satisfy his own idea of what was demanded by a fully equipped commentary on that great epistle, and having, in consequence, sacrificed most of his preparations. These two works take rank with the highest in recent expository literature, English or Continental; and for the union of grammatical, logical, and practical commentary stand almost alone. A somewhat lower place is occupied by his *Exposition of the Discourses and Sayings of our Lord*, published in 1850, which is especially valuable for its analysis of the valedictory discourse; and which was followed, in 1850, by his *Exposition of our Lord's Intercessory Prayer*. Of the same order is his *Resurrection of Life*, an exposition of 1 Corinthians xv., issued in 1851. More practical and hortatory, though constructed on the same rigid principle of exegetical analysis, are his *Expository Discourses on First Peter*, and on *Second Peter, chapter I.*, the former of which, given to the world in 1848, first disclosed the rich stores of his biblical knowledge. A volume entitled *Sufferings and Glories of the Messiah*, consisting of expositions of the text of Psalm xviii. and Isaiah liii., contains his views of Messianic prediction, and of the double sense of prophecy. In preparing these works, Dr. Brown consulted every available authority; and his learning, especially in Scottish, English, and Latin commentary, was in some departments almost exhaustive. His exposition of the Galatians contains a list of not less than one hundred and fourteen critical and hermeneutical treatises

employed in his preparations. His rigorous method as an exegete, coupled with his distinction as a preacher, his energy as a church leader, and his sanctity as a man, gave a great impulse to expository studies, not only in his own denomination, but in other churches, and re-acted upon the style of the pulpit, so as to lay the ground-work both of preaching and lecturing in a clearer understanding of the Word of God. Besides preparing a commentary on the Epistle to the Hebrews, left almost ready for the press, he issued at various times other more fugitive publications. He died at Arthur Lodge, Edinburgh, in 1858, leaving behind him the reputation of being in his own department the greatest biblical expositor in Scotland.—J. C.

BRUCCIOLI, ANTONIO, an Italian scholar, who flourished in the first half of the 16th century. He was a native of Florence, and having been brought into hostile relations with the Medicean family, and becoming suspected of inclining to the opinions of the reformers, he was exposed to much harassing persecution, which ended in his being banished from his native country. Retiring to Venice with his brothers, who were printers, he devoted himself to literary work, chiefly to translations from the Greek and Latin. He began his labours with the Sacred Scriptures, of which he issued the N. T. in 1530. This edition was full of mistakes, which were corrected by the author when he issued his *Biblia tradotta in lingua toscana*, fol., Ven. 1532. This was reprinted in 1538, and again in 1539. It appeared again, with extensive notes, Ven. 1542, 47, 3 vols. fol., and again without the notes in 1545. This translation professes to be 'de la Hebraica verita, e da Greco,' and this seems to be true, though Simon says Bruccioli was a poor Hebraist, and that his version of the O. T. is from the Latin translation of Sanctes Pagnini, whose rude and barbarous style he has imitated (*Hist. crit. V. T.*, lib. II., c. 22). It was placed in the Index of prohibited books among works of the first class (*Le Long Bib. Sac.*; Schelhorn, *Ergötlichkeiten* ii. 355; Negri, *Istor. degli Scritt. Fiorentini*, p. 561).—W. L. A.

BRYANT, JACOB, A.M., an English gentleman who devoted himself to letters. He was born at Plymouth 1715, educated at Eton and at King's College, Cambridge, and died in 1804. His first published writings, bearing, however, only indirectly on the literature of the Bible, are *Vindicia Flavianæ*, a tract of eighty-three pages, containing an able vindication of the testimony given by Josephus concerning our Saviour. Lond. 1777. *The sentiments of Philo-Judeus concerning the ΛΟΓΟΣ, or Word of God; together with large extracts from his writings, compared with the Scriptures, on many other particular and essential doctrines of the Christian religion*, 8vo. Camb., 1797. His principal Biblical works are, *A Treatise upon the Authenticity of the Scriptures, and the Truth of the Christian Religion*, 1792. The last edition, which was in 8vo, appeared in 1810. In this work Bryant has not only given a useful and original view of the evidences of Christianity, but has also, as the candid student will find, satisfactorily obviated most of the chief difficulties of the subject. In 1803 appeared, *Observations upon some passages in Scripture which the Enemies of Religion have thought most obnoxious, and attended with difficul-*

ties not to be surmounted, 4to. The passages chosen as the subject of his observations in this volume, are those containing the particulars of the history of Balaam; the foxes and firebrands, Judges xv. 4, 5; the passage in Joshua x. 5-40, concerning the sun's standing still; and last, the particulars of the history of Jonah. 'On all these topics, the author's profound acquaintance with the idolatries and mythology of the heathen, have supplied him with many curious and important illustrations. If he has not removed all the difficulties, he has at least shewn that they may be considerably reduced.' (Orme, *Biblioth. Bib.*) In 1794 appeared his *Observations upon the Plagues inflicted upon the Egyptians, in which is shewn the peculiarity of those Judgments, and their correspondence with the Rites and Idolatries of that people; to which is prefixed, a prefatory discourse concerning the Grecian colonies from Egypt*, 8vo. Last edition 8vo, 1810. The title is sufficiently descriptive of the design and contents of this work, in which, more than in any other of his writings, the author has employed to advantage his great learning and uncommon power and ingenuity of research. His excessive partiality, however, for etymological research, has in not a few instances carried him too far. At the same time, his honest and uniform good intention is manifest throughout; and the light which he has thrown on several of the singular, and in some respects obscure subjects of which it treats, is of great and permanent value. Bryant's only other work of importance, and in some respects his greatest work, though only indirectly bearing on the literature of the Bible, is entitled, '*A New System, or an Analysis of Ancient Mythology, wherein an attempt is made to divest tradition of fable, and to reduce the truth to its original purity*.' 3 vols. 4to, Lond. 1774-1776, and in 6 vols., 8vo, Lond. 1807. The amount of curious and learned discussion which this work contains, relating to the history and religions of all the ancient nations, is truly 'immense.' It has been truly characterised as a work of uncommon learning, abounding with great originality of conception, much perspicuous elucidation, and the most happy explanations on topics of the highest importance.' The first vol. of the third and last edition is prefaced with an interesting account of the author's life and writings.—W. J. C.

BUBASTIS. [PIBESETH.]

BUCER, properly BUTZER, MARTIN, was born at Schlettstadt in Alsace in 1491. Having embraced the opinions of the reformers, he was, after various turns of fortune, appointed, in 1524, pastor of one of the churches of Strasburg. This office he retained till 1549, when he was deposed in consequence of his refusal to accept the Augsburg Interim. In compliance with the invitation of Cranmer, he passed over into England, where he remained, labouring to further the cause of the Reformation, till his death, which took place 28th Feb. 1551. His pen was much occupied in controversy, and in theological discussion; but, like all the first reformers, he laboured to elucidate the meaning of Scripture by means of commentaries. Besides translating into Latin Luther's discourses on the Epistles of Peter, and into German Bugenhagen's Commentary on the Psalms, he wrote *Enarrationes Perpet. in Sacra IV. Evangg.*, 2 vols. fol., Argent. 1527, 1528, 1530, Bas. 1536, 1 vol. fol., Gen. 1553; *Tzephaniah quem Sophoniam*

velgo vocant, ad Ebraicam veritatem versus et comment. explanatus, Argent. 1528; *Psalmorum libri quinque ad heb. ver. versi et elucidati*, Argent. 1529, 1532, Bas. 1547, Oliva R. Stephani, 1554; *Metaphrasis et enarratio in Ep. ad Romanos*, published first at Strasburg in 1536, as vol. i. of a work on all Paul's Epistles; separately at Basle, 1562, fol.; *Prælectiones in Ep. ad Ephesios, habitæ Cantabrigiæ*, etc., Bas. 1562, fol. Bucher sometimes calls himself Felinus on the title-page of his books.—W. L. A.

BUCHER, SAM. FRIED., was born at Rengersdorf, 16th Sept. 1692, and died 12th May 1765, at Zittau, where he was rector of the Gymnasium. His works are *Antiquitates de velatis Heb. et Græc. feminis*, Wittenb., 1717; *Grammatica Heb.*, 1722; *Thesaurus Orientis*, Frank. 1725; *Antiquitates Biblicæ ex N. T. selectæ*, Witten. 1729. This last work is 'a collection of notes—some of which are sufficiently prolix—on the four [first three] gospels, elucidating them principally from rabbinical sources.'—(Horne.) Bucher wrote also treatises *De Synedrio Magno, De velato Heb. gynæceo*, and *De Unctione in Bethania*, which are inserted in Ugolini's *Thesaurus*, tom. 25, 29, 30.—†

BUGATI, GAETANO, D.D., Professor at the College, and Director of the Ambrosian Library at Milan, was born in that city, 24th Aug. 1745; and died 20th April 1816. He devoted himself to the examination of the rich collection of MSS. which that library contains. He published *Daniel, sec. edit. LXX. Inter pp. ex tetraplis desumptam. Ex. cod. Syro-Estrangelo Biblioth. Ambros. Syriacæ ædidi, Latine vertit, præf. notisque crit. illustravit*, 4to, Mediol. 1788. This work exhibits the text of Daniel from a MS. preserved in the Ambrosian library, and which contains the prophetic and poetical books in Syriac, translated from the hexaplar text of the LXX. In the prolegomena the editor gives an account of the MS., and of the version, the latter of which he attributes to Paul, Bishop of Tela in the beginning of the 7th century. Bugati edited also the text of the Psalms from the same MS. in 1820. The critical value of this translation for the hexaplar text is very considerable. [SYRIAC VERSIONS.]—W. L. A.

BUGENHAGEN, JOHANN, often called POMERANUS, from the name of his native district, was born at Wollen, 24th June 1485, and died at Wittenberg, 21st Mar. 1558. He studied at Greifswald, and became rector of the school of Treptow. Whilst there he became acquainted with the writings of Luther, and soon after he joined the ranks of the reformers. Having settled at Wittenberg as pastor and professor of theology there, he became one of the most zealous and able of Luther's coadjutors in the work of Reformation. He gave valuable aid especially in organizing the educational machinery of the Protestant Church in Germany, and such was the sense entertained of the value of his services that he was offered by Christian II. of Denmark the rich bishopric of Schleswig, which he declined. He aided Luther also in his translation of the Bible, and he gave a version of that work in Low German, for the benefit of those by whom that dialect was used. He wrote an *Explicatio Psalmorum*, of which Luther speaks in the strongest terms of commendation, declaring, 'esse hunc Pomeranum primum in orbe qui Psalterii interpres dici mereatur.' We have also

from him *Adnotationes in Epp. ad Gal., Ephes., Philip., Coloss., Thess., Tim., Tit., Philem., et Hebræos*, 8vo, Argent. 1524, Bas. 1527. A work also professing to be his was published in 1531, under the title 'Io. Pomerani, in D. Pauli ad Rom. Ep. Interpretatio doctissima multisque locis locupletata,' but this is his only in so far as it was taken down from his prelections, and was revised by him. In the prefatory note he complains of his lectures on Job having been given to the public in the same way, but without his consent. These notes are very brief, but they contain often felicitous explanations of the meaning of the Apostle, and are always clear and to the point.—W. L. A.

BUKKI (בִּקְיִי, *i. e.*, בִּקְיִי=בִּקְיִי, *mouth of God*.)

1. Son of Abishua (Sept. Βοκκί; Alex. Βοκαί), the fifth from Aaron in the line of the high priests through Phinehas (1 Chron. vi. 5, 51 [Heb. v. 31; vi. 36]; Ezr. vii. 4). In 1. Esdras viii. 2, he is called Boccas (Βοκκά), for which, in 2 Esdras i. 2, there is substituted Borith. Whether he ever filled the office of high priest is uncertain, as Josephus, our only authority in the matter, gives two directly conflicting statements on this point (*Antiq.* v. 11. 5; viii. 1, 3).

2. (Sept. Βακχίρ, Alex. Βοκκί), son of Jogli, of the tribe of Dan, one of the princes appointed to divide the land of Canaan among the tribes of Israel (Num. xxxiv. 22).

3. (Heb. בִּקְיִי, full form); Sept. Βοκκίς; Alex. Βοκκίς), a Levite of the sons of Heman, the leader of the sixth band of singers in the temple (1 Chron. xxv. 4, 15).—W. L. A.

BULL, BULLOCK. [BAQAR; EGHEL; PAR; SHOR.]

BULLINGER, HEINRICH, was born at Bremgarten in Switzerland, 18th July 1504, and died at Zürich, where he was pastor, 17th Sept. 1575. Having been gained over decisively to the reformed opinions by the teaching of Zwingli, he attached himself to the doctrines and party of that reformer, but with a leaning to more moderate and catholic views. On the death of Zwingli, Bullinger succeeded him at Zürich, and had no small share in settling the constitution and order of the Tigurine church. He had a leading share in the composition of the Helvetic Confession; and was the chief medium of the intercourse which subsisted between the Church of Zürich and the English reformers. His works consist principally of expository discourses and commentaries on Scripture. The principal of these are *Jeremias expositus in 170 concionibus. Acc. Thronorum explicatio*, Tigur. 1575; and a series of commentaries on the books of the N. T., published at Zürich between 1540 and 1549, in folio. His *Decades* were early translated into English (new ed., Camb. 1849, 4 vols. 8vo.); and all his writings were held in high repute in this country. His expositions of Scripture are marked by simplicity and clearness, and are distinguished by their direct practical character.—W. L. A.

BULRUSH. [AGMON; GOME.]

BUNSEN, CHRISTIAN CARL JOSIAS, BARON VON, was born 25th Aug. 1791, at Korbach. He was educated at Marburg and Göttingen, where he devoted his attention chiefly to biblical and linguistic studies. He spent some time also in Berlin

at the feet of Niebuhr, and at Paris under the tuition of Silvestre de Sacy. In 1818 he was appointed secretary to the Prussian embassy at Rome; in 1827 he became resident minister there; in 1839 he was sent as Prussian ambassador to Bern; shortly after he was sent on a special mission to England, having reference to the proposed bishopric of Jerusalem; and almost immediately after he was appointed Prussian ambassador to the Court of St. James's. Having resigned this post in 1854, he was ennobled, and retired from the diplomatic service to devote himself to the chosen studies of his earlier days. Among other things he set himself to accomplish what he had adopted as his proper life-work, a translation of the Bible into German, accompanied with notes and dissertations, the design of which should be to convey to the community the best aids which modern criticism and scholarship afford for the just understanding of the sacred volume. This work, which he intended to occupy 8 volumes large 8vo, he began to publish in 1858, and he had issued 7 parts before his death. These contain the Prolegomena, the translation of the entire Old Testament, except the Hagiographa, and the Bibel-Urkunden, or History of the Books, and restoration of the primitive Bible texts, as far as Kings. As a preparation for this work he issued his *Gott in der Geschichte*, 3 vols., Leipz. 1857-58, in which he develops his philosophy of history, and aims at a Theodiceë. It is not fair, perhaps, to offer any decided criticism on a work which is constructed on a strict and comprehensive plan, but which the author did not live to finish; nor is it easy to apprehend aright Bunsen's position in relation to the Bible. That he was a sincere, devout, and earnest believer in Christ no one can doubt, and in this respect he stands clearly distinct from the rationalist school; yet in his treatment of the supernatural facts of the Bible, he does not scruple to follow in the wake of the narrowest and most carping rationalism. He borrowed much of his philosophy from Spinoza and Hegel, and yet it would not be true to call him a Pantheist, for he distinguished clearly between the immanence of God in the world as an all pervading power, and that doctrine which denies the self-existing and independent being of the Godhead. We fear, after all the thought and labour he spent on the Bible, his *Bibel-werk* is destined rather to remain as a monument of his good intentions, than to be accepted as affording any great help to the better understanding of God's Word. The translation is sometimes felicitous, but not always correct; the notes are brief, and only occasionally furnish fresh instruction; and the Commentary is so full of doubtful and dangerous speculation that it is more likely to bewilder than to guide.—W. L. A.

BURDER, SAMUEL, D.D., late of Clare Hall, Cambridge, and lecturer of Christ's Church, Newgate Street, claims notice here for the following works bearing on the illustration of the Bible:—*Oriental Customs; or an Illustration of the Sacred Scriptures, by an explanatory application of the Customs and Manners of the Eastern Nations*, Lond., 2 vols. 8vo. A new and greatly improved edition was published in 1839. This work is by no means an original contribution to the subject on which it treats; but is chiefly a compilation from the work of the laborious and accurate Harmer. Much, however, that is valuable in Harmer has been left

out. The additional matter, which is considerable, will be found to have been gathered from the different works of voyages and travels which appeared subsequently to Harmer's publication. Burder has also published, *Oriental Literature applied to the Illustration of the Sacred Writings, especially with reference to Antiquities, Traditions, and Manners, collected from the most celebrated Writers and Travellers, both Ancient and Modern*, Lond. 1822, 2 vols. 8vo. This work, as the title indicates, is also a compilation, and as such has at least the merit of being faithfully executed. In most other respects, the work is similar to that noted above. Another work published by Burder, entitled, *Oriental Customs applied to the Illustration of the Sacred Scriptures*, sm. 8vo, 1831, consists of a selection of the more popular articles contained in the two works above described, viz., *Oriental Customs and Oriental Literature*. But Burder's most important work is *The Scripture Expositor, a new commentary, critical and practical, on the Holy Bible, in which difficult passages are explained, etc.*, 2 vols., 4to. This work is only slightly critical; the author's confessed and principal aim having rather been to illustrate the Bible by the application of Eastern customs and literature in general. He has in this way, and with very considerable success, made the fullest use of the volumes described above. Some regard has also been had to the doctrinal and devotional uses of Scripture, but this only in a limited degree. The ground-work of the 'Expositor' is the commentary of Dr. William Dodd. To the selections which have been made from it, Burder has added much original matter, with collections also from writers of eminence in every department of sacred literature.—W. J. C.

BURGESS, THOMAS, D.D., Bishop of Salisbury, was born 18th Nov. 1756, at Odiham in Hampshire, and died 19th Feb. 1837. He was a prelate not more distinguished for his scholarship than for the fidelity, piety, and gentleness with which he discharged the functions of his high office. His exertions to diffuse a taste for Hebrew learning, and his own Biblical labours, demand for him a place here. He published the following works in this department:—*Remarks on the Scriptural account of the dimensions of Solomon's temple*, 1790; *Initia Paulina, sive Introductio ad Lectiorem Pauli Epistolarum*, which contains the Ep. to the Philippians in Gr. and Eng., with notes from Küttner, Theophylact's Proœmia Epistolarum, his Interpretation of the Ep. to the Phil., and Rosenmüller's Scholia on that epistle, with Küttner's Observata de idiomatibus N. T. prefixed, and excerpts from Stephen's and Gataker's dissertations de stylo N. T. appended; *A Hebrew Primer*, 1807; *Hebrew Elements*, 1807, 4th edit. 1823; *Motives to the Study of Hebrew*, 1810; *Selecta Loca Prophetarum ad Messiam pertinent.*, Heb. et Gr., 1810; *Hebrew Etymology*, 1813; *The Greek original of the N. T. asserted, in answer to Paleoromaica*, 1823. Bishop Burgess was also a most determined defender of the authenticity of 1 John v. 7, on which he issued several pamphlets.—†

BURIAL AND TOMBS. The information in the Bible respecting the rites of burial and places of sepulture of the Hebrews is scanty but curious. In considering it we shall not attempt to systematize into a single account the various indications of the practices of 2000 years, for the compactness

thus gained might sacrifice accuracy, as we do not yet know that there were not great changes.

Of the patriarchal burial-rites and tombs little is said in Scripture. The subject first occurs where Sarah's death is related. We read, 'And Sarah died in Kirjath-arba; the same [is] Hebron in the land of Canaan: and Abraham came to mourn for Sarah, and to weep for her. And Abraham stood up from before his dead, and spake unto the sons of Heth, saying, I [am] a stranger and a sojourner with you: give me a possession of a burying-place with you, that I may bury my dead out of my sight.' The children of Heth replied, offering Abraham the choicest of their sepulchres. Then Abraham answered, 'If it be your mind that I should bury my dead out of my sight, hear me, and intreat for me to Ephron the son of Zohar, that he may give me the cave of Machpelah, which he hath, which [is] in the end of his field; for full money shall he give it me for a possession of a burying-place amongst you.' Then follows the truly Arab speech of Ephron the Hittite, who first gives Abraham the field and the cave that was in it, but when the patriarch offers him money, sets the value at four hundred shekels of silver, adding, 'what [is] that betwixt me and thee? bury therefore thy dead.' Accordingly, Abraham is related to have weighed to Ephron 'four hundred shekels of silver, current with the merchant.' It is added that the property, which is specified with unusual minuteness, was made sure to Abraham, and that he buried Sarah there (Gen. xxiii.)

Thus the first commercial matter recorded in the Bible is the purchase of a burying-place. The minute and particular manner in which the circumstances are narrated is noteworthy, and those who hold that the book of Genesis consists of various early inspired documents collected by Moses, may suppose that this detailed account is a kind of legal record of the purchase, an opinion which the concluding passage; specifying the contents of the field, and twice stating the ownership of Abraham, seems to confirm.

The object of the purchase was to secure a permanent right, and the cost at which this was done shews that Abraham attached to it great importance. Whatever was the conduct of Ephron, his compact seems to have been faithfully kept, certainly was so kept for near 200 years. To secure this burial-right may have been commanded, as a sign that Canaan was given to Abraham, who never had any other portion of its land. Remarkably enough, Jacob's 'parcel of a field,' the only other piece of the Canaanite territory held by Abraham's descendants before the conquest, became the burying-place of Joseph. We have no hint of the burial-rites; we only know that Abraham arose from mourning by his dead, and desired to bury her out of his sight. But in buying not alone a sepulchre, but the land where it was, he shewed his faith in the Divine promise; how he not only believed that he had chosen a burying-place in his own land, but how wholly he had left behind the land and the sepulchres of his fathers. And this was no small proof; for we see in the after-history how this first tomb was the gathering-place of the offspring of Abraham at each great burial there. Abraham, in choosing it, and making so careful a provision that it should be respected, must have been also influenced by that strong affection that is seen in the whole relation. But nothing besides faith and

natural affection can be traced, and, although the patriarch came from a land, where, probably among the so-called Scythic population, there was an extraordinary veneration for tombs, we should err in appreciation of his grand and simple character if we thought that anything influenced him but faith in God's promise and love for the dead. Respecting the form of the cave of Machpelah, there can be no doubt that it was a cave: the rendering 'vault' has, however, been here suggested for the term *מַעְרָה*. Elsewhere in the Bible it undoubtedly means a 'cave.*' We cannot conjecture whether it was natural or artificial. The LXX. and Vulg. more clearly define its form by translating Machpelah, reading *τὸ σπήλαιον τὸ διπλοῦν*, and *spelunca duplex*, but the meaning of that word is doubtful. The Mosque of Hebron, which, like that of Jerusalem, shares with those of Mekkeh and El-Medeeneh the distinctive appellation of Haram, though the latter two are especially the two Harams, encloses a cave which has not been doubted to be that of Machpelah, and it seems almost certain that it is the veritable cave. No European traveller has, however, been able to examine it. The masonry of the exterior of the mosque is partly ancient, resembling the bevelled stone-work below the so-called Mosque of Omar, which is probably of Julian's time. Of Abraham's burial nothing is told us but that 'his sons Isaac and Ishmael buried him in the cave of Machpelah' (Gen. xxv. 9). Ishmael's death is as briefly related, and the passage rendered in the A. V., 'he died in the presence of all his brethren,' should rather be translated, 'he encamped,' etc., and certainly does not admit of the former meaning. He does not seem to have been buried in the cave of Machpelah. The first indication of customs connected with burial, is where we read that Esau, deprived of Isaac's blessing, said, 'The days of mourning for my father are at hand; then will I slay my brother Jacob' (xxvii. 41). The next burial recorded is that of Deborah, Rebekah's nurse, who was buried beneath Bethel, under an oak, thence called Allon-bachuth, 'the oak of weeping' (xxxv. 8). Soon after, Rachel died near Ephrath, and was buried, like Deborah, where she died, though the cave of Machpelah was not far. 'And Jacob set a pillar upon her grave: that [is] the pillar of Rachel's grave unto this day' (ver. 16-20). The plain inference from the passage seems to be that the grave was dug in the earth, and a pillar or similar monument set up to mark its place. The building now pointed out as Rachel's Tomb does not fulfil these conditions, but it is possible that it covers her grave. Of the burial of Isaac, we are told that, 'his sons Esau and Jacob buried him' (ver. 29). This was at Hebron, where he evidently had died (ver. 27); for Jacob said, when charging his sons to bury him in the cave of Machpelah, 'There they buried Abraham and Sarah his wife; there they buried Isaac and Rebekah his wife; and there I buried Leah' (xlix. 31). It is remarkable that the less-loved wife should have been buried where Sarah and Rebekah lay, while Rachel, to whose death Jacob dying had recurred (xlvi. 7), was entombed in a solitary grave. Thus far we have the customs of the patriarchal times, and in them we see nothing but the simplest and most natural usages, a desire to secure a perma-

* In Arabic, a cave bears the same name, *مِعَارَة*.

ment place of burial, in one case protected by a pillar, and only, as far as we can judge, ordinary lamentation.

In Egypt we read of different customs, yet customs mainly necessitated by peculiar circumstances. When Jacob's death drew near he charged his sons to entomb him in the burying-place of his fathers. We read that 'he called his son Joseph, and said unto him, If now I have found grace in thy sight, put, I pray thee, thy hand under my thigh, and deal kindly and truly with me; bury me not, I pray thee, in Egypt: but I will lie with my fathers, and thou shalt carry me out of Egypt, and bury me in their burying-place. And he said, I will do as thou hast said. And he said, Swear unto me. And he sware unto him' (Gen. xlvii. 29-31). Afterwards, if the order of the narrative be chronological, he made the same charge to his sons generally, commanding them to bury him with his fathers, mentioning, in a passage already quoted, who were buried there, and specifying the purchase (Gen. xlix. 29-32). It was therefore necessary that the patriarch's body should be preserved. Accordingly we read, after the account of his death, 'And Joseph commanded his servants the physicians to embalm his father; and the physicians embalmed Israel. And forty days were fulfilled for him; for so are fulfilled the days of those which are embalmed; and the Egyptians mourned [or 'wept'] for him threescore and ten days' (l. 2, 3). It is here stated that Egyptian usages were adopted, but there is nothing to indicate that those usages were accompanied by any idolatrous rites. The narrative shews only that due honour was paid to Jacob. Herodotus speaks of seventy days as the period of embalming (ii. 86), and this may correspond to the period of mourning specified in the case of Jacob. Thirty days are mentioned as the period of mourning in the cases of Aaron and Moses, and this may explain the division of the seventy days, but a month may be intended. The duration of the times of embalming and mourning, may, however, have varied at different periods. After the days of mourning, Joseph went up with 'a very great company,' to bury his father. In this there is nothing save high respect for the dead. But it is remarkable that they stopped at the threshing-floor of Atad, beyond Jordan, where 'he made a mourning for his father seven days.' Here we may almost certainly see a Hebrew custom, for not only was the week of seven days probably of great antiquity with the Hebrews, but it is almost certain that it was not used by the Egyptians (Lepsius, *Chronologie der Aegypter*, i. p. 131-133), who divided their months of thirty days into three decades. The sons of Jacob then took his body and buried it in the cave of Machpelah (Gen. l. 2, 14). Joseph, like his father, would not be buried in Egypt. We read that, when his death drew nigh, 'Joseph took an oath of the children of Israel, saying, God will surely visit you, and ye shall carry up my bones from hence. So Joseph died [being] an hundred and ten years old: and they embalmed him, and he was put in a coffin in Egypt' (l. 25, 26). In this case there was the same motive for embalming. Moses kept this oath, and, at the Exodus, 'took the bones of Joseph with him' (Ex. xiii. 19); but they were not buried in the cave of Machpelah, but in the parcel of ground at Shechem, that Jacob bought of the sons of Hamor (Josh. xxiv. 32), and which became Joseph's inheritance (Gen. xlviii. 22 :

Josh. xxiv. 32; 1 Chron. v. 1; John iv. 5). It seems that the burying-place was the rallying-point of the patriarchal family. Long after the patriarchal age, Hebron was the chief town of Judah. There David was anointed king. So, too, at Shechem Joshua ruled, and when the house of Joseph set up a king in the time of the Judges, Shechem was the chosen capital.

Three burials are recorded or referred to in the narrative of the sojourn in the wilderness. Of Miriam it is related that she died at Kadesh, and was buried there (Num. xx. 1). Aaron died on Mount Hor, and was mourned for by all Israel thirty days (Num. xx. 28, 29): nothing is said of his actual burial, but his traditional tomb, outwardly, at least, modern, is shewn on the summit of the mountain supposed to be Mount Hor. Of the death of Moses, we read: 'So Moses, the servant of the Lord, died there in the land of Moab, according to the word of the Lord. And he buried him in a valley in the land of Moab, over against Beth-peor; but no man knoweth of his sepulchre unto this day.' The same mourning was made for him as for Aaron. 'And the children of Israel wept for Moses in the plains of Moab thirty days (Deut. xxxiv. 5, 6, 8). It is possible, from a comparison of these passages with the account of the embalming of Jacob, as already indicated, that the thirty days' mourning was adopted from Egypt. In these cases we do not, however, see any other trace of Egyptian usage. The narrative of the burial of Moses seems to shew that had the people known of his tomb they would have paid it undue reverence. After the entrance into Canaan we read how Joshua was buried 'in the border of his inheritance, in Timnath-serah, which [is] in Mount Ephraim, on the north side of the hill of Gaash,' and Eleazar, 'in a hill [that pertained to] Phinehas his son, which was given him in Mount Ephraim' (Josh. xxiv. 30, 33). In these two cases probably natural caves were used as sepulchres.

The absence in the Law of ordinances enjoining the mode of burial is very remarkable. We may infer that the Israelites had retained simple patriarchal customs which the Law did not annul, and in consequence, burial being connected with religion, that some earlier religious rites and points of belief may also have been preserved and not superseded. This second inference is of importance in reference to the absence of mention of the future state in the Law. It must be noticed that there are allusions to the customs of mourning. At the death of Nadab and Abihu, it is related that Moses gave this command to Aaron, Eleazar, and Ithamar: 'Uncover not your heads, neither rend your clothes' (Lev. x. 6). The priests were not allowed to defile themselves for any dead person, but parents, children, brothers, and unmarried sisters (xxi. 1, 4). They were also forbidden certain mourning practices, which appear to have been partial shaving of the head, clipping the beard in some similar manner, and cutting the flesh (xxi. 5), customs likewise forbidden to the people, as well as tattooing, apparently as a usage of the same kind (Lev. xix. 27, 28; Deut. xiv. 1, where the shaving of the head is shewn to have been 'between the eyes'). The high-priest was commanded not to 'uncover his head,' nor 'rend his clothes,' nor to defile himself by any dead body, even a parent's (Lev. xxi. 10, 11). Nazarites were to approach no

dead body (Num. vi. 6, 7). Contact with the dead caused seven days' uncleanness (vi. 9-11; xix. 11-22). The only direct command as to burial is that enjoining that a person hanged should be buried the same day (Deut. xxi. 23).

The book of Job, whatever its age, represents the life of the patriarchs, partly pointing to Egypt, partly to the desert, so that, in this respect, the idea that Moses wrote it is not contradicted by its contents. It contains a very noteworthy allusion to magnificent burying-places. Job, wishing he had never been born, or had died at his very birth, adds, 'for now should I have lain still and been quiet, I should have slept: then had I been at rest, with kings and counsellors of the earth, which built desolate places for themselves; or with princes that had gold, who filled their houses with silver' (iii. 13, 15). There may be here a reference to the pyramids, which are situate on a desert tract, of which the utter desolateness is a striking contrast to the bright verdure of the Nile valley, above which it rises. The latter portion of the passage may relate to the custom of burying treasure with the dead, which, according to tradition, obtained with the oldest kings of El-Yemen, as we know it to have been usual among the Scythians and other nations; or it may refer to the pyramid-builders, who had abundant wealth, and could only in that primitive state of society have hoarded a great part of their gold and silver.

In the history of the kings, the first notice of burial closes the reference to patriarchal funeral customs. When Samuel was dead, it is related that 'all the Israelites were gathered together, and lamented him, and buried him in his house at Ramah' (1 Sam. xxv. 1). Thus Samuel was honoured like Moses with a national mourning. The burial in the house occurs again in the case of Joab, who 'was buried in his own house in the wilderness' (1 Kings ii. 34), and the cases of Joshua and Eleazar may be compared, but they are not said to have been buried in their houses. When a house is spoken of, a garden in its court may be meant as the actual place, such as we may suppose was the garden in which Manasseh was buried. The modern Arabs occasionally bury in courts, and even rooms of houses; thus Mohammad's tomb was in a room of his house.

The account of the funeral rites of the first king of Israel suggests a curious inquiry. When the men of Jabesh-gilead had rescued the bodies of Saul and his three sons from the wall of Beth-shan, they brought them 'to Jabesh, and burnt them there. And they took their bones, and buried [them] under a tree at Jabesh, and fasted seven days' (1 Sam. xxxi. 11-13). David afterwards removed the bones of Saul and Jonathan, and apparently of the others also, and buried them 'in the sepulchre of Kish,' Saul's father (2 Sam. xxi. 12-14). Here we meet with the practice of burning the dead, which is very remarkable in the case of Shemites. Another mention of it occurs in Amos, where the prophet speaks of burning a body, and bringing the bones out of the house (vi. 7-10). The reading 'burning for' seems here inadmissible. This passage refers to the state of a besieged city, and burning may have been adopted in such a case without being a usual custom. These exceptional instances shew, however, that the Jews had no superstitious reverence for the bodies of the dead, as had the Egyptians.

Absalom was buried where he was slain. 'And they took Absalom, and cast him into a great pit in the wood, and laid a very great heap of stones upon him. . . . Now Absalom in his lifetime had taken and reared up for himself a pillar, which [is] in the king's dale; for he said, I have no son to keep my name in remembrance; and he called the pillar after his own name; and it is called unto this day Absalom's monument' (2 Sam. xviii. 17, 18). This marking the place of burial by raising a great heap of stones seems to have been usual when it was intended to shew abhorrence of the person buried; it was done at the burial of Achan (Josh. vii. 26), and that of the king of Ai, in the latter case by Joshua's command (viii. 29). The monument raised by Absalom has been connected with the structure called his tomb at Jerusalem, but, as we shall shew, the latter is of a far later period.

The Hebrew kings are not known to have had at first a fixed royal burying-place. Of David we only know that he 'was buried in the city of David' (1 Kings ii. 10), and that in St. Peter's time his sepulchre was known at Jerusalem (Acts ii. 29). Whether the Arab building now held to be the tomb of David have a right to its name, cannot be conjectured in the absence of any clear evidence. The identity of most of the traditional sites in Palestine is, however, extremely doubtful. There is some notice of the burial of every king of David's house to whom it was possible to pay this respect. Of several, it is only related either that they were buried in the city of David or were there buried with their fathers. The latter expression does not appear to mean that they were entombed in the royal sepulchres, as we read in Kings that Jehoram was buried with his fathers (2 Kings viii. 24), and, in a fuller account, that he was excluded from the kings' tombs, although buried in the city of David: so, too, of Uzziah, whose burial with his fathers, and entombment apart, occasioned by his leprosy, are mentioned in the same passage (2 Chron. xxvi. 23, comp. 2 Kings xv. 7). The meaning may therefore be, either that, as kings slept with their fathers, so they were buried with them, or else that they were buried in the region of the royal sepulchres. Those kings of whom it is only said that they were buried in the city of David, are Solomon (1 Kings xi. 43; 2 Chron. ix. 31); Abijah (1 Kings xv. 8; 2 Chron. xiv. 1); Amaziah, though killed at Lachish by conspirators (2 Kings xiv. 19, 20; comp. 2 Chron. xxv. 27, 28); and Jotham (2 Kings xv. 38, 2 Chron. xxvii. 9). Those said to have been buried with their fathers in the city of David are Rehoboam (1 Kings xiv. 31; comp. 2 Chron. xii. 16), and Jehoshaphat (1 Kings xxii. 50; 2 Chron. xxi. 1). Of the others whose burial is noticed, we have fuller particulars, and it is to be remarked that much importance is assigned from the time of Asa downwards to the honour paid to the king apparently by the people. Asa's tomb and burial are thus spoken of, 'And they buried him in his own sepulchres, which he had digged for himself in the city of David, and laid him in the bed [or, rather, 'coffin' מִשְׁכָּב, as in Is. lvii. 2, not 'bier,' as rendered by Gesenius], which he had filled with perfumes and spices compounded by the apothecary's art; and they made for him an exceeding great burning' (2 Chron. xvi. 14). Asa seems to have made some new excavated tomb, having several galleries or chambers, near the other royal sepulchre

or sepulchres, and to have been there buried with great state. Two passages may be here compared. Jeremiah prophesies to Zedekiah, 'with the burnings of thy fathers, the former kings which were before thee, so shall they burn for thee; and they shall lament thee, [saying,] Ah lord!' (xxxiv. 5); and St. John, describing the burying of our Saviour, whose body was wound in linen clothes with spices, adds, 'as the manner of the Jews is to bury' (xix. 39, 40), though this and the other Gospel-narratives do not indicate any burning of spices. It has been supposed that Asa's burial resembled that of the Roman emperors, that his body in a bier was placed upon a pyre and burnt with spices. The construction does not admit of this explanation, for it is said of Asa as well as of other kings, that burning was made, or to be made for them, not that they were burnt; the word rendered in the A. V. 'bed' cannot be translated 'bier,' but must signify 'coffin,' as is shewn by the passage in Isaiah before referred to; and among the notices of actual burial the practice of burning is not mentioned, save in the hurried burial of Saul, and the exceptional case of a besieged city, foretold by Amos. The 'bones' of the dead, as Elisha's (2 Kings xiii. 21), are spoken of, not the ashes; and the former term is even applied to the embalmed body of Joseph (Exod. xiii. 19, comp. Gen. i. 25, 26). The mode of burial seems therefore to have been essentially the same as that of the New Testament age. Jehoram, having reigned wickedly and unhappily, had no funeral honours, and was not buried in the royal tombs. 'And his people made no burning for him, like the burning of his fathers.' 'He reigned in Jerusalem eight years, and departed without being desired. Howbeit, they buried him in the city of David, but not in the sepulchres of the kings' (2 Chron. xxi. 19, 20). Joash, slain in a conspiracy, was buried 'in the city of David, but they buried him not in the sepulchres of the kings' (xxv. 25), evidently on account of his impiety; whereas, of the good priest Jehoiada, we read that 'they buried him in the city of David among the kings, because he had done good in Israel, both toward God and toward his house' (xxiv. 16). Ahaziah, though slain in the kingdom of Samaria, and perhaps first buried there (comp. 2 Chron. xxii. 9), was brought to Jerusalem and buried 'in his sepulchre with his fathers in the city of David' (2 Kings ix. 28, where a special tomb is indicated). Uzziah, as a leper, was excluded from the royal burying-places. 'So Uzziah slept with his fathers, and they buried him with his fathers, in the field of the burial which [belonged] to the kings; for they said, He [is] a leper' (2 Chron. xxvi. 23; comp. 2 Kings xv. 7). Ahaz, being a wicked king, was excluded in like manner. 'They buried him in the city, in Jerusalem; but they brought him not into the sepulchres of the kings of Israel' (2 Chron. xxviii. 27; comp. 2 Kings xvi. 20). But Hezekiah's case was far different; 'they buried him in the mount of the sepulchres of the sons of David; and all Judah and the inhabitants of Jerusalem did him honour at his death' (2 Chron. xxxii. 33). Manasseh's partly wicked, and, as it seems, wholly calamitous reign, ensured him a different burial. 'And Manasseh slept with his fathers, and was buried in the garden of his own house, in the garden of Uzza' (2 Kings xxi. 18). This garden was, it seems, in a court, for it is also said, 'they buried him in his own house' (2 Chron. xxxiii. 20). His wicked

successor Amon was buried with his father, but apparently in another tomb, or perhaps pit. 'And he was buried in his sepulchre in the garden of Uzza' (2 Kings xxi. 26). Josiah appears to have been buried with them (xxiii. 30; 2 Chron. xxxv. 24), though in a separate tomb or place, perhaps on account of the calamitous state of the kingdom at his death, which may have rendered haste necessary. Of his successors, none can have been buried at Jerusalem; Jehoiakim alone may have died on the throne, and of him Jeremiah prophesied, 'He shall be buried with the burial of an ass, drawn and cast forth beyond the gates of Jerusalem' (xxii. 19; comp. xxxvi. 30).

Little mention is made of the burials of the kings of the ten tribes. Some, who died in power, were buried at their capital, Samaria (2 Kings x. 35; xiii. 9; xiv. 16). Many, who perished by conspiracies which overthrew their line, and were not aimed, as generally in the cases of the kings of Judah, against themselves only, probably were left unburied. The relations of the sovereign and people were not the same as those between the legitimate kings of the house of David and their subjects, and this will explain why there is no allusion to any public honours or the want of them, in the case of any king of the ten tribes; besides that the impiety of these kings would have alienated from them the love of the people, or at least of those who would have been most disposed to pay such respect to the dead.

Further light is thrown on funeral rites during the period of the kings by passages in the contemporary books of the Old Testament. The custom of having hired mourners to make lamentation at the funeral time as well as at the ceremony, is referred to in the exhortation at the close of Ecclesiastes—'Because man goeth to his long home, and the mourners go about the streets' (xii. 5). Jeremiah also speaks of 'the mourning women' (ix. 17-22); and we read respecting Josiah's death, 'And Jeremiah lamented for Josiah: and all the singing men and the singing women spake of Josiah in their lamentations to this day, and made them an ordinance in Israel: and behold, they [are] written in the lamentations' (2 Chron. xxxv. 25). In this case it may be that the actual funeral rites are not referred to, but the general lamentation on the death of the king, especially as the circumstances of the kingdom were such that it is probable, as already suggested, that he had a hurried burial. The customs of the Jews in our Lord's time, when minstrels attended at a house of mourning, shew, however, that we must not too positively infer this. A full notice of mourning customs is where Ezekiel is commanded not to observe any for his wife. 'Son of man, behold, I take away from thee the desire of thine eyes with a stroke; yet neither shalt thou mourn nor weep, neither shall thy tears run down. Be silent, make no mourning for the dead, bind the tire of thine head upon thee, and put on thy shoes upon thy feet, and cover not [thy] lip, and eat not the bread of men' (Ezek. xxiv. 16, 17; comp. 22, 23). Here we see no reference to prohibited customs, though mourning for a wife was not specially allowed to the priests as it was for parents, etc. It is remarkable that some of the practices are the same as those commanded to a person proved a leper, who may therefore have been held by the Law to be socially dead; but it must be remembered

that some of those concerned in burial-rites must have been rendered unclean, so that the leper may have been commanded to appear unclean, and not as a mourner. He was to have rent clothes, a bare head, and to have a covering upon his upper lip (Lev. xiii. 45). Jeremiah alludes to prevailing mourning customs, which included those forbidden in the Law. He prophesies that the dead of his people should be left unburied, which is spoken of as a great calamity in Ecclesiastes (vi. 3), that there should be no mourning for them, that people should not cut themselves, nor make themselves bald, nor hold a funeral repast (Jer. xvi. 1-7). The house of mourning here mentioned (5) may only mean a house at the time of a funeral (comp. 8). In the same book we read how Ishmael the son of Nethaniah deceived, and for the most part killed, 'fourscore men,' thus described, 'having their beards shaven, and their clothes rent, and having cut themselves, with offerings and incense in their hand, to bring [them] to the house of the Lord' (xli. 5):—the temple not yet being destroyed. These were probably mourners, or, perhaps, they did this on account of the calamities of the country. Isaiah prophesies of the people of Moab, that in their overthrow they should lament, 'on all their heads baldness, every beard cut off' (xv. 2); and Jeremiah, of the same people, on the same or a like occasion, 'Every head bald, and every beard diminished: upon all the hands cuttings, and upon the loins sackcloth,' adding that there should be general lamentations on the housetops and in the streets (xlvi. 37, 38). The same prophet speaks of baldness and cutting among the Philistines (xlvii. 5). The customs forbidden to the Israelites seem therefore to have been generally prevalent in Palestine.

Respecting the tombs of subjects, they appear to have been very marked in some cases; for when Josiah took out bones from the sepulchres at Bethel and burnt them on the idolatrous altar, he refrained from disturbing the remains of the prophet who came from Judah, and who had foretold that this would come to pass, and those of the Israelite prophet buried with him, because he saw a 'pillar,' known by the people of the city to mark the tomb where they lay (2 Kings xxiii. 15-18). These sepulchres were 'in the mount,' from which it might appear probable that they were excavations in the side of a hill rather than structures, did not the 'pillar' seem to indicate a structure or pit beneath it. It is noticeable that the word rendered pillar, *מַצֵּבָה*, is also used of an ordinary gravestone, not set up out of regard, but simply to mark that a body was beneath (Ezek. xxxix. 15); its radical meaning would be something set up. In the case where we read 'pillar,' it must either have been distinguished by its form, or have borne an inscription. There is an important notice of an excavated sepulchre, evidently at Jerusalem, where Isaiah prophesies against Shebna the treasurer, who had made a tomb for himself, that he would be carried captive and die far from his chosen burying-place. 'Thus saith the Lord God of hosts, Go, get thee unto this treasurer, unto Shebna, which [is] over the house, [and say,] What hast thou here, and whom hast thou here, that thou hast hewed thee out a sepulchre here, as he that heweth him out a sepulchre on high, that graveth an habitation for himself in a rock?' (xxii. 15-19). Here we are at once reminded of the tombs excavated in the sides of

the valleys around Jerusalem, for it is scarcely probable that a mere pit would have been an ostentatious mark of security.

There is one curious notice of a tomb of the period between the return from Babylon and the N. T. age. It is the description of the tomb of the Maccabees at Modin, built or completed by Simon, when he buried Jonathan his brother, leaving apparently a place for himself. 'Simon also built a monument upon the sepulchre of his father and his brethren, and raised it aloft to the sight, with hewn stone behind and before. Moreover, he set up seven pyramids, one against another, for his father, and his mother, and his four brethren. And in these he made cunning devices, about the which he set great pillars, and upon the pillars he made all their armour for a perpetual memory, and by the armour ships carved, that they might be seen of all that sail on the sea. This is the sepulchre which he made at Modin, and it standeth yet unto this day' (1 Maccab. xiii. 25-30). This description in some points strikingly recalls the two tombs in the Valley of Jehoshaphat, called those of Zechariah and Absalom, and its difficulties may perhaps be accounted for if we suppose it was written by some one who had not seen the edifice. It must, however, be remarked, that a tomb at Petra is surmounted by five little pyramids or rather obelisks (Feydeau, *Usages Funèbres*, ii. p. 175).

Several passages in the N. T. give us a clear idea of the burial-rites of that time. Immediately after the death, the people of the house, as well as hired mourners, once called 'pipers' ('minstrels,' A. V., Matt. ix. 23), began to lament (Mark v. 38, 39; Luke viii. 52). The dead was washed (Acts ix. 37), and wound in grave-clothes, the head being covered with a separate cloth (John xx. 7; xi. 44). When the funeral was costly, as that which the piety of Joseph of Arimathæa and Nicodemus gave to our Saviour, a great quantity of spices was put either in the folds of the grave-clothes or around the body. It is related that Joseph of Arimathæa took the body of the Lord, and it is added, 'And there came also Nicodemus, which at the first came to Jesus by night, and brought a mixture of myrrh and aloes, about a hundred pound [weight]. Then took they the body of Jesus, and wound it in linen clothes [elsewhere called 'fine linen,' Mark xv. 46] with the spices, as the manner of the Jews is to bury' (John xix. 39, 40). Sweet spices were also brought by the pious women to anoint the Saviour's body on the morning when they found Him risen (Mark xvi. 1; Luke xxiii. 56; xxiv. 1). The burial was conducted in secrecy: there is, therefore, no account of any public rites. It seems, from another passage, to have been the custom for the bier to be borne on the shoulders to the tomb, and accompanied by the kinsfolk and friends (Luke vii. 11-14).

At this period it was considered a pious act to rebuild, restore, or beautify the tombs of prophets or righteous men, and all tombs were whitened from time to time.

The sepulchre of our Lord was a new tomb, hewn in the rock by Joseph of Arimathæa for himself, and having its entrance closed by a heavy stone rolled to it. The tomb of Lazarus is thus described, 'It was a cave, and a stone lay upon it' (John xi. 38). St. Paul mentions burning the body as an inexpensive manner of burial, which those who

gave all to the poor enjoined for themselves (1 Cor. xiii. 3). But it must be remembered that the Apostle was addressing the Gentile church of Corinth.

We may now speak of the ancient tombs that remain in Palestine, and compare them with what

oblong stone, of which very many are seen in the Valley of Jehoshaphat. The second is the more costly sepulchral grotto, consisting of excavated chambers, approached through galleries, or opening from a portico. The third is the isolated sepulchre, like the well-known tombs of Ab-

158. Tomb of the Prophets.

we learn from the passages that have been noticed. Some of these tombs are probably of great antiquity, but most of the more remarkable are likely to have been rebuilt or altered in periods long after they were first made. In the time of our Saviour

proof that any of the latter were more than simple excavations; there is no reference to decoration, though this may be conjectured, with probability, in the instance of Shebna's tomb. Our knowledge of Hebrew architecture is too scanty to give us

159. Tomb of the Kings.

it was the custom, as already noticed, to restore or decorate the tombs of persons held in respect. The early Christians maintained this practice, and have been followed in it by the Muslims. Thus any monuments to which a tradition is attached, or indeed any of important aspect, require the most careful examination. The tombs remaining in Palestine are of three kinds. The first kind is the common excavation in the flat rock, covered by an

the means of deciding whether some of the tombs of this kind that remain are of early times. If, however, we compare one of the most remarkable of these excavations, that on the Mount of Olives called the Tombs of the Prophets, with the monuments of neighbouring countries, we shall feel little doubt that it is of the age of the kings, perhaps one of the royal sepulchres. Nowhere out of Palestine should we suppose it to be later than this age, excepting perhaps in barbarous countries.

This excavation will be seen by the accompanying plan (1) to resemble the tumulus called the Tomb of Alyattes, and the late galleries in the Pyramid of Steps at Sakkarah. It is not a single sepulchre, but has niches for many bodies. The excavation at the head of the Valley called the Tombs of the Kings (2), is of a very different style. It is entered from a court; its face is a portico, adorned externally with architectural mouldings and ornaments, both in Græco-Roman style; within is a hall, from which open several chambers, all of which have their walls recessed for bodies excepting one, apparently of later date than the rest, since it is approached through one of the recesses. The

whole is regular in its forms, and thus sustains the opinion which the external decoration warrants, and forbids the forced supposition that this decoration was added at a late period. The excavation called the Tombs of the Judges (3) resembles

160. Tomb of the Judges.

that just described, but it is important that its entrance is decorated in Greek style, and cannot be considered to be later than the rest of the work. We have spoken of two remarkable isolated tombs at Jerusalem as examples of the third kind of sepulchres. Both may be described as cubical structures, sustaining an upper portion of a pyramidal or similar form. They thus belong to the great class of tombs of Græco-Roman style which were imitations of the famous Mausoleum, and if compared with the architectural works of Petra, they afford evidence that they are of the time of the Idumæan dynasty, which, it must be remembered, was a building age at Jerusalem.

The modern Muslim burial-rites and tombs are described by Mr. Lane. We will not do him the injustice to abridge his account, but refer to the *Modern Egyptians* (chap. xxviii. 5th ed. pp. 511, seqq.) It must be remembered that the usages, not alone of Egypt, but of the Muslim world, as the university of Cairo has been for centuries the place of instruction for all the most learned religious teachers of El-Islâm, shew clear traces of ancient Egyptian practices, as Mr. Lane has observed (p. 516); therefore, we must not use them at random to illustrate the notices of burial in the Bible, and to supply what is there left unrecorded.—R. S. P.

BURK, PHILIPP DAVID, D.D., was born at Neuffen, 26th July 1714, and died 22d March 1770 at Markgumgen, where he was superintendent. His Biblical works are respectively entitled—*Gnomon Psalmorum, in quo ex nativa vi Verborum, Simplicitas, Profunditas, Concinnitas, Salubritas Sensuum Coelestium indicatur*, 2 vols. 4to. Stutz, 1760; and *Gnomon in Duodecim Prophetas Minores, etc., cum præfatione J. A. Bengelii*, 4to. Heilb, 1753. These works, as the titles plainly indicate, were written after the manner of Bengel's celebrated Gnomon—the latter of them bearing a recommendatory preface from the pen of Bengel. As both authors were much alike in the eminent piety of their characters, so their works are alike also in the earnest evangelical sentiment which is felt to pervade them throughout. Burk is, if anything, more technical and constrained in many of his interpretations than Bengel. It was his design

to have gone over the whole of the Old Testament in the same manner, but death interposed.—W. J. C.

BURKITT, WILLIAM, vicar of Dedham, was born at Hitcham, Northamptonshire, in 1650, and educated at Cambridge. He was for 21 years minister of Milden Suffolk, first as curate and afterwards as rector. He became vicar of Dedham, Essex, in 1692, and died in 1703. His works are various, but the only one of any Biblical worth is his commentary on the New Testament, entitled, *Expository Notes, with practical observations on the New Testament of our Lord and Saviour Jesus Christ; wherein the Sacred Text is at large recited, the sense explained, etc.*, Lond. 1700, fol. The thirteenth edition, carefully corrected, Lond. 1752, fol. This is not in any respect a critical work, but is plain and practical, as it was designed to be; affectionate and earnest in the manner of its address. It is, however, of Arminian tendency, and as Dr. Doddridge has observed, his sentiments vary in different parts of the work, as the authors from whom he took his materials were orthodox or not.—W. J. C.

BURNT-OFFERING (Heb. *עֹלָה* or *חֵטֵא*, *עֹלָה*, LXX. *δλοκαύτωμα, δλοκαρπωσις, δλοκαρπωμα*), the most common and general kind of sacrifice among the Hebrews. Of its two designations, the one (*עֹלָה*), which is the more usual in prose, comes from *עלה*, to ascend, which is used in the Hiphil in reference to sacrifices, in the sense of causing to ascend, not from the ground to the altar, but from the altar in flame and smoke to heaven, the habitation of God who accepts the offering (see Gen. viii. 20, 21). This was, indeed, to a certain extent common to all sacrifices that were in whole or in part consumed; but it came to be the characterising mark of the burnt-offering, as it was wholly so disposed of.

The term *בָּלִיל*, more common in poetry than in prose, signifies whole or perfect; and thus indicates more precisely the special nature of the offering, with some reference, perhaps, to its general and comprehensive character as well. The custom of offering this kind of sacrifice may be traced back almost to the very earliest mention of sacrifice in Scripture. The offering of Abel was probably of this kind; though this cannot be determined with absolute certainty, as the sacred historian uses only the word *בְּנֹחַה*, which is so general as to include both those of Cain and of Abel (Gen. iv. 3, 4). But the sacrifice of Noah (Gen. viii. 20) is expressly said to have consisted of burnt-offerings. It was this kind of offering that Abraham was in the habit of making (Gen. xxii. 2, 7, 8, 13); and during the Egyptian bondage it is still the only kind of sacrifice specially mentioned (Exod. x. 25). We also find that this was the kind of offering prevalent outside the pale of the Israelites; as in the cases of Job (ch. i. 5; xlii. 8), Jethro (Exod. xviii. 12), and Balak (Num. xxiii. 3, 15). Whether these facts indicate that the burnt-offering was the only kind of sacrifice in use before the Mosaic law, or simply that it was the most general in its character, and that the precise distinctions afterwards introduced were not known in the patriarchal times, it is not necessary here to inquire. By the Mosaic law the occasions and the ritual of presenting a burnt-offering were more precisely defined than they had probably been

in primitive times; but it still preserved the character of the most general and comprehensive of all the kinds of sacrifice. It was the only kind that could be offered by itself; and all other kinds of offering had to be accompanied with a burnt-offering. It was the regular morning and evening sacrifice, and was to be kept burning on the altar all night (Num. xxviii. 3; Lev. vi. 2); while on the weekly, monthly, and yearly festivals the number of burnt-offerings was proportionally increased (Num. xxviii.) Besides these appointments, having a general reference to all the people, burnt-offerings might be presented by individuals, either as free-will offerings (Ps. li. 18, 19), or in performance of a vow (Ps. lxi. 13-15), or in obedience to the prescriptions of the law in certain cases. These cases were those of a Nazarite polluted with a dead body or at the completion of his vow (Num. vi. 11, 14); of those healed of leprosy or issues of blood (Lev. xiv. 19, 20; xv. 15); of women after child-birth (Lev. xii. 6, 8); and of the high-priest on the great day of atonement (Lev. xvi. 24); in all which cases the burnt-offering was conjoined with a sin-offering. According to Jewish custom, founded probably on some indications in the law, the burnt-offering was the only kind of sacrifice that Gentiles were allowed to offer. With regard to the animals offered, the only peculiarity of the burnt-offering was that it consisted always of males, the same conditions in other respects being required as in other sacrifices. The manner of the offering is described in the first chapter of Leviticus. The offerer brought the animal to the door of the tabernacle or temple; and after laying his hands on its head, slew it. The priests then took the blood, and sprinkled it round about the altar. The offerer flayed and divided the victim; and the priests, laying it upon the altar, with fire and wood, burned the whole, and the ceremony was concluded. The hide of the animal fell to the share of the priests engaged in the ceremony.

In regard to the meaning and import of the burnt-offering, there is much that is common to it with sacrifices in general, and somewhat also peculiar to itself. A discussion of the former will be found in the article SACRIFICE; the latter must be briefly indicated here. Being a bloody sacrifice, it falls under the head of expiatory, as distinguished from eucharistical offerings. This is evident, not only from the general principle stated in Lev. xvii. 11, but because, in the special directions given for the burnt-offering, an expiatory nature is expressly ascribed to it (Lev. i. 4). With regard to its distinction from other kinds of expiatory sacrifice, various opinions have been maintained. The Jewish Rabbins for the most part ascribe to it a special reference to sins of thought, the name being derived from the verb to ascend, and, therefore, referring to what ascends, *i. e.*, in the heart. Other explanations refer them to other special classes of sins. Philo and many of the moderns explain the total burning of the animal as symbolical of the worshipper's entire dedication of himself to God; and this is not improbably a part of the symbolical import of the burnt-offering. But its true and leading characteristic seems to have been its general and comprehensive character. This is indicated by its early use, by the position assigned to it in relation to the other sacrifices in the Mosaic ritual, and also by the use made of the blood in the ceremony which was the most general of all, consisting simply in sprinkling the altar, and not any more peculiarly

sacred places, as the veil or the horns of the altar, as was the case with some other sacrifices. It had not, like the sin-offering and the trespass-offering, reference to any special and definite offences to be atoned for. It was not, in any case, the appointed means of restoration to the covenant standing of the Jews, for those who had, by a breach of the ceremonial law, forfeited this standing. It was rather the offering of those who were in this covenant relation; and as the morning and evening sacrifice, it was the continual expression of the devout feelings of the worshippers. Its expiatory nature thus had respect to the continual sinfulness and shortcomings, even of those who are in a state of reconciliation with God; and it presented to the mind of the spiritual Israelite the great truth that no man can acceptably approach to God, except as a sinner trusting in his mercy; and that without shedding of blood there is no remission of sins. And thus, like all the other sacrifices of the law, it was a type of that true sacrifice which was to be offered in the fulness of time. We cannot doubt, however, that in the entire burning of the victim on the altar there was also shadowed forth the entire surrender of the worshipper's whole person to the service of God. This self-dedication on the part of the believer is in the N. T. closely connected with the sacrifice of Christ (I Cor. v. 14, 15; Rom. xii. 1; xiv. 7-9). But this idea does not seem to have formed the only or even the chief significance of the ancient burnt-offering. (See Outram, *De Sacrificiis*, lib. i., c. 10; Bähr's *Symbolik*, vol. ii., pp. 361-8; Hofmann's *Schriftbeweis*, vol. ii., p. 139 foll.; Fairbairn's *Typology*, vol. ii., pp. 352-5; Winer's *Realwörterb.*, s. v., etc.)—J. S. C.

BURROUGHES, JEREMIAH, an eminent Puritan divine; born 1599, died 1646. He was appointed to the rectory of Titshall in 1631; of which, however, he was summarily deprived on account of his non-conformity in 1636. Having settled in Holland, he was for several years the pastor of a church at Rotterdam. On the commencement of the civil war in England he returned home, when he joined the Independents, and ministered to two of the largest congregations in London. It is the testimony of those who knew him, that 'He was a man of learning, candour, and modesty, and of an exemplary and irreproachable life.' The only work of any biblical worth which he is known to have published, is '*An Exposition of the Prophecie of Hosea*. In divers lectures, 4 vols. 4to, Lond. 1643-51, of which, however, he prepared only the first, the others being by Hall and Reynolds. These lectures are popular and practical rather than critical, but helpful nevertheless to the student of Hosea. A modern edition of the work has been published in one vol. imperial 8vo, Lond. 1843. Burroughes wrote and published besides a vast number of separate sermons.—W. J. C.

BURTON, EDWARD, D.D., was born at Shrewsbury, 13th Feb. 1794. He was educated at Westminster and Oxford, where he distinguished himself by his diligence and proficiency. Having taken his degree, he spent some time on the Continent, especially in Italy; and on his return in 1821, he received orders from the Bishop of Oxford, and became curate of Tettenhall in Staffordshire. In 1825 he removed to Oxford, where he discharged the functions of examining chaplain to

the Bishop, and subsequently of Professor of Divinity in the University. In connection with the latter office he held the living of Eweime, where he fixed his permanent residence from the year 1830, and where he died 19th Jan. 1836. Dr. Burton was an indefatigable student, a sound and accurate scholar, and a theologian of the solid orthodox type. His works, which belong for the most part to the department of Historical Theology, have been collected in 5 vols. 8vo, Oxford, 1837. He is noticed here chiefly because of his Bampton Lecture on the *Heresies of the Apostolic Age*, his *Attempt to ascertain the Chronology of the Acts of the Apostles and the Epistles of St. Paul*; and his *Lectures on the Church History of the first three centuries*; all of which throw light on the N. T. He also issued an edition of the Greek N. T., with notes, in 1831, 2 vols. 8vo; the value of which, however, is not great, either critically or exegetically.—W. L. A.

BUSHEL is used in the Auth. Vers. to express the Greek *μῶδιος*, Latin *modius*, a measure of about a peck.

BUTLER, CHARLES, a distinguished Roman Catholic lawyer and author, was born in London in 1750, and died in 1832. He was educated at the English College at Douay, and was the first Roman Catholic called to the bar subsequent to the period of the Revolution. Immediately on the passing of the Relief Act in 1832, and not long before his death, he was made King's counsel during Lord Brougham's chancellorship. He is the author of several important works on law and general jurisprudence, also a *Life of Erasmus*, chiefly valuable for the historical information which it contains on the state of literature between the tenth and the sixteenth centuries. His contribution to Biblical literature is a work entitled *Hora Biblicæ. Part I. containing an historical and literary account of the original text, early versions, and printed editions of the Old and New Testament. Part II. containing an historical and literary account of the Koran, Zend-Avesta, Vedas, Kings and Edda, and with two dissertations—I. On the great council said to be held by the Jews on the plain of Ageda, in Hungary, in 1650. II. An historical and literary outline of the disputes on the authenticity of 1 John v. 7.* Part first of this work was the fruit of the author's leisure hours, and was originally printed for private circulation in 1799. It was afterwards published, and the fact that in a very short period it passed through several editions is evidence of the great acceptance in which it was held by Biblical scholars. The learning, research, candour, and good sense of the author are everywhere apparent; and the amount of useful information afforded on all the topics of which it treats, together with the indicated sources whence it is chiefly drawn, constitute it a work of permanent value. It only needs to be added respecting the second of the two dissertations in the appendix, that the evidence for and against the authenticity of the passage which has been so much disputed is stated with great candour and accuracy. The fifth and last edition of the *Hora Biblicæ* will be found included in vol. I. of the author's collected *Philological and Biographical Works*, 5 vols. 8vo, Lond. 1817.—W. J. C.

BUTTER. [MILK.]

BUTZ. [BYSSUS.]

BUXTORF, JOHANN, the prince of Hebrew scholars, was born at Camen in Westphalia, 25th Dec. 1564. The proper name of his family was Bockstrop, and hence the *goal* (bock) in their arms. He was educated first at Marburg and Herborn, where he enjoyed the instructions of Olevian and Piscator; afterwards he went to Heidelberg, to Basle, to Zürich, and to Geneva, for the prosecution of his studies, and had the advantage successively of the teaching of Grynæus, Hospinian, Bullinger, and Beza. In 1590 he became professor of Hebrew at Basle, and from that time devoted himself with unremitting zeal and diligence to the study of the Hebrew language, literature, and antiquities. Such was his proficiency in all matters lying within this department, that it is said even the Jews themselves resorted to him for counsel in cases of doubt as to any of their institutions. Certain it is that no Christian ever more thoroughly made himself master of all that could be gathered from Jewish sources belonging to the philology, criticism, and archæology of the O. T. His works in this department are numerous. His earliest publication was his *Manuale Hebraicum*, Bas. 1602, and after this followed his *Synagoga Judaica*, first published in German, Bas. 1603, then in Latin, from the translation of Hermann Germberg, Hanov. 1604, and ultimately from the translation of David Clericus, with the revision of Buxtorf himself and his son, Bas. 1641. His other works are, *Epitome Gram. Heb.*, Bas. 1605; *Epitome radic. Heb. et Chald.*, Bas. 1607; *Lexicon Heb. et Chald. cum brevi lexico Rabbin. Philos.*, Bas. 1607; *Thesaurus Gram. Heb.*, Bas. 1609; *De Abbreviaturis Heb.*, Bas. 1613; *Gram. Chald. et Syriac.* Bas. 1615; *Biblia Heb. cum paraphrasi Chald. et Commentariis Rabbinorum*, 2 vols. fol., Bas. 1618; *Tiberias sive Comment. Masorethicus*, Bas. 1620, appended to the later editions of the *Biblia Heb.*; *Concordantiarum Heb.*, an unfinished work, on which he was engaged at the time of his death, and which was completed by his son, Bas. 1632. The editions above mentioned of these works are the earliest; most of them have passed through so many editions that to enumerate them is impossible. His collection of Jewish writings, with the additions of his son and grandson, was purchased in 1705, for 1000 thalers (£150) for the library at Basle, where it is still preserved. All subsequent writers on Hebrew Grammar, Philology, and Lexicography, have been deeply indebted to the labours of Buxtorf, and the value of his contributions to sound philology in general is such as fully to justify the words of Prideaux, who says, 'The world is more beholden to Buxtorf for his learned and judicious labours than to any other man that lived in his time, and his name ought ever to be preserved with honour in acknowledgment of it' (*Connection* ii. 555, 8th ed.). Buxtorf fell a victim to the plague, which carried him off 13th Sept. 1629.—W. L. A.

BUXTORF, JOHANN, JUN., son of the preceding, and his successor in the Hebrew chair at Basle, was born 13th Aug. 1599 and died 17th Aug. 1664. He followed his father in his devotion to Hebrew studies, and occupied himself much in editing and extending his father's writings. His edition of the *Tiberias*, published after his death in 1665, is to a great extent a new work. He was involved in

a protracted controversy on the integrity of the Hebrew text, in connection with which he published the following works:—*De Litterarum Heb. genuina antiquitate*, 1643; *Tractatus de punctorum origine, antiq. et author. oppositus Arcano punct. revelato Lud. Capelli*, Bas. 1648; *Anticritica, seu vindicia veritatis Heb. adv. Lud. Capelli Criticam quam vocant sacram, quibus sacrosanctæ editionis Bibliorum hebraicæ authoritas integritas et sinceritas, et quamplurima loca vindicantur simul etiam explicantur et illustrantur*, Bas. 1653. In this controversy Buxtorf maintained against Capellus the divine authority of the entire Masoretic text, vowels as well as consonants, words as well as things. The feeling of the age went with him, and for long it was in many quarters held to be essential to orthodoxy to maintain his view, though it never received the general assent of scholars (See Walton, *Proleg. III. ad Bibl. Polygl.*) Besides these publications, Buxtorf issued also *Dissertationes Philol. Theol. Access. R. Is. Abarbanalis aliquot Diss. ex heb. in lat. ling. versæ*, Bas. 1664; *Exercitationes ad histor. arcæ fœderis, ignis sacri, Urin et Thummim, mannae, petrae in deserto, serpentis aerei*, Bas. 1659. He published also a translation of the *Morah Nevochim* of Maimonides, and edited the book *Cosri* in Hebrew, with a Latin translation, Bas. 1640.—W. L. A.

BUXTORF, JOHANN JAKOB, seventh son of the preceding, was born 4th Sept. 1645, and died 1st April 1704. Though sustaining the family reputation for Hebrew scholarship, and though in frequent correspondence with the most learned orientalists of his day, he published nothing except a preface to the *Tiberias* of his grandfather, Bas. 1665, and a revised and corrected edition of his *Synagoga Judaica*, Bas. 1680.—W. L. A.

BUXTORF, JOHANN, TERTIUS, nephew of the preceding, was born 8th Jan. 1662. He succeeded his uncle as Hebrew Professor in 1704, and continued in that office till his death, which took place 19th June 1732. He published *Catalecta Philol. Theol. cum Mantissa Epp. claror. viror. ad Johan. Buxtorfium patrem et filium scripturum*, Bas. 1707; *Specimen phrasæologiae V. T. Heb. Francof.*, 1717; *Dissertationes var. argumenti*, Bas. 1725. (For further information regarding this illustrious family see *Athenæ Rauricæ sive Catalogus Professorum Acad. Basil. ab A. 1560 ad A. 1768.*)—W. L. A.

BUZ (בז *contempt, scorn*; Sept. δ Βαύζ), son of Nahor and Milcah, and brother of Huz (Gen. xxii. 21). Elihu, one of Job's friends, who is distinguished as an Aramæan or Syrian, and called בוז, a Buzite, (Job xxxii. 2), was doubtless descended from this Buz. Judgments are denounced upon the tribe of Buz by Jeremiah (xxv. 23); and from the context this tribe appears to have been located in Arabia Deserta; which may render it uncertain whether the descendants of Nahor's son are intended, although a migration south of the Euphrates is by no means unlikely, and had perhaps already occurred in the time of Elihu. [The name occurs also in I Chron. v. 14, as the name of a man of the tribe of Gad (Sept. Βούζ, Al. Ἀχτι-Βούζ.)]

BYFIELD, NICHOLAS, an eminent Puritan divine; born 1579, died 1622. He was educated at Oxford, and was successively minister of St.

Peter's Church, Chester, and vicar of Isleworth 1615. He was held in high repute for his great learning, profound judgment, quick invention, ministerial success, and pious and peaceable disposition. His works, now scarce, are the following:—*A Commentary on the three first Chapters of the First Epistle of St. Peter; wherein are most judiciously and profitably handled such points of doctrine as naturally flow from the text, together with very useful application thereof, and many good rules for a godly life*, folio, Lond. 1637; *An Exposition upon the Epistle to the Colossians, wherein the text is not only methodically analyzed, and the sense of the words, by the help of Writers both ancient and modern, explained, but also by doctrine and use the intent of the Holy Ghost is in every place more fully unfolded and urged*, fol., Lond. 1615. It is unnecessary to add to the sufficiently and, we may add, correctly descriptive titles of these commentaries. They are much more practical than critical. But both works will repay a careful study. Byfield is also the author of a work entitled, 'The Promises, or a treatise shewing how a godly Christian may support his heart with comfort,' 12mo, Lond. 1647.—W. J. C.

BYNAEUS, ANTONIUS, D.D., and professor of Oriental languages at Deventer, was born 6th Aug. 1654, at Utrecht, and died 29th Aug. 1698. He wrote *De Calceis Hebraeorum*, Dord. 1682; a new edition, greatly enlarged, appeared in 1695, to which is appended a reprint of an earlier publication, *Sonnium de laudibus critices; De Natali ꝑ. C. die* 4to, Amst. 1689; *De morte ꝑ. Chr. libri 3, sive comment. ampliss. in Evang. Hist. etc.*, 3 vols., 4to, Amst. 1691–98. These works are of standard value in their respective departments; that on the shoes of the Hebrews exhausts all that can be said on the subject, and goes a little beyond it. Bynæus wrote also in Dutch an Explication of the Prophecy of Jacob, and of the 110th Ps., as applied to Christ, Deventer, 1794.—†

BYSSUS. The Greek word βύσσος occurs in Luke xvi. 19, where the rich man is described as being clothed in purple and *fine linen*; and also in Rev. xviii. 12, 16, and xix. 8, 14, among the merchandise, the loss of which would be mourned for by the merchants trading with the mystical Babylon. But it is by many authors still considered uncertain whether this byssus was of *flax* or *cotton*. Reference has been made to this article both from *bad* and *butz*, and might be also from *shesh*. For, as Rosenmüller says, 'The Hebrew word *shesh*, which occurs thirty times in the two first books of the Pentateuch (*v. SHESH*, and Celsius, ii. p. 259), is in these places, as well as in Prov. xxxi. 22, by the Greek Alexandrian translators, interpreted *byssus*, which denotes Egyptian cotton, and also the cotton cloth made from it. In the later writings of the Old Testament, as for example, in the Chronicles, the book of Esther, and Ezekiel, *buz* is commonly used instead of *shesh*, as an expression for cotton cloth.' This however seems to be inferred rather than proved, and it is just as likely that improved civilization may have introduced a substance such as cotton, which was unknown at the times when *shesh* was spoken of and employed; in the same manner as we know that in Europe woollen, hempen, linen, and cotton clothes have, at one period of society, been more extensively worn than at another.

בד *bad* occurs in numerous passages of Scripture, as Exod. xxviii. 42, and xxix. 29; Lev. vi. 3; xvi. 4, 23, 32; 1 Sam. ii. 18; xxxii. 18; 2 Sam. vi. 14; 1 Chron. xv. 27; Ezek. ix. 2, 3, 11; x. 2, 6, 7; Dan. x. 5; xii. 7. In all these places the word *linen* is used in the Authorized Version, and Rosenmüller (*Botany of the Bible*, p. 175) says, 'The official garments of Hebrew as well as of Egyptian priests, were made of linen, in Hebrew *bad*.' Celsius, however, (ii. p. 509), states his opinion thus: 'Non fuit igitur בד vulgare linum, ut arbitrati sunt viri quidam doctissimi; sed linum Ægypti optimum et subtilissimum;' and he quotes (p. 510) Aben Ezra for its being the same thing as *butz*: '*Butz* idem est quod *bad*, nempe species lini in Ægypto.'

בז *butz* or *buz* occurs in 1 Chron. iv. 21; xv. 27; 2 Chron. ii. 14; iii. 14; v. 12; Esther i. 6; viii. 15; Ezek. xxvii. 16; and in these passages in the Authorized Version it is rendered *fine linen* and *white linen*. According to Celsius, '*Butz* idem est quod Græci βύσσον et Latini *byssum* adpellant;' while Rosenmüller, as above stated, considers *buz* and *byssum* to indicate cotton and the cloth made from it; as does Forster in his book *De Byssu Antiquorum*.

The mere similarity of name would not prove the correctness of either opinion, for they are not more like than are كتان *kootn*, and كتان *kutan*,

adduced by Rosenmüller (*Bibl. Bot.* p. 176), as the Arabic names of cotton, while in fact they indicate, the first cotton, and the second flax. So at p. 179, the same author states that 'in the Sanscrit, *karpasum* denotes a linen cloth.' Now nothing is more certain than that the Sanscrit word indicates cotton, and cotton only, which was no doubt known to the Hebrews during a part at least of the time when the Scriptures were written. Mr. Harmer has justly observed that 'there were various sorts of linen cloth in the days of antiquity; for little copious as the Hebrew language is, there are no fewer than four different words, at least, which have been rendered 'linen,' or 'fine linen,' by our translators.' These words are, *bad*, *butz*, *pishtah*, and *shesh*.—[KARPAS, SHESH.]—J. F. R.

BYTHNER, VICTORINUS, an able Oriental scholar, a native of Poland. He studied at Oxford, and read a Hebrew lecture for many years there, after which he retired into Cornwall, where he died in 1670. He is the author of *Lyra Prophetica Davidis Regis sive Analysis critico-practica Psalmorum*. In *qua omnes et singule voces Hebr. in Psalterio contentæ ad regulas artis revocantur earumque significationes genuinæ explicantur*, etc. *Insuper Harmonia Hebr. text. cum paraph. Chald. et vers. Gr. fideliter consertur; cui addita est brevis institutio linguæ Hebr. et Chald.*, Lond. 1645, 1650, 1654, 1664, 1679. This work is fitted to be exceedingly helpful to every learner and student of the Hebrew language. The many editions through which it passed is evidence of the high reputation in which it was for long held. As intimated on the title, Bythner availed himself of the aid of the Chaldee Paraphrase and the Septuagint in interpreting the Psalms. The work has been translated into English under the title of the *Lyre of David*. A new edition was published in 1847, 8vo. —W. J. C.

C

CAB, a measure mentioned in 2 Kings vi. 25. The Rabbins make it the sixth part of a *seah* or *satum*, and the eighteenth part of an ephah. In that case a cab contained 3½ pints of our wine measure, or 2½ pints of our corn measure.

CABBALAH. [KABBALAH.]

CABUL (כבול). 1. A town of Asher. In Josh. xix. 27, we read that the border of that tribe 'reacheth . . . to the valley of Jiphthah-el, toward the north side of Beth-emek, and Neiel, and goeth out to *Cabul on the left hand*' (or on 'the north,'

משמאל). The Vatican Codex of the Septuagint combines the two words, and make the name *Χωβασσουηλ*; but the Alexandrine renders it correctly, *Χαβὼλ ἀπὸ ἀριστερῶν*. It is doubtless the same place which Josephus occupied with his little army during the Jewish war. He calls it the village of *Chabolo*, and says it was situated on the confines of Ptolemais, and forty stadia west of Jotopata. There is a Cabul also mentioned in the Talmud, which afterwards became a place of Jewish pilgrimage (Rel. Pal., p. 701).

Between Jéfât, the ancient Jotopata, and Ptolemais, five miles from the former, and ten from the latter, stands the village of Kabûl, which we can have no difficulty in identifying with the Chabolo of Josephus, and the Cabul of Asher. It is a small and poor village; but it occupies a strong site on the top of a rocky ridge on the confines of the plain of Ptolemais (Robinson, *B. R.*, iii. 88).

2. A district in Galilee, containing twenty towns, given by Solomon to Hiram king of Tyre for the assistance he rendered, and the materials he contributed towards the building of the Temple. Hiram was dissatisfied with the gift, and said when he saw them, 'What cities are these which thou hast given me, my brother? And he called them the land of *Cabul*, unto this day' (1 Kings ix. 13). The meaning of the term is not very clear. According to Hebrew etymology, it would signify 'a boundary,'

from כָּבַל = כָּבַל, 'to bound.' This is the interpretation of the Septuagint translators, who render the word *δριον*. The whole passage, however, leaves the impression that Cabul was intended to be a term of reproach, and so Josephus regards it. He says, 'if the name Cabul be interpreted according to the language of the Phœnicians, it denotes *what does not please* (*οὐκ ἀρεστόν*); *Antiq.* viii. 5. 3). The position of these cities is not indicated in the Bible, farther than that they were in the province of Galilee. Now, Galilee appears to have been originally only a small 'circuit' (such is the meaning of the word) of territory in the mountains of Naphthali round Kedesh (Josh. xx. 7; 2 Kings xv. 29). Josephus says the towns of Cabul were not far from Tyre, which is just twenty miles west of Kedesh. If Cabul was situated in this locality, which seems highly probable, then it is easy to understand the cause of Hiram's dissatisfaction. Tyre's great want was corn for food. Hiram would consequently have wished a part of some of the rich corn-growing plains of Palestine; but Solomon only gave him a mountain district, of little value to the Tyrians. There is nothing to

connect or identify this region of Cabul with the town of the same name mentioned above.—J. L. P.

CÆSAR, a name assumed by, or conferred upon, all the Roman emperors after Julius Cæsar. In this way it became a sort of title like Pharaoh, and, as such, is usually applied to the emperors in the New Testament without their distinctive proper names (AUGUSTUS). The Cæsars mentioned by name in the New Testament are Augustus (Luke ii. 1); Tiberius (Luke iii. 1; xx. 22); and Claudius (Acts xi. 28). Nero is referred to in Acts xxv. 8, and Phil. iv. 22; Caligula, who succeeded Tiberius, is not mentioned.—J. K.

CÆSAREA. There were two important towns in Palestine thus named in compliment to Roman emperors.

I. CÆSAREA PALESTINA, or Cæsarea of Palestine, so called to distinguish it from the other Cæsarea, or simply Cæsarea, without addition, from its eminence as the Roman metropolis of Palestine, and the residence of the procurator. It was built by Herod the Great, with much of beauty and convenience, twenty-two years before the birth of Christ, on a spot where had formerly stood a tower called Straton's Tower.

The whole coast of Palestine may be said to be extremely inhospitable, exposed as it is to the fury of the western storms, with no natural port affording adequate shelter to the vessels resorting to it. To remedy this defect, Herod, who, though an arbitrary tyrant, did much for the improvement of Judæa, set about erecting, at immense cost and labour, one of the most stupendous works of anti-

161. Cæsarea.

quity.' He threw out a semicircular mole, which protected the port of Cæsarea on the south and west, leaving only a sufficient opening for vessels to enter from the north; so that, within the enclosed space, a fleet might ride at all weathers in perfect security. The mole was constructed of immense blocks of stone brought from a great distance, and sunk to the depth of 20 fathoms in the sea. The best idea of the work may perhaps be realized by comparing it as to design and execution with the Breakwater at Plymouth. Besides this, Herod added many splendid buildings to the city: among which was a temple, dedicated to Cæsar, a theatre, and an amphitheatre; and when the whole was finished, which was within twelve years from the commencement of the undertaking, he fixed his residence there, and thus elevated the city to the rank of the civil and military capital of Judæa, which rank it continued to enjoy as long as the country remained a province of the Roman empire (Joseph. *Antiq.* xv. 9, etc. See Dr. Mansford, *Script. Gazetteer*). Vespasian raised Cæsarea

to the rank of a Roman colony, granting it first, exemption from the capitation tax, and afterwards from the ground taxes (the real *jus Italicum*, see COLONY). The place was, however, inhabited chiefly by Gentiles, though some thousands of Jews lived in it (Joseph. *De Bell. Jud.* iii. 9. 1; iii. 14; *Antiq.* xx. 8. 7; *Vita*, 11).

Cæsarea is the scene of several interesting circumstances described in the New Testament, such as the conversion of Cornelius, the first-fruits of the Gentiles (Acts x.); the residence of Philip the Evangelist (Acts xxi. 8); the journey thither of St. Paul; his pleading there before Felix; his imprisonment for two years; and his final pleading before Festus and King Agrippa (Acts xxiv.) It was here also, in the amphitheatre built by his father, that Herod Agrippa was smitten of God, and died (Acts xii. 21-23).

It seems there was a standing dispute between the Jewish and Gentile inhabitants of Cæsarea, to which of them the city really belonged. The former claimed it as having been built by a Jew,

meaning King Herod; the latter admitted this, but contended that he built it for them and not for Jews, seeing that he had filled it with statues and temples of their gods, which the latter abominated (Joseph. *De Bell. Jud.* ii. 13. 7). This quarrel sometimes came to blows, and eventually the matter was referred to the Emperor Nero, whose decision in favour of the Gentiles, and the behaviour of the latter thereupon, gave deep offence to the Jews generally, and afforded occasion for the first outbreaks, which led to the war with the Romans (Joseph. *De Bell. Jud.* ii. 14). One of the first acts of that war was the massacre of all the Jewish inhabitants by the Gentiles, to the number of 20,000 (Joseph. *u. s.* ii. 18. 1).

In later times, Cæsarea is chiefly noted as the birth-place and episcopal see of Eusebius, the celebrated Church historian, in the beginning of the 4th century.—J. K.

Addendum.—Cæsarea, the once proud capital of Palestine, is now a desolate and dreary ruin. It bears its old name, though corrupted into the Arabic form *Kaisariyeh*. It lies on the coast of the Mediterranean, between Carmel and Joppa, about 35 miles north of the latter. The ruins of the city are strewn along the winding shore, projecting here and there into the sea, and presenting huge masses of masonry, and long files of prostrate granite and marble columns, to the fury of the restless waves. A strong mediæval wall, with small bastion towers at intervals, encompasses it on the land side, enclosing an oblong area about half a mile long and a quarter wide. The lower part of the wall is still almost perfect, but the upper part has been thrown over in huge fragments into the dry moat. In the interior all is ruin; not a single building remains entire. There are huge piles of rubbish, almost concealed by the dense jungle of thorns and thistles; and there are a few shattered arches, and two or three solitary pillars rising up among them like tombstones in a neglected cemetery. In the southern wall is a gateway, still nearly entire. It was doubtless by it Philip entered the city, for it is on the road to Joppa. And on the rising ground a little within it, stand four massive buttresses, the only remains of the great cathedral in which Eusebius, the father of ecclesiastical history, presided for a quarter of a century. But the most interesting part of the ruins is the old harbour. It is unfortunately not only destroyed, but a large portion of its materials has been carried off for the rebuilding of the ramparts of Acre. The mole of which Josephus writes in such glowing terms, was a continuation of the southern wall of the city. The ruins of nearly 100 yards of it still remain above the water, and form that bold and picturesque promontory now so familiar to us from sketches and photographs. There was evidently a strong tower or castle at this point, perhaps in ancient times the residence of the governor of the city. About 100 yards farther north are the remains of another mole; and between the two is a little bay with a sandy beach. The foundations of the moles are composed of huge blocks of stone, such as are seen in the old wall round Mount Moriah, and in the substructions of Baalbec; but the upper part is much more recent, and probably not older than the time of the crusades.

The city of Herod evidently extended considerably beyond the present walls. A few heaps of

hewn stones and débris, half covered with sand, and partly overgrown with jungle, serve to mark its site. Many columns, too, of marble and granite lie about, and doubtless many more have been buried beneath the sand drifts. A broad low ridge of sand-hills, thickly sprinkled with thorny shrubs and bushes, runs along the eastern side of the ruins, shutting out all view of the plain of Sharon. The site of Cæsarea is thus singularly lonely and desolate. Solitude keeps unbroken Sabbath there. The sighing of the wind as it sweeps over the shattered walls and through the sun-dried jungle; and the deep moaning of the sea as each wave breaks on the cavernous fragments of the ancient mole, are the only sounds that fall upon the traveller's ears as he wanders over the site of Cæsarea.—(*Handbk. for S. and P.*, p. 365.)—J. L. P.

2. CÆSAREA-PHILIPPI (Καῖσάρεια ἢ Φιλίππου). After healing the blind man at Bethsaida, on the north-east coast of the Sea of Galilee, Jesus went with his disciples 'into the coasts of Cæsarea-Philippi' (Matt. xvi. 13). The route he followed appears to have been up the eastern bank of the Jordan. This town is not again referred to in the N. T., and there is no indication given of its distinct locality. This was unnecessary, however, as Cæsarea-Philippi was one of the most celebrated cities of Syria. Its ancient name was *Paneas* (Plin. *H. N.*, v. 15). Josephus relates its history, and tells us the origin of its Greek name. Cæsar Augustus, on his visit to Palestine, in B.C. 20, gave Herod the Great the province of Paneas (Joseph. *Ant.* xv. 10. 1, 3; *B. J.*, i. 21. 3). In consequence of this noble gift, and of others previously bestowed, Herod built in honour of Cæsar a splendid temple of white marble at Paneas. Josephus thus describes the place:—'This is a very fine cave in a mountain, under which there is a great cavity in the earth, abrupt, deep, and full of water. Over it hangs a vast mountain; and under the cavern rise the springs of the river Jordan. Herod adorned the place, which was already a very remarkable one, still farther, by erecting this temple, which he dedicated to Cæsar' (*Ant.* xv. 10. 3.) At a later period the city of Paneas was included in the territory of Philip (Luke iii. 1), who rebuilt or enlarged it, and gave it the name *Cæsarea*, in honour of the Emperor Tiberias Cæsar, adding *Philippi* to distinguish it from the Cæsarea on the sea-coast (Joseph. *Ant.* xviii. 2. 1; *B. J.* ii. 9. 1.) But the name Paneas had become too deeply-rooted in the language of the country to be changed by the will of a prince. It clings to the place still under the Arabic form *Baneâs*, while the Greek name has been long forgotten.

Baneâs occupies one of the most picturesque sites in Syria. A broad terrace on the mountain-side looks out over the rich plain of Hûleh, westward to the castellated heights of Hunîn. Behind it rises, in bold, rugged peaks, the southern ridge of Hermon, wooded to the summit. Two sublime ravines descend from the ridge, having between them a conical hill more than a thousand feet in height, and crowned by the ruins of the castle of Subeibeh. On the terrace at the base of this cone lie the ruins of Cæsarea-Philippi. The terrace is covered with groves of evergreen oak and olive trees, with intervening glades of the richest green turf, and clumps of hawthorn and myrtle here and there. A cliff of ruddy limestone, nearly 100 feet high, rises on the north side of the ruins. At its base is

a cave, whose mouth is now almost choked up with the debris of ancient buildings, and fragments of the overhanging cliff. From the midst of these ruins, and from numerous chinks in the surrounding rocks, the waters of the great fountain gush forth. They collect a short distance below, and form a rapid torrent which leaps in sheets of foam down a rocky bed—now scattering its spray over thickets of oleanders, and now fretting against fallen columns. The fountain was the parent of the city; and the cave beside it was the sanctuary which gave the city its ancient name *Paneas*. In Greece the worship of the Silvan Pan was always associated with caves and grottos; and the Grecian settlers in Syria soon made this spot a shrine of their favourite deity. It is highly probable, however, that there had been a Canaanitish sanctuary here at a still earlier date. Dr. Robinson suggests that it may be that 'Baal-gad, in the valley of Lebanon, under Mount Hermon,' which formed the northern limit of Joshua's conquests (Josh. xi. 17); and which appears to have been in that remote age what Dan subsequently became, the recognised border city of Palestine. A comparison of Josh. xii. 7; xiii. 5; Judg. iii. 3; 1 Chron. v. 23, proves that Baal-gad could not have been very far from this place; and until some farther light is thrown upon the subject; we may at least suppose that by this noble fountain, in the midst of this magnificent scenery, the old Syrians established the worship of one of their Baals. At this same spot the temple of Herod was built. Its ruins are now partly buried in the cave, and partly strewn around its mouth. In the face of the cliff above are several sculptured niches, with Greek inscriptions attached to them. The longest of the inscriptions tells us that the little niche over it was consecrated by a priest of Pan. Thus, as the favourite Greek deity Pan had superseded the Syrian Baal, so the Roman hero-god supplanted Pan.

Our Lord appears to have spent some time in this romantic and interesting region. It was here, probably beside the fountain, Peter confessed his belief in Christ's divinity; and it was here Christ made that remarkable declaration, which has given rise to so much bitter controversy, and which has formed the innocent cause of such unwarrantable assumptions—'Thou art Peter, and upon this rock I will build my church' (Matt. xvi. 18). A few days afterwards Christ took three of his disciples, 'and leadeth them up into an high mountain apart, and was transfigured before them' (Matt. xvii. 1, 2). There cannot be a doubt that that mountain was one of those peaks of Hermon which tower over Cæsarea-Philippi. It was in this region also he cast the devil out of the poor lunatic boy; and we can thus understand the full force of the rebuke administered to his disciples at the time—'If ye have faith as a grain of mustard-seed, ye shall say unto *this mountain* (Hermon), Remove hence to *yonder place* (probably pointing down into the deep valley of the Jordan), and it shall remove' (Matt. xvii. 20).

After the destruction of Jerusalem, Titus amused the inhabitants of Cæsarea by the exhibition of games and spectacles, and some of the poor Jews who had been captured, were there compelled to fight with each other, and with wild beasts, to gratify the tastes of their brutal conquerors (Joseph. B. 7. vii. 2. 1.) In the fourth century its old name was again in common use (Euseb. *Hist. Ecc.*

vii. 17). Jerome confounds it with the city of Dan or Laish (Comm. in Ezech. xxvii. 18); and in this error he is followed by Winer (*R. W.*, s. v.), and by Dean Alford (*Greek Test.*, Matt. xvi. 13).

Above Baneás, on the top of a lofty conical hill, stands the castle of Subeibeh, one of the largest and strongest fortresses in Syria. It is of Phœnician origin; and was probably intended as a defence for the Phœnician possessions in the plain of Dan, and for the city and shrine of Paneas. It is frequently referred to in connection with the history of the crusades; but it has been deserted for two centuries. Baneás itself is now a wretched village of some forty houses huddled together in a corner of the old citadel. The ruins cover a wide space. The most conspicuous ruin is the citadel—a large quadrangle surrounded by a massive wall, with heavy towers at the angles and sides. Great numbers of granite and marble columns and sculptured stones are strewn over the site, shewing its former grandeur.—J. L. P.

CAGE. This word occurs Jer. v. 27, as the translation in the A. V. of כְּלוֹב; but this word denotes rather a trap or snare for catching birds. [FOWLING.] In Rev. xviii. 2, *cage* is given as the reading of φυλακή, in this case being used in the sense of a prison.—†

CAHANA B. TACHLIFA, the celebrated Hagadist, was born at Pum-Nahara about 330 A. D. He prosecuted his early studies under Raba, whom he always regarded as the highest authority in matters affecting the law, and when his revered teacher died (351), Cahana returned to his native place, where he continued to be a diligent student in a school of his own formation till the year 397, when he was created rector of the academy of Pum-Badita. This distinguished office he held for sixteen years, till his death in 413. The value of the services which this renowned teacher of the law rendered to Biblical studies chiefly consists in his having carefully compiled and edited a most important Hagadic work, called *Pesicta of Rab Cahana* (פְּסִיקְתָּה רַבֵּי כַהֲנָה), comprising a cycle of lessons, both from the Pentateuch and the Prophets, for all the festivals and principal Sabbaths of the year, and embodying the traditional explanation of these portions of Scripture. This Midrash, which consisted of twenty-nine sections (each one of which, when taken from the Pentateuch, was called מַדְרַשׁ, or פְּסִיקָה, פֶּסֶק, פְּסִיקָה, and, when from the Prophets, was denominated מִדְרַשׁוֹתָהּ, פְּסִיקְתָּה; comp. Rashi on Jer. xl. 1), is now lost in its original form, but nearly two hundred fragments of it have been preserved in the *Midrash Yalkut* [see CARA SIM-EON], where they are printed and indicated in the margin by the term *Pesicta* (פְּסִיקְתָּה). An anonymous writer re-edited this work of Cahana about the year 846 A. D., under the name פְּסִיקְתָּה רַבְתֵּי, and intermixed with it portions from another Hagadic work, called *Jelamdenu*. This new edition was first published in Prague 1656; the best edition is that of Wolf Tssen, Breslau, which is more correct than the others, and is also accompanied by a critical commentary. For the importance of this work to Biblical criticism and exegesis, we must refer to the articles HAGADA and MIDRASH, and for more information about Cahana and his labours, to the very able and elaborate analysis of Zunz, *Die Gottesdienstlichen Vorträge der*

Juden, Berlin 1832, pp. 185–226, 239–251; Fürst, *Kultur-und-Literatur Geschichte der Juden in Asien*, Leipzig 1849, pp. 71, 217–222, 254; *Bibliotheca Judaica*, ii. pp. 159–161.—C. D. G.

CAHEN, SAMUEL.—This celebrated Jewish expositor of the Old Testament was born in Metz, August 4, 1796, of very poor parents. He began his studies by becoming a *Bachor* (בַּחֹר), diligent student of the Talmud, but was obliged to quit his parental roof in consequence of poverty, and went to Mayence, where the literati Gerson, Lévy, Terquem, Creznach, etc., became his fellow-students and teachers. He thence went to Verdun, where he became the private tutor of a highly respectable family, and where, at the same time, he prepared himself for academic honours, which he soon obtained in a highly creditable way. In 1822 he accepted the professorship of German in an academy at Versailles, which he soon relinquished for the office of secretary to the celebrated Alphonse de Beauchamp, and in 1824 was made Director of the Consistorial School at Paris, where he published his *מקרא קודש* *Cours de lecture hébraïque suivi de plusieurs prières, avec traduction interlinéaire, et d'un petit vocabulaire hébreu-français*, Metz 1824, of which a second edition appeared in 1833. His richly endowed mind and great knowledge of Hebrew with its cognate languages, and of Jewish literature, were now almost entirely devoted to the elucidation of the word of God, the result of which was given to the student of the Sacred Scriptures in 1831 in the first volume of his gigantic Biblical commentary, under the title of *La Bible, traduction nouvelle, avec l'hébreu en regard, accompagné des points-voyllés et des accents toniques, avec des notes philologiques, géographiques, et littéraires, et les principales variantes de la version des septante et du texte samaritain*. To render this work as complete as possible, Cahen engaged the assistance of some of the most distinguished Jewish scholars, viz., *Munk, Terquem, Gerson, Lévy, Dukes*, and others. The whole was finished 1851, consisting of eighteen volumes. As might have been anticipated from these men, the commentary is a store-house of learning, and the student of the Old Testament will find important lore in the notes of and appendices to this remarkable production such as he will meet with nowhere else. The tendency of the commentary is uneven, in some places it is conservative, and in others destructive. Thus, Gen. xlix. 11, Cahen renders 'until he come to Shiloh,' taking Judah as the subject and Shiloh as denoting the city in the tribe of Benjamin (Josh. xviii. 1; 1 Sam. iv. 3), which has been done by some commentators of the middle ages [SHILOH], whereas Is. liii. 1, he admits is a Messianic prediction. Cahen died in Paris on the 8th of January 1862, and was followed to the grave by men of various sects and ranks.—C. D. G.

CAIAPHAS (Καϊάφας), called by Josephus (*Antiq.* xviii. 2, §2) Joseph Caiaphas, was high-priest of the Jews in the reign of Tiberias Cæsar (Luke iii. 2). We learn from Josephus that he succeeded Simon the son of Camith (about A.D. 27 or 28), and held the office nine years, when he was deposed. His wife was the daughter of Annas or Ananus, who had formerly been high-priest, and who still possessed great influence and control in sacerdotal matters, several of his family successively holding the high-priesthood. The names of Annas

and Caiaphas are coupled by Luke—'Annas and Caiaphas being the high-priests;' and this has given occasion to no small amount of discussion. The only opinions worth notice are the one cited under ANNAS, viz., that while Caiaphas was the high-priest recognised by the Roman authorities, Annas was the high-priest recognised by the Jews as enjoying that office *de jure divino*; and the opinion, that Caiaphas was the high-priest, but that Annas was his vicar or deputy, called in the Hebrew, סַגָּן *sagan*. That office cannot be thought unworthy of a man who had filled the pontifical office, since the dignity of *sagan* was also great. Thus, for instance, on urgent occasions he might even enter the Holy of Holies (Lightfoot, *Hor. Heb.* ad Luc. iii. 2). Nor ought it to seem strange or unusual that the vicar of a high-priest should be called by that name. For if, as it appears, those who had once held the office were ever after, by courtesy, called high-priests, with greater justice might Annas, who was both a pontifical person and high-priest's vicar, be so called. In fact, the very appellation of high-priest is given to a *sagan* by Josephus (*Antiq.* xvii. 6, 4). See the commentators on Luke iii. 2; particularly Hammond, Lightfoot, Kuinoël, and Bloomfield.

Caiaphas is the high-priest who rent his clothes, and declared Jesus to be worthy of death. When Judas had betrayed him, our Lord was first taken to Annas, who sent him to Caiaphas (John xviii. 13), who perhaps abode in another part of the same palace. What became of Caiaphas after his deposition in A.D. 38, is not known. (ANNAS.)

CAIN (קַיִן) *Haggayin*, *The Cain*, Sept. Ζακαρία, Alex. Ζαρωκελμ, a town in the plain of Judah (Josh. xv. 56). It has not been identified. Van de Velde suggests the present Yekin, or Yeikin, south-east from Hebron (Robinson, II. 449); but if any weight is to be attached to the conjunction of Cain with Gibeah in the narrative of Joshua, we must seek Cain elsewhere than to the south-east of Hebron.—†

CAIN (קַיִן; Sept. Κάϊν, Joseph. Κάϊς), the eldest son of Adam and Eve, the first-born of the human race (Gen. iv. 1). The name is traced by the sacred historian to the verb קָנָה, to appropriate, to possess, to obtain. Eve bare Cain, and said, 'I have obtained (קָנִיתִי) a man, Jehovah (or with the help of Jehovah).' In this case קַיִן is equivalent to *possession*; as if Eve, expecting the fulfilment of the promise, had in the exuberance of her joy after her pangs had passed, imagined that her child was the very deliverer promised, and had exclaimed, 'Possession! I have obtained a man,' etc. Comp. the use of קָנִיתִי in Lev. xxii. 11; Gen. xxxvi. 6; Ps. civ. 24. Some prefer the meaning of *product* or *creature* from קָן, Arab.

قَان to *make* or *produce*; so that Eve's exclamation is tantamount to 'I have produced what is worthy of being called production, an actual being,' (Knobel, *in loc.*); but this seems less probable than the former. As for the attempt to trace the word to קַיִן, a *lance* or *spear*, and to find in it an allusion to the invention of smithwork by the Cainites, it is a mere gratuitous conjecture, and palpably a contrivance to serve a preconceived hypothesis.

The history of Cain, as given by the sacred his-

torian, is a melancholy one. He is presented as a sullen, self-willed, and self-confident man, of an arrogant temper and vindictive spirit; who would neither humble himself before God nor patiently endure the want of that approval which he had not cared duly to seek. He followed the occupation of a tiller of the ground; and despising the ordinance which required sacrifice as the ground of acceptable worship, he brought only a thank-offering to God of the produce of his field; thereby, instead of confessing himself a sinner and seeking acceptance as of grace, coming to God simply as his superior, to whom he owed a sort of feudal homage. Of this God shewed his disapprobation, whilst he shewed his acceptance of the sacrifice offered by Abel, who 'brought of the firstlings of his flock, and of the fat thereof.' In what way this was done we are not informed; but it may have been by sending down fire from heaven to consume the sacrifice of Abel, while the offering of Cain was left untouched (which is the common opinion), or Jehovah himself may have appeared, and in person announced his mind to the worshippers, which is in keeping with iii. 8, and with what immediately follows in iv. 6 ff. To Cain, mortified and rendered sullen by the preference thus shewn to his younger brother, Jehovah appeared, and expostulated with him, shewing him that he had no occasion for displeasure; that if he were a sinless being he would be so accepted, but if he were a sinner there was the proper offering for sin at hand; and that if he would follow the course which was proper and needful he should still retain that pre-eminence over his brother to which his birthright entitled him (Alexander, *Connection and Harmony of O. and N. T.*, second ed., p. 341). Cain, however, was not to be thus reasoned with; and finding himself alone with his brother in the field (whether by accident or by his own contrivance does not appear*) his evil passions got the mastery of him, and he imbrued his hands in his brother's blood. For this God pronounced a curse upon him, and sent him forth as 'a fugitive and vagabond upon the earth;' a statement which some suppose to allude to his following a nomadic life, but which is rather to be taken as descriptive of the restlessness superinduced by a consciousness of his crime and his being estranged from the abodes of the Adamic family; for we find from a subsequent notice (ver. 17) that Cain did not lead the life of a nomad. As he dreaded vengeance from

* Many interpreters are under the conviction that something is wrong in the Masoretic text at the beginning of ver. 8. The word יאמר cannot be translated 'he talked,' the proper word for which is דבר. The LXX. and other ancient versions follow the Samaritan text, which inserts נלכה הישרה, 'let us go to the field,' as the object of the יאמר, but this reading is not critically stable. Böttcher (*Collect. Hebr.* p. 116) suggests a correction of יאמר for ישמר, 'And Cain observed,' watched with hate and vindictive feeling 'his brother Abel;' and this is approved by Knobel and Bunsen. Tuch, Baumgarten, Delitzsch, and Drechsler, follow Ibn Esra in retaining the received reading, and render 'Cain told it (i.e., what had happened) to Abel,' etc. *Comp. Exod.* xix. 25; 2 Chron. xxxii. 24, for a similar omission of the 'it' after אמר.

the other members of his family, perhaps the posterity of Abel, 'the Lord set a mark on Cain, lest any finding him should kill him,' and at the same time threatened with the severest retribution any who should attempt this (ver. 15). What this 'sign' (אֹת) was, interpreters are not agreed. The prevailing opinion that it was a mark put on Cain by which he might be recognised can hardly be retained; it is in itself improbable, and to convey this meaning we should have had עלקין or בקין and not לקין. Many distinguished interpreters understand it of a pledge or token which God gave Cain to assure him of safety; but did Cain need any such beyond God's own word personally conveyed to him? and does not the connection with the preceding clause necessitate the conclusion that the sign was to serve as a means of *detering* any who might seek to avenge Abel's death from killing Cain, not as a means of *assuring* Cain of safety. Bunsen conjectures that the mark was the horror which the sight of the restless, conscience-stricken murderer inspired in every bosom, and which would restrain the hand of vengeance, either by reminding of the fate which the shedding of human blood entails, or by shewing that Cain was already sufficiently punished by being left to the vengeance of God; but it may be doubted if אֹת can be taken thus widely. Knobel thinks God gave a sign from

heaven for Cain's behoof (לקין comp. ix. 3), accompanied, probably, with a proclamation of his prohibition of all attempts against Cain's life; and on the whole, this seems the preferable view. An outcast from the rest of the Adamic family, Cain travelled eastwards, and settled in the land of Nod, the land of wandering or exile; which it is in vain to seek to identify with any particular locality. Here he settled and built a city, which he called after the name of his son Enoch, born to him subsequently to his settlement in the land of his exile. According to tradition, the name of Cain's wife was Sava (Epiphanius, *Opp.* i. 287). Of the posterity of Cain the sacred writer gives a list to the sixth generation (ver. 18). He also mentions as their social characteristics that, though Cain built a city, among them was found the first who followed a nomadic life; that among them were found the fathers of instrumental music, and the first workers in metal; and that with them the vicious practice of polygamy took its rise; they are represented, in short, as possessing some of the advantages, and with these some of the evils of civilization. By some recent critics the attempt has been made to identify the list of the Cainites in Gen. iv. 18 with the first decade in the list of the Sethites in v. 6 ff.; but for this there is no foundation, except in the alleged similarity of the names Cain and Caiman, Irad and Jared, Methusael and Methuselah, Mehujael and Mahalaleel occurring in both; an argument which is of force only on the supposition that in two collateral lines of descent from the same parent stock the occurrence of similar names is an impossibility. But so far is this from being the case, that even were the names the same (which they are not), the fact would only accord with what constantly happens in analogous cases. The whole tenor of the narrative leaves the conviction on the mind that the sacred writer *intends* to mark the distinction in condition and character as well as descent of the Cainites and

Sethites. For the Rabbinical traditions concerning Cain, see Otho, *Lex. Rabbinico-Philol.* sub vocc. *Cain* and *Uxor*.—W. L. A.

CAINAN (קַיִן, *possessor*; Sept. Καϊνᾶν; N. T. Καϊνᾶν). 1. Son of Enos, and father of Mahalaleel (Gen. v. 9; 1 Chron. i. 2). 2. Son of Arphaxad, the son of Shem, and father of Salah. His name is wanting in the present copies of the Hebrew Scriptures; but is found in the Septuagint version of Gen. x. 24; xi. 12, and in Luke iii. 36. As the addition of his generation of 130 years in the series of names is of great chronological importance, and is one of the circumstances which render the Septuagint computation of time longer than the Hebrew, this matter has engaged much attention, and has led to great discussion among chronologers. Some have suggested that the Jews purposely excluded the second Cainan from their copies, with the design of rendering the Septuagint and Luke suspected; others, that Moses omitted Cainan, being desirous of reckoning ten generations only from Adam to Noah, and from Noah to Abraham. Some suppose that Arphaxad was father of Cainan and Salah, of Salah naturally, and of Cainan legally; while others allege that Cainan and Salah were the same person, under two names. It is believed by many, however, that the name of this second Cainan was not originally in the text of Luke, but is an addition of inadvertent transcribers, who, remarking it in some copies of the Septuagint, added it (Kuinoël, *ad Luc.* iii. 36). Upon the whole, the balance of critical opinion is in favour of the rejection of this second Cainan. Even Hales, though, as an advocate of the longer chronology, predisposed to its retention, decides that we are fully warranted to conclude that the second Cainan was not originally in the Hebrew text, and the Septuagint versions derived from it. And since water cannot rise to a level higher than that of the spring from which it issues, so neither can the authority of the N. T. for its retention, rise higher than that of the O. T., from which it is professedly copied, for its exclusion (*Chronology*, i. p. 291). Some of the grounds for this conclusion are—1. That the Hebrew and Samaritan, with all the ancient versions and targums, concur in the omission; 2. That the Septuagint is not consistent with itself; for in the repetition of genealogies in 1 Chron. i. 24, it omits Cainan and agrees with the Hebrew text; 3. That the second Cainan is silently rejected by Josephus, by Philo, by John of Antioch, and by Eusebius; and that, while Origen retained the name itself, he, in his copy of the Septuagint, marked it with an obelus as an unauthorized reading.—J. K.

CAKES. [BREAD].

CALAH (קַלְחָ; Sept. Χαλάχ). In Gen. x. 11, 12, we read that Asshur went out of the land of Shinar, or, as the margin renders it, he (Nimrod) went out of the land of Shinar to Asshur, 'and builded Nineveh and Calah, and Resen between Nineveh and Calah.' The Hebrew will scarcely bear the marginal reading; but, however this may be, we learn that Calah was not far distant from Nineveh. These cities all lay within ancient Assyria, which appears to have included the rich plain on both banks of the Tigris, between the mountains of Armenia on the north, and Babylonia on the

south. Strabo mentions a province of Assyria called *Calachene* (*Geog.* xi., p. 530; and xvi., p. 736), a name which may perhaps be derived from the old city of Calah.

Within the boundaries of Assyria proper there are three great groups of mounds indicating the sites of ancient cities; these are Kouyunjik opposite Mosul, Nimrûd, twenty miles farther south on the left bank of the Tigris, and *Kalah-Sherghat*, forty miles south of the latter on the right bank of the river. It is now established beyond doubt that the mounds opposite Mosul mark the site of Nineveh. The name and the situation of *Kalah-Sherghat* suggest its identity with the ancient Calah. Resen was situated between Nineveh and Calah, and is in all probability the modern Nimrûd.

Rawlinson maintains that Calah was at Nimrûd, chiefly on the authority of an inscription on the celebrated obelisk discovered at that place by Mr. Layard, and now in the British Museum (Vaux, *Ninev. and Persp.*, p. 262, sq.) The names upon these monuments cannot be accurately determined, and some eminent Assyrian scholars have questioned Rawlinson's views (Layard, *Ninev. and Bab.*, pp. 354, 639; Bonomi's *Nineveh*, pp. 99, sq., 389). The position of Nimrûd does not answer to the notice given in the Bible. Resen was situated between Nineveh and Calah. If we locate Calah at Nimrûd, we do not leave sufficient space for Resen, which is described as a great city; and there is not a trace of ruins in the district.

Kalah-Sherghat was one of the most ancient places in Assyria. On a cylinder discovered there is an inscription recording the fact, that the King Tiglath-pileser restored a monument which had been taken down sixty years previously, after having stood for 641 years. It must, therefore, have been founded about B. C. 1870 (Rawlinson's *Herodot.*, i. 457, 460; Vaux, *Nin. and Pers.*, p. 13). On the bricks and pottery found at Kalah are the names and titles of the earliest known Assyrian kings. The name *Asshur* is found among them. Rawlinson supposes this to be the old name of the city; but may it not be that of its founder? (Rawlinson, *Herodot.* i. 588, sq.) Calah is situated on the right bank of the Tigris, in the midst of beautiful meadows, which are abundantly watered by a small tributary stream. The mound is one of the largest in Assyria, measuring a quarter of a mile in circuit, and sixty feet in height (Bonomi's *Nineveh*, p. 103).—J. L. P.

CALAMUS. [KANEH, KANEH BOSEM].

CALASIO, MARIO DI, was born in 1550 at a small town in Abruzzo, from which he takes his name. He devoted himself to the study of Hebrew, and became professor of that language at Rome. His first publication was a Hebrew grammar; this was followed by a Lexicon; and then he gave forth his great work, entitled, *Concordantia Bibliorum Heb. et Lat.*, 4 vols. fol., Rom. 1621. The basis of this work is the Hebrew Concordance of Rabbi Nathan, first printed at Venice in 1523, and again at Basle 1581. Calasio corrected some of the errors in this work, and added, '1. A Latin translation of the Rabbi's explanations, with additions of his own; 2. The Rabbinical, Chaldaic, Syriac, and Arabic words derived from or agreeing with the Hebrew root in signification; 3. A literal version of the Hebrew text; 4. The variations between the Vulgate and Septuagint versions;

and 5. The proper names of men, rivers, mountains, etc.' (Horne, *Introd.*, II. 2, p. 365). A splendid edition of this work was issued in London in 4 vols. fol., 1747, edited by the Rev. W. Romaine; it is said, however, to contain many errors, and to be somewhat affected by the editor's Hutchinsonian leanings. Calasio died in 1620, before his work was published; it appeared the following year under the auspices of the Pope, by whom the expenses of the publication were defrayed.—W. L. A.

CALDRON. This is the rendering in the A. V. of four different Hebrew words—(1.) קַלְחָת, I Sam. ii. 14; Mic. iii. 3; (2.) סִיר, Ezek. xi. 3, 7, 11; pl. סִירוֹת, Jer. lii. 18, 19; rendered *pot* or *pots*, Exod. xvi. 3; I Kings vii. 45; 2 Kings iv. 38; Ps. lviii. 9; Jer. i. 13; Ezek. xxiv. 6; Zech. xiv. 20, 21; *pans*, Exod. xxvii. 3; (3.) הָדָר, 2 Chron. xxxv. 13; (4.) אֲנַמְוִן, Job xli. 12 [20], a mistranslation. [AGMON.]

The utensil thus designated was a vessel used for the purposes of cooking, and also in the temple service. It was probably of copper. Copper caldrons have been found among the Nineveh remains, some of which are about 2½ feet in diameter, by 3 feet deep (Layard *Nin. and Bab.*, p. 177). 'Caldrons are frequently represented as part of the spoil and tribute in the sculptures of Nimroud and Kouyunjik. They were so much valued by the ancients that it appears from the Homeric poems, that they were given as prizes at public games, and were considered amongst the most precious objects that could be carried away from a captured city. They were frequently embossed with flowers and other ornaments. Homer declares one so adorned to be worth an ox' (*Ibid.*, p. 180; comp. p. 588). Caldrons taken by the Babylonians from Jerusalem (Jer. lii. 18) are represented in the *Monuments of Nineveh*, 1st ser. pl. 24, and 2d ser. pl. 35.—W. L. A.

CALEB (כָּלֵב; Sept. *Χάλεβ*. Gesenius (*The*, p. 684) says, 'perhaps it means *dog*, i. e. כָּלֵב';

Arab. كَلْب'. Fürst (in his new *Lex.* i. 593)

explains by '*Der Kühne, Tapfere*, d. h. *Held*.' Meier controverts Gesenius, and gives the sense as Fürst renders it, '*Der tapfere Held*, the valiant hero).

1. Taking the probable chronological order, we have in I Chron. ii. 18, 19, and 42, certainly, and in 46, 48, possibly, the earliest CALEB mentioned as the son of Hezron, who was son of Pharez, and grandson of the patriarch Judah. This Caleb was great-uncle of Nahshon, 'the prince of the children of Judah,' who was the illustrious brother of Aaron's wife Elisheba. A question has been raised, whether Caleb's wives were three or two. According to our version there were three, Azubah, Jerioth (verse 18), and Ephrath, 'which bare him Hur,' the grandfather of the great artificer Bezaleel (verse 19); but there is much MS. variation.

On the whole, that seems to us the most tenable opinion, and most supported by the best reading of the Hebrew Text, which assigns to Caleb, like his great ancestor Jacob, two wives, Azubah and Ephrath, and (as it would further seem from verses 46 and 48) two concubines, Ephah and Maachah;

in one respect, undoubtedly, Caleb has the advantage in this comparison; having but one wife at a time, he escaped the domestic troubles which so much afflicted Jacob—'When Azubah was dead, Caleb took unto him Ephrath.' The chapter before us, in its genealogical fragments, has preserved to us the names of upwards of a dozen sons, besides their children, some of whom are mentioned as men of wealth and power.

2. Still following the chronological order, we must place as second on our list CALEB, the son of Hur, whose name occurs I Chron. ii. 50. This Hur is described as 'the first-born of Ephrath' (or Ephrath, as she is called in verse 19), consequently this second CALEB was grandson of Caleb the son of Hezron, through his second marriage; he was also the brother of Uri (comp. vv. 20 and 50), and therefore uncle of the artificer Bezaleel—the contemporary of the great Caleb, who thus appears to come later by one generation. [See No. 3.] The second Caleb, like his ancestral namesake, was through his sons Shobal, Salma, and Hareph, the father of a numerous and wealthy race; the first and second of these sons are called by the chronicler '*the fathers*' of the cities of Kirjath-jearim, and the more illustrious Bethlehem; by which is undoubtedly meant [as Vatablus explains, in *Critic. Sacr.*] that they were the princes or chiefs of 'the families,' or clans—*Mishpachoth*—which settled there after the conquest of Canaan. We come now to the

3. CALEB, 'the son of Jephunneh,' who is designated by this patronymic in no less than sixteen of the twenty-eight passages in which reference is made to him in the Scriptures; in three of the sixteen (See Num. xxxii. 12; Josh. xiv. 6 and 14) the additional designation הַקֵּנִזִי, 'the Kenezite,' is applied to him, the notice of which we postpone to the end of this article. This eminent man is first mentioned in the mission of the spies [Num. xiii. 6], whom Moses, at God's command, despatched, from the wilderness of Paran, to reconnoitre the land of Canaan, in the second year after the exodus. He was one of the twelve 'rulers,' נְשִׂיִים, or 'heads,' רֹאשִׁים, of the children of Israel, who comprised the mission, and he represented the illustrious tribe of Judah on this great occasion. Besides his parentage and his tribe, we know nothing of his antecedents; it is often the way of Holy Scripture to introduce its great men abruptly to our view. 'Elijah the Tishbite,' and 'Caleb, the son of Jephunneh,' appear suddenly on the stage of their great enterprises, without eulogy or description. But of Caleb it is not unreasonable to suppose that, after the lawgiver and his brother, none but Nahshon, 'the captain of the tribe of Judah,' out of all the host of Israel, excelled the son of Jephunneh in personal rank and dignity; hence his selection to represent the foremost and largest of the tribes in the most important national service which had yet arisen. The manner in which he discharged this duty proves him to have been possessed of moral qualities, which were even more eminent than his social and political rank. His eminent services are described in Num. xiii. 6-30; xiv. 6-9; (comp. I Maccab. ii. 56); 24, 30; xxxii. 12; Deut. i. 36; the divine favour towards him is instanced in Num. xiv. 38; xxvi. 65; Josh. xiv. 6-15; xv. 13, 14; Judg. i. 20; Josh. xv. 15-19; Judg. i. 12-15. One other pas-

sage occurs, which we here mention, though somewhat out of its order, as describing both good service and honourable reward, Num. xxxiv. 18, 19. In this appointment of Caleb to act with 'the princes of the tribes,' as one of the commissioners for dividing Canaan after its conquest, there is a twofold fitness and force; he was the only man, except Joshua, of the old generation, who respected God's reverent gift of the land, and (except the commander-in-chief) he was the only old man left to set foot in it, after the long and fatal migration of the wilderness.* Having fully recounted the great services and the providential reward of Caleb, the Scripture is silent about the last years of his noble life; these were probably spent in the neighbourhood of Hebron in the possession of a hale old age. Full of honours and full of days, in the possession of undimmed faculties, and to the last enjoying the respect and friendship of the illustrious Joshua, his companion in duty, trial, and heaven-gifted prosperity, he departed to the rest, of which the Canaan he had helped to conquer was but a type.† Besides his daughter Achsah, he had at least three sons, whose names, with that of a grandson, are preserved in I Chron. iv. 15. We cannot close this article without allusion to two of the chief questions which have been raised on the subject of it. The first of these, touching *the identity of the first and third Calebs*, (the son of Hezron and the son of Jephunneh), we should not have referred to, if it had not lately received the sanction of so respectable a writer as Keil (*on Joshua*, page 356, Clark's Tr.) This is not a modern question. J. Buxtorf the younger (in *Historia Arca fœderis*, ii. 2) discusses it, and advances the opinions of the leading Hebrew doctors, D. Kimchi, Raschi, and Aben Ezra. The first of these discards the opinion of the identity, from the chronological difficulties which it produces; and

* Joshua *shared* the divine favour, as he had also encountered the dangers of fidelity, with his friend Caleb: but certain passages of their beautiful history seem to indicate that Caleb was foremost, if not *alone*, in some particulars of the noble service,—see especially Num. xiii. 30, where it is *only* Caleb who 'stills' the infuriate people; so again in xiv. 24, he *alone* has the wonderful honour of the divine approbation, 'But my servant Caleb had another spirit with him, and hath followed me fully;' and again in Moses' recapitulation of Jehovah's words to the men of the next generation, Deut. i. 36, Caleb comes foremost (and in one sense alone) in the divine commendation: and, consistently with this pre-eminence, in all the passages where the two worthies are mentioned together, Caleb's name precedes Joshua's, except in two instances, Num. xiv. 6, and Josh. xiv. 38; but even this latter instance is in observable contrast with the words of the Lord which occur just before in the 30th verse. It is in strict accordance with this priority of honourable mention, that for Caleb was reserved the unique reward of receiving an inheritance in the promised land *before* any of the tribes were endowed with their possessions; while Joshua's inheritance was only given to him 'when they had made an end of dividing the land.' Comp. Josh. xiv. with xix. 49.

† St. Jerome, amongst other writers, places the sepulchre of Caleb in the vicinity of Hebron. See Corn. a Lapide *on Joshua* xiv. 15.

the last says plainly, 'according to the literal meaning of Scripture, Caleb the son of Jephunneh, is *not* the same man as Caleb the son of Hezron, for grave reasons, which the intelligent will understand;' with this opinion of the Jewish doctor, Drusus expresses his emphatic agreement (*on Joshua* xiv. 6). To us the chronological argument seems decisive against the alleged identity. Hezron, Judah's grandson, was one of the company (See Gen. xlv. 12) which migrated with Jacob into Egypt; so that, on the principle of identity, Caleb could not have been less than 120 years old at the time of the exodus, *i.e.*, about three times as old as he declares himself to have been. Moreover, the great artificer Bezaleel must have been of about the same age with the son of Jephunneh; in I Chronicles, however (ii. 20), this Bezaleel is registered as the great grandson of our first Caleb, the son of Hezron. The second question we propose briefly to consider is on the meaning of the epithet 'Kenezite,' as applied to either Caleb or his father Jephunneh. Now, in Genesis xv. 19, 'the Kenazites' are mentioned as a Canaanite tribe; while in the same book, chap. xxxvi. v. 11, 15, 'Kenaz' occurs as an Edomite name; from these facts an interesting speculation has been advanced of the *foreign* origin of Caleb. [Smith's *Dict. s. v. Caleb.*] Similarity of names, however, in nations of closely kindred origin (like the Hebrews and the Edomites), is by no means so unusual as to render such a conjecture at all safe. A comparison of the table of 'the generations of Esau,' in Gen. xxxvi., or I Chron. i., with any genealogy of Hebrew names, is sufficient to shew how frequently Edomite and Israelite names are *identical*—Jeush, Korah, Nahath, Kenaz, Zerah, Shammah, Thobal, Manahath, Amram, Ithran, Bela, Ezer, Jobab, and Saul, all occur in the *Edomite* lists; but they are not on that account foreign or less Hebrew; for they can be readily found also in the Israelite lists. The occurrence, therefore, of the proper name 'Kenaz,' and the patronymic 'Kenezite,' in the family of Caleb, is no proof of its Edomite origin. It has been also suggested [Smith's Dictionary, s. v. *Caleb*] that the expression '*God of Israel*,' in Josh. xiv. 14, is 'significant' in this argument; as if Caleb in that verse were regarded as one, who *ab extra* had come over to the worship of Jehovah; but the phrase 'God of Israel' has no such necessary implication. It has such a meaning, no doubt in Ruth ii. 12; but the case of Jabez is more to the point, another worthy of the tribe of Judah (I Chron. iv. 9, 10); now it is impossible to suppose that because *he* is described as calling on '*the God of Israel*,' the sacred writer meant to imply that he did this *as a proselyte*.

The phrase 'Lord God of Israel' of Joshua xiv. 14 is no doubt 'significant,' but the significance is best explained by an unambiguous passage in the previous chap. xiii. 33. The name 'Kenaz' was evidently a favourite one in the family of Jephunneh; probably it was borne by his father, as it seems to have certainly been by his great grandson (I Chron. iv. 15). We regard then the appellation, 'הקנזי,' 'the Kenezite,' as a patronymic, (like 'כלבי,' 'the Calebite'), equivalent to 'בן־קנז,' 'son of Kenaz,' a designation of the illustrious Othniel occurring in these four passages—Joshua xv. 17; Judges i. 13; iii. 9 and 11.

4. CALEB-EPHRATAH occurs in I Chron. ii. 24,

and nowhere else; possibly it was situated near Hebron in the *Negob-Caleb*. There could have been no difficulty in conjecturing that, when the grandsons of Hur were colonising portions of Judah [No. 2], they would bestow the double name of Caleb-Ephrathah on one of their settlements, in honour of two parental names which must have been venerable to them—were it not written in our passage that ‘*Hezron died in Caleb-Ephrathah*.’ We have seen that Hezron migrated with Jacob into Egypt [No. 3]; he most probably, therefore, lived and died in Egypt; hence our difficulty. The

present text is, ‘after that Hezron was dead, **כַּלְבֵּב אֶפְרַתָּה**, in *Caleb-Ephrathah*,’ now the change is not great to **כָּלֵב אֶפְרַתָּה**, *i.e.*, Caleb went to Ephrathah after Hezron’s death: † this would imply that, on the death of his father [in Egypt, say], Caleb went to Ephrathah [*i.e.*, according to Fürst and Gesenius, *Bethlehem*, see Gen. xlviii. 7; Micah v. 2; according to Houbigant and others (with less reason), a place in Ephraim, 1 Sam. i. 1]. Migrations to the promised land from the land of bondage are not incredible, especially in the case of wealthy and powerful men. The Latin Vulgate has *ingressus est Caleb ad Ephrata*, as if the consummation of Caleb’s marriage did not take place until the death of his father; it is, however, against this view that the preposition **אֶל** does not accompany the verb, which it should do to express this meaning; ‡ a construction which the sacred chronicler actually employs in verse 21 **בְּהַצְרֵקוֹ (אֶל-בְּתִמְכוֹר)**.

5. CALEB, South of, **נֹנֵב-כַּלְבֵּב**; *Sept.* Νόβος Χαλέβ; *Vulg.*, Meridies Caleb) 1 Samuel xxx. 14. This was no doubt the district which the great Caleb gave as her dowry with Achsah to the heroic Othniel; the nucleus of it was Debir, or Kirjath-Sepher, which Achsah designates ‘a south land’ (or rather *the land of the south*, **אֶרֶץ הַנֶּגֶב**); comp. Judges i. 15 with i. 11, 12.—P. H.

CALNDAR. [CHRONOLOGY; MONTHS; YEAR.]

CALF. This is the rendering in the A. V. of the Heb. **עֵגֶל**, and Gr. μόσχος, by which, however, is designated rather a young bull or cow [EGHEL]. The proper Hebrew designation of a calf is **בִּרְבֵקָר** (Gen. xviii. 7; Lev. i. 5; 1 Sam. xiv. 32); **עֵגֶל בִּרְבֵקָר** (Lev. ix. 2); **בִּרְפָר** (1 Sam. vi. 7, 10).

CALF-WORSHIP. [MOSCHOLATRY.]

CALIXTUS, GEORGE, a celebrated Lutheran divine of the 17th century, was born in a Schleswig village on the 14th December 1586. His father, the pastor of the place, had been a pupil

of Melancthon’s. After receiving the rudiments of education at Flensburg, he was sent to the University of Helmstadt in his sixteenth year. From 1603 to 1607 he devoted himself to philosophical and philological studies; but from 1607 he applied himself to theology. From 1609 to 1613 he spent his time in travelling through Belgium, France, Germany, and England, consulting libraries and holding disputations. In 1614 he was appointed professor of theology at Helmstadt, a position he occupied till his death, March 19th 1656. His doctrines were moderate Lutheranism, in opposition to the harsh and stiff Lutheranism which had begun to prevail. His theology was wider, deeper, and more philosophical than that of his opponents. He wrote many works of a polemical character relating to theology. After his death appeared *Orationes selecta*, 1660; *Expositiones literales* upon almost all the New Testament books; *Concordia evangeliorum*; *Lucubrations aa quorundam V. T. librorum intelligentiam facientes*, 1665. Many of his MSS. are still unprinted. Among them there is a large collection of letters. As Calixtus was so much suspected and attacked by the narrow Lutherans of his day, he was obliged to write controversial tracts and books in his self-defence. He was accused of Catholicism and of a strong leaning to the Reformed theology. But though attacked and persecuted by men of an unchristian spirit, he maintained his ground, and became influential in relation to the future of Lutheranism. The strength of his mind lay in the department of historical theology. His reading was immense, and he could take a masterly survey of any period of church history. See *G. Calixtus und seine Zeit*, by Henke.—S. D.

CALLISTHENES (Καλλισθένης). An enemy of the Jews who had set fire to the holy gates, and was burnt by the Jews after the defeat of Nicanor (2 Maccab. viii. 33).—†

CALMET, AUGUSTINE, a learned Benedictine, was born at Mesnil-la-Horgne, near Commerç, in Lorraine, in 1672. After some early study at the Priory of Brenil, he removed, in 1687, to the University of Pont-a-Mousson, where he went through a course of rhetoric. In 1688 he entered, in the Abbey of St. Mansui, into the order of St. Benedict; and subsequently completed his philosophical and theological studies in the Abbey of Munster. In 1696 he was studying with a class of learned companions in the Abbey of Moyen-Moutier. From this time we hear of him as an instructor. In 1698 he was appointed tutor in theology and philosophy to the young *alumni* of the last-mentioned abbey. From this employment he was promoted in 1704 to the post of sub-prior of the Abbey of Munster, where, at the head of an academy of a dozen religieus, he diligently pursued biblical theology. The fruit of his learned labours at Moyen-Moutier and Munster were voluminous notes and dissertations on various parts of Holy Scripture, carefully drawn up for the use of himself and his pupils, rather than for publication. It was in deference to the judgment of the Abbé Duguet and the learned Mabillon that he published these commentaries in 1707-1716, in twenty-three volumes 4to, under the title *Commentaire littéral sur tous les livres de l’Ancien et du Nouveau Testament*. This valuable work brought him reputation and promotion. In 1715 he became prior of Lay,

* The **א** of **בא** was occasionally omitted in the haste of copying, as the Masoretes themselves admit, when they correct the **בנר** of Gen. xxx. 11 by their **כר**, **נר**, **בא נר**. Houbigant on 1 Chron. ii. 24.

† The ancient Hebrew text must have so read the passage; for the LXX. translation is *Merà τὸ ἀποθανεῖν Ἐσραμὴ ἤλαθεν Χαλέβ εἰς Ἐφραθά*—‘after that Esrom was dead, Caleb went to Ephrathah.’

‡ See Gesenius, *Thesaurus*, and Fürst, *Hebraisch, Wörterbuch*, s. v. **בוא**.

near Nancy; in 1718 he was appointed by the chapter Abbé of St. Leopold in Nancy, and in the following year he was promoted to the dignity of Visitor of the Congregation of St. Vannes. In 1728 he resigned his priory of Lay, on being chosen Abbé of Senones in Lorraine, on which appointment he entered in 1729. Here he lived in the prosecution of his favourite studies, and in great esteem for his learning, amiability, and candour, until the year 1757, when he died, October 25, having declined a bishopric which Pope Benedict XIII. offered him, at the suggestion of the College of Cardinals. His *Commentaire littéral* was afterwards republished in 26 vols. 4to, and again in 9 vols. folio; and in 1721 abridged by Pierre Guillemin. Rondet published a revised edition of the abridgment at Avignon in 1761-1773.

In 1715, Calmet published the dissertations and prefaces of his Commentary, with 19 new dissertations, in a separate work of five vols. 8vo, entitled (in the first and second editions), *Dissertations qui peuvent servir de Prolegomènes à l'Écriture Sainte, revues, corrigées, considérablement augmentées, et mises dans un ordre méthodique*. The third edition was considerably enlarged and republished under the title of *Trésor d'Antiquités Sacrées et profanes*; Paris, 1722, 3 vols. 4to. This work was so favourably received, that it was translated very soon into Latin, German, Dutch, and English. The Latin version was by J. D. Mansi, Lucca, 1729, in two folio vols.; the German by L. Mosheim, with notes and prefaces of the translator, Bremen, 1738-47, in six vols. 8vo. The English edition was brought out in the year 1726, by Samuel Parker at Oxford. But neither of these works acquired either the celebrity or the durable reception of Calmet's best known publication, first published at Paris, in four vols. 4to, under the title *Dictionnaire Historique et Critique de la Bible*; this work obtained a European circulation, having been translated in England, Holland, Germany, and Italy. The English translation, which first appeared in 1732, in three folios, was republished with much additional matter, as 'Biblical Fragments,' by Mr. Charles Taylor, first in 1793, in quarto. These fragments contain a vast amount of curious information relating to the manners and customs of the East, the natural history of the Bible, extracts from the writing of travellers, etc., all well illustrated by plates. Taylor lived to publish a fourth edition in 1823. The last edition, bearing the date of 1841, and designated as the eighth edition, consists of two vols. of Calmet's original, two more vols. of Taylor's fragments, and one vol. of plates and maps—all in 4to. This once much-prized publication, notwithstanding its elegant getting-up and undoubted worth in some respects, has been superseded by works of sounder and more advanced learning. Of the many other writings which issued from the pen of the industrious Calmet, three should be here mentioned as connected with Biblical literature—(1.) His *Histoire de l'Ancien et du Nouveau Testament*, intended as an introduction to Fleury's *Ecll. History*; (2.) *De la Poésie et Musique des Anciens Hébreux*, Amst. 1723, 8vo; (3.) *Bibliotheca Sacra*, a most copious and useful catalogue of the best books to be read in order to acquire a good understanding of Holy Scripture in every department of biblical literature. This work was originally a pendant to the 'Dictionary;' but the English readers of the 4to edition of that work

were deprived of it by Mr. Taylor, who superseded it by other matter of questionable value in comparison with it. The learned Italian Mansi so highly appreciated Calmet's biblical labours that he translated the whole of his Commentary, Dissertations, and Dictionary (including the *Bibliotheca* and the Supplements) into very readable Latin. This aggregate of ten folio well-printed volumes is the most convenient form in which the learned student can possess Calmet's still valuable biblical works. The following judgment, pronounced by a competent man, on these works of the French divine, we translate from the *Bibliotheca Theologica selecta* of J. G. Walch (iv. 433):—'Let Calmet's Roman Catholic opinions which he occasionally introduced be only put aside, and certain inaccuracies amended, and then his great work is worthy of all praise and recommendation. Rejecting all allegorical interpretation, Calmet, with great painstaking, investigates the literal sense of Holy Scripture; exhibits the divergences of the Greek and Latin, and other versions, from the Hebrew text; and what is obscure and difficult in history, chronology, geography, and criticism, he carefully explains. In his dissertations he has, with much erudition, illustrated various points of interest, and thereby shed much light on the sacred writings.'—P. H.

CALNEH (כַּלְנֶה; Sept. Χαλάννη), or rather CHALNEH, the fourth of Nimrod's cities (Gen. x. 10), and probably not different from the Calno of Is. x. 9, or the Canneh of Ezek. xxvii. 23. According to the Chaldee translation, with which Eusebius and Jerome agree, this is the same place that was subsequently called Ctesiphon. It lay on the Tigris, opposite Seleucia, and was for a time the capital of the Parthians. This ancient opinion respecting Chalneh is rendered probable by the circumstance that the city named Ctesiphon was in the district called by the Greeks Chalonitis (Pliny, *Hist. Nat.* vi. 26, 27; Polyb. v. 45). Ammianus Marcellinus (xxiii. 6, 23) states that it was the Persian king Pacorus (who reigned from A. D. 71 to 107) who changed the name of the city to Ctesiphon; but that name must have been more ancient, as it is mentioned by Polybius. In the time of the prophet Amos, Calneh appears to have constituted an independent principality (Amos vi. 1, 2); but not long after it became, with the rest of Western Asia, a prey to the Assyrians (Is. x. 9). About 150 years later, Calneh was still a considerable town, as may be inferred from its being mentioned by Ezekiel (xxvii. 23) among the places which traded with Tyre. The site of Ctesiphon, or Calneh, was afterwards occupied by El-Madain, *i. e.*, the (two) cities, of which the only remains are the ruins of a remarkable palace called *Tauk-kesra* (see cut 162), some mounds of rubbish, and a considerable extent of massive wall towards the river. The ruined palace, with its broken arch, although it stands on low ground, is a most conspicuous object, and is seen at a considerable distance, in ascending the river, in varied and striking points of view, in consequence of the serpentine course of the stream in this part.—J. K.

Addendum.—Sir Henry Rawlinson, and some other writers on the geography of Babylonia, have endeavoured of late to identify Calneh with *Niffer*. In the Talmud it is stated that Calneh is called Nopher. Now there can be no doubt that Niffer was one of the most ancient sites in Babylonia.

It is situated on the borders of an extensive marsh between the Tigris and Euphrates, about fifty miles south-east of the ruins of Babylon. 'The present aspect of Niffer is that of a lofty platform of earth and rubbish, divided into two parts by a wide channel. Nearly in the centre of the eastern portion are the remains of a brick tower of early construction, the débris of which constitutes a conical

mound rising seventy feet above the plain' (Loftus, *Chal. and Susian*, p. 100, sq.) There are other mounds and traces of ruins around this principal one. The site was explored by Layard, and afterwards examined by Loftus; but no remains of any importance were discovered (Layard's *Nin. and Bab.*, 556, sq.) The arguments of Rawlinson are not sufficient to establish the identity of Niffer and

162. Tauk-kesra.

Calneh. Jerome distinctly affirms that Calneh was called Ctesiphon in his time (*Ad Amos*, 6; Bochart, *Opp.* i. 238); and Rawlinson himself has shewn that Niffer is an ancient name found on Babylonian monuments (*Herodot.* i. 447).—J. L. P.

CALOVIUS, ABRAHAM, a Lutheran divine of the 17th century, was born at Norungen in East Prussia, 1612 A.D. In 1626 he went to the University of Königsberg, and studied four years. In 1634 he went to Rostock; in 1637 he became extraordinary professor at Königsberg; in 1643 he removed to the Gymnasium at Dantzic. At the Thorn Conference, 1645, he came in contact with Calixtus, and appeared against syncretism. In 1650 he received a call to Wittenberg, where he stood in high favour with the Elector, George II. Here he lived, laboured, and wrote till his death in 1686. Many students were attracted to the place by his fame as a theologian; and had it not been for his colleague John Meisner, he would have ruled undisputed master in the University. When he had attained the age of 70 he married his sixth wife, four months after the death of the fifth, at a time when he was so weak as to be able to walk little more than five steps. He had followed to the grave thirteen children, besides the five wives.

Calovius was a violent polemic, a *malleus hæreticorum* in his day. Lutheran orthodoxy was the object of his conservative efforts. But his spirit and temper were opposite to the teachings of Christ. The best known of his works is his *Biblia illustrata*, in four parts or vols. folio, aimed against Grotius. In this commentary all portions of the Bible, without exception, are equally attributed to the Holy Ghost as their author. The work is pervaded by learning and ability; but its tone is excessively dogmatical. We see Calovius as a doctrinal theologian most clearly in his *Systema locorum theologicorum*, 1655-1677, 12 vols.; and his *Apodixis articularum fidei*, 1684; *Theologia naturalis et revelata*, 1646.—S. D.

CALVARY, the place where Christ was crucified. In three of the Gospels the Hebrew name GOLGOTHA (*place of a skull*) is given; and in Luke (xxiii. 33), where we find Calvary in the Authorized Version, the original is not Calvary, but Cranion (*κρανιον*, a skull). Calvaria is the Latin translation of this word, adopted by the Vulgate, from which it found its way into our version. 'It may be well to remind the reader that there are two errors implied in the popular expression 'Mount Calvary.' 1. There is in the scriptural narrative no mention of a mount or hill. 2. There is no such name as 'Calvary.' (Stanley, *Sin. and Pal.*, p. 460, note). For particulars concerning the site of the crucifixion, see GOLGOTHA.

CALVIN, JOHN, the illustrious Reformer, was born at Noyon in Picardy, on the 10th of July 1509; and died at Geneva on the 27th of May 1564. His father Gerard's name was *Chauvin*, which was afterwards Latinized by his son (in the dedication of his first work on Seneca's treatise *De Clementia*) into the more euphonious shape of *Calvinus*. In this article we omit all reference to the vast and various labours of this great man, which contributed so much to change the opinions of mankind, and which have given him an imperishable renown. Even the mention of his polemical and miscellaneous writings would be here out of place; we therefore confine ourselves to a record of his *Biblical Works*. These fill seven of the nine folio volumes of the best and classical edition of his works, which was published at Amsterdam in 1667. The contents of all these volumes are in Latin; but the Latin is by no means Calvin's composition in every instance; many of his exegetical works are, in fact, most carefully prepared* versions

* The accuracy of these Latin versions is avouched by Calvin; for instance, in a short preface to his *Prelections on the Minor Prophets* (Amst. ed. vol. v.)

of his Homilies and Prelections—which he addressed to crowded audiences in vernacular French—rendered into the more enduring form of that classic tongue which made them intelligible to the learned throughout Europe, by the help of a devoted staff of pious scholars whom he had gathered around him at Geneva. These versions were generally, perhaps in every instance but three, carefully revised and prefaced by Calvin himself. In our enumeration of the biblical works of our illustrious author, we propose to classify the contents of the Amsterdam edition into (1) The treatises which Calvin himself wrote and published; and (2), Those which were taken down from his oral delivery, translated into Latin by learned friends of the reformer, and published either (a) with prefaces by Calvin's own hand, or (b) with prefaces by other editors.

1. The treatises which were wholly the production of Calvin are (following the order of the Amsterdam edition)—[1.] *Commentarii in libros Mosis at quidem in Genesis seorsim, reliquis IV. in formam Harmoniæ digestis; necnon in librum Josue.* This work, though arranged the first amongst his collected writings (Amst. ed. vol. 1.), was yet the very last which proceeded from his pen. The dedication to Henry of Navarre bears the late date of Aug. 1st, 1563. Of the greater portion of this work Mr. Horne says:—‘His harmony of the four last books of the Pentateuch has been much and deservedly admired for its ingenuity. The history contained in them forms a distinct part. The rest is comprised under the following divisions—(a) Those passages which assert the excellence of the Law by way of preface; (b) The ten commandments, under each of which are comprehended all those parts of the Law which relate to the same subject, and this it is which forms the great body of the Harmony; (c) The sum of the Law, containing those passages which enjoin love to God and love to our neighbour; (d) The use of the Law; and, lastly, its sanctions and threats.’ *Introduct.*, vol. v. p. 287, 9th ed. The bulk of the work (which Mr. Horne thus epitomises) is preceded by a commentary on Genesis, and followed by one on Joshua. Hengstenberg has edited the best modern edition of the commentary on Genesis, Berlin, 1838. [2.] *Commentarii in Librum Psalmorum* (Amst. ed. vol. iii. pt. 1). The dedication is dated July 23, 1557. This work was translated into French four years afterwards. Tholuck's is the best modern edition of this very valuable commentary, which is marked by some of Calvin's best characteristics of style, lucidness, grasp of the subject, and absence of all affectation in treating it. [3.] *Commentarii in Evox. IV., quorum tres priores in formam Harmoniæ sunt digesti; quartus vero seorsim explicatur, quod pauca cum reliquis communia habeat; necnon in Acta Apostolorum.* The dedication of the Harmony to the magistrates of Frankfort bears the date of August 1, 1555; of the Gospel of St. John, addressed to the municipal authorities of Geneva, January 1, 1553; of the Acts, addressed to the Prince Nicholas Radziwil,

he writes—‘Incredibilis vero mihi res fuisset, nisi, quom mihi postridie recitarent clare vidissem, quæ scripserant [amici nostri optimi] a sermone meo nihil differre * * * tanta fide exceperunt ii quod ex ore meo audierant ut nullam mutationem animadvertant.

Palatine of Wilna, etc., August 1, 1560. The Harmony, which as such is not held in high respect (owing to Calvin's simply grouping like passages of the Evangelists together mechanically, without any order of time, which he supposes the sacred authors neglected), was at once, like all his writings, translated into French; into English by *Eusebius Paget*, 1584; and into German by *Wolfg. Haller*, 1590. The best modern edition is by Tholuck. (Amst. ed. vol. vi. throughout.) [4.] *Commentarii in omnes Epp. S. Pauli Apostoli, atque etiam in Ep. ad Hebraeos, necnon in Epp. Canonicas*; with various dedications to men illustrious in rank or in connection with the Reformers. These commentaries have been praised for the perspicuity and judicious tone of the author—among other critics by the Romanist Father Simon (*Histoire critique des principaux commentateurs du Nouv. Test.* C. L. p. 748). The commentary on the Ep. to the Romans (Calvin's earliest Biblical work) has been especially commended, as exhibiting some of his very best exegetical qualities. This work was soon translated into French, and has often been republished. Tholuck's is again the best modern edition. (Amst. ed. vol. vii., throughout.)

2. We come now to the second class of Calvin's treatises, viz. those which were taken down from his oral delivery, translated into Latin by learned friends; and published either (a) with prefaces in Calvin's own hand, or (b) with prefaces by other writers; and, first, we mention those which Calvin himself revised and prefaced—again following the order of the Amsterdam edition.

[1.] *Commentarii in Isaiam Prophetam* were first published, by a friend called Nich. Gallasius, in a rough form, with a dedication written by Calvin to King Edward VI. (Dec. 25, 1550); afterwards Calvin revised and enlarged the work himself, and published it with a second dedication to our Queen Elizabeth, addressed to her on her coronation-day; ultimately this valuable work was wrought into its finished state by the original editor, Gallasius (‘tertio recogniti et aucti ampla accessione locorum Scripturæ qui passim in toto opere citantur, etc.’), and dedicated by him to his ‘old friend’ John Crispin, Jan. 1, 1570. In 1552, a French translation was published. (Amst. ed. vol. iii. part 2.) [2.] *Praelectiones in Jeremiam et Lamentationes* were taken down from Calvin's public lectures, and prepared in Latin for publication, by John Budé and C. Joinville, and were issued with a dedication from the pen of Calvin, addressed to ‘the people of God, who desire that Christ's kingdom shall be rightly established in France,’ Aug. 19, 1561. This work was translated into French in the year 1565. (Amst. ed. vol. iv. part 1.) [3.] *Praelectiones in librum Prophetiarum Danielis* were, like the preceding, prepared for publication in their present shape by Budé and Joinville; Calvin writing a dedication to Frederick, Prince Palatine of the Rhine, dated Geneva, July 23, 1553. A second carefully revised edition was superintended by the same editors in 1576. Meanwhile a French translation had been published in the year 1569, and an English one in London, 1574. (Amst. ed. vol. v. part 1.) [4.] *Praelectiones in XII. Prophetas (quos vocant) Minores*; prepared this time by Budé alone,* to

* Budé's name occurs alone, but from an interesting statement appended by another of Calvin's paladins, J. Crispin, it would seem that four per-

the great satisfaction of the author, who authenticated the work with a dedication to Gustavus, King of Sweden, Feb. 1, 1559, and a short address to the Christian reader, in which he praises the fidelity and loving industry of Budé, and his other editors. A French translation was published at Geneva in 1560. (Amst. ed. vol. v. part 2.) We have now only left the three works, which have been already referred to as having been taken down from Calvin's oral delivery, and published carefully indeed, but without the advantage of the author's own superintendence. [1.] *Homilie in 1 librum Samuelis*; put into Latin from a transcript of the oral original, and published after Calvin's death by David Claude, who, in his dedication to Prince Maurice of Hesse, calls his labour, 'posthuma viri magni suboles.' (Amst. ed. vol. ii. part 1.) [2.] *Conciones in librum Jobi* were first published by eager friends as they were taken down from Calvin's pulpit discourses in the original French; they were some years afterwards, 'by two pious and learned men selected for the purpose' (Beza's preface), translated into Latin, 'if not with all the elegance they deserved, still with the utmost care,' and published by Theodore Beza, with an address to the Christian reader, dated Aug. 14, 1593. The work had, however, been previously translated into German, (in 1587) under the title, *Erklärung des Buchs Hiob in hundert und neun und funfzig Predigten*. (Amst. ed. vol. ii. part 2.) [3.] The last work which bears the name of Calvin is *Prælectiones in Ezechielis viginti capita priora*; collected and translated by Joinville and Budé, and published with a preface addressed to the renowned Coligny, by Beza, Jan. 15, 1565. They were simultaneously published in French. (Amst. ed. vol. iv. part 2.)

There is great natural propriety in the fact that, next to Geneva, the home and centre of all Calvin's labours, where two editions of his collective works were published, in 12 folio vols., in 1578, and again in 1617, in 7 folio vols., the churches of Holland and Scotland have 'delighted to honour' the illustrious man to whom they owe so much. We have mentioned the *Amsterdam* edition, as the very best collection of the published writings of Calvin in their original shape; *Edinburgh* is now doing honour to itself by the publication of a uniform series of translations, in about 50 octavo volumes, of writings which have helped more perhaps than any others to form the opinion of Reformed Christendom.—P. H.

CAMBYSES. [AHASUERUS.]

CAMEL. Three names for the camel occur in the O. T., and a fourth is perhaps to be added.

They are as follows:—1. גַּמְלָה , Arab. anc. and mod.

جمل , *jemel* or *gemel*, and the like in the other Semitic languages; Sansk. *kramêla*, Gr. *κάμηλος*;

Copt. Ⲭⲉⲙⲉⲟⲩⲗ (Memph.), Ⲭⲉⲙⲉⲟⲩⲗ ,

Ⲭⲉⲙⲉⲟⲩⲗ (Sah.) The word has been supposed by Mr. Birch to be found in anc. Egyptian, written *kamr* (Bunsen, *Egypt's Place etc.*, i. p. 543), but this is an incorrect reading (see Brugsch's

Geogr. Inschriften, ii. pp. 53, 54). On the supposition that the origin of the word is Semitic, two derivations have been proposed. Bochart

takes it from גַּמַל , *gamal*, 'he or it gave, repaid,' because the camel was supposed to be vindictive. The reason is, however, very doubtful, for the camel, though usually a complaining and occasionally an ill-tempered animal, can scarcely be called vindictive. Gesenius supposes that it is related to חַמַל , *hamala*, 'he or it carried,' but this is too far-fetched, to be even probable. If the name be Iranian, the Sanskrit *kramêla* would signify the walking animal, from the root *kram*, 'to walk, step,' but a foreign word might have been modified to adapt it to a Sanskrit root (Pictet, *Origines Indo-Européennes*, i. p. 386). 2. בִּבְרָה , f. בִּבְרָה , 'a young camel,' where the radical signification is youthfulness. 3. בְּרִכְרוֹת (Is. lvi.

20), reasonably supposed to mean 'dromedaries,' that is, swift camels, from כָּרַר , *karar*, 'he or it danced.' 4. אֲחֵשְׁתָּרִים (Est. viii. 10, 14) translated in A. V. 'camels,' should rather be rendered 'mules,' if the expression 'sons of mares' designate the same animals, as seems almost certain (10). Gesenius compares the Persian *âstar*, etc., and the Sanskrit *avalara*, 'a mule,' the latter, which is no doubt the source, meaning that which is more than a horse, as a beast of burden (Pictet, p. 355). Gesenius should, however, have noticed the Sanskrit *ushtra*, 'a camel,' which is found in various Iranian languages (*Ibid.*, pp. 385, 386).

In the Bible, *gamal* and its equivalents correspond to the genus *Camelus*, as constituted by modern naturalists. 'In this arrangement it comprises two species positively distinct, but still possessing the common characters of being ruminants without horns, without muzzle, with nostrils forming oblique slits, the upper lip divided and separately movable and extensile, the soles of the feet horny, with two toes covered by unguiculated claws, the limbs long, the abdomen drawn up, and the neck, which is long and slender, bent down and up, the reverse of that of a horse, which is arched. Camels have thirty-six teeth in all, whereof three are cuspidate on each side above, six incisors, and two cuspidate on each side below, which, though differently named, still have all more or less the character of tushes. They have callosities on the breast-bone and on the flexures of the joints. Of the four stomachs, which they have in common with other animals chewing the cud, the ventriculus, or paunch, is provided with membranous cells to contain an extra provision of water, enabling the species to subsist for four or more days [even as many as sixteen] without drinking. But when in the desert, the camel has the faculty of smelling it afar off, and then, breaking through all control, he rushes onwards to drink, stirring the element previously with a forefoot, until it is quite muddy. Camels are temperate animals, being fed on a march only once in twenty-four hours, with about a pound-weight of date-stones,* beans, or barley, and are enabled in the wilderness, by means of their long flexible necks and strong cuspidate teeth, to snap as they pass at thistles and thorny

sons at least were engaged in preparing the work for publication.

* In the original art. 'dates,' an error or oversight.—R. S. P.

plants, mimosas and caper-trees. They are emphatically called the ships of the desert;* having to cross regions where no vegetation whatever is met with, and where they could not be enabled to continue their march but for the aid of the double or single hunch on the back, which, being composed of muscular fibre, and cellular substance highly adapted for the accumulation of fat, swells in proportion as the animal is healthy and well fed, or sinks by absorption as it supplies the want of sustenance under fatigue and scarcity; thus giving an extra stock of food without eating, till by exhaustion the skin of the prominences, instead of standing up, falls over, and hangs like empty bags on the side of the dorsal ridge. Now, when to these endowments are added a lofty stature and great agility; eyes that discover minute objects at a distance; a sense of smell of prodigious acuteness, ever kept in a state of sensibility by the animal's power of closing the nostrils to exclude the acrid particles of the sandy deserts; a spirit, moreover, of patience, not the result of fear, but of for-

bearance, carried to the length of self-sacrifice in the practice of obedience, so often exemplified by the camel's bones in great numbers strewing the surface of the desert; when we perceive it furnished with a dense wool, to avert the solar heat and nightly cold, while on the animal, and to clothe and lodge his master when manufactured, and know that the female carries milk to feed him;—we have one of the most incontrovertible examples of Almighty power and beneficence in the adaptation of means to a direct purpose that can well be submitted to the apprehension of man; for, without the existence of the camel, immense portions of the surface of the earth would be uninhabitable and even impassable. Surely the Arabs are right, 'Job's beast is a monument of God's mercy!' The two species are—1. The Bactrian camel (*camelus Bactrianus* of naturalists), which is large and robust; naturally with two hunches; and originally a native of the highest table-lands of Central Asia, where even now wild individuals may be found. The species extends through China, Tartary, and

163. Camels.

Russia, and is principally imported across the mountains into Asia Minor, Syria, and Persia. It is also this species which, according to the researches of Burckhardt, constitutes the brown Taos variety of single-hunched Turkish or Toorkee camels commonly seen at Constantinople, there being a very ancient practice among breeders, not, it appears, attended with danger, of extirpating with a knife the foremost hunch of the animal soon after birth, thereby procuring more space for the pack-saddle and load. It seems that this mode of rendering the Bactrian similar to the Arabian camel or dromedary (for Burckhardt misapplies the last name) is one of the principal causes of the confusion and contradictions which occur in the descriptions of the two species, and that the vari-

ous other intermixtures of races in Asia Minor and Syria, having for their object to create greater powers of endurance of cold or of heat, or of body to carry weight or to move with speed, have still more perplexed the question.

'2. The Arabian camel or dromedary (*camelus dromedarius* or *Arabicus* of naturalists) is properly the species having naturally but one hunch.' It is probably of Western-Asiatic origin. It has indeed been supposed to have had its first habitation in Africa, but the Egyptian monuments do not once represent it, nor do the inscriptions and papyri speak of it. The mentions in the Pentateuch do not seem to prove that camels were kept in any part of Egypt but its north-eastern tract, at the time to which they refer the home of strangers, as we shall shew later. It is evident, however, that the camel was abundant in Syria and Palestine at a very early period as a beast of burden.

Of the Arabian species two very distinct races are noticed; those of stronger frame but slower pace, used to carry burdens varying from 500 to 700 weight, and travelling little more than twenty-four miles in a day; and those of lighter form, bred for the saddle with single riders, whereof the fleetest serve to convey intelligence, etc., and travel at the

* The expression ship of the desert, now common in the West, has its origin in a mistranslation of the Arabic *مركب* *markab*, a word also applied to a horse, and signifying a thing ridden on or that carries, its radical meaning, from *ركب* *rakaba*, 'he or it rode:': it is used for a ship to denote that it is a carrier.—R. S. P.

rate of upwards of 100* miles in twenty-four hours. The latter are designated by several appellations, all more or less implying swiftness. The best come from Omán, or from the Bishárees in Upper Egypt. Caravans of loaded camels have always scouts and flankers mounted on these light animals. The Romans of the third and fourth centuries of our era, as appears from the 'Notitia,' maintained in Egypt and Palestine several *ala* or squadrons mounted on dromedaries. Bonaparte formed a similar corps, and in China and India the native princes and the East India Company have had them also.

* All camels, from their very birth, are taught to bend their limbs and lie down to receive a load or a rider. They are often placed circularly in a recumbent posture, and together with their loads form a sufficient rampart of defence against robbers on horseback. The milk of she-camels is still considered a very nutritive cooling drink, and when turned it becomes intoxicating. Their dung supplies fuel in the desert and in sandy regions where wood is scarce; and occasionally it is a kind of resource for horses when other food is wanting in the wilderness: Their flesh is eaten by the Arabs, who consider the hunch a delicacy, but was forbidden to the Hebrews (Lev. xi. 4; Deut. xiv. 7). On swift dromedaries the trotting motion is so hard that to endure it the rider requires a severe apprenticeship; but riding upon slow camels is not disagreeable, on account of the measured step of their walk; ladies and women in general are conveyed upon them in a kind of wicker-work sedan, known as the takht-raván of India and Persia.

In the history of the Hebrews the camel is used only by nomad tribes. This is because the desert is the home of the Arabian species, and it cannot thrive in even so fine a climate as that of the valley of the Nile in Egypt. The Hebrews in the patriarchal age had camels as late as Jacob's journey from Padan-aram, until which time they mainly led a very wandering life. With Jacob's sojourn in Palestine, and still more, his settlement in Egypt, they became a fixed population, and thenceforward their beast of burden was the ass rather than the camel. The camel is first mentioned in a passage which seems to tell of Abraham's wealth (Gen. xii. 16, as xxiv. 35), to which Pharaoh doubtless added, rather than to recount the king's gifts. If the meaning, however, is that Pharaoh gave camels, it must be remembered that this king was probably one of the Shepherds who partly lived at Avaris, the Zoan of Scripture, so that the passage would not prove that the Egyptians then kept camels, nor that they were kept beyond a tract, at this time, and long after, inhabited by strangers. The narrative of the journey of Abraham's servant to fetch a wife for Isaac portrays the habits of a nomad people, perhaps most of all when Rebekah, like an Arab damsel, lights off her camel to meet Isaac (xxiv.) Jacob, like Abraham, had camels (xxx. 43): when he left Padan-aram he 'set his sons and his wives upon camels' (xxx. 17); in the present he made to Esau there were 'thirty milch camels with their colts' (xxxii. 15). In Palestine, after his return,

* In the original art., 'the rate of 200 miles,' but I can find no instance recorded, nor do I remember any to have occurred while I was in the East, warranting a greater distance than 120 miles in the twenty-four hours.—R. S. P.

he seems no longer to have kept them. When his sons went down to Egypt to buy corn, they took asses. Joseph sent wagons for his father and the women and children of his house (xlv. 19, 27; xlv. 5). After the conquest of Canaan, this beast seems to have been but little used by the Israelites, and it was probably kept only by the tribes bordering on the desert. It is noticeable that an Ishmaelite was overseer of David's camels (1 Chron. xxvii. 30). On the return from Babylon the people had camels, perhaps purchased for the journey to Palestine, but a far greater number of asses (Ezr. ii. 67; Neh. vii. 69). There is one distinct notice of the camel being kept in Egypt. It should be observed, that when we read of Joseph's buying the cattle of Egypt, though horses, flocks, herds, and asses, are spoken of (Gen. xlvii. 17), camels do not occur: they are mentioned as held by the Pharaoh of the exodus (Exod. ix. 3), but this may only have been in the most eastern part of Lower Egypt, for the wonders were wrought in the field of Zoan, at which city this king then doubtless dwelt.

It is in the notices of the marauding nomad tribes that wandered to the east and south of Palestine, that we chiefly read of the camel in Scripture. In the time of Jacob there seems to have been a regular traffic between Palestine, and perhaps Arabia, and Egypt, by camel caravans, like that of the Ishmaelites or Midianites who bought Joseph (Gen. xxxvii. 25, 28). In the terrible inroad of the Midianites, the Amalekites, and the Bene-Kedem, or children of the east, 'both they and their camels were without number: and they entered into the land to destroy it' (Judg. vi. 5, comp. vii. 12). When Gideon slew Zebah and Zalmunna, kings of Midian, he 'took away the ornaments [or 'little moons'] that [were] on their camels' necks' (viii. 21), afterwards mentioned, with neck-chains, both probably of gold (26). We also find other notices of the camels of the Amalekites (1 Sam. xv. 3; xxx. 17), and of them and other and probably kindred peoples of the same region (xxvii. 8, 9). In the account of the conquest by the Reubenites, the Gadites, and the half-tribe of Manasseh, of the Hagarites beyond Jordan, we read that fifty thousand camels were taken (1 Chron. v. 18-23). It is not surprising that Job, whose life resembles that of an Arab of the desert, though the modern Arab is not to be taken as the inheritor of his character, should have had a great number of camels (Job i. 3; xlii. 12). The Arabian Queen of Sheba came with a caravan of camels bearing the precious things of her native land (1 Kings x. 2; 2 Chron. ix. 1). We read also of Benhadad's sending a present to Elisha 'of every good thing of Damascus, forty camels' burden' (2 Kings viii. 9). Damascus, be it remembered, is close to the desert.

In the prophets the few mentions of the camel seem to refer wholly to foreign nations, excepting where Isaiah speaks of their use, with asses, in a caravan bearing presents from the Israelites to the Egyptians (xxx. 6). He alludes to the camels of Midian, Ephah, and Sheba, as in the future to bring wealth to Zion (lx. 6). The 'chariot of camels' may be symbolical (xxi. 7). Jeremiah makes mention of the camels of Kedar, Hazor, and the Bene-Kedem (xlix. 28-33). Ezekiel prophesies that the Bene-Kedem should take the land of the Ammonites, and Rabbah itself should be 'a resting-place for camels' (xxv. 1-5).

Two passages in the N. T., 'It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God' (Matt. xix. 24); and the reproof of 'blind guides, which strain at a gnat, and swallow a camel' (xxiii. 24), are held to be proverbial expressions. Commentators have tried to explain the first, either by supposing the needle's eye to have been a small gate, or by the reading of κάμηλος, a rope, probably an invented word, for κάμηλος, a camel. The former idea seems worthy of consideration, especially as the passage of a camel through a small gate, correctly described, when the animal is deprived of his burden, made to kneel, and so unwillingly dragged through by force, affords a figure of remarkable exactness. The 'rayment of camel's hair' worn by St. John the Baptist with a leathern girdle (Matt. iii. 4; comp. Mark i. 6), was no doubt a coarse shirt like those worn by the Bedawees, who likewise make tents of camel's hair. The Baptist's seems to have been the same dress as that of Elijah (2 Kings i. 8), and others of the earlier prophets (Zech. xiii. 4).—[C. H. S. and R. S. P.]

The zoological portion of this article, distinguished by marks of quotation, is retained from the preceding editions.

CAMERARIUS, JOACHIM, belonged to an ancient noble family, of the name of *Liebard*, which he exchanged for that of *Camerarius*, from the circumstance that several of his ancestors had filled the office of chamberlain (*Kammerer*) to the bishops of Bamberg. He was born at Bamberg, April 12, 1500. In 1515 he entered the University of Leipzig. Such was his proficiency in classical literature that he was elected Professor of Greek at Erfurt in 1521, where he embraced the principles of the Reformation. The plague, and the unsettled state of the university, occasioned his removing to Wittenberg, where he formed an intimate friendship with Melancthon, at whose recommendation he was made Professor of History and the Greek language at Nürnberg in 1526. In 1530 he was one of the deputies to the Diet at Augsburg, where he took a leading part with Melancthon. Under the patronage of Duke Ulrich he removed to the University of Tübingen, where he composed his *Elements of Rhetoric*. In 1541 he was employed by the Dukes Henry and Maurice of Saxony to remodel the University of Leipsic. In 1555 he again went as a deputy to the Diet at Augsburg, and in the year following to Regensburg. During the last years of his life he withdrew almost entirely from public affairs, and died at Leipsic April 15, 1574, leaving behind him five sons, all men of worth and reputation; one of them, especially Joachim, attained to great eminence as a botanist, and practised as a physician at his native place, Nürnberg. (Born Nov. 5, 1534, died 1598).

Camerarius was a man of the strictest integrity, quiet and taciturn; disposed to moderation, but of great energy and perseverance in the two great objects to which he devoted his life, the cultivation of classical learning and the advancement of the Reformation. To the former he contributed by numerous editions of the Greek and Latin classics (of which a list is given by Fabricius in his *Bibliotheca Græca*) and by the improvements he introduced into several of the German Universities. The latter he aided by his advocacy on important public occasions, and by various writings on theo-

logical and ecclesiastical subjects. Of his works on biblical subjects, the following are the principal:—*Sententia et sapientia Siracida*; *Notatio figurarum sermonis in libris Ev. et apostol. scrr.*; *Historia S. Christi*; *Homilia*. He wrote a biography of Prince George of Anhalt, 1555 (republished with a German translation by Schubert 1853) and a memoir of Melancthon (*Narratio de Ph. Mel. ortu, totius vita curriculo et morte, etc.*) 1566, republished with notes and documents by Strobel, Halle, 1777; also Melancthon's letters in 1569. (Herzog's *Encyclopædie*, vol. ii. p. 542, and *Conversations Lexicon*, Leipzig, 1843, vol. iii. p. 142.)—J. E. R.

CAMERON, JOHN, born in Glasgow in 1579, laureated in its university 1598, and admitted as a regent 1599. In 1600 he taught the classical languages in the French College of Bergerac, and afterwards became professor of philosophy at Sedan. He was chosen one of the students supported for four years by the French church, in order that they might devote themselves exclusively to sacred studies, and on closing the last year of this course in Heidelberg, 1608, he composed some theses that excited considerable interest, 'De triplici Dei cum homine fœdere.' For ten years following he acted as colleague to Dr. Primrose in the charge of the church at Bordeaux, from which he was translated to Saumur, where he officiated as professor of divinity. Driven from France by the public commotions of the time, he gave private lectures in London, and in 1622 was appointed principal of the university of Glasgow. As he had committed himself to the royal policy in opposition to Presbytery, he did not feel himself at home in his native city, so that he left it in a year, and at Montauban, where he obtained the theological chair, he became equally unpopular by his advocacy of the tenet of passive obedience. He died in 1625, leaving a widow, to whom he had been married but a few months, and three daughters by an earlier marriage, whose support was undertaken by the French church.

Cameron has won celebrity from his eminent scholarship, his connection with the Salmurian controversy (Mosheim, *Ecl. Hist.*, cent. 17, sect. ii., p. 2, ch. 2), and especially his abilities as an exegete. It is in this last capacity that Cameron chiefly has claims on the attention of the biblical student. He has left no regular and sustained commentary on any portion of Scripture. In 1626–28, his *Prælectiones in selectiora loca Novi Testamenti* appeared in three 4to volumes; in 1632, a separate 4to was edited by Cappel, under the title, *Myrothecium Evangelicum, in quo aliquot loca N. T. explicantur*; and in 1642, all his theological works, with the exception of the *Myrothecium*, were collected into one folio. His treatises in the body of his works are polemical disquisitions on particular texts rather than exegetical inquiries into their meaning. So far as the latter process is made the basis on which his doctrinal and controversial conclusions rest, it is of great value, from the subtle tact and luminous precision with which it is conducted. Many of the topics are of great interest, while the discussion of them is by no means trite or supererogated by later exegesis. The passages expounded relate to the primacy of Peter, the consistency of grace with responsibility, the ascension of Christ, his second advent, etc., from Matthew xvi. 18, 19;

Phil. ii. 12, 13; Ps. lxxviii. 19; Mat. xvi. 27; xvii. 10-13; xvii. 14, 15; xvii. 24-27; xviii. 1; xviii. 2-5; xviii. 7; xviii. 8, 9; xviii. 10; xviii. 15-20; xix. 3. The notes in the *Myrothecium* are much shorter, comprehending no small part of the expository matter in the *Praelectiones*; but besides this, it has a great variety of short notes on different parts of mostly all the books of the N. T. There are no special principles on which the author proceeds. He seems fond of discovering a Hebraistic tinge in many phrases. His consummate knowledge of the original tongue enables him to apprehend with singular clearness the scope of any statement, while he can give his readers his conclusions respecting it in language at once terse and perspicuous. They may not concur with him in his views, but they are sure to profit from the freshness and point with which they are given.—W. H. G.

CAMON (קמון; Sept. Παμων; Vat. βαμων; Alex.

Καμων, *Josephus*). The burial-place of Jair the Gileadite. Its exact site is not known, but *Josephus* asserts that it was in Gilead (*Ant.* v. 7. 6) which is highly probable, as that was the native country of Jair, and the district in which his family had extensive possessions (*Judg.* x. 4). Dr. Robinson, in his *Later Biblical Researches* (p. 114) mentions a *Caimon*, which he identifies with the *Cammona* of Eusebius, and the *Cimana* of Jerome, near the plain of Esdraelon, but supposes it may be the site of a still earlier city, Jokneam; he makes no allusion, however, to the burial-place of Jair.—J. E. R.

CAMP. [ENCAMPMENT.]

CAMPBELL, GEORGE, an eminent preacher, divine, and metaphysician of the Church of Scotland, born at Aberdeen in 1719. He shewed early talent, and prepared himself for the law till the age of 22, when he devoted himself to the study of theology, attending lectures both in King's College and in Marischal College, and at the same time forwarding his general improvement by joining a learned society. He was ordained minister of Banchoory-Ternan in 1748, and there began those literary labours which have given him a lasting reputation. In 1757 he was translated to Aberdeen, where he acquired great fame as a preacher, and as a lecturer on rhetoric and criticism. In 1759 he was appointed Principal of Marischal College, and soon after published his celebrated *Dissertation on Miracles*, in answer to Hume's essay on the same subject. This work passed through several editions, and was translated into French, Dutch, and German. In 1771 he was elected Professor of Divinity in Marischal College, and devoted himself with the greatest energy to the duties of that office. In 1795, having attained the age of 76, he resigned his professorship, and soon after, on receiving a pension of £300 a-year from Government, also gave up his office of principal. In the following year he was struck with paralysis, and died.

Besides his *Dissertation on Miracles*, and the *Lectures on Ecclesiastical History*, which were published after his death, he published in 1776 his *Philosophy of Rhetoric*, and at a later date his *Translation of the four Gospels, with preliminary dissertations and explanatory notes*. This has long been a standard work in biblical literature. The Preliminary Dissertations are very valuable; they

lay down clearly the principles and criterion of biblical interpretation, and abound in sound criticism. The translation presents generally the sense of the original, but is disfigured by false taste and a stilted artificial style. The appended notes are, like the dissertations, worthy of commendation.

CAMPHIRE. [KOPHER.]

CANA OF GALILEE (Κανὰ τῆς Γαλιλαίας), a village only mentioned by the Evangelist John. It was the native place of Nathanael; but it was chiefly celebrated as the scene of Jesus' first miracle, in turning the water into wine (*John* xxi. 2; ii. 1-11). It appears from the Bible that it was not far from Nazareth; and an incidental remark of *Josephus* shews that it was a night's march distant from Tiberias (*Vit.* 16. 17). Eusebius and Jerome represent Cana as identical with Kanah, a town of Asher (*Josh.* xix. 28; *Onomast.* s. v.); but the latter was much farther north. [KANAH.]

The true site of Cana of Galilee now forms a subject of keen dispute. Some affirm that it is the village of *Kefr Kenna*, three miles north-east of Nazareth; others at *Kana*, eight miles north of Nazareth. The arguments in favour of each may be thus summed up, taking the latter first.

1. *Kana*. Cana of Galilee is uniformly rendered in the Arabic version *Kana-el-Jelil* (قانا الجليل),

and this is the proper name of *Kana* as known to the people of the district. Saewulf, who visited Palestine in A. D. 1102, says, 'Six miles to the N. E. of Nazareth, on a hill, is Cana of Galilee' (*Early Trav. in Pal.*, p. 47). This can only refer to *Kana*. *Marinus Sanutus*, in the fourteenth century, describes *Cana* as lying north of Sepphoris, on the side of a high hill, with a broad fertile plain in front (*Gesta Dei*, p. 253). *Quaresmius* states that in his time (A. D. 1620) two *Canas* were pointed out, one of which is *Kana-el-Jelil* (*Elucid.* ii. 852).

2. *Kefr Kenna*. The name of this place (كنا)

bears no analogy to the *Cana* (قانا) of the Gospel; yet the monks at Nazareth, and most modern travellers attempt to identify them. The tradition attached to *Kenna* cannot be traced farther back than the seventeenth century. De Saucy says St. Willibald alludes to it; but he gives no indication of the position of *Cana* (*Early Trav. in Pal.*, p. 16). *Phocas* is also indefinite. *Quaresmius* is the first who mentions it. He speaks of both *Kana* and *Kenna*; but he gives his opinion in favour of the latter. From his time until within the last few years, *Kefr Kenna* has been almost universally regarded as *Cana*. The arguments in favour of its claims are fully given by De Saucy (*Journey*, ii. 376, sq.); while those of its rival are stated by Robinson (*B. R.*, ii. 346).

On reviewing the arguments, there can be little difficulty in deciding that *Kana-el-Jelil* is the true site of *Cana* of Galilee. The ruins occupy a fine position on the declivity of a hill, looking out over the rich plain of Battauf. It is about five miles from Sepphoris, and seventeen from Capernaum and Tiberias. When visited by the writer in the spring of 1857 it was uninhabited, and had the appearance of having been so for many years, though a few of the houses were standing. There are no traces of antiquity except a few cisterns; and the

probability is it was always an obscure village. In former times, the house in which the marriage-feast was held, and the water-pots themselves, were shewn to travellers at Kana-el-Jelil; but now the

monks shew them at Kefr Kenna! (Robinson, *B. R.*, ii. 346, *sq.*; iii. 108; Thomson's *Land and the Book*, 426, *sq.*; *Van de Velde* ii. 405).—J. L. P.

164. Cana : Kefr Kenna.

CANAAN (כְּנַעַן; Sept. *Xanadv*), son of Ham and grandson of Noah. The transgression of his father Ham (Gen. ix. 22-27), to which some suppose Canaan to have been in some way a party, gave occasion to Noah to pronounce that doom on the descendants of Canaan which was, perhaps, at that moment made known to him by one of those extemporaneous inspirations with which the patriarchal fathers appear in other instances to have been favoured [BLESSING]. That there is no just ground for the conclusion that the descendants of Canaan were cursed as an immediate consequence of the transgression of Ham, is shewn by Professor Bush, who, in his *Notes on Genesis*, has fairly met the difficulties of the subject.

CANAAN, LAND OF.—The ancient name of the country lying between the Jordan valley and the Mediterranean (Gen. xii. 5; xvi. 3; Judg. iii. 1). Different opinions are held regarding the origin and meaning of the name. Gesenius states that it is from the root כְּנַעַן, one meaning of which is 'to be low or depressed;' and that the country is so called because of its low situation, as contrasted with the 'highlands' of Aram (*Thesaurus*; Stanley, *S. and P.*, 128, 263). Others think that it is so called as contrasted with the mountains and plateau of Gilead. Such views are purely fanciful, and they are at variance with the plain statements of the Bible. Canaan was the son of Ham. He and his family colonised western Syria, and while the whole region took his name, different sections of it were called after his sons (Gen. x. 15-20).

Aram was a son of Shem, and his descendants colonised the country of Aram (Gen. x. 21-31). The view of Gesenius is not even supported by the physical geography of the countries referred to. Aram cannot, with any regard to truth, be termed a 'highland region.' It comprised the vast plains along the banks of the Euphrates, and westward to the Orontes and Anti-libanus. Canaan, on the contrary, is a hill country, with strips of plain along the coast. In one passage it is distinguished from the low valley of the Jordan—'Abram dwelled in the land of Canaan, and Lot dwelled in the cities of the plain' (Gen. xiii. 12). The name *Canaan* is not confined to the Bible. It occurs on some of the most ancient monuments of Egypt (Kenrick's *Phœnicia*, p. 40). It is also mentioned by Sanchoniathon and Stephanus of Byzantium as the original name of Phœnicia; and it is found on an old Phœnician coin of Laodicia (Kenrick, *Phœnicia*, pp. 42, 460, and plate 2; Gesen. in *Is.* xxiii. 11; Reland, *Pal.*, p. 7).

The extent and boundaries of Canaan are given with tolerable exactness in the Bible. On the west the sea was its border from Sidon to Gaza (Gen. x. 19). On the south it was bounded by a line running from Gaza to the southern end of the Dead Sea, including the Judæan hills, but excluding the country of the Amalekites (Gen. x. 19; Num. xiii. 29). The Jordan was the eastern boundary; no part of Canaan lay beyond that river (Num. xxxiii. 51; Exod. xvi. 35, with Josh. v. 12; xxii. 11. See Reland, *Pal.* 3, *sq.*) On the north, Canaan extended as far as Hamath, which was also the utmost boundary of the 'land of promise' (Gen.

xvi. 8; Num. xxxiv. 8). The coast from Sidon northwards to Arvad, and the ridge of Lebanon, were inhabited by Canaanites, though they do not appear to have been included in Canaan proper (Gen. x. 15-19. See Bochart, *Opp.* i. 308, sq. Reland, *Pal.* 3, sq.)

While such was the country usually called Canaan in the Bible, we find that the name was sometimes used in a much more limited sense. Thus, in Num. xiii. 29, 'The Hittites and the Jebusites and the Amorites dwell in the mountains; and the Canaanites dwell by the sea, and by the coast of the Jordan.' In 2 Sam. xxiv. 7, the Canaanites are distinguished from the Hivites, though the latter were descended from Canaan; and in several passages the Canaanites are mentioned with the Hittites, Amorites, Jebusites, etc., as if they constituted a special portion of the population (Exod. iii. 8; Deut. vii. 1; Josh. iii. 10). The prophet Zephaniah uses Canaan as a specific name for Philistia (ii. 5). Isaiah (xxiii. 11) appears to give this name to Phœnicia—'The Lord gave commandment concerning Canaan to destroy her strongholds.' The A. V. renders כְּנַעַן 'Merchant City,' (Sept. *χαναάν*). So the person called by Mark a 'Syrophenician' (vii. 26), is called by Matthew (xv. 22) 'a woman of Canaan.' The Septuagint often translate *Canaan* 'Phœnicia,' as in Exod. xvi. 35; Josh. v. 12. It is not easy to understand why there should be so much diversity in the use of the name Canaan. The most probable explanation is, that while some of the tribes which inhabited Syria retained for their territories the name of their common ancestor Canaan, others preferred taking, as a distinctive appellation, the name of some subsequent head or chief of the tribe. The very same practice prevails to this day among the great Arab tribes of Arabia. For an account of the geography, etc., of Canaan, see PALESTINE.—J. L. P.

CANAAN, LANGUAGE OF, (שְׂפַת כְּנַעַן, *lip of Canaan*). This expression occurs Is. xix. 18, where it undoubtedly designates the language spoken by the Jews dwelling in Palestine. The use of such an expression, however, suggests the question as to the relation of the Hebrew to the language spoken by the inhabitants of Canaan at the time of the immigration of Abraham. Was that language the Hebrew? and if so, how is this to be accounted for?

That the language spoken by the Canaanites was substantially identical with Hebrew, appears—1. From the fact that the proper names of Canaanitish persons and places are Hebrew, and can be accounted for etymologically from the Hebrew as readily as Hebrew proper names themselves. Thus we have קִרְיַת כַּפַר חֲבִימָל, מְלִכֵי צֶדֶק, שָׁכֵם, etc.; 2. Close as was the intercourse of the Hebrews with the Canaanites, there is no hint of their needing any interpreter to mediate between them; which renders it probable that their respective languages were so nearly allied to each other as to be substantially the same; 3. The remains of the Phœnician language, which was undoubtedly Canaanitish, bear the closest analogy to the Hebrew, and are best explained from it; which proves them to be substantially the same language (Bochart, *Geogr. Sac.* ii. col. 699 ff., ed. 1682). Other reasons might be adduced, but these are of the

most weight (see Gesenius, *Gesch. d. Heb. Spr.* p. 16).

To account for this some have supposed that the Canaanites and the Hebrews were of the same original stock, and that the account in Genesis of their being descended from different branches of the Noachic family is a fiction to be put to the account of national bigotry on the part of the writer. But this is a hypothesis utterly without foundation, and which carries its own confutation in itself; for had national bigotry directed the writer, he would have excluded the Edomites, the Ammonites, the Moabites, from the Shemitic family, as well as the Canaanites, nay, would hardly have allowed the Canaanites to claim descent from the righteous Noah. The list of the nations in Gen. xi. is accepted by some of the most learned and unfettered scholars of Germany as a valuable and trustworthy document (Knobel, *Völkertafel der Genesis*, 1850, Bertheau *Beiträge*, p. 174, 179). But if these were different races, how came they to have the same language? Knobel thinks that the country was first occupied by a Semitic race, the descendants of Lud, and that the Hamites were immigrants who adopted the language of the country into which they came (p. 204 ff.) Grotius, on the other hand, Le Clerc and others, are of opinion that Abraham acquired the language of the country into which he came, and that Hebrew is consequently a Hamitic and not a Shemitic language (Grotius, *Dissert. de Ling. Heb.*, prefixed to his Commentary; Le Clerc, *De Ling. Heb.*; Beke, *Origines Biblicæ*, p. 230; Winning, *Manual of Compar. Philology*, p. 275); by later writers Abraham's native tongue is supposed to have been Indo-germanic or Aryan. On the other hand, some maintain that Abraham retained the use of the primeval language, and brought it with him to Canaan; contending that, had he borrowed the language of the country into which he came, the result would have been a less pure language than the Hebrew, and we should have found in it traces of idolatrous notions and usages (Havernick, *Einleit.* 151, E. T. p. 133; Pareau, *Inst. Interp.*, p. 25, E. T., i. p. 27). This last is the oldest opinion, and there is much to be urged in its favour. It, however, leaves the close affinity of the language of Abraham and that of the Canaanites unaccounted for. The hypothesis that Abraham acquired the language of the Canaanites, and that this remained in his family is certainly the one least burdened with difficulties, and accounts not only for the affinity of the Hebrew and Phœnician tongues, but for the ease with which Abraham and his son made themselves understood in Egypt, and for the affinity of the ancient Egyptian and several modern African languages with the Hebrew. (See Bleek, *Einleit. ins A. T.*, p. 61 ff.; J. G. Müller. in Herzog's *Real-Enc.*, Bd. vii., p. 240.)—W. L. A.

CANAANITE, THE (ὁ Καναανίτης, var. *lec. Kanavēlῆs, Kanaaios, Xanaaios*, Matt. x. 4; Mark iii. 18), equivalent to the Syr. כְּנַעֲנִי, and the Gr. *ζηλωτής*. [SIMON.]

CANAANITES (קְנַעֲנִי the Canaanite collectively; sometimes also as a gentile adjective (Gen. xxxviii. 2, etc.); Sept. *Kanaaios*), the descendants of Canaan, the son of Ham and grandson of Noah, inhabitants of the land of Canaan and the adjoin-

ing districts. A general account of the different nations included in the term is given in the present article, and a more detailed account of each will be found under their respective names.

The Israelites were delivered from Egypt by Moses, in order that they might take possession of the land which God had promised to their fathers. This country was then inhabited by the descendants of Canaan, who were divided into six or seven distinct nations, viz., the Hittites, Gergashites, Amorites, Canaanites, Perizzites, Hivites, and Jebusites (Exod. iii. 17, where the Gergashites are not mentioned; Deut. vii. 1, etc.) All these tribes are included in the most general acceptation of the term Canaanites; but the word, in its more restricted sense, as applied to one tribe, designated those 'who dwelt by the sea, and by the coasts of Jordan' (Num. xiii. 29). Besides these 'seven nations,' there were several tribes of the Canaanites who lived beyond the borders of the Promised Land, northward. These were the Arkites, Sinites, Arvadites, Zemarites, and Hamathites (Gen. x. 17, 18), with whom, of course, the Israelites had no concern. There were also other tribes of Canaanitish origin (or possibly other names given to some of those already mentioned), who were dispossessed by the Israelites. The chief of these were the Amalekites, the Anakites, and the Rephaim (or 'giants,' as they are frequently called in our translation).* These nations, and especially the six or seven so frequently mentioned by name, the Israelites were commanded to dispossess and utterly to destroy (Exod. xxiii. 23; Num. xxxiii. 53; Deut. xx. 16, 17). The destruction, however, was not to be accomplished at once. The promise on the part of God was that he would 'put out those nations by little and little,' and the command to the Israelites corresponded with it; the reason given being, 'lest the beasts of the field increase upon thee' (Exod. xxiii. 29; Deut. vii. 22).

The destructive war commenced with an attack on the Israelites, by Arad, king of the Canaanites, which issued in the destruction of several cities in the extreme south of Palestine, to which the name of Hormah was given (Num. xxi. 1-3). The Israelites, however, did not follow up this victory, which was simply the consequence of an unprovoked assault on them; but, turning back, and compassing the land of Edom, they attempted to pass through the country on the other side of the Jordan, inhabited by a tribe of the Amorites. Their passage being refused, and an attack made on them by Sihon, king of the Amorites, they not only forced their way through his land, but destroyed its inhabitants, and proceeding onwards towards the adjoining kingdom of Bashan, they in like manner destroyed the inhabitants of that district, and slew Og, their king, who was the last of

* Other tribes are mentioned in the promise to Abraham (Gen. xv. 19), viz., the Kenites, Kenizzites, and Kadmonites. Of these the Kenites, or at least a branch of them, seem to have adhered to the Israelites, through their connection by marriage with Moses (Judg. iv. 11), and they were treated with kindness when the Amalekites were destroyed by Saul (1 Sam. xv. 6). The others are not elsewhere mentioned—the term Kenezite, applied to Caleb (Josh. xiv. 14), being a patronymic. (See Josh. xv. 17.)

the Rephaim, or giants (Deut. iii. 11). The tract of which they thus became possessed was subsequently allotted to the tribes of Reuben and Gad, and the half tribe of Manasseh.

After the death of Moses the Israelites crossed the Jordan, and, under the conduct of Joshua, took possession of the greater part of the Promised Land, and destroyed its inhabitants. Several cities, however, still held out, particularly Jebus, afterwards Jerusalem, which was not taken till the time of David (2 Sam. v. 6), and Sidon, which seems never to have yielded to the tribe of Asher, to whom it was allotted (Judg. i. 31). Scattered portions also of the Canaanitish nations escaped, and were frequently strong enough to harass, though not to dispossess, the Israelites. The inhabitants of Gibeon, a tribe of the Hivites, made peace by stratagem, and thus escaped the destruction of their fellow-countrymen. Individuals from amongst the Canaanites seem, in later times, to have united themselves, in some way, to the Israelites, and not only to have lived in peace, but to have been capable of holding places of honour and power; thus Uriah, one of David's captains, was a Hittite (1 Chron. xi. 41). In the time of Solomon, when the kingdom had attained its highest glory and greatest power, all the remnants of these nations were made tributary, and bond-service was exacted from them (1 Kings ix. 20, 21). The Gergashites seem to have been either wholly destroyed or absorbed in other tribes. We find no mention of them subsequent to the book of Joshua, and the opinion that the Gergesenes, or Gadarenes, in the time of our Lord, were their descendants, has very little evidence to support it (Rosenmüller, *Scholæ in Gen.* x. 16; Reland, *Palestina*, i. 27, p. 138). The Anakites were completely destroyed by Joshua, except in three cities, Gaza, Gath, and Ashdod (Josh. xi. 21-23); and the powerful nation of the Amalekites, many times defeated and continually harassing the Israelites, were at last totally destroyed by the tribe of Simeon (1 Chron. iv. 43). Even after the return of the Jews from the Babylonish captivity, there were survivors of five of the Canaanitish nations with whom alliances had been made by the Jews, contrary to the commands which had been given them. Some of the Canaanites, according to ancient tradition, left the land of Canaan on the approach of Joshua, and emigrated to the coast of Africa. Procopius (*De Bello Vandalico*, ii. 10) relates that there were in Numidia, at Tigisis (*Tingis*), two columns on which were inscribed, in Phœnician characters, *ἡμεῖς ἐσμεν οἱ φυγόντες ἀπὸ προσώπου Ἰησοῦ τοῦ ληστῆος υἱοῦ Ναυῆ*—'We are those who fled from the face of Joshua, the robber, the son of Naue.' (Bochart, *Geogr. Sac.*, i. 24; Michaelis, *Læus of Moses*, art. 31, vol. i. p. 176, Smith's Transl.; Winer's *Realwörterbuch*, arts. 'Canaaniter' and 'Josua.')

CANDACE, or, more correctly, KANDAKE (both the c's being hard), was the name of that queen of the Ethiopians (*Κανδάκη ἡ βασίλισσα Αἰθίοπων*) whose high treasurer was converted to Christianity under the preaching of Philip the Evangelist (Acts viii. 27). The country over which she ruled was not, as some writers allege, what is known to us as Abyssinia; it was that region in Upper Nubia which was called by the Greeks *Meroë*; and is supposed to correspond to the present

province of Atbara, lying between 13° and 18° north latitude. From the circumstance of its being nearly enclosed by the Atbara (Astaboras or Tacazze) on the right, and the Bahr el Abiad, or White river, and the Nile, on the left, it was sometimes designated the 'Island' of Meroë; but the ancient kingdom appears to have extended at one period to the north of the island as far as Mount Berkal. Meroë, from being long the centre of commercial intercourse between Africa and the south of Asia, became one of the richest countries upon earth; the 'merchandise' and wealth of Ethiopia (Is. xlv. 14) was the theme of the poets both of Palestine and Greece; and since much of that affluence would find its way into the royal coffers, the circumstance gives emphasis to the phrase—*πάσης τῆς γῆς θάλασσαν*, 'all the treasure' of Queen Candace. It is further interesting to know, from the testimonies of various profane authors, that for some time both before and after the Christian era, Ethiopia Proper was under the rule of female sovereigns, who all bore the appellation of 'Candace,' which was not so much a proper name as a distinctive title, common to every successive queen, like 'Pharaoh' and 'Ptolemy' to the kings of Egypt, and 'Caesar' to the emperors of Rome. (Pliny, *List. Nat.* vi. 29; Strabo, p. 820, ed. Casaub., comp. Dion Cassius, liv. 5. Eusebius, who flourished in the fourth century, says, that in his day the Queens of Ethiopia continued to be called Candace.

A curious confirmation of the fact of female sovereignty having prevailed in Ethiopia has been remarked on the existing monuments of the country. Thus, on the largest sepulchral pyramid near Assour, the ancient Meroë (see Cailliaud, plate xlvii.), a female warrior, with the royal ensigns on her head, drags forward a number of captives as offerings to the gods; on another compartment she is in a warlike habit, about to destroy the same group. Heeren, after describing the monuments at Naga, or Naka, south-east of Shendy, says, 'It is evident that these representations possess many peculiarities, and that they are not pure Egyptian. The most remarkable difference appears in the persons offering. The queens appear with the kings; and not merely as presenting offerings, but as heroines and conquerors. Nothing of this kind has yet been discovered on the Egyptian reliefs, either in Egypt or Nubia. It may therefore with certainty be concluded, that they are subjects peculiar to Ethiopia. Among the Ethiopians, says Strabo (p. 1177), the women also are armed. Herodotus (ii. 100) mentions a Nitocris among the ancient queens of Ethiopia. Upon the relief [on the monument at Kalabshé] representing the conquest of Ethiopia by Sesostris, there is a queen, with her sons, who appears before him as a captive' (Hereen, *On the Nations of Africa*, vol. ii. p. 399). Irenæus (iii. 12) and Eusebius (*Hist. Eccl.* ii. 1) ascribe to Candace's minister her own conversion to Christianity, and the promulgation of the Gospel throughout her kingdom; and with this agrees the Abyssinian tradition, that he was likewise the apostle of Tigré, that part of Abyssinia which lay nearest to Meroë; it is added that he afterwards preached the Gospel in Arabia Felix, and also in the island of Ceylon, where he suffered martyrdom. (See Tillemont, *Mem. Hist. Eccl.* tom. ii.; Basnage, *Exercitatio. anti-Baron.* p. 113; Ludolph, *Comment ad Hist.*

Æthiop. p. 89). [ETHIOPIA; ABYSSINIA.]—N. M.

CANDLESTICK (הַמְנֹרֶת; Sept. ἡ λυχνία).

The candelabrum which Moses was commanded to make for the tabernacle, after the model shewn him in the Mount, is chiefly known to us by the passages in Exod. xxv. 31-40; xxxvii. 17-24; on which some additional light is thrown by the Jewish writers, and by the representation of the spoils of the Temple on the arch of Titus.

165.

The material of which it was made was fine gold, of which an entire talent was expended on the candelabrum itself and its appendages. The mode in which the metal was to be worked is described by a term which appears to mean *wrought* with the hammer, as opposed to *cast* by fusion. The structure of the candelabrum, as far as it is defined in the passages referred to, consisted of a base; of a shaft rising out of it; of six arms, which came out by threes from two opposite sides of the shaft; of seven lamps, which were supported on the summits of the central shaft and the six arms; and of three different kinds of ornaments belonging to the shaft and arms. These ornaments are called by names which mean *cups*, *globes*, and *blossoms*. The cups receive, in verse 33, the epithet *almond-shaped* (it being uncertain whether the resemblance was to the *fruit* or to the *flowers*). Three such cups are allotted to every arm; but four to the shaft: two-and-twenty in all. Of the four on the shaft, three are ordered to be placed severally under the spots where the three pairs of arms set out from the shaft. The place of the fourth is not assigned; but we may conceive it to have been either between the base and the cup below the lowest tier of arms, or, as Bähr prefers, to have been near the summit of the shaft. As for the name of the second ornament, the word only occurs in two places in the Old Testament, in which it appears to mean the capital of a column; but the Jewish writers generally (cited in Ugolini, *Thesaur.* xi. 917) concur in considering it to mean *apples* in this place. Josephus, as he enumerates

four kinds of ornaments, and therefore two of his terms must be considered identical, may be supposed to have understood *globes*, or *pomegranates* (*σφαίρα ἂν βόσκεις*, *Antiq.* iii. 6. 7). But as the term here used is not the common name for pomegranates, and as the Sept. and Vulgate render it *σφαίρωσῆς* and *sphaerula*, it is safest to assume that it denotes bodies of a spherical shape, and to leave the precise kind undefined. Bähr, however, is in favour of *apples* (*Symbolik*, i. 414). The name of the third ornament means *blossom*, *bud*; but it is so general a term that it may apply to any flower. The Sept., Josephus, and Maimonides, understand it of the lily; and Bähr prefers the flower of the almond. It now remains to consider the manner in which these three ornaments were attached to the candelabrum. The obscurity of verse 33, which orders that there shall be 'three almond-shaped cups on one arm, globe and blossom, and three almond-shaped cups on the other arm, globe and blossom; so on all the arms which come out of the shaft,' has led some to suppose that there was only one globe and blossom to every three cups. However, the fact that, according to verse 34, the shaft (which, as being the principal part of the whole, is here called the *candelabrum* itself), which had only four cups, is ordered to have globes and blossoms (in the plural), is a sufficient proof to the contrary.

It is to be observed, that the original text does not define the height and breadth of any part of the candelabrum; nor whether the shaft and arms were of equal height; nor whether the arms were curved round the shaft, or left it at a right angle, and then ran parallel with it. The Jewish authorities maintain that the height of the candelabrum was eighteen palms, or three ells; and that the distance between the outer lamps on each side was two ells. Bähr, however, on the ground of harmonical proportion with the altar of incense and table of shew-bread, the dimensions of which are assigned, conjectures that the candelabrum was only an ell and a half high and broad. The Jewish tradition uniformly supports the opinion that the arms and shaft were of equal height; as do also Josephus and Philo (*l. c.*; *Quis Rer. Div. Har.* sec. 44); as well as the representation on the arch of Titus. Scacchius has, however, maintained that they formed a pyramid, of which the shaft was the apex.

This candelabrum was placed in the Holy Place, on the *south* side (*i. e.*, to the *left* of a person entering the tabernacle), opposite the table of shew-bread (*Exod.* xxvii. 35). Its lamps, which were supplied with pure olive oil only, were lighted every evening, and extinguished (as it seems) every morning (*Exod.* xxvii. 21; xxx. 7, 8; *Lev.* xxiv. 3; *1 Sam.* iii. 3; *2 Chron.* xiii. 11). Although the tabernacle had no windows, there is no good ground for believing that the lamps burnt by day in it, whatever may have been the usage of the second temple. It has also been much disputed whether the candelabrum stood lengthwise or diagonally as regards the tabernacle; but no conclusive argument can be adduced for either view. As the lamp on the central shaft was by the Jewish writers called *נר מערבי*, *the western*, or *evening lamp*, some maintain that the former name could not be applicable unless the candelabrum stood across the tabernacle, as then only would the central lamp point to the west. Others again adhere

to the latter signification, and build on a tradition that the central lamp alone burnt from evening to evening, the other six being extinguished by day (*Reland*, *Antiq.* i. 5, 8).

In the first temple, instead of this single candelabrum, there were ten candelabra of pure gold (whose structure is not described, although *flowers* are mentioned; *1 Kings* vii. 49; *2 Chron.* iv. 7), one half of which stood on the north and the other on the south side of the Holy Place. These were carried away to Babylon (*Jer.* lii. 19). In the temple of Zerubbabel there again appears to have been only one candelabrum (*1 Maccab.* i. 23; iv. 49, 50). It is probable that it also had only seven lamps. At least, that was the case in the candelabrum of the Herodian temple, according to the description of Josephus (*De Bell. Jud.* vii. 5. 5). This candelabrum is the one which, after the destruction of Jerusalem, was carried with other spoils to Rome; then, A. D. 455, became a part of the plunder which Genseric transported to Africa; was again, about A. D. 533, recaptured from the Vandals by Belisarius, and carried to Constantinople, and was thence sent off to Jerusalem, and from that time has disappeared altogether. It is to this candelabrum that the representation on the arch of Titus at Rome was intended to apply; and, although the existence of the figures of eagles and marine monsters on the pediment of that lamp tends, with other minor objections, to render the accuracy of that copy very questionable (as it is incredible the Jews should have admitted any such graven images into their temple), yet there is reason to believe that, in other points, it may be relied upon as a reasonably correct representation of the Herodian candelabrum. *Reland* has devoted a valuable little work to this subject, *De Spoliis Templi Hierosolym. in Arcu Titiano*, ed. sec. Schulze, 1775.—J. N.

CANE (or CALAMUS), SWEET, an aromatic seed, mentioned among the drugs with which sacred perfumes were compounded (*Ezek.* xxvii. 19). [KANEH, KANEH-BOSEM.]

CANKER-WORM. [YELEQ.]

CANNE, JOHN. The place and date of his birth are unknown, though the latter is supposed to be about 1590. He is said to have been originally a minister of the Established Church, but for the greater part of his life he was one of its most decided opponents. In 1621 he was chosen pastor over a Nonconformist (Neal says a Brownist or Independent) church in London. After preaching in that capacity for a year or two, he was driven by the severity of the times to Holland, and became pastor of the ancient English Church at Amsterdam, carrying on at the same time the business of a printer. After seventeen years' absence, he returned to his native land in 1640. Between the years 1634 and 1640 he had become a Baptist, and in 1641 visited Bristol, and as 'a baptized man' was invited to assist in the formation of the Broadmead Baptist church in that city. He again suffered severity from the dominant ecclesiastical powers, though acquitted when brought to trial, about five months before Cromwell's death, in 1658. How soon after this he returned to Amsterdam is not known, but he died there in 1667. The work by which he is best known, and which has conferred upon him a lasting reputation, is his

Reference Bible, which has formed the basis of all similar undertakings. Eleven editions at least are known to have been published in little more than a century, from 1644 to 1754. They are given in Anderson's *Annals of the English Bible*, Lond. 1845, vol. ii. p. 555 who says—'Several of these books are but too incorrect, and many of the later have been corrupted by *additional texts*.' His other works are numerous, and occasioned by the peculiar circumstances of the times. (Canne's *Necessity of Separation from the Church of England, etc.*, with an *Introductory Notice by the Rev. C. Stovel*, London, 1849; Neal's *Hist. of the Puritans*, 1732, vol. ii. ch. 7.)—J. E. R.

CANNEH (Ezek. xxvii. 23), probably the same as CALNEH, which is the reading in one codex.

CANON. I. The Greek word *Κανὼν* denotes, primarily, a straight rod; and from this flow numerous derivative uses of it, in all of which the idea of *straightness*, as opposed to *obliquity*, is manifest. Among the rest, as a rod was employed to keep other things straight, or as a test of straightness, the word is employed to denote a *rule* or *standard*, by a reference to which the rectitude of opinions or actions may be determined. Thus the Greeks spoke of a *κανὼν τοῦ καλοῦ* (Eurip. *Hec.* 602), and Aristotle (*Eth. Nicom.* iii. 6) describes the good man *ὡς περ κανὼν καὶ μέτρον ἐκάστων ὧν*. They also used the verb *κανονίζω* to denote *determining by rule or standard* (Aristot. *Eth. Nic.* ii. 2). In this latter acceptance *κανὼν* is used in the New Testament (comp. Gal. vi. 16; Phil. iii. 16). In the same sense it is frequently used by the Greek fathers (Suicer. *Thes. Eccles.* in voc.); and as the great standard to which they sought to appeal in all matters of faith and duty was the revealed will of God contained in the scriptures of the Old and New Testaments, they came insensibly to apply this term to the truth thus revealed. Whether from the first they applied it also to the collective body of the sacred writings, and spoke of them in this capacity as the canon or rule, does not appear. They may have done so, however, for the usage already existed among the Greek grammarians, by whom the collective body of the Greek classics was called the Canon (Ruhnken, *Hist. Orat.* 94; comp. Quintil. *Inst. Rhet.* x. I, 54). The earliest instance extant of the term being applied to the sacred books, as such, is in the iambic lines to Seleucus preserved by Gregory of Nazianzus, when, after enumerating the books of the New Testament, the author says, *Οὗτος ἀψευδέστατος Κανὼν ἂν εἴη τῶν θεοπνευστῶν γραφῶν*. Before this, however, we have Origin speaking of 'canonical scriptures' (*De Princip.* iv. 33; *Prol. in Cantic.* s. l.; *Comment. in Matt.*, sec. 117) and 'canonized books' (*In Matt.*, sec. 28), though it remains uncertain whether by this epithet he intends books having regulative authority, or books ratified by authority. The term as used now of the sacred books is employed in the former sense, and in this acceptance we shall use it in this article.

2. The Canon, then, may be defined to be 'The Authoritative Standard of Religion and Morals, composed of those writings which have been given for this purpose by God to men, or the collection of books which comprise the divine and authoritative standard of religious truth and duty. We prefer this to the definition frequently given of the Canon, that it is 'The Catalogue of the Sacred Books;'

while Semler (*Von Freier Untersuchungen der Canons*), Doederlein (*Institutio Theol. Christ.* tom. i. p. 83), and others, define it as 'The List of the Books publicly read in the meetings of the early Christians.' The former of these definitions eviscerates the term Canon, as applied to the sacred writings, of its proper meaning; and the latter is doubly erroneous, as it not only omits the main characteristic of the Canon, *its divine authority*, but substitutes for this a characteristic which is historically false, as the Canon was not at any time synonymous with the list of books read in public in the early churches. De Wette and some others would identify the Canon, at least as respects the Old Testament, with the *national literature of the Jews*, on the ground, that it was enough for a Jew that a book was written by one of his own nation to entitle it to be viewed as also, and for that reason, sacred (*Einh.*, sec. 16). But this is not true in point of fact; for the Jews distinguished among writings all of which were of Jewish authorship, those which they held sacred from those which were not so held. (Cf. Eccl. xii. 11, 12; Joseph. *Contr. Apion.* i. 8). Something beyond mere national authorship was required to entitle any book to a place in the Canon of the Jews.

3. According to this definition, in order to establish the Canon of Scripture, it is necessary to shew that all the books of which it is composed are of divine authority; that they are entire and incorrupt; that, having them, it is complete without any addition from any other source; and that it comprises the whole of those books for which divine authority can be proved. It is obvious that, if any of these four particulars be not true, Scripture cannot be *the sole and supreme standard of religious truth and duty*. If any of the books of which it is composed be not of divine authority, then part of it we are not bound to submit to; and consequently, *as a whole*, it is not the standard of truth and morals. If its separate parts be not in the state in which they left the hands of their authors, but have been mutilated, interpolated, or altered, then it can form no safe standard; for in appealing to it, one cannot be sure that the appeal is not made to what is spurious, and what, consequently, may be erroneous. If it require or admit of supplementary revelations from God, whether preserved by tradition or communicated from time to time to the Church, it obviously would be a mere contradiction in terms to call it *complete*, as a standard of the divine will. And if any other books were extant, having an equal claim with the books of which it is composed to be regarded as of divine authority, it would be absurd to call it the *sole standard of truth*; for in this case the one class of books would be quite as deserving of our reverence as the other.

4. Respecting the *evidence* by which the Canon is thus to be established, there exists considerable difference of opinion amongst Christians. Some contend, with the Catholics, that the authoritative decision of the Church is alone competent to determine the Canon; others appeal to the concurrent testimony of the Jewish and early Christian writers; and others rest their strongest reliance on the internal evidence furnished by the books of Scripture themselves. We cannot say that we are satisfied with any of these sources of evidence exclusively. As Michaelis remarks, the first is

one to which no consistent Protestant can appeal, for the matter to be determined is of such a kind, that, unless we grant the Church to be infallible, it is quite possible that she may, at any given period of her existence, determine erroneously; and one sees not why the question may not be as successfully investigated by a private individual as by the Church. The concurrent testimony of the ancient witnesses is invaluable so far as it goes; but it may be doubted if it be sufficient of itself to settle this question, for the question is not *entirely* one of facts, and testimony is good proof only for *facts*. As for the internal evidence, one needs only to look at the havoc which Semler and his school have made of the Canon, to be satisfied that where dogmatical considerations are allowed to determine exclusively such questions, each man will extend or extruncate the Canon so as to adjust it to the Procrustean couch of his own preconceived notions. As the question is one partly of fact and partly of opinion, the appropriate grounds of decision will be best secured by a combination of authentic testimony with the evidence supplied by the books themselves. We want to know that these books were really written by the persons whose names they bear; we want to be satisfied that these persons were commonly reputed and held by their contemporaries to be assisted by the divine spirit in what they wrote; and we want to be sure that care was taken by those to whom their writings were first addressed, that these should be preserved entire and uncorrupt. For all this we must appeal to the testimony of competent witnesses, as the only suitable evidence for such matters. But after we have ascertained these points affirmatively, we still require to be satisfied that the books themselves contain nothing obviously incompatible with the ascription to their authors of the divine assistance, but, on the contrary, are in all respects favourable to this supposition. We want to see that they are in harmony with each other; that the statements they contain are credible; that the doctrines they teach are not foolish, immoral, or self-contradictory; that their authors really assumed to be under the divine direction in what they wrote, and afforded competent proofs of this to those around them; and that all the circumstances of the case, such as the style of the writers, the allusions made by them to places and events, etc., are in keeping with the conclusion to which the external evidence has already led. In this way we advance to a complete moral proof of the divine authority and canonical claims of the sacred writings.

5. The books specified as canonical in the 6th Article of the Church of England, and the 1st of the Confession of the Church of Scotland, are received as such by the majority of Protestants. To these the Church of Rome adds, as part of the Old Testament, ten other books, or parts of books, which Protestants reject as Apocryphal. [APOCRYPHA.] For the evidence in support of the genuineness and divine authority of those books universally regarded by Christians as canonical, taken individually, we shall refer here to the articles in this work under the titles of these books respectively. The remainder of the present article shall be devoted to a sketch of the formation and history of the Canon, first of the Old Testament, and then of the New.

6. *Formation of the Old Testament Canon.*—

By this is meant the collection into one whole of all those books whose divine authority was recognised by the Jews, and which now form the Old Testament, as that is received by the Protestant churches—The question is, At what time and by whom was this done?

In answer to this, a very steadfast tradition of the Jews ascribes the completion of the Old Testament Canon to Ezra [EZRA], and certain other persons, who, after the rebuilding of the Temple, formed with him, and under his auspices, what has been called the Great Synagogue (כנסת הגדולה). Without pretending to be able to give full demonstration of the accuracy of this traditionary opinion, it seems to us one which may be evidence, both direct and circumstantial, be rendered so extremely probable, that to call it in question would be to exhibit a degree of scepticism such as, in all other questions of a similar kind, would be thought highly unreasonable and absurd. In the *first* place, there is the testimony of the tradition itself. The earliest form in which this appears is in the fourth book of Esdras, a work dating from the end of the first or beginning of the second century after Christ. Here it is asserted that Ezra, by divine command and by divine aid, caused to be composed 94 books by three men in forty days, 70 of which, wherein 'is a vein of understanding, a fountain of wisdom, and a stream of knowledge,' were to be given to the wise of the people, whilst the rest were to be made public, that 'both the worthy and the unworthy might read them' (xiv. 42-47).* These twenty-four thus made public are, doubtless, the canonical books. The statement is very vague; but that this is its reference is rendered probable by the appearance in the writings of some of the Christian fathers of a tradition, that the sacred writings, which had been lost during the exile, were restored by Ezra in the time of Artaxerxes by inspiration (Clemens Alex., *Strom.* I. 22, p. 410; Potter; Tertullian, *De cultu foem.* i. 3; Irenæus, *Adv. Hær.* iii. 21 [25], etc.) In accordance with this, as respects person and time, is the Talmudic tradition contained in the Babylonian Gemara (Tr. *Baba Batirra*, fol. 13 b. and 14 b. See the passages in Buxtorf's *Tiberias*, bk. i. c. 10; Wæhner, *Antiq. Heb.* i. 13). The substance of this is, that, whilst Moses, Joshua, Samuel, David, Jeremiah, Hezekiah, and his friends, wrote the earlier books, the men of the Great Synagogue wrote (כתבו) Ezekiel, the Twelve [Minor Prophets], Daniel, and Esther; Ezra his own book, and he and Nehemiah the books of Chronicles. Everything depends here on the sense in which the verb כתב is taken. That it cannot be taken throughout in the sense of *compose* is manifest from the fact that David is said to have 'written' the Psalter through ten venerable elders, Adam, Melchizedek, Abraham, Moses, Jeduthan, Asaph, and the three sons of Korah, which can only mean that he incorporated their compositions with his own; and that Hezekiah and his friends are said to have 'written' the book of Isaiah, the Proverbs, the Song of Solomon, and Ecclesiastes; in this case it cannot denote the original writing of the books, but must mean the *ascrip-*

* The numbers here given are those of the Arabic and Ethiopic texts. The Vulg. has 204 books (for which a Dresden MS. gives 904, suggesting an error for 94) and five men.

tion (or the *to-writing*) of them to the canon, or the preparation and redaction of them, so as to fit them for a place in the Canon. This last is the interpretation advocated by Keil, and it has the commendation of being suited to all the uses of the verb in this passage, without pressing into it more than it legitimately signifies. It may be added, that this is the verb used by the Targumist on Prov. xxv. 1, as equivalent to the Hebrew עָתָק. This more detailed statement of the Gemara throws light on and gives force to the following passage in one of the oldest of the Talmudic books, the פְּרָקִי הַנְּבוֹנִים, or *Sayings of the Fathers*:—‘Moses received the Law on Mount Sinai, and gave it to Joshua, Joshua to the elders, the elders to the prophets, the prophets gave it to the men of the Great Synagogue.’ In the book יוֹמָא, fol. 69, 2, it is also said—‘Wherefore is their name called Men of the Great Synagogue? Because they restored the Crown (*i.e.*, of the Law) to its pristine splendour.’ According to this, the steadfast tradition of the Jewish books, Ezra and his contemporaries added the later books to the Canon, and thereby completed it. An attempt has been made to discredit this tradition, by adducing the circumstance that Simon the Just, who lived long after Ezra, is said, in the Pirke Aboth, to have been one of the members of the Great Synagogue; but to this much weight cannot be allowed, partly because Simon is, in the passage referred to, said to have been one of the *remnants* of the Great Synagogue, which indicates his having outlived it; and principally because the same body of tradition which states this opinion, makes him the *successor* of Ezra: so that either the whole is a mistake, or the Simon referred to must have been a different person from the Simon who is commonly known by the title of ‘Just’ (Cf. Othonis, *Lex. Rabbin. Philol.*, p. 604, Gen. 1675; Hävernick’s *Einleitung in das A. T.* Th. i. Abt. 1. s. 43). Or we may adopt the opinion of Hartmann (*Die Enge Verbindung des Alt. Test. mit d. Neuen*, s. 127), that the college of men learned in the law, which gathered round Ezra and Nehemiah, and which properly was the synagogue, continued to receive accessions for many years after their death, by means of which it existed till the time of the Maccabees, without our being required to suppose that what is affirmed concerning its doings in the time of Ezra is meant to refer to it during the entire period of its existence. Suspicions have also been cast upon this tradition from the multitude of extravagant wonders narrated by the Jews respecting the Great Synagogue. But such are found in almost every traditional record attaching to persons or bodies which possess a nationally heroic character; and it is surely unreasonable, because a chronicler tells one or two things which are incredible, that we should disbelieve all besides that he records, however possible or even probable it may be. ‘Je ne nie pas,’ says Fabricy (*Des Titres Primitifs de la Révélation*, i. 87, Rome, 1772), ‘que les Docteurs Juifs n’ayent avancé bien des chimères au sujet de cette Grande-Synagogue; mais laissons le fabuleux, et prenons ce qu’il y a de vrai dans un point d’antiquité Hébraïque, appuyé sur des témoignages que la bonne critique ne permet pas de révoquer en doute.’ To this it may be added that there are some things, such as the order of daily prayer, the settling of the text of the Old Testament, the establishment of the traditional interpretation of Scripture, etc., which must

be assigned to the period immediately after the Captivity, and which presuppose the existence of some institute such as the Great Synagogue, whether this be regarded as formally constituted by Ezra or as a voluntary association of priests and scribes (Zunz, *Gottesdienstlichen Vorträge der Juden*, p. 33). *zdly*, The part of this tradition which ascribes the formation of the Canon, before the Exile, to Moses and the prophets, is sufficiently supported by the testimony of Scripture itself. When Moses had finished the writing of the Law, ‘he delivered it to the priests, the sons of Levi, and unto the elders of Israel’ (Deut. xxxii. 9); and the book was then taken and put in the side of the ark, in the most holy place (ver. 26). Towards the close of the book of Joshua, it is said that ‘he wrote these words in the book of the law of God;’ which Le Clerc, with considerable probability, explains as meaning that he agglutinated the membrane on which his words were written to the volume of Moses which had been deposited in the side of the ark (*Comment. in loc.*) At a later period we find that Samuel, when he had told the people the manner (מִשְׁפָּט) the *ius publicum* of the kingdom, wrote it in the book (הַסֵּפֶר), and laid it up before the Lord (1 Sam. x. 25). Hilkiah, at a still later date, is said to ‘have found the book of the Law in the House of the Lord’ (2 Kings xxii. 8). Isaiah, in calling attention to his own prophecies, says, ‘Seek ye out of the book of the Lord and read: no one of these shall fail’ (xxxiv. 16); a passage on which Gesenius says (*Comment. i. 921*), ‘The poet seems to have before his mind the placing of his oracle in a collection of oracles and sacred writings, whereby future generations might judge of the truth of his predictions.’ In the writings of Jeremiah we find frequent allusion to the earlier books, especially the Pentateuch; in opposition to the false prophets, he sustains himself by an appeal to the prophets that were before him (xxviii. 8); and he represents himself as a link in the chain of true prophets whose words had come to pass (vii. 25, xi. 8, xxvi. 4-6; see Kueper, *Jeremias libb. sac. interpres atque vindex*, 1837; Koenig, *Altestament. Studien*, 2ter Th.) The author of Ecclesiastes refers (xii. 10-12) to his own work as destined to form part of a great whole of sacred writings, which he distinguishes from the ‘many books’ of ordinary human literature (See *Hengstenberg and Ginsburg*, in loc.) And Daniel informs us, that he ‘understood, by the books, the number of the years of the captivity’ (ix. 2); an expression which seems to describe the sacred Canon so far as it then was complete (Gesenius, *Lex. Heb. in v. סֵפֶר*). From these notices we may gather—that such books as were sanctioned by the authority of Moses and the prophets (whose business it was, as the watchmen of Zion, to guard the people against either the reception of any writing that was spurious or the loss of any that was genuine) were acknowledged by the Jews before the Exile as of Divine authority; that, in all probability, an authentic copy was in every case laid up in the sanctuary, and placed under the care of the priests* (Joseph. *Antiq. v. 1. 17*), from which copies were taken and circulated among the people

* The entrusting of the sacred books to the care of the priesthood was common to the Jews with the ancient nations generally. See Hävernick’s *Einleit. i. 1. sec. 17*, and the authors cited there.

CANON.

From the EVANGELIA QUATUOR VULGARĒ VERSIONIS,
10th Century, Harleian MSS., No. 2821.

(2 Chron. xvii. 9); and that collections of these were made by pious persons for their own use, such as Daniel probably had in Babylon, and such as Jeremiah seems to have had, from the frequent quotations in his prophecies from the older books. 3dly, It is natural to suppose that, on the return of the people from their exile, they would desiderate an authoritative collection of their sacred books. We know that, on that occasion, they were filled with an anxious desire to know the will of God, for neglect of which, on the part of their fathers, they had so severely suffered; and that, to meet this desire, Ezra and certain of the Priests and Levites read and expounded the word of the Lord to the people (Neh. viii. 1-8; ix. 1-3). As their fathers also had been misled by false prophets, it is natural to suppose that they would earnestly crave some assurance as to the writers whose words they might with safety follow. The Temple also was now bereft of its sacred treasures (Joseph. *De Bell. Jud.* vi. 6; *Tract. Rabbin. Foma.* ed. Sheringham, p. 102, sq.) During the exile, and the troublous times preceding it, several prophets had committed their oracles to writing, and these required to be added to the Canon; and the majority of the people having lost acquaintance with the Hebrew, a translation of their sacred books had become necessary. All this conspired to render it imperative that some competent authority should, at the time of the second temple, form and fix the code of sacred truth. 4thly, The time of Ezra and Nehemiah was the latest at which this could be done. As the duty to be performed was not merely that of determining the genuineness of certain books, but of pointing out those which had been divinely ordained as a rule of faith and morals to the Church, it was one which none but a prophet could discharge. Now, in the days of Nehemiah and Ezra there were several prophets living, among whom we know the names of Haggai, Zechariah, and Malachi; but with that age expired the line of prophets which God had appointed 'to comfort Jacob, and deliver them by assured hope' (Ecclus. xlix. 10). On this point the evidence of Josephus, the Apocryphal books, and Jewish tradition, is harmonious (comp. Joseph. *Cont. Apion.* i. 8; 1 Macc. iv. 46; ix. 27; xiv. 41; Hieronym. *ad Jes.* xlix. 21; Vitringa, *Obs. Sac. lib.* vi. cap. 6, 7; Hävernicks, *Einleit.* i. 1. 27; Hengstenberg, *Beiträge zur Einleit. ins A. T.* i. s. 245). As Ezra and his contemporaries were thus the last of the prophets, if the Canon was not fixed by them, the time was passed when it could be fixed at all. 5thly, That it was fixed at that time appears from the fact, that all subsequent references to the sacred writings presuppose the existence of the complete Canon; as well as from the fact, that of no one among the Apocryphal books is it so much as hinted, either by the author or by any other Jewish writer, that it was worthy of a place among the sacred books, though of some of them the pretensions are in other respects sufficiently high (*e. g.*, Ecclus. xxxiii. 16-18; l. 28). Josephus, indeed, distinctly affirms (*Cont. Ap. loc. cit.*) that, during the long period that had elapsed between the time of the close of the Canon and his day, no one had dared either to add to, or to take from, or to alter anything in, the sacred books. This plainly shews that in the time of Artaxerxes, to which Josephus refers, and which was the age of Ezra and Nehemiah, the collection

of the sacred books was completed by an authority which thenceforward ceased to exist. 6thly, Those who refuse to accept this date as that of the closing of the Old Testament Canon, are unable to fix on any date later than the time of the Maccabees. But it may be safely affirmed that no book, issued for the first time during the interval between the death of Malachi and the time of the Maccabees, could have been received by the Jewish people as divine; and this for two reasons—(1) That no writing was accepted as divine which was not the production of or authorized by a נביא, a *προφήτης*, a man enjoying divine inspiration, whereby he was fitted to become the medium of communication between God and the people; and (2) That no prophet appeared in Israel after the death of Malachi; for both of which assertions we have the testimony of Josephus (*Cont. Ap.* i. 8) confirmed by that of Philo, who throughout uses the term *προφήτης* as the proper designation of the authors of those books which he cites as *holy*, and to whom he ascribes all the writings he cites as such (Hornemann, *Obs. ad illustr. doctr. de Canone V. T.*); by that of the son of Sirach, who speaks of the existence of prophets in his nation as a privilege of the *past* (xlix. 10); and by that of the passage above cited from the first book of Maccabees.

7. *Division of the Canon into three parts, the Law, the Prophets, and the Writings* (תורה וכתובים וכתובים נביאים). This division is very ancient; it appears in the prologue to Ecclesiasticus, in the New Testament, in Philo, in Josephus, and in the Talmud (Surenhusii Βιβ. Καταλλ. p. 49). Respecting the principle on which the division has been made, there is a considerable difference of opinion. All are agreed that the first part, the Law, which embraces the Pentateuch, was so named from its containing the national laws and regulations. The second embraces the rest of the historical books, with the exception of Ruth, Esther, Ezra, Nehemiah, and the Chronicles; and the writings of the prophets, except Daniel and Lamentations. It is probable that it received its name *a parte potiori*, the majority of the books it contains being the production of men who were professionally prophets. That this criterion, however, determined the omission or insertion of a book in this second division, as asserted by Hengstenberg (*Authent. des Daniel*, p. 27), and by Hävernicks (*Einl.* I. sec. 11), cannot be admitted; for on the one hand, we find inserted in this division the book of Amos, who was 'neither a prophet nor a prophet's son;' and on the other, there is omitted from it the Book of Lamentations, which was unquestionably the production of a prophet. The insertion of this book in the last rather than in the second division, has its source probably in some liturgical reason, in order that it might stand beside the Psalms and other lyric poetry of the sacred books. It is more difficult to account for the insertion of the book of Daniel in the third rather than in the second division; and much stress has been laid on this circumstance, as affording evidence unfavourable to the canonical claims of this book. But if the book of Daniel be a forgery, why, if inserted at all, was it not inserted in the division to which it claims to belong? The answer is, that the second division was then closed, and could not be reopened so as to admit the new comer. But in what sense was it closed? Had some competent authority, pre-

vious to the appearance of the Book of Daniel, so fixed that a certain number of prophetic books were possessed by the Jewish nation, that no other ever could be possessed by them. If so, how came the Book of Daniel to be inserted at all among the sacred books, seeing, on this supposition, no one could regard it in any other light than as spurious? But is it certain that the Book of Daniel occupied from the first the place it now occupies in the third, and not in the second division? The only evidence for this assertion is, that such was the place of the book in the fifth century of the Christian era, as we learn from Jerome and the Talmud; from which it is inferred that such was always its place. But is this inference legitimate? Is it not possible that for some reason of a mystical or controversial kind, to both of which sources of influence the Jews during the early ages of Christianity were much exposed, they may have altered the position of Daniel from the second to the third division? What renders this probable is, that the Talmudists stand alone in this arrangement. Josephus, Siracides, Philo, the New Testament, all refer to the Hagiographa in such a way as to induce the belief that it comprised only the poetical portions of the Old Testament—the psalms, hymns, and songs; whilst in all the catalogues of the Old Testament writers given by the early Fathers, up to the time of Jerome, Daniel is ranked among the prophets, generally in the position he occupies in our common version. In the version of the LXX. also, he is ranked with the prophets next to Ezekiel. Nor does Jerome agree with the Talmud in all respects, nor does one class of Jewish rabbis agree with another in the arrangement of the sacred books. All this shews that no such fixed and unalterable arrangement of the sacred books, as that which is commonly assumed, existed anterior to the fifth century of the Christian era, and proves very distinctly that the place then assigned to Daniel by the Talmudists was not the place he had during the preceding period, or originally occupied. The very foundation of the objection being thus sapped, the whole superstructure necessarily falls to the ground. The Book of Daniel being accepted as the authentic production of that prophet, was, from the first, ranked with the other prophetic writings, and all that has been built upon its alleged exclusion from among the prophets is the mere 'baseless fabric of a vision.' As respects the name given to the third division, the most probable account of it is, that, at first, it was fuller—viz., 'the other writings,' as distinguished from the Law and the Prophets (comp. the expression τὰ ἄλλα βιβλία, used by the Son of Sirach, *Ecclesi.* Prol.); and that in process of time it was abbreviated into 'the writings.' This part is commonly cited under the title *Hagiographa*.

8. *Subsequent History of the Old Testament Canon.*—The Canon, as established in the time of Ezra, has remained unaltered to the present day. Some, indeed, have supposed that, because the Greek version of the Old Testament contains some books not in the Hebrew, there must have been a double canon, a Palestinian and an Egyptian (Semler, *Apparat. ad liberalem V. T. interpret.* sec. 9, 10; Corrodi, *Beleuchtung der Gesch. des Jüdisch. u. Christlich. Kanons*, s. 155-184; Augusti, *Einleit. ins. A. T. s. 79*); but this notion has been completely disproved by Eichhorn (*Einleit.* bd. i. s. 23), Hävernick (*Einl.* i. sec. 16), and

others. All extant evidence is against it. The Son of Sirach, and Philo, both Alexandrian Jews, make no allusion to it; and Josephus, who evidently used the Greek version, expressly declares against it in a passage above referred to (sec. 6). The earlier notices of the Canon simply designate it by the threefold division already considered. The Son of Sirach mentions 'the Law, the Prophets, and the other books of the fathers;' and again, 'the Law, the Prophecies, and the rest of the books;' expressions which clearly indicate that in his day the Canon was fixed.* In the New Testament our Lord frequently refers to the Old Testament, under the title of 'the Scriptures,' or of 'the Law' (Matt. xxi. 42; xxii. 29; John x. 34, etc. etc.); and in one place he speaks of 'the Law of Moses, the Prophets, and the Psalms' (Luke xxiv. 44); by the third of these titles intending, doubtless, to designate the Hagiographa, either after the Jewish custom of denoting a collection of books by the title of that with which it commenced; or, as Hävernick suggests, using the term ψαλμοί as a general designation of these books, because of the larger comparative amount of lyric poetry contained in them (*Einl.* sec. 14); or, what is most probable, naming this because it was that one of the class which principally testified concerning the Christ. As an evidence of the extent of the Old Testament Canon in the time of our Lord, may be cited Matt. xxiii. 35, and Luke xi. 51; where our Lord, by naming Abel and Zechariah, the former of whom is mentioned in Genesis, and the latter in 2 Chronicles, probably intends to indicate the first and the last examples of the shedding of the blood of the righteous according to the order of the books. Paul applies to the Old Testament the appellations 'The Holy Writings' (γραφὰὶ ἁγία, Rom. i. 2); 'the Sacred Letters' (ἐπὶ γράμματα, 2 Tim. iii. 15), and 'the Old Covenant' (ἡ παλαιὰ διαθήκη, 2 Cor. iii. 14). Both our Lord and his Apostles ascribe divine authority to the ancient Canon (Matt. xv. 3; John x. 34-36; 2 Tim. iii. 16; 2 Peter i. 19-21, etc.); and in the course of the New Testament, quotations are made from all the books of the Old except Ruth, Ezra, Nehemiah, Esther, Canticles, Lamentations, and Ezekiel; the omission of which may be accounted for on the simple principle that the writers had no occasion to quote from them. Philo attests the existence in his time of the ἐπὶ γράμματα, describes them as comprising laws, oracles uttered by the prophets, hymns, and the other books by which knowledge and godliness may be increased and perfected (*De Vita Contemplat.* in *Opp.*, tom. ii. p. 275, ed. Mangey); and quotations from or references to the most of the books are scattered through his writings. The evidence of Josephus is very important for, besides general references to the sacred books, he gives a formal account of the Canon, as it was acknowledged by the Pharisees and the priesthood, of which he was a member in his day, ascribing five books, containing laws and an account of the origin of man, to Moses, thirteen to

* Hitzig and some others speak of the title thus applied to the third division as 'vague,' and as indicating no settled canon. But this is absurd. 'The rest of the books' presupposes a fixed number of books, by subtracting from which the remainder is found.

the Prophets, and four, containing songs of praise to God and ethical precepts for men, to different writers, and affirming that the faith of the Jews in these books is such that they would for them suffer all tortures and death itself (*Cont. Apion*, i. 7, 8; Eichhorn, *Einleit.* i. sec. 50; Jahn, *Introductio*, p. 50). It is true that the number thus specified only amounts to 22; but this deficiency is generally, and, we think, satisfactorily accounted for, by supposing that Josephus classed Lamentations with Jeremiah, that he viewed Ezra and Nehemiah as one book (comp. *Baba Bathra*, 15, a; *Sanedrin*, 93, b), and that the twelve minor prophets were classed by him under one head (Stuart on the *Canon*, p. 245). It has been objected to this, that Josephus must on this supposition have ranked Job among the Prophets; for as the Psalms, Proverbs, Canticles, and Ecclesiastes constitute the *four* which he places under the third head, it is only under the second that Job can find a place. But there seems no violence in the supposition that Job was so reckoned by Josephus; for this book possesses a *historical* pretension as its fundamental characteristic, and with Josephus the prophets were primarily historians (*τὸ κατ' αὐτοῦ πραχθέντα συνέγραψαν*, *Cont. Ap.* l. c.) In accordance with this, it is noticeable that Josephus never quotes as scripture a passage which is not found in some one of these books. Melito, bishop of Sardis in the second century of the Christian era, gives, as the result of careful inquiry, the same books in the Old Testament Canon as we have now, with the exception of Nehemiah, Esther, and Lamentations; the two first of which, however, he probably included in Ezra, and the last in Jeremiah (Euseb. *Hist. Eccles.* iv. 26; Eichhorn, *Einl.* i. sec. 52). The catalogues of Origen (Euseb. *Hist. Eccles.* vi. 25), of Jerome (*Prolog. Galeat.* in *Opp.* iii.), and of others of the fathers, give substantially the same list (Eichhorn, *l. c.*; Augusti, *Einl.* sec. 54; Cosins, *Scholastical Hist. of the Canon*, ch. iii. vi.; Henderson, *On Inspiration*, 449). In the Talmudic Tract entitled *Baba Bathra*, a catalogue of the books of the sacred Canon is given as follows:—Moses wrote his own book and the section Bileam and Job; Joshua wrote his own book and eight verses in the Law; Samuel wrote his book, and Judges and Ruth; David the book of Psalms

through (or under the lead of *על ידי*) ten venerable elders, Adam, Melchizedek, Abraham, Moses, Heman, Jeduthan, Asaph, and the sons of Korah; Jeremiah wrote his book, the Books of Kings and Lamentations; Hezekiah and his friends wrote the sign *ישיב*, viz., Isaiah, Proverbs, Song of Songs, and Coheleth; the men of the Great Synagogue wrote the sign *קניג*, viz., Ezekiel, the twelve (minor prophets), Daniel, and the Megilloth Esther; Ezra wrote his book, and the genealogies of the Books of Chronicles, down to himself. . . . Who brought down the rest of them (the Chronicles)? Nehemiah the son of Checaliah' (see the original, quoted in Ginsburg's *Ecclesiastes*, p. 244). In another passage the order of the books is given thus:—The Pentateuch, Joshua, Judges, Samuel, Kings, Jeremiah, Ezekiel, Isaiah, and the minor prophets, of which Hosea is the first; Ruth, Psalms, Job, Proverbs, Coheleth, Song of Songs, Lamentations, Daniel, Esther, Ezra, and Chronicles (*Ibid.* p. 12; Eichhorn, *Einleit.* i. 130). They thus make out 24 books. It has been asserted

that doubts existed among the Jews as to the Canonicity of Ecclesiastes and the Song of Songs; but all that the passages cited from the Talmud in support of this shew, is, that in the school of Shammai, where unusual scrupulosity in such matters was affected, objections, arising out of supposed difficulties and contradictions, had been started against these and other books, but that these were overruled by the concurrent decision of the 72 elders, and declared to be invalid (Ginsburg, *l. c.* p. 13-16). It thus appears that the Canon once fixed remained among the Jews unaltered, and was the same as we now have. For the history of the Old Testament Canon in the Christian Church, see APOCRYPHA.

9. *Formation of the New Testament Canon.*—Whilst there is abundance of evidence in favour of the divine authority of the New Testament books, taken separately, fully greater perhaps than can be adduced in support of many of those of the Old Testament, the history of the formation of the New Testament Canon is involved in greater obscurity than that of the Old. An ecclesiastical tradition ascribes to the apostle John the work of collecting and sanctioning the writings which were worthy of a place in the Canon; but this tradition is too late, too unsupported by collateral evidence, and too much opposed by certain facts, such as the existence of doubt in some of the early churches as to the canonicity of certain books, the different arrangement of the books apparent in catalogues of the Canon still extant, etc., for any weight to be allowed to it. A much more probable opinion, and one in which nearly all the modern writers who are favourable to the claims of the Canon are agreed, is, that each of the original churches, especially those of larger size and greater ability, collected for itself a complete set of those writings which could be proved, by competent testimony, to be the production of inspired men, and to have been communicated by them to any of the churches as part of the written word of God; so that in this way a great many complete collections of the New Testament scriptures came to be extant, the accordance of which with each other, as to the books admitted, furnishes irrefragable evidence of the correctness of the Canon as we now have it. This opinion, which in itself is highly probable, is rendered still more so when we consider the scrupulous care which the early churches took to discriminate spurious compositions from such as were authentic—the existence, among some, of doubts regarding certain of the New Testament books, indicating that each church claimed the right of satisfying itself in this matter—their high veneration for the genuine apostolic writings—their anxious regard for each other's prosperity leading to the free communication from one to another of whatever could promote this, and, of course, among other things, of those writings which had been entrusted to any one of them, and by which, more than by any other means, the spiritual welfare of the whole would be promoted—the practice of the Fathers of arguing the canonicity of any book, from its reception by the churches, as a sufficient proof of this—and the reason assigned by Eusebius (*Hist. Eccles.* iii. 25) for dividing the books of the New Testament into *ὁμολογούμενοι* and *ἀντιλεγόμενοι*, viz., that the former class was composed of those which the universal tradition of the churches authenticated, while the

latter contained such as had been received by the majority, but not by all* (Stosch, *Comment. Hist. Crit. de Libb. N. Testamenti Canone*, etc., p. 112, ff.; Olshausen's *Echtheit der IV. Evang.* s. 439). In this way we may readily believe that, without the intervention of any authoritative decision, either from an individual or a council, but by the natural process of each body of Christians seeking to procure for themselves and to convey to their brethren authentic copies of writings in which all were deeply interested, the Canon of the New Testament was formed. With this natural desire two circumstances of an outward kind co-operated. The one was the rise of heretical sects, leading to disputes, for the settling of which a fixed canon became indispensable; the other was the persecutions to which the Christians were exposed, and which naturally led them to be scrupulously careful to determine on solid grounds the number of books for adherence to which they were prepared to suffer. The persecution of Diocletian may be almost said to have given the touch by which the previously somewhat unsettled elements were crystallized and fixed.

10. *History of the New Testament Canon.*—On this interesting subject we can do little more here than indicate the sources of information, and state generally the results of inquiry. The first certain notice which we have of the existence of any of the New Testament writings, in a collected form, occurs in 2 Pet. iii. 16, where the writer speaks of the epistles of Paul in such a way as to lead us to infer that at that time the whole or the greater part of these were collected together, were known amongst the churches generally (for Peter is not addressing any particular church) and were regarded as on a par with 'the other Scriptures,' by which latter expression Peter plainly means the sacred writings both of the Old Testament and the New Testament, as far as then extant. A late tradition ascribes to St. John the collection and arrangement of the other Gospels (Photius, *Bibl. Cod.* 254); to this much importance cannot be attached; but that St. John must have had before him copies of the other evangelists is probable from the *supplementary* character of his own gospel.

Second century.—The witnesses here are the Apostolic Fathers, Justin Martyr, Papias, the Muratori Fragment (of uncertain authorship, but certainly not of later date than the latter part of the second century), the Peshito version, Irenæus, Tatian, Theophilus of Antioch, Clement of Alexandria, Tertullian, and the Gnostic and Marcionite heretics. In the Apostolic Fathers we have little beyond citations from the New Testament writers to which to appeal; but these are so numerous as to embrace not only the Gospels, but all the Epistles with the exception of Jude, 2 Peter, 2 and 3 John, from which no quotations are made, and 1 and 2 Thess., Colos., Tit., and Philem., to which the references were too indistinct to be held valid in a question of evidence. Whether all the refer-

ences in these writings to the gospel history are to be traced to our extant Gospels must be admitted as a doubtful point; but it is important to observe, that near as these writers were to the apostolic age, they draw a clear line of distinction between themselves and the Apostles. Clement calls his readers to 'the illustrious and venerable Canon of their holy calling' (*Ad. Cor.* i. 7), which, however, it must be confessed, may refer merely to *principles*, without relation to these as embodied in writing; and he appeals them 'to the epistle of the blessed Paul,' addressed to them as of supreme authority (47). In the same spirit Polycarp calls the attention of the Philippians to the wisdom of 'the blessed and glorified Paul,' as that to which neither he nor any other like him could aspire, and which they had embodied in that epistle written by Paul to them, and by attention to which they might be edified in the faith (*Ep. ad Phil.* c. iii.) Ignatius, writing to the Romans (sec. 4), says, 'Not as Peter and Paul do I enjoin upon you,' etc.; and the relation, in general, in which these men considered themselves and their writings, as standing to the churches, may be gathered from the statement of Barnabas, who, after saying that the Lord had spoken by the prophets, adds: 'but I, not as a teacher, but as one of yourselves, will shew a few things by which you may be in very many respects gladdened' (c. i.) In the anonymous Epistle to Diognetus, which is, on good grounds, supposed to be one of the earliest of the uninspired Christian writings, the writer speaks of the Law, the Prophets, the Gospels, and the Apostles (sec. xi. ed. Hefele). But the most remarkable passage is that in which Ignatius speaks of 'betaking himself to the Gospel as the flesh of Jesus, and to the apostles as the Presbytery of the church,' and adds, 'the prophets also we love;' thus shewing, that it is to the Scriptures he was referring (*Ep. ad Philadelphenos*, sec. v.) Theophilus of Antioch speaks frequently of the New Testament writings under the appellation of *αἱ ἅγια γραφαί*, or *ὁ θεῖος λόγος*, and in one place mentions the Law, the Prophets, and the Gospels, as alike divinely inspired (*Ad. Autol.* iii. 11). Clement of Alexandria speaks of the *ἀποστολική γραφή*, and discriminates the *ἀπόστολος* or the *ἀπόστολοι* as the designation of a collective body of writings from the *εὐαγγέλιον*, and classes both with the *προφήται* as containing the doctrine of the Lord, and as being authoritative. (See the passages in Lardner, *Works* ii. 231, ed. 1788). Tertullian distinctly intimates the existence of the New Testament Canon in a complete form in his day, by calling it 'Evangelicum Instrumentum' (*Adv. Marc.* iv. 2), by describing the whole Bible as 'totum instrumentum utriusque Testamenti' (*Adv. Prax.* c. 20), and by distinguishing between the 'Scriptura Vetus' and the 'Novum Testamentum' (*Ibid.* c. 13). Irenæus repeatedly calls the writings of the New Testament 'the Holy Scriptures,' 'the Oracles of God' (*Adv. Hær.* ii. 27; i. 8, etc.), and in one place he puts the Evangelical and Apostolical writings on a par with the Law and the Prophets (*Ibid.* i. 3, sec. 6). From these allusions we may justly infer, that before the end of the second century the New Testament Scriptures were generally known by the Christians in a collected form, and revered as the word of God.

What the books were which they thus revered, may be gathered partly from the quotations made by the Christian writers of that age, partly

* Strictly speaking, they had *three* classes into which the books were at first divided, viz. Those universally acknowledged; those universally rejected; those which were received by some but not by all. In process of time the last class disappeared, as the books of which it was composed were placed in one or other of the other two.

from their formal statements. The result is, that the Four Gospels, the Acts, thirteen of Paul's Epistles, 1 *John*, and 1 *Peter*, were generally recognized in all the churches; the *Revelation* was received by the most, though not by all (in the Syriac version it is wanting, which would seem to shew that it was unknown to, or not held canonical in the churches for which that version was made); the *Epistle to the Hebrews* was generally received as Pauline in the Greek churches, was received, but not as Pauline, nor apparently as directed to any church in particular, but as catholic, by the Syrian churches, and was apparently unknown to the churches of the west; the *Epistle of James* was received by the Syrian churches, but it is not mentioned as known elsewhere; the *Epistle of Jude* was received in the Western churches, but is not in the Syriac Canon, nor is it mentioned by any belonging to the Greek churches; 2 *John*, and probably 3 *John* also, were known to the western and eastern churches, but not to the Syrian; no certain trace of acquaintance with 2 *Peter* is found in the writings of this age. The Muratori Fragment formally rejects, as spurious and heretical, the Epistle of Paul to the Laodiceans, and another, now lost, to the Alexandrians.

Third century. The witnesses here are Origen, Firmilian of Cappadocia, Apollonius, Hippolytus, Cyprian, Victorinus, Dionysius of Alexandria, and Methodius. Of these the chief is Origen, whose judgment on the Canon is preserved by Eusebius (*Hist. Eccl.* vi. 25). He recognises our four Gospels as a complete whole, and admits no others to the same rank; the *Acts* he names as the work of Luke, and places it between the Gospels and the Epistles as of equal authority with them (*In Joan.* t. i. c. 5); of the writers of the *Epistles* he refers only to Paul, Peter, and John, though, from his other writings, it would appear that the Epistles of James and Jude were also known to him; of the Epistles of John he mentions the First as of more undoubted authority than the other two; he ascribes the *Revelation* to John; the Epistle to the *Hebrews* he reckons as Pauline, in the sense of containing the sentiments (*νοήματα*) of that Apostle; the *Second Epistle of Peter* he is the first to name expressly, but he names it as doubtful. Origen cites some of the writings of the Apostolic Fathers as if he attached canonical authority to them, but he does not class them with the Gospels, the Acts, and the Apostolical Epistles, to which he refers as a collective whole under the title of *ἡ καθὴν διαθήκη* or *πᾶσα ἡ καθὴν διαθήκη*. Other testimonies shew, that in the Eastern church the 2d and 3d *John* were, at a date a little after the time of Origen, generally received, also the *Epistle to the Hebrews*. This also was accepted in the Syrian churches, but not in those of the West, especially Rome. Respecting the *Revelation*, serious doubts were entertained by many in the Alexandrian church, and by some it was utterly rejected, though only on internal grounds.

Fourth century. Here the witnesses are Eusebius, Athanasius, Cyrill of Jerusalem, Gregory of Nazianzus, the author of the iambic lines to Seleucus, preserved by Gregory, and by some ascribed to him, by others to Amphilocheus of Iconium, Canon 59 of the Laodicean Council, the Canones Apostolici, Epiphanius, Augustine, and Jerome. Eusebius made the Canon the object of anxious inquiry, and he gives us not only his own

judgment, but that of others who lived before his time. He divides the books into three classes, 1. The *ἀπολογούμενα*, or those universally received as apostolical; 2. The *ἀντιλεγόμενα*, or those received by some as apostolical, but not by all, along with those which were spurious (*ψευδῆ*), that is, either a forgery, such as the Acts of Paul, or a work that was genuine but not apostolical, such as the Shepherd of Hermas; and 3. *Heretical*, or such as were to be at once set aside as 'monstrous and impious.' The result of his researches is, that the books generally acknowledged in the churches as canonical, were the *Four Gospels*, the *Acts*, thirteen *Epistles of Paul*, 1 *John*, and 1 *Peter*. Of the other seven writings, he himself seems to have recognized the canonical authority, though he admits that by some they were doubted; but he appears to have remained in uncertainty regarding the *Revelation*. 'The testimony of Eusebius,' it has been justly remarked, 'marks a definite step in the history of the Canon, and exactly that which it was reasonable to expect from his position. The books of the New Testament were formed into distinct collections—'a quaternion of Gospels,' 'fourteen Epistles of St. Paul,' 'seven Catholic Epistles'' (Westcott, *History of the Canon, etc.*, p. 490). From this time the Canon of the New Testament may be regarded as fixed, and as embracing all the books now contained in it. It was some time before the *Revelation* and the *Epistle to the Hebrews* were accepted by all the Eastern churches; but, by the end of the fourth century, these writings, as well as all the catholic epistles, seem to have been universally received. In the churches of the West we find the same concord prevailing at this date; all the books now received as canonical were recognized by them; and the Canon was announced as determinately fixed by decrees of councils and rescripts of the bishops of Rome. In the Syrian churches the Canon of the Peshito still prevailed; they seem never to have accepted *Jude*, 2 *Peter*, 2 and 3 *John*, and *Revelation*; though, in his writings, which are preserved in Greek, Ephræm Syrus uses these as canonical.

It does not seem necessary to continue this historical sketch any further. From the beginning of the fifth century the Canon of the New Testament was fixed in the churches; and any divergencies from the standard thus exhibited, made either by churches or individuals in later times, are to be viewed as mere utterances of opinion, and carry with them no evidential authority.

II. With the external evidence thus furnished in favour of the sacred Canon, the internal fully accords. In the Old Testament all is in keeping with the assumption that its books were written by Jews, sustaining the character, surrounded by the circumstances, and living at the time ascribed to their authors; or if any apparent discrepancies have been found in any of them, they are of such a kind as further inquiry has served to explain and reconcile. The literary peculiarities of the New Testament, its language, its idioms, its style, its allusions, all are accordant with the hypothesis that its authors were exactly what they profess to have been—Jews converted to Christianity, and living at the commencement of the Christian era. Of both Testaments the theological and ethical systems are substantially in harmony; whilst all that they contain tends to one grand result—the manifestation of the power and perfection of Deity, and the re-

storation of man to the image, service, and love of his Creator. The conclusion from the whole facts of the case can be none other than that the Bible is entitled to that implicit and undivided reverence which it demands, as the only divinely appointed Canon of religious truth and duty.

12. Besides the Introductions to the critico-historical study of Scripture, the following works may with advantage be consulted on the subject of the Canon:—Cosins, *Scholastical History of the Canon*, 4to London, 1657, 1672; Du Pin, *History of the Canon and Writers of the Books of the Old and New Test.* 2 vols. folio, London, 1699-1700; Ens, *Bibliotheca Sacra, sive Diatribæ de Librorum Nov. Test. Canone*, 12mo Amstel. 1710; Lardner, *Credibility of the Gospel History*, Works, vol. i.—vi., 8vo, edit.; Stosch, *Comment. Hist. Crit. de Libb. Nov. Test. Canone*, 8vo Francof. ad Viadrum, 1755; Schmid, *Hist. Antiq. et Vindicatio Canonis V. et N. Test.* 8vo, Lips. 1775; Mill, *Proleg. in Nov. Test. Pars Prima*, Oxon, 1707; Jones, *New and Full Method of settling the Canonical Authority of the New Test.* 3 vols. 8vo; Paley, *Horæ Paulinæ*; Alexander, *Canon of the Old and New Test. ascertained*, 12mo Princeton, U. S. 1826, London, 1828; Stuart, *Critical Hist. and Defence of the O. T. Canon*, Lond. 1849; Westcott, *General Survey of the History of the Canon of the N. T.*, Camb. 1855; Kirchhofer, *Quellensammlung zur Gesch. des N. T. Canons*, Zürich, 1844; Art. *Canon*, by Oehler and Landerer in Herzog's *Real-Encyclopædie*.—W. L. A.

CANOPY (κονωπέριον). This word occurs only in Judith x. 21; xiii. 9, 15; xvi. 19, in reference to the tester or roof of the couch on which Holofernes rested. It is described as 'woven with purple, and gold, and emeralds, and precious stones;' and was evidently a luxurious addition to the ordinary couch. [BED.] Judith pulled down this canopy from the pillars on which it was supported, not, as has been suggested, to hide the blood she had shed, but rather to carry it away as a trophy; for it is expressly said, she gave, as a gift to the Lord, the canopy which she had taken out of the bed-chamber of Holofernes (xvi. 19).—W. L. A.

CANTICLES. [SOLOMON'S SONG.]

CAPELLUS, JAMES, belongs to a family distinguished as statesmen, jurists, and theologians in the fifteenth, sixteenth, and seventeenth century. He is generally styled James Capellus III., to distinguish him from his father and grandfather. He was born at Rennes, 1570. His father died in 1586. His mother was persuaded to attend mass as an expedient for saving the family estate at Tilloy from confiscation, but this violation of her conscience brought on an illness from which she never recovered. In 1593 James took the younger children from the hands of their Popish guardians, and removed to Sedan. Two years after he returned to Tilloy, and preached to the Protestants in the neighbourhood. In 1599 he was appointed, by the Duke de Bouillon, to be preacher and Hebrew professor at Sedan. In 1610 he was appointed professor of theology in the same university, an office which he held till his death, in September 1624. His *Observationes Criticæ in Libb. V. T.* were published with those of his younger brother Louis, Amst. 1689. The same volume contains a list of his other works published and in manu-

script, by his brother in his *Commentarius de Capellorum gente*, originally written in French, and translated into Latin by his son James, who succeeded his father when only nineteen as professor of Hebrew at Saumur; on the revocation of the Edict of Nantes he took refuge in England in 1689, and died at Hackney in 1722, 83 years old.—J. E. R.

CAPERNAUM (Καπερναούμ), a city on the north-western side of the Lake of Gennesaret, and on the border of the tribes of Zebulun and Naphthali. The infidelity and impenitence of the inhabitants of this place, after the evidence given to them by our Saviour himself of the truth of his mission, brought upon them this heavy denunciation:—'And thou, Capernaum, which art exalted unto heaven, shalt be brought down to hell: for if the mighty works which have been done in thee had been done in Sodom, it would have remained until this day,' etc. (Matt. xi. 23). This seems to have been more than any other place the residence of Christ after he commenced his great mission; and hence the force of the denunciation, which has been so completely accomplished that even the site of Capernaum is quite uncertain. Dr. Robinson (*Bibl. Researches*, iii. 288-294) exposes the errors of all previous travellers in their various attempts to identify the site of Capernaum; and, from a hint in Quaresmius, he is rather inclined to look for it in a place marked only by a mound of ruins, called by the Arabs, Khan Minyeh. This is situated in the fertile plain on the western border of the Lake of Gennesaret, to which the name of 'the land of Gennesaret' is given by Josephus (*De Bell. Jud.* iii. 10. 8). This plain is a sort of triangular hollow, formed by the retreat of the mountains about the middle of the western shore. The base of this angle is along the shore, and is about one hour's journey in length, whereas it takes an hour and a half to trace the inner sides of the plain. In this plain Josephus places a fountain called Capharnaum: he says nothing of the town; but, as it can be collected from the Scriptural intimations that the town of Capernaum was in this same plain, it may be safely concluded that the fountain was not far from the town, and took its name therefrom. In this plain there are now two fountains, one called 'Ain el Madauwarah, the 'Round Fountain'—a large and beautiful fountain, rising immediately at the foot of the western line of hills. This Pococke took to be the Fountain of Capernaum, and Dr. Robinson was at the time disposed to adopt this conclusion.

Addendum. At the hill which bounds the plain of Gennesaret on the north is the fountain of Ain et-Tin, so called from a fig-tree which spreads its branches over it. Beside the fountain are foundations of old buildings, now almost obliterated. A few hundred yards west of it are the extensive ruins of Khan Minyeh; and a short distance southward are mounds of stones and rubbish, now nearly covered with thorns and thistles. The writer was enabled to make out traces of ruins extending over a space of several acres. This appears to be the true site of Capernaum; but as this view has been opposed by Wilson, Ritter, Thomson, and other recent authors, it may be well to sum up in a few words the leading arguments in its favour. Robinson gives them in full (*Bibl. Res.* iii. 348, sq.)

1. Capernaum was situated on the shore of the

lake, in the plain of Gennesaret (John vi. 17, 21, 24, 25, with Mark vi. 53). This plain is easily identified; it extended from Mejdal to Ain et-Tin.

2. In Gennesaret was a fountain called Capernaum, and therefore in all probability beside the town. Ain et-Tin is the only fountain near the shore.

3. The notices of some of the mediæval pilgrims, though not very clear, seem to point to Ain et-Tin as the site of Capernaum. That of St. Willibald certainly does so (*Early Travels in Pal.*, p. 16). Quaresmius identifies Khan Minyeh and Capernaum (Robinson, *B. R.*, iii. 357).

4. It is only since the seventeenth century that an attempt has been made to locate Capernaum at Tell Hum. The arguments in its favour may be seen at large in Wilson, *Lands of the Bible*; Ritter, *Pal. and Syr.*, ii. 340 ff.; Thomson, *Land and Book*, 352, sq.

Capernaum is now utterly desolate; its very name is unknown to tradition, and its site is disputed. What a comment on our Lord's prediction, 'Thou shalt be brought down to hell!' Capernaum was perhaps more closely connected with Christ's public ministry than any other town in Palestine. After he was rejected by the Nazarenes 'he came and dwelt in Capernaum,' which was hence called 'his own city' (Matt. iv. 13; ix. 1). Here he healed the demoniac (Mark i. 21-28), cured 'Peter's wife's mother' (Luke iv. 38), restored the paralytic, and called Matthew (Matt. ix. 2-9), cured the centurion's servant (Luke vii. 1-10), raised Jairus' daughter (Mark v. 22-43), and miraculously obtained the 'tribute-money' (Matt. xvii. 24-47). Near Capernaum he chose his apostles (Mark iii. 13-19), preached the 'Sermon on the Mount,' (Matt. v), related the parables of the 'sower,' the 'tares,' the 'treasure hid in a field,' the 'merchant seeking goodly pearls,' and the 'net cast into the sea' (Matt. xiii.). In Capernaum he gave a lecture on fasting at Levi's feast (Matt. ix. 10-17), on formality to the Pharisees (Matt. xv. 1-20), on faith (John vi. 22-71), and on humility, forbearance, and brotherly love (Mark ix. 33-50). Well might the Saviour, after such acts of love and power, and such words of wisdom and mercy, denounce woe upon the city that had seen and heard, and yet rejected! (*Hand-book for S. and P.*, p. 430, sq.)—J. L. P.

CAPHAR-SALAMA (Χαφαρσαλαμά, Alex. Χαφαρσαράμα), a village in Palestine, near to which Judas Maccabæus defeated Nicanor, one of the generals of Demetrius Soter, 1 Macc. vii. 31, Joseph. *Ant.* xii. 10. 4.—S. N.

CAPHENATHA, Χαφενάθα, *Caphenatha*, *Chaphanatha*; 1 Macc. xii. 37. The word occurs nowhere else, and its derivation is very uncertain. It appears to have been the name given to a part of the fortifications on the eastern side of Jerusalem which were repaired by Jonathan Maccabæus. It is not mentioned by Josephus.—J. E. R.

CAPHTHOR (כַּפְתּוֹר), a district or country respecting the position of which great diversity of opinion prevails. All that we learn from the notices of it in Scripture is—1. That it was the mother country of the Philistines, or rather a portion of them called the CAPHTORIM, for there were Philistines also who came from Casloch (Gen. x. 14), who emigrated from it and settled on the coast of

Palestine, from Joppa to the borders of Egypt, having expelled the original occupants, the Avim (Deut. ii. 23; Jer. xvii. 4; Am. ix. 7). 2. That it was a maritime district, if not an island (Jer. xlvii. 4, where it is called כַּפְתּוֹר). 3. That its people were a Mizraite race, and its locality, consequently, somewhere within the range of the Mizraic settlements. Beyond this it is only conjecturally that anything can be advanced regarding it. It has been identified with—1. CAPPADOCIA. This is the rendering of the older versions, and this view has been followed by Bochart (*Phaleg.* iv. 32); Gesenius (*Thesaur.* s. v.); Koester (*Erläuterungen der heiligen Schriften aus den Klassikern*, p. 157), etc. 2. CYPRUS. This was suggested by Calmet in the first edition of his *Commentaries on Genesis*, and it has recently been conjecturally resumed by Höck (*Kreta* i. 368), and Redslob (*Alltest. Namen*, p. 15). 3. CRETE. Lakemacher was the first to propose this (*Obs. Philol.* ii. 11); it was adopted by Calmet (*Disquis. Bibl.* iii. 25); and it has found very general acceptance with recent inquirers, among whom may be named Rosenmüller (*Bibl. Alterthumsk.* ii. 2, 363; iii. 385); Mövers (*Phanizien*, i. 28); Lengerke (*Kanaan* i. 194); Ewald (*Gesch. d. Volkes Isr.* i. 330); Tuch (*Genesis*, p. 243); Knobel (*Genes.* p. 110); Delitzsch (*Genes.* p. 290); Fürst (*Heb. und Chal. H. W. B.*), etc. 4. CERTAIN PARTS OF EGYPT. (1), *The Coast of the Egyptian Delta*. This is the opinion of Stark (*Gaza und die Philist. Küste*, p. 76). (2), *Damiatta*. So Saadias

in the Arab. Vers. ديمياط, *Dimyiat*; Benjamin of Tudela; the Heb. book *Fuchasin*, quoted by Bochart (*Phaleg.* iv. 38); Haine (*Obs. Sac.* ii. 6. 10). 3. *Part of Morocco*, west from Egypt (Quatremère *Journal des Savans*, 1846, p. 265).

Of these opinions the last two alone are worthy of consideration. The first rests on little beyond the similarity of sound between Caphthor and Cappadocia, a similarity which is by no means striking, and which entirely disappears when it is known that the ancient name of Cappadocia was Katpatuk or Katapatuka (Rawlinson, *Journ. of the Asiatic Soc.* xi. 1, 95). Köster urges, as the strongest argument in favour of this view, that 'all the eastern districts of Asia Minor beyond the river Halys, and as far as Mount Taurus, were undoubtedly occupied by Semitic peoples;' but supposing it proved that the Cappadocians were originally a Semitic people (which, however, is very far from being 'undoubted'), one does not see what proof there is in this that the Caphthorim, who were a Hamitic race, emigrated thence, or that Caphthor is Cappadocia. The opinion that Cyprus is the ancient Caphthor rests also almost solely on a supposed resemblance between כַּפְתּוֹר and Κύπρος, an argument of but little weight; while the opinion itself stands opposed to the fact, that the Hebrews knew Cyprus under the name of כִּרְתִים, and they were not likely to fall into any confusion respecting an island so near their own shores. The extensive agreement of scholars in favour of Crete as the ancient Caphthor, gives a preliminary probability to this supposition; and it receives support from the fact, that the inhabitants of the same district, apparently occupied by the Caphthorim, are called כִּרְתִים, *Crethi*, which is assumed to mean Cretans (A. V. Cherethites), and that these *Crethi* were undoubtedly Philistines (1 Sam. xxx. 14, 16; Ezek. xxv. 16; LXX. κρητας; Zeph.

ii. 5; LXX. κρητῶν; comp. 2 Sam. viii. 18). To this it may be added, that Tacitus, apparently confounding the Jews with the Philistines, calls them 'Judæos Creta insula profugos' (*Histor.* v. 2); that Stephanus Byzant. (s. v. *Gaza*), says that Gaza was previously called Minoa from Minos king of Crete; and that such a name as Φαλδσαρνα in Crete indicates the presence of the Philistines there. The weight of these auxiliary reasons cannot be thought great, and the force of the main reason is seriously impaired by the consideration, that the Crethi are identified by the sacred writers with the כְּרִי or inhabitants of Caria [CARIA]. On the other hand, it is extremely improbable, either that a small island like Crete should be able to send forth so large a body of emigrants as must have landed on the territories of the Avim, so as to be able to expel them, and take possession of their country, or that the Phœnicians would allow a sea-faring race like the Cretans to settle in their vicinity (see Höck, *Kreta*, p. 367). On the whole, the supposition that the Caphthorim were an Egyptian race, which crossed over from somewhere in the vicinity of Damietta, seems the most probable. The close resemblance of the Philistines to the native Egyptians on the monuments, shews that they were originally kindred peoples, though the differences in costume and manners are such as to indicate that the separation must have taken place at an early period. The similarity of the term כְּפָתָר with κοπρός (in hieroglyphics *kebt-hor*, see *Encycl. Britann.* vol. viii. p. 419), and so with γύπτος in Ἀγύπτος, favours this view; though, when this is pushed the length of actually finding Ἀγύπτος in כְּפָתָר, we cannot help thinking that a good reason is subjected to suspicion, from an attempt to strengthen it unduly, as the Gr. *al* is most certainly not the Heb. אֵל, though the letters are the same.—W. L. A.

CAPPADOCIA (Καππαδοκία). Among those who were present on the day of Pentecost, when the apostles received the miraculous gift of tongues, were 'dwellers in Cappadocia.' They with others exclaimed, 'How hear we every man in our own tongue, wherein we were born?' (Acts ii. 8, 9.) Peter also addressed his First Epistle, among others, to the 'strangers scattered throughout Cappadocia' (1 Pet. i. 1). In ancient times the Cappadocians occupied the whole eastern section of the great plateau in the centre of Asia Minor, and also the lower plains between that plateau and the Euxine. The latter portion was subsequently called Pontus (Rawlinson's *Herodot.* i. 653, 659, 399). Ptolemy makes Cappadocia extend as far north as the shores of the Euxine (*Geog.* vi. 1). The province mentioned in the New Testament is more limited in extent, because Pontus is also named. It was bounded on the north by Pontus, on the west by the river Halys, on the south by Mount Taurus, which separated it from Cilicia, and on the east by the Euphrates.

The Cappadocians were a mixed race, descended from the *Moschi*, a Scythian tribe, and another tribe of Persian origin. Their language was therefore partly Scythian and partly Persian. It bore no analogy to the Semitic, and it was thus the more wonderful to hear Jews speak it with accuracy and fluency (Bocharti *Opp.* i. 535).

Christianity took deep root in Cappadocia at a very early period, and it continued to flourish there

for many centuries. Some of the most eminent fathers of the early church were natives of this province. The celebrated Gregory Thaumaturgus flourished here in the middle of the third century. Gregory Nazianzen (so called from Nazianzus, a town of Cappadocia), Gregory Nyssen, and his brother Basil the Great, were born in Cappadocia, and lived there together during a part of the fourth century (Connyb. and Howson, *Life of St. Paul*, i. 267).—J. L. P.

CAPPEL or CAPPELLUS, LOUIS (LUDOVICUS), was born at St. Helier, 1585. He was the son of Jacques Cappel II. He lived for the most part in Sedan from his eighth till his twentieth year. At the age of 24 the church in Bourdeaux furnished him with the means of travelling abroad for four years through Great Britain, Belgium, and Germany. At Oxford he studied two years. After his return, he was elected professor of Hebrew in the Academy of Saumur, 1613; and two years after he became a preacher there. In 1633 he became professor of theology in Saumur to the Reformed Synod. Here he laboured till his death, which took place on 18th June 1658. Cappel was a very learned and many-sided theologian, who possessed a spirit of independent inquiry, and freely gave the results of it to the public without fear. The leading subject of his researches was the history of the Old Testament text. His principal works are, *Arcanum punctationis revelatum*, first published by Erpenius anonymously, Leyden, 1624, 4to. In this work it is proved that the Hebrew points were not of divine origin, but were the invention of Jewish critics after the completion of the Babylonian Talmud. Another important work which he wrote is his *Critica sacra*, shewing that the Masoretic text is faulty in many respects. In consequence of the difficulty and danger attending the promulgation of the views advocated, it was not published till 1650 at Paris, sixteen years after it had been written. He is also the author of *Diatriba de veris et antiquis Hebræorum literis*, Amsterdam, 1645, 12mo, written against a treatise of the junior Buxtorf's. He wrote besides, *Templi Hierosolymitani delineatio triplex*; and *Chronologia Sacra*, printed in the prolegomena of the London Polyglott; *Historia apostolica illustrata*, Geneva, 1634. In 1689 his son Jacques published *L. Cappelii commentarii et notæ criticae in Vet. Test.* This contains his *Vindicia Arcani punctationis* against Buxtorf, the son. The views so ably propounded and maintained by Cappel respecting the Hebrew text are now generally received. Several of his works are still in MS.—S. D.

CAPTAIN. This is the rendering in the A. V. of different Hebrew and Greek words, and denotes sometimes a military, sometimes a civil chief. It represents, [1], שָׂר, which means *chief* or *ruler*, and is used generally to designate a military commander (Gen. xxi. 22; xxxvii. 36; xl. 4; etc.) [ARMY]; but sometimes also the prefect of a city (Judg. ix, 30), or the leader of a choir of priests or singers (1 Chron. xxiv. 5; xv. 27). [2], נְשִׂיא, *a person of rank*, used to designate a prince or king (1 Kings xi. 34), the chief of a tribe (Num. ii. 3, 5), or of a family (Num. iii. 24). [3], רֹאשׁ, properly *head* (Num. xiv. 4). [4], קָצִין, *a decider, a judge*, hence a prince (Prov. xxv. 15); a civil ruler (Is. i. 10; iii. 6); a military chief (Judg. xi. 6, 11).

[5], נָגִיד, a chief or president, hence a military chief (1 Sam. ix. 16; xiii. 14; 2 Sam. v. 2. In 2 Kings xi. 4, 19, כָּרִי is rendered captains by mistake [CARIA]. In the N. T. *captain* represents ἀρχηγός (Heb. ii. 10); στρατηγός (Luke xxii. 4; Acts v. 26); χιλιάρχος (Mar. vi. 21; John xviii. 12; Rev. xix. 18). The 'captain of the temple' (Acts iv. 1), was not a military officer; he was chief of the body of Levites to whom was entrusted the guardianship of the temple (2 Maccab. iii. 4; Joseph. *Bell. Jud.* ii. 12. 6; *Antiq.* xx. 6. 2). The 'captains' mentioned Luke xxii. 4, were probably his subalterns.

God is called שֵׁר הַצְּבָאָה (Dan. viii. 11), not as equivalent to אֱלֹהֵי צְבָאוֹת, but because he is the Head and Protector of his people. So, in the N. T., our Lord is called Captain of his people's Salvation (ἀρχηγὸν τῆς σωτηρίας αὐτῶν, Heb. ii. 10), because he is the beginner, source, and author of their salvation, the Head of his church, which he conducts with and in himself, to blessedness.—W. L. A.

CAPTIVITIES. The word *Captivity*, as applied to the people of Israel, has been appropriated, contrary to the analogy of our language, to mean Expatriation. The violent removal of the entire population of a city, or sometimes even of a district, is not an uncommon event in ancient history. As a measure of policy, no objection to it on the ground of humanity was felt by any one; since, in fact, it was a very mild proceeding, in comparison with that of selling a tribe or nation into slavery. Every such destruction of national existence, even in modern times, is apt to be embittered by the simultaneous disruption of religious bonds; but in the ancient world, the positive sanctity attributed to special places, and the local attachment of Deity, made expatriation doubly severe. The Hebrew people, for instance, in many most vital points, could no longer obey their sacred law at all, when personally removed from Jerusalem; and in many others they were forced to modify it by reason of their change of circumstances.

Two principal motives impelled conquering powers thus to transport families in the mass; first, the desire of rapidly filling with a valuable population new cities, built for pride or for policy; next, the determination to break up hostile organizations or dangerous reminiscences of past greatness. Both might sometimes be combined in the same act. To attain the former object, the skilled artisans would in particular be carried off; while the latter was better effected by transporting all the families of the highest birth, and all the well-trained soldiery. The Greeks used the special epithet ἀνάσπαστοι for a population thus removed (Herod. iii. 93; vi. 9, *et passim*).

The expatriation of the Jewish people belongs to two great eras, commonly called the first and second Captivity; yet differing exceedingly in character. It is to the former that the above remarks chiefly apply. In it, the prime of the nation were carried eastward by the monarchs of Assyria and Babylon, and were treated with no unnecessary harshness, even under the dynasty that captured them. So far were they from the condition of *bondsmen* (which the word 'captive' suggests), that the book of Susanna represents their elders in

Babylon as retaining the power of life and death over their own people (i. 28), when Daniel was as yet a very young man. The authority of that book cannot indeed be pressed as to the chronology; yet the notices given by Ezekiel (xiv. 1; xx. 1) concur in the general fact, that they still held an internal jurisdiction over their own members. At a later time, under the Seleucidæ, we have distinct proof that in the principal cities the Jews were governed by an officer (ἐθνάρχης) of their own nation; as also in Egypt under the Ptolemies. The book of Tobit exhibits Israelities in Media possessed of slaves themselves (viii. 18); the book of Daniel tells us of a Jew, in eminent political station; and that of Esther celebrates their power and consequence in the Persian empire. Under the Seleucidæ [ANTIOCHUS] they were occasionally important as garrison-soldiers; and it may be suspected that, on the whole, their lot was milder than that of the other conquered nations among which they dwelt.

That which we name the first Captivity, was by no means brought about by a single removal of the population. In fact, from beginning to end, the period of deportation occupied full 150 years; as the period of return reaches probably through 100. The first blow fell upon the more distant tribes of Israel, about 741 B.C.; when Tiglath-pileser, king of Assyria (2 Kings xv. 29), carried off the pastoral population which lived beyond the Jordan, with Zebulon and Naphtali. (To this event allusion is made in Isaiah ix. 1; a passage very ill translated in our received version). In the time of this conquering monarch, Assyria was rapidly rising into power, and to aggrandize Nineveh was probably a great object of policy. It is therefore credible, as we had received no particular provocation from the Israelites, that he carried off these masses of population to stock his huge city with. His successor Shalmanezar made the Israelitish king Hoshea tributary. When the tribute was withheld, he attacked and reduced Samaria (B.C. 721), and, by way of punishment and of prevention, transported into Assyria and Media its king and all the most valuable population remaining to the ten tribes (2 Kings xvii. 6). That he did not carry off all the peasants is probable from the nature of the case; Hengstenberg, however, maintains the contrary (*Authentic des Pentateuches*, ch. i. 'On the Samaritan'). The families thus removed were, in great measure, settled in very distant cities; many of them probably not far from the Caspian Sea; and their place was supplied by colonies from Babylon and Susis (2 Kings xvii. 24). Such was the end of Israel as a kingdom.—An interval of more than a century followed before Judah was to suffer a similar fate. Two separate deportations are narrated in the book of Kings, three in that of Jeremiah, while a fourth and earlier one appears in the book of Daniel. Jeremiah dates by the years of Nebuchadnezzar's reign (who came to the throne B.C. 606 or 605), and estimates that in his seventh year 3023 were carried off, in his eighteenth 832, and in his twenty-third only 745; making in all, as the writer is careful to note, 4600 (Jer. lii. 28, etc.). The third removal he ascribes to Nebuzaradan, the Babylonian general. That some error here exists, at least in the numbers, appears undeniable; for 4600 persons was a very petty fraction of the Jewish people; and, in fact, 42,360 are stated to have returned im-

mediately upon the decree of Cyrus (Ezra ii. 64). In 2 Kings xxiv. 8-16, we find 18,000 carried off at once, in the third month of king Jehoiachin, and in the eighth year of Nebuchadnezzar; which evidently is the same as the first removal named by Jeremiah, and may be placed in B.C. 598. After this, the vassal king Zedekiah having rebelled, his city is beleaguered, and finally in his eleventh year is reduced (B.C. 588) by Nebuchadnezzar in person; and in the course of the same year, 'the nineteenth of Nebuchadnezzar' (2 Kings xxv. 8), Nebuzaradan carries away all the population except the peasants. Perhaps we need not wonder that no mention is made in the 'Kings' of the third deportation; for the account of the destruction was in a manner complete, upon the second invasion. There is a greater difficulty in the statement with which the book of Daniel opens, which is generally interpreted to mean that *in the third year of Jehoiakim*, Nebuchadnezzar besieged and captured Jerusalem, partially plundered the temple, and carried off the first portion of the people into captivity, among whom was Daniel. The text, however, does not explicitly say so much, although such is the obvious meaning; but if this is the only interpretation, we find it in direct collision with the books of Kings and Chronicles (which assign to Jehoiakim an *eleven* years' reign), as also with Jer. xxv. 1. The statement in Daniel partially rests on 2 Chron. xxxvi. 6; which is itself not in perfect accordance with 2 Kings xxiv. In the earlier history the war broke out during the reign of Jehoiakim, who died before its close; and when his son and successor Jehoiachin had reigned three months, the city and its king were captured. But in the Chronicles, the same event is made to happen twice over, at an interval of three months and ten days (2 Chron. xxxvi. 6 and 9), and even so, we do not obtain accordance with the received interpretation of Dan. i. 1-3. It seems on the whole the easiest supposition, that 'the third year of Jehoiakim' is there a mistake for 'the third month of Jehoiachin.' Hengstenberg, however, and Hävernick defend the common reading, and think they reconcile it with the other accounts. On the whole, it is pretty clear that the people of Judah, as of Israel, were carried out of their land by two principal removals. The former, B.C. 598, was directed to swell the armies and strengthen the towns of the conqueror; for of the 18,000 then carried away, 1000 were 'craftsmen and smiths, all strong and apt for war,' and the rest are called 'mighty men of valour.' (Yet there is a difficulty about verses 14 and 16 in 2 Kings xxiv.) It was not until the rebellion of Zedekiah that Nebuchadnezzar proceeded to the extremity of breaking up the national existence, B.C. 588. As the temple was then burnt, with all the palaces and the city walls, and no government was left but that of the Babylonian satrap, this latter date is evidently the true era of the captivity. Previously Zedekiah was tributary; but so were Josiah and Ahaz long before; the national existence was still saved.

Details concerning the *Return* from the captivity are preserved in the books denominated after Ezra and Nehemiah; and in the prophesies of two contemporaries, Haggai and Zechariah. The first great event is the decree of Cyrus, B.C. 536, in consequence of which 42,360 Jews of Babylon returned under Sheshbazzar, with 7337 slaves, besides cattle. This ended in their building the altar,

and laying the foundation of the second temple, 53 years after the destruction of the first. The progress of the work was, however, almost immediately stopped: for Zerubbabel, Jeshua, and the rest, abruptly refused all help from the half-heathen inhabitants of Samaria, and soon felt the effects of the enmity thus induced. That the mind of Cyrus was changed by their intrigues, we are not informed; but he was probably absent in distant parts, through continual war. (There is a difficulty in Ezra iv. as to the names Ahasuerus and Artaxerxes; yet the general facts are clear.)—When Darius (Hystaspis), an able and generous monarch, ascended the throne, the Jews soon obtained his favour. At this crisis, Zerubbabel was in chief authority (Sheshbazzar perhaps being dead), and under him the temple was begun in the second and ended in the sixth year of Darius, B.C. 520-516. Although this must be reckoned an era in the history, it is not said to have been accompanied with any new immigration of Jews. We pass on to 'the seventh year of king Artaxerxes' (Longimanus), Ezra vii. 7, that is, B.C. 458, when Ezra comes up from Babylon to Jerusalem, with the king's commendatory letters, accompanied by a large body of his nation. The enumeration in Ezra viii. makes them under 1800 males, with their families; perhaps amounting to 5000 persons, young and old: of whom 113 are recounted as having heathen wives (Ezra x. 18-43). In the twentieth year of the same king, or B.C. 445, Nehemiah, his cupbearer, gains his permission to restore 'his fathers' sepulchres,' and the walls of his native city; and is sent to Jerusalem with large powers. This is the crisis which decided the national restoration of the Jewish people; for before their city was fortified, they had no defence against the now confirmed enmity of their Samaritan neighbours; and, in fact, before the walls could be built, several princes around were able to offer great opposition [SANBALLAT]. The Jewish population was overwhelmed with debt, and had generally mortgaged their little estates to the rich; but Nehemiah's influence succeeded in bringing about a general forfeiture of debts, or at least of the interest; after which we may regard the new order of things to have been finally established in Judæa [NEHEMIAH]. From this time forth it is probable that numerous families returned in small parties, as to a secure home, until all the waste land in the neighbourhood was re-occupied.

There has been great difference of opinion as to how the 70 years of captivity spoken of by Jeremiah (xxv. 12; xxix. 10) are to be estimated. A plausible opinion would make them last from the destruction of the first temple, B.C. 588, to the finishing of the second, B.C. 516; but the words of the text so specify 'the punishing of the king of Babylon' as the end of the 70 years—which gives us the date B.C. 538—that many, with Jahn, cling to the belief that a first captivity took place in the third year of Jehoiakim, B.C. 605. Winer, on the contrary, suspects that a desire to make out the 70 years in this way, has generated the story in Daniel, so irreconcilable with the books of Kings and of Jeremiah. But, in fact, if we read Jeremiah himself, it may appear that in ch. xxv. he intends to compute the 70 years from the time at which he speaks (ver. 1, 'in the fourth year of Jehoiakim,' *i.e.* B.C. 604); and that in xxix. 10 the number 'seventy years' is still kept up, in re-

membrance of the former prophecy, although the language there used is very lax.

The great mass of the Israelitish race nevertheless remained in dispersion. Previous to the captivity, many Israelites had settled in Egypt (Zech. x. 6-11; Is. ix. 18), and many Jews afterwards fled thither from Nebuzaradan (Jer. xli. 17). Others appear to have established themselves in Sheba (see Jost's *Geschichte*, etc.), where Jewish influence became very powerful (SHEBA).

It is maintained by Von Bohlen (*Genesis*, p. cxvi.) that the ten tribes intermarried so freely with the surrounding population as to have become completely absorbed; and it appears to be a universal opinion that no one now knows where their descendants are. But it is a harsh assumption that such intermarriages were commoner with the ten tribes than with the two; and certainly, in the apostolic days, the *twelve* tribes are referred to as a well-known people, sharply defined from the heathen (James i. 1; Acts xxvi. 7). Not a trace appears that any repulsive principle existed at that time between the Ten and the Two. 'Ephraim no longer envied Judah, nor Judah vexed Ephraim;' but they had become 'one nation;' though only partially 'on the mountains of Israel' (Is. xi. 13; Ezek. xxxvii. 22). It would seem, therefore, that one result of the captivity was to blend all the tribes together, and produce a national union which had never been effected in their own land. If ever there was a difference between them as to the books counted sacred, that difference entirely vanished; at least no evidence appears of the contrary fact. When, moreover, the laws of landed inheritance no longer enforced the maintenance of separate tribes and put a difficulty in the way of their intermarriage, an almost inevitable result in course of time was the entire obliteration of this distinction; and as a fact, no modern Jews know to what tribe they belong, although vanity always makes them choose to say that they are of the two or three, and not of the ten tribes. That all Jews now living have in them the blood of all the twelve tribes, ought (it seems) to be believed, until some better reason than mere assertion is advanced against it.

When Cyrus gave permission to the Israelites to return to their own country, and restored their sacred vessels, it is not wonderful that few persons of the ten tribes were eager to take advantage of it. In two centuries they had become thoroughly naturalized in their eastern settlements; nor had Jerusalem ever been the centre of proud aspirations to them. It is perhaps remarkable, that in Ezra ii. 2, 36 (see also x. 18, 25), the word *Israel* is used to signify what we might call the Laity as opposed to the priests' and Levites; which might seem as though the writer were anxious to avoid asserting that all the families belonged to the two tribes. (If this is not the meaning, it at least shews that all discriminating force in the words *Israel* and *Judah* was already lost. So, too, in the book of Esther, the twelve tribes through all parts of the Persian empire are called Jews.) Nevertheless, it was to be expected that only those would return to Jerusalem whose expatriation was very recent; and principally those whose parents had dwelt in the Holy City or its immediate neighbourhood. The re-migrants doubtless consisted chiefly of the pious and the poor; and as the latter proved docile to their teachers, a totally new spirit reigned in the

restored nation. Whatever want of zeal the anxious Ezra might discern in his comrades, it is no slight matter that he could induce them to divorce their heathen wives—a measure of harshness which St. Paul would scarcely have sanctioned (1 Cor. vii. 12); and the century which followed was, on the whole, one of great religious activity and important permanent results on the moral character of the nation. Even the prophetic spirit by no means disappeared for a century and a half; although at length both the true and the false prophet were supplanted among them by the learned and diligent scribe, the anxious commentator, and the over-literal or over-figurative critic. In place of a people prone to go astray after sensible objects of adoration, and readily admitting heathen customs; attached to monarchical power, but inattentive to a hierarchy; careless of a written law, and movable by alternate impulses of apostasy and repentance; we henceforth find in them a deep and permanent reverence for Moses and the prophets, an aversion to foreigners and foreign customs, a profound hatred of idolatry, a great devotion to priestly and Levitical rank, and to all who had an exterior of piety; in short, a slavish obedience both to the law and to its authorized expositors. Now first, as far as can be ascertained (observe the particularity of detail in Neh. viii. 4, etc.), were the synagogues and houses of prayer instituted, and the law periodically read aloud. Now began the close observance of the Passover, the Sabbath, and the Sabbatical year. Such was the change wrought in the guardians of the Sacred Books, that, whereas the pious king Josiah had sat eighteen years on the throne without knowing of the existence of 'the Book of the Law' (2 Kings xxii. 3, 8); in the later period, on the contrary, the text was watched over with a scrupulous and fantastic punctiliousness. From this era, the civil power was absorbed in that of the priesthood, and the Jewish people affords the singular spectacle of a nation in which the priestly rule came later in time than that of hereditary kings. Something analogous may perhaps be seen in the priestly authority at Comana in Cappadocia under the Roman sway (Cicero, *Epi. ad Div.* xv. 4, etc.)

In their habits of life, also, the Jewish nation was permanently affected by the first captivity. The love of agriculture, which the institutions of Moses had so vigorously inspired, had necessarily declined in a foreign land; and they returned with a taste for commerce, banking, and retail trade, which was probably kept up by constant intercourse with their brethren who remained in dispersion. The same intercourse in turn propagated towards the rest the moral spirit which reigned at Jerusalem. The Egyptian Jews, it would seem, had gained little good from the contact of idolatry (Jer. xliiv. 8); but those who had fallen in with the Persian religion, probably about the time of its great reform by Zoroaster, had been preserved from such temptations, and returned purer than they went. Thenceforward it was the honourable function of Jerusalem to act as a religious metropolis to the whole dispersed nation; and it cannot be doubted that the ten tribes, as well as the two, learned to be proud of the Holy City, as the great and free centre of their name and their faith. The same religious influences thus diffused themselves through all the twelve tribes of Israel.

Thus in Egypt and Arabia, in Babylonia, Assy-

ria, Media, masses of the nation were planted, who, living by traffic and by banking, were necessitated to spread in all directions as their numbers increased. By this natural progress they moved westward, as well as eastward, and, in the time of St. Paul, were abundant in Asia Minor, Greece, and the chief cities of Italy.

The extermination suffered by the Jewish inhabitants of Palestine, under the Romans, far better deserves the name of captivity: for after the massacre of countless thousands, the captives were reduced to a real bondage. According to Josephus (*De Bell. Jud.* vi. 9. 3), 1,100,000 men fell in the siege of Jerusalem by Titus, and 97,000 were captured in the whole war. Of the latter number, the greatest part was distributed among the provinces to be butchered in the amphitheatres or cast there to wild beasts; others were doomed to work as public slaves in Egypt: only those under the age of seventeen were sold into private bondage. An equally dreadful destruction fell upon the remains of the nation, which had once more assembled in Judæa, under the reign of Hadrian (A. D. 133), which Dion Cassius concisely relates; and by these two savage wars, the Jewish population must have been effectually extirpated from the Holy Land itself—a result which did not follow from the Babylonian captivity. Afterwards a dreary period of fifteen hundred years' oppression crushed in Europe all who bore the name of Israel, and Christian nations have visited on their head a crime perpetrated by a few thousand inhabitants of Jerusalem, who were not the real forefathers of the European Jews. Nor in the East has their lot been much more cheering. [For an interesting and scientific calculation of the probable numbers taken away in the first captivity, see *Question of the supposed lost tribes of Israel*, by James Kennedy, LL. B., 1855.]—F. W. N.

CARA, JOSEPH, son of the celebrated Hagadist Simeon Cara, flourished in the north of France towards the end of the eleventh century, and was a junior contemporary of the immortal Rashi, whose commentary on the Pentateuch he completed. Although the Germano-French school in which he was brought up devoted at that time all its intellectual powers to the study of the Talmud, and explained the Bible according to the Hagada, Cara, stimulated by the noble example of his uncle Menachem B. Chelbo [Menachem], abandoned the allegorical mode of interpretation (דרוש), of which his own father was so great a defender, and consecrated his great talents to the simple and grammatical exposition of the word of God (פשוט), which he prosecuted with unabated zeal and distinguished success. Having no exegetical helps, he had to frame laws of grammar and interpretation of his own, in accordance with which he unfolded the meaning of every section in a most lucid manner and in logical sequence, he even applied to the text rules of higher and lower criticism as they are now termed, and obtained results contrary to the generally received opinions, which he maintained in defiance of tradition. Let a few specimens suffice. The statement in 1 Sam. ix. 9, that, 'He who is now called (נביא) a Prophet was beforetime (i.e., the time of Samuel) called (ראה) a Seer,' has occasioned great difficulty to the Jews, who hold fast to the traditional opinion that Samuel wrote this book, and made them resort to various expedients in

order to explain it away (comp. Kimchi *in loco*) Cara most plainly remarks upon it:—'We have here an evidence that this book was not written at the time of Samuel, as in his day a prophet was called ראה; it was in a later day, when he was no longer called by this name, but was termed נביא, that his book was written. Moreover, the expression ראה does not occur in any other portion of the Bible. Our ancient sages, however, maintain that Samuel did write the book which is called by his name. May He who cautheth the light to shine upon the world make darkness light, and the crooked straight.' The traditional explanation of Gen. xxxiv. 25, making it to describe the acute pain and fever which seized all the Shechemites on the third day after their circumcision, has perplexed some interpreters, so much so that Abrabanel felt himself constrained to explain it, 'and it came to pass on the third day (i.e., after the violation of Dinah), when they were sore,' etc. Cara, with more justice remarks, that it was the third day when this operation was completed upon all the males, when they were sore, ובוים שהיו נימולים

וכואבים באו עליהם כי בני ימים נימולו כולם.

Cara's commentaries extend nearly over the whole O. T.; and it is greatly to be regretted that fragments only have been printed of most of them.

1. His *His thoroah פרוש* glosses upon Rashi's commentary on the *Pentateuch* have mostly been published

by Geiger under the title לקוטים in his נטעי נטעי, Breslau, 1847; and Parshandatha, Leipzig, 1855. 2. Fragments of his commentary on the *Prophets*, פרוש נביאים, are given by De Rossi in his *Varie Lectiones*, Parma, 1785, on 1 Sam. vi. 19 (vol. ii. p. 141); Ezek. xlvii. 13 (vol. iii. p. 168);

Zech. xii. 10 (*ibid.*, p. 217); קבני על יד, by Leopold Dukes, Eslingen, 1846; נטעי נעמנים, by Geiger, Breslau, 1847. 3. Fragments of the Commentaries

on *Esther*, *Ruth*, and *Lamentations*, have been published by Dr. Adolph Jellinek, Leipzig, 1855.

The commentary on *Lamentations* has been printed in Naples, 1487; and reprinted in the collection,

דברי הכמים, pp. 16-23, Metz, 1849. 4. The commentary on *Job* is printed in Frankel's *Monatschrift für Geschichte und Wissenschaft des Judenthums*, 1856-58. 5. His commentary on *Hosea* has just been published in Breslau, 1861.—C. D. G.

CARA, SIMEON, B. CHELBO, also called R. SIMEON HA-DARSHAN, who received the former name from his reading (קרא) in the synagogue the lesson on the Sabbath, and the latter from his collecting and explaining (דרשן) the Midrashim, was brother of the celebrated commentator Menachem B. Chelbo, and flourished in the eleventh century. Cara has immortalised his name by his famous collection of Midrashim, on almost every verse of the O. T., which he published under the name of *Falkut* (ילקוט), collection). The labour which this assiduous scholar must have expended in bringing together from upwards of fifty different works of all ages such a catena of traditional expositions can hardly be described, and will only be appreciated by those who use this Hagadic Thesaurus, as it is fitly denominated. Besides the many fragments of Cahana's *Pesicta* [Cahana] which Cara gives us, and which otherwise would not have been known, he has also preserved other Hagadic relics of great importance. He has arranged all his

amassed lore under the respective verses of Scripture, and has also divided the O. T. into two thousand and forty-eight sections, in order to facilitate the references to it. This storehouse of Midrashim is the text-book of all students of Hagadic interpretation, and some idea may be formed of its utility and popularity from the fact that, notwithstanding its necessarily large size and great price, ten different editions of it have appeared between 1526 and 1805. As to the importance of this work to the critical exposition of the Bible, we can only remark here that there is hardly a deviation to be found in the Septuagint, the Vulgate, etc., from the Hebrew text, or an explanation in St. Jerome and other fathers of the Christian Church who were acquainted with the sacred language of the O. T., which appears to be at variance with the present reading of the text, to which the clue will not be supplied in it. For illustrations of this remark, we must refer to articles *Hagada* and *Midrash*. One of the best and most convenient editions of this work is the one published at Frankfort-on-the-Maine, 1687, fol., by the brothers Isaac Eisac and Seligmann, the sons of Hirz Reis, נדפס פה ק"ק ורנאקבורט דמיין ע"י, האחים הנקרים כמר יצחק אייזק וועלימן בני המנוח האלוף הפרנס כהר"ר הירץ רייז זצ"ל בשנת תמ"ז ל'פ"ק. Compare the masterly article of Rapa-port in the Hebrew Annual called *Keven Chemed* (כרם המד), vol. vii. p. 4, etc. Zunz, *Die Gottesdienstlichen Vorträge der Juden*, pp. 295-303; Steinschneider, *Catalogus Librorum Hebræorum in Bibliotheca Bodleiana*, Berolino, 1852-60, col. 2600, 2604.—C. D. G.

CARAITES. [KARAITES.]

CARAVAN (كروان) is the name given to a body of merchants or pilgrims as they travel in the East. A multitude of people, of all ages and conditions, assembling to undertake a journey, and prosecuting it *en masse* for days and weeks together, is a thing unknown in Europe, where, from the many facilities for travelling, and a well organized system of police, travellers can go alone and unprotected along the highways to any distance with the most perfect security. But troops of people on march are a common spectacle along the roads of Eastern countries; and, indeed, the nature of the countries in many places, as well as the disorderly state of society, points out the only practicable way of travelling to be in large caravans.

The earliest caravan of merchants we read of is the itinerant company to whom Joseph was sold by his brethren (Gen. xxxvii.) 'Here,' says Dr. Vincent, 'upon opening the oldest history in the world, we find the Ishmaelites from Gilead, conducting a caravan loaded with the spices of India, the balsam and myrrh of Hadramaut, and in the regular course of their traffic proceeding to Egypt for a market. The date of this transaction is more than seventeen centuries before the Christian era, and notwithstanding its antiquity, it has all the genuine features of a caravan crossing the desert at the present hour' (*Commerce and Navig. of the Ancients*, vol. ii. p. 262). This caravan was a mixed one, consisting of three classes, Ishmaelites (ver. 25), Midianites (ver. 28), and Medanites, as the Hebrew calls the last (ver. 36), who, belonging to

the mountainous region of Gilead, would seem, like the nomade tribes of Africa in the present day, to have engaged themselves as commercial travellers, and were then, in passing over the plain of Dothan, on the high caravan-road for the market of Egypt.

Besides these communities of travelling merchants in the East, there are caravans of pilgrims, *i.e.*, of those who go for religious purposes to Mecca, comprising vastly greater multitudes of people. These Hadj caravans that travel yearly to Mecca, bear so close a resemblance to the journey of the Israelites through almost the same extensive deserts, that, as the arrangement of those vast travelling bodies seems to have undergone no material alteration for nearly four thousand years, it affords the best possible commentary illustrative of the Mosaic narrative of the Exodus. Like them, the immense body of Israelitish emigrants, while the chief burden devolved on Moses, was divided into companies, each company being under the charge of a subordinate officer, called a prince (Num. vii.) Like them the Hebrews made their first stage in a hurried manner and in tumultuous disorder (Exod. xii. 11, 38, 39); and, like them, each tribe had its respective standard, the precise form and device of which, amid the conflicting accounts of the Rabbins, it is not easy to determine [STANDARDS]; but which, of whatever description it was, was pitched at the different stages, or trust perpendicularly into the ground, and thus formed a central point, around which the straggling party spread themselves during their hours of rest and leisure (Num. ii. 2). Like them, the signal for starting was given by the blast of a trumpet, or rather trumpets (Num. x. 2, 5); and the time of marching and halting was regulated by the same rules that have been observed by all travellers from time immemorial during the hot season. Like theirs, too, the elevation of the standard, as it was borne forward in the van of each company, formed a prominent object to prevent dispersion, or enable wanderers to recover their place within the line or division to which they belonged. Nor was there any difference here, except that, while the Israelites in like manner prosecuted their journey occasionally by night as well as by day, they did not require the aid of fires in their standards, as the friendly presence of the fiery pillar superseded the necessity of any artificial lights. One other point of analogy remains to be traced in the circumstance of Hobab being enlisted in the service of the Hebrew caravan as its guide through the great Arabian desert. At first sight, the extreme solicitude of Moses to secure his brother-in-law in that capacity may appear strange, and not easily reconcilable with the fact that they enjoyed the special benefit of a heavenly guide, who had guaranteed, in a supernatural manner, to direct their progress through the wilderness. But the difficulty will vanish when it is borne in mind, that although the pillar of cloud by day and of fire by night sufficed to regulate the main stages of the Hebrews, foraging parties would at short intervals require to be sent out, and scouts to reconnoitre the country for fuel, or to negotiate with the native tribes for provender and water. And who so well qualified to assist in these important services as Hobab, from his intimate acquaintance with the localities, his influence as a Sheikh, and his family connection with the leader of Israel?

The nature and economy of the modern Hadj caravans might be applied also to illustrate the return of the Hebrew exiles under Ezra from the land of their captivity; and the bands of Jewish pilgrims that annually repaired from every corner of Judæa to attend the three great festivals in Jerusalem. On such occasions the inhabitants of the same village or district would naturally form themselves into travelling parties, for mutual security as well as for enjoying the society of acquaintance. The poorer sort would have to travel on foot, while females and those of the better class might ride on asses and camels. But as their country was divided into tribes, and those who lived in the same hamlet or canton would be more or less connected by family ties, the young, the volatile, and active among the Jewish pilgrims had far more inducements to disperse themselves amongst the crowd than those of the modern processions, numbers of whom are necessarily strangers to each other. In these circumstances it is easy to understand how the young Jesus might mingle successively with groups of his kindred and acquaintance, who, captivated with his precocious wisdom and piety, might be fond to detain him in their circle, while his mother, together with Joseph, felt no anxiety at his absence, knowing the grave and sober character of their companions in travel; and the incident is the more natural that his parents are said to have gone 'one day's journey' from Jerusalem before they missed him? since, according to the present and probably the ancient, practice of the East, the first stage is always a short one, seldom exceeding two or three hours. Mic-mash—the modern El Vyra, where Mary's discovery is reputed to have been made—is, according to Mr. Munro (*Summer Ramble*, vol. i. p. 265), scarcely three miles from Jerusalem, where the caravan of Galilean pilgrims halted.—R. J.

CARAVANSERAIS. In the days of the elder patriarchs, there seem to have been no places specially devoted to the reception of travellers, at least in the pastoral districts frequented by those venerable nomads; for we find Abraham, like the Oriental shepherds of the present day, under a strong sense of the difficulties and privations with which journeying in those regions was attended, deeming it a sacred duty to keep on the outlook, and offer the wayfaring man the rights of hospitality in his own tent. Nor could the towns of Palestine, as it would seem, at that remote period, boast of any greater advance with respect to establishments of this sort; for the angelic strangers who visited Lot in Sodom were entertained in his private house; and on the tumultuous outrage occasioned by their arrival disinclining them to subject his family to inconvenience and danger by prolonging their stay, they announced their intention to lodge in the streets all night. This elicited no surprise, nor any other emotion than a strenuous opposition on the part of their kind-hearted host to their exchanging the comforts of his home for a cheerless exposure to the cold and dews of midnight; and hence we conclude that the custom, which is still frequently witnessed in the cities of the East, was then not uncommon for travellers who were late in arriving, and who had no introductions to a private family, to bivouac in the street, or wrapping themselves up in the ample folds of their hykes, to pass the night as they best

could in the open air. In the Arab towns and villages, however, when a traveller arrives in the daytime, the sheikh, or some principal person of the place, goes out to welcome him, and treats him with great civility in his own house; or else he conducts him to the *menzil*, which, though a place of rather a nondescript character, is understood to be the house occupied by those who entertain strangers, when there are no other lodgings, and to which the women in the sheikh's house, having surveyed the number of the guests, send provisions of every kind according to the season, and provide every accommodation the place can afford (*La Roque, De la Palestine*, p. 124).

The first mention of an inn, or house set apart for the accommodation of travellers (כַּלְסוֹן; Sept.

κατάλυμα), occurs in the account of the return of Jacob's sons from Egypt (*Gen. xliii. 21*); and as it was situated within the confines of that country, and at the first stage from the metropolis, it is probable that the erection of such places of entertainment originated with the Egyptians, who were far superior to all their contemporaries in the habits and the arts of civilized life, and who, though not themselves a commercial people, yet invited to their markets such a constant influx of foreign traders, that they must have early felt the necessity and provided the comforts of those public establishments. The 'inns' where travellers lodge in the East do not, however, bear the least resemblance to the respectable houses of the same class in this country, much less do they approximate to the character and appurtenances of European hotels. The Egyptian inn, where the sons of Israel halted to bait their asses, was probably, from the remote period to which it belonged, of a rude and humble description, in point both of appearance and accommodation—merely a shed; under the roof of which the cattle and their drivers might obtain shelter from the heats of noon and the dews of midnight; and such is the low state of art, or the tyrannical force of custom in the East, that establishments of this kind in the present day can, with few exceptions, boast of improvements, that render them superior to the mean and naked poverty of those which received the pilgrims of the patriarchal age.

خان *khan* or کروانسرائي *karavanserai*, is the name which this kind of building bears; and though the terms are often applied indiscriminately, there is an acknowledged distinction, which seems to be, that *khan* is applied to those which are situated in or near towns, whereas caravanserais (a lodge for caravans, as the compound word imports) is the more appropriate designation of such as are erected in desert and sequestered places. A *khan* is always to be found in the neighbourhood of a town; and while houses corresponding to the description of the other are generally disposed at regular stages along public and frequented roads, they are more or less numerous in proportion to the relative distances of towns, and the populous or desert state of the country. Though varying in character and size, this class of establishments preserves so generally the same uniform plan of construction, that a description of one may serve to convey an idea of all. Let the reader imagine, then, a large edifice, which, though in the distance it seems an immense pile, resembling a castellated fort, on a nearer

approach loses much of this formidable appearance, when it is found that no part of the building rises above the enclosing wall. It presents the form of a square, the sides of which, about 100 yards in length each, are surrounded by an external wall of fine brickwork, based on stone, rising generally to the height of twenty feet. In the middle of the front wall there is a wide and lofty archway, having on one or both sides a lodge for the porter and other attendants; while the upper part of it, being faced with carving or ornamental mason-work, and containing several rooms, surmounted by elegant domes, is considered the most honourable place of the building, and is therefore appropriated to the use of the better sort. This archway leads into a spacious rectangle, the area forming a court-yard for cattle, in the midst of which is a well or fountain. Along the sides of the rectangle are piazzas extending the whole length, and opening at every few steps into arched and open recesses, which are the entrances into the travellers' apartments. An inner door behind each of these conducts to a small oblong chamber, deriving all its light from the door, or from a small open window in the back wall, entirely destitute of furniture, and affording no kind of accommodation in the way of presses or shelves, except some rude niches excavated in the thick walls. This cell is intended for the dormitory of the traveller, who generally prefers, however, the recess in front for sitting in under shade during the daytime, as well as for sleeping in during the night, when the season allows; being the more adapted for this purpose that the floor is neatly paved, or consists of a smooth bed of earth, on a platform rising two or three feet above the level of the area. There being no other door but the entrance arch, each occupant remains isolated in his own quarters, and is cut off from all communication with the other inmates of the caravanserai. But in the middle of each of the three sides there is a large hall, which serves as a travellers' room, where all may indiscriminately assemble: while at the end of each side there is a staircase leading to the flat roof of the house, where the cool breeze and a view of the surrounding country may be enjoyed. These chambers generally stand on the ground-floor, which is a few feet above the level of the court-yard; but in the few buildings of this sort which have two storeys, the travellers are accommodated above, while the under flat is reserved for the use of their servants, or appropriated as warehouses for goods. And in such establishments there is found one other additional advantage in having a supply of servants and cooks, as well as a shop in the porter's house, where all commodities may be procured. Caravanserais of this superior class, however, are rarely to be met with. The most part are but wretched lodging-places—filled, it may be, with dirt and vermin—consisting only of bare walls, in which not an article of furniture is to be seen, nor a cooking utensil to be found, nor provisions of any sort to be obtained for love or money. The traveller must carry along with him, as well as provide with his own hands, whatever is necessary for his use and comfort. If he performs his journey on camels or on horseback, he must, on arriving at the stage, act as his own ostler, tie up his beast, and distribute its provender and litter. To supply the want of a divan and bed, he must take his mat and carpet, which, folded up, may have served him

for a saddle, and squat upon the floor, or repose himself at night; or, if he is a pedestrian, and must travel as lightly as possible, he makes the cloak which he wears by day discharge the office of a counterpane by night. In the victualling department he finds as great a dearth as in that of furniture. He must subsist on the supply of food and articles of luxury he may have had the foresight to provide, and husband them as well as he can, as no addition to his stores can be made till he reaches the next town. In general, he must content himself with a plain diet of dry bread, fruits, or such prepared viands as admit of preservation; or, if he wishes a fresh cooked meal, he must himself furnish the fuel, kindle the fire, superintend the boil or the roast, as well as wash and arrange his eating-pan. 'The baggage of a man, therefore, who wishes to be completely provided,' says Volney, 'consists of a carpet, a mattress, a blanket, two saucers, with lids, contained within each other; two dishes, two plates, etc., coffee-pot, all of copper well tinned. A small wooden box for salt and pepper, a round leather table, which he suspends from the saddle of his horse, small leather bottles or bags for oil, melted butter, water, a pipe, a tinder-box, a cup of cocoa-nut, some rice, dried raisins, dates, Cyprus cheese, and, above all, coffee berries, with a roaster and wooden mortar to pound them. Every one, although his travelling equipage may not be so complete as this, must find several of these items and implements indispensable to existence during a journey in the East; for in many of the khans or caravanserais to which he may come, he can look for nothing from the keeper except to shew him the way to his chamber, and give him the key if it is furnished with a door. One assistance only he may depend upon, and it is no inconsiderable one,—that of receiving some attendance and aid if overtaken by sickness; for one of the requisite qualifications for the office is, that the functionary possess a knowledge of simples, and the most approved practice in case of fracture or common ailments. And hence the good Samaritan in the parable (Luke x. 30), although he was obliged, in the urgency of the case, himself to apply from his own viaticum a few simple remedies for the relief of the distressed man, left him with full confidence to be treated and nursed by the keeper of the khan, whose assiduities in dressing the wounds and bruises of his patient might be quickened, perhaps, by the liberal remuneration he was promised, as well as by the example of the humane traveller.

The state of Judæa, in the time of Christ and the Apostles, was, probably, in respect to means of communication, much superior to that of any Oriental country in the present day; and we may be disposed to conclude, that for the encouragement of intercourse between distant parts, that country was then studded with houses of public entertainment on a scale of liberal provision at present unknown in the same quarter of the world. But the warm commendations of hospitality so frequently met with in the works of contemporary classical writers, as well as the pressing exhortations of the inspired Apostle to the practice of that virtue, too plainly prove that travellers were then chiefly dependent on the kindness of private individuals. The strong probability is, that the 'inns' mentioned in the N. T. find their true and correct representations in the Eastern khans and cara-

vanserais of the present day; and that, although the Jews of that period could not have been acquainted with the largest and most magnificent of this class of buildings, which do not date earlier than the commencement of the Mecca caravans, and which the devotion of opulent Mussulmans then began to erect for the accommodation of the pilgrims, they had experience of nothing better than the bare walls and cell-like apartments of such edifices as we have described above. Bishop Pearce, Dr. Campbell, and others, indeed, have laboured to shew that *κατάλυμα*, the word used by Luke to denote the place whence Mary was excluded by the previous influx of strangers, is not synonymous with *πανδοχείον*, the house to which the good Samaritan brought the wounded stranger, although in both instances our translators, for want of corresponding terms in the English language, have indiscriminately rendered it by 'inn.' *Κατάλυμα* signifies the guest chamber (Mark xiv. 14; Luke xxii. 11); and it is extremely probable that, as upper rooms were always the largest in a house, and most suitable for the reception of a numerous company, every respectable householder in Jerusalem appropriated one gratuitously to his friends who flocked to Jerusalem at the annual feasts, and who from that circumstance might call it their 'inn.' *Πανδοχείον*, again, was a house set apart for the accommodation of all strangers who could pay for their lodging and entertainment; and as the name, 'receiver of everything,' seems to imply, was of a mean description, having no partition-wall, men and cattle being both included under the same roof, the former occupying one side, and the latter the other. Beth-lehem being the chief city of the family of David, a *κατάλυμα* might have been placed, by the kindness of some friend, at the service of Joseph and Mary, who were wont to resort to it as often as business or friendship called them to town. But, as the same privilege might have been offered to others, who, owing to the general census, flocked in such unwonted numbers, that the first comers completely occupied every vacant space, they were obliged to withdraw to the *πανδοχείον*, where, in the only retired corner, viz., at the head of the cattle, the mother of Jesus brought forth her child. [But it is to the last degree improbable, that any one who received Joseph and Mary as *guests*, would not, on such an occasion as hers, have found some accommodation for her in his house. The distinction between *κατάλυμα* and *πανδοχείον*, is probably simply, that the former denotes any place where strangers have free accommodation, the latter one where they had to pay.]

166.

Many caravanserais, however, have not the accommodation of stables, the cattle being allowed to range in the open area; and hence has arisen an opinion warmly espoused by many learned writers, and supported by a venerable tradition, that our Lord was born in an adjoining shed, or probably in a subterranean cave, like the grotto that is sometimes connected with the fountain of

the place (Justin Martyr, *Dial. with Trypho*, p. 303; Origen, *Cont. Cels.*) [BETHLEHEM.] Moreover, much learning has been expended on the word *φάρνη*, which our translators have rendered 'manger;' although it is capable of the clearest demonstration, that the ancients, equally with the modern inhabitants of the East, are strangers to the conveniences which go under that name in European stables. The anecdote, quoted by Campbell from Herodotus, respecting Mardonius, the Persian general, having brought with him a brazen manger for his horses, only establishes our remark, proving as it does that those ancient mangers were more like troughs than the crib out of which our horses are fed; and, indeed, in the only other place in the N. T. where *φάρνη* occurs, it is rendered 'stall;' that is, not the thing out of which the cattle ate, but the place from which they ate (see Parkhurst *in loco*). No explanation, however, that we have met with, appears so satisfactory, and conveys such an intelligible picture to the eye as that given by the editor of the *Pictorial Bible* (Luke ii. 7); with whose words we shall conclude this article. 'The most complete establishments have very excellent stables in covered avenues, which extend *behind* the ranges of apartments—that is, between the back walls of these ranges of building and the *external* wall of the khan; and the entrance to it is by a covered passage at one of the corners of the quadrangle. The stable is on a level with the court, and consequently below the level of the buildings, by the height of the platform on which they stand. Nevertheless, this platform is allowed to project behind into the stable, so as to form a bench, to which the horses' heads are turned, and on which they can, if they like, rest the nose-bag of haircloth from which they eat, to enable them to reach the bottom when its contents get low. It also often happens, that not only this bench exists in the stable, but also recesses, corresponding to those in front of the apartments, and formed by the side walls which divide the rooms being allowed to project behind into the stable, just as the projection of the same walls into the great area forms the recesses in front. These recesses in the stable or the bench, if there are no recesses, furnish accommodation to the servants and others who have charge of the beasts; and when persons find on their arrival that the apartments usually appropriated to travellers are already occupied, they are glad to find accommodation in the stable, particularly when the nights are cold or the season inclement. It is evident, then, from this description, that the part of the stable called 'the manger,' could not reasonably have been other than one of those recesses, or at least a portion of the bench which we have mentioned as affording accommodation to travellers under certain circumstances.'—R. J.

CARBUNCLE. [BARQETH; EKDACH.]

CARCHEMISH (כַּרְכֵּמִישׁ) is mentioned in

Is. x. 9 among other places in Syria which had been subdued by an Assyrian king, probably Tiglath-pileser. That Carchemish was a stronghold on the Euphrates appears from the title of a prophecy of Jeremiah against Egypt (xlv. 2):—'Against the army of Pharaoh-necho, king of Egypt, which lay on the river Euphrates, at Carchemish, and which Nebuchadnezzar the king of

Babylon overthrew, in the fourth year of Jehoiakim, the son of Josiah, king of Judah.' According to 2 Chron. xxxv. 20, Necho had five years before advanced in spite of Josiah, the father of Jehoiakim, against the Babylonians, on the Euphrates, to take Carchemish. These two circumstances—the position of Carchemish on the Euphrates, and its being a frontier town, render it probable that the Hebrew name points to a city which the Greeks called Kirkesion, the Latins Circesium, and the Arabs, Kerkesiyeh (قرقسيد);

for this too lay on the western bank of the Euphrates, where it is joined by the Chaboras. It was a large city, and surrounded by strong walls, which, in the time of the Romans, were occasionally renewed, as this was the remotest outpost of their empire towards the Euphrates, in the direction of Persia (Ammian. Marcell. xxiii. 11).—J. K.

Addendum.—At the point where the Khabur (the ancient Chebar) joins the Euphrates, there are large mounds on both banks of the former river, marking the sites of old cities, or perhaps of different sections of one great city. The mound on the right bank is crowned with a modern Arab village, called Abu Serai, or, as Layard writes it, Abu-Psera. It stands on a narrow wedge-shaped plain, in the fork of the two rivers. This corresponds exactly to Procopius' description of Circesium, who says that its fortifications had the form of a triangle at the junction of the Chabur and Euphrates (*B. P.* ii.) This seems to be the true site of Carchemish. I was visited by Benjamin of Tudela in the twelfth century, who found in it two hundred Jews (*Early Travels in Pal.*, p. 93). It has been recently conjectured that the site of Carchemish was further up the Euphrates, and closer to the borders of northern Syria. For such a conjecture there seem to be no just grounds. (See Layard's *Nin. and Bab.* 283-286; Chesney's *Expédition*, i.; Bonomi's *Nin. and Persép.*, p. 42).—J. L. P.

CARIA (*Καρία*), a country lying at the south-western extremity of Asia Minor, to which, among others, the Romans wrote in favour of the Jews (1 Maccab. xv. 22, 33). At one time it belonged to Rhodes; but the Romans deprived the Rhodians of it (B. C. 168), and made it free; afterwards (B. C. 129) they added it to their province of Asia. It was in the interval between these dates that the letter referred to was written. Its principal towns were Halicarnassus, Cnidus, and Myndus, which are all mentioned in the rescript of the Roman senate. Cnidus is mentioned in Acts xxvii. 7, as having been passed by St. Paul on his voyage to Rome. The *כרית* mentioned in the O. T. (2 Sam. xx. 23, *Cherethites*, A. V.; and 2 Kings xi. 4, 19, *Captains*, A. V.) are supposed by some to have been Carians. This is rendered highly probable by the fact, that the Carians were of old a warlike people, who were always ready to serve the neighbouring princes as soldiers and as body guards (comp. Herod. I. 171; II. 152; V. 111; Thuc. I. 8). They are identified with the *כרתי*, *Crethi* in Scripture (comp. 2 Sam. xx. 23, and 2 Kings xi. 4, 19, with 2 Sam. viii. 18; see also the *כרית* on 2 Sam. xx. 23). The Crethi were a Philistine race. [CAFHTHOR].—W. L. A.

CARMEL (*כַּרְמֶל*), *A garden or fruitful field*; Sept. *Κάρμηλος*, a name given to a mountain VOL. I.

range on the coast of Palestine, and also to a town in the south of Judah.

1. *Mount Carmel.*—The word Carmel is of frequent occurrence in Scripture as a common noun, and signifies 'a highly cultivated tract,' as contrasted with *Midbar*, 'a wilderness.' Thus, in Jeremiah ii. 7, 'I brought you into a land like a garden (*אֶל-אֶרֶץ הַכַּרְמֶל*), that ye might eat the fruit thereof;' and Is. xxix. 17, 'Lebanon shall be turned into a fruitful field (*לְכַרְמֶל*).' In some passages it is difficult to determine whether the word is used as a common noun or as a proper name; as 2 Kings xix. 23; 2 Chron. xxvi. 10. The fact seems to be that the mountain range received the name Carmel as descriptive of its character—fertile, wooded, and blooming; and that the mountain itself came afterwards to be used as an emblem of richness and beauty. Thus, in Is. xxxv. 2; 'The glory of Lebanon is given unto it, the beauty of Carmel and Sharon.' These and similar allusions become doubly emphatic and expressive when we connect them with the picturesque scenery, the natural richness, and the luxuriant foliage and herbage of Carmel.

167. Carmel.

The ridge of Carmel branches off from the northern end of the mountains of Samaria, and runs in a north-westerly direction between Sharon and the plain of Acre. Its extreme length is about sixteen miles, the greatest breadth of its base five, and its highest point 1750 feet above the sea. It projects far into the Mediterranean, forming a bold promontory—the only one along the bare coast of Palestine. At the place of junction with the mountains of Ephraim the ridge is low, and the scenery bleak and tame. The ancient caravan road from Tyre, Sidon, and the coast of Phœnicia to Sharon and Egypt, crosses this section by a pass called Wady el-Milh. At the mouth of this wady, in the great plain of Esdraelon, is Tell Kaimôn, the site of the ancient *Jokneam of Carmel* (Josh. xii. 22). Immediately on the west side of Wady el-Milh, Carmel rises up in all its beauty, thickly sprinkled with oaks, and rich in pasturage. Towards the plain of Acre it here presents steep and lofty peaks, clad in dark foliage, reminding one of the hills above Heidelberg. The

heights are all wooded, not densely like a forest, but more like an English park; and long deep ravines of singular wildness wind down the mountain sides, filled with tangled copse, fragrant with hawthorn, myrtle, and jessamine, and alive with the murmur of tiny brooks and the song of birds. At intervals along the slopes are open glades, carpeted with green grass, and spangled with myriads of wild flowers of every hue (Robinson's *B. R.*, iii. 114, *sq.*; Van de Velde, i. 317, *sq.*; Thomson, *Land and the Book*, 487, *sq.*). The western extremity of the ridge—that, unfortunately, with which ordinary travellers are most familiar, and from which they take their impressions—is more bleak than the eastern. Its sides are steep and rocky, scantily covered with dwarf shrubs and aromatic herbs, and having only a few scattered trees here and there in the glens (compare Van de Velde, i. 293; *The Crescent and the Cross*, i. 54, *sq.*). The writer has frequently visited the mountain range of Carmel. He has been there at all seasons, and he can confidently affirm that no part of Palestine west of the Jordan can be compared with it for the picturesque beauty of its scenery, the luxuriance of its herbage, and the brilliancy and variety of its flowers. Well might such a mountain suggest to the Hebrew royal naturalist the words: 'Thine head upon thee is like Carmel' (Cant. vii. 5). Reference is made to thick tresses of the 'Bride,' covering the head, and interwoven, as is still the custom in Syria, with garlands of flowers, and studded with gold ornaments and gems. The fertile plains on the north and south of the ridge add greatly to the effect. Esdraelon, and its continuation, the plain of Acre, are like a vast meadow. That 'ancient river, the river Kishon,' winds through it in a tortuous bed, deeply cut in the alluvial soil; in places laving the rocky roots of the mountain. The declivities on the southern side towards Sharon are more gradual. Low spurs shoot out here and there into the undulating pasture-lands of that rich plain, terminating in wooded knolls or broken banks, covered with brushwood and brake. The wood that clothes the greater part of Carmel is the prickly oak (*quercus ilex*); the foliage is thus evergreen, and the underwood is mainly composed of evergreen shrubs. Consequently Carmel might well be taken by Isaiah (xxxv. 2) as the type of natural beauty; while Amos (i. 2) might with equal truth and appropriateness regard the withering of the top of Carmel as the type of utter desolation.

The whole ridge of Carmel is deeply furrowed with rocky ravines, filled with such dense jungle as scarcely to be penetrable. Here jackals, wolves, hyenas, and wild swine make their lairs, and woodcocks find excellent cover; while in the open forest glades, partridges, quails, and hares sport about. In the sides of the mountain, especially round the convent and overhanging the sea, are great numbers of caves and grottos, formed partly by nature and partly by art and industry in the soft calcareous rock. Carmel at one period swarmed with monks and hermits, who burrowed in these comfortless dens. Curious traditions cling to some of them, in part confirmed by the Greek inscriptions and names that may still be traced upon their walls. One of them is called the 'Cave of the Sons of the prophets,' and is said to be that in which the pious Obadiah hid the prophets from the fury of the infamous Jezebel (1 Kings xviii. 4).

It was probably from his knowledge of these wild retired dells and secret grottos of Carmel, where the persecuted and the outlaw now, as of yore, find a secure asylum, that the prophet Amos wrote, 'Though they hide themselves in the top of Carmel I will search and take them out thence' (ix. 3). The limestone strata of Carmel abound in geodes, and beautiful specimens of the fossil *echinus*. At one place near the town of Haifa great numbers of them lie on the surface of the ground, and the peasant think they are petrified melons and olives. A singular legend is attached to this spot (*Handbook for S. and P.*, p. 371).

Carmel formed the south-western boundary of Asher (Josh. xix. 26). Its position, projecting into the Mediterranean and towering over it, illustrates the singular expression in Jeremiah (xlv. 18), 'Surely as Tabor is among the mountains, and as Carmel by the sea.' But Carmel derives its chief interest from Elijah's sacrifice, and the tragic event which followed it. The exact spot is still identified by local tradition, and preserves in its name, *el-Muharakah*, 'the sacrifice,' a memorial of the event. At the eastern extremity of the ridge, where the wooded heights of Carmel sink down into the usual bleakness of the hills of Palestine, is a terrace of natural rock. It is encompassed by dense thickets of evergreens; and upon it are the remains of an old and massive square structure, built of large hewn stones. This is *el-Muharakah*; and here, in all probability, stood Elijah's altar (1 Kings xviii. 30). The situation and environs answer in every particular to the various incidents of the narrative. A short distance from the terrace is a fountain, whence the water may have been brought, which was poured round Elijah's sacrifice and altar (chap. xviii. 33). The terrace commands a noble view over the whole plain of Esdraelon, from the banks of the Kishon down at the bottom of the steep declivity, away to the distant hill of Gilboa, at whose base stood the royal city of Jezreel. To the 850 prophets, ranged doubtless on the wide upland sweep, just beneath the terrace, to the multitudes of people, many of whom may have remained on the plain, the altar of Elijah would be in full view, and they could all see, in the evening twilight, that 'the fire of the Lord fell, and consumed the burnt-sacrifice, and the wood, and the stones, and the dust, and licked up the water' (ver. 38). The people then, trembling with fear and indignation, seized, at Elijah's bidding, the prophets of Baal; 'and Elijah brought them down to the brook Kishon, and slew them there.' On the lower declivities of the mountain is a mound called *Tell el-Kwis*, 'the Hill of the Priests,' which probably marks the very scene of the execution. May not the present name of the Kishon itself have originated in this tragic event—it is called *Nahr el-Mokatta*, 'the River of Slaughter.' The prophet went up again to the altar, which is *near*, but *not upon*, the summit of the mountain. While he prayed, he said to his servant, 'Go up now, and look toward the sea.' The sea is not visible from the terrace, but a few minutes' ascent leads to a peak which commands its whole expanse. Seven times did the servant climb the height, and at last saw the little cloud 'like a man's hand' rising out of the sea (Stanley, *S. and P.*, p. 346, *sq.*; Van de Velde, i. 324, *sq.*; Thomson, p. 483, *sq.*).

Carmel was also the retreat of Elisha, and thus became the scene of another interesting episode in

Scripture history. The prophet was here when the Shunamite's son died. Looking down one afternoon, probably from the side of Elijah's altar, he saw her 'afar of,' hastening towards him on her ass. She paid little regard to the inquiries of his servant sent to meet her, but pressing on past him 'to the man of God,' she dismounted, threw herself on the ground before him, and 'caught him by his feet'—just as an Arab mother would do at the present day under similar circumstances. The story is well known (2 Kings iv. 25-37).

The fame of Elijah's great sacrifice appears to have rendered Carmel sacred even among the heathen. Pythagoras, we are told, spent some time upon the mountain in meditation (Jamblicus, *Vit. Pythag.* iii.); and here, too, Tacitus informs us, Vespasian consulted 'the oracle of Carmel' (*Hist.* ii. 78).

The convent of Carmel is a modern building. It was erected about twenty-five years ago, on the site of an older structure, by a poor monk who begged the funds through the whole world, and completed it at a cost of nearly half a million of francs! The order of the Carmelites, to whom the convent belongs, is of ancient date. The scattered monks were concentrated on this mountain in the 12th century. The convent is said to stand on the spot where Elijah and Elisha dwelt, and the prophet's cave is shewn beneath the great altar. The modern name of the whole range of Carmel is *Jebel Mar Elias*, 'the mountain of St. Elijah.'

2. A town in the mountains of Judah, situated on the borders 'of the wilderness of Paran,' or 'of Maon,' as the Septuagint renders it (Josh. xv. 55; 1 Sam. xxv. 1). It is best known as the residence of the churlish Nabal, and the scene of an incident highly characteristic of modern as well as ancient Syrian life. Were a feast like Nabal's held near the same spot now, there is little doubt that some neighbouring Arab sheikh would apply for a share, as David did (1 Sam. xxv. 4-35). Carmel is not afterwards mentioned in Scripture. Eusebius and Jerome allude to it as a flourishing town, ten miles south-east of Hebron, and having a Roman garrison (*Onomast.*, s. v. *Carmelus*). In the 12th century King Amalrich encamped here when forced to retreat before the army of Saladin. He was led to select it on account of its abundant waters (Will. Tyr. in *Gesta Dei.*, p. 993).

Seven miles south-by-east of Hebron, and one mile north of Maon, are the extensive ruins of *Kermul*, the ancient Carmel. They lie round the semi-circular head, and along the shelving sides of a little valley, which is shut in by rugged limestone rocks. The houses are all in ruins, and their sites are covered by heaps of rubbish and hewn stones. In the centre of the valley is a large artificial reservoir, supplied by a fountain among the neighbouring rocks. Westward of it, on the rising ground, stands the castle, the most remarkable ruin in Carmel. Its walls are ten feet thick; their sloping basement and bevelled masonry are evidently of Jewish origin, probably the work of Herod. The interior was remodelled, and the upper part rebuilt by the Saracens. Beside it are the ruins of a massive round tower. Around and among the ruins of Carmel are the foundations of several old churches, shewing that the town had at one period a large Christian population. Carmel has been a desolate ruin for many centuries (Robinson, *B. R.*, ii. 493, sq.; *Handbook for S. and P.*, p. 61. Van de Velde, ii. 78).—J. L. P.

CARMI (כַּרְמִי, Sept. *Xapm*) 1. The fourth son of Reuben (Gen. xlv. 9) from whom sprang the Carmites (הַכַּרְמִי, Num. xxvi. 6). 2. The father of Achan and son of Zabdi (Josh. vii. 1, 18). In 1 Chron. iv. 1, Carmi is called the son of Judah; but 'סוֹן' there must mean simply 'descendant,' as out of the five names mentioned only one was properly the son of Judah. †

CARNAIM. [ASHTAROTH.]

CARPENTER. [HANDICRAFT.]

CARPUS (Κάρπος), a friend of Paul who dwelt at Troas, and with whom he left a cloak (2 Tim. iv. 13). [At what time this visit to Troas was paid is uncertain. If a second imprisonment of Paul at Rome be supposed, it may have occurred during the interval between this and his liberation from that recorded in Acts.]

CARPZOV, JOHN BENEDICT, IV., born 1720, studied in Leipzig under Gesner and Ernesti, and became professor of poetry and Greek in Helmstadt, 1748. He was a good philologist and Hebraist. In 1768 he published *Liber doctrinalis theologie purioris*; in 1750, *Sacræ exercitationes in epistolam ad Hebræos*; *Stricturæ theologica in epist. ad Romanos*, 1756; *Septenarius epistolarum catholicarum*, 1790. He died in 1803.—S. D.

CARPZOV, JOHANN GOTTLÖB, the most illustrious of the learned family to which he belonged, was born at Dresden 26th Sept. 1679, and died at Lübeck 7th April 1767. He studied at Wittenberg, Leipzig, and Altdorf; in 1706 he became pastor of one of the churches in Dresden; in 1708 he was called to fill that office at Leipzig; in 1719 he became professor of oriental languages in the university there; and in 1730 he was elected to be superintendent-general and first pastor at Lübeck, where he remained till his death. He wrote many works, but those by which he is now best known are his *Introductio in libros canonicos V. T.* 4to, Lips. 1721, 1731, 1757; *Critica Sacra V. T.* 4to, Lips. 1728; *Apparatus Histor. Crit. Antiquitatum et Cod. Sac. et gent. Hebr.* etc., 4to Lips. 1748. These are works of solid and extensive erudition, sound judgment, and orthodox tendency. It has been the fashion of the rationalistic school to depreciate his labours; but all who have examined his writings impartially will admit that to him the science of Biblical Isagogik is deeply indebted. Hävernick calls his *Introductio* 'a master-piece of Protestant science.' He is especially powerful in the apologetic department against Spinoza, Simon, Toland, Whiston, etc., and many, as Hävernick observes, have spoken lightly of his labours, who but for them might have made a less learned appearance in their own writings than they have. His work on Biblical Antiquities consists principally of extensive annotations on Goodwin's *Moses and Aaron*.—W. L. A.

CARRIAGE. This word occurs in the A. V. repeatedly, but in no instance in the sense of a vehicle. In Judg. xviii. 21, it is the translation given of כְּבוֹדָה, which signifies property or heavy baggage; in 1 Sam. xvii. 22, and Is. x. 28, it stands for כְּלִים, which means equipment, tools, baggage; in Is. xlvi. 1, it represents נְשִׂוּת, a burden; and in Acts xxi. 15, it is used to convey the

meaning of the noun *σκεῖος*, involved in the verb *ἐπισκευάζειν*, which simply means to *get ready* or *prepare*. The only passage in which any allusion to a vehicle can be supposed is 1 Sam. xvii. 20, where the word in the original *מעגל*, though meaning there a *rampart* or *bulwark*, properly designates one made of the waggons or baggage-carts of the army. [CART; CHARIOT.]—W. L. A.

CARRIERES, LOUIS DE, a learned French divine, was born 1662, died 1717. He commenced life as a soldier, but retired from the army at the age of twenty-seven, and entered the congregation of the Oratory. He is deserving of notice here for his *Literal Commentary* on all the books of Scripture, published in 24 vols. 12mo, 1711-1716; also a separate work of the same kind, restricted to the four gospels, entitled—*Commentaire Littéral sur l'histoire et concordé des quatre Évangélistes. Inscrit dans la traduction Française, avec le texte Latin à la marge.* 12mo, à Reims, 1711.—W. J. C.

CARSHENA (כרשנה). The first of the seven princes of Persia and Media who formed the inner council of King Ahasuerus. Fürst derives the word from Zend *Keres*, slim, and *ná*, a man = *Slim-man*.†

CART (עגלה; Sept. Ἀμαξα). The Hebrew word rendered by our translators in some places by 'waggon,' and in others by 'cart,' denotes any vehicle moving on wheels and usually drawn by oxen; and their particular character must be determined by the context indicating the purpose for which they were employed. First, we have the carts which the king of Egypt sent to assist in transporting Jacob's family from Canaan (Gen. xlv. 19, 27). From their being so sent it is manifest that they were not used in the latter country; and that they were known there as being peculiar to Egypt is shewn by the confirmation which they afforded to Jacob of the truth of the strange story told by his sons. These carts or waggons were, of course, not war-chariots, nor such curricles as were in use among the Egyptian nobility, but were not suited for travelling. The only other wheel-

168.

vehicles actually or probably used by the Egyptians themselves are those represented in figs. 1, 2, of No. 169. But they are not found on the monuments in such connection as to shew whether they were employed for travelling or for agriculture. The solid wheels would suggest the latter use, if, indeed, the same feature does not rather shew that, although figured on Egyptian monuments, they are the cars of a foreign people. This is the more probable, inasmuch as the ready means of transport and travel by the Nile seems to have rendered in a great measure unnecessary any other wheel-carriages than those for war or pleasure. The sculptures, however, exhibit some carts as

used by a nomade people (enemies of the Egyptians) in their migrations. If any of these had, by the rout of this people, been left in the hands of the Egyptians, the king would, no doubt, consider them suitable to assist the migration of another people of similar habits. At any rate, they afford the only attainable analogy, and are for that reason here represented (No. 168).

Elsewhere (Num. vii. 3, 6; 1 Sam. vi. 7) we read of carts used for the removal of the sacred arks and utensils. These also were drawn by two oxen. In Rossellini we have found a very curious representation of the vehicle used for such purposes by the Egyptians (No. 169, fig. 3). It is little more than a platform on wheels; and the apprehension which induced Uzzah to put forth his hand to stay the ark when shaken by the oxen (2 Sam. vi. 6), may suggest that the cart employed on that occasion was not unlike this, as it would be easy for a jerk to displace whatever might be upon it.

As it appears that the Israelites used carts, they doubtless employed them sometimes in the removal of agricultural produce, although we are not aware of any distinct mention of this practice in Scripture. This is now the only use for which

169.

carts are employed in Western Asia. They are such as are represented in No. 170.

170.

CARTWRIGHT, CHRISTOPHER, was a native of York, where he was born in 1602, and died in 1658. He was of Peterhouse, Cambridge, to which he was admitted June 29, 1617; he preceded A. B. in 1620, and A.M. in 1624. He was afterwards minister at York. He wrote *Carmina in obitum Anna Reginae* 1619, and in *nuptias Caroli regis* 1625. Besides a commentary on the 15th Psalm, and some controversial pamphlets, he is the author of *Electa Thargumico-Rabbinnica, sive Annot. in Genesim ex triplice Thargum nempe Onkeli, Hierosol. et Jonathan.*; item *ex R. Salomone et Aben Ezra, etc., excerpta, una cum Animadd. subinde interspersis, etc.*, sm. 8vo, Lond. 1648; *Electa Thargum-Rabbinn. in Exodum*, Lond. 1653. In the 8th vol. of the *Critici Sacri*, another work of Cartwright's, in character resembling the above, is frequently cited, viz., *Mellificium Hebraicum sive Obs. ex Hebr. antiquiorum monumentis desumpta, etc.*, but this does not appear to have been published separately. All these works are of great value. The

author, besides great erudition, displays much soundness of judgment and exegetical tact. Both the volumes of the *Electa* are now scarce.—W. L. A.

CARTWRIGHT, THOMAS, a Puritan divine, born about the year 1535, died 27th Dec. 1603. He studied at St. John's College, Cambridge, and in 1560 was chosen a fellow of that college. In 1567 he commenced B.D., and three years after he was chosen Lady Margaret's divinity reader. His strong Puritan convictions, and the freedom with which he professed them, brought him into difficulties, and led to his being deprived by Whitgift of his place as Margaret professor in 1571, and of his fellowship in the following year. He now passed over to the Continent, where he laboured first as minister to the English merchants at Antwerp, and afterwards at Middleburg. He returned to England in 1573, only to leave it again after a short time. In 1580 he returned once more, and for the next twelve years was involved in constant conflict with the high Church party, and spent a considerable part of the time in prison, in consequence of his zealous advocacy of Puritan opinions. Besides his controversial writings, he wrote *Commentaria Practica in totam Histor. Evangel. ex. IV. Evangg. harmonice concinnatam*, 4to, 1630, Amst. 1647; *Commentarii in Proverbia Salomonis*, 4to, Amst. 1638; *Metaphrasis et Homiliae in lib. Salomonis qui inscribitur Ecclesiastes*, 4to, Amst. 1647. These works display considerable exegetical ability, and are remarkable for clearness and precision of thought and expression. Hengstenberg in his work on Ecclesiastes has borrowed largely from Cartwright's *Metaphrasis*.—W. L. A.

CARVED WORK, properly speaking, differs from *sculpture* and *chasing*; it embraces simply works in ivory and wood; while *sculpture* operates on marble or stone, and *chasing* on metals. This distinction, however, does not exist in the biblical terms, which refer to *carved* work; these are (1) הַטְּבוֹת, 'carved works,' Prov. vii. 16; (2) חִקָּה (in *Pual* Part), 'carved work,' 1 Kings vi. 35; (3) חֲרָשֶׁת, 'carving of timber,' Exod. xxxi. 5; 'carving of wood,' Exod. xxxv. 33; (4) פְּסָל, 'carved image,' Judges xviii. 18, and 2 Chron. xxxiii. 7, with its plural פְּסִילִים, 'carved images,' 2 Chron. xxxiii. 22, and xxxiv. 3, 4; (5) פְּתוּחַ, 'carved figures,' 1 Kings vi. 29; 'carved work,' Ps. lxxiv. 6; (6) קָלַע (in *Kal* part), 'he carved,' 1 Kings vi. 29, 32, 35; (6) מְקַלְעֵת, 'carved' (a carving), 1 Kings vi. 18; 'carved figures,' 1 Kings vi. 29. Comparing (1) with other passages in which the cognate verb occurs (such as Deut. xix. 5; Josh. ix. 21; 2 Chron. ii. 10; Jerem. xlvi. 22), we find it refers to *WOOD CARVING*;^{*} (2) in other passages

(Ezek. viii. 10; xxiii. 14; and Job xiii. 27) seems to indicate sculpture and painting on walls. From other passages in which (3) is used (such as 1 Chron. xiv. 1; xxii. 25; xxiv. 12; Is. xliv. 12, 13), it signifies working in *stone* and in *iron*, as well as in *wood*; (4) which is more frequently translated 'graven image,' is only a general expression, not indicating the material; (5) generally translated 'engraving,' is applied to *seal cutting*, in Exod. xxxix. 6, 14, 30; (6), like (4), is too general to indicate the material 'carved.' There has been a good deal of discussion as to the extent of the prohibition contained in the second commandment; some (including early Jewish commentators) have contended that all imitative art was forbidden—against this extreme view Michaelis protests (*Laws of Moses*, Art. 250) on the reasonable ground, that certain figures were in fact made by God's own command. Both in the Tabernacle and the Temple many objects were provided, which would put under contribution largely the arts of carving and engraving, e.g., the two cherubim in the holy of holies (Exod. xxv. 18, 20); the floral ornaments of the golden candlestick, xxv. 34; the various embroidered hangings of the sanctuary, xxvi.; and the brazen serpent, Num. xxi. 8, 9. So again in the temple, besides the cherubim, there were on the walls various figures of all kinds, as well as the *brazen sea*, as it was called, which rested on twelve brazen oxen. Ezekiel's temple, in like manner, has cherubim with the heads of men and lions. Even after the return from Babylon, when men severely interpreted the prohibition of the commandment, there were figures of animals on the golden candlestick (Reland *de Spoliis Templi Hier. in Arcu Titiano*), and vines with pendent clusters on the roof of the second temple, and the golden symbolic vine over the large gate. Not the *making* of images as works of art, but the *worship* of them was excluded by the decalogue. Among the Mohammedans, the more liberal Persians (followers of Ali) allow themselves the fullest latitude, and paint and mould the human figure, while their stricter rivals confine their art to representations of trees and fruits, or inanimate objects; but all alike abhor all attempts to represent God, or even their saints (Kitto, *Pictorial Bible*, Deut. v. 8, 9). There were however, from whatever cause, limitations in fact, which the artizans who ornamented the Tabernacle and the Temple observed. In the former, nothing is mentioned as fabricated of *iron*; nor is skill in manipulating this metal included among the qualifications of the artificer Bezaleel. While 'in the temple there is no mention made of *sculptured stones* in any part of the building. All the decorations were either carved in wood and then overlaid with metal, or wholly cast in metal. Even the famous pillars of Jachin and Boaz were entirely of brass' (Kitto on 2 Chron. iii. 6). The qualifications of the accomplished men who built the Tabernacle (Bezaleel and Aholiab) and the Temple (Hiram) are carefully indicated; to the former, especially Bezaleel, is attributed skill in 'carving' and 'sculpture' (Exod. xxxi. 5), whereas the latter seems to have rather executed his decorative works by fusile processes (comp. 1 Kings vii. 14, 15 with 46; Müller's *Ancient Art*, by Leitch, p. 216; and De Wette's *Archaeol.*, sec. 106). Working in ivory, which culminated in the Olympian Zeus of Pheidias and the Athéné at Athens (Grote's *Greece*, vol. vi. pp. 30-32), appears to have been carried to great

* According to Gesenius and Fürst (*Hebr. Wörterb.*), הַטְּבוֹת describes the art of embroidery, in Prov. vii. 16. 'Tapestry of variegated stripes as to pattern, made of Egyptian thread.' The LXX. renders the word in this passage by ἀμφιπαισος, ἀμφιπαισος διέστρωσα τοῖς ἀπ' Αἰγύπτου which agrees with the view of the German critics. See also Schleusner, s. v.

perfection by Hebrew artists; see 1 Kings xxii. 39 on Ahab's ivory house (compared with Amos iii. 15); also 1 Kings x. 18-20 on Solomon's *Ἀρβύλος χρυσελεφάντινος*, with lions at both arms, and on the sides of the six steps. Ezekiel says of Tyre, according to the LXX. (xxvii. 6), τὰ ἱερά σου ἐποίησαν ἐξ ἐλέφαντος (Müller *ut supra*, p. 215). Artificers among the Hebrews were not (as among the Greeks and Romans) servants and slaves—but men of rank, who do not seem to have disdained the pursuit of the plastic and decorative arts as a profession; e.g., the nephew of the first judge Othniel (of the illustrious and wealthy family of Caleb) was at the head of apparently a guild of craftsmen, who inhabited 'the valley of Charashim' (וַיָּבֵן חַרְשִׁים), see our (3) above), near Jerusalem, 1 Chron. iv. 14; comp. Neh. xi. 35. See also the remarkable statement of 2 Kings xxiv. 14, where 'the craftsmen and smiths' are reckoned among 'princes,' and contrasted with 'the poorest sort of people.' Compare with Jer. xxiv. 1 and xxix. 2. (Jahn's *Archæologia Biblica*, v. sec. 83). Taking this fact into consideration, we need not regard the occupation of Joseph, the husband of the blessed Virgin, as degrading.—P. H.

CARYL, JOSEPH, was a native of the city of London, and was born in 1602. He became a student of Exeter College, Oxford, where he proceeded M.A. in 1627. After his ordination, he was chosen preacher at Lincoln's Inn, an office which he held for several years with much acceptance. In 1645 he was presented to the living of St. Magnus, near London Bridge, where he continued till he was ejected in 1662. After this, he gathered a separate congregation from amongst his former hearers, to whom he ministered till his death, which took place 7th Feb. 1673. Caryl was a moderate Independent, and is admitted by Wood to have been 'a learned and zealous Non-conformist.' During the Protectorate he was employed in many offices of trust, and seems to have fully enjoyed the confidence of those in power. He published a considerable number of sermons, and had a principal hand in a Greek and English Lexicon which appeared in 1661, the earliest, we believe, of its kind. But his great work is his *Commentary on the Book of Job*, 12 vols. 4to, Lond. 1644-66, 2 vols. fol. 1669. This ponderous work, it is obvious, must contain a great deal that hardly belongs legitimately to the department of Commentary; it is full of polemical divinity, and homiletical discourse; but, at the same time, it has very considerable worth in an exegetical point of view. Poole cites it frequently in the second vol. of his *Synopsis*, and Dr. E. Williams says it contains 'a rich fund of critical and practical divinity' (*Christian Preacher*, p. 431). A very useful abridgment of it by John Berrie, Esq., Dalkeith, appeared at Edinburgh in one vol. 8vo. 1836.—W. L. A.

CASAUBON, ISAAC, was born at Geneva in 1559. In 1582 he became professor of Greek in the university of his native town. After holding this office for 14 years, he removed to Montpelier, where he acted for two years as professor of Greek and polite literature. In 1603 he became librarian to the French king, and for a short time exercised considerable influence in various ways in France. The murder of the king, however, and the fact of his oldest son turning Roman Catholic,

so affected him that he gave up his appointments in France and passed over into England, where he was received with much courtesy and regard. In 1611 the king granted him a pension of £300, and gave him, though a layman, a prebend in the Church of Canterbury. He died 1st July 1614, and was buried in Westminster Abbey. Casaubon was one of the most learned men of a learned age, and was held in the highest repute for his scholarship, especially in Greek, by the most eminent scholars of his day. His learning was chiefly expended on editions of the classics, most of which are still prized by scholars. In 1587 he issued an edition of the Greek N. T. with notes, which were reprinted in Whittaker's edition, Lond. 1633, and in the *Critici Sacri*. There are also some useful observations on passages of scripture in his *Exercitationes de rebus sacris et Ecclesiasticis*, in reply to Baronius, and in the *Casauboniana* collected from his MSS. by C. Wolfius, Hamb. 1710.—W. L. A.

CASAUBON, MERIC, son of Isaac Casaubon, and grandson of Stephens the printer, was born at Geneva, Aug. 14, 1599. He was educated at Oxford, where he was a student of Christ Church and M.A. in 1621, in which year he published a defence of his father against the calumnies of certain Roman Catholics. In 1624 Bishop Andrews presented him to the living of Bleadon, Somersetshire; and in 1628 Archbishop Laud made him prebendary of Canterbury, and Rector of Ickham. In 1636, by the command of Charles I., who was then residing at Oxford, the degree of D.D. was conferred upon him. At the outbreak of the civil war, however, he lost all his preferment. Cromwell wished him to write the history of the war, and endeavoured to persuade him to undertake it by very liberal offers, one of which was that all his father's books, then in the Royal library at St. James', having been purchased by James I., should be made over to him, and a pension of £300 paid to his family as long as he should have a son living. These, however, were all refused, as he did not sympathize with the great hero of the war. Christina, Queen of Sweden, also offered him the government of one, or the superintendence of all the universities in her kingdom, which he likewise refused, preferring to live in England. At the restoration, he recovered all his preferment, and wrote till his death in 1671. He left several children, and was buried in Canterbury Cathedral. His works, which are for the most part controversial or practical, are not of great value. Walton mentions him in the preface to his Polyglott, as having contributed to that work by sending him a copy of the Jerusalem Targum, with a Latin translation by Cenellerius, but in so corrupt a state as to be almost unusable. One of the rarest and most curious of his works is entitled *De Quatuor linguis Comment. Pars prior quæ de Ling. Heb. et de Ling. Saxon.* Lond. 1650. In this he treats briefly of the Hebrew, more fully of the Saxon, especially with a view to their etymological affinities. The book is curious, and not without value, though some of the author's etymologies are such as in the present state of philological learning cannot but provoke a smile. The latter part never appeared. He wrote also *De verborum usu et accurata eorum cognitionis utilitate Diatribe*, 1647, 12mo. *A discourse concerning Christ, his Incarnation, and Exinanition, as also concerning*

the principles of Christianity by way of Introduction, Lond. 4to, 1646; which is a treatise on the ἐκένωσις of Phil. ii.; in it he also derides the doctrine of the millennium incidentally. He left many MSS. to the university of Oxford, which are there preserved.—S. L.

CASEMENT (אֶשְׁמֵת, Prov. vii. 6) elsewhere rendered *Lattice* (Judg. v. 28). [HOUSE.]

CASIPHIA (כַּסְפִּיָּה; Sept. ἐν ἀργυρίῳ τοῦ ἵππου; *Chasphia*). A place or district occupied by a colony of Jewish exiles, to whom Ezra sent, when going up to Jerusalem, in order to obtain Levites for the service of the Temple (Ezra viii. 17). Dr. Fürst (*Handwörterbuch*, s. v.) places it in the south of Media which borders on Babylonia; and supposes that the name refers to the snowy mountains in that region. According to a Jewish tradition it was the 'large country' to which Shebna, the treasurer of Hezekiah, was threatened to be exiled (Is. xxii. 18).—J. E. R.

CASLUHIM (כַּסְלִיחִים, Sept. Χασμουηλιμ), a Mizraite people from whom went forth a portion of the Philistines (Gen. x. 14; I Chron. i. 12). Bochart, on the ground of the similarity of the names, and the assertion that the Colchians were an Egyptian colony (Herod. ii. 104; Diod. Sic. i. 28), identifies them with the Colchians (*Phaleg*. iv. 31); but in these reasons there is little weight, and it is extremely improbable that the Philistines should have migrated from Colchis to the south of Palestine. More recent scholars generally adopt the suggestion that the Casluhim were the aborigines of Casiotis, a region lying on the borders of Egypt towards Arabia Petræa, south of the Serbonian bog (Ptolem. *Geogr.* iv. 5. 12; Amm. Marcell. xxii. 16), and which contained the town Casium, the modern *el Kas*. Here was the Mons Casius to which reference is repeatedly made by the ancient writers (Strabo, i. p. 50, 55; Plin. v. 11, 12; Lucan *Pharsal*. viii. 539; x. 433). It is described as a 'low littoral tract of rock, covered with shifting, and even quicksand,' and this has been regarded as furnishing a serious difficulty in the way of the supposition that it was from it that the Casluhim went forth (Smith's *Dict. of the Bible*, i. 282). But Ptolemy (*l. c.* comp. Joseph. *Bell. Jud.* iv. 11, 5) gives us the names of several towns lying in this district, so that it must have been capable of supporting a population, and may have, in an earlier period, been quite adequate to the support of a tribe. The position of the Casluhim in the list beside the Pathrusim and the Capthorim renders it probable that the original seat of the tribe was somewhere in Lower Egypt, and not far from the vicinity of that 'Serbonian Bog betwixt Damiatia and Mount Casius old' (*Par. Lost.* ii. 592).—W. L. A.

CASPION (Sept. Χασπίων and [*Alex.*] Χασπίων; Vulg. *Casbon*) occurs in I Maccab. v. 36, as another form of

CASPHOR (Sept. Χασφώρα [*Al.* Κασφώρα]; Vulg. *Casphor*, and Josephus, *Ant.* xii. 8, 3; Χάσφωμα), which was one of the cities in 'the land of Galaad' taken by Judas Maccabæus in his brilliant campaign against the Syrian general, the younger Timotheus. See I Maccab. v. 24-54. The site of this city does not appear to have been identified. From the

slight clue afforded in the history, which states that Judas and his brother Jonathan on their errand of liberation had proceeded *three days' journey into the wilderness east of Jordan*, before they received from the Nabathæans information, which determined their military movements, added to the specific description of the cities to be attacked—that they were *strong and great* (πᾶσαι αἱ πόλεις αὐταὶ ὄχυραι καὶ μεγάλαι), it is not unreasonable to conjecture, that we have in this group the originals of some of the ruined cities of the Haurân and neighbouring districts which are now exciting the curiosity of travellers. After a careful comparison of the routes of Ritter (section on *Haurân-ebene*) and Seetzen (notes on part I., March 1806, vol. iv. p. 198), with the maps of Van de Velde and Robinson (in *Later Bibl. Researches*), we suppose that on the confines of Haurân [*Auranitis*] and Jebel Ajlun [*Galaaditis*] near the ascertained sites of Bostra, Astaroth-Karnaim and Edrei, may be placed our Casphon. Seetzen's commentators suggest the modern *es Szâbn*, as the possible site of Casphon, but add—'Site however uncertain.' Calmet (*in. loc.*), from another form of the Vulgate, *Chesbon* or *Cheschbon*, supposes, with extreme improbability, that Heshbon, the well known capital of Sihon, was identical with Casphon.—P. H.

CASPI. [IBN CASPI.]

CASPIS, Κάσπις, *Casphin*, 2 Maccab. xii. 13. A fortified city inhabited by people of various nations, and situated near a lake two stadia in breadth (v. 16), taken with great slaughter by Judas Maccabæus. Winer supposes it to be the same as Casphon (Casbon, *Vulg.*) in I Maccab. v. 36, or Heshbon.—J. E. R.

CASSIA. [KETZIAH.]

CASSIODORUS, MAGNUS AURELIUS. Born in Calabria about 470 or 480. He was of good family, and was the principal minister and associate of Theodoric, king of the Ostrogoths, and continued in high office under his immediate successors. At the age of 66 years, probably from a desire for repose, increased by the disorders he saw threatening his country, he withdrew to a monastery which he had founded in a beautiful spot in Calabria. Here he established an order less severe than usual, and the inmates of Viviers devoted themselves not only to sacred studies but to agriculture and secular pursuits. Cassiodorus drew up short treatises for them on most of the subjects of a liberal education at that time, and defends this innovation in his book *De institutione Divinarum Litterarum*, which forms a sort of introduction to the work referred to above, *De artibus ac disciplinis Liberalium litterarum*. His favourite occupation, or at least object, was the accurate copying of ancient MSS. He paid great attention to this, and wrote a treatise, *de Orthographia*, for the guidance of the copyists whom he directed. He wrote this work in the 93d year of his age, and much is not known of his life afterwards. He is said to have lived to 100 years, or at least to 97. Besides other works, he wrote *An exposition of the Epistle to the Romans*, now lost, especially directed against Pelagius; and works called *Complexiones in Epistolis Apostolorum et Actibus eorum et Apocalypsi Quasi brevissimâ explanatione decursas*. Cassiodorus was a man of infinite industry, and did considerable service to

literature. His theological works are of little inherent value—very interesting as exhibiting in a man of high cultivation in the sixth century the aspect of Christianity and ancient philosophy; but from this very combination and the position of the man, somewhat artificial and wanting in earnestness. His works and life are in Migne's *Bibliotheca Patrum*.—H. W.

CASTELL, EDMUND, eminent among the famous band of Oriental scholars which adorned our literature in the 17th century, was born in 1606 at Hatley, in Cambridgeshire. In 1621 he became a pensioner of Emmanuel College, Cambridge, from which he afterwards migrated to St. John's College, for the sake of its library, which was of great service to him in the preparation of his grand work, the *Lexicon Heptaglotton*, or Dictionary of Seven Languages, which cost him 'the drudgery,' as he called it, of 17 years, impaired health, and (as some have said) ruin of a competent fortune. The biographer of Dr. Lightfoot mentions the sum of £12,000, of his own estate, as spent by the toilsome scholar; but this was not expended entirely on the *Lexicon*; with his usual generosity in the prosecution of his favourite literature, he contributed £1000 to Walton's splendid undertaking, the great Polyglott Bible. Without believing that his costly sacrifice of time, and money, and health, extended to absolute ruin, we may yet be certain that his loss was very great. While preparing his *Lexicon*, Castell maintained in his own house and at his own expense seven Englishmen and seven foreigners as writers, all of whom died before the completion of the work, when 'the whole burthen,' says Strype (*Life of Lightfoot*) 'fell upon himself—though, by God's grace, he at last finished it, before it finished him.' He refers to his own desolate condition and ill-requited labours in his *Preface*, where also he mentions Beveridge (afterwards Bishop), Murray, and Wansleb, three eminent orientalists, as most persevering in their help, Dr. E. Poccocke also assisted him—but to Dr. Lightfoot, the renowned Hebrew and Rabbinical scholar, he in his letters expresses the greatest acknowledgments; 'Without him,' he said, 'his work could never have been so entire as it is.*' He received some preferences, which, however inadequate as a recompense for his services, were yet honourable. In the early part of his life, he had been vicar of Hatfield Peverell, in Essex, and afterwards rector of Wodeham Walter, in the same county, both of which he resigned at different periods. He was also rector of Higham Gobion, Bedfordshire, a benefice which he retained till his death. He was appointed Professor of Arabic in the University of Cambridge in 1666, and Prebendary of Canterbury in 1667. He was also chaplain in ordinary to

King Charles II., and possessed of these honours he died in 1685, having bequeathed all his Oriental MSS. to the University which was his *Alma Mater*. His *Lexicon* was by no means his only work. He assisted Walton in his Polyglott. In the preface of that *magnum opus* the author acknowledges Castell's labours upon the Samaritan, the Syriac, the Arabic, and the Ethiopic versions, with his notes upon all of them, as well as his Latin translation of the Ethiopic version of the Canticles. Moreover, in vol. vi. Walton acknowledges his farther assistance of collation. Besides all this, he is said to have also translated several of the books of the N. T. and the Syriac version of Job, where differing from the Arabic. Amid all his discouragements he was ever on the watch to advance the progress of oriental and biblical learning. 'Though I perish,' he said, 'it comforts me not a little to see how Holy Writ flourishes.' He published in 1660 a congratulatory work on the King's restoration, which does not pertain to our subject; and in 1667 an important contribution to biblical learning, which we must not omit to mention, entitled *Oratio in Scholis Theologicis habita ab Edm. Castello S. T. D. et Linguae Arabice in Academia Cantabrig. Professore, cum Praelectiones suas in secundum Canonis Avicennae librum auspicaretur, quibus via praerulitur ex Scripturis Orientalibus ad clarius ac dilucidius enarrandam Botanologicam S.S. Scripturae partem, opus a nemine adhuc tentatum, &c.*

The title of his great work is 'LEXICON Heptaglotton; Hebraicum, Chaldaicum, Syriacum, Samaritanum, Ethiopicum, Arabicum, conjunctim; et Persicum, separatim. In quo omnes Hebraeae, Chaldaeae, Syrae, Samaritanae, Ethiopicae, Arabicae, et Persicae, tam in MSS. quam Impressis libris, cum primis autem in Bibliis Polyglottis, adjectis hinc inde Armenis, Turcicis, Indis, Japonicis, &c., ordine Alphabetico, sub singulis Radicibus digestae continentur.' The copious title-page goes on to describe the 'ample and lucid arrangement and explication of the MEANINGS of all these words (especially of those which occur, be they but *ἄραξ* *λεγομενα* in the Hebrew Scriptures), on a different plan from any pursued by modern lexicographers, whether Hebrew or Christian; with materials derived from the three Chaldaee Targums; and the two Talmuds—of Babylon and Jerusalem; from the Commentators, Theologians, and Philosophers of the most ancient Rabbins; from the various readings of the S. Scripture, Hebrew, Chaldaee, etc.; from three copies of the Syriac O. & N. Test.; three Ethiopic of the greatest portion of the same; besides three Arabic copies and two Persian; and three copies of the Samaritan Pentateuch; furthermore, from innumerable Lexicons of all these languages; from the Koran; from Avicenna, the Geographer of Nubia, etc.; and from the Septuagint Version of the Scriptures. In addition to all this, difficult and discrepant opinions of different interpreters are compared and examined; very many errata in other Lexicons, as well as in Polyglott Bibles and faulty translations, are often amended, and restored to their proper meaning.' And as if this enormous labour were not enough, the very learned author 'added a brief and (as far as could be compiled) a harmonized sketch of the Grammar of the afore-mentioned languages.' We know not how better to indicate the value of this work, than by saying, that subsequent scholars,

* Besides these, and others at home, he rejoiced in the friendship of many illustrious foreigners, companions in his Oriental learning. 'Besides some amongst ourselves,' he says, in one of his letters, 'I have a Golius, a Buxtorf, a Hottinger, a Ludolfo, etc., in foreign parts, that both by their letters and in print have, not only sufficiently—but too amply and abundantly for me to communicate—expressed their over-high esteem of that which finds but a prophet's reward here in its close.

who have been great in the several departments here combined, have agreed in doing honour to Castell's labours: thus J. D. Michaelis, in 1787, republished the Syriac portion in a quarto edition of two volumes, '*cum annotationibus*;' and, three years afterwards, the Hebrew lexicon 'cum supplementis,' in a similar form. The two volumes of Castell are generally found combined with the six volumes of Walton's Polyglott in the shape of an appendix. 'Some copies of the Lexicon have in the title, 'Londini, Scott, 1686,' but this proves nothing more than a reimpression of the title, for there never was a second edition of the work.' Horne's *Introduction* (9th ed.), vol. v. p. 252. If Castell did not receive his recompense when living, posterity has awarded him constant praise. (The best account of Dr. Castell is to be found in *The Life of Bishop Walton*, by the Rev. H. J. Todd, M.A., F.S.A., (chap. v.), vol. i. pp. 163-179).—P. H.

CASTELLIO, or, as he called himself, CASTALIO, (CHATELLON) SEBASTIAN, was born in Savoy or Dauphiné, in 1515. He first studied at Lyons, then at Strasburg, where he lived in the same house with Calvin. When the latter returned to Geneva, Castalio got the situation of teacher in a school there through his influence. He soon shewed, however, independent thought and inquiry—not agreeing with the Geneva catechism about Christ's descent into hell, nor with Calvin's doctrine of election. Here he began to translate the Bible into Latin and French; but Calvin did not like many parts of the work. He was obliged to leave Geneva, having been refused admission into the ministry, and repaired to Basel, where he had to contend with poverty, till a professorship of Greek was conferred upon him in 1553. He was involved in controversy with Beza; and with his colleague Borrahaus about predestination. In consequence of complaints from various quarters, he was cautioned by the Basel council to confine himself to the duties of his office. His death took place on 23d December 1563. His principal work is the Latin translation of the Bible, *Biblia Veteris et Novi Testamenti ex versione Sebast. Castalionis, cum ejusdem annotationibus*, Basil, 1551, folio; which was reprinted several times. He also published a French translation of the Bible, Basil, 1555; *Dialogi 4 de prædestinatione, electione, libero arbitrio, et fide*, 1578; *Defensio suarum translationum Bibliorum et maxime N. T.*, 1562. He edited *Theologia Germanica*, 1557; and *Thomas a Kempis*, 1563, besides several of the ancient classics. Castellio was an elegant Latin scholar, as his version of the Bible attests. The language is Ciceronian and polished. It loses, however, on this very account, much of the strength belonging to the original. His spirit was tolerant, benevolent, independent, as the dedication to his Bible and the anonymous work written against Calvin respecting the persecution of Servetus, shew. Beza accused him of Pelagianism and laxity in his religious belief; for which there was ground, if the stand-point of Calvinism be taken as the criterion. But Castellio was liberal and enlightened beyond his day.—S. D.

CASTLE. [FORTIFICATIONS.]

CASTOR AND POLLUX (*Δίδασκουροι*), the Dioscuri: in heathen mythology, the twin sons of

Jupiter by Leda. They had the special province of assisting persons in danger of shipwreck (Theocrit. *Id.* xxii. 1; Xenoph. *Symp.* viii. 29, comp. Horat. *Carm.* i. 3. 2; iv. 8. 31; Senec. *Nat. Quæst.* i. 1); and hence their figures were often adopted for 'the sign' (*τὸ παράσημον, insigne*), from which a ship derived its name, as was the case with that 'ship of Alexandria' in which St. Paul sailed on his way to Rome (Acts xxviii. 11).

CAT (*αἰλουρος*). This animal could not be unknown to the Hebrews, for their ancestors had witnessed the Egyptians treating it as a divinity, under the denomination of Pasht, the Lunar Goddess, or Diana, holding every domesticated individual sacred, embalming it after death, and often sending it for interment to Bubastis. Yet we find the cat nowhere mentioned in the canonical books as a domestic animal. And in Baruch (vi. 22) it is noticed only as frequenting Pagan temples, where no doubt the fragments of sacrificed animals and vegetables attracted vermin, and rendered the presence of cats necessary. This singular circumstance, perhaps, resulted from the animal being deemed unclean, and being thereby excluded domestic familiarity, though the Hebrews may still have encouraged it, in common with other vermin-hunters, about the outhouses and farms, and corn-stores, at the risk of some loss among the broods of pigeons which, in Palestine, were a substitute for poultry. [TSIYIM.]

CATENÆ, a name given to collections of expositions culled from the writings of the Fathers, and linked together so as to form one continuous series. The application of this name to works of this sort has been attributed to Thomas Aquinas, whose collection on the Four Gospels bears the title of *Catena Aurea*; but that it is of later invention appears from the fact that the older editions of this work bear the title of *glossa continua*, according to what was the customary phraseology of the time, and that Thomas himself, in his dedication to Pope Urban IV., calls his work *continua expositio*. The early names for these among the Greeks were *ἐπιτομὰ ἐρμηνειῶν, συναγωγὰ ἐξηγήσεων, σχόλια ἀπὸ διαφόρων ἐρμηνειῶν*, etc., which are more justly descriptive of their contents than the later names *χρυσὰ κεφάλαια* and *σειρά*. These catenæ are of different kinds. 'Sometimes the words of the Fathers from whom they were compiled are presented in a mutilated state, and not as they were originally written. Sometimes the bare exposition is given, without the reasons by which it is supported. Sometimes we find that the opinions of different writers are confounded; that being assigned to one which properly belongs to another. By far the greater number appear to have been hastily and negligently made, with so many omissions, corruptions, and errors, that they cannot be relied on' (Davidson, *Hermeneut.* p. 156). All are not alike in the method of their arrangement, nor are all equally skilfully or neatly arranged. They vary, also, according as the writers from whom they are drawn were attached to the grammatical, the allegorical, or the dogmatic principle of interpretation; and sometimes the compiler's own inclination in this respect gives a character to his work. The use of these catenæ is, nevertheless, considerable; as they preserve to us many fragments of Aquila and the other versions of the

Hexapla; as they contain extracts from the works of interpreters otherwise unknown to us; and as they occasionally supply various readings.

The number of these Catenæ is considerable; many yet remain in MS. Of those that have been printed may be mentioned:—*Catena Gr. Patrum in beatum Job, collectore Niceta*, ed. Pat. Junius, fol. Lond. 1637; *Symbolarum in Mattheum tomus prior exhibens Catenam Gr. Patrum xxi.*, ed. P. Possinus, fol. Tolos. 1646; *EjUSD. tomus alter quo continetur Catena PP. Gr. xxx.*, interpr. Balth. Corderius, fol. Tolos. 1647; *Catena Gr. PP. in Evang. sec. Marcum* collect. atque interp. P. Possinus, etc., fol. Rom. 1673; *Catena lxx. Gr. PP. in Lucam, quæ simul Evang. introducit explicatorum, luce et latinitate donata*, etc., a B. Corderio, fol. Antw. 1628; *Catena PP. Gr. in Joannem ex antiquiss. Gr. codice in lucem* ed. a B. Corderio, fol. Antw. 1630; *Catena Gr. PP. in Nov. Test.*, ed. J. A. Cramer, 8 vols. 8vo, Oxon. 1844. To this class belong also the Commentaries of Theophylact, Euthymius Zigabenus, Ecuemenius, Andreas, Arethas, Bede, Aquinas, etc.

As to the origin of this class of commentaries there is much uncertainty. The introduction of them has been assigned to Olympiodorus by Wolf and others, but this cannot be substantiated; still less can the opinion of those who would ascribe this to Procopius Gaza. It is probable that the practice of compiling from the great teachers of the Church grew up gradually in the later and less enlightened ages, partly from a feeling of veneration for these earlier and brighter luminaries, partly from inability to furnish anything original on the books of scripture. It was a season of night, when those who sought after truth felt that even reflected lights were a great blessing. (See Simon, *Hist. Crit. des princ. Commentateurs de N. T.*, c. 30, Ittigius de *bibliothecis et catenis patrum*, Lips. 1708; Fabricius, *Bibl. Gr.*, T. vii. p. 728; J. C. Wolfius, *Exercitatio in cat. PP. Gr.*, reprinted in Cramer's *Catena in N. T.*, vol. i.; Noesselt, *De Cat. PP. Gr. in N. T.*; Opusc. iii. 325, ff.; Cramer's *Prefatio* to his edition of the Catenæ).—W. L. A.

CATERPILLAR. [CHASIL.]

CATTLE. [BAQAR; EGHEL; SHOR.]

CAVES. The geological formation of Syria is highly favourable to the production of caves. It consists chiefly of limestone, in different degrees of density, and abounds with subterranean rivulets. The springs issuing from limestone generally contain carbonate of lime, and most of them yield a large quantity of free carbonic acid upon exposure to the air. To the erosive effect upon limestone rocks, of water charged with this acid, the formation of caves is chiefly to be ascribed. The operation of these causes is sometimes exemplified by a torrent perforating a rock, and forming a natural arch, like that of the Nahr el Leben, which falls into the Nahr El Salib, called also the river of Beirut. The arch is upwards of 160 feet long, 85 feet wide, and nearly 200 feet above the torrent (Kitto's *Physical History of Palestine*, art 'Geology and Mineralogy'). The *subordinate* strata of Syria, sandstone, chalk, basalt, natron, etc., favour the formation of caves. Consequently the whole region abounds with subterranean hollows of different dimensions. Some of them are of immense ex-

tent; these are noticed by Strabo, who speaks of a cavern near Damascus capable of holding 4000 men (xvi. p. 1096, edit. 1707). This cavern is shewn to the present day. Modern travels abound with descriptions of the caves of Syria. The Crusade writers record the local traditions respecting them current in their times (William of Tyre; Quaresmius, *Elucid. Ter. Sanc.*) Tavernier (*Voyage de Perse*, part ii. chap. iv.), speaks of a grotto between Aleppo and Bir, which would hold near 3000 horse. Maundrell has described a large cavern under a high rocky mountain, in the vicinity of Sidon, containing 200 smaller caverns (*Travels*, pp. 158, 159). Shaw mentions the numerous dens, holes, and caves, in the mountains on the sea coast, extending through a long range on each side of Joppa. The accounts of the latest and most accurate travellers verify their statements. The first mention of a *cave* in Scripture relates to that into which Lot and his two daughters retired from Zoar, after the destruction of Sodom and Gomorrah (Gen. xix. 30). It was some cavern in the mountains of Moab, but tradition has not fixed upon any of the numerous hollows in that region. The next is the *cave of Machpelah*, in the field of Ephron, which Abraham purchased of the sons of Heth (Gen. xxv. 9, 10). There Abraham buried Sarah, and was himself afterwards buried; there also Isaac, Rebecca, Leah, and Jacob, were buried (Gen. xlix. 31; l. 13). The cave of Machpelah is said to be under a Mohametan mosque, surrounded by a high wall called the Haram; but even the Moslems are not allowed to descend into the cavern. The tradition that this is the burial-place of the patriarchs, is supported by an immense array of evidence (Robinson, *Biblical Researches in Palestine*, ii. 433-440).

The situation of the cave at *Makkedah*, into which the five kings of the Amorites retired upon their defeat by Joshua, and into which their carcases were ultimately cast, is not known (Josh. x. 16, 27). Some of the caves mentioned in the Scriptures were *artificial*, or consisted of natural fissures enlarged or modified for the purposes intended. It is recorded (Judg. vi. 2), that, 'because of the Midianites, the children of Israel made them the dens which are in the mountains, and caves, and strongholds.' Caves made by art are met with in various quarters. An innumerable multitude of excavations are found in the rocks and valleys round Wady Musa, which were probably formed at first as sepulchres, but afterwards inhabited, like the tombs of Thebes (Robinson's *Researches*, ii. 529). Other excavations occur at Deir Dubbân (ii. 353); others in the Wady leading to Santa Hanneh (ii. 395). 'In the mountains of Kûl'at Ibn Ma'an, the natural caverns have been *united* by passages cut in the rocks, in order to render them more commodious habitations. In the midst of these caverns several cisterns have been built; the whole would afford refuge for 600 men' (Burckhardt's *Travels*, p. 331). Caves were used as *dwelling-places* by the early inhabitants of Syria. The Horites, the ancient inhabitants of Idumæa Proper, were Troglodytes or dwellers in caves, as their name imports. Jerome records that in his time Idumæa, or the whole southern region from Eleutheropolis to Petra and Ailah, was full of habitations in caves, the inhabitants using subterranean dwellings on account of the great heat (*Comm. on Obad.* v. 6). 'The excavations at Deir

Dubbân and on the south side of the Wady, leading to Santa Hanneh, are probably the dwellings of the ancient Horites' (Robinson, ii. 353), and they are peculiarly numerous around Beit Jibrin (Eleutheropolis) (ii. 425). The Scriptures abound with references to habitations in rocks; among others, see Num. xxiv. 21; Cant. ii. 14; Jer. xlix. 16; Obad. 3. Even at the present time many persons live in caves. The inhabitants of Anab, a town on the east of the Jordan, lat. 32° N. long. 35° E., all live in grottoes or caves hollowed out of the rock (Buckingham's *Travels among the Arab Tribes*, p. 61). In the neighbourhood of Hebron peasants still live in caves, and especially during the summer, to be near their flocks (Wilkinson's *Travels*, i. 313). Poor families live in caverns in the rocks which seem formerly to have been inhabited as a sort of village, near the ruins of El Burj. So also at Siloam, and in the neighbourhood of Nazareth. Caves afforded excellent refuge in the time of war. Thus the Israelites (1 Sam. xiii. 6) are said to have hid themselves in caves, and in thickets, and in rocks, and in high places, and in pits. See also Jer. xli. 9; Joseph. *Antiq.* xii. 11. 1. Hence, then, to 'enter into the rock, to go into the holes of the rocks, and into the caves of the earth' (Is. ii. 19), would, to the Israelites, be a very proper and familiar way to express terror and consternation. The pits spoken of seem to have consisted of large wells, in 'the sides' of which, excavations were made, leading into various chambers. Such pits were sometimes used as prisons (Is. xxiv. 22; li. 14; Zech. ix. 11), and with niches in the sides, for burying-places (Ezek. xxxii. 23). Many of these vaulted pits remain to this day. The cave in which Lazarus was buried was probably something of this kind. The tomb shewn as his, at Bethany, is not attended with the slightest probability (Robinson, ii. 100). The strongholds of Engadi, which afforded a retreat to David and his followers (1 Sam. xxiii. 29; xxiv. 1), can be clearly identified. They are now called 'Ain Tidy by the Arabs, which means the same as the Hebrew, namely, 'The Fountain of the Kid.' 'On all sides the country is full of caverns, which might serve as lurking-places for David and his men, as they do for outlaws at the present day. The whole scene is drawn to the life' (Robinson, ii. 203). The cave of Adullam, to which David retired to avoid the persecutions of Saul (1 Sam. xxii. 1, 2), and in which he cut off the skirt of Saul's robe (1 Sam. xxiv. 4), is an immense natural cavern at the Wady Khureitun, which passes below the Frank mountain (Herodium: see the *Map of Palestine*). For a description of this cave by Irby and Mangles, and the reasons for believing its identity, see article ADULLAM. Dr. Pococke refers to a tradition that 30,000 persons once retired into it to avoid a malaria. Such is the extent of the cavern, that it is quite conceivable how David and his men might 'remain in the sides of the cave,' and not be noticed by Saul (*Travels*, vol. ii. p. 41). Caverns were also frequently fortified and occupied by soldiers. Josephus often mentions this circumstance. Certain caves were afterwards fortified by Josephus himself during his command in Galilee under the Romans. In one place he speaks of these as the caverns of Arbela (*Vita*, sec. 37), and in another as the caverns near the lake Genesareth (*De Bell. Jud.* ii. 20. 6). A fortified cavern

existed in the time of the Crusades. It is mentioned by William of Tyre (xxii. 15-21), as situate in the country beyond the Jordan, sixteen Roman miles from Tiberias. The cave of Elijah is pretended to be shewn, at the foot of Mount Sinai, in a chapel dedicated to him; and a hole near the altar is pointed out as the place where he lay (Robinson, i. 152).—J. F. D.

CAWTON, THOMAS, a learned English divine, and son of an eminently learned Puritan of the same name, was born in 1637. He studied first at Utrecht, where he soon rose into reputation for his extensive acquirements, and subsequently at Oxford, where, having completed his studies under Samuel Clarke, he soon after received ordination from the bishop of the diocese. But so much dissatisfied did he soon become with the party then dominant in the establishment, that after having officiated as chaplain first to Sir Anthony Irby, and afterwards to Lady Armin, he left it to become the pastor of a Nonconformist congregation in Westminster, where he died in 1677. It was while a student at Utrecht that he wrote and published the two following learned dissertations:—*Disputatio de Versione Syriaca Vet. et Novi Testamenti*, Ultraj. 1657, 4to; *Dissertatio de usu Lingue Hebraica in Philosophia Theoretica*, Ibid. 1657, 4to. Orme's account of these works is not more succinct than it is correct. He says, 'That on the Syriac Scriptures is more valuable, though not more curious than the one on the Hebrew language. Cawton discusses the Syriac versions both of the O. and N. T. On the former he endeavours to shew that there were anciently two Syriac translations, one made from the Septuagint, and the other from the Hebrew text. It was a copy of the latter which Usher obtained, and which is printed in Walton's Polyglot. The author of it, he conceives, cannot now be ascertained; but the age of it he considers to be about the time of the Apostles, and its authority he ranks very high. The Syriac version of the N. T., he thinks, was made about the second or third century. He gives a short account of the editions of it published by Plantin, Hutter, Gutbirius, and in the Polyglot; and makes some observations on the translations of it by Tremellius and Boderianus.' Cawton was greatly celebrated for his extensive acquirements in the oriental languages, especially in the Hebrew and its cognate dialects, Chaldaic, Syriac, and Arabic.—W. J. C.

CEDAR. [ERES.]

CEDRON. [KIDRON.]

CEILING. The orientals bestow much attention upon the ceilings of their principal rooms. Where wood is not scarce, they are usually composed of one curious piece of joinery, framed entire, and then raised and nailed to the joists. These ceilings are often divided into small square compartments; but are sometimes of more complicated patterns. Wood of a naturally dark colour is commonly chosen, and it is never painted. In places where wood is scarce, and sometimes where it is not particularly so, the ceilings are formed of fine plaster, with tasteful mouldings and ornaments, coloured and relieved with gilding, and with pieces of mirror inserted in the hollows formed by the involutions of the raised mouldings of the arabesques, which enclose them as in a frame. The antiquity of this taste can be clearly traced by

actual examples up to the times of the Old Testament, through the Egyptian monuments, which display ceilings painted with rich colours in such patterns as are shewn in the annexed cut. The

171.

explanation thus obtained satisfactorily illustrates the peculiar emphasis with which 'ceiled houses' and 'ceiled chambers' are mentioned by Jeremiah (xxii. 14) and Haggai (i. 4).

CELSIUS, OLAUS, was born at Stockholm in 1670, and died in 1756. He was a minister, and professor of theology and of the oriental languages in Upsal, and was twice offered the dignity of archbishop of Upsal. He published many dissertations on points of theology, history, and antiquities, of which the most important are, *De Lingua novi Testamenti originali*, Upsal, 1707, 8vo; *De Helsingiâ antiquâ*, 1713, 8vo; *De versionibus Bibliorum Sueo-Gothicis*, Stockholm, 1716, 8vo; *De Sculpturâ Hebræorum*, Upsal, 1726, 8vo, etc. But his most distinguished and most useful labours were on the natural history of the Bible. He had a great knowledge of botany, is looked upon as the founder of the school of natural history among the Swedes, and was the patron of Linnæus; and, by direction of Charles XI., travelled over the principal states of Europe to determine the different plants mentioned in the Bible. The result of his labours were seventeen dissertations, published at intervals from 1702 to 1741, and afterwards collected into one work, called *Hierobotanicon, seu de plantis Sanctæ Scripturæ dissertationes breves*, Upsal, 1745 and 1747. Celsius joined to immense learning a very exact observation of nature, and the work is one of considerable value, determining upwards of 100 plants. Particulars of his life and works may be found in the second vol. of the *Memoirs of the Society of Sciences of Upsal*.—H. W.

CENCHREA, or CENCHREÆ (Κερχραει), one of the ports of Corinth, whence Paul sailed for Ephesus (Acts xviii. 18). It was situated on the

eastern side of the isthmus, about seventy stadia from the city: the other port on the western side of the isthmus was called Lechæum. [CORINTH.]

CENDEBÆUS (Κενδεβαίος), a general of Antiochus Sidetes, defeated and driven out of Judæa by Judas and John Hyrcanus, the sons of Simon Maccabæus (1 Maccab. xv. 38, 40; xvi. 1, 4, 8; Joseph. *Antiq.*, xiii. 7. 3; *Bell. Jud.* i. 2. 2).—S. N.

CENSER, the vessel in which incense was presented in the temple (2 Chron. xxvi. 19; Ezek. viii. 11; Eccles. i. 9). Censers were used in the daily offering of incense, and yearly on the day of atonement, when the high-priest entered the Holy of Holies. On the latter occasion the priest filled the censer with live coals from the sacred fire on the altar of burnt-offering, and bore it into the sanctuary, where he threw upon the burning coals the 'sweet incense beaten small' which he had brought in his hand (Lev. xvi. 12, 13). In this case the incense was burnt while the high-priest held the censer in his hand; but in the daily offering the censer in which the live coals were brought from the altar of burnt-offering was set down upon the altar of incense. This alone would suggest the

172. Egyptian Censers.

probability of some difference of shape between the censers used on these occasions. The daily censers must have had a base or stand to admit of their being placed on the golden altar, while those employed on the day of atonement were probably furnished with a handle. In fact, there are different names for these vessels. Those in daily use were called מִקְטָרֵת מִקְטָר, *miktereth*, from מִקְטָר, 'incense'; whereas that used on the day of atonement is distinguished by the title of מִחְתָּה *michtah* or 'coal-pan.' We learn also that the daily censers were of brass (Num. xvi. 39), whereas the yearly one was of gold (Joseph. *Antiq.* xvi. 4. 4). The latter is also said to have had a handle (Mishn. tit. *Yoma*, iv. 4), which, indeed, as being held by the priest while the incense was burning, it seems to have required. These intimations help us to conclude that the Jewish censers were unlike those

of the classical ancients, with which the sculptures of Greece and Rome have made us familiar; as well as those (with perforated lids, and swung by chains) which are used in the church of Rome. The form of the daily censer we have no means of determining beyond the fact that it was a pan or vase, with a stand whereon it might rest on the golden altar. Among the Egyptians the incense was so generally burned in the hand of the officiating priest, that the only censers which we find in the least degree suited to this purpose are those represented in Figs. 2 and 3 of No. 171. But the numerous figures of Egyptian censers, consisting of a small cup at the end of a long shaft or handle (often in the shape of a hand), probably offer adequate illustration of those employed by the Jews on the day of atonement. There was, however, another kind of censer (fig. 1) less frequently seen on the Egyptian monuments, and likewise furnished with a handle, which will probably be regarded by many as offering a more probable resemblance. It is observable that in all cases the Egyptian priests had their costly incense made up into small round pellets, which they projected successively from between their finger and thumb into the censer, at such a distance, that the operation must have required a peculiar knack to be acquired only by much practice. As the incense used by the Jews was made up into a kind of paste, it was probably employed in the same manner.—J. K.

CENSUS. [CYRENUS; DAVID.]

CENTURION (ἐκατοντάρχης and ἑκατόνταρχος), a Roman military officer in command of a hundred men, as the title implies. Cornelius, the first Gentile convert to Christianity, held this rank (Acts x. 1, 22). Other Centurions are mentioned in Matt. viii. 5, 8, 13; xxvii. 54; Acts xxi. 32; xxii. 25, 26; xxiii. 17, 23; xxiv. 23; xxvii. 1, 6, 11, 31, 43; xxviii. 16.

CEPHAS (Κηφᾶς; in later Hebrew or Syriac כִּיפָא, a surname which Christ bestowed upon Simon (John i. 42). [PETER.]

CERATIA, **CERATONIA**, is the name of a tree of the family of Leguminous plants, of which the fruit used to be called *Siliva edulis* and *Siliva dulcis*. By the Greeks, as Galen and Paulus Ægineta, the tree is called *κερατια*, *κερατωτια*, from the resemblance of its fruit to *κέρας*, a horn. The word *κεράτιον* occurs in Luke xv. 16, where it has been translated *husks* in the A. V.: our Saviour, in the parable of the prodigal son, says that 'he would fain have filled his belly with the *husks* that the swine did eat; and no man gave unto him.' In the Arabic version of the N. T., the word **خروب** *Kharoob*, often written **خرنوب** *Kharnooob*, is given as the synonym of *Keratia*. According to Celsius, the modern Greeks have converted the Arabic name into *χάρουβα*, and the Spaniards into *Garrova* and *Algaroba*. The Italians called the tree *Caroba*, the French *Carroubier*, and the English Carob-tree. Though here, little more than its name is known, the Carob-tree is extremely common in the South of Europe, in Syria, and in Egypt. The Arabs distinguish it by the name of *Kharnooob shamee*—that is, the Syrian Carob. The ancients, as Theo-

phrastus and Pliny, likewise mention it as a native of Syria. Celsius states that no tree is more frequently mentioned in the Talmud, where its fruit is stated to be given as food to cattle and swine: it is now given to horses, asses, and mules. During the Peninsular war the horses of the British cavalry were often fed on the beans of the Carob-tree. Both Pliny (*Hist. Nat.* xv. 23) and Columella (vii. 9) mention that it was given as food to swine. By some it has been thought, but apparently without reason, that it was upon the husks of this tree that John the Baptist fed in the wilderness: from this idea, however, it is often called St. John's Bread, and Locust-tree.

The Carob-tree grows in the south of Europe and north of Africa, usually to a moderate size, but it sometimes becomes very large, with a trunk of great thickness, and affords an agreeable shade. The quantity of pods borne by each tree is very considerable, being often as much as 800 or 900 pounds weight: they are flat, brownish-coloured, from 6 to 8 inches in length, of a sub-astringent taste when unripe, but, when come to maturity, they secrete, within the husks and round the seeds, a sweetish-tasted pulp. When on the tree, the pods have an unpleasant odour; but, when dried

173. *Ceratonia Siliqua*.

upon hurdles, they become eatable, and are valued by poor people, and during famine in the countries where the tree is grown, especially in Spain and Egypt, and by the Arabs. They are given as food to cattle in modern, as we read they were in ancient, times; but, at the best, can only be considered very poor fare.—J. F. R.

CETUBIM (בְּתוּבִים, *the Writings*). [CANON.]

CHABAZZELETH (חַבְזֵלֶת) occurs in two places in Scripture, first in the passage of Cant. ii. 1, where the bride replies, 'I am the *Rose* of Sharon and the lily of the valleys;' and secondly, in Is. xxxv. 1, 'The wilderness and the solitary

place shall be glad for them; and the desert shall rejoice, and blossom as the rose.' In both passages we see, that in the A. V., as also in some others, the word is considered to indicate the rose. The Sept. renders it simply by *flower* in the passage of the Canticles. In this it has been followed by the Latin Vulgate, Luther, etc. It is curious, however, as remarked by Celsius, *Hiero.*, i. p. 489, that many of those who translate *chabazzeleth* by *rose* or *flower* in the passage of the Canticles, render it by *lily* in that of Isaiah.

The rose was, no doubt, highly esteemed by the Greeks, as it was, and still is, by almost all Asiatic nations, and, as it forms a very frequent subject of allusion in Persian poetry, it has been inferred that we might expect some reference to so favourite a flower in the poetical books of the Scripture, and that no other is better calculated to illustrate the above two passages. But this does not prove that the word *chabazzeleth*, or any similar one, was ever applied to the rose. Other flowers, therefore, have

174. *Narcissus tazetta*.

been indicated, to which the name *chabazzeleth* may be supposed, from its derivation, to apply more fitly. Scheuzer refers to Hiller (*Hierophyt.* p. 2), who seeks *chabazzeleth* among the bulbous-rooted plants, remarking that the Hebrew word may be derived from *chabab* and *batzal*, a bulb, or bulbous root of any plant; as we have seen it applied to the onion in the article BETZAL. So Rosenmüller remarks that the substantial part of the Hebrew name shews that it denotes a flower growing from a bulb, and adds in a note 'that הבצלת is formed from בצל or bulb, the guttural ה being sometimes put before trilaterals, in order to form quadrilaterals from them' (see Gesen. *Lehrgeb.* p. 863). Some therefore have selected the asphodel as the bulbous plant intended; respecting which the author of 'Scripture Illustrated' remarks, 'It is a very beautiful and odiferous flower, and highly praised by two of the greatest masters of Grecian song. Hesiod says it grows commonly in woods; and Homer (*Odys.*, i. 24) calls the Elysian fields 'meads filled with asphodel.'

Celsius (*l. c.*) has already remarked that Bochart has translated *chabazzeleth* by *narcissus*; and not

without reason, as some oriental translators have so explained it. In the Targum, Cant. ii. 1, instead of *chabazzeleth* we have *narkom*, which, however, should have been written *narkos* נרקוס, as appears from the words of David Cohen de Lara, '*Narkos idem est ac chabazzeleth Saron.*' So in Is. xxxv. 1, *chabazzeleth* is written *chamzaloito* in the Assyrian translation, 'quod maronita Latine vertit narcissum' (Cels. *Hierobot.* i. p. 489). This, Rosenmüller informs us, according to the testimony of Syriac-Arabic dictionaries, denotes the 'colchicum autumnale,' that is, the meadow saffron. That plant certainly has a bulb-like root-stock; in form the flowers resemble those of the crocus, are of a light violet colour, but without any scent. *Narkom* and *narkos* are, no doubt, the same as the

Persian *nurgus*, Arabic نرجس, and which, through-

out the East, indicates *Narcissus tazetta*, or the polyanthus narcissus. The ancients describe and allude to the narcissus on various occasions, and Celsius has quoted various passages from the poets indicative of the esteem in which it was held. As they were not so particular as the moderns in distinguishing species, it is probable that more than one may be referred to by them, and, therefore, that *N. tazetta* may be included under the same name as *N. poeticus*, which was best known to them. It is not unimportant to remark that the narcissus was also called βολβός ἐμετικός, and *Bulbus vomitorius*, and the Arabic *bush-al-kye*, no doubt refers to the same or a kindred species. It is curious also that an Eastern name, or the corruption of one, should be applied by gardeners even in this country to a species of narcissus—thus, *N. Trewrianus* and *crenulatus*,—the former, supposed by some to be a variety of *N. Orientalis*, were once called *bazalman major* and *bazalman minor*. That the narcissus is found in Syria and Palestine is well known, as it has been mentioned by several travellers; and, also, that it is highly esteemed by all Asiatics from Syria even as far as India. Hence, if we allow that the word *chabazzeleth* has reference to a bulb-bearing root, it cannot apply to the rose. The narcissus, therefore, is as likely as any other of the bulbous tribe to have been intended in the above passages.—J. F. R.

CHAFF. This is the rendering in the A. V.

of three Hebrew words—1. מוץ or מוץ (Job xxi. 18; Ps. i. 4; xxxv. 5; Is. xvii. 13; xxxix. 5; Zeph. ii. 2, etc.) This word, from מוץ, to *press out*, to *separate*, properly designates that which is severed from the grain, the refuse from the winnowed corn, and is the proper word for *chaff* (Sept. *Xvois*, except in Zeph. ii. 2, where ἄνθος παρά πορευόμενον is substituted). Worthless and wicked characters are compared to chaff, because they shall be swept away, and destroyed by the divine judgments (Ps. i. 5; Zeph. ii. 2; Matt. iii. 12).

2. חֵשֶׁשׁ (Is. v. 24; xxxiii. 11). This word, from חָשַׁשׁ, to *be dry*, *withered*, denotes not so much chaff as dry withered grass, such as easily takes fire and is consumed.

3. חֶבֶן (Jer. xxiii. 28), elsewhere rendered *straw* (Exod. v. 7, 10, 12; Is. xi. 7; lxx. 25), and *stubble* (Job xxi. 18). It properly means *chopped straw*, such as was used to mix with clay for bricks, and to form litter for cattle, horses, and camels, or,

perhaps, mixed with barley, to form part of their provender (Gen. xxiv. 25, 32; Judg. xix. 19; 1 Kings iv. 28; Is. xi. 7). Comp. Chaldee תבנא,

Syr. **ܠܒܢܐ**, Ar. **تبين**. The Sept. gives ἀχυρον as its equivalent.

In Dan. ii. 35, the Chaldaic word עָנַר is used to designate the husk of corn, the chaff; though the LXX., reading κοπιωρός, would indicate that they regarded it as describing the dust that rises from the threshing-floor rather than the chaff. In the N. T. the word rendered chaff is ἀχυρον (Matt. iii. 12; Luke iii. 17).—W. L. A.

CHAGAB (חַגָב) a winged edible locust (Lev.

xi. 22; Num. xiii. 33; Is. xl. 22; Eccles. xii. 5; and 2 Chron. vii. 13). In all these passages the Sept. reads ἀκπῆς, Vulgate locustia, and English grasshopper, except the last, where the English has locusts. The manifest impropriety of translating this word 'grasshoppers' in Lev. xi. 22, according to the English acceptance of the word, appears from this, that the חַגָב is placed there among the 'flying creeping things.' In all the other instances it most probably denotes a species of locust, and so our translators have properly rendered it in 2 Chron. vii. 13. Oedman infers, from its being so often used for this purpose, that it denotes the smallest species of locust; but in the passage in Chronicles voracity seems its chief characteristic. An Arabic root, signifying 'to hide,' is usually adjoined, because it is said that locusts fly in such crowds as to hide the sun; but others say, from their hiding the ground when they alight. Even Parkhurst demurs, that 'to veil the sun and darken the air is not peculiar to any kind of locust;' and with no better success proposes to understand the cullulated, or hooded, or veiled species of locust. Tychem suggests the *G. coronatus*.

Fürst (following Rashi) proposes to understand the word in Eccl. xii. 5, as referring to the *solanum pomigerum spinosum*, thence to the *membrum virile*, and the whole passage as describing the passing away of all desire for carnal pleasures, and this view is adopted by Mead (*Med. Sac.* p. 44), Desvoeux, Hitzig, and others. But why resort to such an explanation when the ordinary meaning of the word gives as good a sense (not to say a better)? The day 'when the locust shall be loathed' is the day when even what in health is esteemed a delicacy, will be refused (See Ginsburg's *Ecclesiastes*, p. 463).

CHAIN. Chains of gold appear to have been much used among the Hebrews—I. As badges of official distinction, as they are among ourselves at the present day. The earliest mention of them occurs in Gen. xli. 42, where we are told that a chain of gold formed a part of the investiture of Joseph in the high office to which he was raised in Egypt; a later instance occurs in Dan. v. 29, from which we learn that a golden chain was part of a dress of honour at Babylon. In Egypt the judges wore chains of gold, to which was attached a jewelled figure of Thmei, or Truth; and in that country similar chains were also worn as ornaments by the women. It is not, however, necessary to suppose that the Hebrews derived this custom from the Egyptians; for the fact that chains are mentioned among the spoil of the Midianites shews that they were in use among people whose condi-

tion of life more nearly resembled that of the Israelites before they obtained possession of Canaan. 2. As ornaments. It would seem that chains were worn both by men and women for this purpose (Prov. i. 9; Ezek. xvi. 11), and we find them enumerated among the ornaments of brides (Cant. i. 10; iv. 9). In Cant. iv. 9 the neck ornament of the bride is called the chain of her neck; and in Prov. i. 9 parental counsels are compared to ornaments of grace unto the head, and chains around the neck of a child. Among the spoils taken from the Midianites were chains which they used to adorn the necks of their camels (Judg. vii. 26). 3. As a means of confinement (Judg. xvi. 21; Ps. cxlix. 8). It was a custom among the Romans to fasten a prisoner with a light chain to the soldier who was appointed to guard him. One end of it was attached to the right hand of the prisoner, and the other to the left hand of the soldier. This is the chain by which Paul was so often bound, and to which he repeatedly alludes (Acts xxvii. 20; Eph. vi. 20; 2 Tim. i. 16). When the utmost security was desired, the prisoner was attached by two chains to two soldiers, as was the case with Peter (Acts xii. 6).

CHATS, CHARLES, was born at Geneva in 1701, and died in 1786 at the Hague, where he had been pastor since 1728. He published *La Sainte Bible avec un Comment. littéral, et des Notes choisies tirées de divers auteurs Anglais*, 6 vols. 4to, Hag. 1742-77; a seventh volume was issued in 1790 after his death, by Dr. Maclaime, who furnished the preliminary dissertations; *Le Sens littéral de l'Écriture Sainte, traduit de l'Anglais de Stackhouse*, 3 vols. 8vo, 1751; *Theologie de l'Écriture S., ou la Science du Salut, comprise dans une ample collection de passages du V. et N. T.*, 2 vol. 8vo, 1752.—†

CHAJUG, JEHUDA B. DAVID, commonly called *Ching*, and in Arabia *Abukaria*, Jachja B. Dauid el-Fasi el-Kartubi, and Jachja, who is justly regarded by all Jewish critics and expositors as the prince of Hebrew grammarians, ראש המדורקים, was born in Fez about 1020-1040, A.D., and hence is sometimes also called Jehuda Fási יהודה פאסי. He was the first who recognised that the stem words of the Hebrew consist of three consonants, as up to his time some of the chief etymologists and expositors, e. g., Suadia Gaon, Menachem, Ibn-Saruk, maintained that there were biliteral and even monoliteral stems, and derived ירר from רר, עשה from עש, וין (Lev. viii. 20) from a stem consisting of the single letter י. He, too, was the first who discovered the true relation of the *quiescent letters*, forming the *Mnemonic אהוי* אהוי, and their changes. It was he, too, who arranged the verbs according to their conjugations (בנינים).

distributing them under two heads—I. KAL (קל) *light*, not burdened with any formative additions; and 2. CABED (כבד) *heavy*, being burdened with formative additions; and fixed six conjugations, viz.—1. Kal (קל); 2. Niphal (נפעל); 3. Hiphil (הפעיל); 4. Hithpael (התפעל); 5. Paul and *Hophal*, designated אשר לא נקרא שם פעלו, where the name of the actor is not mentioned; and 6. Piel (פעל), characterised as כבד אחר, the other heavy

confugation. This number and arrangement have been adopted by all grammarians, and is exhibited in all the regular paradigms of the verb given by Gesenius, Ewald, and all modern linguists in their Hebrew grammars. These discoveries and scientific principles Chajug propounds in three books. 1. The first is called ספר אותיות הנה, also ספר המושך, and treats on the *אותיות הסתר והמושך letters*, is divided into three sections; section *a*. comprises the verbs whose *first* radical is quiescent, viz., (נחי ל אלף) verbs *Pe Aleph* (א'פ), and (נחי ל יוד), *Pe Yodli* (י'פ), e.g. יָשַׁב, etc.; section *b*. comprises those verbs whose *second* radical is quiescent (נחי עין ו) = *Ayin Var.* (ו'ע), e.g. קָיָם; and section *c*. those whose *third* radical is quiescent (נחי למור ה) = *Lamed He*, e.g. נָגַלָה, etc. 2. The second book is called ספר הכפל, and treats on verbs whose *second* and *third* radicals are alike = *Ayin doubled* (ע'ע), e.g. כָּבַב, etc. 3. The third book is called ספר הנקוד, and treats upon the vowel points, and accents. Originally written in Arabic, these marvellous grammatical discoveries were at first inaccessible and unknown to the Germano-French interpreters; but they exercised so extraordinary an influence upon the Spanish school of interpreters, that the renowned Ibn Ezra and Ibn-Gikatilla translated them into Hebrew, to render them more generally useful, and Chajug soon became the praise of all grammarians, lexicographers, and commentators, who constantly quote him in their works. Chajug's productions have been published by the learned and indefatigable Leopold Dukes (*Beiträge zur Geschichte der Ältesten Auslegung und Sprach-erklärung des Alten Testaments*, Von Heinrich Ewald und Leopold Dukes, Stuttgart, 1844), who also gives an elaborate sketch of the author's life and linguistic discoveries (pp. 155-163), to which, as well as to Ewald's remarks (pp. 123-125, Erstes Bändchen), we must refer against the partial account given by Father Simon (*Hist. Crit. lib.* i. cap. 31) of this celebrated philologist. Chajug also wrote a Hebrew Lexicon, which is often quoted by the lexicographers Ibn Ganach and Parchon, but this work has not come to light yet; comp. Munk, *Notice sur Aboutwalid*, p. 64, etc.; Steinschneider, *Catalogus Librorum Hebræorum in Bibliotheca Bodleiana*, cols. 1301-1306.—C. D. G.

CHALCEDONY (χαλκηδών, Rev. xxi. 19), a precious stone, supposed by some to be the same that occurs in the Hebrew Scriptures (Exod. xxviii. 18) under the name of *nophék* (translated 'emerald'); but this is doubtful. Chalcedony is a variety of amorphous quartz, and the distinction between it and agate is not very satisfactorily established. It is harder than flint (specific gravity 2.04), commonly semi-transparent, and is generally of one uniform colour throughout, usually a light brown, and often nearly white; but other shades of colour are not infrequent, such as grey, yellow, green, and blue. Chalcedony occurs in irregular masses, commonly forming grotesque cavities, in trap rocks and even granite. It is found in most parts of the world; and in the east is employed in the fabrication of cups and plates, and articles of taste, which are wrought with great skill and labour, and treasured among precious things.—J. K.

CHALDÆA, OR CHALDEA. The Hebrew word כַּשְׁדִּים is rendered in the A. V. both *Chaldea* (Jer. l. 10; Ezek. xi. 24) and *Chaldeans* (Job i. 17; Is. xxiii. 13). It is a plural noun, and signifies primarily 'Chaldeans.' But as the country was called אֶרֶץ כַּשְׁדִּים (Jer. xxv. 12), the same signification came to be given elliptically to כַּשְׁדִּים (Jer. li. 24; Ezek. xvi. 29). In the Septuagint the rendering is almost as arbitrary as in the English. Thus it is Καλδαία in Jer. l. 10; *Ἰσσηίς* in Job i. 17; but usually Χαλδαῖοι. The word *Casdim* is only found in the Hebrew Scriptures. All the Greek authors have Χαλδαία and Χαλδαῖοι. The word in the ancient cuneiform inscriptions is *Kaldai* (Rawlinson's *Herodotus*, i. 665, note).

The term *Casdim*, as the name of a country, is not employed with uniformity of signification in the Bible. It generally means Babylonia (Jer. xxiv. 5; li. 24); sometimes it is applied to a still wider district, including the whole of Mesopotamia and the regions to which the *Casdim* tribes had spread (Ezek. i. 3). There can be little doubt, however, that originally the name was confined to a small province colonized by the remarkable and enterprising tribe of the *Casdim*. The position and general boundaries of this province we have now sufficient data to define; to a consideration of these data and a description of that province this article is confined. Chaldæa is deserving of the attention of every student of biblical literature, because it was not only the native country of the great Hebrew patriarch, but it was, in all probability, the original source and centre of literature and science.

The first notice of Chaldæa is in Gen. xi. 28, where it is said that 'Haran died in the land of his nativity, in *Ur of Casdim*.' Here the word *Casdim* evidently means a definite territory, taking its name from those who dwelt in it. From the tenth chapter of Genesis we learn that the beginning of Nimrod's kingdom was 'Babel, and Erech, and Acad, and Calneh, in the land of Shinar.' This land is now generally acknowledged to be the great marshy plain extending on both banks of the Euphrates from Babylon southward to the Tigris. In this region the remains of great cities have been discovered and explored. Many inscribed bricks, cylinders, and fragments of pottery have been found; and from these, combined with the notices of ancient historians and native traditions, Sir Henry Rawlinson and other Assyrian scholars have been able to identify the sites of the principal cities mentioned in Genesis. The old cities of the great eastern empire are now represented by huge mounds of rubbish, which rise like islands out of the vast plains, and which contain, buried within and beneath them, the most precious relics of ancient monumental literature. On the right bank of the Euphrates, opposite the mouth of the western arm of the Tigris, are the mounds of *Mugayer*, which mark the site of *Ur* (Rawlinson's *Herodotus*, i. 447). Ancient Chaldæa therefore lay, in part at least, along the right bank of the Euphrates. But the inscriptions discovered at *Warka* and other places shew that *Ur*, which appears to have been a territory as well as a city (comp. Gen. xi. 28), extended across the Euphrates (Loftus, *Chal. and Susian*, p. 162). Hence Chaldæa must have included the extreme southern portion of Mesopotamia. The same view is taken by ancient geographers, who

supply still farther information, which the monuments of Assyria now enable us fully to understand. Ptolemy (v. 20) places Chaldæa in the south-western part of Babylonia, bordering on the Arabian desert. Pliny notices the Chaldæans in several places, distinguishing between *Chaldæa proper* and the Babylonian empire, which was afterwards called Chaldæa. He calls Babylon 'the capital of the nations of Chaldæa' (*Hist. Nat.*, vi. 30), and then he designates the marsh at the junction of the Euphrates and Tigris *Lacus Chaldaici* (vi. 31). He calls Orchenus (the *Erech* of Genesis and modern *Warka*) a chief seat of Chaldæan learning, and he says that 'below the confluence of the Euphrates and Tigris you have the Chaldæans dwelling on the left side of the river' (vi. 32). Strabo's testimony is to the same effect. He refers to a tribe of Chaldæans who lived beside the Arabians on the shores of the Persian Gulf, *inhabiting a section of Babylonia* (ἔστι καὶ κατὰ φύλόν τι τῶν Χαλδαίων καὶ χώρα τῆς Βαβυλωνίας ὑπ' ἑκείνων οἰκουμένη, κ. τ. λ. xvi.) Combining these notices, we are enabled to locate Chaldæa proper around and below the junction of the Euphrates and Tigris, and to distinguish it, besides, from Babylonia. It was bounded on the west by the Arabian desert, on the south by the Persian Gulf, on the east by Susiana and the Tigris, and on the north by Babylonia. Probably a line drawn across Mesopotamia, through the ruins of Niffer, might mark its northern boundary. The whole region is flat and marshy. It was formerly intersected by numerous canals, into which the waters of the Euphrates were turned, for the purposes of irrigation, by dams and embankments. The canals are now neglected, the channel of the river is choked up with mud, and the waters spread far and wide over the low plain. Great numbers of bare, scorched mounds rise up at intervals, like little islands, marking the sites of the old cities of Chaldæa. Among these the mounds of Niffer, Warka, and Mugayer are the largest. Recent excavations have shewn that the Chaldæans were as skilful in architecture as they were in arms and literature. The engraved gems and cylinders also bear witness to their proficiency in the fine arts. The country was not only intersected by navigable canals, but by good roads, which connected the leading towns, and extended to neighbouring countries. All is now changed. The once fertile plain has become a wilderness. It is not difficult to account for the rapid decay. The canals which supplied water for irrigation were the sources of life and fertility to the country. When these were neglected, they were soon choked up, the waters ceased to flow, a burning sun parched the soil, and corn fields, gardens, and groves of palms soon disappeared. Now the waters which once gave richness and beauty to the country, converts a large section of it into pestilential marshes, and dense jungles and cane-brakes, where the lion, the panther, and the wild boar find a fitting abode. A few Arab tribes still reside here, but they are wild and lawless, and scarcely more intelligent or human than the buffaloes which they tend. Most interesting and instructive descriptions of ancient Chaldæa, with historical notices, will be found in Loftus' *Chaldæa and Susiana*, Layard's *Nineveh and Babylonia*, and the papers communicated by Sir Henry Rawlinson to the Royal Geographical and Asiatic Societies.

The true etymology of the name Casdim is un-
VOL. I.

known. There can be no doubt, however, that this is the Hebrew equivalent for the *Kaldai* of Babylonian monuments, and the *Χαλδαῖοι* of the Greek historians. In Rawlinson's *Herodotus* (i. 655) we find the following remarks, containing the most recent and authentic notice of the old inhabitants of Chaldæa:—'The monuments of Babylonia furnish abundant evidence of the fact that a Hamitic race held possession of that country in the earliest times, and continued to be a powerful element in the population down to a period very little preceding the accession of Nebuchadnezzar. The most ancient historical records found in the country, and many of the religious and scientific documents, are written in a language which belongs to the Allophylian family, presenting affinities with the dialects of Africa on the one hand, and with those of high Asia on the other. The people by whom this language was spoken, whose principal tribe was the Akkad (Accad, Gen. x. 10), may be regarded as represented by the Chaldæans of the Greeks, the Casdim of the Hebrew writers. This race seems to have gradually developed the type of language known as Semitism, which became in course of time the general language of the country; still, however, as a priest-caste, a portion of the Akkad preserved their ancient tongue, and formed the learned and scientific Chaldæans of later times.' Their language was the language of science in those countries; and the Chaldæans devoted themselves to the study of the sciences, and especially astronomy. The scientific tablets discovered at Nineveh are all in this dialect. These facts throw new and clear light on the many allusions to the Chaldæan wise men in the Bible (Dan. i. 4; ii. 2; iv. 7; Ezek. xxiii. 14). The influence and power of the Chaldæans rapidly increased, so that in the early part of the 9th century B.C., they became the dominant race in Babylonia, and gave that kingdom their name (2 Chron. xxxvi. 17; Dan. ix. 1) [*BABYLONIA*; *CHALDÆANS*]. During the 8th century B.C., a number of them emigrated from their native plains, and settled in the mountains of Armenia. This is possibly the true explanation of the occurrence of Chaldæans in that region, as noted by many ancient writers (Xen. *Anab.* iv. 3, 4; Strab. xii.; Steph. Byz., s. v. *Χαλδία*); and this, too, shews why Gesenius and other recent authors were led to believe that the Chaldæans of Babylonia were a colony from the northern mountains, settled in that country by one of the later Assyrian monarchs (Rawlinson's *Herodotus*, i. 656; Winer, *R. W. B.* s. v. *Chaldäer*; Ditmar, *Vaterland d. Chaldäer*; Bochart, *Geogr.*)—J. L. P.*

* As this sheet is passing through the press, a valuable paper from the pen of Sir H. Rawlinson has made its appearance in the *Athenæum*, from which it appears desirable to give the following extract relating to the subject of this article:—

'If time and space permitted, I should desire, before concluding my letter, to say a few words on the proper meaning and etymology of the Hebrew *קַסְדִּים*, which is universally rendered in the Bible by Chaldæa and the Chaldees. I am not prepared to go the length of Mons. Oppert, who maintains that *Kasdim* is Turanian for 'Mesopotamia' (from *kas* 'two,' and '*dim*' water); but there is no concealing the fact, that there is something eminently unsatisfactory in the forced assimilation of *Kasdim* with Chaldæa. In the first place, the sub-

CHALDÆAN PHILOSOPHY. [PHILOSOPHY.]

CHALDÆANS (כַּשְׁדִּיִּים). The origin and condition of the people to whom this name is assigned in Scripture have been subjects of dispute among the learned. Probably, however, they were the same people that are described in Greek writers as having originally been an uncultivated tribe of mountaineers, placed on the Carduchian mountains, in the neighbourhood of Armenia, whom Xenophon describes as brave and fond of freedom (*Cyrop.* i. 31; *Anab.* iv. 3, 4, 7, 8, 25). In *Hab.* i. 6-10 the Chaldæans are spoken of in corresponding terms: 'Lo, I raise up the Chaldæans, that bitter and hasty nation, which shall march through the breadth of the land to possess the dwelling-places that are not theirs; they are terrible and dreadful; their horses are swifter than leopards and more fierce than evening wolves; their horsemen shall spread themselves; they shall fly as the eagle that hasteth to eat.' They are also mentioned in *Job* i. 17: 'Chaldæans fell upon the camels (of Job) and carried them away.' These passages shew not only their warlike and predatory habits, but, especially that in *Job*, the early period in history at which they were known.

As in all periods of history hardy and brave tribes of mountaineers have come down into the plains and conquered their comparatively civilized and effeminate inhabitants, so these Armenian Chaldæans appear to have descended on Babylon, made themselves masters of the city and the government, and eventually founded a dominion, to which they gave their name, as well as to the inhabitants of the city and the country tributary to

stitution of the Hebrew sibilant for the Assyrian liquid is without precedent, although the reverse change is sufficiently common. In the second place, the Hebrew term is sometimes used as a feminine singular as well as a masculine plural. Again, the term *Kaldai* does not seem, from the inscriptions, to have been known in the olden time, the name never once occurring among the many ethnic titles of the early kings of Babylonia. The *Kaldai*, indeed, of the inscriptions are first met with as a tribe on the Lower Euphrates in the annals of the son of Sardanapalus, about B.C. 850; and there is no trace on the monuments of their ever having occupied, either geographically or politically, the position which is assigned to the *Kasdim* in the historical and prophetic books of Scripture. On the other hand, there is the consistent voice of all antiquity, and the authority of present usage, for the identity of the *Kasdim* with the *Kaldai* or Chaldæans; and I am entirely without the means of explaining how, if the names were originally distinct, and applied to different people, such a complete amalgamation should have taken place.

'I can only regard this question of the *Kasdim* as one of those puzzles which, together with the etymology and application of *Shinar*, *Nimrud*, and some other early biblical names, have not yet yielded to research; but which must, it would seem, in due time be solved, as our acquaintance with the darker points of Babylonian archæology becomes, through the bilingual tablets, more extended and certain.'

it, infusing at the same time young blood and fresh vigour into all the veins and members of the social frame. What length of time the changes herein implied may have taken cannot now be ascertained. Winer (*Realwörterbuch*, s. v. *Chaldæer*) conjectures that the Chaldæans were at first subjects of the Assyrian monarchy, which, from 2 Kings xvii. 24, etc., also 2 Chron. xxxiii. 11, appears to have been established in Babylon; and that, while subjects of that empire, they became civilized, gained for themselves the government, and founded the Chaldee-Babylonian kingdom or dynasty.

Authentic history affords no information as to the time when the Chaldæan immigration took place. It is possible that, at a very early period, a tribe of Chaldees wandered into Babylon and gave to the land the seven Chaldee kings mentioned by Berosus; but it is possible also that the Chaldæans entered in a mass into the Babylonian territory for the first time not long before the era of Nabonassar (B.C. 747), which Michaelis and others have thought the words of Isaiah render probable, ch. xxiii. 13—'Behold the land of the Chaldæans, this people was not, till the Assyrian founded it for them that dwell in the wilderness.' The circumstance, moreover, that a Shemitic dialect is found to have prevailed in Babylon, corroborates the idea that the Chaldæans were immigrants, since the northern Chaldæans must, from their position, have spoken a different form of speech.

The kingdom of the Chaldees is found among the four 'thrones' spoken of by Daniel (vii. 3, *sg.*), and is set forth under the symbol of a lion having eagles' wings. The government was despotic, and the will of the monarch, who bore the title of 'King of Kings' (Dan. ii. 37), was supreme law, as may be seen in Dan. iii. 12; vi. 24. The kings lived inaccessible to their subjects in a well-guarded palace, denominated, as with the ancient Persians (Xenoph. *Cyrop.* 1), 'the gate of the king' (Dan. ii. 49, compared with Esther ii. 19, 21, and iii. 2). The number of court and state servants was not small; in Dan. vi. 1, Darius is said to have set over the whole kingdom no fewer than 'an hundred and twenty princes.' The chief officers appear to have been a sort of 'mayor of the palace,' or prime minister to which high office Daniel was appointed (Dan. ii. 49), 'a master of the eunuchs' (Dan. i. 3), 'a captain of the king's guard' (Dan. ii. 14), and 'a master of the magicians,' or president of the Magi (Dan. iv. 9). Distinct probably from the foregoing was the class termed (Dan. iii. 24, 27) 'the king's counselors,' who seem to have formed a kind of 'privy council,' or even 'cabinet,' for advising the monarch and governing the kingdom. The entire empire was divided into several provinces (Dan. ii. 48; iii. 1), presided over by officers of various ranks. An enumeration of several kinds may be found in Dan. iii. 2, 3. The head officers, who united in themselves the highest civil and military power, were denominated אֲחֻזְרַפְנִי, 'presidents' (Dan. vi. 2); those who presided over single provinces or districts bore the title of פְּחוּתֵי (Hagg. i. 1; ii. 2), in the Chaldee dialect פְּחוּתַי, 'governors.' The administration of criminal justice was rigorous and cruel, will being substituted for law, and human life and human suffering being totally disregarded. Nebuchadnezzar (Dan. ii. 5) declares to the college

of the Magi—'If ye will not make known unto me the dream with the interpretation thereof, ye shall be cut in pieces, and your houses shall be made a dunghill' (see also Dan. iii. 19; vi. 8; Jer. xxix. 22). The religion of the Chaldees was, as with the ancient Arabians and Syrians, the worship of the heavenly bodies; the planets Jupiter, Mercury, and Venus were honoured as Bel, Nebo, and Meni, besides Saturn and Mars (Gesenius *On Isaiah*). Astrology was naturally connected with this worship of the stars, and the astronomical observations which have made the Chaldean name famous were thereby guided and advanced. The language spoken in Babylon was what is designated Chaldee, which is Shemitic in its origin, belonging to the Aramaic branch. The immigrating Chaldeans spoke probably a quite different tongue, which the geographical position of their native country shews to have belonged to the Medo-Persian stock.

The term Chaldeans represents also a branch of the order of Babylonian Magi (Hesych. Χαλδαίου γένος Μάγων). In Dan. ii. 2 they appear among 'the magicians, and the astrologers, and the sorcerers,' who were 'called for to shew the king his dream.' In the 10th verse of the same chapter they are represented as speaking in the name of the rest; or otherwise theirs was a general designation which comprised the entire class (Dan. iv. 7; v. 7); a general description of these different orders is found in Dan. v. 8, as 'the king's wise men.' In the Greek and Roman writers the term *Chaldeans* describes the whole order of the learned men of Babylon (Strabo. xv. p. 508; Diod. Sic. ii. 29; Cic. *De Div.* i. 1. 2). In later periods the name Chaldeans seems, without reference to place of birth, to have been applied in the western parts of the world to persons who lived by imposing on the credulity of others, going from place to place professing to interpret dreams and disclose the future. In this sense the word is obviously used by Josephus (*De Bell. Jud.* ii. 7. 3), when 'diviners and some Chaldeans' are said to have been called in by Archelaus to expound what was 'portended' by a dream he had; and by Ephraem Syrus in his controversial works, where a Chaldee is an astrologer and fortune-teller. CHALDEE LANGUAGE. [ARAMAIC LANGUAGE.]

CHALDEE VERSION. [TARGUM.]

CHAMELEON appears to be a satisfactory translation of תִּנְשֵׁמֶת, *tinshemeth*, which denotes a small species of lizard, celebrated for the faculty it has of changing the colour of its skin. This property, however, has no reference to the substance it may be placed on, as generally asserted, but is solely derived from the bulk of its respiratory organs acting upon a transparent skin, and on the blood of the animal. The chameleons form a small genus of Saurians, easily distinguished by the shagreened character of the skin, and the five toes on the feet, divided differently from those of most other animals, there being, if the expression may be allowed, two thumbs opposed to three fingers. Their eyes are telescopic, move separately, and can

be directed backwards or forwards. Chameleons are slow, inoffensive, and capable of considerable abstinence from food; which consists solely of flies, caught by the rapid protrusion of a long and viscid tongue. Among themselves they are irascible, and are then liable to change their colours rapidly: dark yellow or grey is predominant when they are in a quiescent state, but, while the emotions are in activity, it passes into green, purple,

175. Chameleon Africanus.

and even ashy black. The species found in Palestine and all Northern Africa, is the common *Chameleon Africanus*, and is that referred to in Lev. xi. 30, where unclean animals are mentioned.—C. H. S.

CHAMOIS. [ZEMER.]

CHAMOR (חֲמֹר or חֲמֹר). The domesticated ass used for carrying burdens (Gen. xlii. 26; xli. 14), for riding (Gen. xxii. 3; Josh. xv. 18, etc.), and for the plough (Deut. xxii. 10; Is. xxx. 24). It was the animal used for riding in times of peace, as opposed to the horse, which was for war, and to ride on it indicated that the party came on a peaceful errand (Zech. ix. 9). The common working ass of Western Asia is described as 'an animal of small stature, frequently represented on Egyptian monuments with paniers on the back, usually of a reddish colour, and the same as the Turkish *Hymar*.' The ass was held in esteem among the

176. Domestic Ass of Western Asia.

Jews on account of its serviceable qualities. To be 'buried with the burial of an ass' (Jer. xxii. 19) is not an expression of contempt, but rather a threatening of punishment; instead of being buried with his fathers, the party so threatened should be

cast out to be food for birds and beasts of prey. Though the ass was among the animals forbidden by the law of Moses to be used for food, it would appear that in cases of great extremity this prohibition was relaxed (2 Kings vi. 25); among some other nations it seems to have been an article of food even when there was no dearth (comp. Apuleius, *Metam.* vii., p. 158, ed. Bipont.; Galen *Facult. Aliment.* l. 2, p. 486, ed. Kühn; Plin., *H. N.* viii. 68). The charge of worshipping the ass brought by the heathen against the Jews (Joseph., *cont. Apion.* ii. 7; Plutarch, *Sympos.* iv. 5; Tacit., *Hist.* v. 4) must be set down to mere calumny.—W. L. A.

CHANAAN. Canaan is thus spelt in the Apocryphal books and the N. T.

CHANAMEL (חַנַּמֶּל). This *ἄραξ λεγόμενον* occurs Ps. lxxviii. 47, and there the Targum explains it as meaning *hoar-frost* (כְּרוֹבָה), and with this the Sept. (τῆ πάχυν), Vulg. (*pruina*), Syriac, and Arabic agree. This opinion is adopted also by Kimchi, Bochart, etc. Others, among whom is Ibn Esra, prefer *hailstones* as the reading of חַנַּמֶּל. Some of the Jewish interpreters, cited by Ibn Esra, maintain that the word denotes a species of locust; and this Lee (*Lex. in voc.*) attempts to defend by philological arguments from the Arabic. These, however, are very inconclusive, and this interpretation has all the appearance of being adopted for the sake of bringing the passage into harmony with Exod. x. 5, 15. The A. V. has followed the ancient versions, by rendering 'frost,' and this seems the best course. There is no ground whatever for Michaelis's opinion that the word means *ants*; indeed it is absurd to suppose the ant could be introduced as a destroyer of sycamores.—W. L. A.

CHANDLER, SAMUEL, D.D. (1693-1766), a learned nonconformist divine, born at Hungerford, and educated for the ministry at Gloucester and Tewkesbury by the Rev. Samuel Jones. Butler, the author of the *Analogy*, and Secker, afterwards Archbishop of Canterbury, were amongst his fellow students. In 1716 he was chosen to be pastor of the Presbyterian congregation, Peckham. In 1726 he became minister of another congregation of the same denomination in Old Jewry, London, and continued to sustain this office until his death. His first biblical work was an edition with notes of the recently discovered annotations of Cassiodorus, *Cassiodori Senatoris Complexiones in Epistolas, Acta Apostolorum, et Apocalypsin, e vetustissimis Canonico-rum Veronenisum Membris nuper erutae*. Editio altera ad Florentinam fideliter expressa, opera et cura Samuelis Chandleri 1722, 12mo. His other biblical works are—*A Vindication of the Christian Religion*, in two parts, 1725, 8vo, 2d ed. 1728,—the first part is on the nature and use of miracles, the second part is a reply to Collins; *A Vindication of the Antiquity and Authority of Daniel's Prophecies, and their application to Jesus Christ*, 1728, 8vo; *A Paraphrase and Critical Commentary on the Prophecy of Joel*, 1735, 4to; *A Vindication of the History of the Old Testament*, 1740, 8vo; *A Defence of the Prime Ministry and Character of Joseph*, 1742, 8vo. The last two works were in answer to Thomas Morgan, M.D., author of *The Moral Philosopher. The Witnesses*

of the Resurrection of Jesus Christ re-examined, and their testimony proved entirely consistent, 1744, 8vo; *A Critical History of the Life of David*, 1766, 2 vols. 8vo—this is one of the most valuable of Dr. Chandler's works, it discusses with much acuteness the facts of the history of David, and contains a detailed exegesis of those psalms which refer to him; it was re-printed at Oxford in 1853 in one vol. *A Paraphrase and Notes on Galatians, Ephesians, and Thessalonians*, 1777, 4to. This was a posthumous work, edited by Nath. White. The remaining works of Dr. Chandler are—*Reflections on the Conduct of Modern Deists*, 1727, 8vo; *Plain Reasons for being a Christian*, 1730, 8vo; *A Translation of the History of the Inquisition, by Philip Limborch, with an Introduction concerning the Rise and Progress of Persecution*, 1731, 2 vols. 4to; *A History of Persecution*, in four parts, (i.) *Among the Heathen*; (ii.) *Under the Christian Emperors*; (iii.) *Under the Papacy and Inquisition*; (iv.) *Among Protestants*, 1736, 8vo; *A Short and Plain Catechism, being an explanation of the Creed, Ten Commandments, and Lord's Prayer*, 1742, 12mo; *A Review of* (the work entitled) *the History of the Man after God's own Heart*, 1762, 8vo. Four volumes of sermons were published in 1768, under the editorship of Dr. Amory. For a complete list of separate Sermons and Pamphlets, see *Protestant Dissenter's Mag.*, vol. i. 1794, p. 260-264.—S. N.

CHANNAEL, R., the son of the celebrated R. Chusiel, the president of the Jewish community at Kairnan (afterwards Mahadia), flourished about 950-980 A.D. He wrote glosses on the Talmud, on the jurisprudence of the Bible and Talmud, and composed liturgies. He also wrote a commentary on the Pentateuch, which, owing to its antiquity, is of peculiar interest to the biblical student, inasmuch as it shews the ancient mode of interpretation. A few specimens will shew how expositors tried to grapple with difficult passages. Upon Gen. xxxi. 19, 'and Rachel had stolen the images that were her father's,' he remarks, 'she stole them to convince her father, that a god which cannot protect himself from being stolen is of no use, just as it is said, 'if he (Baal) be a god, let him plead for himself because one hath cast down his altar' (Judg. vi. 31); and again, 'wilt thou yet say before him that slayeth thee, I am God? but thou shalt be a man and no God in the hand of him that slayeth thee' (Ezek. xxviii. 9).' Bishop Patrick gives the same explanation of this passage. Upon Exod. iv. 10, 'I am slow of speech and of a slow tongue,' he remarks 'the statement of the two things, viz. כבד פה וכבד לשון, shews that our teacher Moses could neither pronounce distinctly the dentals זשצ'ס, this being indicated by the first assertion פה כבד, nor the Linguals לנת לשון; and hence the second assertion כבד לשון.' So also Ibn Esra, who has evidently taken it from Channael. Upon Exod. iii. 22, 'but every woman shall,' etc., he remarks 'profane be the thought that God, blessed be his name, authorised his people to deceive the Egyptians to borrow from them vessels of gold and vessels of silver, and not return them.

The word שאל means to ask, to request a present, thus it is used in Judg. viii. 24, 'and Gideon said unto them, I would desire a request of you שאל

(מוכס שאלה), that you would give me,' etc. The learned Rapaport has collected the surviving fragments of this commentary, and published them with explanatory notes, and a biography of the author, under the title התורה מפורש ר"ה על התורה, in the Hebrew Annual called Bicure Ha. itim, vol. xii. Vienna, 1831.—C. D. G.

CHANUCA. [DEDICATION, FEAST OF.]

CHAOS. [CREATION.]

CHAPHAR-PEROTH (הַפְּרָרוֹת). This word, the pl. of הַפְּרָרוֹת, occurs Is. ii. 20, as the designation of some object to which those who have been recovered from idolatry shall cast their idols. In the A. V. it is translated *moles*, a rendering which follows that of the Vulg. (*talpa*), and is adopted by many interpreters, among whom are Ibn Esra, Bochart, Ewald, and Umbreit. Others think it means an animal of the *mouse* or *rat* species, comparing the Ar. فَار, فَرَاد, from فَار, to dig, to burrow (Gesén., Maurer, Knobel). Either of these will suit the etymology of the word, which is derived from the *pealal* form of הָפַר, to dig = the *much digger*. It has been objected to the opinion that it denotes the mole, that this animal is not found in houses. But the passage does not oblige us to understand it of an animal found only in houses; on the contrary, 'the consideration that persons fleeing for safety not only throw away what they may have accounted valuable before abandoning their houses, but also in their flight through the open country, renders it more likely, that precisely moles are meant' (Henderson, *in loc.*) The same writer adds: 'Since the verb הָפַר signifies to dig, its geminated derivative must denote some animal particularly noted for perforation, than [among] which none rivals the mole.' The opinion of Kimchi, which is followed by Hitzig, that the word signifies *sparrows*, has nothing but a dubious etymology (from Ar. فَرَفْرَف) to support it, and is out of keeping with the whole representation of the passage.—W. L. A.

CHAPTER, not the same word, though synonymous, with the architectural term *capital*, the *head* or uppermost part of a column or pilaster. In the O. T. there occur three different Hebrew words to express the English noun 'chapter.' 1. The first and most frequent is כְּתָרֶת, which occurs (1 Kings vii., 2 Kings xxv., 2 Chron. iv., and Jer. lii.) no less than twenty-three times (sing. and plur.), but always in connection with the building or the destruction of Solomon's temple. The word is derived from כָּתַר, to 'inclose round' (Judges xx. 23), *Piel*; and 'compass about' (Ps. cxlii. 8), *Hiphil*; and signifies 'crown' (i. q. כְּתָר), then 'the ornament which surrounds the top of a pilaster.' [Sept. ἐπιθέματα, plur.; Vulg. capitella.] The prevalent idea of the Hebrew term is the *roundness* of the forms which characterised the capitals of the Egyptian and Assyrian columns (Fürst, *Hebr. Wört.* 643). The כְּתָרֶת consisted of two portions, the crown or ledge (in which sense it is applied to the laver, 1 Kings vii. 31), and the 'pommel' or turban-shaped bowl beneath (בִּקְלָה). According to R. Levi Ben Gershom, this chapter

rather resembled a pair of crowns or caps, so joined as to form an oval figure of five cubits high, bulging out all around beyond the breadth of the column which it surmounted, not unlike, as we may suppose, the truncated lotus-bud capitals of the grand pillars of the Memnonium, Thebes (See Frith's *Egypt and Palestine Photographed*, vol. i. pl. 35). Dr. Lightfoot, who adopts Gershom's view (*Descriptio Templi*, xiii. 2, 3), goes on to reconcile the discrepancy between 1 Kings vii. 16, which gives the height of the chapters as five cubits each, and 2 Kings xxv. 17, which states it to be only three cubits. These three cubits contained (says Lightfoot, after the Jewish commentators) the sculpture or 'wreath-work' which is mentioned in the same verse; whereas the other passage included two belts or necks of plain space of two more cubits below the ornamental portion. The chapters were festooned with 'nets of checker-work and wreaths of chain work,' with sculptured 'pomegranates,' forming an ornate group similar to that which still adorns the columns of the beautiful temple ruins of Wady Kardassy in Nubia (Frith, vol. ii. pl. 4). 1 Kings vii. 19 is very obscure. What is the meaning of the 'lily-work in the porch?' Lightfoot (*ut antea*) translates the verse thus: 'The chapters upon the top of the pillars possessed lily-work of four cubits over the porch,' and supposes that the lily-work surrounded the column *under* and *not around* the chapter; the lily-leaf not enveloping the chapter, which had its ornaments already, but curving laterally over the space of the porch, and occupying four cubits of the column below the chapter. 2. The second Hebrew word translated 'chapter' in A. V. is צַפַּת, which occurs only in 2 Chron. iii. 15. (The

Sept. and the *Vulgate* combine צַפַּת and רֵאשִׁי in this passage, and render the united words by τὰς κεφαλὰς and capita). It is derived from צָפַה, to contract, draw together; *Piel*, to overlay (with metal), as in 1 Kings vi. 21, and many other places; from this notion comes (according to Meier, *Hebr. Würzwbuch.*, 160) the sense of arrangement and ornamental decoration; very suitable, therefore, is the derivative צַפַּת to express the decorated part of a pillar. 3. The other Hebrew noun for 'chapter' is רֵאשִׁי, 'the head' or 'top,' as it is so often rendered. (See *e. g.*, Numb. xxxii. 14). This word, which the Sept. renders κεφαλῶδες, and the Vulg. capita, occurs in Exodus xxxvi. 38; xxxviii. 17, 19, 28, in the description of the Tabernacle, and very suitably there, inasmuch as it does not (like the other nouns) imply ornament, but simply the highest part or apex of a shaft; in this sense, it is directly contrasted with כְּתָרֶת, in 1 Kings vii. 16. 'He made two chapters, כְּתָרֶת, of molten brass to set upon the tops, רֵאשִׁי, of the pillars. A vast amount of learned information, from ancient and modern sources, is accumulated on the subject of this art. in Meinhard Plesken's *Dissertatio Philologica de Columnis Aeneis*, sec. viii.—P. H.

CHAPPELOW, LEONARD, was born in 1683, and died in 1768. He was educated at St. John's College, Cambridge, of which he became a fellow in 1717. In 1720 he succeeded Ockley as Arabic professor, and soon after he was presented to the livings of Great and Little Hornead, in Hertfordshire. In 1727 he published Spencer's

famous work, *De legibus Hebræorum ritualibus*, with additions and corrections left by the author, 2 vols. fol. Other works of his are *Elementa Ling. Arab.*, 1730; *A Commentary on the Book of Job, with the Hebrew text and a translation*, etc., 2 vols. 4to, 1752; an edition of the Arabic poem, entitled *Tograi*, with Pococke's Latin translation and notes, and an English translation, with additional notes, by the editor; *Six Assemblies or Ingenious Conversations of learned men among the Arabians*, etc., formerly published by Schultens in Arabic and Latin, with large notes and observations, etc., 8vo, 1767. Chappelow was a good Oriental scholar, and his notes on these Arabic works are valuable. In his Commentary on Job, he follows in the wake of Schultens, to whose school he belonged, and whose tendency to attach undue importance to the Arabic as an auxiliary to Hebrew philology, he all but surpassed. He cannot be said to have added much to our means of interpreting the book of Job, but his example and his publications did much to advance Oriental literature in England.—W. L. A.

CHARGOL (חרגל; Sept. Ὀφιομάχης; Vulg. *Ophiomachus*; A. V. *Beetle*; found only in Lev. xi. 22). This word cannot mean the *beetle*. No species of scarabæus was ever used as food by the Jews, or perhaps any other nation. Nor does any known species answer to the generic description given in the preceding verse: 'This ye may eat of every winged creeper which goeth upon four (feet); that which hath joints at the upper part of its hind legs, to leap with them upon the earth' (comp. Niebuhr, *Descrip. de l'Arabie*, Copenhagen, 1773, p. 33). Hence it is plain that the chargol is some winged creeper, which has at least four feet, which leaps with its two hind jointed legs, and which we might expect, from the permission, to find actually used as food. This description agrees exactly with the *locust-tribe* of insects, which are well-known to have been eaten by the common people in the East from the earliest times to the present day. This conclusion is also favoured by the derivation of the word, which comes from חרגל, to

shake, and רגל, the foot, like the English grasshopper, and French sauterelle. The Arabic

حرجل is derived from a word signifying a troop or swarm, and is explained by Golius as a *species of locusts without wings*. It seems, indeed, to be so generally agreed among the learned that chargol denotes the locust, that the matter of dispute is rather what particular *species* of locust is intended, or whether the word describes any one of those several *states* through which the locust passes, in each of which it greatly resembles the perfect insect, the only difference being, that in the larva state it is entirely *destitute of wings and wing-cases*, and that in the pupa state it possesses only the rudiments of those members gathered up so as to form four little buttons on the shoulders. Swammerdam observes that the want of attention to these particulars, in former writers, had led to a very unnecessary multiplication of names, Aldrovand, Johnson, Mouffet, and others, having described the locust in these several states under the names bruchi, atelabi, aselli, etc., supposing them to be so many distinct species. Michaelis, on the other hand, contends that the

several words in this passage, ארבה, חנב, חרגל, denote only the four successive states of locusts, produced by casting off their several skins or coverings.

Their *first* state, he thinks, is before they have cast off their first cuticle; but that, since in this state they are so small as not to be readily used for food, Moses enumerates only their *four* remaining states (*Supplement. ad Lexicon Hebraic.*, pt. iii. pp. 667-669, and 910-912). To this view, however, it is justly objected by Rosenmüller (apud Bochart), that the phrase 'after its kind or species,' added to *each* of these terms, is not consistent with the various *states* merely through which the locust passes. Tychsen maintains that the words refer to four different *species* of locusts, and endeavours to shew that ארבה is the *gryllus gregarius*, Forskali; that סלעם is the *gryllus eversor de asso* apud Roselium;

חרגל, the *gryllus gurgis de asso*, et *gryllus verrucivorus*, Linn.; and that the חנב is the *gryllus coronatus*, Linn. (Tychsen, *Comment. de Locustis Biblicis*, subjoined to Don Ignacio de Asso y del Rio's, *Abhandlung von den Heuschrecken und ihren*, etc., Rostock, 1787-88).

In attempting to ascertain the particular *species* of locust intended by the word 'chargol,' great deference is due to the term adopted by the Septuagint and repeated by Jerome, which is evidently derived from *οφίς* and *μάχη*, and indicates a creature that fights with serpents. Inapplicable as such a description may seem to be to the habits of any known species of locust, it may, nevertheless,

177. *Truxalis nasutus*.

help to identify the species of which we are in search. Now the ancients have certainly referred to the notion of locusts fighting with serpents (Aristot. *Hist. Anim.* ix. 9; Plin. *Hist. Nat.* xi. 35). Although this notion is justly discarded by Cuvier (Grandsagne's edition of Pliny, Parisii, 1828, p. 451, note), yet it may serve to account for the application of the term ὀφιομάχης to a species of locust. For this word instantly suggests a reference to the *ichneumon*, the celebrated destroyer of serpents and other vermin; and it is remarkable that Hesychius, in the second century, applies the word ὀφιομάχος both to the *ichneumon*, and a species of *locust* having no wings. If, then, any species of locust can be adduced whose habits resemble those of the *ichneumon*, may not this resemblance account for the name, *quasi* the *ichneumon* (locust); just as the whole genus of insects called *Ichneumonidae* were so denominated because of the supposed analogy between their services and those of the Egyptian *ichneumon*? and might not this name, given to that species of locust at a very early period, have afterwards originated the erroneous

notion referred to by Aristotle and Pliny? Now, there is one kind of locusts, the genus *truxalis* (fierce or cruel), inhabiting Africa and China, and comprehending many species, which hunts and preys upon insects. It is also called the *truxalis nasutus*, or long-nosed. May not, then, this winged, leaping, insectivorous locust, and its various species, be 'the chargol, after its kind,' and the *ὀφιομάχης* of the Septuagint? or might the name have arisen from the similarity of *shape and colour*, which is striking, between the *truxalis nasutus* and the ichneumon; just as the locust generally is, at this time, called *cavalette* by the Italians, on account of its resemblance in shape to the *horse*? We know that the ancients indulged in tracing the many resemblances of the several parts of locusts to those of other animals (Bochart, *Hieroz.* pt. ii. lib. iv. c. 5, p. 475). It may be observed, that it is no objection to the former and more probable supposition, that a creature which lives upon other insects should be allowed as food to the Jews, contrary to the general principle of the Mosaic law in regard to birds and quadrupeds, this having been unquestionably the case with regard to many species of fishes coming within the regulation of having 'fins and scales,' and known to exist in Palestine at the present time—as the perch, carp, barbel, etc. (Kitto's *Physical History of Palestine*, article FISHES). The fact that the Chargol is never made the means of the divine chastisements (for which purpose a locust preying upon insects *could* scarcely be used), *concur*, at least, with the foregoing speculation*.—J. F. D.

CHARIOT RACES. [GAMES.]

CHARIOTS. The Scriptures employ different words to denote carriages of different sorts, but it is not in every case easy to distinguish the kind of vehicle which these words severally denote. We are now, however, through the discovery of ancient sculptures and paintings, in possession of such information respecting the chariots of Egypt, Assyria, Babylon, and Persia, as gives advantages in the discussion of this subject which were not possessed by earlier writers. The chariots of these nations are, in fact, mentioned in the Scriptures; and by connecting the known with the unknown, we may arrive at more determinate conclusions than have hitherto been attainable.

The first chariots mentioned in Scripture are those of the Egyptians; and by close attention to the various notices which occur respecting them, we may be able to discriminate the different kinds which were in use among that people.

The earliest notice on this head occurs in Gen. xli. 43, where the king of Egypt honours Joseph by commanding that he should ride in the second of the royal chariots. This was doubtless a state-chariot, and the state-chariots of the Egyptians do

not appear to have been different from their war-chariots, the splendid military appointments of which rendered them fit for purposes of royal pomp. This view of the matter is confirmed by our finding that, although the same word (מרכבה, *mercabah*) is again used for chariots of state in Gen. xli. 29; 1 Sam. viii. 11; 2 Sam. xv. 1, it undoubtedly denotes a war-chariot in Exod. xv. 4; Joel ii. 5. In Is. ii. 7, the same word appears to comprehend chariots of every kind which were found in cities. This may be accounted for by the fact that chariots anciently in the East were used almost entirely for purposes of state or of war, being very rarely employed by private persons. We also observe that where private carriages were known, as in Egypt, they were of the same shape as those used in war, and only differed from them by having less complete military accoutrements, although even in these the case for arrows is not wanting. One of the most interesting of the Egyptian paintings represents a person of quality arriving late at an entertainment in his curricule, drawn (like all the Egyptian chariots) by two horses. He

178. Egyptian Curricule.

is attended by a number of running footmen, one of whom hastens forward to knock at the door of the house, another advances to take the reins, a third bears a stool to assist his master in alighting, and most of them carry their sandals in their hands that they may run with the more ease. This conveys a lively illustration of such passages as 1 Sam. viii. 11; 2 Sam. xv. 1. The principal distinction between these private chariots and those actually used in war was, as appears from the monuments, that in the former the party drove himself, whereas in war the chariot, as among the Greeks, often contained a second person to drive it, that the warrior might be at liberty to employ his weapons with the more effect. But this was not always the case; for in the Egyptian monuments we often see even royal personages alone in their chariots, war-riding furiously, with the reins lashed round their waist (No. 182). So it appears that Jehu (who certainly rode in a war-chariot) drove himself; for his peculiar style of driving was recognised at a considerable distance (2 Kings ix. 20).

There has been some speculation as to any difference of meaning between the preceding word *mercabah* (מרכבה), and *mercab* (מרכב). In 1 Kings v. 6 (A. V. iv. 26), the latter obviously means chariots, taken collectively. But in Lev. xv. 9 (rendered in the A. V. 'saddle') and Cant. iii. 10 (rendered 'the bottom') it has been understood by some to denote the seat of a chariot. To this view there is the fatal objection that ancient chariots had no seats. It appears to denote the seat of a litter (the only vehicle that had a seat), and its name *mercab* may have been derived from the general

* Since the above was written it has been found that Becmana, reasoning from the Sept. and Vulg., arrived at a similar conclusion; viz., that some insect of the spheg or ichneumon kind was meant (apud Bochart, a Rosenmüller, vol. iii. p. 264). The genus of *locusts* called *truxalis* answers the description. It is some excuse for the English rendering 'beetle' in this place, that Pliny classes one species of *gryllus*, the house-cricket, *G. domesticus*, under the *scarabæi* (*Hist. Nat.* xi. 8).

resemblance of the body of a litter (distinguished from the canopy, etc.) both in form and use, to that of a chariot.

Another word, רֶעֶב *receb*, from the same root, appears to signify a carriage of any kind, and is especially used with reference to large bodies of carriages, and hence most generally of war-chariots; for chariots were anciently seldom seen together in large numbers except when employed in war. It is applied indifferently to the war-chariots of any nation, as to those of the Egyptians (Exod. xiv. 9), the Canaanites (Josh. xvii. 18; Judg. i. 19; iv. 3), the Hebrews (2 Kings ix. 21, 24; x. 16), the Syrians (2 Kings v. 9), the Persians (Is. xxi. 7, 9). By a comparison of these references with those passages in which *mercabah* occurs, we find the two words applied with so little distinction to all sorts of carriages as to suggest that they were used indifferently and interchangeably, just as we should say either 'carriage' or 'coach'—neither of which is specific, and both of which differ more from each other than the Hebrew *receb* and *mercabah*—to denote the same vehicle. Indeed there are passages in which both words are manifestly applied to the same identical vehicle, as in 2 Kings v. 9, 21, and 1 Kings xxii. 35, 38; where no reader would suspect a change of vehicles, which some have endeavoured to establish in order to make out a difference between the *receb* and *mercabah*. Mr. Charles Taylor, in one of the fragments appended to his edition of Calmet, indulges in much ingenious speculation on this subject, and labours to make out that while the *mercabah* denoted a chariot of state drawn by four horses, the *receb* was a humbler chariot drawn by two horses, and sometimes a litter carried by two horses. To this it may be sufficient to answer that chariots of state were *not* drawn by four horses in the East; that no instance of such a practice can be produced; and that the best Hebrew scholars of the Continent deny that it can be proved that *receb* anywhere denotes a litter, for which indeed there is a different word. [LITTER.]

There is another word which is sometimes rendered by chariot, viz. עֲגָלָה *'agalah*; but as we have elsewhere [CART] shewn that it denotes a plaustrum, cart, or waggon, drawn by oxen, we need not here return to the subject. It is indeed alleged that in Ps. xlvi. 9 the word manifestly imports a chariot of war. The plural *'agaloth*, is there used, and the supposition that it means a chariot of war proceeds on the assumption that only chariots were used in war. But this is not the fact, for in the scenes of Egyptian warfare we find carts, drawn by oxen, brought into the field by certain nomade nations, and in which they endeavour to escape from their pursuers.

In the prophecy of Nahum, who was of the first captivity, and resident (if not born) at Elkosh in Assyria, there is much allusion to chariots, suggested doubtless by their frequency before his eyes in the streets of Nineveh, and throughout the Assyrian empire. In fact, when prophesying the downfall of Nineveh, he gives a particular and animated description of their action in the streets of the great city:—

The shield of his mighties is made red :
The valiant men are clothed in scarlet :
The chariots are as the fire of lamps, in the day
when he prepareth them.

And the horsemen spread fear
In the streets, the chariots madden :
They run to and fro in the broad places :
Their appearance is as lamps, they run
as lightning. Nahum ii. 3, 4.

These allusions to the horsemen and chariots of Nineveh give much interest to one of the very recent discoveries of M. Botta, on the site of that very ancient city. In excavating a certain mass of building, which appears to have formed part of some much more extensive pile, he discovered various inscriptions and sculptures, which seem to shew that the work was earlier than the age of Cyrus, and may be referred to the times of the Assyrian empire. In one place is a bas-relief, representing a horseman at full gallop. Another part of the same wall represents two horsemen galloping side by side, with another following at a short distance. Further on, two armed horsemen are visible, one following the other at full gallop. The movement of the horses is very animated; and both men and horses shew traces of colour. In another place are two horsemen walking their horses side by side. The only horseman visible has a sword; a quiver and bow are over his shoulder, and his legs are clothed in mail. These figures are very interesting, not only in connection with the prophecy which so distinctly mentions the 'horsemen' of Nineveh, but because they are, in fact, the only mounted figures which occur among the more ancient monuments of Asia. None have been found at Babylon, none at Persepolis; and among the numerous sculptures and paintings of Egypt, only one solitary unarmed figure, who seems to have crossed the back of the animal by accident. But the matter of greatest interest is the discovery of a curious bas-relief, representing a chariot drawn by two horses, and containing three persons. The principal of these appears to be a bearded man, lifting his right arm, and holding in his left hand a bow. He wears a tiara painted red ('the valiant men are clothed in scarlet'); behind him is a beardless slave, carrying a fringed parasol, and at his left is the charioteer holding the reins and the whip. The principal person and the charioteer wear ear-rings. The chariot-wheels have eight spokes; the chariot itself has been covered with carving, now impossible to be made out. The most noticeable thing is a bench, which seems to be attached to the chariot by a double belt, and which M. Botta supposes to have been a metal rod, intended to secure the solidity of the whole. The horses are admirably drawn, and afford indications of pure Arabian blood. Their harness is very rich, and still bears evident traces of colouring, among which blue and red only can be distinguished, the rest having turned black. Behind the chariot rides a cavalier, bearing a lance, with a sword at his belt, and a quiver over his shoulder (*Athenæum*, July 29, 1843).

From this description it would appear that the Assyrian chariots were considerably different from those of the ancient Egyptians, and even from those of the Persians, with which we are acquainted through the Persepolitan sculpture (now in the British Museum), here copied (No. 179), and which are of a much heavier build than those of Egypt, as perhaps the more mountainous character of the country required. The chariots of

Assyria would seem in some respects to have occupied a middle place between the other two. Among other points we observe that the spokes of

179. Persian Chariot.

the wheels are never more than six in the Egyptian chariot, while in the Assyrian there are eight, and in the Persian eleven. Not very different from the Persian chariot is one represented on a coin found at Babylon (No. 180); but the spokes of the

180. Babylonian Chariot.

wheels are eight, as in the Assyrian chariot. This coin has given occasion to much unsound speculation in the attempt to connect it with the history of Daniel.

CHARIOTS OF WAR. The Egyptians used horses in the equipment of an armed force before Jacob and his sons had settled in Goshen; they had chariots of war, and mounted asses and mules, and therefore could not be ignorant of the art of riding; but for ages after that period Arab nations rode on the bare back, and guided the animals with a wand. Others, and probably the shepherd invaders, noosed a single rope in a slip-knot, round the lower jaw, forming an imperfect bridle, with only one rein; a practice still in vogue among the Bedouins. Thus cavalry were but little formidable compared with chariots, until a complete command over the horse was obtained by the discovery of a true bridle. This seems to have been first introduced by chariot-drivers, and there are figures of well-constructed harness, reins, and mouth-pieces, in very early Egyptian monuments, representing both native and foreign chariots of war. These differed little from each other, both consisting of a light pole, suspended between and on the withers of a pair of horses, the after end resting on a light axle-tree, with two low wheels. Upon the axle stood a light frame, open behind and floored for the warrior and his charioteer, who both stood within: on the sides of the frame hung the war-bow, in its case; a large quiver with arrows and darts had commonly a particular sheath. In Persia, the chariots elevated upon wheels of con-

siderable diameter, had four horses abreast; and, in early ages, there were occasionally hooks or scythes attached to the axles. In fighting from chariots great dexterity was shewn by the warrior, not only in handling his weapons, but also in stepping out upon the pole to the horses' shoulders, in order the better to attain his enemies, and the charioteer was an important person, sometimes equal in rank to the warrior himself. Both the

181. Egyptian War Chariot.

kingdoms of Judah and Israel had war-chariots, and, from the case of king Josiah at the battle of Megiddo, it is clear they had also travelling-vehicles, for being wounded he quitted his fighting-chariot, and in a second, evidently more commodious, he was brought to Jerusalem (2 Chron. xxxv. 24). Chariots of war continued to be used in Syria in the time of the Maccabees (2 Maccab. xiii. 2), and in Britain when Cæsar invaded the

182. Egyptian War Chariot.

island; but it would lead us beyond our proper limits if we were to expatiate on the Biga and Quadriga, the Essedum, Rheda, and Covinus of the ancients. The subject belongs more properly to a dictionary of classical antiquities.—C. H. S.

CHARISMATA. [SPIRITUAL GIFTS.]

CHARMING OF SERPENTS. [NACHASH.]

CHARTUMMIM (חַרְטֻמִּים; Sept. *ἐπαιδοί, φαρμακοί*). This is the title rendered 'magicians' in our version, applied to the 'wise men' of Egypt (Gen. xli. 8, 24; Exod. vii. 11; viii. 7, 18, 19; ix. 11), and of Babylon (Dan. i. 20; ii. 2). The word 'magicians' is not in either case properly applied, as the magi belonged to Persia, rather than to Babylon or Egypt; and should be altogether avoided in such application, seeing that it has acquired a sense different from that which it once bore. The Hebrew word properly denotes 'wise men,' as they called themselves, and were called by others; but, as we should call them, 'men eminent in learning and science,' their exclusive possession of which in their several countries enabled them occasionally to produce effects which were accounted supernatural by the people. Pythagoras, who was acquainted with Egypt and the East, and who was not unaware of the unfathomable depths of ignorance which lie under the highest attainable conditions of human knowledge, thought the modest title of philosopher (*φιλόσοφος*), 'lover of wisdom,' more becoming, and accordingly he brought it into use; but that of 'wise men' still retained its hold in the East.

Gesenius concludes that the Egyptian *Chartummim* were those of the Egyptian priests who had charge of the sacred records. His etymological reasons may be seen in his Thesaurus. There can be little doubt that they belonged to some branch of the priesthood, seeing that the more recondite departments of learning and science were cultivated exclusively in that powerful caste.

CHARUL (חַרְל) occurs in three places in Scripture, and in them all is translated 'nettles' in the A. V. (Prov. xxiv. 30, 31; Job xxx. 7; Zeph. ii. 9). Considerable difficulty has been experienced in determining the plant which is alluded to in the above passages, which, as Celsius says, 'sacris scriptoribus parcius memorata, et notis paucissimis descripta, ac distincta.' The majority of translators and commentators have thought that some thorny or prickly plant, or a nettle, is intended by the charul, on account of the other plants which are mentioned along with it. Hence brambles, the wild plum, and thistles, have been severally selected; but nettles have had the greatest number of supporters. Celsius however prefers the *Zizyphus Paliurus*, or the plant which has been called Christ's thorn, as that best suited to the several contexts.

Of all these determinations, however, it must be observed that they amount to nothing more than conjectures, because, as Rosenmüller says, the cognate languages have not this word, and also because 'the Greek translators of Alexandria in the first and last of these three places entirely deviate from our present Hebrew text; but in the passage of Job they translate *charul* by *wild shrubs*.' To us it does not appear, from the import of the above passages, that a thorny plant is necessarily meant by the term under review. All that is implied is that neglected fields, that is, fields in cultivation which are neglected, will become covered with *weeds*, and that these should be of a kind such as idlers, as in the passage of Job, might take shelter under, or lie down among. This passage, in-

deed, seems to preclude any thorny plant or nettle, as no one would voluntarily resort to such a situation; and one of the commentators, as quoted by Celsius (ii. p. 168) appears to have been of the same opinion: 'Bar Bahlul apud Castellum pisa vel cicerculas explicat: ' that is, he considers *pease*, or rather vetches, to be intended. Moreover, it is worthy of remark, that there is a word in a cognate language, the Arabic, which is not very dissimilar from *charul* or *kharul*, and which is applied to plants apparently quite suitable to all the above

passages. The word *خردل* *khardul* is applied in all old Arabic works, as well as at the present day, to different species of mustard, and also to plants which are employed for the same purposes as mustard (as we hope to be able to shew in the article SINAPI), and it is not very unlike the *kharul* or *charul* of Scripture. In fact, they do not differ

183. *Sinapis Orientalis*.

more than many words which are considered to have been originally the same. Some of the wild kinds of mustard are well known to spring up in corn fields, and to be the most troublesome of all the weeds with which the husbandman has to deal: one of these, indeed, *sinapis arvensis*, is well known to be, and is specially mentioned by a modern botanical author, Sir James Smith, as abundant in corn-fields, where it is a very troublesome weed, and also in waste ground, when newly disturbed. So also, as old a writer as Gerarde, in his *Herbal*, says, 'There be three sorts of wild turneps; one, our common rape, which beareth the seed whereof is made rape-oil, and feedeth singing birds: the other, the common enemy to corne, which we call charlock.' He likewise mentions that this is also called *charlock*, *chadlock*, and *kedlock*, words which it is curious to observe for their resemblance to *khardul*, *kharul*, or *charul*, and which are applied in our country to this wild kind of mustard, as

khardul is to the species of mustard indigenous in different parts of Asia. That some of these are found in Syria and Palestine is well known, as Russel mentions the above *sinapis arvensis*, or charlock, as common in the neighbourhood of Aleppo, and, in fact, it is one of the most widely diffused of the species. Decandolle, in his *Syst. Natural.* ii. p. 615, describes it as 'Habitat arvis, vineis, agris Europæ interdum nimis copiosa, a Lusitania ad Petropolim, a Sicilia ad Daniam, ab Anglia ad Tauriam.' Irby and Mangles moreover state, that in their journey from Bysan to Adjeloun they met with the mustard plant growing wild, and as high as their horses' heads. In fact, so large do some of the species grow in these countries, that one of them has been supposed to be the mustard tree alluded to by our Saviour. *S. arvensis* being so widely diffused is probably also found in Palestine, though this can only be determined by a good botanist on the spot, or by a comparison of genuine specimens. But there is another species, the *S. orientalis*, which is common in corn-fields in Syria, and south and middle Europe, and which can scarcely be distinguished from *S. arvensis*. Either of these will suit the above passages, and as the name is not very dissimilar, we are of opinion that it is better entitled to be the *charul* of Scripture than any other plant that has hitherto been adduced. It would be the first to spring up in a carelessly cultivated field, and choke the neglected corn, while it would soon cover deserted fields, and might readily be resorted to for shelter from a hot wind, or even from the rays of the sun, when growing so large as is described by some of the travellers in the Holy Land.—J. F. R.

CHASE. [HUNTING.]

CHASIDIM (חסידים; Ἀσσιδαῖοι, 1 Maccab. vii. 13), one of the three chief Jewish sects, of which the other two were the *Hellenists* and the *Maccabeans*, and from which were developed afterwards other sects, such as the *Pharisees*, the *Essenes*, etc. The appellation חסידים or the singular חסיד, the *benevolent*, the *pious*, is already used in the Psalms to denote those of the Jewish community who were distinguished by their love to God and good will towards men. These were singled out from the midst of (עם האלהים) God's chosen people as חסידיו יהוה, the *saints of Jehovah* (Ps. iv. 4; xii. 2; xvi. 10; xxx. 5; xxxi. 24; xxxii. 6; xxxvii. 28; lxxix. 2; al.) It was therefore natural that when, in later days, the influences and practices of these heathen nations who conquered Palestine had cooled the zeal of many in Israel in the cause of God, when multitudes grew lax in the observance of the law, and when the religion of their fathers was in imminent danger, those who feared the Lord should separate themselves more visibly from their Hellenizing brethren, unite together by special ties to keep the ordinances, and hedge themselves in more securely by the voluntary imposition of works of supererogation, thus becoming an organised sect characterised by the special name *Chasidim* in a peculiar and sectarian sense (קהל חסידים, קהל חסידים, Ἀσσιδαῖοι, 1 Maccab. ii. 42). That this old sect should first come before us so late as the time of Judas Maccabæus, and unite themselves so readily with him (1 Maccab. i. 11; ii. 42; vii. 13; 2 Maccab. xiv. 6; with 1 Maccab. iii. 6, 8; vi. 21; vii. 5; ix. 23), is owing to the fact that they found in him

an earnest defender of the ancient faith, for the maintenance of which they were always ready to lay down their lives.

The essential principles of the *Chasidim* were as follows:—Most rigidly to observe all the ritual laws of purification—to meet together frequently for devotion, carefully preparing themselves for it by ablutions, and wearing their phylacteries longer than others—to seek diligently for opportunities of offering sacrifices (Nedarim, 10, a), to impose upon themselves voluntarily great acts of self-denial and mortifications; like the Nazarites they abstained from wine and all intoxicating liquors sometimes for weeks, and sometimes during their whole lives; and like the priests they observed the Levitical purifications during the time of their being Nazarites and sometimes longer. Thus it is related of Jose ben Jooser, who was the spiritual head of the community at the time of Judas Maccabæus, and one of the sixty *Chasidim*, who were slain by Bacchides through the treachery of Alcimus (1 Maccab. vii. 12–16) that he observed in his dress and food the Levitical purity, which belonged to the priests (Chagiga, 18, b). They, to a great extent, had all things in common, as is evident from the remark in the Mishna, 'he who says mine is thine, and thine is thine, is a *Chasid*' (Aboth. v. 10); and the injunction of Jose ben Jochanan, the colleague of Jose ben Jooser, 'let thy house be always open, and regard the poor as inmates of thy house' (*ibid.* i. 5); some of them withdrew altogether from general society, and devoted themselves entirely to contemplation and to the study of the written and oral law, whilst others continued to prosecute the affairs of the world, therefrom maintaining their brethren engaged in devotion, and were called אנשי מעשי, *practical men or the party of action*; (Krochmal, More Neboche Ha-seman 144) they did not speak much even with their own wives (Aboth. i. 5), and would not look at all at strange women. Their self-denying and holy life, as well as their reputed power to perform miraculous cures and to drive out evil spirits, secured for them the high respect of the Jewish community at large.

Their principles, however, became too narrow, and were carried to such extravagant excesses, that R. Josua ben Chananja regarded those who were so foolishly rigid (חסיד שוטה) as 'corrupting the world,' *i.e.*, as dangerous members of society (Mishna Sota, iii. 4). Some idea may be formed of their absurd rigidity, from the remarks of the Gemaras upon this passage, defining what is meant by a foolish *Chasid*:—'He,' says the Jerusalem Talmud (*in loco*), 'who neglects to rescue a drowning child from the water because he must first take off his phylacteries,' or 'he,' remarks the Babylonian Talmud (21, b), 'who does not come to the help of a female in a perilous situation, in order to avoid looking upon a female, or he who gives away all his property to benevolent purposes, and thereby reduces himself to beggary, he is a foolish *Chasid*.'

These impracticable and wild extravagances produced, in the course of time, their natural effect, and resulted in the splitting up of the association

(קהילה). Those who insisted upon the rigid observances formed themselves into separate denominations, such as the *Essenes*, etc., whilst the moderate party retained the name *Chasidim*.

The standard of a *Chasid* in the Talmudic period (200–500 A.D.) was more what it had originally

been, and almost approached the demands of the O. T. Not to be over-righteous, and not to press the observance or non-observance of certain things to its utmost extreme (לפנים משורת) but to be temperate, mild, forbearing, benevolent, pious, etc., were now the qualifications of a Chasid (מדת הסיירות), comp. Baba Mezia, 30, b; 52, b; Sabbath 120, a, 'He who wants to be a Chasid,' says R. Jehuda ben Jecheskiel, 'must observe the laws of equity, leave to every one that which belongs to him, and give every man that which is due to him' (Baba Kama, 30, a; Kethuboth, 82, a; Baba Bathra, 46, a; Chulim, 127, a). But even among these more sober-minded Chasidim there were some who would never give a letter to a non-Hebrew servant on the Sabbath day to be carried anywhere (Jerusal. Sabbath, I, 8, b; 19, a), nor repair a hedge because the resolution to do it had been formed on the Sabbath day (*ibid.*, 150 b), nor extinguish a fire which broke out on the Sabbath (*ibid.*, 16, 7; Nidda, 38, a). This, however, was not the rule but the exception.

In the post-Talmudic period and in the middle ages, the old and venerable Scripture name *Chasid* was claimed by parties belonging to different schools, and was made to describe characters compatible with the respective notions entertained by these several parties. The philosophic school understood by it simple piety (מדת הכמה) in contradistinction to scientific knowledge (מדת החכמה). Thus, R. Tobiah ben Eliezer of Worms (1080 A.D.) in his comment upon the words, 'My doctrine shall drop as the rain' (Deut. xxxii. 2), says, 'just as the rain waters every tree according to its nature, so are the operations of the Thora [The word of God], to one it imparts knowledge, and the other it makes a Chasid' (Letach Tob, *in loco*). Maimonides takes *Chasid* to denote one religiously moral as distinguished from philosophically moral (Deoth. i. 4, 2, 3; Intro. to Aboth. iv.) The Karaites claim the title *Chasidim* for those who earnestly strive to know God as he is. 'The perfect Chasidim,

(החסידים השלמים), says Aaron b. Eliah (fl. 1346 A.D.), 'long for the days of the Messiah, in order to know God without any hindrance and without any external medium, as it is written of that day, in Jeremiah xxxi. 34, they shall teach no more every man his neighbour and every man his brother, saying, Know the Lord, for they shall all know me, from the least of them even unto the greatest of them' Etz Chaim, 203). Hence they only give this distinguished title of *Chasidim* to their spiritual heads. The French and German schools also fixed so high a standard for the qualifications of a *Chasid* that few, except the Rabbins, could attain to it. In these schools, however, it approaches more the asceticism of olden times, and even the אנשי מעשי, men of practice, make their appearance again (Thur Or. Ch. 113, 619). In the Kabbalistic school representing the *Sohar*, the Chasidim approximated still more closely the old sect. Here we not only find a vigorous observance of externals and mortifications insisted upon, actually based upon the authority of the old *Chasidim*. חסיד קדמאי (Sohar iii. 9, a; M. Abr.), but also retirement from the world for meditation upon the divine mysteries. Here, too, a knowledge of the mysteries of God is claimed, as well as intercourse with the angelic worlds, and the power of performing miracles, healing the sick, driving out devils, etc.

The tendency in the human heart to that which is mystical, the inclination to believe that the departed spirits of those we have loved may still hold converse with us, the readiness with which those who have been afflicted long, and who have in vain sought relief from natural means, will resort to persons who believe themselves endowed with the power of performing supernatural cures, and the assurance that God manifests himself unto his own as he does not unto the world, so remarkably exemplified in the rapid spread of the doctrines of the Christian schoolmen, in the credence given to the supernatural pretensions of the Romish Church, to Swedenborg, Irving, etc., secured a ready welcome to the marvellous teachings of the Kabala for centuries, and gradually prepared the way for the reorganization of the different *Chasidim* into one sect, whenever a qualified leader should arise. The harvest did not wait long; the reaper soon made his appearance.

The organizer of the sect *Chasidim*, existing to the present day in various parts of the continent,

was Rabbi Israel ben Eliezer Baal Shem (בעל שם), i. e., possessor of the secret how to call upon the name so as to be able to affect the creation; also called *Bescht*, בעשט, from the initials of בעל שם טוב. Baal Shem made his first public appearance in Tlusti in the district of Czortkow in Poland, where he began his wonderful deeds, which soon led to the discovery, on the part of his disciples, that his father had been visited by the prophet Elijah, to predict his birth, and that his mother was an hundred years old when she was delivered of him. Baal Shem then removed to Medziboze in Podolia, where his wonderful works secured for him the name *saint* (צדיק). He spoke of his frequent communications with the Deity and the world of spirits, performed miraculous cures, and reclaimed human souls which had entered into beasts. His fame spread far and wide, and multitudes of deluded Jews flocked from all parts of Poland to this thaumaturgus, to submit themselves to his guidance, and he formed them into the sect *Chasidim* of the present day. The following are their chief principles and tenets:—

1. The great aim of every *Chasid* is to be in intimate communion with (רביקות) or wedded to the Deity (זיווג שכינה), who is regarded as a bride. This communion is effected through prayer, and more especially through frequent contact with the *Tzadic*, or spiritual head, who is espoused to God, and who, as his delegate upon earth, can do all manner of wonderful things. The *Tzadic* is therefore the king and supreme judge of the community, has absolute power over their thoughts, words, and deeds, is richly supported by the voluntary contributions of his followers, they perform pilgrimages to him to spend the Sabbaths and festivals with him, when the rich sit with him at the table, and the poor esteem it the greatest privilege to touch the hem of his garment, or even to catch a glimpse of him. 2. Revelation and the reward of all good works depend upon absolute faith, which is greatly interfered with by research and philosophy. 3. Miracles must be implicitly believed in; the greatest devotion is to be manifested during prayer, and hence shouting, clapping of hands, singing, dancing before the Lord, etc., must be resorted to, so as to preclude the intrusion of profane thoughts. 4. Repentance and conversion are essential to salva-

tion; a man must always prepare himself for them and never despair. 5. The *Chasid* must keep aloof from profane knowledge and from the love of mammon, which lead to unbelief, but worship God, even in the performance of business. 6. He must be exceedingly cheerful, contented, unselfish, benevolent, peaceable, charitable in judging others, courageous, temperate in his dress and mode of living, etc. In every town or village where ten *Chasidim* are to be found, they must meet separately for prayer and meditation, and use the Spanish form of prayer, introducing into it the Kabalistic elements. These doctrines the *Chasidim* derive from the Bible, the Talmud, and more especially from the Sohar. At the death of Baal Shem, A.D. 1760, his three grandsons, Bär of Meseritz, Mendel of Przemislaw, and Michael of Kolk, continued to govern the sect; they spread the fame of their grandfather's wondrous deeds, promulgated his doctrines, and established communities throughout Poland, Wallachia, Moldavia, Galicia, and in Palestine, where they exist to the present day. R. Moses Dattelbaum of Galicia, a *Chasid* who was invited to become the head of the Jewish community at Sator-Alja-Ujhely, introduced these doctrines into Hungary in 1809, and, by means of his imposing appearance, deep penetration, profound Talmudic knowledge, and great popular talents, soon secured for them a rapid spread. The following incident of this most remarkable orator's life will help to explain the cause of the extraordinary increase of *Chasidim* in Hungary. Dattelbaum, in delivering a discourse to a large assembly of Jews the evening before the great day of atonement, paused suddenly, and ordered all the youths present to be conducted before the sacred ark wherein the scrolls of the law are deposited, which was done immediately. The whole congregation watched with breathless silence what was coming. 'Children,' said the Rabbi, 'are you resolved to lay down your lives for our holy faith, if the Holy One, blessed be His name, should demand it of you? Oh! I know your resolution. Respond then with a loud voice, Yes, Rabbi, we are prepared to die.' The children repeated these words. 'The congregation was deeply moved, and Dattelbaum exclaimed, 'Lord of the universe, the Thora mentions only one Isaac who was willing to submit to death to glorify Thy name, but here are assembled a large number of Isaacs, for their sakes look down upon us graciously!'

Literature.—The *Chasidim* have published some very able and learned works in defence of their peculiar doctrines. The following are some of them:—1. A small work called חסידות, by Senior Salman Lidier, 1780, reprinted in Königsberg, 1823; 2. שיעורי הייחוד והאמונה, Sklow, 1820; 3. הנהגות ישראל, a book of ethics, arranged in alphabetical order by R. Nachman, 1821; comp. also *Jost Geschichte des Judenthums und seine Secten*, iii. p. 185, etc.; *Ben Chananja*, ii. pp. 1, 49, 145, 193.—C. D. G.

CHASIL (חָסִיל). This word occurs 1 Kings viii. 37; 2 Chron. vi. 28; Ps. lxxviii. 46; Is. xxxiii. 4; Joel i. 4; ii. 25. In the first two passages the LXX. give βροχός; in the other ἐρυσίβη, except in Is. xxxiii. 4, where they seem to have followed a different text. In the A. V. the word is translated by *caterpillar* in all these passages.

The English word *caterpillar* belongs strictly to

the *larvæ* of the genus *lepidoptera*, and more especially to the larvæ of a section of it, the *Papilionidæ*.

It is, however, far from provable that the חסיל is any species of caterpillar. The root חָסַל, from which it is derived, signifies to 'consume' or 'devour,' and it is especially used to denote the ravages

of the locust (Deut. xxviii. 38. יחַסְלוּן הארבה). The Arabic and Syriac cognates also signify to consume. The word βροχός, by which it is frequently rendered in the Septuagint, from βρώσσω, I eat up, conveys also the idea of ravenousness. All these names indicate a creature whose chief characteristic is voracity, and which also attaches to all the species of locusts. The ancients, indeed, concur in referring the word to the locust tribe of insects, but are not agreed whether it signifies any particular species of locust, or is the name for any of those states or transformations through which the locust passes from the egg to the perfect insect. The *Latin Fathers* take it to mean the larva of the locust, and the *Greek* understand it as the name of an adult locust. The Latins give the name *bruchus* to the young locust before it has wings, call it *atellabus* when it begins to fly, and *locusta* when it is fully able to fly. Thus Jerome, in his *Comm. in Nahum*. c. iii.: 'Bruchus nihil aliud faciat, nisi semper in terra sit, et absque alio cibo et ventri serviat; atellabus autem saltem modicas assumat alas, et cum in altum volare non possit, tamen de terra exsilire notatur, et tandem perveniens in locustam volitat.' And again, 'Atellabus quem significantius *compressorem* interpretatus est Aquila, parva locusta est, inter locustam et bruchum, et modicis pennis reptans, potius quam volans semperque subsiliens.' Augustine also, on Ps. civ., says, 'Bruchus est locustæ fetus; una plaga est locustæ et bruchi, quoniam altera est parens, et alter est fetus.' The same opinion is maintained by Gregorius in *Jobum*, lib. xxxiii. c. 17. These statements of Jerome, and the other Latins, are very remarkable, since the Vulgate, in Nahum iii. 16, reads Bruchus expansus est et *avolanis*, and *flies away*; and the Septuagint, also, in the same place, reads βροχός ὤρμησε καὶ ἐξετετάσθη, and what is still more remarkable, Jerome himself, Lev. xi. 22, puts the bruchus among the volucres. It is curious to see the Greek fathers ascribing wings and the power of flight to the bruchus in their comments on the same passages. Thus Cyril upon Nahum iii.: Φασί γὰρ, ὅτι, πιπτοῦσης χαλαζῆς, καὶ ὑέτων καταρηγγυμένων ἀδρανῆς ἐς πτήσῳ ὁ βροχός, καταδευμένον αὐτῶ τῶν πτέρων. And Theodoret upon the same passage: τῆς ἡλιακῆς προσβαλλούσης ἀκτίων ἀνίσταται καὶ πετάσσει τὰ πτερὰ, καὶ εἰς ἕτερον μεταβαίνει τόπον. The same writer on Amos vii. 1 plainly distinguishes the bruchus from the young of the locust. 'Ἐπιγονὴν δὲ ἀκρίδων, he observes, ἐκάλεσε τὸν Ἀσσύριον, βροχὸν δὲ τὸν Βαβυλώσιον. The Septuagint also in Lev. xi. 22, seems to distinguish the bruchus and ἴψ τὰ θμια, 'and its kind,' from the ἀκρίς, or common locust, and ἴψ τὰ θμια as differing not in age but in species. Theophrastus also, Περὶ τῶν ἀθρόων φαινομένων ζώων says, χαλεπαὶ μὲν οὖν αἱ ἀκρίδες, χαλεπώτεροι δὲ οἱ ἀττέλεβοι, καὶ τοῦτων μάλιστα οὗς καλοῦσι βροχόους (βροχούς). The testimony of Hesychius is very clear: Βροχός ἀκρίδων εἶδος Ἴωβες. Κύπριοι δὲ τὴν χλωρὰν ἀκρίδα, βροχὸν. Ταραντῖνοι δὲ, Ἀττελεβον, ἕτεροι,

'Αρουραλαν μάντω. The inconsistency of Jerome's statements, and the contrariety both of his notions on the subject, and of the other Latins, to those of the Greeks, may be owing to the circumstance that in his time the use of the words in question might have become arbitrary, or loose and uncertain. Even Pliny calls the attelabi, minimæ locustarum sine pennis (*Nat. Hist.* xxix. 4, 20). Thus Jerome translates חסיל, in 1 Kings viii. 37, by rubigo; nor does the Septuagint observe strict uniformity; for, in Ps. lxxviii. 46, it has ἐρσιβη, and in Is. xxxiii. 4, ἀκριδες.

The superior antiquity however of the Septuagint entitles its opinion to preference, and, in the passages already quoted, it ascribes flight to the βροῦχος, and speaks of it as a distinct species; and in the former particular especially, it is difficult to suspect it of an egregious error. The statement of Aristotle is also worthy of notice, who speaks of the attelabus as a mature insect, for he refers to its parturition and eggs (*Hist. An.* v. 29).

The arguments and speculations of the most eminent modern writers may be seen in Bochart, *Hierozo.*, ed. Rosenmüller, vol. iii. p. 256, *sq.* Lips. 1793-96. Upon those arguments and speculations, the learned editor gives an opinion, which appears to us the best that can be formed; it is this, that the Hebrew word does mean a locust; but of what species it is impossible to determine. One of his observations we cannot forbear to quote, namely, that in Ps. lxxviii. 46, the חסיל is parallel to אורכה, the most certain name for the locust; and that in Is. xxxiii. 4, the חסילים answer to the נסים in the other member of the sentence, a collocation which seems plainly to intimate different species.—J. F. D.

CHASKUNI, BEN MANOACH, a learned Jew who flourished in France about the beginning of the 13th century. He wrote a commentary on the Pentateuch, in which he made large use of the Midrashic literature; indeed it is almost entirely a compilation. It was printed at Venice in 1524, fol., and again at Basil in 1606; and in 1559 a carefully revised edition, by Vittorino Eliano, grandson of Elias Levita, appeared at Cremona, 4to. It may be found also in the *Biblia Magna* of Moses Frankfurter, Amst. 1724-27.—W. L. A.

CHASMIL (חשמל), Ezek. i. 4, 27; viii. 2) was probably a composition of several sorts of metal, since even ἤλεκτρον, by which the word is rendered by the ancients, frequently signifies a composition of gold and silver (Plin. *Hist. Nat.* xxxiii. 23; ix. 65). Nor were the ancients unacquainted with the art of amalgamating various species of metal; and the Latin *aurichalcum*, at least according to the derivation of Isidorus (*Orig.* xvi. 19; 'Aurichalcum dicitur, quod et splendorem auri et duritiam æris possideat'), would thus coincide with Bochart's etymology (*Hierozo.* iii., p. 893) of חשמל; for he thinks the word composed of נחש *as*, and מלל *aurum*, and proposes to read נחשמל, instead of חשמל. Neither can there be any doubt that aurichalcum is a mere Latinized form of the Greek ἀυριχαλκος (Homer, *Hymn.* v. 9; Hes. *Scut.* 122; Callim. *In lav. Pallad.* 19). According to Serv. (*ad Æn.* xii. 87), the aurichalcum possessed the

brightness of gold and the hardness of copper, and might not improbably have been our present *platina*, which has been re-discovered in the Ural mountains, after having long been known as an American fossil. Pliny (*Hist. Nat.* xxxiv. 12) says of aurichalcum, 'Nec reperitur longo iam tempore, effeta tellure.' Perhaps by נחשת מצהב (Ezra viii. 27) was meant *aurichalcum*; at least the derivation of the words tallies with the properties of that metal.—E. M.

CHATZIR (חציר), or CHAZIR, also CHAJIR.

This word occurs in several places in the O. T., where it is variously translated, as *grass*, in 1 Kings xviii. 5; 2 Kings xix. 26; Job xl. 15; Ps. xxxvii. 2, etc.; *herb*, in Job viii. 12; *hay*, in Prov. xxvii. 25, and Is. xv. 6; and *court*, in Is. xxxiv. 13; but in Num. xi. 5, it is translated *leeks*. Hebrew scholars state that the word signifies 'greens' or 'grass' in general; and it is no doubt clear, from the context of most of the above passages, that this must be its meaning. There is therefore no reason why it should not be so translated in all the passages where it occurs, except in the last. It is evidently incorrect to translate it *hay*, as in the above passages of Proverbs and Isaiah, because the people of Eastern countries, as it has been observed, do not make hay. The author of *Fragments*, in continuation of Calmet, has justly remarked on the incorrectness of our version, 'The *hay* appeareth, and the tender *grass* sheweth itself, and the *herbs* of the mountains are gathered' (Prov. xxvii. 25):—'Now certainly,' says he, 'if the *tender grass* is but just beginning to shew itself, the *hay*, which is grass cut and dried after it has arrived at maturity, ought by no means to be associated with it; still less ought it to be placed before it.' The author continues, 'The word, I apprehend, means the first shoots, the rising, just budding spires of grass.' So in Is. xv. 6.

In the passage of Num. xi. 5, where the Israelites in the desert long for 'the melons, and the *leeks*, and the onions, and the garlic' of Egypt, it is evident that it was not *grass* which they desired for food, but some green, perhaps grass-like vegetable, for which the word *chatzir* is used, and which is above translated *leeks*. In the same way that, in this country, the word *greens* is applied to a variety of cabbage, in India *subzee*, from *subz* 'green' is used as a general term for herbs cooked as kitchen vegetables. It is more than probable, therefore, that *chatzir* is here similarly employed, though this does not prove that *leeks* are intended. Ludolphus, as quoted by Celsius (*Hierobot.* ii. 264), supposes that it may mean lettuce, or salads in general, and others that the succory or endive may be the true plant. But Rosenmüller states, 'The most ancient Greek and the Chaldee translators unanimously interpret the Hebrew by the Greek πράσα, or leeks.' The name, moreover, seems to have been specially applied to leeks from the resemblance of their leaves to grass, and from their being conspicuous for their green colour. This is evident from minerals even having been named from πράσον on account of their colour, as prasius, prasites, and chrysoprasium. The Arabs use the word كرات *kooras*, or *koorath*, as the translation of the πράσον of the Greeks, and with them it signifies the leeks, both at the present day and in their older works. It is curious that of the different

kinds described, one is called *kooras-al-bukl*, or leek used as a vegetable. That the leek is esteemed in Egypt we have the testimony of Has-selquist, who says, 'that the kind called *karrat* by the Arabs must certainly have been one of those desired by the children of Israel; as it has been cultivated and esteemed from the earliest times to the present time in Egypt.' So the Roman satirist (Juv. xv. 9)—

'Porrum et cepe nefas violare et frangere morsu.
O sanctas gentes, quibus hæc nascuntur in hortis
Numina!'

The Romans employed it much as a seasoning to their dishes, as is evident from the number of recipes in Apicius referred to by Celsius. The leek (*Allium Porrum*) was introduced into this country about the year 1562, and, as is well known, continues to be esteemed as a seasoning to soups and stews.—J. F. R.

CHAZIR (חִייר; in Arabic *chizron*; Sept. חִייר). Occurs in Lev. xi. 7; Deut. xiv. 8; Ps. lxxx. 13; Prov. xi. 22; Is. lkv. 4; lxxvi. 3, 17.

The Hebrew, Egyptian, Arabian, Phœnician, and other neighbouring nations abstained from hog's flesh, and consequently, excepting in Egypt, and (at a later period) beyond the Sea of Galilee, no domesticated swine were reared. In Egypt,

184. Wild Boar.

where swineherds were treated as the lowest of men, even to a denial of admission into the temples, and where to have been touched by a swine defiled the person nearly as much as it did a Hebrew, it is difficult to conjecture for what purpose these animals were kept so abundantly, as it appears by the monumental pictures they were; for the mere service of treading down seed in the deposited mud of the Nile when the inundation subsided, the only purpose alleged, cannot be admitted as a sufficient explanation of the fact. Although in Palestine, Syria, and Phœnicia, hogs were rarely domesticated, wild boars are often mentioned in the Scriptures, and they were frequent in the time of the Crusades; for Richard Cœur-de-Lion encountered one of vast size, ran it through with his lance, and while the animal was still endeavouring to gore his horse, he leaped over its back, and slew it with his sword. At present wild boars frequent the marshes of the Delta, and are not uncommon on Mount Carmel, and in the valley of Ajalah. They are abundant about the sources of the Jordan, and lower down, where the river enters the Dead Sea. The Koords and other wandering tribes of Mesopotamia, and on the banks of both the great rivers, hunt and eat the wild boar, and it may be suspected that the half-human satyrs they pretend sometimes to kill in the chase, derive their cloven-footed

hind quarters from wild boars, and offer a convenient mode of concealing from the women and public that the nutritive flesh they bring home is a luxury forbidden by their law.—C. H. S.

CHEBAR (כְּבַר; Sept. Χοβάρ), a river upon the banks of which king Nebuchadnezzar planted a colony of Jews, among whom was the prophet Ezekiel (2 Kings xxiv. 15; Ezek. i. 1, 3; iii. 15, 23; x. 15, 22). The prevailing opinion is that this river is identical with the Ἀβόρρας (Strabo. xvi. p. 747), or Χαβόρας (Ptol. v. 18) of the ancients; which rising in the vicinity of Nisibis, passes through upper Mesopotamia, flows for a while parallel to the Euphrates, and then, suddenly turning to the right, falls into the Euphrates at Circesium. For this identification the similarity of the names strongly speaks. It has, however, been objected to this, that 'in the O. T. the name of Chaldea is never extended so far northwards.' But Chebar is not placed by Ezekiel in *Chaldea*, but 'in the land of the Chaldeans;' an expression which might apply to any part of the territory ruled over by the king of Babylon. Bochari's conjecture that Chebar was the *Nahr-Malcha*, or royal canal, cut by order of Nebuchadnezzar, and which Pliny (*H. N.*, vi. 26) says was made under the superintendance of a person named Chobar, is ingenious; but can be entertained only through the supposition that the *Nahr-Malcha* was called also the *Nahr-Chobar*, from the name of the officer under whose directions it was made—a supposition entirely irreconcilable with the usages of Oriental despotisms; if the work was called *Nahr-Malcha* 'flumen regium quia regia cura effossum,' we may be very sure it would not be called also, and at the same time, *Nahr Chobar*, 'a Chobaris nomine huic operi prefecti.' Tradition places the tomb of Ezekiel at *Keffil*, and this has been supposed to favour the opinion that Chebar must be sought in Babylonia and not in Mesopotamia. But such a tradition has only a faint bearing on the question: if tradition would indicate *Tel Abib* for us, it would lend us more important aid, as it would help us to determine where Ezekiel lived. From *this* name, however, something may be borrowed in support of the identification of Chebar with the Aborras. *Tel Abib* means *corn-hill* or *grass-mountain*, and might well be on the banks of that river, of which it is said, 'Abore annis *herbida ripa*' (*Amm. Marc.* xiv. 3). Whether the Chebar (כְּבַר) of Ezekiel be the same as the Habor (הַבּוֹר) of 2 Kings xvii. 6; xviii. 11; 1 Chron. v. 26, admits of doubt. Habor was a river of Gozan. If Gozan be the Gauzanitis (Mygdonia) of the ancients, it must have flowed in the same district as the Chebar, and is therefore probably to be identified with it. But it has been suggested that Gozan is the modern Zozan, a term applied by the Nestorians to the pasture lands of Assyria; and as there is a river still bearing the name of Habor, or Khabour, which flows through a rich pasture land till it joins the Tigris near Jezirah, it has been proposed to identify this with the Habor to which the Israelites were deported (Grant, *The Nestorians*, p. 129, ff.) What gives weight to this suggestion is, that all the other places which are mentioned along with Habor lie in Assyria, and that it was by the kings of Assyria the Israelites were carried away. In this case Chebar and Habor are not the same.—W. L. A.

CHEDEK. [THORNS.]

CHEGORLAOMER (LXX. Χοδολλαγομῆρ; Joseph. Χοδολλάμορος). A king of Elam who comes before us in connection with the history of Abraham as a great conqueror. He made war upon certain kings of South Palestine, and for a period of twelve years received tribute from them. When, however, this was refused, he, in alliance with other east Asiatic sovereigns, attacked the confederates 'in the vale of Siddim, which is the Salt Sea,' and slew the kings of Sodom and Gomorrah, carrying off much spoil, together with Lot, Abraham's nephew. Upon hearing of this, Abraham armed his trained servants to the number of 318, pursued the victorious army, fell upon them by night, slew the king of Elam and his allies, and rescued Lot (Gen. xiv. 1-17). Interesting remarks on Chedorlaomer, are to be found in Rawlinson's *Herod.*, vol. i. pp. 436, 446, where it is suggested that he is the Kudur-Mapula of early Babylonian history (BABYLON). Mr. Stuart Poole, with great probability, supposes that the conquests of Chedorlaomer are in some way connected with the shepherd domination in Egypt. 'It appears to me,' he says, 'that the first invasion of Palestine by Chedorlaomer and his confederates probably caused the shepherds to leave the East and settle in Egypt,' *Hora Egypt.* p. 150. The narrative is strangely supposed by Hitzig, *Ps.* ii. 176, to be a late fiction referring to the expedition of Sennacherib against Jerusalem. Cf. Gen. xiv. 5, and 2 Kings xviii. 13. See on the other side, *Tuch Genes.* 308; Bertheau *Israel. Geschichte* 217.—S. L.

CHEESE. The most important passage in which this preparation from milk is mentioned in Scripture is that where Job, figuratively describing the formation of the fetus in the womb, says—

'Hast thou not poured me out like milk,
And curdled (condensed, solidified) me like
cheese?' (x. 10).

We know not how our biblical illustrators have deduced from this that the cheese used in the East necessarily was in a semi-fluid state. It rather alludes to that progressive solidification which is common to all cheese, which is always soft when new, though it hardens when it becomes old. But for the tendency to seek remote and recondite explanations of plain things, it must seem perfectly obvious that to 'curdle like cheese' does not mean that curdled milk *was* cheese; but that milk was curdled to form eventually the hardened cheese. If the text proves anything as to the condition of cheese, it would rather shew that, when considered fit for use, it was hard, than that it was soft or fluid; the process of solidification being the subject of allusion, of which curdling the milk is, in the case of cheese, only the first though the most essential operation. Undoubtedly the Orientals do eat curds, or curdled milk; but that therefore their cheese consists of curdled milk is not the correct inference. We also eat curds, but do not regard curds as cheese—neither do they. The other passages describe 'cheese' in the plural, as parts of military provision, for which the most solid and compact substances are always preferred. Persons on a march would not like to encumber themselves with curdled milk (2 Sam. xvii. 29).

There is much reason to conclude that the cheese used by the Jews differed in no respect from that

still common in the East; which is usually exhibited in small cakes about the size of a tea saucer, white in colour, and excessively salt. It has no rind, and soon becomes excessively hard and dry—being, indeed, not made for long keeping. It is best when new and comparatively soft; and, in this state, large quantities are consumed in lumps or crumbs not made up into cakes. All cheese in the East is of very indifferent quality; and it is within the writer's own knowledge that the natives infinitely prefer English or Dutch cheese when they can obtain it. In making cheese the common rennet is either butter-milk or a decoction of the great-headed thistle, or wild artichoke. The curds are afterwards put into small baskets made of rushes or palm leaves, which are then tied up close, and the necessary pressure applied.

There are several decisions in the Mishna relative to the pressure by which cheese was made (*Cholim*, viii. 2). This proves that, as observed before, no preparation of milk was regarded as cheese while in a fluid state, or before being subjected to pressure. In another place (*Avoda Sara*, ii. 5) it is decided that cheese made by foreigners could not be eaten, from the fear that it might possibly be derived from the milk of some animal which had been offered in sacrifice to idols.

CHEKE, SIR JOHN, an eminent scholar, and one of the first to promote the study of Greek in England, was born at Cambridge in 1514. He was attached to the opinions of the Reformers, and for this suffered much during the reign of Mary. In an evil hour he consented to recant the views he had professed, and this he did on the 4th of October 1556, before the queen and the whole court. He soon found, however, that the stings of his own conscience were less easy of endurance than the persecutions of the queen, and in less than a year after his recantation, he died of a broken heart, 13th Sept. 1557. Among his other literary labours was a translation of Matthew's Gospel into English, of which the MS., with the exception of one or two leaves, is extant, and has been edited by the Rev. J. Goodwin, Camb. 1843. This translation is interesting on several accounts, and deserves a place in the history of the English Bible. It was executed, it is believed, about the year 1550. The author's desire was to produce a more purely English translation than those which were making their appearance in his day, and which were in his judgment disfigured and rendered less generally useful by the multitude of foreign, chiefly Latinized, words which they contained. In pursuit of this, he goes so far as to give *pro-sent* instead of *apostles*, *crossed* instead of *crucified*, *again-raising* for *resurrection*, *ground-wrought* instead of *founded*, etc. A few notes are added, partly exegetical, partly reflective. It seems to have been the author's intention to translate the entire N. T., but he completed only Matthew and a few verses of Mark.—W. L. A.

CHELBENAH (חֶלְבֵנָה) is mentioned in Exod. xxx. 34, as one of the substances from which the incense for the sanctuary was to be prepared. The Hebrew word is very similar to the Greek χαλβάνη, which occurs as early as the time of Hippocrates. The substance is more particularly described by Dioscorides, who gives μετώπιον as an additional name, and states that it is an exudation produced by a ferula in Syria. So Pliny (xii. 25),

as translated by Holland, 'Moreover we have from Syria out of the same mountain, Amanus, another kind of gum, called galbanum, issuing out of an herb-like fennelgeant, which some call by the name of the said resin, others stagonotis. The best galbanum, and which is most set by, is grisly and clear, withal resembling hammoniac.' Theophrastus had long previously (*Hist. Pl.* ix. 7) said that galbanum flows from a Panax of Syria. In both cases it is satisfactory to find a plant of the same natural family of Umbelliferæ pointed out as yielding this drug, because the plant has not yet been clearly ascertained. The Arabs, however, seem to have been acquainted with it, as they give its names. Thus, 'galbanum' in Persian works has *barsu* assigned to it as the Arabic, *birecja* as the Hindoostance, with *khulyan* and *metonion* as the Greek names (evident corruptions of *χαλβάνη* and *μετώπιον*, arising from errors in the reading of the diacritical points): *Kinneh* and *nafel* are stated to be names of the plant, which is described as being jointed, thorny, and fragrant (Royle, *Illust. Himal. Bot.* p. 23). Lobel made an attempt to ascertain the plant by sowing some seeds which he found attached to the gum of commerce: 'Oritur in hortis nostris hæc pervenusta planta semine copioso, lato, foliaceo, aromatico, reperto Antwerpæ in *galbani lachryme*' (*Obs.* p. 431). The plant which was thus obtained is the Ferula ferulago of Linnæus, a native of N. Africa, Crete, and Asia Minor. It has been objected, however, that it does not yield galbanum in any of these situations; but the same objection might be made, though erroneously, to the mastich-tree, as not yielding mastich, because it does not do so except in a soil and climate suitable to it. Other plants, as the Bubon galbanum and gummiferum, have, in consequence, been selected, but with less claim, as they are natives of the Cape of Good Hope. The late Professor Don, having found some seeds of an umbelliferous plant sticking to the galbanum of commerce, has named the plant, though yet unknown, Galbanum officinale. These seeds, however, may or may not have belonged to the galbanum plant. Dr. Lindley has suggested another plant, which he has named *Opoidea galbanifera*, and which grows in Khorassan, in Durrood, whence specimens were sent to this country by Sir John M^cNeill, as yielding an inferior sort of ammoniacum. Upon the whole, it is evident that the plant is yet to be ascertained. Galbanum is in the present day imported into this country, both from the Levant and from India. That from the latter country is exported from Bombay, having been first imported thither, probably from the Persian Gulf. It is therefore probable that it may be produced in the countries at the head of that gulf, that is, in the northern parts of Arabia or in Persia (portions of which, as is well known, were included in the Syria of the ancients), perhaps in Kurdistan, which nearly corresponds with ancient Assyria. The later Greeks, finding the country to the north of Palestine subject to the Assyrians, called the country Assyria, or by contraction *Syria*. It is on this account that in classical writers the names Assyria and Syria are so often found interchanged (*l. c.* p. 244).

Galbanum, then, is either a natural exudation, or obtained by incisions from some umbelliferous plant. It occurs in commerce in the form either of tears or masses, commonly called *lump-galbanum*. The latter is of the consistence of wax, tenacious,

of a brownish, or brownish yellow colour, with white spots in the interior, which are the agglutinated tears. Its odour is strong and balsamic, but disagreeable, and its taste warm and bitter. It is composed of 66 per cent of resin, and 6 of volatile oil, with gum, etc., and impurities. It was formerly held in high esteem as a stimulant and anti-spasmodic medicine, and is still employed as such and for external application to discuss indolent tumours. A French author enumerates various pharmaceutic preparations of which it formerly constituted an ingredient, as 'le Mithridate, l'orvietan, le dioscordium de Fracasta, l'onguent des Apôtres ou dedacapharmaque d'Avicenna, etc., les emplatres divins de Jacques Lemort, manus Dei magnetique d'Ange Sola,' etc. It is still more to our purpose that we learn from Dioscorides that, in preparing a fragrant ointment, galbanum was mixed with other aromatic substances; as under *Μετώπιον* he says, in the Latin translation of Sprengel, 'Paratur et in Ægypto unguentum vernaculo nomine Metopium dictum, scilicet propter galbani permisionem. Lignum enim e quo galbanum manat, metopium vocatur. Ex oleo omphacino et amygdalarum amararum, cardamomo, scheno, calamo, melle, vino, myrrha, balsami semine, galbano et resina componitur.'—J. F. R.

CHELCIAS (Χελκίας, the Greek form of the Heb. name *חֶלְקִיָּהּ* Hilkiah). Six persons of this name are referred to in the Apocrypha. 1. One of the governors (*ἐπιστάται*) of the temple in the time of Josiah, 1 Esd. i. 8; and the same as the Hilkiah, who is called a ruler of the house of God, 2 Chron. xxxv. 8; and high-priest, 2 Kings xxii. 4. 2. The great-grandfather of Ezra, 1 Esd. viii. i comp. Ez. vii. 1. 3. One of the ancestors of Judith, Jud. viii. 1, according to the Vatican text, the Alex. gives a somewhat different genealogy. 4. One of the remoter ancestors of Baruch, Bar. i. 1. 5. The father of Joachim, high-priest in the house of Baruch, Bar. i. 7. 6. The father of Susannah, Sus. vv. 2, 29; identified with (1) in the fragment of a commentary on Susannah, attributed to Hippolytus *Ἡρῆ. Op.*, ed. Fabricii, vol. i. p. 273.—S. N.

CHELLUS (Χελλούς, Judith i. 9. This place and several others are omitted in the Vulgate). Movers supposes it to be the same as Halhul (Josh. xv. 58), and that Beth-anoth mentioned with it is the same as Beth-anoth (Josh. xv. 59).—J. E. R.

CHELUB (*כְּלֻבִּי*). 1. In the Hebrew text described as 'the brother of Shua, and the father of Mehiv' (*Χαλὲβ πατήρ Ἀσχά*, Sept. 1 Chron. iv. 11). 2. The father of Ezri, one of David's 'rulers' who was 'over them that did the work of the field for tillage' (1 Chron. xxvii. 26, Sept. *Χελοῦβ*, *Chelub*, Vulg.)—J. E. R.

CHELUBAI (*כְּלֻבַּי*; LXX. *Χαλὲβ*), the name given in 1 Chron. ii. 9 to the brother of Jerahmeel, and the son of Hezron, the grandson of Judah. In verses 18 and 42 he is called Caleb. It is probably the same person that reference is made in verse 50, where the LXX. seem to have preserved the more correct reading; and also in 1 Chron. iv. 1, where both Heb. and LXX. read Carmi.—S. N.

CHEMAR (חֶמָר; Arab. *chomar*; Sept. ἀσφαλτος; A. V. 'pitch'). Luther, like the modern Rabbins, erroneously translates the Hebrew by 'clay.' The Hebrew and Arabic names probably refer to the reddish colour of some of the specimens (Dioscorides, i. 99). The Greek name, whence the Latin Asphaltum, is doubtless derived from the Lake Asphaltites (Dead Sea), whence it was abundantly obtained. Usually, however, asphaltum, or compact bitumen, is of a shining black colour; it is solid and brittle, with a conchoidal fracture, altogether not unlike common pitch. Its specific gravity is from 1 to 1.6, and it consists chiefly of bituminous oil, hydrogen gas, and charcoal. It is found partly as a solid dry fossil, intermixed in layers of plaster, marl, or slate, and partly as liquid tar flowing from cavities in rocks or in the earth, or swimming upon the surface of lakes or natural wells (Burckhardt, ii. 77). To judge from Gen. xiv. 10, mines of asphaltum have existed formerly on the spot where subsequently the Dead Sea, or Lake Asphaltites, was formed, such as Mariti (*Travels*, iv. 27), discovered on the western shore of that sea. The Palestine earth-pitch, however, seems to have had the preference over all the other sorts (Plin. xxviii. 23; Discor. i. p. 100). It was used among the ancients partly for covering boats, paying the bottoms of vessels (comp. Niebuhr, ii. p. 336; Gen. vi. 14; Exod. ii. 3; Joseph. *De Bell. Jud.* iv. 8. 4; Buckingham, *Mesopot.* p. 346), and partly as a substitute for mortar in buildings; and it is thought that the bricks of which the walls of Babylon were built (Gen. xi. 3; Strabo, xvi. p. 743; Herod. i. 179; Plin. xxxv. 51; Ammian. Marcell. xxiii. 6; Vitruv. viii. 3; comp. Joseph. *Antiq.* i. 4. 3) had been cemented with hot bitumen, which imparted to them great solidity. In ancient Babylon asphaltum was made use of also for fuel, as the environs have from the earliest times been renowned for the abundance of that substance (Diod. Sic. ii. 12; Herod. i. 179; Dion. Cass. lxxviii. 27; Strabo, xvi. p. 738; Plut. *Alex.* c. 35; Theodoret, *Quest. in Genes.* 59; Ritter, *Geogr.* ii. 345; Buckingham, *Mesopot.* p. 346). Neither were the ancient Jews unacquainted with the medicinal properties of that mineral (Joseph. *De Bell. Jud.* iv. 8. 4).

Asphaltum was also used among the ancient Egyptians for embalming the dead. Strabo (xvi.) and many other ancient and modern writers assert, that only the asphalt of the Dead Sea was used for that purpose; but it has in more recent times been proved, from experiments made on mummies, that the Egyptians employed slaggy mineral pitch in embalming the dead. This operation was performed in three different ways: first, with slaggy mineral pitch alone; second, with a mixture of this bitumen and a liquor extracted from the cedar, called *cedoria*; and third, with a similar mixture, to which resinous and aromatic substances were added (Haüy. *Mineral.* ii. p. 315).

Asphaltum is found in masses on the shore of the Dead Sea, or floating on the surface of its waters. Dr. Shaw (*Travels in Barbary and the Levant*) was told that this bitumen, for which the Dead Sea is so famous, rises at certain times from the bottom of the sea in large pieces of semiglobular form, which, as soon as they touch the surface, and the external air operates upon them, burst asunder in a thousand pieces, with a terrible

crash, like the *fulvis fulminans* of the chemists. This, however, he continues, only occurs along the shore; for, in deep water, it is supposed that these eruptions shew themselves in large columns of smoke, which are often seen to rise from the lake. The fact of the ascending smoke has been much questioned by naturalists; and although apparently confirmed by the testimonies of various travellers, collected by Büsching in his *Erdbeschreibung*, it is not confirmed by the more observant travellers of recent years. Pococke (*Description of the East, etc.*, ii. sec. 46) presumes that the thick clumps of asphalt collected at the bottom of the lake have been brought up by subterraneous fire, and afterwards melted by the agitation of the waters. Also Strabo (xvi. p. 764) speaks of subterraneous fires in those parts (comp. Burckhardt, *Syria*, 394).

Dr. Robinson, when in the neighbourhood, heard from the natives the same story which had previously been told to Seetzen and Burckhardt, namely, that the asphaltum flows down the face of a precipice on the eastern shore of the lake, until a large mass is collected, when, from its weight or some shock, it breaks off and falls into the sea (Seetzen, in *Zach's Monatl. Correspond.* xviii. 441; Burckhardt, p. 394; Robinson, ii. 229). This, however, he strongly doubts, for assigned reasons, and it is agreed that nothing of the kind occurs on the western shore. The professor rather inclines to receive the testimony of the local Arabs, who affirm that the bitumen only appears after earthquakes. They allege that after the earthquake of 1834 huge quantities of it were cast upon the shore, of which the Jehalin Arabs alone took about 60 kuntars (each of 98 lbs.) to market; and it was corroboratively recollected by the Rev. Eli Smith, that a large amount had that year been purchased at Beirut by the Frank merchants. There was another earthquake on January 1, 1837, and soon after a large mass of asphaltum (compared by one person to an island, and by another to a house) was discovered floating on the sea, and was driven aground on the western side, near Usdum. The neighbouring Arabs assembled, cut it up with axes, removed it by camels' loads, and sold it at the rate of four piastres the *rutt*, or pound; the product is said to have been about three thousand dollars. Except during these two years, the Sheik of the Jehalin, a man fifty years old, had never known bitumen appear in the sea, nor heard of it from his fathers (Robinson's *Bib. Researches*, ii. 230). This information may serve to illustrate the account of Josephus, that 'the sea in many places sends up black masses of asphaltum, which float on the surface, having the form and size of headless oxen' (*De Bell. Jud.* iv. 8. 4); and that of Diodorus (ii. 48), who states that the bitumen is thrown up in masses, having the appearance of islands.—E. M.

CHEMARIMS (חֶמְרִים; Sept. Χωμαριμ).

This name is applied exclusively in the O. T. to idolatrous priests (Hos. x. 5, 2 Kings xxiii. 5; Zeph. i. 4). According to Kimchi, who derives it from a word signifying *blackness*, *sadness*, it contains an allusion to the dark garments and ascetic habits of the priests. The Syr. ܚܡܪܝܡ is used in the Epistle to the Hebrews of the Jewish priests and of Christ. Comp. Gesen. on Is. xxii. 12; xxxviii. 15; and *Theo. s. v.* Fürst says that the applica-

tion of this word specially to idolatrous priests is a purely Hebrew idiom. In the Targ. Onkel. בַּמִּזְבֵּחַ is used for כֹּהֵן in Gen. xlvii. 22; Judg. xvii. 5; etc.

CHEMNITZ, MARTIN, a distinguished theologian of the 16th century, was born on the 9th November 1522, in Mark Brandenburg. At the age of fourteen he was sent to the school at Wittenberg, where he had an opportunity of hearing Luther preach. He was soon taken back to his parents. In 1539-42 he was a student at the university of Magdeburg; in 1543 he went to Frankfurt-on-the-Oder; and in 1545 Melancthon had him settled at Wittenberg, and helped him in his studies. In 1547 he went to Königsberg, where he was favourably received on account of his astrological knowledge. Here he began to prosecute theological studies. Having opposed Osiander's doctrine of justification by faith, his post of librarian was made uncomfortable, and he removed again to Wittenberg, 1553, where he attached himself closely to Melancthon; but in 1555 went to Brunswick as preacher. Here, too, he became a teacher of theology. He died April 8th, 1586, having led a very active life, chiefly taken up with controversial theology. His connection with Mörlin, the great opponent of Osiander, had an important influence on his life and opinions. He is the author of *De cena Domini*, 1560; *Anatome propositionum Alberti Haradenbergii de cena Domini*; *Fundamenta sanæ doctrinæ de vera et substantiali præsentia, exhibitione et sumptione corporis et sanguinis Domini in cena*; *De duabus naturis in Christo*; *Theologia Jesuitarum præcipua capita*; *Examinis concilii Tridentini per Martinum Chemnicium scripti opus integrum, quatuor partes*, etc., a work of great learning, ability, and acuteness, which was published in parts, and occupied ten years of labour; *Bedenken wider den neuen Wittenbergischen Catechismus*; and *Harmonia quatuor Evangg.* 1593, afterwards continued and completed by Lyser and Gerhard, 3 vols. fol. 1704. A list of thirty-two printed works of Chemnitz is given by Rethmeyer. The only one of any importance at the present day is his great work against Catholicism. See Rethmeyer's *Historia ecclesiastica in clytæ urbis Brunsvigæ, pars III.*—S. D.

CHEMOSH (כְּמוֹשׁ; Sept. Χημὸς) is the name of a national god of the Moabites (1 Kings xi. 7; 2 Kings xxiii. 13; Jer. xlvi. 7, who are for this reason called the 'people of Chemosh,' in Num. xxi. 29), and of the Ammonites (Judg. xi. 24), whose worship was introduced among the Israelites by Solomon (1 Kings xi. 7). No etymology of the name which has been proposed, and no attempt which has been made to identify this god with others whose attributes are better known, are sufficiently plausible to deserve particular notice. Jerome's notion that Chemosh is the same as Baal-Peor has no historical foundation; and the only theory which rests on any probability is that which assumes a resemblance between Chemosh and Arabian idolatry (cf. Beyer, *Addit. ad Seiden.* p. 322; Pocock, *Specimen*, p. 307). Jewish tradition affirms that he was worshipped under the symbol of a black star; and Maimonides states that his worshippers went bareheaded, and abstained from the use of garments sewn together by the needle. The black star, the connection with Arabian idolatry, and the fact that Chemosh is

coupled with Moloch, favour the theory that he had some analogy with the planet Saturn.—J. N.

CHENAANAH (כְּנַעֲנָה, Sept. Χαναάν; Vulg. Chanana. Fürst, in *Hebr. Wörtl. s. v.*, says it is the original form of the noun כְּנַעַן, Canaan; and suggests that the prevalence of such names as this, and *Tharsish* and *Cush* among the Benjamites, indicates special connection by intermarriage with the earlier race; the straits to which this tribe was specially reduced may have driven its members to special alliances with their Phœnician neighbours). This proper name occurs five times.

1. In 1 Chron. vii. 10 it designates a great-grandson of the patriarch Benjamin; CHENAANAH being the fourth of seven sons of Bilhan, who was the son of Jediael, the third son of Benjamin. Chenaanah is described as, like his brethren, the head of a *Mishpachah* or clan, and a 'mighty man of valour.'

2. In 1 Kings xxii. 11, 24, and 2 Chron. xviii. 10, 23, CHENAANAH is the father of the false prophet Zedekiah, who smote Micaiah the son of Imlah on the cheek, and induced Ahab to undertake the military expedition to Ramoth-Gilead, in which he perished.—P. H.

CHENANI (כְּנַנִּי, shortened from כְּנַנְיָה, from כְּנַן to prepare), 'Jah is preparing,' Fürst) is mentioned but once; in Neh. ix. 4. He was one of the Levites who took part in the solemn service of confession and praise to God, after the public reading of the law. There is much variation in the text of this verse. Thus in the name before us one of Kennicott's MSS. (180), and six of De Rossi's, read כְּנִי כְּנַנִּי 'sons of Chenani,' instead of כְּנִי כְּנַנִּי 'Bani, Chenani' (for there is no conjunction in the original). This reading is very probable, for there is not only another *Bani* in the verse, but the Sept. supports the MSS., its version being *ἱὸς Χωφελ* (or as the Cod. Alex. has it, *ἱὸς Χαναλ*). The Peschito version *assimilates* the names of verse 4 to those of verse 5, omits *Chenani*, and in place of it reads *Pethahia*. In the omission of *Chenani*, it is supported by the *Cod. Frid.-August.* of LXX., which omits *ἱὸς Χωφελ*, *primâ manu*. The Latin Vulgate translates as A. V.—P. H.

CHENANIAH (חֲנַנְיָה, *God's goodness*; Sept. Χωφελῆ), a master of the temple music, who conducted the grand musical services when the ark was removed from the house of Obed-edom to Jerusalem (1 Chron. xv. 22).

CHEPHIRAH (כְּפִירָה, 'a village,' Sept. Κεφίρα), one of the towns of the Gibeonites who by a clever trick induced Joshua and the Israelites to enter into an alliance with them (Josh. ix. 3, 57). The other towns of this tribe were Gibeon, Beeroth, and Kirjath-jearim. Chephirah was allotted to Benjamin, and its position is indicated by its being mentioned in connection with Kirjath-jearim and Mizpeh (Josh. xviii. 26; Ezra ii. 25). On the western declivity of the mountain range, eleven miles from Jerusalem, and four from Kirjath-jearim, is a ruined village called Kefir, which doubtless marks the site of the old city of Chephirah. After remaining unknown, or at least unnoticed, for more than 2000 years, its site was discovered by Dr. Robinson in 1852 (Robinson, *B. R.*, iii. 146; *Handbook of S. and P.*, 221).—J. L. P.

CHERETHITES and PELETHITES (כְּרִיתִי וּפְלִיתִי, *Crethi* and *Plethi* without the final ם in the plural; Sept. Χερεθὶ καὶ Φελεθὶ), names borne by the royal life-guards in the time of David (2 Sam. viii. 18; 1 Chron. xviii. 17). Prevailing opinion translates their names 'Headmen and Foot-runners.' In the later years of David, their captain, Benaiah, rose to a more commanding importance than the generals of the regular troops; just as in imperial Rome the prefect of the praetorian guards became the second person in the empire. It is evident that, to perpetrate any summary deed, Benaiah and the guards were chiefly relied on. That they were strictly a body-guard is distinctly stated in 2 Sam. xxiii. 23. The grammatical form of the Hebrew words is nevertheless not quite clear; and, as the Cherethites are named as a nation of the south (1 Sam. xxx. 14), some are disposed to believe *Crethi* and *Plethi* to be foreign Gentile names used collectively. No small confirmation of this may be drawn from 2 Sam. xv. 18; 'All the Cherethites, and all the Pelethites, and all the Gittites, 600 men,' etc. If the two first words were grammatical plurals, like the third (Gittites), it is scarcely credible that final ם should be added to the third, and not also to the other two. As the word *all* is repeated three times, and 600 men is the number intended the third time; the Cherethites and Pelethites must have been reckoned by the hundred; and since the Gittites were clearly foreigners, all the *a priori* improbability which some have seen in David's defending himself by a *foreign* guard falls to the ground.

That in 2 Sam. xv. 1, Absalom's runners are called by the name רָצִים, which they also afterwards bear, may perhaps go to prove that *Plethi* or *Pelethites* does not mean 'runners.' Indeed, as such a meaning of the word cannot be got out of pure Hebrew, but recourse to the Arabic language is needed, the probability would in any case be, that the institution, as well as the name, was imported by David from the south. Ewald believes that *Plethi* means *Philistines*, and that it has been slightly corrupted to rhyme with *Crethi*. May not *Plethi* have been from another dialect? Be this as it may, these body-guards for the prince are not found under the reign of Saul. [ARMY; CARIA.]—F. W. N.

CHERITH (כְּרִית; Sept. Χορῆθ), a river in Palestine, on the banks of which the prophet Elijah found refuge (1 Kings xvii. 3-7). Eusebius and others have conceived themselves bound by the words עַל פְּנֵי הַיַּרְדֵּן, rendered 'east of the Jordan,' to seek the river in the Trans-Jordanic country; but although the words sometimes may receive this translation (as in Gen. xxv. 18; Josh. xix. 11), they properly denote simply *before*—'before the Jordan' (comp. Gen. xviii. 16)—that is, in coming from Samaria. And this interpretation, which places the Cherith west of the Jordan, agrees with the history, with Josephus (*Antiq.* viii. 13. 2), and with the local traditions which have uniformly placed the river of Elijah on this side the Jordan. Dr. Robinson drops a suggestion that it may be the Wady Kelt, which is formed by the union of many streams in the mountains west of Jericho, issuing from a deep gorge, in which it passes by that village and then across the plain to the Jordan. It is dry in summer.—J. K.

Addendum.—No spot in Palestine is better fitted to afford a secure asylum to the persecuted than Wady el-Kelt. On each side of it extend the bare, desolate hills of the wilderness of Judæa, in whose fastnesses David was able to bid defiance to Saul. The Kelt is one of the wildest ravines in this wild region. In some places it is not less than 500 feet deep, and just wide enough at the bottom to give a passage to a streamlet (1 Kings xvii. 6) like a silver thread, and to afford space for its narrow fringe of oleanders. The banks are almost sheer precipices of naked limestone, and are here and there pierced with the dark openings of caves and grottoes, in some one of which probably Elijah lay hid. The Wady opens into the great valley, and from its depths issues a narrow line of verdure into the white plain; it gradually spreads as it advances until it mingles at the distance of a mile or more with the thickets that encompass Riha, the modern representative of Jericho. To any one passing down from Jerusalem or Samaria towards Jericho, the appropriateness of the words in 1 Kings xvii. 3 would be at once apparent—'the brook Cherith, that is *before Jordan*.'

Wady el-Kelt is unquestionably the valley of Achor, in which the Israelites stoned Achan (Josh. vii. 26), and which served to mark the northern border of Judah (xv. 7). Along the southern bank of the Wady, by a long and toilsome pass, ascends the ancient and only road from Jericho to Jerusalem. This is doubtless 'the *going up* to Adummim, which is on the *south side of the river*' (xv. 7). The Kelt being near Mount Quarantania, the traditional scene of the Temptation, was a favourite resort for anchorites when the example of St. Saba made that order fashionable in Palestine (Robinson, *B. R.*, i. 558; *Handbook of S. and P.*, 191). Van de Velde locates Cherith at Ain Fesail, a few miles north of the Kelt (ii. 310).—J. L. P.

CHERUBIM (כְּרוּבִים or כְּרָבִים, sing. כְּרוּב; LXX. Χερουβὶμ; A. V. Cherubim, where the *s* is a superfluous addition to the Hebrew plural form. The singular is seldom used when they are spoken of *generically*, except in Ps. xviii. 11, and as a proper name Ezr. ii. 59). 'Cherubim' is the name given by the sacred writers to certain well-known religious symbols, intended to represent a high order of spiritual beings, and variable, within certain conditions, by the pictorial or poetic imagination of the Hebrew people. A correct conception of their nature and purpose is of so much importance, that it has occupied the attention of almost every writer, Jewish and Christian, who has devoted himself to biblical criticism; yet, after the vast learning and labour which has been applied to an elucidation of this interesting and difficult subject, many of our conclusions must still remain, in a high degree, indefinite and uncertain.

I. As the chief data for our inquiry lie within the narrow limits of a few passages, to which constant reference must be made, it will be best to commence by bringing these passages together, and subjecting them to a careful analysis. In the book of Genesis cherubim are only once mentioned (Gen. iii. 24), where the office of preventing man's access to the tree of life is assigned to 'the cherubim (הַכְּרָבִים, not as in A. V. 'cherubims') with the flame of the waving sword.' They are thus abruptly introduced, without any intimation of their

shape and nature, as though they were too well understood to require comment. That some *angelic beings* are intended is obvious, and the attempts to refer the passage to volcanic agency (Sickler, *Ideen zu einem Vulkan, Erdglobois*, p. 6), or to the inflammable bituminous region near Babylon (Plin. ii. 109, etc.), is a specimen of that valueless rationalism which unwisely turns the attention from the inner spirit of the narrative to its mere external form. We might perhaps conjecture, from the use of the *article*, that there were supposed to be a definite number of cherubim, and it seems that *four* is the mystic number usually attached to the conception of them. As the number four has special significance in Hebrew symbolism—being the number to express the world and divine revelation (Baehr's *Symbolik*, i. 119, sq.)—this consideration must not be lost sight of.

We next meet with cherubim in Exod. xxv. 18 (xxxvii. 7), where Moses receives the command to make two cherubim of solid gold, one at each end of the capporeth or mercy-seat, and out of the same piece with it (כְּרֻבִים, with outstretched wings and 'faces one to another and towards the mercy-seat.' Here, again, the introduction of the cherubim is equally abrupt, and it is most remarkable that, while the minutest instructions are given for the other details of the tabernacle furniture, the cherubim are left entirely undescribed, and we only learn that they were single figures with faces and wings. But with what faces? If we may trust the unanimous testimony of Jewish tradition, we must suppose that they are the faces of human beings, according to the positive assertion of Maimonides, Abarbanel, Aben Ezra, etc. (Otho. *Lex. Rab. s. v. Cherubim*; Buxtorf, *Hist. Arc. Fœd.*, p. 100). In this connection, we may observe, without pressing it into the argument, the fact that the phrase 'faces one to another,' is literally, 'faces, man to his brother' (אִישׁ אֶל־אָחִיו), * Exod. xxv. 20); nor do we see any difficulty in the command that they were to look 'one to another' 'towards the mercy-seat,' because the former expression may only mean that they were to be exactly opposite to each other. Similar figures were to be enwoven on the ten blue, red, and crimson curtains of the tabernacle (Exod. xxvi. 1). The promise that God would 'meet and commune with Moses from between the two cherubim' (Exod. xxv. 22), originates the constant occurrence of that expression as a description of the divine abode and presence (Num. vii. 89; I Sam. iv. 4; Is. xxxvii. 16; Ps. lxxx. 1; xcix. 1, etc.)

It has been sometimes disputed whether the colossal cherubim of olive wood, overlaid with gold, with outspread wings, touching in the centre of the oracle and reaching to either wall, placed by Solomon in the Holy of Holies, were substitutes for, or additions to, the original golden pair. The latter is probably the truth, for had the Mosaic cherubim been lost, we should have been informed of

* Compare the corresponding phrase אִשָּׁה אֶל־אָחִיהָ, 'woman to her sister,' where *wings* only are referred to. Hence it is an error to lay any stress on what is a mere idiom. 'Cherubim' are sometimes spoken of in the masculine, sometimes in the feminine; another proof of their indeterminate character.

the fact. All that we learn about these figures is, that they each had a *body* ten cubits high (1 Kings v. 23), and stood on *their feet* (2 Chron. iii. 13), so that the monstrous conception of winged child-faces is an error which should long ago have been banished from Christian iconography (De Saulcy, *Hist. de l'Art Judaïque*, p. 25). The expression 'cherubims of *image work*,' in 2 Chron. iii. 10 (כְּרֻבִים מְעֻשִׂים, LXX., ἔργον ἐκ ξύλων, Vulg. *opere statuario*, Marg., of *moveable work*), is very obscure, but would probably give us no farther insight into the subject (Dorjen, *de opere Zaazyim* in Ugolini, *Thes.* viii. No. 6); but in 1 Chron. xxviii. 18, 19, we learn that David had given to Solomon a model for these figures, which are there called 'the *chariot* of the cherubim' (Vulg. *quadriga* cherubim). We are not to suppose from this that any wheels supported the figures, but we must take 'cherubim' in apposition to 'chariots' (Bertheau, *ad loc.*) The same phrase is found in Eccles. xlix. 8, and is in both cases an allusion to the poetical expression, 'He rode upon a cherub, and did fly' (2 Sam. xxii. 11; Ps. xviii. 10), an image magnificently expanded in the subsequent vision of Ezekiel, which for that reason has received from the Rabbis the title of מְרֻכְבָּה, 'the chariot.' Although the mere word 'cherub' is used in these passages, yet the simple human figure is so totally unadapted to perform* the function of a chariot, that we are almost driven to the conclusion arrived at by De Saulcy on this ground alone, that the normal type of the cherub involved the *body of an ox*, as well as spreading wings and a human face (*Hist. de l'Art Judaïque*, p. 29). If this conjecture be correct, we shall have in these symbols a counterpart, exact in the *minutest particulars*, to the human-headed oxen, *touching both walls with their wings*, which have been discovered in the chambers of Nimroud and Khorsabad. This close analogy has been pointed out by Mr. Layard and others (*Nineveh and Babylon*, ii. 643). We shall find further on, the strongest additional confirmations of this remarkable inference. We may here mention the suspicion of its truth, which we cannot but derive from the strange reticence of Josephus, who in one place (*Antiq.* iii. 6. 5) calls the cherubim winged *creatures*, unlike any existing shape (Ζῶα περιεῖνά, μορφήν δ' οὐδένη τῶν ἰπ' ἀνθρώπων ἐωραμένον παραπλήσια), and in another (viii. 3. 3), declares that no one could *even conjecture* their true form (οὐδεὶς ὁποῖα τινας ἦσαν εἰπεῖν οὐδ' εἰκόσαι δύναται). Now, it is hardly conceivable that an emblem seen daily by multitudes of priests, and known to the Jews from the earliest ages, could be so completely secret and forgotten as this. If the cherubim were simply winged genii, there would have been no possible reason why Josephus should have been ashamed to mention the fact, and, in that case, he would hardly have used the ambiguous word Ζῶον. If, on the other hand, they were semi-bovine in shape, Josephus, who was of course familiar with the revolting idolatry of which his nation was accused (Tac., *Hist.* v. 4; Jos. c. *Apion*, ii. sec. 7, p. 475), had the best reason to conceal their real form (Spencer, *de Legg. Ritt. Hebr.*, III. iv. 2 ad ff.), and to avert, as far as possible, all further inquiry about them.

* It must be admitted that Ps. lxxviii. 17, slightly invalidates the inference.

Arks, surmounted by mysterious winged guardians, were used in the religious service of most ancient nations, and especially in Egypt (Plut. *de Isid.*, xxxix.; Wilkinson's *Anc. Egypt.*, v. 271; See ARK), but none of them involved the sublime and spiritual symbolism of the cherubim on the mercy-seat,—at once* guardians of the Divine oracles and types of God's presence for the expiation of sin. But a question here arises, how the profuse introduction of these figures into the tabernacle was reconcileable with obedience to the second commandment. It is certain that the rigid observance of this commandment was as serious a hindrance to the plastic arts among the Jews as the similar injunctions of the Koran are to the Mohammedans; and yet no word of condemnation was breathed against the cherubim, though Josephus even ventures to charge Solomon with distinct disobedience to the Law for placing oxen under the brazen sea (ἀμαρτεῖν αὐτὸν ἐτύχεν καὶ σφαλῆναι περὶ τὴν φυλακὴν τῶν νομίμων). The cherubim, indeed, were made in obedience to a distinct command; but how was it that they did not offend the consciences or seduce the allegiance of the theocratic Hebrews? The answer seems to be, that the second commandment only forbids the plastic arts when prostituted to the direct object of idolatry, and Tertullian is right in defending the introduction of cherubim on the ground that they were a *simplex ornamentum* (c. *Marcion*, ii. 22); even the Talmudists allowed the use of images for purely decorative purposes (Kalisch on *Exod.*, p. 346). Besides, they represented created beings as created beings, and also as themselves in the attitude of humility and adoration (*Exod.* xxv. 20; *1 Pet.* i. 12), so that instead of violating the commandment they expressed its highest spirit, in thus vividly symbolising God's supremacy over the creatures which stood on the highest step of life, and were, in fact, the ideal of absolute and perfect created existence (Bähr, *Symbol.* i. 340, sq.) We may add that the danger was less, because, in all probability, they were seen by none but the priests (Cornel. a Lapide on *Exod.* xxv. 8); and when, in the desert, the ark was moved from place to place, it was covered over with a triple veil (*Num.* iv. 5, 6), before which even the Levites were not suffered to approach it (Bochart, *Hieroz.* II. xxxiv. ad. ff.) It may even be the case that the shape of the cherubim was designedly considered as indefinite and variable—'eine† wandelbare Hieroglyphe'—that the tendency to worship them might still further be obviated. This wavering and indistinct conception of them was due to their symbolical character, a fact so thoroughly understood among all Oriental nations as at once to save the Jews from any strong temptation, and to raise them above the breath of suspicion. It is both important and necessary to bear this in mind, because it will save us from futile inquiries as to the objective reality, as well as the ideal truth of cherubic existences. Had they been 'a likeness of anything,' instead of a changeable emblem, they

could hardly have been regarded as otherwise than idolatrous; but in the words of S. Thomas Aquinas, 'Non ponebantur ad cultum, quod prohibebatur primo legis præcepto, sed in signum mysterii.' We again find here an argument in favour of a shape other than that of a mere winged man. Such figures, the direct representations of angels, would have been far more dangerous and questionable than such a compound enigma as a human-faced and winged ox. The latter would be in direct accordance alike with the letter and spirit of the Decalogue; the former would be only defensible if it resulted from a direct command.

A remarkable comparison in Ezekiel (xxviii. 14-17) throws great light on our views about the nature and object of these cherubim on the Capreth, and also serves to bring them into connection with the vengeful guardians of Paradise, and to confirm their purely emblematical character. In this passage the king of Tyre, in his 'wisdom, beauty, magnificence, and perfection,' under his robe and canopy of ruby, chrysolite, and chryso-prase, and in the midst of flutes and tabrets, is compared to one who has been 'in Eden the garden of God,' to 'the anointed cherub that covereth,' and to 'the covering cherub from the midst of the stones of fire.' The first of these expressions (v. 14) is rendered by St. Jerome, 'Tu es cherub extensus et protensus sc. arcam,' and is obviously an allusion to *Exod.* xxv. 20, *1 Kings* vi. 24, as is clear from the reference, in the same verse, to the 'holy mountain of God'; the 'stones of fire,' or gems of fiery splendour (cf. *Mart.* xiv. 109; *Stat.*, *Theb.* ii. 276) are the hidden palace-treasures of the secluded monarch (cf. *Lucan.*, *Pharsal* x. 112); while the king himself, guarding them in the midst of his lonely splendour, recalls to the mind the glorious beings who protect the material beauties of Paradise, and the mysterious moral treasures of the Divine Covenant. That these beings are typically regarded, appears yet further in the opening expression (v. 12), 'thou art the seal of similitude, and the crown of beauty' (LXX. vers.)—i.e., thou art like a splendid hieroglyph of created pre-eminence.

As yet we have only heard of cherubs presented as single figures, but the composite creature-forms, with which we are familiar through Ezekiel and the Apocalypse, had their archetypes also in the temple. For we are told that, on the borders of the molten sea, and on the plates of the ledges, Solomon graved lions, oxen, and cherubim, and 'cherubims, lions, and palm-trees' (*1 Kings* vii. 29, 36). Villalpandus explains these passages by apposition, as though the lion and oxen were themselves cherubic emblems; and in this there is little doubt that he is right, as may be seen from the parallel description in *Ezek.* xli., where the figures of men and young lions between palm-trees are called cherubim (vv. 18, 19). Indeed it seems clear that a figure with either of the four component faces may be called a cherub, and the shapes of Ezekiel's vision, which were the fullest and completest emblem of these existences, might be ideally indicated by a single shape and face. Besides, as a quadriform shape could not, in days when perspective was unknown, be represented in alto-relievo on a flat surface, the artist, whether a Bezaleel or a Hiram, could only represent two, or one face as visible at a time, and by alternating the faces give the full type. The absence of eagle-

* We may mention two fanciful applications of these figures. Some have compared them to the two angels (*John* xx. 12) in the tomb of Christ (*Otho, Lex. Rabb.* s. v.); others to Jews and Gentiles opposed to each other, yet both looking to a common mercy-seat (*Godwin's Mos. and Aar.* ii. i. 7).

† J. F. v. Meyer.

headed figures in Solomon's actual, and Ezekiel's mystic temple, is the less surprising, because the aquiline element was abundantly symbolised by the mantling wings (Spencer, *de Legg. Hebr. l. c.*) We cannot, however, agree with Grotius, Spencer, etc., in supposing that, פְּנִיִּים, means *appearances* and not *faces*, so that the cherub would be regarded as a single-headed figure composed of four elements; an opinion obviously untenable, and amply refuted by Gataker, *Miscell. Advers.*, II. x., p. 323 (see Rosenmüller, *Schol. in Ezek. i. 10*).

We now pass to 'the chariot' or vision of Ezekiel, which must always be regarded as the *locus classicus* respecting cherubs. In the first of these sublime visions (Ezek. i. 4-28), the prophet sees a whirlwind out of the north, a great cloud and an infolding fire (comp. Gen. iii. 24, 'a sword infolding itself'), and out of the midst of this rolling amber-coloured flame, the dim outline of four quadriform *living-creatures*, with straight legs, calves feet, and the similitude of a human hand under their four wings. The faces were those of a man, an ox, a lion, and an eagle; and they flashed to and fro like lightning. They (or it) were uplifted on the broad concentric hands of dreadfully high living wheels, and supported on their heads, or head (for, as they are both masculine and feminine, so they are both four and one, plural and singular, vv. 5, 19, 20, 21, 22), a firmament like terrible crystal, whereon gleamed the likeness of a sapphire-coloured throne, on which in dim human Epiphany was seen the glory of God. They are silent, and the Prophet did not know what they were, except that they were הַיְיָ, 'a living creature,' or חַיִּוִּת, 'living creatures.' But in Ezek. x., when they again appear as the gorgeous chariot-throne of Jehovah, then, and then first, he recognises that they are cherubim (x. 20), and he adds the additional particulars that their wings sounded like thunder (x. 5, Ps. xxix. 3), and that their *bodies*, as well as the peripheries of their wheels, were 'distinct with eyes.' In this new description the prophet adds a single expression, which, in all probability, is the clue to the right understanding of the subject; for, in v. 14, he says, 'the first face was the face of a cherub,' the second of a man, the third of a lion, and the fourth of an eagle. Comparing this with Ezek. i. 10, we find that 'the face of a cherub is identical 'with the face of an ox.' If we set aside all preconceived prejudices, and the influence of long tradition, we seem driven by this to the* *irresistible* conclusion that the idea of the cherubic shape was *predominantly* bovine; or, at least, if this inference (unhesitatingly adopted by Grotius, Spencer, Bochart, etc., who speak of them as Angeli *μοσχουμορφοί*) should seem to militate against Ezek. i. 5, it is certain that the cherubim, when represented as single figures, were either represented as winged oxen (*perhaps* with human heads) or as winged men. But Ezek. i. 5 refers, we believe, only to the erect figure, the 'os sublime,' while the prominent mention that they had

human hands three times repeated (Ezek. i. 8; x. 8, 21), would be singularly superfluous if the human figure was their normal type. We have already seen other strong reasons to adopt the belief that they were normally represented as *winged oxen*, and the proofs of that position will accumulate as we proceed.

Instead of 'full of eyes,' some would render עֵינָי, 'colours,' referring it to the fugitive opalescent reflected tints which fell about them, and asking what was the use of these eyes when the faces looked every way, or how on feathers there could be room for the sensorium, optic nerve, etc. (Taylor's Calmet, Fr. clii. cclxxxiii.) It is superfluous to observe that the question is decided at once by γέμοντα ὀφθαλμῶν, in Rev. iv. 6, and we only mention it to shew the absurdities necessarily involved in these heavy attempts to reduce the rapture of a prophetic ecstasy into shapes of anatomical precision. Such matter of fact criticisms of glowing poetic imaginations are radically erroneous, as all attempts are which confuse rhetoric with logic. The fact that even a Raphael (in his vision of Ezekiel) fails to give any satisfactory picture of the marvellous image, suffices to prove the inadequacy of the highest* art to attain the sublime heights of the poet's inspired imagination. A curious resemblance has been pointed out between the general features of the molten sea in Solomon's temple, and this compound image (Vitringa, *Observatt. Sacr.* IV. i. sec. 17, *sq.*); nor is it strange, considering how often this imposing object must have been seen by Ezekiel in his boyhood, and how strong a hold every ornament of that beloved temple took on his priestly and devout imagination.

It was professedly in *vision* that Ezekiel saw the cherubim (Kimchi on Ezek. x. 8), and it is idle to attribute objective reality to the imagery of a dream. Who has thought of inquiring whether the ladder of Jacob or the great sheet of St. Peter were actual and material things? The ideal truths thus revealed to the prophet were necessarily translated into the forms of his finite understanding, and were thus permeated by his own individuality, and coloured by the circumstances of his life. The cherubim of this Apocalypse were so moulded by the workings of his high imagination, that he did not at first recognise the old Mosaic symbol in these mysterious beings who formed for the Divine Being at once a living chariot and a lightning throne. We shall afterwards explain the chief details of the composition which recur in the 'living creatures' of the Revelation of St. John (Rev. iv. 6-11; v. 8), where the rendering of Ζῶα by 'beasts' is the most unfortunate in the whole English version. It should be rendered 'Immortalities,' and they differ from the cherubim of Ezekiel in having six wings instead of four, in speaking and giving praise instead of keeping an awful silence, and in being single instead of quadriform. We have, however, already seen that even in Ezekiel there is a perpetual variation between one single tetramorphic being, and the 'four-fold-visaged four.'

* Lightfoot seems to think that the cherubim of the Holiest were quadriform, and explains this verse by the precarious supposition that the bovine face was at the high-priest's right, and was therefore the one he saw most often and most clearly (*Descript. Templi., Opp.* I. 652).

* An attempt to render the cherubim of Ezekiel in a Greek Mosaic of Mount Athos (given in Mr. Jamieson's *Sacred and Legendary Art*, p. 136, No. 49) is not wholly destitute of a rude sublimity. See, too, Milton's magnificent amplification, *Par. Lost*, vi. 744, *sq.*, 836.

We are then, from a review of all these passages, entitled to infer that *although the complete symbol of the cherubim was composed of four separate or united forms of life, they might be sufficiently indicated by any one of these four elements, and that the shape in which they were commonly represented was either that of a winged ox (perhaps with a human head), or of a winged man (perhaps with calves' feet).* The final argument, which to our minds gives preponderance to the former view, is the overwhelming amount of proof which tends to shew that Aaron in the wilderness, and Jeroboam at Dan and Bethel, intended by the figures, which in Scripture are contemptuously called calves, to establish for the materialising vulgar unconcealed cherubic emblems, not as involving a new cultus, like Baal-worship or Apis-worship, but to give popular expression to the worship of Jehovah (see Exod. xxxii. 5; 1 Kings xii. 28). This fact is a strong corroboration of the conclusions at which we have inductively arrived, but its further development belongs to another place (see Monœus de *Vitulo Auroo*, Critici Sacri, vol. ix. Bochart, *Hieroz.* ii. 34, 41, and CALF). It only remains to add, that a prevailing animal form in the cherubim may well have originated the strange calumny (above alluded to) that the Jews and Christians worshipped the figure of an ass (Joseph. c. *Apion.* II. p. 475; Tac. *Hist.* v. 4; Diodor. *Fragn. Lib.* xxxiv. and 40, ἐρῶν ἐν αὐτῷ λίθων ἄγαλμα ἄνθρωπος βαθυπύγῳ καθήμενον ἐπ' ὄνου. Tert. *Apol.* 16 ad *Natt.* i. 14; Epiphani. de *Hæres.* xxvi. 10; Min. Fel. *Oct.* ix.). We know that the Jews and Christians were, till the war of Barchocebas, constantly confounded together, and among many conjectures we can find no more probable origin for this 'inepta persuasio.'

II. Having thus determined approximately the shape of the symbol, we proceed to consider *what it was intended to represent*, what were the cherubim supposed to be? About the answer to this question there need be no doubt; they were intended to represent divine existences in immediate contact with Jehovah. This was the view of Chrysostom, Athanasius, Ambrose, Augustine, and the Fathers generally (Sixt. Senensis, *Bibl. Sanct.*, p. 348), and the Pseudo Dionysius places them second (between seraphim and thrones) in the nine orders of the celestial hierarchy (Dion. Areop. de *Cælest. Hier.* 5-9). The Kabbalists, on the other hand, placed them ninth in their ten choirs of spirits (Buddæus, *Philos. Hebr.*, p. 415). The nature of the passages in which they occur—passages poetical and highly-wrought; the existence of exactly similar images among other nations, and the purely symbolic character of their form, has led, not only Jewish allegorists like Philo, and Christian philosophers like Clemens of Alexandria, but even such writers as Hengstenberg, Keil, Neumann, etc., to deny them any personal reality, and in this way we may explain Zullich's definition of them as 'mythical servants of Jehovah' (*Die Cherubim-Wager*, Heidelb. 1832). Thus, in the vision of Ezekiel, it is obvious that their animal shape and position implies subjection to the Almighty; that the four heads, uniting what were, according to the Jewish proverb, the four highest things in the world (Schoettgen's *Hor. Hebr.* ad Rev. iv.)—viz., the lion among beasts, the ox among cattle, the eagle among birds, and man among all, while God is the highest of all,—con-

stitute them the representative and quintessence of creation, placed in subordination to the great Creator (Leyrer, in *Zellers Wörterb.* s.v.) The heads, too, represent not only creatures, perfect after their kind, but also perfect qualities, as love, constancy, magnanimity, sublimity, the free consciousness of man, the strong courage of the lion, the enduring strength of the ox, the rapid flight of the eagle (Hoffman); and possibly the number four may indicate the universe as composed of four elements or four quarters. The four traditional (?) standards of the quadrilateral Israelite encampment (Num. ii.), the lion of Judah, the man of Reuben, the eagle of Dan, the ox of Ephraim, are far too uncertain to be relied upon. Their eyes represent universal knowledge and insight (cf. Ov. *Metam.* i. 624, and the similar symbol of the Phœnician god Taut, mentioned by Sarchoniatho, ap. Euseb. *Præp. Evang.* x. p. 39), for they are the eyes of the Lord, which run to and fro through the whole earth (Zech. iv. 10). The wings imply speed and ubiquity; the wheels are necessary for the throne-chariot, itself a perfect and royal emblem, and so used by other nations (Chrysost. *Orat.* xxxv. 1); and the straight feet imply the fiery gliding and lightning-like flash of their divine motion (cf. *νέπιδες*). We purposely avoid the error of pressing the minor particulars, such as those suggested by Clemens Alexandrinus, when he supposes that the twelve wings hint at the twelve signs of the Zodiac (*Stromata*, V. cap. vi. sec. 37, p. 240, ed. *Sylb.*) Thus explained, they become a striking hieroglyphic of the dazzling consummate beauty of universal creation, emanating from and subjected to the Divine Creator, whose attributes are reflected in his works. And thus, too, it becomes more than ever obvious that we are dealing with an allegory, and the most learned of the Christian fathers is right when he distinctly asserts οὐδ' ἔστι τὴν ἀρχὴν ἐπισυνθετόν τι καὶ ἀσθητόν ζῶον ἐν οὐρανῷ ὡς πῶς ἔχου, Σύμβολον δ' ἔστι, κ. τ. λ.; a symbol, he proceeds, speaking of the Mosaic cherubim, the face of reason, the wings of Liturgies and Energies, the voice of thankful glory in ceaseless theoria.

It is clear that the interpretation of the symbol must be as variable as the symbol itself, and we shall accordingly find that no single explanation of the cherubim can be accepted as adequate, but that the best of the various explanations contain elements of truth which melt and fade into each other, and are each true under one aspect. Unsatisfactory and vague as is the treatise of Philo 'on the Cherubim and Flaming Sword,' it has at least the merit of seizing this truth. Thus, discarding his astronomical vagaries which are alien to the spirit of Mosaism (Kalisch on Exod., p. 496), we may safely follow him in regarding the cherubim as emblems at once of divine perfection (*τὰς τοῦ Ὁυτος δυνάμεις τὴν τε ποιητικὴν καὶ βασιλικὴν*), personifications in fact of natural power employed in God's service, as De Wette holds; and emblems also of the divine attributes, his slowness to anger, his speed to love (Grotius on Exod. xxv. 18; Bochart, *Hieroz.* ii. 18; Rosenmüller, *Scholia in Ezek.* i., *δύναμιν εὐέργειαν καὶ κολαστήριον*; Philo, *περὶ τῶν Χερουβ. καὶ τῆς φλογ. ροφῆς*, sec. 7-9; *De Vita Mos.* p. 688). Both of these views are admissible; the cherubim represent at once the subordination of the universe to God (*Pirke*, R. Elieza, c. 3; *Schemoth Rabba*, sec. 23, ap. Schoettgen, *Hor. Hebr.* ad

CHERUBIM.

1.

2.

1. Man-headed Winged Bull, from Khorsabad.
2. Winged Symbolical Figure, from a bas relief, Nineveh.

Apoc. iv. 6, τῆς βασιλείας αὐτοῦ σύμβολον; *Isidor.*, lib. iv. ep. 70; Alford on *Rev.* iv. 8), and the glory of Him whose servants they are (Χερουβιμ δοξῆς, Heb. ix. 5); 'as standing on the highest step of created life, and uniting in themselves the most perfect created life, they are the most perfect revelation of God and the divine life.' This is the conclusion of Baehr, whose whole treatment of the subject, though over-ingenious, is the most valuable contribution to a right understanding of this important and interesting question (*Symbolik*, i. 340).

As the other suggestions of their meaning are, for the most part, mere adaptations, they may simply be mentioned and passed over; as that the cherubim represent the four archangels; the four major Prophets; the church (Cocceius); the two uncreated angels, *i.e.*, the Son and the Holy Spirit (Hulse); the two natures of Christ (Lightfoot); the four ages of the world (Kaiser, *de Cherubis humani generis mundique ætatum symbolis*, 1827); or God's fourfold covenant with man in Christ, as man, as sacrificed, as risen, and ascended (Arndt, *Wahres Christenthum*, iv. 1, 6). We may mention also for their curious absurdity the notions of Justin Martyr (*Quæst.* xlv.), that the cherubim represent Nebuchadnezzar in his overthrow and madness; of Clermont, that they are the northern army of Chaldeans; and of Vatke, that they symbolise the destructive powers of the heathen gods. The very wide spread and early fancy which attached the cherub figures to the four evangelists is equally untenable, though it first appears in the Pastor Hermas, and was adopted by the school of St. John (*Iren. adv. Hær.* iii. 2. 8; Athanas. *Opp.* v. 2, p. 155; August. *de consens. Evang.* i. 6; Jerome *Grol. ad Ewv.* ep. 50 *ad Paulin*; Greg. *Hom.* 4 *in Ezek.*; Adam de St. Vict. *Hymn de Ss. Evang.*, etc.) The four, in their union, were regarded as a symbol of the Redeemer—

'Est homo nascendo, vitulusque sacer moriendo,
Et Leo surgendo, caelos aquilaque petendo.'

(See Trench's *Sacred Lat. Poetry*, p. 61; Mrs. Jamieson, *Sacred and Leg. Art.*, p. 135). The last to maintain this view is Dr. Wordsworth (on *Rev.* iv.), who is rightly answered by Dean Alford (*ad loc.*).

3. What was the office ascribed to these symbolic beings whose shape and nature we have examined? It is mainly twofold, viz.—1, a protective vengeful function in guarding from man's too close intrusion the physical and moral splendours of a lost paradise and a sacred revelation; and 2, to form the throne and chariot of the divine being in his earthly manifestations, and to guard the outskirts of his unapproachable glory (Eichhorn, *Einleit.* iii. sec. 80). The cherubim engraved and woven in the temple decorations, while they symbolise this function, serve also as 'a seal of similitude,' *i.e.*, as heraldic insignia of the divine attributes to mark Jehovah's presence by their guardian ministries (*Isidor.* iv., ep. 73). At the same time, from another point of view, they were no less significant of the fulness of life subordinated to him who created it. A reference to the Apocalypse enables us to combine these conceptions with a far sublimer truth, and to explain the connection of the cherubim with the mercy-seat as a type not only of vengeance but of expiation and forgiveness. For in the vision of St. John these immortalities appear in the same choir with the redeemed innumerable

multitude of the universal church (iv. 7; v. 13); no longer armed with flaming swords, with wrathful aspect, and repellant silence, but mingling with the elders, and joining in the new song. And here, too, we find the recovered Eden, the water of life flowing freely, and the tree of life with no flame to hedge it round. Thus it is in the Apocalypse that the fullest and divinest significance is attached to this profound emblem. In the cherubim of the last book of the Bible we find the highest explanation of the cherubim in the first. The apparent wrath which excluded man from the forfeited paradise,* was but the mercy in disguise, which secured for him its final fruition in a nobler form of life. And thus, to give the last touch of meaning to this changeful symbol, we catch in it a gleam dim at first, but growing into steady brightness, of that redeemed created perfection, that exalted spiritual body, for which is reserved hereafter the paradise of God. Beyond this we cannot go; but we have said enough to shew the many-sided applicability of this inspired conception—a many-sidedness which is the strongest proof of its value and greatness.

4. It is most important to observe the extraordinary resemblance of the cherubim, as described in Scripture, to the symbolical religious fancies of heathen nations. It is not true in any sense to say with Kurz that the animal character is far more predominant in the emblems of heathen pantheism. Even if we concede (which is more than doubtful) that the simplest conception of Cherubim was represented by winged men, we find four-winged and six-winged human figures in the sculptures of Nineveh (Layard, i. 125). In fact, there is no single cherubic combination, whether of bull, eagle, and man (Layard, *Nineveh*, i. 127); man, lion, and eagle (*Ibid.*, pp. 70, 349); man and eagle (*Ibid.*, i. 64); man and lion (*Ibid.*, ii. 463); or to take the most prevalent (both in Scripture and in the Assyrian sculptures), man and bull (*Ibid.*, i.), which may not be profusely paralleled. In fact, these woodcuts might stand for direct illustrations of Ezek. xli. 19; *Rev.* iv. 6, sq.; I Kings vii. 29, etc.; and when we also find 'wheels within wheels' represented in the same sculptures (*Ibid.*, ii. 448), it is Mr. Layard's natural inference, that Ezekiel, 'seeking to typify certain divine attributes, chose forms familiar not only to himself, but to the people whom he addressed' (*Id.*, *Ibid.*; see, too, *Nineveh and Babylon*, ii. 643); or, as we should greatly prefer to see it expressed, the familiar decorations of the Assyrian temples moulded the forms of his imagination, even at its most exalted moments. But, as we have already seen, Ezekiel was far more likely to have been supplied with this imagery by the sacerdotal sympathies which impressed his memory with the minutest details of the temple at Jerusalem; and the same symbols were not exclusively Assyrian, but were no less familiar to the Egyptians (Porphyry, *de Abstinent.* iv. 9; Ritter, *Erkunde*, viii. 947; Witsius, *Ægypt.* ii. 13), the Persians (*Hdt.* iii. 116; iv. 13; Ktes. *Ind.* xii; *Plin.* vii. 22; Wilkinson's *Anc. Egypt.*, *passim*;

* For an explanation of the reason why the cherubim belonging to an elohistic sphere appear in Gen. iii. in the Jehovistic sphere, a question which at present would have little interest to English readers, See Kurz in Herzog's *Cyclopædia*, s. v., and *Geschichte des Alten Bundes*. Disagreeing widely from some of his conclusions, we have gained much from his remarks.

Chardin's and Niebuhr's *Travels*); the Greeks (Pausan. i. 24, 6); the Arabians (D'Herbelot, *Bibl. Orient.*, s. v. Simourg. Anka), and many other nations (Plin. x. 49, 69; Parkhurst's *Lexicon*, s. v.) On this subject generally, see Kreuzer *Symbol*, i. 495; Rhode, *Heil. Sage S.*, 217; and Rödiger in Ersch. and Gruber, s. v. Cherub. The similarity to the sphinx is such as to have led even in early times to a very strong belief that the idea of the Mosaic cherubim was in some way derived from them (Clem. Alex., *Strom.* V., cap. vi., sec. 37, ed. *Sylb.* p. 240; Orig., *c. Cels.*, iii. p. 121; Euseb. *Præp. Evang.*, iii. 12). For a number of weighty arguments to this effect, see Bochart, *Hieroz.*, II. xviii. xxxiv. and xli.; Spencer, *de Legg. Ritt.*, III. iv.; and especially Hengstenberg, *Die BB. Mos. u. Äg. S.* 157, sq. And besides these external coincidences, still more striking, perhaps, are the cherubic functions ascribed in Greek mythology to the fiery-breathing bulls which guarded the golden fleece (Ov., *Mel.* vii. 104), to the winged dragon of the Hesperides, to the resuscitated Phoenix, to the Gryphons (lion-eagles) who kept the Arimaspians from their guarded gold (*Æsch.*, *Prom.* v. 843; *Meld.* ii. 1; comp. Milton, *Par. Lost*, ii. 943), and to the thundering-horses that draw the chariot of Jupiter (Hor., *Od.* i. 34, 7). Influenced by too exclusive an attention to these single resemblances, Herder identifies the cherubim with the mythic gold-guarding monsters of antiquity (*Geist. der Hebr. Poes.* i. 163), and J. D. Michaelis with the Equi Tonantes (*De Cherubis*. Comment. Reg. Soc. Götting. i. 157; Velthusenius, *Von den Cherubinen*, Braunschweig, 1764, etc.; Schleusner, *Lex. N. T.* s. v. Χερουβ). Similarly, Justin Martyr considers that Plato borrowed from the Scriptures his πτηνὸν ἄρμα of Zeus (πρὸς Ἑλληνας, p. 30). From these conclusions we dissent. It seems far more likely that the Hebrews were in the most ancient times acquainted with a symbol familiar to so many nations, than to suppose either that they borrowed it from the Egyptians, or that any other nation adopted it from them. In fact, the conception belongs to the common cycle of oriental tradition, fragments of which were freely adopted by the Hebrew writers, who always infused into them a nobler meaning and an unwonted truth.

5. It may appear presumptuous to inquire into the phenomena which suggested the germ of the cherubic symbol. Yet we think that there are traces in the Bible that the primary type of these celestial beings was derived from those wreathing fires and rolling storm-clouds which were always regarded as the most immediate proofs of divine proximity. The clouds, which are God's chariot, were early and naturally personified as sentient attendants; and the creatures of poetic metaphor—inseparable from Semitic modes of thought—were soon invested with objective existence. It would have been impossible for a Hebrew poet to speak of the dark and fleeting storms and vivid lightning-flashes without attributing them to a living agency; and hence the air, and the fire, and the wind, were to him the attendants of Jehovah, and 'he did fly upon the wings of the wind,' is the natural pexegesis of 'he rode upon a cherub and did fly.' The magnificent passage in Ps. civ. 3, 4, is, in fact, a distinct recognition of this method of description. In Zech. vi. a vision of four chariots represents the four spirits, or 'winds,' of heaven; and the Jews call the doctrine of angels (which they con-

sidered to be revealed in Ezek. i.) by the name of מַעֲשֵׂה הַמְּרֻבָּה, or *opus vehiculii*. In confirmation of this view, compare Deut. xxxiii. 26; Exod. xix. 18; Ps. lxxviii. 4; Hab. iii. 5, with Ezek. i. 4, 13. For the seraphim, see SERAPHIM; several circumstances distinguish them clearly from the Cherubim, and we disagree with Hendewerk, who regards them as identical (*De Cher. et Ser. in Bibliis, non diversis*, 1836).

6. We may now proceed to the derivation of the name, but we can only give the chief conjectures, with their several authorities. They will be explained and justified for the most part by what has been already said, but it is impossible to decide between their respective merits. From Semitic sources we have the following conjectures—1. That the word is derived from כָּרַב *aravit*, and means 'the plougher' or 'ox,' as it is used for שׂוֹר in Ezek. i. 10; x. 14. This is the derivation most generally adopted. 2. By metathesis from רֶכֶב, 'a chariot,' Ps. xviii. 11, etc. (Lud. de Dieu, Rödiger, etc.) 3. For קְרוֹב, 'near,' meaning the angels nearest God (Hyde, *de Rel. vet. Pers.* p. 263). 4. From כָּרַם, 'noble,' (Maurer on *Is.* vi. 2, cf. שְׂרָפִים). 5. From כְּרוּבִיא, 'like a boy,' adopted by most of the Rabbis (Otho, *Lex. Rab.*, s. v.; Buxtorf, *Hist. Arc.* p. 100). 6. From חֲרָה, 'he consecrated' = guardian, or attendant. 7. From כַּי, like, רַב, powerful, like Cabeiri = θεοὶ δῶνατοι. See Ps. ciii. 20; *δυναμεις*, 1 Pet. iii. 22; ἀρχαί, Eph. i. 21. 'Scriptura solent vocare Cherubim quiddam potens est.' Procopius on *Gen.* iii.; Theodor. in *Gen.* 7u. xlv. 8. From a Syriac root meaning to cut (cf. *carve*). This is suggested by Hävernick on *Ezek.*, p. 5. Hence Abenezra says that cherub is the same thing as צִוּרוֹ, and means any artistic figure (Schulten's *Prov. Salomon.* p. 472). Keil on 1 Kings v. 9. The oldest derivation is from רַב and נֶכַר, as though it meant 'abundance of knowledge,' a meaning once universally adopted (Philo de *Vit. Mos.* p. 688; Clem. Alex., *Strom.* V. p. 240, ed. *Sylb.*, πλῆθος γνῶσεως; *Lex. Cyrilli*, ἐπίγνωσις πληθομένης; *Fragm. 7. Lex. Origin.* p. 114; 'Multitudo scientiæ,' Jerome on *Is.* vi. 2; Dionys. de *cel. Hier.*, vii. p. 96; Spencer, *de Legg.* III. 3. 1, etc.) Hence the remark of Thomas Aquinas, 'Nomen Seraphim imponitur ab ardore, qui ad charitatem pertinet, nomen autem Cherubim imponitur a scientiâ' (I. i. qu. 108, cap. vii.) This distinction between the fiery zeal of seraphs and the wisdom of cherubim is often alluded to in our earlier divines, as in Jeremy Taylor; 'there are some holy spirits whose crown is all love, and some in whom the brightest jewel is understanding' (Sermon on Advent). To this long list of Semitic derivations (which by no means exhaust the conjectures of the learned) we may add one from the Persian root *grifian*, (Sanskrit *grihî*; Goth. *gripan*, Greek γρῦψ, γρῦπος) 'to seize' (Eichhorn, and Vatke; see Gesen. *Thes.* II. p. 710). If among these conflicting conjectures we might give an opinion, we should most readily adopt the first, which, on philological grounds, is wholly unobjectionable, and which, when taken in connection with the arguments which prove the predominance of a bovine shape in the cherubic symbol, becomes exceedingly probable.

7. It only remains to give a list of the principal

authors who have treated of cherubim. Besides others already quoted, we may mention Philo, *περὶ χερ. καὶ τῆς φλογὸς ῥομφαλῶν*; Clem. Alex., *Strom.* V. cap. vi.; Spencer, *de Legg. Rit.* III. 5, p. 843.; Bochart, *Hieroz.* I. 2, cap. xxxiv., etc.; Carpzov, *Apparat Critic.* p. 268, sq.; J. H. A. Dorjén in Ugolini, *Thes.* viii.; Rödiger, s.v. in Ersch. and Gruber *Cycl.*, tom. xvi.; Bähr, *Symbolik*, I. 340, sq.; De Sauley, *Hist. de l'Art Judaïque*, p. 23, sq.; Jac. Ode, *Comment de Angelis*, I. v. 73; Deyling, *Observatt. Sacr.*, II. 442; Hengstenberg, *Die Bücher Mos. und Egypt.* 8. 157, sq.; Rosenmüller, *Schol. in Ezek.*; Hävernick, *Ezek.* s. 5; Kalisch, *on Exod.*, p. 430; Gesen, *Thes.* II. 710. To these may be added a large number of monographs, the most important of which have already been mentioned or quoted in the article itself.—F. W. F.

[As tending in some respect to illustrate this subject, we subjoin the following figures, copied from ancient monuments, all of which illustrate some one or more of the notions which we attach to the cherubic forms; and while they afford material assistance to our ideas on the subject, they shew that figures of this kind, as sacred symbols, were not peculiar to the Hebrews, and that their presence in the sanctuary was not calculated to excite any surprise among the neighbouring nations, or to lead to the notion that the Jews also were worshippers of idols, for even in the pagan monument they never appear as idols, but as symbols; and it was very possibly this fact—that the cherubic figures were not liable to be misunderstood—which induced the Divine wisdom to permit their introduction into the most holy place. Of all these, the most remarkable is the figure sculptured in bas-relief. The first group (No. 185) is from Egypt.

185.

The figures are the more remarkable from being such as appear upon the sacred *arks* of that country, and the disposition of their wings agrees much with one or another of the arrangements which have been ascribed to the cherubim of the Ark. As such figures certainly existed in Egypt before the time of

Moses, this may suggest another reason in addition to that already given, why a particular description of the cherubim was not judged necessary.

The next group of figures (No. 186) is also Egyptian, and shews the diversity of the winged symbols which so often appear on the monuments. Figs. 1 and 8 are such hovering winged figures as

186.

usually surmount the whole of a sacred tablet or shrine; and to such hovering wings there seem some symbolical allusions in Scripture, even when the cherubim are not mentioned. Figure 4, that of a hawk with the face and symbols of Isis, and the crowned and winged serpents (figs. 6, 7), are the only compound images, and, as such, deserve particular attention.

If we proceed to Babylon, similar winged symbols are discovered. The cut (No. 187) is from

187.

an antique gem found at Babylon. It combines the human and quadrupedal forms, with the wings of a bird, and is not unlike the Egyptian sphinx, excepting that the head is that of a man, not of a woman. The next (No. 188) is from a Babylonian cylinder, and is remarkable, as giving not only the wings, but the head of a bird to the human form.

In proceeding to the monuments of ancient

Persia, the winged symbols become still more striking. The very remarkable example in the

Babylonian sphinx in a different position. The other figures in the same cut are frequently re-

188.

annexed engraving is from a bas-relief at Mourg Aub (No. 189), representing a man arrayed in a richly embroidered robe, with such quadruple wings as the vision of Ezekiel ascribes to the cherubim, with the addition of ample horns (the

189.

well-known symbols of regal power) issuing from the head, and upbearing a symbolical crown or mitre, such as is often seen on the heads of the Egyptian gods and their ministering priests.

The next group of figures (No. 190) is collected from different ancient Persian sculptures and gems. Fig. 1 is a hovering winged symbol which occurs as frequently in the Persian monuments as the similar figures do in those of Egypt. 1 and 4 are remarkable as offering a near approach to the traditional figure which has been assigned to angels; and 3 affords a very curious example of quadruple wings, resembling those in No. 189, but being much shorter.

The 4th figure in the cut No. 191 affords a rare example of the combination of the beast, bird, and man, and seems to be the same as the

190.

peated in the Persian sculptures. They are acknowledged Mithric symbols; and, as such, they

191.

go far to evince the purely symbolical character of the cherubic figures. In all of these, except the

last, a warrior is represented grasping with one hand these winged symbols by the single horn, with which all of them are furnished, while he thrusts his sword into them with the other. It is observable that these figures, taken together, include all those which Ezekiel's vision assigns to the Cherubim—the head of a man, an eagle, a lion, and an ox (fig. 5); but we do not anywhere find all these combined in a single figure, as appears to have been the case in the visionary cherubim.

It is of some importance to remark, that the winged symbolical figures of this description are far more rare in the remoter East—in India or China, than in Western Asia.]

CHESALON (כֶּסְלוֹן; Sept. Χασλών), a place mentioned only in Josh. xv. 10. In describing the boundaries of Judah, it is said that 'the border compassed from Baalah westward unto Mount Seir, and passed along upon the side of Mount Jearim upon the north, which is Chesalon.' Chesalon therefore lay on the north side of Mount Jearim, and a subsequent reference shews that Bethshemesh was west of it. Eusebius describes it as a large village in *Benjamin*, on the confines of Jerusalem; Jerome says it lay in *Judah*; but neither defines its true position (*Onomast.* s.v. *Chaslon*).

On the side of a hill five miles east of Bethshemesh is the village of *Keslu*, in which it is not difficult to recognise the ancient Chesalon. Its position on the 'side' or 'flank' of the hill may perhaps have originated the name Chesalon, which signifies the 'flank' (Robinson, *B.R.*, ii. 30; iii. 154; Gesenius, *Thesaur.* s.v.)—J. L. P.

CHESIL (כֶּסִּיל; LXX. Vat. Βαθίλ; Alex. Κασίλ), one of the cities originally assigned to the tribe of Judah, Josh. xv. 30, but probably the same as the Bethul (Josh. xix. 4), which, with other towns, was given up to the tribe of Simeon (Josh. xix. 9), and which is called Bethuel, 1 Chron. iv. 30. Its exact position is unknown.—S. N.

CHEST. I. A box for containing treasures. In this sense it is used in the A. V. for the Heb. כֶּסֶף (Ez. xxvii. 24). This word, in the *Stat. Constr.* כֶּסֶף, occurs Ez. xxvii. 24, where it denotes that in which precious wares are stored; Esth. iii. 9; iv. 7, where it is rendered in the A. V. *treasuries*, but probably denotes properly the place in which the royal treasures were kept, and so would correspond exactly to our *Treasury* (Sept. γὰρο-φύλακτον). The word is formed from כָּסָה (comp. Gr. γὰρα, Lat. *gaza*) and is the same as the Chald. כֶּסֶף, def. כֶּסֶף (Ez. v. 17; vi. 1; vii. 20), which, however, is used rather to denote the treasure itself than that in which it is contained. 2. A box into which money might be dropped (2 Kings xii. 9, 10; 2 Chron. xxiv. 8, 10, 11) or in which reliques might be conveyed (Gen. l. 26). This sort of chest we may presume was of the same form as the Ark of the Covenant, from the same word (אֲרוֹן) being used to designate both. [ARK OF THE COVENANT.]—W. L. A.

CHESTNUT-TREE. [ARMON.]

CHESULLOTH (כֶּסְלוֹת; Sept. Χασαλόθ). In Josh. xix. 18, the border of Zebulun is said to lie 'toward Jezreel, and Chesulloth, and Shunem.'

From this it might be inferred that Chesulloth was situated between Jezreel and Shunem, both of which lie in the valley between Little Hermon and Gilboa; but a closer examination of the whole passage shews that the border towns are named without any regard to their geographical order; and besides, the writer of this article was unable to discover any trace of town or village in the valley between Shunem and Jezreel. In verse 12, *Chisloth-Tabor* is mentioned in the description of the boundary of Zebulun, where it bordered on Issachar, and this is by some supposed to be the same as Chesulloth. [CHISLOTH-TABOR.] From the base of Carmel the line ran eastward, apparently along the banks of the Kishon to Chisloth-Tabor, and to Daberath (now *Debârrieh*), which lay at the base of Mount Tabor. Josephus mentions a town called *Xaloth* in the 'great plain' (*Bell. Jud.* iii. 3. 1), and Eusebius and Jerome speak of it as in the plain near Tabor (*Onomast.* s.v. *Achasselath*).

On the northern side of the great plain of Esdraelon, at the point indicated by the notices in the Scriptures, and in Eusebius and Jerome, stands the little village of *Iksâl*. There can be no doubt that this is identical with *Chisloth* or *Chesulloth*, which is just another form of the same name, and with the *Xaloth* of Josephus. The village is built on a low rocky spur, which shoots out from the base of the mountain range of Galilee. It contains no ancient buildings, and few ruins; but there are around it, and in the neighbouring cliffs, numerous tombs hewn in the rock, such as are usually found near the old towns of Palestine (Pococke's *Travels*, ii. 65; Robinson, *B.R.*, ii. 332; Ritter, *Pal. und Syr.*, ii. 393).—J. L. P.

CHEZIB (כֶּזִיב; Sept. Χασβί), according to the Masoretic text and the LXX., is the name of the place where Judah's Canaanite wife Shuah (verse 2), or Bathshuah (verse 12), gave birth to his third son Shelah. It occurs in this form but once; in Gen. xxxviii. 5. In Josh. xv. 44, the LXX. mentions a Κεζίβ as one of the western cities of the tribe of Judah. This is *Achzib* in the Hebrew text and A. V. Hence the identity of *Chezib* and *Achzib* has been inferred by Grotius and others. [ACHZIB.] The place *CHOZEBA* in 1 Chron. iv. 22 is probably the same. It is mentioned in close connection with Shelah, the son of Judah. But according to the fragment of Aquila, preserved by St. Jerome (in *Quæst. Hebr.*; See also Montfaucon's Origen's *Hexapla, Orig. Opp.*, de la Rue, v. 287), *Chezib* is not a proper name at all. Jerome's rendering of Aquila's version of this passage is—'Et vocavit nomen ejus Selom, et factum est ut mentiretur in partu, postquam genuit eum.' Similarly the Vulgate translates—'quo nato parere ultra cessavit;' as much as to say, that after the birth of this son the mother ceased bearing; which seems a more intelligible statement than—'He [Judah] was at *Chezib* when she bare him.' This sense of Aquila and the Vulgate is also supported by the Peschito Syriac version. Nor is there any objection to rendering *כֶּזִיב* כֶּזִיב by *factum est ut mentiretur, etc.* The root כֶּזִיב, to lie or deceive, is in Is. lviii. 11, applied to the 'failing' or drying up of a spring of water. See Gesenius and Fürst (Lexicon), s. v., and Drusius on Gen. xxxviii. 5. In Micah i. 14, the proper name and the appellative, derived from כֶּזִיב, are brought together in a striking paronomasia.—P. H.

CHIDON (כִּידוֹן; Sept. [*Alex.*] Χειδών; [The word is omitted in the usual (Vat.) text]; Vulg. *Chidon*) is the name given, in 1 Chron. xiii. 9, to the threshing-floor where Uzza met his sudden death when he 'rashly' touched the ark on its way from Kirjath-Jearim to Jerusalem [UZZA]. The locality is not identified. St. Jerome indeed says (*Quaest. Hebr.* Opp. [ed. Ben.] iii. 870), 'Chidon means shield (*clypeus*). For there is a tradition that it was on this spot that Joshua was standing when it was said to him, *Raise thy shield towards the city Ahi*,' in reference to Josh. viii. 18. But this is obviously too vague to help us; the site of Ahi is itself unknown. Moreover, it is not certain that Chidon is the name of a place at all; according to some it is the name of the proprietor of the threshing-floor (comp. 1 Chron. xxi. 15, etc., and see *Poli Synops. on 2 Sam.* vi. 6). Indeed, among the extreme variations of the versions, this threshing-floor has been identified with that of Araunah or Ornan, the Jebusite. In one of the fragments of the Hexapla (Origen's *Works*, by Dela Rue, Migne. vi. i. 42) a portion of 2 Sam. vi. 6 is preserved; and one of the variations of the LXX., as known to Origen, expressly assigns this threshing-floor to Ornan or Ernan; *ἔως τῆς ἀλωῆς Ἐρνὰ τοῦ Ἰεσοῦσαλου*. Nor is this improbable; for the cortege which brought the Ark seems to have approached near the end of their appointed journey when the calamity which befel Uzza suspended for three months their progress. The house of Obedom was probably not far from 'Perez-Uzza' (see 1 Chron. xiii. 11-13) while it was undoubtedly near to 'the city of David' (xv. 1, 3). The word כִּידוֹן is defined by J. C. Ortlob (*De Scutis et Clypeis Hebr.*) as an offensive weapon, 'hasta brevis, longum tamen satis, et exitiale;' like Bochart (after R. Salomon), he derives it from כִּיר (*exitium*), and conjectures that the threshing-floor was called *Chidon* because Uzza met his death in it, 'quasi aream cladis atque exitii' (*Hieroz.* p. 140). So Fürst (*Lex.* 589) renders, *Tenne des Todes*. Gesenius sees no such allusion in the name, and translates, *area jaculi*. The כִּידוֹן, according to him, was a weapon like that of the Polish lancers (Uhlanen) see *Theis.* 683. According to R. Abraham Ben David (*De Templo*) it resembled the Italian *alabarda* (halberd). The noun, as an appellative, is translated *spear* in Josh. viii. 18, 26; *target*, 1 Sam. xvii. 6; *shield*, Job xxxix. 23; and *lance*, Jer. l. 42. The Peshito-Syriac has the inexplicable reading  (Ramîn), in which it

is followed by the Arabic version, رَامِينَ (Ramēn),

for the name Chidon. Josephus, like the Alex. Sept., writes Χειδών (*Antiq.* vii. 4. 2). For the other designation of this threshing-floor in the parallel passage, see NACHON.—P. H.

CHILDREN. The word 'children' is sometimes used in the plural number, when meant to designate only one male issue (comp. 1 Chron. ii. 31; 2 Chron. xxiv. 25; xxxiii. 6). In such places the terms בְּנִים, literally 'sons,' is equivalent to offspring, all of whom had probably died except the last-mentioned in the text. The more children—especially of male children—a person had among the Hebrews, the more was he honoured,

it being considered as a mark of divine favour, while sterile people were, on the contrary, held in contempt (comp. Gen. xi. 30; xxx. 1; 1 Sam. ii. 5; 2 Sam. vi. 23; Ps. cxxvii. 3, *sq.*; cxxviii. 3; Luke i. 7; ii. 5). That children were often taken as bondsmen by a creditor for debts contracted by the father, is evident from 2 Kings iv. 1; Is. l. 1; Neh. v. 5. Among the Hebrews, a father had almost unlimited power over his children, nor do we find any law in the Pentateuch restricting that power to a certain age; it was indeed the parents who even selected wives for their sons (Gen. xxi. 21; Exod. xxi. 9, 10, 11; Judg. xiv. 2, 5). It would appear, however, that a father's power over his daughters was still greater than that over his sons, since he might even annul a sacred vow made by a daughter, but not one made by a son (Num. xxx. 4, 16). Children cursing or assaulting their parents were punished by the Mosaic Law with death (Exod. xxi. 15, 17; Lev. xx. 9); a remarkable instance of which is quoted by Christ (Matt. xv. 4, 6; Mark vii. 9, 13). Before the time of Moses a father had the right to choose among his male children, and declare one of them (usually the child of his favourite wife) as his first-born (בְּכוֹר), though he was perhaps only the youngest. Properly speaking, the 'first-born' was he who was first begotten by the father, since polygamy excluded all regard in that respect to the mother. Thus Jacob had sons by all his four wives, while only one of them was called the first-born (Gen. xlix. 3); we find, however, instances where that name is applied also to the first-born on the mother's side (1 Chron. ii. 50; comp. v. 42; Gen. xxii. 21). The privileges of the first-born were considerable, as shewn in BIRTHRIGHT.

The first-born son was regarded as devoted to God, and had to be redeemed by an offering (Exod. xiii. 13; Num. xviii. 15; Luke ii. 22). This probably stood connected with the priestly character of the eldest son in patriarchal times. The first-born son, if not expressly deprived by the father of his peculiar rights, as was the case with Reuben (Gen. xlix.), was at liberty to sell them to a younger brother, as happened in the case of Esau and Jacob (Gen. xxv. 31, *sq.*). Considering the many privileges attached to first-birth, we do not wonder that the Apostle called Esau a *thoughtless person* (Heb. xii. 16).

Mothers usually nursed their children, but nurses were sometimes employed (Gen. xxxv. 8; 2 Kings xi. 2). Whether the nurse (אֲמוֹנָה) of Mephibosheth (2 Sam. iv. 4) is properly so designated may be doubted; the word rather means

governess or curatrix. Children of both sexes were probably under the care of women for some years after their birth, and in the case of delicate boys this might be continued much longer. There are some

allusions in Scripture to the modes in which children were carried. These appear to be adequately represented by the existing usages, as represented in the cut No. 192, in which fig. 1 represents a Nestorian woman bearing her child bundled at her back, and fig. 2, an Egyptian female bearing her child on her shoulder. The former mode appears to be alluded to in several places, and the latter in Is. xlix. 22. For other matters regarding children, see ADOPTION; BIRTH; BIRTHRIGHT; EDUCATION.—E. M.

CHILMAD (כִּלְמָד; *Χηλμάδ*; *Chelmad*). A place carrying on traffic with Tyre, named in connection with Sheba and Ashur (Ezek. xxvii. 23). The Targum supposes that Media is intended, but without any foundation. Bochart and others have suggested Charmande, a town beyond the Euphrates, mentioned by Xenophon (*Anab.* i. 5. 10), but though described as large and flourishing, it seems not of sufficient importance to be introduced in this connection.—J. E. R.

CHIMHAM (כִּמְחָם). Probably a son (1 Kings ii. 7) of Barzillai the Gileadite, permitted by him to return with David over Jordan after the defeat of Absalom, Barzillai himself having declined on account of his great age, 2 Sam. xix. 37, 38, 40. The name is also written כִּמְחָה, and in Jer. xli. 17, כִּמְחָה in the Kethiv. This may have been the original form of the word of which the others are contractions, but it is more likely the mistake of a transcriber. Professor Blunt observed in the mention of the dwelling of Chimham, Jer. xli. 17, at Bethlehem, an indication of the actual munificence of David to the family of Barzillai, for which we are prepared by the narrative in Samuel and Kings. See *Undesigned Coincidences*, 6th ed., p. 150.—S. L.

CHINNERETH. [CINNERETH.]

CHIOS (*Xios*). An island in the Ægean Sea, about 38° 30' N. lat.; 26° 0' E. long., near the west coast of Asia-Minor. It was one of the 12 Ionian states, inhabited, however, by a mixed population. It fought bravely and suffered severely in the Ionian revolt, and after the Persian war, passed under the power of the Athenians, Macedonians, and Romans successively. St. Paul passed it when sailing from Troas on his last visit to Jerusalem (Acts xx. 15).—H. W.

CHIQUITILLA. [GIKATILLA.]

CHISLEV (כִּסְלֵו; 1 Maccab. i. 54, *Χασελεύ*) is the name of that month which is the third of the civil, and the ninth of the ecclesiastical year of the Jews, and which commences with the new moon of our December. It corresponds, in Josephus, to the Macedonian month Ἀπριλλῖος. As it is now admitted that Chislew is one of those Persian names of months which the Jews adopted after the captivity, it is fruitless to search for a Syro-Arabian etymology of the word. Benfey has shewn that כִּסְלֵו is a mutilated form of כִּסְלֵוּ; and, by an ingenious, although adventurous, mode of derivation, deduces that word from the Zend *Khsat'hravairya*, through a series of commutations incident to its transit through

the different dialects (*Monatsnamen einiger alter Völker*, p. 124).

The memorable days which were observed in this month were:—The feast of the dedication of the Temple, in commemoration of its being purified from the heathen abominations of the Syrians, which was celebrated by illuminations and great demonstrations of joy for eight days, beginning from the 25th of this month (1 Maccab. iv. 59); and a fast on account of Jehoiachim having, in this month, burnt the roll containing Jeremiah's prophecy (Jer. xxxvi. 22, 23). There is some dispute whether this fast was observed on the 6th or on the 28th of the month. It is an argument in favour of the earlier day that the other would fall in the middle of the eight days' festival of the dedication.—J. N.

CHISLOTH-TABOR (בְּסֻלַת הַתְּבֹר; Sept. *Χασιλωθαβὶρ*, or [*Alex.*] *Χασελῶθ βαθῶρ*; Vulg. *Cesuleth Thabor*) is mentioned in Josh. xix. 12, as one of the towns on the southern border-line of the tribe of Zebulun. It has been sometimes accounted the same place as Chesulloth [CHESULLOTH], by Masius and Rosenmüller among others. Robinson (*Researches* iii. 182) affirms the identity, and Keil (on *Joshua*, Trans., p. 423) denies it. The two places were at least very near each other. The city mentioned in verse 22, and again in 1 Chron. vi. 77, as simply *Tabor*, is no doubt the same place as our Chisloth-Tabor. The name is itself suggestive of its position. Jarchi (in Keil) explains it to mean *ilia seu lumbos Thaboris*, in French *les flancs* (So Stanley, p. 496, 'Loins or flanks of Tabor'), 'not the summit nor the lowest part of the mountain, but upon the slope somewhere near the centre, and on the front, in about the same situation as that of the loins in an animal.' Others (such as Simonis *Onomast.*, and Rosenmüller) give a different turn to the meaning; regarding the *loins* as the seat of strength, they render בְּסֻלַת by *fiducia Thaboris*, i. q., *munitionem*; as if the city were strongly fortified.

כִּסְלֵו, which is *flanks* in Lev. iv. 9, and *loins*, Ps. xxxviii. 7, is translated *confidence* in Prov. iii. 26. Fürst (Lex. 614) and Gesenius (Thes. 702) combine both meanings in their definitions. Pococke (ii. 65) mentions a village which he calls *Zal*, about three miles from Tabor. This is by Robinson, Van de Velde (*Map and Memoir*, p. 304), V. Raumer (124) and Ritter (*Palest. and Syria*, ii. 393), called *Iksâl*; 'probably,' says Robinson, 'the Chesulloth and Chisloth-Tabor of Joshua on the frontier of Zebulun and Issachar, the Chasalus of Eusebius and Jerome in the plain near Tabor (*Onomast.*, s. v. *Αχσελεύθ*, *Aschaseluth*), and the Xaloth of Josephus situated in the great plain' (*De Bell. Jud.*, iii. 3. 1; *De Vita*, sec. 44). See also Dr. Zunz, *On the Geography of Palestine from Jewish Sources* (in Asher's Benj. of Tudela, vol. ii. p. 432; and Seetzen's *Reisen durch Syrien*, u. s. w. iv. 311.—P. H.

CHITTAH (חֲטָה), occurs in various passages of Scripture, as enumerated by Celsius: Gen. xxx. 14; Exod. ix. 32; xxix. 22; xxxiv. 22; Deut. viii. 8; xxxii. 14; Judg. vi. 11; xv. 1; Ruth ii. 23; 1 Sam. vi. 13; xii. 17; 2 Sam. iv. 6; xvii. 28; 1 Kings v. 11; 1 Chron. xxi. 20, 23; 2 Chron. ii. 15; xxvii. 5; Job xxxi. 40; Ps. lxxxii. 16; cxlvii. 14; Cant. vii. 2; Is. xxviii. 25; Jer. xii. 13; xli. 8;

Ezek. iv. 9; xxvii. 17; xlv. 13; and Joel i. 11. There can be no doubt that *chittah*, by some written *chitha*, *chetteth*, *cheteh* etc., is correctly translated 'wheat,' from its close resemblance to the Arabic as well as to the names of wheat in other languages. Celsius says, 'חטה, *chitha*, occultato 𐤇 in puncto dagesch, pro חטה *chitha* dicitur ex usu Ebraeorum.' This brings it still nearer to the Arabic name of wheat, *حطة* which in Roman characters is variously written, *hinteh*, *hinthe*, *henta*, and by Pemptius in his translation of Avicenna, *hinhitha*; and under this name it is described by the Arabic authors on *Materia Medica*. As the Arabic *ح* *ha*, is in many words converted into *خ* *kha*, it is evident that the Hebrew and Arabic names of wheat are the same, especially as the Hebrew 𐤇 has the guttural sound of *ח*. Different derivations have been given of the word *chittah*: by Celsius it is derived from 'חנת' *chanath*, protulit, produxit, *fructum*, ex. Cant. ii. 13; or the Arabic 'حطب' *rubuit*, quod triticum rubello sit colore' (*Hierobot.* ii. 113). The translator of

193. *Triticum compositum*—Egyptian Wheat.

the *Biblical Botany* of Rosenmüller justly observes that 'the similarity in sound between the Hebrew word *chittah* and the English *wheat* is obvious. Be it remembered that the *ch* here is identical in sound with the Gaelic guttural, or the Spanish *x*. It is further remarkable that the Hebrew term is etymologically cognate with the words for *wheat* used by every one of the Teutonic and Scandinavian nations (thus we have in Icelandic *hveiti*, Danish *hvede*, Swedish *hvete*, Mæso Goth. *hwaiite*, German *vveizen*); and that, in this instance, there is no resemblance between the Scandinavian and Teutonic terms, and the Greek, Latin, and Slavonic (for the Greek word is *πυρός*, the Latin *frumentum* or *triticum*, the Russian *psenitsa*, Polish *pszenica*); and

yet the general resemblance between the Slavonic, the Thracian, and the Gothic languages is so strong, that no philologist now doubts their identity of origin'—*l. c.* p. 75.

Rosenmüller further remarks that in Egypt and in Barbary *قمح* *kamich* is the usual name for

wheat (*Descrip. de l'Égypte*, t. xix. p. 45; Hóst's *Account of Maroko and Fez*, p. 309); and also, that in Hebrew, *קמה* *kemach* denotes the flour of wheat (*Gen.* xviii. 6; *Num.* v. 15). This, it is curious to observe, is not very unlike the Indian name of wheat, *kumuk*. All these names indicate communication between the nations of antiquity, as well as point to a common origin of wheat. Thus, in his *Himalayan Botany*, the author of this article has stated: 'Wheat having been one of the earliest cultivated grains, is most probably of Asiatic origin, as no doubt Asia was the earliest civilized, as well as the first peopled country. It is known to the Arabs under the name of *hinteh*, to the Persians as *gundoom*, Hindu *gehoon* and *kunuk*. The species of barley cultivated in the plains of India, and known by the Hindoo and Persian name *juo*, Arabic *shaer*, is *hond hexaerstickum*. As both wheat and barley are cultivated in the plains of India in the winter months, where none of the species of these genera are indigenous, it is probable that both have been introduced into India from the north, that is, from the Persian, and perhaps from the Tartarian region, where these and other species of barley are most successfully and abundantly cultivated' (p. 419). Different species of wheat were no doubt cultivated by the ancients, as *triticum compositum* in Egypt, *T. aestivum*, *T. Hibernum* in Syria, etc.; but both barley and wheat are too well known to require further illustration in this place.—J. F. R.

CHITTIM, or KITTIM (כִּיִּיִם בְּתִיִּים), a branch of the descendants of Javan, the son of Japheth (*Gen.* x. 4). The plural termination of Chittim, and other names in this ethnographical survey (*ver.* 13, 14), renders it probable that the term *son* must be understood (like its correlate, *father*; *v.* AB) not in the strict sense of that relation. On the authority of Josephus, who is followed by Epiphanius and Jerome, it has been generally admitted that the Chittim migrated from Phœnicia to Cyprus, and founded there the town of Citium, the modern Chitti. 'Chethimus possessed the island of Chethima, which is now called Cyprus, and from this all islands and maritime places are called Chethim by the Hebrews' (*Joseph. Antiq.* i. 6. sec. 1). Cicero, it may be remarked, speaks of the Citians as a Phœnician colony (*De Finibus*, iv. 20), 'scis enim Citianos clientes tuos a Phœnicia profectos.' Dr. Pococke copied at Citium thirty-three inscriptions in Phœnician characters, of which an engraving is given in his *Description of the East* (vol. ii. p. 213), and which have recently been explained by Gesenius in his *Monum. Phœnic.* (p. 124-133). Some passages in the prophets (*Ezek.* xxvii. 6; *Is.* xxiii. 1, 12) imply an intimate connection between Chittim and Tyre. At a later period the name was applied to the Macedonians (*1 Maccab.* i. 1, *Χεττιεῖς*; and *viii.* 5, *Κιτιεῖς*). Hengstenberg has lately endeavoured to prove that in every passage in the O. T. where the word occurs, it means Cyprus, or the Cyprians. On *Num.* xxiv. 24, he remarks, that the invad-

ers of Ashur and Eber are said to come not from Chittim, but כִּיֹּם, *from the coast of Chittim*, that being the track of vessels coming from the west of Palestine. In Dan. xi. 30, he contends that the use of the absolute form, צִיִּים, instead of the construct, denotes a less intimate connection with the following word, and that the phrase means, like that in Balaam's prophecy (to which he supposes the prophet alludes) ships sailing along the coast of Chittim. The Vulgate translates Chittim, in this passage, *Romanos*, an interpretation adopted by several of the ancient Jewish and Christian writers. Bochart attempts to support it on etymological grounds, of which Michaelis presumes to say, 'etymologica autem quæ de Latio Bochartus habet, facile ipsi relinquo, quæstiones geographicas his crepundiis carere cupiens.'

'Chittim seems to be a name of large signification (such as our Levant), applied to the islands and coasts of the Mediterranean, in a loose sense, without fixing the particular part, though particular and different parts of the whole are probably in most cases to be understood' (v. *Pictorial Bible*, notes on Ezek. xxvii. 6); Michaelis, *Spicilegium Geographiæ Hebræorum Exteræ post Bochartum*, pars i. pp. 1-7, 103-114; Michaelis *Supplementa ad Lexicæ Hebræicæ*, pp. 1138, 1377-1380; Bochart *Geogr. Sacr.* c. 157-161; Gesenii *Thesaurus*, p. 726; Pococke's *Description of the East*, vol. ii. p. 213; Newton's *Dissertations on the Prophecies*, v.; Hengstenberg, *History of Balaam*, etc., p. 500, transl. by J. E. Ryland, Edin. 1848; Conybeare and Howson's *St. Paul*, i. 188.—J. E. R.

CHIUN (כִּיֹּן). The original word in Amos v. 27, which is translated by LXX. Παυρᾶν, and in Acts vii. 43 Περφᾶν or Περμφᾶν. The meaning of it is uncertain. See Alford, *Gr. Test. l.c.* Some suppose כִּיֹּן is a mistake for רִיֹּן; others think that it is a common noun, meaning the carriage or framework on which the idol was borne; another opinion is, that it is a Coptic appellation of the planet

Saturn (?), but cf. Persian کيوان the planet Saturn. [REMPHAN.]-S. L.

CHLOË is mentioned in 1 Cor. i. 11, in a manner which has left it doubtful to some, e.g., St. Ambrose, Thomas Aq., Stunica and Calvin (see Erasmus, in *Crit. Sacr.*, in *loc.*; also Calvin, in *loc.*), whether a place or a person be meant. Ἐπὶ τῶν Χλόης is St. Paul's expression. Notwithstanding the efforts of Stunica, no place at all suitable has been found to satisfy the Apostle's reference; besides which, the phrase should have been, not τῶν Χλόης, but τῶν ἐν Χλόῃ, to express the local sense. The ellipsis here is probably *okelav*, meaning Chloë's family (See Wolf's *Curæ Philologicæ* in 1 Cor. i. 11; and Bos, *Ellips.* 137. A similar construction occurs in Rom. xvi. 10, 11; where the οἱ Ἀριστοβούλου and οἱ Ναρκίσσου are translated in A. V. by the ellipsis of *household*. Olshausen (in *loc.*) suggests Chloë's slaves alone; but nearer relations still may have been St. Paul's informants; and it has been even suggested that Stephanas, Fortunatus and Achaicus, whose arrival at Ephesus from Corinth gladdened the apostle (1 Cor. xvi. 17), were sons of Chloë (See Hammond and Wordsworth, in *loc.*) The Peschito-Syriac version is equivalent to *De domesticis Chloës*. Chloë

herself was probably a religious matron (Poli *Synops.*, in *loc.*), either 'an inhabitant of Corinth (Theophylact), or some Christian woman (Estius) known to the Corinthians elsewhere, or (Michaelis, Meyer) an Ephesian having friends, who had been at Corinth.' (Alford, in *loc.*) Chloë is an occasional name in Greek, and especially in Latin writers. It was a surname of Δημήτριος, and gave name to a festival in her honour. Among other Chloës, Horace mentions one in a well-known ode (iii. 9.), to whom he assigns Thrace, or perhaps Crete, as her birth-place—

'Me nunc Thressa [Al. Cressa] Chloë regit
Dulces docta modos et citharæ sciens.'

—P. H.

CHOACH (חֹאךְ). This word is in the A. V. translated *thistle* in 2 Kings xiv. 9; Job xxxi. 40; and *thorns* in Job xli. 2; Prov. xxvi. 9; Is. xxxiv. 13, etc. From the context of the several passages, it is evident that *choach* must have been some useless plant or weed of a thorny nature. Prov. xxvi. 9: 'As a thorn (*choach*) goeth into the hand of a drunkard,' etc. The Septuagint translates it by ἄκανθα and ἄκαν, that is, words which signify thorny plants in general, and also by κνίδιον, 'a nettle.' But it is difficult in this, as in other instances, to ascertain what particular plant is intended, and hence *choach* has been variously translated. Celsius has pointed out that the Arabic خوخ *khokh* is similar in nature and

origin to the Hebrew word, and is employed as its synonyme, and that *chuch* is the Syriac version. *Khokh* is applied in Arabic to the peach, and *bur khokh*, whence we have apricock, etc., to the apricot. *Choach* may therefore be considered as a generic term applied to the plum tribe; and some of these, as the common sloe, *Prunus spinosa*, are well known to be of a thorny nature: 'Sylvestris prunus, humilis, ac solidis spinis munitus est.' Some kindred species, as a thorny Cratægus, may supply its place in Syria. Bové says of Mesteh, not far from the Jordan, 'Les arbutus qui y croissent m'ont paru des Rhamnées ou des Rosacées du genre Prunus.'—J. F. R.

CHObA, CHObAI (Χωβά, Χωβαί). A city of Samaria, in the neighbourhood of Bethulia, referred to in the book of Judith (xv. 4, 5); and identified by Van de Velde (*Memoir*, p. 304; *Syria and Palestine*, vol. i. p. 368) with Kubatiéh, a village on the road from Jenin to Sebastiyeh (Samaria). Whether the Choba mentioned Jud. iv. 4 is the same as the preceding, or as the Hobah (חובה), LXX. Χοβά) of Gen. xiv. 15 (Gesenius *Heb. Lex.* s. v.) is uncertain.—S. N.

CHOLED (חֹלֵד; Arabic, خلد *khuld*; Lev. xi. 29, in our version, 'weasel'). Although the similarity of sound in names is an unsafe ground to depend upon when it is applied to specific animals, still, the Hebrew and Syriac appearing likewise to imply creeping into, creeping underneath by burrowing—characteristics most obvious in moles—and the Arabic denomination being undoubted, *chald* may be assumed to indicate the above animal, in preference to *tinsmeth*, which, in conformity with the opinion of Bochart, is referred to the *chamæleon*. This conclusion is

the more to be relied on as the animal is rather common in Syria, and in some places abundant. Zoologists have considered the particular species to be the *Talpa Europea*, which, under the name of the common mole, is so well known as not to require a more particular description. The ancients represented the mole to have no eyes; which assertion later scientific writers believed they had disproved by shewing our species to be possessed of these organs, though exceedingly small. Nevertheless, recent observations have proved that a species, in other respects scarcely, if at all, to be distinguished from the common, is totally destitute of eyes, and consequently has received the name of *Talpa caeca*. It is to be found in Italy, and probably extends to the East, instead of the *Europæa*. Moles must not, however, be considered as forming a part of the Rodent order, whereof all the families and genera are provided with strong incisor teeth, like rats and squirrels, and therefore intended for subsisting chiefly on grain and nuts; they are, on the contrary, supplied with a great number of small teeth, to the extent of twenty-two in each jaw—indicating a partial regimen; for they feed on worms, larvæ, and under-ground insects, as well as on roots, and thus belong to the insectivorous order; which brings the application of the name somewhat nearer to carnivora and its received interpretation, 'weasel.'—C. H. S.

CHOMET (חֹמֵט, from חָמַט, to twist, wind, bend one's self); the name given to a reptile (Lev. xi. 30; Sept. σαῦπα; Vulg. lacerta; A. V. snail). It designates one of the lizard species, probably the true lizard, of which multitudes are found in Palestine, especially amid ruins and sandy plains.

CHORASHAN (כּוֹרֶשָׁן; Sept. Βηρσαβέε; Alex. Βωρασάν; Vulg. Lacus Asan). This place is mentioned in I Sam. xxx. 30, as one of the towns amongst whose elders David made a friendly distribution of the spoils of the Amalekites. It is generally supposed to be identical with the *Ashan* of Joshua. [ASHAN.] See Keil on *Joshua*, Tr., p. 382; Gesenius, *Theor.* 672; Fürst, *Lex.* i. 583. By St. Jerome and Eusebius (*Onomast.* s. v. *Asan*) it is designated *Bethasan*, and is placed by the former fifteen, and by the latter sixteen, miles from *Ælia* (Jerusalem), πρὸς δυσμὰς, as Eusebius adds; to the west, with a slightly southern direction: this would bring the town near to Ziglag, whence David sent his presents. According to Josh. xv. 42, this town was in the tribe of Judah; while in Josh. xix. 7, and I Chron. iv. 32, it is assigned to the tribe of Simeon. To reconcile these statements, it is not necessary (with Von. Raumer, p. 173) to suppose two places of the same name; but (with Winer, *Bibl. Realw.*, v. i. p. 93) to include *Ashan* within that portion of Judah, which, as being 'too much' for it (Josh. xix. 9), was afterwards transferred to the 'children of Simeon.' The name *Chor-ashan* is described by Gesenius and Fürst to mean 'a smoking furnace,' the latter conjecturing that the place was the seat of some iron-foundry. Winer, however, resorts to the most satisfactory conjecture, to the effect that the prefix CHOR is synonymous with the Syriac כּוֹרֶשָׁן, and the Arabic كور (Chor), which often means 'habitation' or place of any kind (ortschaft) [comp. Χώρα], like

the word בֵּית (Beth.) This accounts for the form *Beth-asan* given to the name by Jerome and Eusebius. Fürst rejects too summarily as false the version of the Peschito, the Alex. LXX., and the Vulgate [בּוֹרֶשָׁן, Βωρασάν, Lacus Asan (or *Borasan*)] as if in relation to some well of water, making כּוֹר = כּוֹר. The Vat. LXX. Βηρσαβέε somewhat countenances the idea. On another ground we may suppose the place to have been well-watered: *Ashan* is probably the *Ain* of Josh. xxi. 16 [AIN]. This seems indeed more than probable on comparing the list of this passage (xxi. 13-16), with that of the parallel place in I Chron. vi. 57-59.* Now though *Ain* עַיִן, 'a spring,' is distinguished from Beer, כּוֹר, 'a well' (See Stanley, *Sin. and Pal.*, 509), it yet points to a fact of a similar nature. From these last-mentioned passages, we learn the ecclesiastical character of our town as one of the Levitical cities.—P. H.

CHORAZIN (Χοραζῖν). This place is only mentioned in the Bible as one of the three cities in which most of Christ's mighty works had been done, and on which woes were pronounced because of their unbelief (Matt. xi. 21; Luke x. 13). No indication is given of its situation farther than that it seems to have been near Bethsaida. Jerome informs us that Capernaum, Bethsaida, and Chorazin all lay on the shore of the Sea of Galilee; and that Chorazin was two miles from Capernaum (*Comm. in Esai.* ix. 1; *Onomast.* s. v. *Chorazain*). The most satisfactory description of the position of Chorazin is given by St. Willibald, who visited this region in the beginning of the eighth century. From Tiberias he went to Magdulum (now *Mejdel*); thence to Bethsaida; thence to *Chorazin*, where there was a Christian church; and thence to the sources of the Jordan at Banias (*Early Trav. in Pal.*, p. 16). Capernaum was situated at Khan Minyeh (CAPERNAUM), Bethsaida at Tabighah (BETHSAIDA); and consequently we must look for the site of Chorazin along the shore between the latter place and the mouth of the upper Jordan, and at the distance of about two miles from Capernaum. With such data we can have no difficulty in identifying Chorazin with the extensive ruins of *Tell Hûm*, situated on the shore of the lake, nearly three miles from Capernaum.

The ruins of *Tell Hûm* are among the most remarkable in northern Palestine. To reach and explore them is no easy task. No trodden path leads to them. The Arabs seem to avoid them. Thickets of thistles as tall as a man on horseback, and so dense that no horse can break through them, encompass and cover the whole site. The ruins lie close upon the shore, and are here and there washed by the waves. They cover a level tract about half a mile long by a quarter broad, and consist chiefly of foundations and heaps of rough stones. There is a small tower built up of old materials, in part standing. A short distance from it are the remains of one of the most beautiful buildings in Palestine. It was upwards of 100 feet long by 80 wide.

* Robinson, however, seems to identify *Ain* with 'the ruins of a village called *El-Ghuwein*,' which, in his latest map, he puts south of Hebron. This would destroy the identity not of *Ain* and *Ashan*, but of *Ashan* and *Chorashan*. But Robinson does not write with certainty. *Bibl. Researches*, vol. ii. p. 625, note 2.

Numbers of Corinthian columns, sculptured entablatures, and ornamented friezes, lie around it in confused heaps. Among them are large slabs of limestone, on which are sculptured panels and ornamented work. This splendid structure appears to have been a synagogue. Its date cannot be earlier than the fifth century. After the destruction of Jerusalem, the Jewish Sanhedrim assembled at Tiberias, which continued to be the capital of their nation for three centuries. The Jews gathered round it, and formed a large proportion of the population of Galilee from the second to the sixth century. They were rich and powerful; and they have left traces of their taste and architectural skill in many of the towns. The *woe* pronounced by our Lord has come upon Chorazin (Robinson, *B.R.*, iii. 359; *Handbook of S. and P.*, 427).

About three miles inland from Tell Hüm is a fountain, and the ruins of a small village, bearing the name Kerazeh, which some identify with Chorazin (Keith on *Prophecy*; Thomson, *The Land and the Book*). But may it not be, as suggested by Dr. Robinson, that after the destruction of the town on the exposed coast, some of the inhabitants retired to this more secure spot, carrying with them the name of their home; just as happened at Sarepta? (Van de Velde, ii. 396).—J. L. P.

CHOZEBA (כּוּזְבָא, 'failing water,' Fürst; 'lying,' Gesenius; Sept. *Χωζηβά*; כּוּזְבָא יִשְׁרָאֵל is rendered by Vulgate *virii mendacii*, instead of 'men of Chozeba') was a town of the plain of Judah, on the west side, probably the same as ACHZIB and CHEZIB, which see. It is mentioned only once, in 1 Chron. iv. 22. The Vulgate renders the proper names of this verse by appellatives, following a curious Rabbinical tradition which is given by St. Jerome (*Quaest. Hebr.* on 1 Chron. iv. 22) and may also be found in Corn. a Lapide, and Calmet, *in loc.* According to this absurd interpretation *Jokim* is *Qui fecit stare Solem*, 'He who made the sun stand still;' not indeed the great Joshua; but the Elimelech mentioned in Ruth, the father of Mahlon and Chilion, who are the *virii mendacii*, etc. Elimelech, it seems, was a righteous man, and performed the stupendous miracle to convert the sinners of his people, among whom his sons were unhappily conspicuous, etc. The remarkable clause which terminates the verse—'And these are ancient things,' is said to refer to these ancient traditions; whereas, most probably, it points to some authentic old vouchers of the genealogy of the *Sons of Shelah*, whose name, it will be observed, is brought into connection with our Chozeba as closely in this passage of Scripture, as the same Shelah is connected with the Chezib of Gen. xxxviii. 5. But see CHEZIB.—P. H.

CHRIST. [JESUS.]

CHRISTIAN (*Χριστιανός*). This world-famous name, 'quod sicut unguentum diffusum longe lateque redolet' (Gul. Tyr. iv. 9), occurs but three times in the N. T. (Acts xi. 26; xxv. 28; 1 Pet. iv. 16). In Acts xi. 26 we are informed that it arose in the city of Antioch* during the year spent

there in preaching by Paul and Barnabas. It was therefore first used about the year 44 A.D. Both Suidas (ii., p. 3930, a, *ed. Gaisford*) and Malalas (*Chronograph.* x.) say that the name was first used in the episcopate of Evodius at Antioch, and Evodius is said to have been appointed by St. Peter as his successor A.D. 45 (Jerome, *Chron.*, p. 429). That Evodius actually invented the name (Malalas *l.c.*) is an assertion which may be disregarded as safely as the mediæval fiction that it was adopted at a council held for the purpose.

Throughout the N. T. the followers of Christ are called by vague and general names, such as *οἱ μαθηταί* (Acts ix. 26; xi. 29; xiii. 52), *οἱ πιστοὶ οἱ πιστεύοντες* (Acts xv. 23; iv. 32; Rom. xv. 25; Col. i. 2) *οἱ ἀδελφοί, οἱ ἅγιοι, οἱ τῆς δόξης* (Acts xv. 1, 23; 1 Cor. vii. 12; Rom. viii. 27; Acts xix. 9, 23, etc.) The very variety of these terms, many of which are wholly unadapted for use by any but the believers themselves, prove the non-existence of, and the necessity for, some common and indifferent appellation. That the new designation did not arise from the Jews is obvious, first because they had generally adopted the opprobrious terms 'Galileans' and 'Nazarenes,' which sufficiently expressed their contempt and hatred for the new sect (Acts xxiv. 5; ii. 44; iv. 32; John i. 46; Luke xiii. 2); and secondly, because it is certain that they would not have used the hallowed title of Messiah (*Χριστός*, the Anointed) to apply as a name of ridicule to those whom they so much despised. That the name did not originate with the Christians themselves is equally certain, because even after it had been invented, it was not adopted by them. As the name is essentially external, it is *not even alluded to* for twenty years (Acts xxvi. 28). In both of the places where alone it subsequently occurs, it is placed in the mouth of an enemy. That the tendency of Agrippa's speech was sarcastic when he said, '*Almost thou persuadest me to be a Christian*'—is evident from the context; but as the sarcasm was intended to be half-complimentary, we may infer that the new name did not involve the same designed animosity as the insulting title 'Nazarene.' In 1 Pet. iv. 16, 'if any man suffer as a *Christian*,' the word is again used as a name given *from without* by unfavourable judges, a term in fact of legal indictment (cf. Clem. Alex., *Strom.* p. 297, 13, *ed. Sylb.*); and the continuation of the verse, 'let him glorify God in this name' (leg. *ὀνόματι*, pro *μέρει*), is the earliest indication we have that the church was prepared to adopt the badge which had been fixed upon it by the world. In fact, the name Christian, though originally used as a stigma, was regarded in after-times as a peculiar glory, just as the cross, once the mark of infamy and degradation, was afterwards the proudest emblem on the banners of armies and the diadems of kings. We hear of more than one martyr and confessor, who at the tribunal or the stake shouted repeatedly, as his cry of triumph and consolation, 'I am a Christian' (Euseb. *H. E.* v. i., Tert. *Apolog.* 2); and in the Clementine Liturgy (quoted by Mr. Humphry on Acts xi. 26) we find an express thanksgiving that Christians were suffered to bear the name of their Lord (*εὐχαριστοῦμέν σοι ὅτι τὸ ὄνομα τοῦ Χριστοῦ σου ἐπέκέκληται ἐφ' ἡμᾶς*). The

* 'No slight honour to the city,' as St. Chrysostom observes; but it is a pure fiction that its name was changed in consequence to Theopolis (See William of Tyre, quoted by Conybeare and Howson). It

was significant of the ultimate diffusion of Christianity that the name arose in a great city, which was neither the civil nor the religious capital of the world.

name itself was only contemptuous in the mouths of those who regarded with contempt him from whom it was derived; and as it was a universal practice to name political, religious, or philosophical societies from the name of their founders (as Pythagoreans, Epicureans, Apollonii, Cesariani, Vitelliani, etc.), it was advantageous rather than otherwise for the Christians to adopt a title which was not necessarily offensive, and which bore witness to their love and worship of their master; a name intrinsically degrading—such as the witty Antiochenes, notorious in the ancient world for their propensity to bestow nicknames,* might easily have discovered (Philost., *Vit. Apol.*, iii. 16; Zosim. iii. 11—*γελώσις τε καὶ ἀταξία ἱκανῶς ἔχοντα*, Procop. *Bell. Pers.* ii. 8),—would certainly have retarded the progress of the new religion; and as we see even in modern times that it is the tendency of rival sects to brand each other with *derisive* epithets, it is natural to suppose that the name 'Christians' resulted rather from philosophical indifference than from theological hatred. The Latinised form of this hybrid word—Greek in form, Latin in termination—is not indeed a conclusive proof that it emanated from the Romans, because such terminations had been already familiarised throughout the East by the Roman dominion; but it is precisely the kind of name which would have been bestowed by the haughty and disdainful spirit of victorious Rome, which is so often marked in early Christian history (John xviii. 31; Acts xxii. 24; xxv. 19; xviii. 14). That the disciples should have been called from 'Christus,' a word implying the *office*, and not from 'Jesus,' the *name* of our Blessed Lord, leads us to infer that the former word was most frequently on their lips, 'which harmonises with the most important fact that in the Epistles he is usually called not 'Jesus,' but Christ' (Conybeare and Howson's *St. Paul*, i. 130). 'Christus non proprium nomen est, sed nuncupatio potestatis et regni,' Lactant (*Div. Instit.* iv. 7). In later times when the features of the 'exitiabilis† superstitio' were better known, because of its ever-widening progress (Tac., *Ann.* xv. 44), this indifference was superseded by a hatred against the *name* as intense as the Christian love for it, and for this reason the Emperor Julian 'countenanced and perhaps enjoyed the use of the less honourable appellation of Galileans' (Gibbon, v. 312, *ed. Milman*; Greg. *Naz. Orat.* iii. 81). Yet as Tertullian, in an interesting passage points out, the *name* so detested was harmless in every sense, for it merely called them by the office of their master, and that office merely implied one set apart by solemn unction (Tertull., *Apol.* 3).

It appears that by a widely prevalent error the Christians were generally called *Christiani*, and their founder *Chrestus*—a mistake which is very easily accounted for (Suet., *Ner.* 16, *Claud.* 25;

* If the name were meant for one of those sneering jests (*σκώμματα*), which Julian especially attributes to the Antiochenes, it is hard to see the point of it, unless it can be meant to ridicule their adherence to the cause of one who had been crucified (See Wetstein, *N. T.* in Acts xi. 26).

† Gibbon's conjecture that this disgust partly arose from a confusion of the 'Galileans' with the followers of Judas the Gaulonite, is rightly denounced by Guizot as 'devoid not only of verisimilitude but even of possibility' (i. 545, *ed. Milman*.)

Lactant, *Instit. Dio.* iv. 7), and one which the Christians were the less inclined to regret, because it implied their true and ideal character (*οἱ εἰς Χριστὸν πεπιστευκότες χρῆστοι τε εἰσὶ καὶ λέγονται*, Clem. Alex., *Strom.* II. iv. 18. 'Sed quum et perperam Chrestianus pronuntiatur a vobis (nam nec nominis certa est notitia penes vos) *de suavitate et benignitate compositum est*,' Tert. *Apol.* 3). The explanation of the name Christian, as referring to the 'unction from the Holy One,' although supported by the authority of Theophilus Antiochenus (A. D. 170), 'who lived not long after the death of St. John' (*τοῦτον ἔνεκεν καλούμεθα Χριστιανοὶ ὅτι Χριστὸν ἔλαον θεοῦ*, *ad Autolye.* i. 12), can only be regarded as an adaptation of an after-thought (See Jer. Taylor, *Disc. of Confirm.*' sec. 3, and compare the German *Christen*).

The adoption of the name marks a very important epoch in the history of the Church; the period when it had emerged even in the Gentile observation from its Jewish environment, and had enrolled followers who continued *Gentiles* in every respect, and who differed widely from the Jewish proselytes. 'It expressed the memorable fact that a community consisting primarily of Jews, and directed exclusively by them, could not be denoted by that name or by any name among them. To the disciples it signified that they were witnesses for a king, and a king whom all nations would be brought in due time to acknowledge' (Maurice, *Ecl. Hist.*, p. 79). See Buddæus *Miscell. Sacr.* i. 280, *sq.*; Wetstein, *N. T.* in Acts xi. (Conybeare and Howson, i. 130; Zeller., *Bibl. Wörterb.* s. v. *Christen*, etc.—F. W. F.

CHROMATIUS, Bishop of Aquileia during the latter part of the 4th century, and the earlier years of the 5th; the friend and correspondent of Jerome, Rufinus, Ambrose, and Chrysostom; and held by them, and others, in the highest esteem. He is styled by Jerome 'the most holy and the most learned of bishops,' Rufinus expresses such confidence in his judgment that he terms him 'the Bezaleel of our time;' and he was one of the three western bishops whose support was sought by Chrysostom, after his deposition by the Council of the Oak. In several ways he rendered important services on behalf of biblical and ecclesiastical literature. It was at his instigation that Rufinus made his translation of the Ecclesiastical History of Eusebius, and also of the Homilies of Origen on Joshua (Rufin. *Hist. Ecc. Pref.*, *Orig. Hom. in Jes. Prol.*). It was by the pecuniary aid he rendered to Jerome that the latter was enabled to prosecute his literary labours, and it was partly in consequence of his urgent appeals that Jerome made his translation of the O. T. from the Hebrew, and not from the Greek of the Septuagint (Hieron, *Pref. in lib. Sal.*, *Pref. in lib. Paralip. Pref. in lib. Tobie*). His only extant works are eighteen homiletic pieces on the earlier chapters of Matthew. One of these—that on the eight beatitudes—is clearly a sermon. The others were intended to be read, and probably form part of a practical exposition of Matthew, the remainder of which has been lost. His style is simple and clear, and his method of interpretation is literal and not allegorical. The best edition is that by Braidæ (Utini, 1816, 4to), and reprinted by Migne in the twentieth volume of his *Patrol. Curs.*—S. N.

CHRONICLES. *Name*.—The Hebrew name

of Chronicles is *הַיָּמִים הַזֵּהָרִים*, *i. e.*, *words of the days, annals*. In the Hebrew canon they formed a single book, which the Greek translators divided into two with the title *παράλειπόμενα*, *things omitted*, because many things omitted in the books of Kings are contained in them. The common name, *Chronicles*, is from the Latin *Chronicon*, which Jerome first used (Prolog. galeat. in libr. Regg.) The example of the Septuagint, in dividing the work, was followed by the Vulgate and Luther. D. Bomberg also introduced it into his editions of the Hebrew Bible, so that it is now universal.

The books of Chronicles may be *divided* into two parts, as follows:—

I. Containing chapters i.—ix. 34.

II. Containing ix. 35—2 Chron. xxxvi.

The former consists of genealogical lists interspersed with short historical notices; the latter, of the history of the kings in Jerusalem from David to Zedekiah.

Sources.—The following documents are referred to by the compiler himself:—

1. The book of Samuel the seer, and the book of Nathan the prophet, and the book of Gad the seer (1 Chron. xxix. 29); for the history of David.

2. The book of Nathan the prophet, the prophecy of Ahijah the Shilonite, and the visions of Iddo the seer against Jeroboam the son of Nebat; for the history of Solomon (2 Chron. ix. 29).

3. The book of Shemaiah the prophet and of Iddo the seer (2 Chron. xii. 15); for the history of Rehoboam.

4. The book of Jehu the son of Hanani, transferred into the book of the kings of Israel (2 Chron. xx. 34); for the history of Jehoshaphat.

5. The story (Midrash) of the book of the Kings (2 Chron. xxiv. 27).

6. A work of Isaiah the prophet respecting Uzziah (2 Chron. xxvi. 22).

7. The vision of Isaiah the prophet (2 Chron. xxxii. 32); for the history of Hezekiah.

8. The book of the Kings of Israel (2 Chron. xxxiii. 18); for the history of Manasseh.

9. The Sayings of the Seers (Hosai), in 2 Chron. xxxiii. 19; for the history of Manasseh.

10. The book of the Kings of Judah and Israel (2 Chron. xxviii. 26; xvi. 11; xxv. 26); for the histories of Asa, Amaziah, and Ahaz.

11. The book of the Kings of Israel and Judah (2 Chron. xxvii. 7; xxxv. 27; xxxvi. 8); for the histories of Jotham, Josiah, and Jehoiakim.

12. The Story (Midrash) of the prophet Iddo (2 Chron. xiii. 22); for the history of Abijah.

In relation to Nos. 10, 11, 8, 4, it is observable, that all refer to one and the same document. A large work is quoted under different names, and consisting of two leading divisions; the one concerning the kings of Judah, the other those of Israel. No. 5 seems to us to denote an explanatory document occasionally employed by the compiler of Chronicles. But the term *Midrash* is obscure. Nos. 1, 2, 3, 4, 6, 7, 9, were *prophetic* documents, *i. e.*, they were written by prophets; and it appears to us most probable, that they existed as separate monographs (with the exception of No. 4), rather than that they were incorporated with the large historical work, *the book of the Kings of Israel and Judah*, which grew to its full dimensions out of memoranda committed to writing in different reigns. No. 12, *viz.*, a Midrash of the prophet

Iddo, appears to have contained an explanation of the section of the large work termed *the book of Iddo the seer*. In No. 9 the word *הַנְּבִיאִים* is most probably a proper name, not the plural *seers*.

If the term *לְהַתְּחִיל*, in No. 3, means *belonging to the genealogical list*, and thus refers to the place where the words of Shemaiah and Iddo were to be found, the opinion respecting the prophetic monographs in question that they formed a part of the large historical work, would be corroborated. But it is very difficult to tell what it means. Our translators seem to have come as near its signification as any critics who have since attempted an explanation. Thenius conjectures, that in the history of Rehoboam, contained in the books of Kings, there were copious accounts of the race of David; and that the section in which particulars respecting Rehoboam and the prophets Shemaiah and Iddo stood, began with a genealogical list. This is more than doubtful. The manner in which the document is referred to seems to shew that it was not incorporated with the large historical composition, for in 2 Chron. xxxiii. 18, *the book of the Kings of Israel* is referred to for the history of Manasseh; whereas for *the same kings, the sayings of the seers* (No. 9) are appealed to in the next verse. Surely, therefore, Nos. 8 and 9 were not identical, nor was the latter a part of the former.

In No. 6 the citation is peculiar: 'the rest of the acts of Uzziah, first and last, did Isaiah the prophet, the son of Amoz, write' (2 Chron. xxvi. 22). One is inclined to believe that the monograph of Isaiah was single and independent, especially as it is not found either in Isaiah's prophecies, in the canon, or in the historical appendix in Is. xxxvi.—xxxix.

In addition to the sources enumerated, the compiler must have had others. Thus the lists of David's heroes (xi. 10-47), of those who came to him at Ziklag (xii. 1-22), of the captains, princes of the tribes, and officers of David's household (xxvii.), the number and distribution of the Levites, and the minute information given respecting Divine worship (xxiii.—xxvi.), must have been derived from written sources not included in *the book of the Kings of Israel and Judah*.

Some documents are mentioned by the compiler which he did not *use*. Thus a writing of Elijah addressed to Jehoram is spoken of in 2 Chron. xxi. 12; and a collection of *lamentations*, in which was an elegy composed by Jeremiah on Josiah's death (2 Chron. xxxv. 25).

In 1 Chron. i.—ix., we have only a few references to the origin of the genealogical lists. Throughout most of this portion the compiler relied on registers, which he carefully followed. But his information respecting them is not definite.

It has been inquired, whether our present books of Samuel and Kings were one of the sources whence the Chronicle writer drew his materials? The question is answered in the affirmative by De Wette, Movers, and Bleek; by Hävernick and others in the negative. The first-named critic adduces three arguments in favour of the hypothesis that the parallel accounts were derived from the earlier books, only one of which appears to us valid, *viz.*, the certainty of the Chronist's having known the earlier books. After denying the validity of all his arguments, Keil proceeds to adduce

some positive grounds against the hypothesis that the books of Kings and Samuel were used as sources.

1st, *The circumstance that both narratives agree with one another, and have parallel sections only when they cite their sources.* But no more than 15 verses appear after the last citation of sources in the Chronicles, in which the destruction of the Jewish state is described very briefly. It is probable that the writer employed the Kings up to this time and not after.

2dly, *The different arrangement of materials in both works.* All the difference of arrangement that exists is not great, and is sufficiently explained by the use of other sources in addition to the independence of the writer.

3dly, *The many historical additions which the Chronicles have in the parallel sections.* These are accounted for like the last.

4thly, *The apparent contradictions in the parallel sections.* These are explained by the use of other sources besides, on which the writer may have sometimes relied more than on the accounts in Kings.

The considerations adduced by Keil are singularly wanting in validity. If the compiler of Chronicles knew the canonical books, why should it be thought that he abstained from using them? They would have facilitated his work. The most convincing proof that he both knew and used them is furnished by parallels, which are often verbal. Thus in 2 Chron. i. 14-17, there is a paragraph almost verbally coinciding with 1 Kings x. 26-29. Again, 1 Chron. xvii. and xviii. are in many places verbally parallel with 2 Sam. vii. and viii. Compare also 1 Chron. xix. 1-xx. 1, with 2 Sam. x.-xi.; 1 Chron. x. 1-xi. 4, with 1 Kings xii. 1-24; 2 Chron. xv. 16-18, with 1 Kings xv. 13-15; 2 Chron. xxv. 1-4, 17-28, with 2 Kings xiv. 1-6, 8-20; 2 Chron. xxxiii. 1-9, with 2 Kings xxi. 1-9; 2 Chron. xxxiii. 21-25, with 2 Kings xxi. 19-26. The deviations, however, are often the best index of the author's use of the earlier books, because they shew design.

The genealogies in chapters i.-ii. 2, relating to the ante-Mosaic period, are all contained in the book of Genesis, though they are compressed as much as possible, as the following table will shew.

- (a) 1 Chron. i. 1-4 from Genesis v.
- ,, i. 5-23 from Genesis x. 2-4, 6-8, 13-18, 22-29.
- ,, i. 24-27 from Genesis xi. 10-26.
- ,, i. 29-33 from Genesis xxv. 12-16, 1-4.
- ,, i. 35-54, from Genesis xxxvi. 23-26, and xlv. 8, etc.

Again, a number of names and families met with in earlier historical books occur in Chronicles in a different genealogical connection, or at the head of longer lists peculiar to these books—

(b) as 1 Chron. ii. 10-12, the ancestors of David; comp. Ruth iv. 19-22, etc.

(c) Lists which are peculiar to Chronicles are found among the chapters referred to in (b), as ii. 18-53; iii. 16-24; iv. 2-23, 34-43; v. 1-26, 33-36; vi. 1-34. It will be seen that these are more numerous than such as are commonly admitted to have been taken from the older biblical books. Because they are not found elsewhere it is unnecessary to view them with suspicion, or to consider them as the arbitrary addition and fabrication of the writer himself. Yet Gramberg does not hesitate to maintain this.

Whence were the names in (a) taken? There is little doubt that Genesis was the source. But the form is different here, and it may therefore be asked, Did the compiler of Chronicles derive the accounts *immediately from Genesis*, or did he take them from some other historical work in which they had already got their present form? It is unnecessary to resort to the latter hypothesis. We may reasonably suppose that he borrowed them at once from Genesis, abridging and contracting them according to the object he had in view.

Whence were the genealogies in (b) and (c) taken? In consequence of their characteristic nature they must have been borrowed from other sources than the historical books of the O. T. The Pentateuch, Joshua, Samuel, and Kings, could not have furnished them, for they have a better connection and are more complete than the fragmentary genealogies in those books with which they coincide. The differences are too great to admit of their derivation from the canonical writings. They must therefore have been compiled from old genealogical and topographical lists existing among the author's contemporaries. This is plainly indicated in various places.

On comparing the different notices with one another, it will be found that the names vary very much. Various causes contributed to this result, one consisting in the mistakes of transcribers. Tradition had also varied in progress of time, and the genealogies varied accordingly.

In 1 Chron. ix. 35-44, we have a duplicate of viii. 29-40 with a few deviations, viz., Jehiel, Ner, and Mikloth are wanting in viii. 29-31; Shimeam is Shimeah (viii. 32); and Ahaz in viii. 35 is omitted in ix. 41. For Jehoahab and Rapha in viii. 36, 37, we have Javah and Rephaiah in ix. 42, 43. At ix. 44 the two verses viii. 39, 40, are omitted.

There are many difficulties in this genealogical part which cannot be resolved for want of data. One of the most obvious is in 1 Chron. vi. 6r, where it is stated, that ten cities were given by lot to the sons of Kohath out of the half tribe of Manasseh. This contradicts Joshua xxi. 20-26, where we see that some of the ten cities were in the territories of Ephraim and Dan. It is said, indeed, in the 66th and following verses, that the sons of Kohath had cities out of the tribe of Ephraim; but here the entire number is eight instead of ten. Besides, Gezer and Shechem were not cities of refuge, as is stated.

On comparing 1 Chron. ix. 1-34 with Nehemiah xi. 3-36 great perplexity arises as to the original relation between them: Three points require investigation, viz., whether the one genealogy was derived from the other, whether they were taken independently from a common source, and to what time they refer. The last determines the other two.

It is apparent that Nehemiah gives a list of the principal inhabitants of Jerusalem *after* the exile. Does 1 Chron. ix. also present a post-exile list of those dwelling at Jerusalem? Keil asserts that it relates to the inhabitants of Jerusalem *before* the exile; laying considerable stress on ix. 2, 'the first inhabitants that dwelt in their possessions, in their cities,' contrasted with Neh. xi. 1, 'and the rulers of the people *dwelt at Jerusalem*.' But his reasoning is precarious here. The first verse of 1 Chron. ix. is from the chronicist himself, referring his readers for farther information to the source whence he drew most of the preceding genealogies.

But in the second verse there is an obvious transition to the post-exile time. In ix. 16 mention is also made of Berechiah 'that dwelt in the villages of the Netophathites,' which villages are referred to in Neh. xii. 28, *after* the captivity. Both registers in 1 Chron. ix. and in Neh. xi. 3, etc., are arranged alike. Their general plan corresponds. There is also a remarkable coincidence of names and incidental notices amid many deviations. Allowance should be made for the numerous mistakes made in the transcription of names. Both agree in the main points, *i.e.*, the account of the *heads* of families, while they also touch in subordinate particulars. Hence they could not have originated independently. They refer to the same persons and time, *i.e.*, the *post-exile* inhabitants of Jerusalem. Which is the original? De Wette and Zunz suppose Nehemiah the original, and the other a copy. No comparison we can make leads to such a conclusion. The most natural hypothesis is, that both were taken from one and the same source. It is not, however, easy to conceive that both drew from it *directly*. Rather does their source seem to have existed in different abridgments and forms more or less exact; a fact which will account for the various peculiarities of each.

As to the time when the heads of the families mentioned in chapter ix. lived in Jerusalem, there is no internal mark of importance to guide us in determining it. We hold with Herzfeld, that the list in Chronicles was written somewhat later than that in Nehemiah. It would appear that in the interval between Neh. xi. and 1 Chron. ix., an important accession had been made to the inhabitants of Jerusalem; for of the tribe of Judah dwelt there, according to Nehemiah, 468; but 690 according to 1 Chron. Of Benjamin there were 928 according to Nehemiah, 956 according to 1 Chron., etc. etc. A long interval, however, should not be assumed, because the population would increase rapidly. Bertheau's attempt to invalidate this argument is unsuccessful.

In farther considering the relation of Chronicles to the other historical books of the O. T., we shall now confine ourselves to their properly historical portion, commencing with 1 Chron. ix. 35. Here more than forty parallel sections of greater or less compass come under review, side by side with others in Samuel and Kings. The agreement is often verbal; but the deviations are also frequent and considerable. The differences between the parallels may be classed under three heads, *viz.*—*Such as relate to the matter; such as concern the language in which facts are narrated; and those which concern both matter and language.*

I. Deviations in the matter of the narrative. Here there are omissions, additions, and a different order.

I. *Omissions.*

(a.) Of primary facts.

David's kindness to Mephibosheth and Ziba, 2 Sam. ix.

His adultery with Bathsheba and Uriah's murder, 2 Sam. xi. 2–xii. 25. The surrender of Saul's seven sons to the heathen Gibeonites as an atonement, 2 Sam. xxi. 1–14.

The large episodes respecting David's family history, including Absalom's rebellion and its consequences, with Sheba's revolt, 2 Sam. xiii.–xx.

A war with the Philistines, 2 Sam. xxi. 15–17.

David's song of thanksgiving and last words, 2 Sam. xxii., xxiii.

Adonijah's usurpation of the kingdom, and the anointing of Solomon as king, 1 Kings i.

The encounter between David and Michal, when the latter came forth to mock him, 2 Sam. vi. 20–23.

David's last charge, 1 Kings ii. 1–9.

Solomon's deposition and banishment of Abiathar, and his putting to death Joab and Shimei, 2 Kings ii. 26–46.

Solomon's marriage with Pharaoh's daughter, 1 Kings iii. 1.

His wise judgment, iii. 16–28.

His princes and officers, the peace and largeness of his kingdom, the daily provision of his household, his stables, etc., 2 Kings iv.

The building of his palace, 1 Kings vii. 1–12.

His wives, concubines, idolatry, and threatened punishment, 1 Kings xi. 1–13.

His adversaries, 1 Kings xi. 14–40.

The copiously detailed transactions which happened at Hebron during the reign of David, 2 Sam. i.–iv.

Description of the ornaments and vessels of the Temple, 1 Kings vii. 13–39.

Prayer of Solomon, 1 Kings viii. 56–61.

The taking of Gath in war with the Syrians, and delivering up of the temple vessels to the Syrian king, 2 Kings xii. 17, 18.

There are also many omissions in the histories of Ahaz and Hezekiah, 2 Kings xvi. 5–18; xviii. 4–8.

2. *Additions or interpolations.*

(a.) Primary facts.

A list of those who attached themselves to David during Saul's life, and the number of the warriors who chose him king at Hebron, 1 Chron. xii.

David's preparations for building the temple, 1 Chron. xxii.

The number and distribution of the Levites and priests, with the settlement of their employments, 1 Chron. xxiii.–xxvi.

Accounts of David's army and officers, 1 Chron. xxvii.

His last directions and regulations in a solemn assembly before his death, 1 Chron. xxviii.–xxix.

Arrangements of Rehoboam for strengthening his kingdom; the reception of the priests driven out of Israel into Judah; the wives and children of the king, 2 Chron. xi. 5–23.

Abijah's war with Jeroboam, 2 Chron. xiii. 2–20; his wives and children, 21–22.

Asa's victory over Zerah, an Ethiopian who invaded Judah, 2 Chron. xiv. 8–14.

Address of the prophet Azariah to Asa, in consequence of which the king renounces idolatry, 2 Chron. xv. 1–15.

Address of the prophet Hanani, and how Asa received his admonition, 2 Chron. xvi. 7–10.

Jehoshaphat's carefulness to secure his kingdom, his endeavours to extirpate idolatry, and to promote the knowledge of religion among the people, 2 Chron. xvii.

Jehu's opinion of Jehoshaphat's covenant with Ahab, and Jehoshaphat's arrangements for restoring the due administration of justice, 2 Chron. xix.

The invasion of various eastern peoples, and how they destroyed one another, so that the arms of Jehoshaphat had no share in the victory, 2 Chron. xx. 1–30.

His provision for his sons, and their slaughter by Jehoram, 2 Chron. xxi. 2–4.

Jehoram's idolatry and punishment, including a letter to him from Elijah, 2 Chron. xxi. 11-19.

Death of Jehoiada, and apostacy of the people; the appearance of the prophet Zechariah and his death, 2 Chron. xxiv. 15-22.

Amaziah's equipments, and his hiring of soldiers out of the northern kingdom, whom he sent home again at the exhortation of a prophet, xxv. 5-10.

His introduction of Edomite idolatry, and censure by a prophet, xxv. 14-16.

Uzziah's fortunate wars, his buildings and armed force, 2 Chron. xxvi. 6-15.

Jotham's successful war with the Ammonites, 2 Chron. xxvii. 5-6.

Hezekiah's celebration of the passover, xxx. 1-27.

His arrangements for the regular worship of Jehovah and for the support of the priests and Levites, 2 Chron. xxxi. 2-21.

Manasseh's transportation to Babylon, his conversion and restoration, 2 Chron. xxxiii. 11-13.

His measures towards strengthening the kingdom, 2 Chron. xxxiii. 14.

(b.) Short notices in the books of Samuel and Kings are here enlarged and completed. Compare 1 Chron. xiii., xv., xvi., with 2 Sam. vi.

(c.) Insertions, consisting of reflections by the author, or his own views assigned to the persons described, as, 'But Amaziah would not hear: for it came of God that he might deliver them into the hand of their enemies, because they sought after the gods of Edom,' 2 Chron. xxv. 20; compare 2 Kings xiv. 11.

3. The Chronicles also differ from the books of Samuel and Kings in the order in which several occurrences are placed.

Comp. 1 Chron. xi. 1-9	with 2 Sam. vi. 1-10.
" xi. 10-17	" xxiii. 8-10.
" xiii.	" vi. 3-11.
" xiv.	" v. 11-25.
" xv.	" vi. 12, etc.
2 Chron. i. 3-13	1 Kings iii. 4-14.
" i. 14-17	" x. 26-29.
" ii.	" v.

II. The linguistic deviations exhibited by the books of Chronicles compared with the earlier historical works included in the canon, are either omissions; or they are orthographical, grammatical, and exegetical.

I. Omissions.

(a.) The omission of superfluous or less suitable words.

1 Sam. xxxi. 3, 'the archers hit him,' **הַפּוֹרִיִּים**. In 2 Chron. x. 3, the word, **אֲנָשִׁים בָּקָשָׁת**, which is harsh in its present position, is omitted.

1 Sam. xxxi. 11, **אֶלָּו** is superfluous. In 1 Chron. x. 11, **כָּל** is substituted.

(b.) Much oftener than the preceding do we find instances where single words or sentences are omitted by the Chronist, to the injury of the connection or sense.

2 Kings xxi. 18, 'And Manasseh slept with his fathers and was buried in the garden of his own house,' etc. 2 Chron. xxxiii. 20, 'And they buried him in his own house.'

2. Orthographical.

(a.) The *scriptio plena* instead of the *defectiva*, as **קְרוֹיָד**, 1 Chron. ii. 15, etc. etc., for **קְרוֹדָד**, 1 Sam. xvi. 13, 19, etc.

(b.) Variations according to a later, and for the most part Aramaising pronunciation, as the interchange of **ס** the softer consonant with the harder **שׁ**, at the beginning and end of words; thus **הַיָּהוָה**, 1 Chron. xiii. 12, for **הַיָּהוֹה**, 2 Sam. vi. 9.

3. Grammatical.

To this head belong—

(a.) The regular mode of writing, instead of the irregular, abridged, or incorrect mode employed in the earlier books, as **מְבִיא**, 1 Chron. xi. 2, for **מְבִי**, 2 Sam. v. 2.

(b.) To this head belongs also the later form of a word instead of the earlier, as **מִלְכּוֹת**, 1 Chron. xiv. 2, for the older **מִמְלֻכָה**, 2 Sam. v. 12.

(c.) The older or irregular flexion of a verb or substantive is changed into that belonging to the later usage, as **אֲרִיִּים** in 1 Kings x. 20, which becomes in 2 Chron. ix. 19 **אֲרִיּוֹת**.

(d.) Alterations in construction are made, as the avoidance of the infinitive absolute with the finite verb, *ex. gr.*, 1 Chron. xiv. 10, **נָתַתִּי**, for **נָתַתְנָהוּ**, 2 Sam. v. 20.

4. Exegetical alterations of language embrace the following—

(a.) The substitution of a younger or commoner synonym for an older or unusual one. Thus in 1 Chron. x. 12, we find **גּוֹפֵה**, *deadbody*, for **נֹיֵה** in 1 Sam. xxxi. 12.

(b.) A more distinct reference is given to an indefinite expression, as in 1 Chron. xiii. 10, *because he put his hand to the ark*, instead of the indefinite phrase of 2 Sam. vi. 7, *for his error*.

(c.) Euphemisms belong here, as in 1 Chron. xiv. 4, **עֲרֵשְׁתוֹתֵיהֶם**, instead of **עֲרֵשְׁתֵּיפְשָׁעוֹ**, 2 Sam. x. 4.

III. Other deviations relate both to the language and matter; but change the sense for the worse. They may be classed as follows:—

(a.) Alterations which obscure the meaning; as 1 Chron. xiii. 3, 'are not his servants come unto thee for to search, and to overthrow, and to spy out the land,' instead of, 'to search the city, and to spy it out, and to overthrow it,' 2 Sam. x. 3.

(b.) Exaggerations in numbers. Thus in 1 Chron. xxi. 5, the number of those fit to bear arms in Israel is 1,100,000, and in Judah 470,000. But in 2 Sam. xxiv. 9, the numbers are, Israel 800,000, and Judah 500,000.

(c.) It is to this head that De Wette and others would refer what they regard as mythological alterations and additions.

1 Chron. xxi. 16, 'And David lifted up his eyes, and saw the angel of the Lord stand between the earth and the heaven, having a drawn sword in his hand stretched out over Jerusalem,' etc.: 27, 'And the Lord commanded the angel; and he put up his sword again into the sheath thereof.' Instead of this, we have only in 2 Sam. xxiv. 17, 'when David saw the angel that smote the people,' etc.

Scope.—The scope of the work has reference to the temple and its worship. The compiler living after the captivity, and looking back to the history of his nation before its calamities, was animated with the desire of holding up the mirror of history before his contemporaries, that they might see the

close connection between regard for the true worship and national prosperity. In accordance with this design, we find most attention directed to the times in which religion prevailed among the people, and to the men who were most active in purifying the kingdom from idolatry. David, Solomon, Asa, Jehoshaphat, Joash, Hezekiah, Josiah, are described at length in relation to the temple and its appointed ordinances.

The spirit of the work is Levitical. This is only natural, because the author himself was a Levite. His stand-point is an *ecclesiastical* one; and therefore Levites everywhere occupy the fore-ground, while prophets are in the distance. There is an absence of the prophetic element. The book was compiled in an *apologetic* tone, the writer having been desirous to present the favourable side of his country's history. Thus in 1 Kings ix. 21, it is said that the children of Israel were not able utterly to destroy the old inhabitants of Canaan; but in 2 Chron. viii. 8, the statement is softened into, 'whom the children of Israel destroyed not.' Hence many of the bad parts of David's conduct, which are related in the books of Samuel and Kings, are here omitted.

If it be asked how the compiler employed his sources, the question is difficult to answer. He did not make his extracts from them verbally and slavishly. In other words, he was not a mere copyist or abridger of existing accounts. He must have used them freely and independently. It cannot be maintained, however, that his sources were always as good as those used by the writer of the Kings; or that he followed them so exactly and faithfully. Hence in places where his narrative contradicts the earlier books, it is almost always less reliable. Compare 2 Chron. xx. 36, 37, with 1 Kings xxii. 48. It speaks most favourably on behalf of his general fidelity, that he has in some cases given two different accounts of the same thing, which he found in his sources; as in 1 Chron. xxiii. 24-32 compared with xxiii. 3; it being stated in the one case, that the Levites were to do service in the house of the Lord from twenty years of age and upwards; in the other from thirty. Both numbers are given as the compiler found them.

The historical character of the books has been

Jair had 23 cities in Gilead (1 Chron. ii. 22).
 Jashobeam, one of David's mighty men, slew 400 at one time (1 Chron. xi. 11).
 The famine, proposed by Gad to David, is said to have lasted 3 years (1 Chron. xxi. 12).
 When David numbered the people, Judah had 470,000 men (1 Chron. xxi. 5).
 Solomon had 4000 stalls (2 Chron. ix. 25).
 Jehoiachin was 8 years old when he became king (2 Chron. xxxvi. 9).
 David slew of the flying Aramæans 7000 men who fought in chariots (1 Chron. xix. 18).
 The sum of the people numbered under David amounted to 1,100,000 (1 Chron. xxi. 5).
 David bought the threshing-floor of Oman for 600 shekels of gold (1 Chron. xxi. 25).
 At the building of the temple Solomon had 3600 overseers (2 Chron. ii. 2).
 The brazen sea contained 3000 baths (2 Chron. iv. 5).
 The ships of Solomon brought from Ophir 450 talents of gold (2 Chron. viii. 18).
 Ahaziah was 42 years old when he began to reign (2 Chron. xxii. 2).

most impugned in the portions peculiar to themselves. Here the Levitical bias of the writer appears most strongly. But it should be always recollected, that the author being himself a Levite, and taking a post-exile view of Jehovah's worship, brings forward arrangements connected with divine service in the temple; that he was a native of Judah, which was much less addicted to idolatry than Israel; and that pious kings who manifested right zeal for the glory of God are commended; while the ruinous consequences of idolatrous practices are shewn. The general credibility of the sacred writer's communications may be safely asserted here. In many cases they are confirmed by independent testimony. It is true that he has sometimes transferred customs and usages established in his own time to an earlier period. Thus in 1 Chron. xvi., a psalm of praise is represented as sung by David, which did not then exist in its present state. The parts of it are found scattered through various psalms. Verses 8-22 are from Psalm cv.; verses 23-33 are from Psalm xcvi.; verses 34-36 are from the close of Psalm cvi. No critic pretends that either the psalm here, or those from which it was made, existed as early as David's time.

The state of the text in Chronicles is closely connected with the judgment that may be pronounced on the nature of the contents. If the text be regarded as exceedingly corrupt, some of the contradictions and difficulties which appear in the narratives may be readily removed. But if the text be taken as it is, and adhered to, inaccuracy will often lie at the door of the writer. We believe that the text *is* corrupt, and to a considerable extent. Transcribers have made more mistakes in copying it than any other. The reasons are perhaps not very remote. Wherever proper names occur in abundance, there is greater liability to err. So with regard to numbers; for letters alike in shape being used as numerals, were easily interchanged. Besides, where so many parallels appear in other books, there was a temptation to correct or supplement one by another.

The following list of discrepant numbers may shew that there are corruptions in the text. We do not mean to say that all are such. It is sufficient for us to assert, that *some* of them are owing to errors of transcription:—

He had 30 cities (Judg. x. 4).

Jashobeam slew 800 (2 Sam. xxiii. 8).

It lasted 7 years (2 Sam. xxiv. 13).

Judah had 500,000 (2 Sam. xxiv. 9).

He had 40,000 (1 Kings iv. 26).

He was 18 years old (2 Kings xxiv. 8).

He slew 700 (2 Sam. x. 18).

It amounted to 800,000 (2 Sam. xxiv. 9).

He gave for it 50 shekels of silver (2 Sam. xxiv. 24).

He had 3300 overseers (1 Kings v. 16).

It contained 2000 baths (1 Kings vii. 26).

They brought 420 talents (1 Kings ix. 28).

He was 22 years old (2 Kings viii. 26).

According to 1 Chron. xxii. 14, David gave for the building of the temple 100,000 talents of gold (£500,000,000), and 1,000,000 talents of silver (£353,000,000). Besides, according to xxix. 4, he gave out of his private purse 3000 talents of gold of Ophir (£21,600,000), and 700 talents of silver. The nobles of the kingdom also gave 5000 talents of gold and 10,000 drachmas (darics); 10,000 talents of silver, 18,000 talents of brass, and 100,000 talents of iron (xxix. 7). These, added together, make an incredibly large sum, which is greatly reduced, however, by Reinke conjecturing that *letters* representing smaller numbers were exchanged for others signifying the present larger ones; and by Keil, who indulges in arbitrary assumptions.

A similar example occurs in 2 Chron. xvii. 14, etc., where Jehoshaphat king of Judah is said to have had an army of 1,160,000 men; while Adnah the chief had 300,000; Jehohanan, the next to him, 280,000; Amasiah, 200,000; Eliada, 200,000; Jehozabad, 180,000. Besides these, the king put numbers in the defenced cities throughout all Judah. In this instance again, corruption is assumed.

A third example of the same kind is in 2 Chron. xiii. 3 and 17, where Abijah led forth to battle 400,000 men, and Jeroboam, king of Israel, 800,000. 500,000 are said to have fallen. The two kingdoms could scarcely have contained so many fighting men, nor could so many have been slain in one battle.

Another example is in 2 Chron. xxviii. 6, 8, where Pekah, king of Israel, is said to have slain 120,000 men in one day; and to have carried away captive 200,000 women and children into Samaria.

On the whole, there is a limit to the assumption of textual corruption in the books of Chronicles, which critics like Reinke manifestly transgress, and which apologists are too prone to lay hold of. There is also a limit to a constant maintenance of the Masoretic text as it is, which De Wette has perhaps exceeded. We believe that both the opponents of the Chronist and his defenders have fallen into error. The sacred writer is not so culpable as the former would lead us to infer; neither is he infallible as the latter allege.

Time and author.—1. The history contained in the work is brought down to the termination of the exile in Babylon, when Cyrus issued a decree encouraging the Jews to return and rebuild the temple in Jerusalem: This may be assigned to the year 535 B.C. And there are marks of a still later age. In 1 Chron. iii. 19-24, the genealogy of Zerubbabel's sons appears to be carried down to the third generation. Shemaiah, the son of Shechaniah, was contemporary with Nehemiah (Neh. iii. 29). One of Shemaiah's sons was Neariah; one of Neariah's three sons was Elioenai; and Elioenai's seven sons are enumerated. In this way the genealogy comes down to nearly 300 B.C., or at least to 330 B.C. We admit that the list is by no means easy of explanation. Hence it has been variously interpreted. According to R. Benjamin and the LXX. there are nine descents from Jesaiah (verse 21) to Johanan, so that the history reaches to 270 B.C. Zunz's calculation (260 B.C.) amounts to nearly the same time. Ewald again, reckons the succession from Zerubbabel as containing about six generations. He assumes from 150-200 years after Zerubbabel and Joshua; and therefore obtains the termination

of the Persian dynasty or the beginning of the Grecian, *i. e.*, 330-320 B.C. This coincides with the date already given.

Notwithstanding such probable calculation of the date, there are modes of bringing it within the period defined by Hengstenberg and Hävernick as the *antecanonical* one, *i. e.*, 400 B.C. Both Movers and Hävernick contrive to make the Chronicle writer a younger contemporary of Nehemiah, by assuming that the genealogist stops with Hanaiah's two sons, Pelatiah and Jesaiah, the author appending to these names single individuals of David's posterity. It is supposed that after these grandsons of Zerubbabel, there is another *parallel* genealogy of returned exiles, whose relation to Zerubbabel is not stated. Shemaiah, a contemporary of Zerubbabel, as is conjectured, has his family register carried down four degrees, as far as his great grandsons. Hence these critics bring the register to about 400 B.C. This view is more ingenious than correct; for it is tolerably clear, from Neh. iii. 29, that Shemaiah was not the contemporary of Zerubbabel but of Nehemiah; and, if he were so, he lived ninety years later than Zerubbabel. Instead of his being put somewhere about 530, that is in Zerubbabel's time, as Movers and Hävernick suppose, he must, as a contemporary of Nehemiah's, be placed about 440 B.C. The explanation of these scholars would not readily suggest itself to the reader of 1 Chron. iii. 21. It is most natural to *carry forward* the genealogy there, just as it is contained in the preceding and subsequent verses, even though the expression be varied.

Another way of preventing the genealogy from bringing the whole work down to a comparatively recent date, is by assuming its origin to be posterior to the rest of the history. It is supposed that it did not proceed from the author of the Chronicles, but was subsequently inserted by another hand. The hypothesis is arbitrary. It should therefore be summarily dismissed, though sanctioned by the respectable names of Vtringa, Heidegger, Carpov, and apparently Keil.

daric. The employment of a word which has been thought to mean *Darics*, introduced into the history of David (1 Chron. xxix. 7), shews that the compiler wrote at a time when the name and use of the coin had become familiar. If the word really mean *Darics*, as Gesenius and others think, it brings us far down into the Persian period or after. But Ewald supposes the term אֲדָרְכָנִים to be merely the Greek δραχμή. If so, the writer must have lived after Alexander the Great, when Greek money became current. The term בֵּיתָה, meaning a *palace* or *temple* (1 Chron. xxix. 1, 19), does not necessarily limit the date to the Persian dynasty. It is used in Nehemiah, Esther, and Daniel.

ezra. It is commonly admitted that Ezra and Nehemiah formed originally one work; and it appears to us that Ezra was connected with the Chronicles at first, so that all belonged to the same compilation. If this be so, the notices bearing on the time of composition of the Chronicles found in Ezra and Nehemiah are appropriate. In Neh. xii. 11, Jaddua is the last in the list given of high priests. He lived in the time of Alexander the Great. The line is carried down no farther, and therefore we may presume that he was contempo-

rary with the compiler of Nehemiah's book. Again, compositions of Nehemiah and Ezra were used by the compiler of the works called after them, whence it may be inferred that the compiler lived a considerable time after those writers. Besides, he speaks of the time of Ezra and Nehemiah as one long past (Neh. xii. 26, 47). The manner too in which Cyrus and his successors are constantly styled '*Persian Kings*', shews that the Greek dynasty had begun (Ezra i. 1; iv. 5). Thus, the earlier part of the Greek dominion is the probable date of Chronicles.

The name of the compiler is unknown. De Wette thinks that he belonged to the priests. He seems to have been one of the singers in the temple at Jerusalem, for he speaks much of them and the porters, shewing a minute acquaintance with their employments and position. The Levitical bias is much more prominent than the priestly; and therefore Ewald correctly supposes that he was a Levitical musician.

Many have assigned the authorship to Ezra. This opinion was held by various Rabbins, ecclesiastical fathers, and older theologians. In more modern days it is advocated by Pareau, Eichhorn, and Keil. In its favour the last-named critic adduces the identity of the termination of Chronicles with the commencement of Ezra. Here, however, it is assumed that Ezra wrote the book which bears his name—a view which cannot be sustained. The great similarity of diction is also adduced in favour of identity of authorship. This is correct, but proves nothing for Ezra's authorship. The same remark applies to the argument derived from the frequent citation of the law with the same formula, as לְפָנֵי יְהוָה (1 Chron. xxiii. 31; 2 Chron. xxxv.

13; xxx. 16; Ezra iii. 4); as also to that founded on the love for copious descriptions of the arrangements connected with public worship, with the temple music and songs of the Levites in standing liturgical formulæ, for genealogies and public registers. Till it be first shewn that the book of Ezra proceeded from the scribe himself, these analogies between it and Chronicles fail to establish the position that Ezra wrote the latter work. They are *just* analogies, corroborating identity of authorship, but not *Ezra*-authorship.

There is not the least foundation for believing that the compiler lived at Babylon, not Jerusalem. The use of such language as 'the treasures, all these he brought to Babylon' (2 Chron. xxxvi. 18), does not favour the idea that the writer was there, because the words, 'many brought gifts to the Lord, to the Lord to Jerusalem' (2 Chron. xxxii. 23), would also shew that the writer was himself at Jerusalem, the same verb occurring in both places. When it is written, 'the King of Syria brought Israel to Damascus' (2 Chron. xxviii. 5), it does not follow from the use of the verb that the writer was himself at Damascus.

A good deal has been written about the books of the Chronicles, aggressive and defensive. Of the former kind was De Wette's *Beiträge zur Einleitung in das alte Testament*, 1806, 8vo, since modified and softened in his *Einleitung*, throughout its successive editions. Gramberg's *Die Chronik nach ihrem geschichtl. Charakter und ihrer Glaubwürdigkeit neu geprüft*, 1823, 8vo, belongs to the same side. On the other hand, Dahler, Movers, and Keil, wrote in defence of the credibility of Chro-

nicles. Dahler's work, published at Strasburg in 1819, is superficial. More elaborate and able are the treatises of Movers and Keil, especially the former. That of Movers is entitled, *Kritische Untersuchungen ueber die Biblische Chronik*, 1834, 8vo; that of the latter, *Apologetischer Versuch ueber die Chronik*, 1833, 8vo. In addition to these works, the reader may consult Davidson's *Text of the Old Testament considered, etc.*, 1856; Zunz's *Gottesdienstlichen Vorträge der Juden*; the last edition of De Wette's *Einleitung*, the *Einleitung* of Keil, and especially that of Bleek, 1860, 8vo. Davidson's *Introduction to the Old Testament*, vol. ii., contains a longer account of Chronicles than the present article. The best commentary on the Chronicles is that of Bertheau, in the *Exegetisches Handbuch*. But a satisfactory and able commentary is still a desideratum, Bertheau's falling far short of the conditions required.—S. D.

CHRONOLOGY is the science which treats of the measurement, denotation, and recording of time. That part of it which deals with the units of time, as defined by the revolutions of the heavens, is called *Theoretical* or *Mathematical Chronology*. The consideration of the methods, adopted by different nations, of reckoning the succession of these units, of dividing them into smaller, and grouping them into larger portions of time, and of giving names to these natural or conventional units, in order that each may have its own proper appellation, forms the subject of *Technical* or *Applied Chronology*. And when, by means of this nomenclature, the events of the nations are set forth in their due relations of time, this (which, properly speaking, is a branch of history) is called *Historical Chronology*.

2. The *date* of an event is the name of the time of its occurrence, and to assign the date of a past event is to say *how long ago* it took place. The reckoning in every case, ultimately and essentially, has its point of departure in the present instant, the *now* of the speaker. The savage has no other method of dating an event than to say that it occurred so many days, or moons, or summers and winters ago; and a date expressed in terms of the most finished nomenclature of time resolves itself at last into the same procedure. For the statement, 'On such a day of a given month and year, in such an era or succession of years,' gives the measure of the time elapsed from the epoch or commencement of the era, reign, or other succession of years to the occurrence of the event, and assumes that it is known or ascertainable by what number of years, months, days, etc., that epoch precedes the present instant, or some other instant, the distance of which from the present is known. Otherwise, the date is only relative, not absolute.

3. For purposes of historical denotation, it matters not what method of dividing, arranging, and naming the portions of time be adopted, provided the method be constant, and the information capable of rendering an answer to the question, *How long ago?* or, which is essentially the same thing, *How long before* or since the epoch of the Christian or any other known era: the only difference being this, that a fixed instant of time is taken as the point of departure in place of the ever-shifting *Now* of the speaker (the *és éué* of Herodotus, e.g., ii. 145, which his reader has to fix as best he may). Thus, such a day, month, and year of the era of Nabonassar, or of the Hegira, can be rendered with ab-

solate precision in year B.C. or A.D., and month and day of Julian or Gregorian Calendar, because in both eras, the epoch, the dimensions of the years, and the calendar arrangements, are absolutely known. It makes no difference whatever, that the Nabonassarian (or Egyptian vague) 'year' consists only of 365 days, and the year of the Hegira only of 354 days, neither of them a true measure of the tropical year. In both eras, each day has its name and designation, which distinguishes it from all others, past, present, and to come, and this is all that is needed for purposes of chronology. The convenience of civilized life requires that our 'year' should be brought by well calculated intercalation as near as possible to the dimensions of the natural year; but this is a consideration so perfectly distinct from the requirements of chronology, that if instead of the 'year' as our larger unit of time, we chose to reckon by periods of any assignable number of days, say 500 or 1000, with a calendar, which should give each of them a name, every purpose of 'dating' would be attained.

4. *Biblical Chronology.*—If the chronology of the O. and N. T. is to be ascertained as a whole or in part, e.g., if we are to be enabled to express such statements as 11th year of Zedekiah, 14th of Hezekiah, 4th of Solomon, in equivalent terms of the era B.C., it is necessary, first, to colate all the cardinal notes of time contained in the record; to ascertain their genuine form, import, and authority; to obtain from them, thus digested, a continuous tract of time, with no gaps and no overlappings; and, lastly, to refer this by means of proved synchronisms with other accredited history, to some fixed and known point of time. Until this is done, and so done that there remains nothing questionable or conjectural in the procedure, we have no determinate chronology, and any dates we may assign are only approximate, and more or less hypothetical and precarious.

5. The ancient Hebrews had no *era*, and the current denotation of time, down to the age of Solomon, is expressed in terms of the lives of men. The whole book of Genesis is pervaded by a thread of chronology of this description. Thus, Adam at a specified age begat Seth, who at such an age begat Enos, and so on without intermission, down to the birth of Jacob at such a year of Isaac. The death of Joseph at the age of 110 years, is the last event recorded in this book; and as it is clearly to be gathered, that when Jacob was 130 years old (xlvi. 9), Joseph had reached or completed his 39th year (xlv. 6; xli. 46), the sum total of the years contained in Genesis can be ascertained: not indeed with exact precision, unless the birth of each patriarch be supposed to coincide with the exact completion of the given year of his father's life; but with less than 23 or 24 years of excess or defect, since that it is the number of the successive lives recorded. The year of the Hebrews after the time of Moses was lunar, of 12 months, with now and then a 13th, which was added whenever, on inspection of the barley fields towards the close of the 12th month, it appeared that there would not be ripe ears enough to form the *omer* or first-fruits offering by the 16th day of the next moon (Levit. ii. 14; xiii. 10, 11; *Ordo Sacrorum*, sec. 407). This economical arrangement secured to the lunar year of the Hebrews a general average conformity with the year of the seasons. Whatever was the form of year in the earlier times, there is no reason

to doubt that the years intended in the enumeration of men's lives are years of the seasons, marked by the recurrence of seed-time and harvest, or other events dependent on the earth's revolution round the sun. (In fact, the Hebrew שָׁנָה , *year*, implies

this, its original meaning, like the Lat. *annus*, *annulus*, being *ring*, *round*.) There can be no question, that the author or last redactor of the book of Genesis intended that the narrative should be connected by this continuous series of time-marks. Jewish and Christian chronographers accepted the statements unquestioned, and held that the series of 'years of the world' thus formed, from the creation of the first man to the death of Joseph, accorded with the truth of facts. The 'import' and the 'authority' of the numerical statements were to them unimpeachable; the only question was that which related to their 'genuine form' (sec. 4). For so it is, that while the received Hebrew text gives one set of numbers for the descents from Adam to Terah, father of Abraham, the numbers in the LXX. differ from these by enlargements, usually an entire century added to each descent (Adam 230 years, where the Hebrew has 130 years, etc.), while the Samaritan text varies from the Hebrew by deductions from the antediluvian, and agrees for the most part with the LXX. in the postdiluvian portion of the genealogies. And supposing the inquirer to have decided in favour of the Greek text, even so there are diversities to be discussed; for the LXX. has various readings of some of the numbers both before and after the Flood: in particular, while most of the copies have a second Cainan after Arphaxad, with a descent of 130 years, this addition is ignored by other copies and by important authorities (*Ordo Saecul.*, sec. 307 and note, and Dr. Mill on the *Descent and Parentage of the Saviour*, p. 143, ff.) These considerations will account for the enormous discrepancy which appears in the estimates formed by different chronologists of the number of years contained in the Book of Genesis. The Hebrew numbers, from Adam to Terah's 70th year, make 1656 *plus* 292 years; the LXX. with its various readings, 2242 or 2262 *plus* 942 or 1042 or 1072 or 1172; the Samaritan, 1307 *plus* 942. This last, however, need not come into consideration, since it is well understood that the Samaritan text, here as elsewhere, is merely fabricated from the Greek (Hengstenberg, *Auth. des Pent.*, i, 32, ff.); and those who treat it as an independent authority (e.g., Lepsius, *Chronol. der Aeg.*, p. 397, ff.) only show themselves ignorant of the results of criticism on this subject. Of course the LXX. in one or other of its enumerations would be followed by those early enquirers who had access to that text only: the earliest extant estimate, by Demetrius, an Alexandrine Jew of the third century B.C., quoted from Alexander the Polyhistor by Euseb., *Præp. Ev.* ix. 21. 12, makes the interval from Adam to the birth of Abraham, 2262 *plus* 1072. Josephus certainly did not follow the LXX.: his numbers in the generations before and after the Flood have been forced into conformity with the Greek by a later and unskilful hand, which betrays itself by leaving its work incomplete (*Ordo Saecul.*, sec. 319-321). As the chronology of Dr. Hales (which some, it seems, still accept as authoritative) professes to be based on the LXX., rectified by the aid of Josephus, it ought to be known that the text of this author, besides having been palpably vitiated in this portion

of it (*Ant.* i. 3, 4, and 6. 5), swarms with gross inconsistencies, caused, it would seem, by his adopting, without reflection, statements belonging to different chronological systems (see this well shewn by M. v. Niebuhr, *Gesch. Assurs u. Babels*, p. 347, ff.) Of the Christian writers of the first three centuries, Origen alone knew Hebrew, and he first leaves the LXX., but only in part; Jerome, the learned Hebraist, declares for 'the Hebrew verity,' and as his recension of the old italic version forms the basis of the Sixtine Vulgate, which a canon of Trent declares, under anathema, to be canonical and infallible, the Hebrew chronology is virtually perpetuated in the churches of the Roman obedience. The Greek church still holds by the LXX. Our own popular Bible chronology (Ussher's, which Bishop Lloyd attached to the margin of our Bibles) follows the Hebrew. During the last century, there has been a disposition in some of our own and the Continental writers to abandon the Hebrew for the LXX., chiefly prompted by the wish to enlarge the period before Abraham, so as to allow more time for the growth of nations after the Flood, and (more recently) to facilitate the 'connection of sacred and profane chronology' in the earliest ages of mankind, especially in respect of Manetho's Egyptian Chronology. The question of probability and inducement—to enlarge on the part of the Alexandrine Jews (comp. Bunsen, *Aeg. St.* 5, 68); to contract on the part of the Masoretes—is discussed in *Ordo Saeculorum*, sec. 308, ff.; and the artificial processes by which the LXX. numbers are formed from the Hebrew, and not *vice versa*, have been exposed partly, *ibid.*, sec. 313, ff., and further in *The Cycles of Egyptian Chronology*, sec. 72 (Arnold's *Theological Critic*, vol. ii., p. 145, ff.)

6. At the 70th year of Terah the discrepancy between the Hebrew and the LXX. ceases. But here another difficulty arises in the question relative to the birth of Abraham: whether this is to be set, as Gen. xi. 26 seems to say, at Terah 70, or, since the Call is placed at Abraham 75, and seems to have taken place only upon the death of Terah at the age of 205, whether the birth of Abraham must not be set 60 years later (Gen. xi. 32; comp. Acts vii. 4). Ussher contends that the latter is the true construction, and since his time it has been very generally adopted by writers on Chronology. There are evident traces of it in ancient writers, *Ordo Saecul.* sec. 297, and note. The modern Jewish chronology (Mundane Era of Hillel) takes the numbers as they lie in the text, and reckons from Adam to the birth of Isaac, when Abraham was 100 years old, $1656+292+100=2048$. From the birth of Abraham to the end of Genesis no further difficulty occurs, the enumeration being, expressly or by implication, as follows:—To birth of Isaac, 100; to birth of Jacob, 60; to birth of Joseph, 91; to his death, 110.

7. With Joseph the enumeration by genealogical succession is discontinued, and the book of Exodus opens with the birth of Moses, without note of time: only we learn that between Levi and Moses were two descents, indeed by the mother's side (Jochebed, daughter of Levi) only one; and as the sum of the lives of Levi, Kohath and Amram is $137+133+137$, it follows that from the birth of Levi to the birth of Moses must be considerably less than 407 years. The desiderated information is supplied further on in the statement, emphati-

cally worded and iterated (Exod. xii. 40-42, 51), that the Exodus took place at the exact close, to a day, of a period of 430 years. But the question is, from what point of time are these years reckoned? And as this is variously answered, the chronological schemes vary accordingly. Some, as the LXX., Josephus, the Jewish Chronology, and most Christian writers, assign the period to the entire sojourn in Canaan and Egypt, beginning either with the Call of Abraham (Gen. xii.), or the Promise (xv.); others date it from the close of the period during which the Promises were made (Perizonius, Schöttgen); some (as Bengel) from the birth of Jacob; while numerous recent writers give the whole period to the sojourn in Egypt, reckoned from the descent of Jacob and the patriarchs into that country. See *Knobel*, ad l., and *Ordo Saecul.* sec. 281. The genealogy of Moses is inconsistent with so long an interval as 430 years between Jacob 130, and Moses 80; as are the others, in which (with one exception, and that only apparent), in the 4th, 5th, or 6th descent from the twelve patriarchs, we constantly arrive at contemporaries of Moses (*Ordo Saecul.* sec. 284-288). Any argument from the increase of population must be precarious, because the basis of calculation can only be conjectural. We only know that the settlement in Goshen was eventually constituted as twelve tribes in seventy houses (for so Gen. xlvii. 8-27 must be understood, see Hengstenberg, *Authentic des Pent.* 2, 35, ff.): if these houses, or rather clans, consisted not only of the offspring of the twelve patriarchs but of the families of the circumcised male-servants (Gen. xvii. 13), who were probably numerous, a basis of population is provided which might increase in the course of rather more than two hundred years into a nation numbering more than 600,000 fighting men.

8. After the Exode, the history records 40 years of wandering in the wilderness, and in Josh. xiv. 7-10, an incidental notice of the age of Caleb, who, 40 years old in the 2d year from the Exode, was now 85, brings us to the 47th year. Then occurs a gap, as the interval between the partition of lands (Josh. xiv.) and the opening of the book of Judges is not recorded. Here, with the history of the heathen oppressions and the deliverers, commences a series of time-marks, which, if meant to be continuous, make 390 years to the end of the Philistine oppression (Judg. xiii. 1). Then another gap between Judges and the 1st book of Samuel, for it is not stated at what conjuncture in the time of the Judges, or how long after it, the 40 years of Eli (1 Sam. iv. 18) began. This, which is the first item in 1 Sam., is followed by a term of 20 years and 7 months, ending with the great deliverance at Mizpeh (vi. 1; vii. 2), with which begins the undefined term of the rule of Samuel, followed by the reign of Saul, also undefined, and this by the reign of David, 40 years and 6 months, and Solomon 40 years, in the 4th of which he began to build the temple (1 Kings vi. 1).

9. It appears, then, that the direct narrative furnishes a continuous enumeration of time from Adam to the 47th year after the Exode, subject to three sources of discrepancy, as regards—1. The genuine numbers; 2. Terah's age at the birth of Abraham; 3. The bearings of the period of 430 years. The tract of years enumerated in the book of Judges is isolated by two chasms; one of

which, extending from the partition of lands under Joshua to the first servitude, may, for aught that appears, be 20 or 50 years, or even more; the other is the undefined term of the rule of Samuel and Saul, preceded by 40 years of Eli, which may be either altogether detached from the time of the Judges, or may reach up into it to some point not expressed. (The mention of 300 years by Jephthah, Judg. xi. 26, is too vague and general to have any weight in the decision of the question). But here again the information which is needed seems to be supplied in the statement (1 Kings vi. 1) that 'the 4th year of Solomon, in which he began to build the Temple, was the 480th year after the children of Israel were come out of the land of Egypt.' This statement is accepted by Hillel, who makes the 480 years one of the elements for the construction of his Mundane Era, by Ussher also, by Petavius, who, however, dates the period from the Eisode, and by many others. In more recent times, Hengstenberg, *Authentie des Pentateuchs*, ii. 23, ff.; Hofmann, in the *Studien u. Kritiken*, 1838; Thenius on 1 Kings vi. 1; Tiele, *Chronol. des A. T.*; Gehringer, *über die biblische Aere*; M. v. Niebuhr, *Gesch. Assurs u. Bab.*, uphold the statement as historical. But though this measure, by bridging over the interval from Moses to Solomon, enables the chronologist, when he has formed his mundane series down to the Exode, to assign the A. M. of 4 Solomon and so of 1 David, or, having traced the reckoning B.C. up to 1 Solomon, to give the year B.C. of the Exode, the whole tract of time occupied by the Judges is still loose at either end, and needs much management to define its bearings. For the items actually enumerated, being (even if the entire 40 years of Eli, and the 20 years of the Ark at Kirjath-Jearim, be included in the 390 of the Judges) $47 + 390 + 43 = 480$, no room is left for Joshua and the Elders, Samuel and Saul. Accordingly, the chronologists who accept this measure are obliged to resort to violent expedients—the assumption that some of the servitudes were contemporary, and others, which it is clearly impossible to exalt above the rank of ingenious conjectures. But the number 480 is, in fact, open to grave suspicion. The LXX. has instead of it 440. Josephus takes no notice of either, and on various occasions makes the interval 592, 612, and 632 years; the early Christian chronographers also ignore the measure, thus Theophil. Antioch. reckons 498 to 1 David; Clem. Alex. to 1 Saul, 490; Africanus, 677 years. St. Paul's enumeration in Acts xiii. 18-21, also proves at least this, that Jews in his time reckoned the interval in a way which is inconsistent with the statement in 1 Kings vi. 1: he gives from the Exode to 1 David $40 + 450 + 40 = 530$; therefore to 4 Solomon, 573 years. Some chronologists accept St. Paul's term of 450 years for the interval from the first servitude to the end of those 20 years of the ark, 1 Sam. vii. 2 (composed of $390 + 40 + 20$). Mr. Clinton, *Fasti Hell.* i. 312, dates the 450 from the partition of lands (47th after Exode), assumes 20 years for Joshua and the elders, and another term of 12 years between the 20 years of the ark, 1 Sam. vii. 2, and the 40 years which he gives entire to Saul—thus making the sum 612 years. In *Ordo Saeculorum* the $40 + 450 + 40$ are taken as continuous from the Exode to 1 David, and the detailed items are adjusted to this measure, sec. 240-269. But here the question arises—What authority is due

to a N. T. writer or speaker when casually diverting to matters of chronology in O. T. times (as here in Acts xiii., and again Gal. iii. 17, and also Acts vii. 4)? Those who account that such statements are merely the result of the writer's own investigation, or an echo of the rabbinical exegesis of his times, will of course decline to allow them as conclusive. In this case, unless we fall back upon 1 Kings vi. 1, which, in a measure, is open to the same objection, we are without the means of forming a continuous chronology from Moses to Solomon. The method of genealogies, precarious at best—that is, if we possessed even one demonstrably complete in all its descents from Moses to David—fails utterly, from the fact that those which have been preserved, especially those of the sacerdotal and Levitical families, which might have been expected to have been the most carefully registered, are, one and all, demonstrably incomplete. This has been shewn by the writer of this article in an examination of *Lepsius on Bible Chronology*, Arnold's *Theol. Critic*, i. p. 59-70. If, then, neither 1 Kings vi. 1 nor Acts xiii. 18-21 be deemed available, nothing remains but that some authentic synchronism from profane, especially Egyptian, annals should be applied, if any such can be ascertained, to the decision of this question. In what manner, and with what degree of success this attempt has been made, will be shewn in the article on MANETHO.

10. After Solomon's forty years, from Rehoboam downward, we find connected notes of time expressed by years of the parallel reigns of Judah and Israel. Here and there, indeed, the numbers are inconsistent and manifestly corrupt, but seldom those synchronisms which are cardinal for the construction of a Canon. The result is, that the last year of Hoshea, last king of the Ten Tribes, corresponding wholly or in part with Hezekiah, is the 257th from Rehoboam. The gross sum total of the regnal years of Judah, to that year inclusive, is 260; of the Ten Tribes, 243; but, as corrected by the synchronisms, only 257 and 238 years. This deficit of 19 years has been by most chronologists taken to imply that the two gaps in the Israelite succession which are brought to light by the synchronisms, were intervals of anarchy, one of 11 years, between the death of Jeroboam II. in 27 Uziah, and the accession of Zechariah in 38 Uziah; the other of 8 years, between the death of Pekah in 4 Ahaz, and the accession of Hoshea in the 12th of the same reign. But later writers prefer to liquidate the reckoning, by assuming an error in the regnal years of Jeroboam II. and Pekah. Thus Ewald, making the difference 21 years, gives these kings 53 and 29 years respectively, instead of 41 and 20, *Gesch. des Volkes Isr.* iii. 1, p. 261-313; Thenius *die BB. der Könige*, p. 346, by a more facile emendation, makes the numbers 51 and 30

(\aleph for \aleph , and \beth for \beth); J. v. Gumpach, *Zeitr. der Bab. u. Assyr.*, though reducing the total amount to 241 years, gives Pekah 29 years, and retains the 41 of Jeroboam; Lepsius, *Chronol. der Aeg.* makes the reigns 52 and 30; and Bunsen, *Aegyptens Stelle*, b. iv., pp. 381, 395, 402, makes Jeroboam reign 61 years, and retains for Pekah his 20 years. Movers (*die Phönizier*, ii. 1. 153), by a peculiar method of treatment, reduces the reigns of Israel to 233 years, and brings the reigns of Judah into conformity with this sum, by making Jehoram

co-regent with Jehoshaphat 4 years, Uzziah with Amaziah 12, and Jotham with Uzziah 11 years. From this point, viz., from the end of the kingdom of Israel, we have only the reigns of the kings of Judah, the sum of which, from 7 Hezekiah to 11 Zedekiah, is 133 years.

11. *Synchronisms with Profane Annals.*—In the latter part of this tract of time, we meet with synchronisms, more or less precise, between sacred and profane history. Thus Jer. xxv. 1, the 1st year of Nebuchadnezzar, coincides wholly or in part with 4 Jehoiakim; 2 Kings xxiv. 12, the epoch of Jeconiah's captivity and of Zedekiah's reign, lies in 8 Nebuchadnezzar; *ibid.* xxv. 8, the 11th of Zedekiah, the 5th month, 10th day, lies in 19 Nebuchadnezzar; and Jer. lii. 31, the 37th of Jeconiah, 12th month, 25th day, lies 'in the year that Evil-merodach began to reign.' From these synchronisms it follows demonstrably, that, in this reckoning, Nebuchadnezzar has 45 years of reign, two years more than are assigned to him in the Astronomical Canon, where his reign of 43 years begins *Ac. Nab.* 144 = 604 B.C.; consequently, that his reign in the Jewish reckoning bears date from the year 606 B.C. (*Ordo Saecul.*, sec. 161-171, 438). Hence it results, that the year of the taking of Jerusalem and destruction of the Temple is 588 B.C. Those chronologists who, not having carefully enough collated and discussed the testimonies, accept unquestioned the year 604 B.C. as that first year of Nebuchadnezzar, which coincides with 4 Jehoiakim, place the catastrophe two years later, 586 B.C. With this latitude for difference of views, the synchronism 1 Nebuchadnezzar = 4 Jehoiakim = 606 or 604 B.C., has long been generally taken by chronologists as the connecting link between sacred and profane annals, the *terminus a quo* of the ascending reckoning. From this point the series of years B.C. is carried up through the reigns of the kings to Rehoboam, and thence to Solomon and David: but there it is arrested, unless, in one or other of the ways which have been indicated, we can measure the interval between the time of the Judges and the accession of David, and then again that between the partition of lands under Joshua and the first servitude in the book of Judges. On the other hand, the descending reckoning can be pursued—but in a vast variety of forms—down to the time of the settlement in Canaan; so that, if it be possible to carry the ascending line of years up to that point, our Mundane Era, of whatever form, can be rendered in terms of the era B.C.

12. But, besides the fundamental synchronisms, the history of the kings presents points of connection with the contemporary history of Assyria, Babylon, and Egypt, which recent monumental discoveries have invested with a high degree of importance. Thus in 2 Kings xviii. 13; xix. 9, it appears that Sennacherib, king of Assyria, and Tirhaka, king of Ethiopia, were both contemporary with Hezekiah, and at the 14th year of his reign. Now, in the recently recovered Armenian version of Eusebius's *Chronicle*, we have it on the authority of Berosus (quoted from the Polyhistor) that from Sennacherib to Nebuchadnezzar were 88 years (the names and numbers are given, and agree with the expressed sum): this account places the accession of Sennacherib at B.C. 692, which is 20 years later than the lowest date that the biblical numbers will allow for 14 Hezekiah. Accordingly, Niebuhr (*kl. histor. u. philol. Schrif-*

ten, i. 209) proposed to strike out that number of years from the 55 assigned to Manasseh; then the interval to 4 Jehoiakim = 1 Nebuchadnezzar, would be 15 + 35 + 2 + 31 + 3 = 86. Since Niebuhr's time an important Assyrian monument of the time of Sennacherib, interpreted by Rawlinson and Hincks, informs us that the invasion of Judaea, which in the book of Kings is said to have been in the 14th of Hezekiah, took place in Sennacherib's 3d year. Hence the interval to 4 Jehoiakim becomes 86 years. Of itself this does not prove much, and Ewald, iii. 364; Thienus, p. 410; Bunsen, iv. 398, retain the biblical number, which also the younger Niebuhr, *Gesch. Assurs u. Babels*, 99-105, learnedly upholds against his father's objections. With the assistance, too, of the Canon, and of the extract from Abydenus's account of the same times, it is not difficult to bring the statements of Berosus into conformity with the biblical numbers; as in *Ordo Saecul.*, sec. 489, ff.; Brandis, *Rerum Assyriarum tempora emendata*, p. 40, ff. (retracted, however, in his later work *über den hist. Gewinn aus der Entziff. der Assyr. Inschr.* p. 46, 73); and in the work just cited of the younger Niebuhr. On the other hand, Lepsius, *Königs-Buch der Aegypter*; Movers, *die Phänizier*, ii. 1. 152, ff. (whose arguments A. v. Gutschmid, *Rhein. Mus.*, 1857, thinks unanswerable); Scheuchzer, *Phul u. Nabonassar*; and J. v. Gumpach, *Abriss der Bab. Assyr. Gesch.*, p. 98, ff., contend for the reduced numbers.

13. In connection with this discussion, a passage of Demetrius Judeus (*supra*, sec. 5) has been deemed important (v. Gumpach, *u. s.* 90, 180). He seems to have put forth a chronological account of the biblical history, from which Eusebius, *Præp. Ev.*, ix. 21, 29, gives—quoting it from the Polyhistor—what relates to the patriarchs and Moses: another passage, preserved by Clem. Alex. *Strom.* i., sec. 141, is a summary of the period elapsed from the captivity of the Ten Tribes to his own times. Its substance is as follows:—From Sennacherib's invasion of Judah to the last deportation from Jerusalem by Nebuchadnezzar, 128 years 6 months. From the captivity of the Ten Tribes to Ptolemy IV. (Philopator), 473 years 9 months (so we must read for 573); from Nebuchadnezzar's deportation from Jerusalem, 338 years 3 months. As the epoch of Ptolemy IV. in the Canon is B.C. 222 (24th October), this gives for Nebuchadnezzar's 'last deportation' 560 B.C. (July); for Sennacherib's invasion, 688 B.C. (Jan.); and for the captivity of Samaria, 695 B.C. (Jan.) But unless we are prepared to set aside the Astronomical Canon, at least its dates for Nebuchadnezzar and Evil-merodach, the captivity under Nebuchadnezzar, whether it be that in his 19th year (11th Zedekiah), or 'the last' in his 23d year, Jer. lii. 30, cannot fall so low as 560 B.C. That the final deportation is meant, is plain from the exact correspondence of the sum with the biblical items—Hezekiah, 15; Manasseh, 55; Amon, 2; Josiah, 31; Jehoiakim, 3; Nebuchadnezzar, 22 = 128 years. The 6 months over are perhaps derived from the 3 of Jehoahaz, and 3 of Jeconiah. M. v. Niebuhr, *u. s.*, p. 102, ff., sets himself to solve the difficulty; but the writer of this article is satisfied that the whole matter is to be explained by an error in the ordinal of the Ptolemy. Set the goal at Ptolemy III. (Euergetes) = 247 B.C., Oct.; then we have for the captivity of the Ten Tribes 720 (Jan.); for

Sennacherib in Judæa, 713 (Jan.); for the deportation in 23 Nebuchadnezzar, 585, July; and consequently 589 for the destruction of the Temple—very nearly in accordance with the date for the last assigned by Clement of Alexandria, 588 B.C., *Strom.* i. sec. 127. In fact, the chronological statements in this portion of the *Stromata* swarm with numerical errors, and a careless scribe might easily misread TETAPTOT for TOTIPITOT. Be that as it may, it is a great mistake to suppose that Demetrius or any other Jew of his or of later times, can be competent to rule a question of this kind for us. He may have been, as M. v. Niebuhr thinks, 'a sensible writer' (though others, judging from the fragments preserved by Eusebius, may fairly think otherwise); that 'he may have handed down good materials' is just possible; the probability is, that he gives us the results of his own inquiries, confined to the text of the sacred books, except that he gathered from the Astronomical Canon the year corresponding to 23 Nebuchadnezzar, the last recorded in the sacred books.

14. A farther synchronism with 14 Hezekiah is furnished by the mention, 2 Kings xix. 9, of Tihaka, undoubtedly the Tarkos, Tarakos of Manetho's 25th dynasty, in which, according to the uncorrected numbers, his reign begins 170½ (Afr.), 183 or 188 (Eus. Gr.), 185, 187, or 193 (Eus. Armen.) before Cambyses, 525 B.C.: the extremes therefore are 695 and 718 B.C. for his epoch. But we are not dependent on the lists for the time of this king *Taharka*. The chronology of the 26th dynasty had already been partially cleared up by funerary inscriptions (now in the museums of Florence and Leyden), which by recording that the deceased, born on a given day, month, and year of Neko II., lived so many years, months, and days, and died in a given year, month, and day of Amosis, enabled us to measure the precise number of years (41) from the epoch of the one king to the epoch of the other (Böckh, *Manetho* 729, ff.): and now it is placed beyond further question by Mariette's discovery of a number of inscriptions, in each of which the birth, death, day of funeral, and age of an Apis are recorded in just the same way (see Mariette's own account, *Renseignement sur les 64 Apis, trouvés dans les souterrains du Sérapéum—Bulletin Archéol. de l'Athén. Français*, Oct. 1855; and the selection from these by Lepsius *On the 22d dynasty*, translated by W. Bell, 1858). There remains only a slight doubt as to the epoch of Cambyses: whether with the canon this is to be referred to 525 B.C. (the usual date), or with De Rouge to 527, for which v. Gumpach also contends, or 528 with Dr. Hincks *On the age of the 26th dynasty*, or even 529 Böckh, *Manetho*, 739, ff. The main result is, that Psametik I. began to reign 138 years before the epoch of Cambyses, therefore 663 B.C. (or at most 3 years earlier). Now Mariette, No. 2037, records that an Apis born 26 Taharka, died 20 Psametik I., 12th month, 20th day; its age is not given. As the Apis was not usually allowed to live more than 25 years, though some of the inscriptions record an age of 26 years, on this, as an extreme supposition, the interval from I Taharka to I Psametik will be at most 31 years, and the highest possible epoch for Tihaka, 697 B.C. This result, in itself, is not necessarily opposed to the biblical date for 14 Hezekiah: for in the narrative itself, while a 'Pharaoh, King of Egypt' is mentioned, xviii. 21, this Tihaka is styled 'King of Ethiopia,' and he

seems to appear on the scene as an unexpected enemy of Sennacherib (M. v. Niebuhr *u.s.* 72, ff., 173, 458); he may have reigned in Ethiopia long before he became king of Egypt: though, on the other hand, it is clear that this originally Ethiopian dynasty was contemporaneous in its lower part with the 26th, a Saite dynasty of Lower Egypt, and probably in its upper part with the preceding Saite dynasty, as Lepsius makes it. The real difficulty, however, consists in this, that the 'So (SUD), King of Egypt,' whose alliance against Assyria was sought by Hoshea in his 5th or 6th year (2 Kings xvii. 4), can be no other than one of the two predecessors of Tihaka, Sebek I. or II., to the first of whom Manetho gives 8, to the other 14 years of reign. Thus, at the earliest, the former would begin to reign 719 B.C., which is at least 5 years too low for the biblical date. As a conjectural remedy for this 'desperate state of things,' v. Niebuhr, p. 459, suggests that the 50 years of the 25th dynasty were possibly not continuous; failing this, either an error must be assumed in the canon somewhere between its 28th and its 123d year, both of which are astronomically attested, or else the reign of Manasseh must be reduced. On the whole, it seems best to wait for further light from the monuments. At present, these attest the 12th year of Sebek II., but give no dates of his predecessor; the genealogical connection of the two, and of Taharka, is unknown; of Bocchoris, the only occupant of the preceding dynasty, no monument has been discovered, and but scanty and precarious traces of the Tanite kings of the 23d dynasty, the last of whom, Zet, may even be the Sethos whom Herodotus, ii. 141, makes the hero of the miraculous defeat of Sennacherib's army. And, indeed, Is. xix. 11; xxx. 4, both seem to imply that Zoan (Tanis) was at that time the residence of the Pharaoh of Lower Egypt. Here is ample scope for conjecture, and also for discoveries which may supersede all necessity for conjecture.

15. The mention of 'Merodach Baladan, son of Baladan, king of Babylon,' apparently in or not long after 14 Hezekiah, 2 Kings xx. 12, forms yet another synchronism. For Sennacherib's inscription records his defeat of this king in his first year; a Marudakh Baladan appears in the Polyhistor's extract from Berosus as king in Babylon early in Sennacherib's reign, but with circumstances which make it extremely difficult to make out the identity of the three persons with each other, and with either the *Mardok* Empad, who in the canon reigns in Babylon from 721 to 709, or the Mesesi *Mordak* of the same document, from 692 to 688. (See HEZEKIAH and MERODACH BALADAN). Here it may be sufficient to mention, that Dr. Hincks, *Trans. of Royal Irish Academy*, vol. xxii. 364, retaining the 55 years of Manasseh, proposes to solve the difficulties by placing Sennacherib's invasion of Judæa in Hezekiah's 25th instead of his 14th year, at the date 701 B.C.: Hezekiah's illness remains at its earlier date. Bunsen, tacitly adopting this construction, makes 3 Sennacherib fall in 24 Hezekiah, and imagines that the invasion which terminated disastrously to the Assyrian king was a second, in Hezekiah's 28th year, on which latter occasion it was that Tihaka came to the relief of Jerusalem (*Aeg. Sl.*, b. iv. 505). Retaining for this Egyptian king an epoch, 712 B.C., which is plainly disproved by the Apis inscriptions (sec. 14), he makes it possible for So = Sevek II. to have been contemporary

with Hoshea. It must be owned, that the received chronology of Hezekiah's reign is beset with difficulties on the side both of Egypt and of Assyria and Babylon. But from neither have we as yet all the facts we need, and the fuller and clearer information which is confidently expected from the cuneiform inscriptions, in particular, will probably make much bright that is now dark. In the meantime, it will be well to remember that no man's insight is final; he who least commits himself to peremptory conclusions now, will perhaps have least to retract by and bye.

16. Another argument tending to lower still more the whole time of the kings, and the date of the building of Solomon's Temple, is fetched from some ancient data of Tyrian chronology. It is as follows:—Josephus, *c. Ap. i. 17*, announces that the building of the Temple lies 143 years 8 months before the founding of Carthage; he gives this on the authority of Menander of Ephesus, meaning his own summation of that author's enumeration of reigns professedly copied from public monuments. In proof, he quotes the regnal numbers of the kings from Hirom, the friend of Solomon, to Pygmalion inclusive, eleven in all, making a sum (not however expressed) of 177 years 8 months. He adds, from his author, 'It was in the 7th year of Pygmalion that Elisa fled from Tyre, and founded Carthage in Libya;' and, *from himself*, 'The sum of years from the reign (epoch) of Hirom to the founding of Carthage is 155 years 8 months; and since it was in 12 Hirom that the Temple was built, the time from thence to the founding of Carthage is 143 years 8 months.' (The interval, as the numbers stand in the text, is, in fact, 177 years 8 months, minus 12 of Hirom and 40 of Pygmalion, *i. e.*, only 125 years 8 months: it does not concern us here to consider how the missing 18 years may be restored; the number, 143 years 8 months, given twice by Josephus, is not affected by errors what may have crept into the details.) Now, the founding of Carthage is placed by Timeus (Dion. Hal. i. 74) 38 years before Ol. 1, *i. e.*, 814-13 B.C.; by Trogus (Justin, xviii. 6) 72 years before the building of Rome, *i. e.*, 825 B.C. Niebuhr (the father), accepting the date 814-13 B.C. as indisputable, deduces for the building of Solomon's Temple the year 957-56 B.C. (*Lect. on Anc. Hist.* iii. 159); Movers (*Phœnicier*, ii. 1. 140, ff.), preferring the other, gets the date 969 B.C. Again, Josephus, *Ant.* viii. 3. 1, after stating that 11 Hirom is 4 Solomon, and the year of the building of the Temple, adds (probably from Menander), that the year in question was 240 years from the building of (New) Tyre. It does not appear that he found the 11 or 12 Hirom expressed by Menander or Dios as answering to the 4 Solomon. Probably he obtained the synchronism from his own investigation of the various places in 2 Sam., 1 Kings, and 1 Chron., where Hiram is mentioned; but the number 240 is probably Tyrian. Now Trogus (Justin xviii. 3) states, that Tyre was founded by the Sidonians in the year before the fall of Troy. Among the numerous ancient dates assigned to that event one is 1208 B.C. (Ephorus, followed by the *Parian Chron.* and other authorities). But 1209—240=969 B.C., precisely the year which resulted from the former argument. Such is the twofold proof given by Movers, accepted by J. v. Gumpach and others, and highly applauded by A. v. Gutschmid in *Rhein. Musæum*, 1857. On the other hand, it should be

considered—1. That between the flight of Elisa, in Pygmalion's 7th year, which is the goal of these 143-4 years, and the founding of the city, there certainly occurred a train of events (the settlement in Byrsa = *Bozrah*, and the growth around it of the Magalia = *Ma'hal*, which eventually became the New-Town, *Kartharasa* = Carthage) which implies a considerable tract of time; and 2. That as the ancient dates of the fall of Troy vary over a range of about 180 years, Timeus placing it at 1333, Herodotus at 1270, Eratosthenes at 1183, Arctinus, 1144, besides intermediate dates (Müller, *Fragmenta Chronol.* sec. 17), the 240 years may be so measured as to fall near enough to the time given to 4 Solomon by the usual chronology. It has been generally received hitherto that the Era of Tyre dates from *cir.* 1250 B.C., and there seems to be no sufficient reason to the contrary (Bunsen, iv. 280, ff.) The concurrence of the two lines of argument in the year 969 B.C. is one of those coincidences which are so perpetually occurring in chronological combinations, that the practised inquirer at last pays little heed to them. In fact, it may only imply that Justin's author got from Menander the date 384 Tyre = 7 Pygmalion, mistakenly, as by Josephus, identified with 1 Carthage; and having also obtained from the same or some other source the year equivalent to 1 Tyre, would so arrive at his datum for 1 Carthage, or, *vice versa*, from the latter would rise to the former. And, after all, when we inquire what is the worth of Josephus as a reporter; and, supposing him accurate, what is the value of the Tyrian annals, the answer is not of necessity unfavourable to the claims of the biblical chronology of the kings of Judah and Israel. Furnished, as this is, by an annalistic series incomparably more full and exact than any profane records of the same times which have come to us at second hand, it is not to be impeached by any but clear contemporary monumental evidence (such as Mariette's Apis-records); and if the entire Hebrew tale of years from 4 Solomon to 11 Zedekiah is to be materially lowered on the scale of the series B.C., this can only be done by proving some capital error in the Astronomical Canon.

17. And, in fact, an attempt has lately been made in this direction, which, if successful, must set our biblical chronology adrift from its old bearings. It is contended by Mr. Bosanquet (*Re-adjustment of Sacred and Profane Chronology*, 1853) that a lower date than 606-604 B.C. for the accession of Nebuchadnezzar is imperatively demanded by the historical connection of that event with the famous 'Eclipse of Thales;' which, according to Herodotus i. 74, 103, occurring during a pitched battle between the Medes and Lydians, was the occasion of a peace, cemented by marriages, between Cyaxares and Halyattes, after which, as Herodotus seems to imply, the former turned his arms against Assyria, and, in conjunction with Labynetus (the Nabopolassar of Berosus and the Canon), took and destroyed Nineveh. The dates assigned by the ancients to that eclipse lie between Ol. 48 and 50. Kepler, Scaliger, and Sir Isaac Newton made it B.C. 585; Baily (*Philos. Trans.*, 1811) and Oltmanns (*Schr. der Berlin. Akad.* 1812-13) found it 30th Sept. 610 B.C., which date was accepted by Ideler, Saint-Martin, and most subsequent writers. More recently it has been announced by Mr. Airy (*Philos. Mag.*, 1853) and Mr. Hind

(*Athenæum*, Aug. 1857), as the result of calculation with Hansen's improved tables, that in the eclipse of 610 the moon's shadow traversed no part of Asia Minor, and that the only suitable one is that of 28th May 585 B.C., which would be total in Ionia, Lydia, Lycia, Pamphylia, and part of Cilicia. It has, indeed, been contended by Mr. Adams, that the tables need a further correction, the effect of which (as Mr. Airy remarked, *Athenæum*, Oct. 1859) would be such as to render the eclipse of 585 inapplicable to the recorded circumstances: but it appears that the Astronomer-Royal no longer entertains any doubts on this point, having quite recently (see *Athen.*, Sept. 1861) expressed his 'unaltered conviction, that the tables of Hansen give the date of the great solar eclipse, which terminated the Lydian war, as the most reliable records of antiquity placed it, in the year 585 B.C.' And, indeed, however the astronomical question may ultimately be decided, it would appear, from all that is known of the life of Thales, that he could hardly have predicted an eclipse in Ionia so early as 610 B.C. (Röth, *Gesch. unserer abendländischen Philosophie*, ii. 98). But that the 'Eclipse of Thales' occurred at the conjuncture indicated by Herodotus, rests only on his testimony, and in this he might easily be mistaken. Either he may have confounded with the eclipse predicted by Thales an earlier one occurring during the war of Cyaxares and Halyattes—possibly that of 610, for no locality is mentioned, and there is nothing to forbid our seeking the battle-field in some suitable situation (e. g., with M. v. Niebuhr, p. 508, in Atropatene, or with v. Gumpach, *Zeitr. der Bab. u. Assyrr.*, p. 94, in Armenia); or, he may have assigned to that earlier war what really took place during a later war of the Medes and Lydians under Astyages and Halyattes. And the latter supposition is not without support of ancient authors. Cicero (*de Divinat.* i. 50), from some lost authority, places the eclipse, without date or mention of the war, under Astyages. Pliny (*H. N.* ii. 9), giving the date Ol. 48.4 = B.C. 585, says, also without mention of the war, that the eclipse occurred in the reign of Halyattes (this lasted, in the usual chronology, from 620 to 563 B.C.) Solinus (c. 15, 16) assigns Ol. 49. 1 as date of eclipse and battle, but (c. 20) he speaks of the war as between Halyattes and Astyages. From Eudemus, a much earlier author, Clement of Alexandria (*Strom.* i. 14, sec. 65) gives the date of the eclipse 'about Ol. 50,' with the addition, that it was the time of the war between Cyaxares and Halyattes—in which Eudemus, if more than the date be his, merely repeats Herodotus; but the addition is as likely to be Clement's own. The Eclipse of Thales, therefore, is by no means so cardinal an event as has been assumed; and to uphold the loose statement of Herodotus, in connection with the earlier date 610 B.C., is as precarious a proceeding as is the attempt to urge it with the lower, and, in all probability, authentic date, 585 B.C., to the subversion of the received chronology. Mr. Bosanquet, however, holds that from the testimony of this eclipse there is no escape; and supporting by this the arguments above described (sec. 13-16), together with others fetched from new combinations, does not hesitate to interpose '25 years of Scythian rule in Babylon' between Nabopolassar and Nebuchadnezzar, thereby lowering the epoch of the latter from 604 to 579 B.C. The effect of

this is to bring the destruction of the Temple to 560; Sennacherib's 3d and Hezekiah's 14th year to 689; and the 4th of Solomon to 989 or 990 B.C. Of course this involves the necessity of extensive changes in the history and chronology of the lower portion of the 6th century B.C. Thus Cyrus is made into two persons of the name; the first, beginning to reign in Persia, 559 B.C., succeeded by Cambyses as viceroy 535 (which is made the 1st year of Evil-merodach), and as king, 529 B.C., together with a second Cyrus as joint-king of Media in 13 Cambyses = 523 B.C. The length of reign of this Cyrus II. is not assigned; he disappears from Mr. B.'s table, together with Cambyses, who, with Smerdis between, is followed at 516 by Darius Hystaspis as king, which Darius had become viceroy in Babylon and Media in 521 B.C. It should be remarked that this 're-adjustment' of the chronology is proposed with a view to a fulfilment of Daniel's Prophecy of the Seventy Weeks (*Chronol. of the Times of Daniel, Ezra, and Nehemiah*, 1848)—namely, the predicted seventy years of desolation reach from the destruction of the temple, 560, to 490 B.C.; the date of Daniel's prophecy in the first Babylonian year of Darius Hystaspis, then '62 years old' (Dan. vi. 1), is made 493 B.C., whence to the birth of Christ, which the author places (wrongly) in 3 B.C., are the seventy times seven years foretold: also this year 493 is itself the goal of an earlier period of 490 years, reckoned from 983 B.C., Mr. B.'s date of the dedication of Solomon's Temple. So extensive a refashionment of the history will hardly be accepted on the strength of the alleged proofs, unless, perhaps, by those who regard the prophecy of Daniel as itself furnishing an element of the chronological question. This view was boldly followed out, in ignorance or scorn of all Gentile chronology, by the framers of the Jewish Mundane Era. Assuming that a period of 490 years *must* reach from the destruction of the first Temple to that of the second, which latter they set at A.D. 69 (a year too early), they obtained for 19 Nebuchadnezzar = 11 Zedekiah, the year 422 B.C. (which, in profane chronology, lies in the reign of Darius Nothus). On the like grounds Lightfoot does not hesitate to place the first year of Cyrus 490 years before the Passion, for which his date is 33 A.D. 'From this year [458 B.C.] to the death of Christ, are 490 years; and there is no cause, because of doubtful records among the heathen, to make a doubt of the fixedness of the time, which an angel of the Lord had recorded with so much exactness.'—(*Harmony of the O. T.*, Works, vol. i., p. 312.) A late noble writer (Duke of Manchester, *Daniel and his Times*, 1845), with the like end in view, identifies the Darius of Ezra, Haggai, and Zechariah, and of Dan. viii. 1 (made different from him of vi. 1), with Darius Nothus; and, in order to this result, sets himself to shew that the founder of the Persian monarchy, whom the Greeks call Cyrus, is in fact Nebuchadnezzar I. (the Nabopolassar of the Canon), for the 'Persians' and the 'Chaldeans' are the same people: his son Cambyses is the Nebuchadnezzar of the Bible, destroyer of the Temple: Belshazzar is the last king of the Cyrus dynasty at Babylon: his conqueror, 'Darius the Mede,' Dan. vi. 1, is Darius Hystaspis: and the biblical Koresh, the restorer of the Jews (and Cyrus of Xenophon, altogether different from him of Herodotus and Ctesias), is a satrap, or feudatory of Xerxes and

Artaxerxes. Strange to say, this wild speculation, with its portentous conglomeration of testimonies, sacred and profane, ancient and modern, genuine and spurious (conspicuous among these the 'Philo' and 'Megasthenes' of the impudent forger Annius of Viterbo), has not only been gravely listened to by scholars of Germany, but has found among them zealous advocacy and furtherance. Ebrard in the *Theol. Studien u. Kritiken*, 1847; Metzke 'Cyrus der Gründer des Pers. Reiches war nicht der Befreier der Juden sondern der Zerstörer Jerusalems', 1849.

It should, however, be remarked, that the identification of Ezra's Darius with D. Nothus has commended itself (still with a view to Daniel's prophecy) to more than one eminent writer. Proposed by Scaliger, it is advocated by the late Dr. Mill in his *Treatise on the Descent and Parentage of our Saviour*, 1842, p. 153, and the reasons given deserve consideration. See the Art. DARIUS.

Apocryphal Books of the Old Testament.—The Book of *Tobit* contains an outline of Assyrian history (from the deportation of the Ten Tribes to the Fall of Nineveh), to which the moral fiction is attached (*Ordo Secl.* p. 555, note; v. Niebuhr *Gesch. Assurs.* p. 100, note; comp. Fritzsche *das Buch Tobit* 1853, p. 14, ff.; Ewald, *Gesch. des V. Isr.* 4, p. 233, ff.) To treat it as a narrative of facts, and apply it to purposes of chronological proof, as some, even recent, writers have done, (e.g., v. Gumpach, *Babyl. Zeitr.* p. 138), is quite to mistake its character.—As regards the book of *Judith*, it is surprising that any one conversant with history and criticism should fail to see that this is not a record of facts, but a religious, quasi-prophetic allegory (*Ordo Secl.*, p. 556, note; Fritzsche, *das B. Judith*, p. 123, ff.; Ewald, *Gesch. des V. Israel* 4, p. 541. See also Winer, *Real. W.-B. s. v.*; Movers in the *Bonn. Zeitschr. für kath. Theologie*, 1835, p. 47; Vaihinger *s. v.* in Herzog's *Real-Encyclop.* 7, p. 135, ff.) M. v. Niebuhr, acknowledging this (*u. s.* p. 212-285), nevertheless finds in its dates, according to the Lat. version, a background of historical truth with reference to the times of Nebuchadnezzar. V. Gumpach *u. s.* 161, ff., maintains its historical character, and applies it to his own purposes with extraordinary confidence. See also Scholz, *Einkl. in die heil. Schriften*, 1845.—In the books of *Maccabees* the years are regularly counted, under the name ἔτη τῆς βασιλείας τῶν Ἑλλήνων, meaning the Era of the Seleucidæ, beginning in the autumn of 312 B.C.; only, in the First Book the epoch is made 1 Nisan of that year, while in the Second Book it is 1 Tisri of the following year (311 B.C., i.e., eighteen months later). This, which has been sufficiently proved by earlier writers (see Ideler, *Hdb. der Chronol.* i. 531, ff.; *Ordo Secl.* sec. 440-42), is contested on inadequate grounds by v. Gumpach, *Zwei Chronol. Abhandl.* 1854.

18. *New Testament Chronology.* The Gospels and Acts of the Apostles have (with one exception, Luke iii. 1) no express dates: in the absence of these, combinations, more or less probable, are all that the chronologist has to go by.

For the *Nativity*, the criterior limit is furnished by the death of Herod (Matt. ii. 1, 19; Luke i. 5), the year of which event, as it is nowhere named by Josephus or any other extant historian, has to be determined by various circumstances. These are—the mention of an eclipse of the moon not

long before it (*Antiq.* xvii. 6. 4, *fin.*), which, by calculation, can only have been that of 12-13 Mar. B.C. 4; the length of Herod's reign, together with the recorded date of its commencement (*Antiq.* xvii. 8. 1; comp. xiv. 14. 5 and 16. 4); and of that of his sons—Archelaus (*Antiq.* xvii. 13. 3; comp. *Bell. Jud.* ii. 7. 3), the consular year of whose deposal is given by Dion Cass. lv.; Herod Philip (*Bell. Jud.* xviii. 4. 6, length of reign and year of death); for Herod Antipas, Josephus (*Antiq.* xviii. 7. 2) gives date of deposal, but not length of reign; this, however, is known from coins (Eckhel, *Doct. Num.* iii. 489) to have reached its 43d year. All these indications point to B.C. 4, not long before the Passover, as the time of Herod's death. Those who would impugn this conclusion urge other, discrepant, statements in Josephus; or call in question either the fact of the eclipse or its calculated date; or contend that the death of Herod could not have taken place so soon after it. The inducement is, that our Lord's age may not exceed 30 years at the time of his baptism, i.e., at the earliest in the 15th year of Tiberius, for if this note of time is to be taken strictly, the earliest date for the Nativity should be the year 3 B.C. The year supposed known, it is attempted to approximate to the day by calculating the order of the sacerdotal cycle, and finding at what time in the given year the course of Abijah' (Luke i. 5) entered upon office. The starting-point for the reckoning is furnished by a Jewish tradition (*Mishna*, iii. 298. 3), and it is assumed that the conception of John the Baptist ensued at the expiration of Zechariah's week of service, and the Annunciation five months later (Luke i. 23-26, 36; but in the church calendars six months).—Here, it should be observed, that we have no reason to suppose the ancients to have been in possession of the true date, either year or day. Having ascertained, as they supposed, the year and day of the Baptism, they counted back 30 years to the Nativity (see a paper by the present writer, *S. Clemens Alex. on N. T. Chronology* in the *Journal of Classical and Sacred Philology*, 1854, vol. i, p. 327, ff.) Also, it would be well that all such considerations as the 'fitness of things' prescribing a particular year, or day of the year, for this or any other event of sacred history, should be banished from chronological investigations. Let the date be first clearly proved before attention is called to any supposed natural fitness, sacred significance, or alleged fulfilment of prophecy. These must not be allowed to rank among the primary elements of a question of chronology. At most they may recommend one of two or more conclusions between which the chronological arguments are evenly balanced, or may countervail any slight uncertainty attaching to the proof; but even this, for the most part, only to the inquirer himself: whatever conviction they may convey to his mind will rarely reach the minds of others.

19. St. Luke's date, '15th of Tiberius' (iii. 1), interpreted by the constant rule of the imperial annals (and also of the Canon), denotes the year beginning August A.D. 28, and ending in the same month of A.D. 29. Referred to the current consular year, it may mean either A.D. 28 or 29. Taken in the Jewish sense, it may be the year beginning either 1 Nisan or 1 Tisri A.D. 28, or even 1 Tisri A.D. 27. The hypothesis of a dating of the years of Tiberius from an epoch earlier by three years than the death of Augustus, which,

from the 16th century downward, has found favour with many learned men, will not bear examination: it is unknown to the early ecclesiastical writers, and nowhere in histories, on monuments, or coins, is a trace of any such epoch of Tiberius to be met with. The utmost latitude is that which arises from the question of technical use—imperial, consular, or Jewish; and when this is decided, there remains the further question, Whether the evangelist intended by this date to mark the commencement of the Baptist's ministry, or the baptism of our Lord, or the crowning event of the whole narrative—the crucifixion and resurrection. All these views have their advocates.

20. The note of time (John ii. 10) connected with the *Passover after the Baptism*, points, if the 'forty and six years' are reckoned from Herod's announcement of his purpose in his eighteenth year (*Antiq.* xv. 11. 1) to 27 A.D.: if from the actual commencement, after all the materials were provided, it may denote either 28 or 29, or 30 A.D., according to the length of time supposed to be spent in preparation. But here, again, besides discrepant statements in Josephus as to the epoch of Herod's reign, it chances that the earlier account of the same proceedings in *Bell. Jud.* i. 21. 1, dates this undertaking of Herod in his *fifteenth* year. It does indeed admit of proof, even from the context, that the 15th year is too early, but it may, plausibly enough, be urged by those who wish to do so, that, if Josephus is wrong in the one statement, he is just as likely not to be right in the other.

21. The *Crucifixion* certainly cannot be placed earlier than A.D. 28, in which year the 15th of Tiberius began, and it has never been proposed by inquirers of any note to place it later than A.D. 33. The astronomical element of the question—namely, that in the year of the Passion, the 14th of Nisan fell on a Friday—if it be rigorously applied, *i. e.*, according to a definite rule of Jewish usage and the results of strict lunar calculation, indicates only one of the six years mentioned, *viz.*, A.D. 29, in which 14 Nisan was 18 Mar. and Friday. If a certain laxity as to the rule be allowed, the 14th Nisan may *possibly* have fallen on 3d April, Friday, in A.D. 33. But if, in compliance with the apparent import of the first three Gospels, without explanation from the fourth, it is contended that the crucifixion took place on the day after the Passover, the year may have been A.D. 30, in which the 15th Nisan fell on Friday 7 April, or A.D. 33, in which it was (in strictness) Friday 3 April. Lastly, if it be maintained that the Jewish Passover-day was regulated, not by actual observation of the moon's phases, but by cycles more or less faulty, any year whatever of the series may be available in one form or other of the hypothesis.

22. *Ancient testimony*, if that is to have weight in this question on the supposition that the year was known, either by tradition or by access to public records (the *Acta Pilati*, to which the ancients so confidently appeal), certainly designates the Passover of the year 29, *cons. duobus Geminis*, the 15th year of Tiberius. In the Western Church the consent to this year is all but general; in the Eastern, the same year is either named or implied in the two earliest extant testimonies, Clem. Alex. (*Strom.* i. 21, sec. 101-143; see *Journal of Class. and Sacr. Philol.* u. s.), and Julius Africanus. Those of the ancients who assign a different year, do so, either because they placed the baptism in that year, and

the ministry necessarily occupied at least one year, or because they were misled by erroneous consular fasti, or because they wished to make out a term of three and a half years from the baptism to the Passion, with a view to a fulfilment of Daniel's prophecy, which at an early period was imported into this question. As the fourth Gospel specifies three Passovers, implying a ministry of at least two entire years, it follows that, if the year of the Passion was A.D. 29, the baptism of our Lord did not take place, in any sense, in the 15th of Tiberius. But the earliest writers, with great consent, hold that the Lord's ministry occupied little more than one year. The first three Gospels, by naming only two Passovers, favour this view. The text of John vi. 4, as it appears in all known MSS. and versions, is conclusive against it; but there is strong reason to believe that the words *τὸ πάσχα* were not found in the text of that passage in early times. It is inexplicable that with these words in their copies the ancients should have failed to see that three Passovers imply at least two years: Irenæus, in making out a list of the Passovers for a controversial purpose, takes no notice of John vi. 4; Origen and Cyril of Alexandria demonstrably held 'the feast of the Jews' there mentioned to be the Feast of Tabernacles (*Ordo Sacl.*, sec. 85-94).

23. In the *Acts*, the mention of the *death of Herod Agrippa* (xii. 23), interposed between an arrival of St. Paul at Jerusalem and his return thence to Antioch (xi. 30, xii. 25), would yield a firm resting-point for that portion of the narrative, *viz.*, Easter A.D. 44 (Joseph. *Antiq.* xviii. 8. 2; comp. xix. 5, 1; *Bell. Jud.* ii. 11. 6), could we be certain that the death of Agrippa took place soon after, or even in the same year with the Easter mentioned xii. 3, 4. (The time of Agrippa's death is determinable with high probability to the beginning of August of that year). But as it is possible that the writer, after his narrative of the acts of this king, thought fit to finish off all that he had to say about him before going on with the narrative about Paul and Barnabas, it may be that their mission to Jerusalem, and return, after the martyrdom of James, and deliverance of Peter, took place before the year 44. It might even be inferred from xi. 26 *ἦρτις ἐγένετο ἐπὶ Κλαυδίου*, that the prophecy of Agabus was delivered before, or quite in the beginning of 41 A.D., as the famine is known to have prevailed at Rome during the first two years of Claudius (41, 42; Dion Cass. lx. 11), but that it appears not to have been felt in Judæa till after the death of Agrippa, in the procuratorship of Cuspius Fadus and Tiberius Alexander (45-47; Joseph. *Antiq.* xx. 2. 5, and 5. 2). If there are conclusive reasons for assigning this second visit of St. Paul to Jerusalem to the year 44, they are to be sought elsewhere.

24. In Gal. i. 2, St. Paul speaks of two visits to Jerusalem, the one (i. 18) *μερὰ ἑτη τριπλά*, *viz.*, from his conversion, the other (ii. 1) *διὰ δεκαεσσάρων ἐτῶν*. The first of these is evidently that of Acts ix. 26; that the other must be the second of those mentioned in the Acts, *viz.*, that of xi. xiii., has been understood by many, and probably would have been by all, could it have been made to square with their chronology. The argument, restricted from irrelevant issues, lies in a very narrow compass. To make good his assertion (i. 11, ff.), that he received not his gospel and commission from Peter, or any other man, but direct from Christ himself, the

Apostle begins to enumerate *the occasions on which alone he saw and conversed with the other Apostles at Jerusalem*. Now, if the visit Gal. ii. 1 be not that of Acts xi. 12, it must be later (no one wishes to put it earlier): but if so, then he has not enumerated *all* the occasions on which he saw the other Apostles. The very purpose of the recital forbids the supposition that he would omit any; yet he had other conferences with the Apostles, if this was not the second of them (Comp. Meyer *on Gal.*, p. 41). This one argument ought to be sufficient for all who accept as authoritative, both the statement of the history, and that of the epistle; it is clearly useless to allege (with Wieseler, *Chronol. des apost. Zeitalters*, p. 180) that the Apostle, not writing a history, is not bound to recite all his visits to Jerusalem; or (with Ewald, *Gesch.* vi. 50), that he is concerned to enumerate only those visits which he made for the purpose of conferring with the Apostles. His intention is so plain, that if the visit Gal. ii. 1 cannot be identified with that in Acts xi. 12, one or other statement must be rejected. Accordingly, Schleiermacher (*Einleit. ins N. T.* 569, ff.), Neander (*Pfla. u. Leit.* i. 188 of the 4th ed.), De Wette (*Komm.* in loc.), Meyer (*u. s.* p. 47), find the conclusion inevitable that Luke was misinformed in saying that Paul went up to Jerusalem as related in Acts xi. 30, because the Apostle himself declares that between his first visit, which can be no other than that of ix. 26, and the other, which can only have been that to the Council, as related in Acts xv., there was none intermediate. But, in fact, the circumstances of the visit, Gal. ii. 1, are perfectly compatible with those of Acts xi. xii., the only difficulty being that which is supposed to lie in the chronology: whereas the discrepancy between Gal. ii. 1, ff., and Acts xv. is such that it is difficult to see how they can relate to the same fact. Which manifest incongruity furnishes Baur (*Paulus*, p. 120, ff.) with an argument in support of his position, that the book of Acts is the work, not of a companion of St. Paul, but of some much later hand (in the 2d century). And, indeed, here also the conclusion does seem to be inevitable; if both accounts are meant for the same occurrence, one of the two misrepresents the facts. Wieseler, to evade this conclusion, gives up the assumed identity of Gal. ii. 1 with Acts xv., and labours to shew that it was the visit xviii. 22, an hypothesis which needs no discussion, unless we are prepared to say that the Apostle was not even present at the Council, Acts xv.: for that a Council was held is not denied, even by those who contend that the account given of it in the Acts is not authentic; and, if Paul was present at it, it is impossible to explain his passing it by in silence, as if it had no bearing upon the point which he is concerned to substantiate. His silence on the subject of the Council need be no difficulty to those who hold that he is here speaking of the visit Acts xi. xii.; the explanation being, either that the Epistle was written before the Council, against which supposition the only weighty objection (and that not conclusive) is, that the first mention of Galatia occurs in the Acts after the Council (xvi. 6); or, that the Apostle breaks off from the tone of narrative into expostulation and indignant reproof just where the next thing to be mentioned, after the notice of Peter's dissimulation, was the settling of the matter in controversy by the apostles and elders at Jerusalem. In short, the

attempts to separate Gal. ii. 1 and Acts xi. xii. are plainly designed only to meet a supposed chronological difficulty. The time of Acts xii. being defined to A.D. 44, a term of 17 years, the sum of the 3 and the 14, supposed to be consecutive, would lead to A.D. 27, which cannot possibly be the year of Paul's conversion; and, if both terms are supposed to be dated from the same epoch, it would follow that the conversion took place A.D. 30, a date still too early for those who assign the Crucifixion to that or to a later year. But not too early if the year of the passion be 29 A.D.; and in exact accordance with the most ancient traditions recorded by ecclesiastical writers, according to which the martyrdom of Stephen took place within a year after the Ascension, and St. Paul's conversion, which clearly was not much later, in the year after the Ascension, *i.e.*, in this year 30 (*Ordo Saec.* sec. 102).*

25. The mention of Gallio (xviii. 12), would furnish a note of time, were the date of his proconsulate in Achaia on record. We can only conjecture that it was through the interest of his brother Seneca, who, disgraced and in exile from 41 to 48, thereafter stood in the highest favour with Claudius and Agrippina, that Gallio was presently made consul (suffect) and then proconsul of Achaia (Plin. *H. N.* xxxi. 33; comp. Senec. *Ep.* 105). So, the date would be not earlier than 49, and not much later.

26. The decree of Claudius for the expulsion of all Jews from Rome (xviii. 2) is mentioned by Suetonius in a well-known passage, *Claud.* 25, but neither dated nor placed in any discoverable order of time (Dion Cass. lx. 6, relates to merely restrictive measures taken or contemplated in the beginning of the reign). If, as is likely, it formed part of a general measure for the expulsion of the 'astrologers' (*Chaldei, mathematici, astrologi*), its date may be as late as 52, in which year *de mathematicis Italia pellendis factum SC. atrox et irivum* (Tacit. *Ann.* xii. 52). But Zonaras (p. 972, ed. Reimar) in the summary compiled from Dion Cass., places an expulsion of the astrologers from Italy immediately after the elevation of Agrippina, A.D. 49, and before the arrival of Caracatus at Rome, A.D. 50; and in Tacitus, *u. s.* 22, we find Agrippina, just after her marriage, accusing her rival Lollia of dealings with Chaldeans and Magi. It is not likely that any general severe measure against the Jews would be taken while the younger Agrippa, a special favourite of Claudius, was still at Rome, as he certainly was to the end of 48,

* The chronological difficulty, which would present itself as soon as the ancient date of the Passion was abandoned for a later year, has induced the conjecture, seemingly as early as the *Chron. Pasch.* p. 436, ed. Bonn., that for 14 should be read 4 (Δ IA' Δ ' for Δ I' I' Δ); see Meyer *u. s.* 49. On this supposition the conversion might be assigned to A.D. 37, the first visit to A.D. 40, the second to A.D. 44. With this would accord the note of time 2 Cor. xii. 2, according to the *ancient* date of that Epistle, *viz.*, A.D. 54 (see below), that year being 14 years after the date so assigned to the first visit and the trance (Acts xxii. 17). But the present writer, holding (with Grotius) that the Apostle is speaking of a man 'who had been in Christ already fourteen years' at the time of the revelation there mentioned, refers it to the year 44 (*Ordo Saec.* sec. 125).

when he succeeded his uncle Herod as king of Chalcis (*Antiq.* xx. 5. 2, and 7. 1; *Bell. Jud.* ii. 14. 4, where for ἑπτακαίδεκατον we must read ἑνεκακαίδ). The insurrectionary movements in Judæa early in 49 may have been connected with the decree as cause or effect (*Antiq.* xx. 5. 3, 4). All these indications point to the year 49, and it is remarkable that that is the year named by Orosius (*Hist.* vii. 6, 'ninth year of Claudius') from some lost source of intelligence; *ut Josephus tradit*, he says; but that is a mistake.

27. The year of the recall of Felix and appointment of Festus as his successor (*Acts* xxiv. 27) is not on record, and the arrival of *St. Paul at Rome*, in the spring of the following year, has been assigned to every one of the years, from 56 to 63 inclusive. The earliest is that given by the ancients, and is advocated in *Ordo Saeculorum*, sec. 108, ff. But the writer perceives now that one principal argument there used is not tenable. From the statement of Josephus (*Antiq.* xx. 8. 9) that Felix on his return to Rome escaped condemnation upon the charges laid against him before Nero, chiefly through the influence of his brother Pallas, whose consideration with that emperor was 'just then at its highest' (μάλιστα δὴ τότε διὰ τιμῆς ἔχων ἐκείνον), combined with the fact, related by Tacitus (*Ann.* xiii. 14, 15), of Pallas's removal from his office at the head of the *fiscus*, shortly before the death of Britannicus, who had nearly completed his 14th year, and with the latter part of the statement in Sueton. *Claud.* 27, that Britannicus was born *vigesimo imperii die inque secundo consulatu* (= A.D. 42), it was inferred that not long before Feb. 56 A.D., Pallas had ceased to be at the height of imperial favour, consequently the recall of Felix could not be placed later than the summer of A.D. 55. This must be rejected; for Tacitus, *u. s.* 15, evidently places the death of Britannicus early in 55, the events of which year begin at ch. 11, and end with ch. 25; therefore the former part of Suetonius's statement is alone true—that Britannicus was born on the 20th day of the reign of Claudius, = 13th Feb. A.D. 41. Dion Cassius, indeed, mentions the birth under the second year (ix. 10), but not until he has expressly returned to the former year, τῷ προτέρῳ ἔτει. Hence it is clear that if the date of Pallas's loss of office is decisive for the date of his brother's recall, this must have occurred, at latest, in 54, before the death of Claudius (13th Oct. of that year) and no part of the procuratorship of Felix would have been under Nero: a result totally incompatible with the narrative of Josephus, *Antiq.* xx. 8; *Bell. Jud.* ii. 13. On the other hand, it is hard to say at what conjuncture in Nero's time Pallas could be said to have been held *μάλιστα δὴ τότε διὰ τιμῆς*. At the very beginning of the reign it is noted of him that *tristi arrogantia modum liberti egressus tedium sui moverat* (*Tacit. Ann.* xiii. 2); within a month or two he is removed from the *fiscus*; about a year later, when impeached, together with Burrus, *nec tam grata Pallasianis innocentia quam gravis superbia fuit* (*Tacit. u. s.* 23); as the ally of Agrippina he was an object more of fear than of favour; and his great wealth caused his removal by death A.D. 62, *quod inmensam pecuniam longa senecta detineret* (*Ann.* xiv. 65). The present writer strongly suspects that in this matter of Pallas's influence, exercised on behalf of his brother, Josephus was misinformed. Of very ma-

terial circumstances relative to Felix he certainly was ignorant, unless we are to suppose that Tacitus had no documentary warrant for the very circumstantial account which he gives under the year 52 (*Ann.* xii. 54); how Felix was then *jam pridem Judææ impositus*, holding a divided command with Cumanus, *ut huic Galilæorum natio, Felici Samaritæ parerent*. He may have mistaken the nature of this divided rule; in fact, there is reason to believe that Felix held a military command, as Suetonius relates (*Claud.* 28); *Felicem legionibus et alis provinciæque Judææ impositus*, and Victor (in the *Epitome*, p. 361); *Felicem legionibus Judææ præfecit*. Of that associated government, and of Felix's equal share in the wrongs of which Cumanus was accused, Josephus is ignorant; but what he says of Pallas and Felix is far more suitable to that earlier conjuncture, as described by Tacitus, than to the later occasion to which he refers it. At that time, viz., when Cumanus was deposed, 'Felix would certainly have suffered for the wrongs done by him to the Jews, but for the intercession of his brother Pallas, whom the emperor [Claudius] at that very time held in the highest consideration;' for that Pallas just then had reached the pinnacle of his commanding influence, Tacitus shews in the preceding recital of the public honours decreed to him, and by him recorded as the crowning glory of his life in his own epitaph (*Plin. Ep.* vii. 29; viii. 6). Even in the account Josephus gives of that earlier conjuncture (in which he speaks only of Cumanus and the final hearing before Claudius, *Ant.* xx. 6. 3), he mentions the 'very great exertions made by the emperor's freedmen and friends for Cumanus and the Samaritans.' The absence of dates, of which Josephus is not sparing when he has them, of itself implies that his materials for the account of Felix were scanty; and the way in which Burrus is introduced, after the passage relating to Pallas (*Ant.* xx. 8. 9), strengthens the suspicion raised by the conflicting account in Tacitus, that the Jewish historian in this paragraph is mixing up with his recital of what took place on the recall of Felix, occurrences of an earlier time. Certainly the accompanying notice, *οὗτος δὲ παιδαγωγὸς ἦν τοῦ Νέρωνος* is more apposite to that earlier conjuncture in the time of Claudius (A.D. 52), when Nero was barely fourteen years old; it might still in some sense be notable as the ground of Burrus's influence in the beginning of Nero's reign, when he and Seneca are spoken of as *rectores imperatorie juventutis* (*Tacit. Ann.* xiii. 2); but the description is very strange when referred to the year 61, the last of Burrus's life, especially as this is not the first mention of him.

28. The argument for the year 61, as the date of *St. Paul's arrival at Rome*, is thus put by Wieseler, *Chronologie des Apost. Zeitalters*, p. 66, ff. The narrative of Josephus, *Antiq.* xx. 8, *Bell. Jud.* ii. 13, from Nero's accession (13th Oct. 54) to the defeat of the 'Egyptian' implies at least two years; this impostor, claiming to be another Moses, would of course make his appearance at the Passover, *i. e.*, at the earliest, that of 57 A.D. That this must have been at least a year before *St. Paul's arrest* is implied in the tribune's expression, *πρὸ τούτων ἡμερῶν* (*Acts.* xxi. 38); therefore the earliest possible date for this arrest is A.D. 58, Pentecost; the *dierta* of xxiv. 27, gives A.D. 60 as the earliest possible date for the arrival of Festus, and the spring of 61 for the Apostle's arrival at Rome. The latest

possible is given by the ἀκωλύτως of Acts xxviii. 31, implying that after these two years some great 'hindrance' did arise, which could be no other than the Neronian persecution, beginning July A.D. 64. The extreme date hence resulting is limited by these further considerations. Pallas and Burrus were living, and influential men at the time when Felix was recalled; but Pallas died in the latter half, and Burrus in the first or second month of A.D. 62; consequently Felix arrived in 61 at latest. But Paul was delivered τῷ στρατοπεδάρχῳ, the *one* præfect of the prætorian guards, who must therefore be Burrus, before and after whom there were *two*. As Burrus died Jan. or Feb., and Paul arrived May or June, the year could not be 62, and the latest possible date would be A.D. 61. Latest possible and earliest possible thus coinciding, the date, Wieseler thinks, is demonstrated.—To this it is objected, and justly, that τῷ στρατοπεδάρχῳ of necessity means no more than the præfect concerned (Meyer, *Kömm. in Apostelgesch.*, p. 19; Lange, *Apost. Zeit.* ii. 9). And in favour of the later date (62 A.D.), it is urged that on the hearing before Nero of the complaints relative to Agrippa's building overlooking the Temple (*Antiq.* xx. 8. 10, 11; *Bell. Jud.* ii. 14. 1), the Jews obtained a favourable judgment through the influence of Poppæa, 'Nero's wife.' But Poppæa was married May 62, and undoubtedly Festus's successor, Albinus, was at Jerusalem in the feast of Tabernacles of the same year (*Bell. Jud.* vi. 5. 3). Hence it is argued, that unless κατὰ τὸν καιρὸν τούτου (*Antiq.* xx. 8. 11) is taken with undue latitude, Festus cannot have entered upon the province earlier than 61 (Meyer *u. s.*) Ewald (*Gesch.* vi. 44) also urges the ἀκωλύτως of Acts xxviii. *fin.* for this year 62, and calls attention to the circumstance that the imperial rescript, rescinding the Jewish isopolity, obtained by the Greeks of Cæsarea through the influence of Burrus (*Antiq.* xx. 8-9), is spoken of as something recent in the beginning of the rebellion (spring of A.D. 66); and indeed, in *Bell. Jud.* ii. 14. 4, it seems as if the rescript had but just then reached Cæsarea. Ewald surmises that the death of Festus and of Burrus may have retarded the process. But the fact may be (as was suggested above), that Josephus in that passage has confused some exercise of Burrus's influence in behalf of the Cæsarean Greeks in the time of Claudius, or early in the time of Nero, with the much later matter of the rescript, which would officially pass through Burrus's hands as secretary for the East (τάξι μ τῶν ἐπὶ τῶν Ἑλληνικῶν ἐπιστολῶν πιστευμένους), and the operation of which may have been delayed through the influence of Poppæa (*ob. Aug.* 65). That Poppæa is spoken of as Nero's 'wife,' on the occasion above mentioned, may be merely ephemeristic anticipation: this woman, *divi pelleris, et adulteri Neronis, max mariti potens* (*Ann.* xiv. 60), may have befriended the Jews in the former capacity (at any time after 58, *Ann.* xiii. 45). In fact the marriage could not have taken place at the time when she is said to have aided them, unless it be possible to crowd the subsequent occurrences, *Antiq.* xx. 8. 11 and 9. 1, into the space of three or four months (*Ordo Saccl.* p. 122, ff.) Nor can any certain inference be drawn from the narrative in Joseph, *Vit.* 3, of certain priests whom Felix had sent to be tried at Rome, and for whom Josephus, 'after his 26th year,' which was complete A.D. 64, was enabled, through the good offices of 'Cæsar's wife,' Poppæa, to obtain their liberty. The men

had been prisoners three years at least, and for aught that appears, may have been so seven or eight years or more. That they were obscure and insignificant persons is evident, from the fact that Ismael and Helkias, whom the 'devout' Poppæa, two years before, had graciously detained at her court, appear to have made no intercession for their release.

29. But Wieseler, p. 99, ff., after Anger, *de temp. in Act. Ap. ratione*, p. 106, ff., has an argument to which both attach high importance, derived from the notice of a Sunday (Acts xx. 7), the 12th day after leaving Philippi, which departure was 'after the days of Azyma' (15-21 Nisan), and, indeed, very soon after, for the Apostle 'hasted, if it were possible, to reach Jerusalem for the Pentecost,' v. 16, and of the 43 days which he had before him from 22 Nisan to the day of Pentecost, the days specified or implied in the narrative, Acts xx. xxi., amount to 35 to the landing at Cæsarea (comp. Chrysost. *in Act. Hom.* xlv. 2), leaving but eight days for the stay there (ἡμέρας πλείους, xxi. 10), and the journey to Jerusalem. Wieseler concludes that the departure from Philippi was on the 23d Nisan, which being 12 days before the Sunday at Troas, would be Wednesday, consequently the 15th Nisan fell on a Tuesday. According to his method of Jewish calendar reckoning (from which the present writer dissents), from A.D. 56 to 59 inclusive, the only year in which 15th Nisan would fall on a Tuesday would be 58, which is his date for St. Paul's arrival at Jerusalem. Were it worth while, the argument might be claimed for the year 55 (the date assigned by the ancients), in which year the day of true full moon = 15 Nisan was 1st April and Tuesday. But in fact it proves nothing; the chain is no stronger than its weakest link, and a single 'perhaps' in the reckoning is enough to invalidate the whole concatenation.

30. On the whole, it seems to the present writer that neither in the Acts nor in the history of the times have we the means of settling this part of the chronology. Josephus in particular, from whom are fetched the combinations which recent German writers deem so unanswerable, is discredited in this part of the history (written probably from his own resources and the inaccurate recollections of his boyhood) by the infinitely higher authority of Tacitus, who drew his information from the public records. Only, in whatever degree it is probable that the first residence at Corinth commenced A.D. 49, in the same it is probable that the arrest at Jerusalem belongs to the year 55, six years being sufficient, as nearly all enquirers are agreed, for the intermediate occurrences. Then, if the arrival at Rome took place, as the ancients say, in the second year of Nero, it will be necessary (with Petavius) to refer the *diēria* (xxiv. 27) to the term of Felix's (sole) procuratorship.

31. That the two years' imprisonment, with which the narrative in the Acts ends, did not terminate in the Apostle's death, but that he was set at liberty, and suffered martyrdom under Nero at a later time, appears to have been the unanimous belief of the ancients (see the testimonies in *Ordo Saccl.* sec. 130). And, indeed, in no other way is it possible to find a place for the three pastoral Epistles, and especially to account for statements in the Second Epistle to Timothy. Wieseler's forced explanations have satisfied and can satisfy no one. (See also Lange *Apostol. Zeitalter*, ii. 386, ff., and in

Herzog's *Encycl. s. v.* Paulus 244, ff., and Huther in Meyer's *krit. exeg. Komm.* p. 25, ff. Meyer himself, *Römerbr.* Einleit. p. 12, ff., owns that the three pastoral Epistles 'stand or fall together,' and that if they be genuine, the conclusion is inevitable: which he turns into an argument against their genuineness). But if, after his release, the apostle visited not only Spain (as Ewald admits, *Gesch.* vi. 631, on the unquestionable testimony of Clemens, *Rom.* c. 5), but Greece and Asia, as is clear from the Epistles to Timothy and Titus, scant room is left for these movements between the late dates, assigned with almost one consent by recent German writers, to the close of the first imprisonment (63 and 64), and the year 65 or 66, which the ancients give as the date of St. Paul's martyrdom. So far, therefore, it is more probable that the first imprisonment ended in one of the years 58-60. Another consideration points the same way: when Poppæa's influence was established (58-65), which, after she became a *θεοσεβής* (i.e., at least as early as 61), was freely used in favour of the Jews, it would certainly have been invoked against the Apostle by his enemies (comp. Ewald vi. 621); and even if he escaped with life, his confinement would not have been of the mild character described in the concluding verse of the Acts: more especially as his 'bonds in Christ were manifest in all the palace' (prætorium), Phil. i. 13, and among his converts were some 'of Cæsar's household,' *ib.* iv. 22.*—H. B.

CHRYSLITE (*χρυσόλιθος*), a species of precious stone, called by some *χρυσόφυλλον* (Epiph. *de gemmis*, c. x.) It received its name from the yellow or golden lustre by which it is pervaded ('aureo fulgore translucens,' Pliny, *H. N.*, xxxvii. 9). It is of the quartz kind, is completely diaphanous, has a strong double refraction and a glassy fracture. Pliny describes it fully (*Hist. Nat.* xxxvii. 9). By some the ancient chrysolite is supposed to be the modern topaz; but this is liable to objection (Bellermann, *Urim et Thummim*, p. 62). The LXX. give it as the synonym of the Heb. תרשיש [TARSHISH]. It is used once in the N. T. as the stone which formed the seventh of the foundations of the new Jerusalem (Rev. xxi. 20).—W. L. A.

CHRYSTOPRASUS (*χρυσόπρασος*), a precious stone allied to the beryl, but of a paler hue. From the composition of the word (from *χρυσός*, gold, and *πράσον*, a leek) it may be presumed that its prevailing colour was green, streaked or spotted with yellow; and this may account for its having received the name *Pantherion*, from its resemblance to the marked skin of the Panther (Schleusner, *in voc.* The statement made by Schleusner, and copied in Smith's *Dict. of the Bible*, i. 328, that Pliny applies the term *Pardalios* to this gem is a mistake; he simply says (xxxvii. 11) that 'some gems are called pardalios, from the skin of the panther'. The gem is named only once in Scripture (Rev. xxi. 20); but the LXX. give *ὁ λίθος ὁ πράσινος* as the

rendering of שֹׁהָם in Gen. ii. 12 [SHOHAM].—W. L. A.

CHRYSTOSTOM, JOHN. Chrysostom, or the golden-mouthed, was the complimentary title bestowed by a later generation on John, Archbishop of Constantinople, the most eloquent, and perhaps the best, of the Christian Fathers. After shewing brilliant oratorical and philosophical promise in the schools of Libanius and Andragathius, he was induced by the teachings of the Bishop Meletius to abandon the law, and receive the sacrament of baptism. After six years of close ascetic seclusion in the mountains of Antioch, during which he committed the Scriptures to memory, and enjoyed the instructions of Diodorus, and the warm friendship of Basil and Gregory, and Theodore of Mopsuestia, he was ordained deacon by Meletius, A. D. 381, and priest by Flavianus, A. D. 386. He continued to preach at Antioch for twelve years, and distinguished himself not only by his burning eloquence, but also by the unswerving faithfulness with which he denounced every form of profligacy and error. Eutropius, the infamous eunuch who swayed the feeble mind of the Emperor Arcadius, had heard the great preacher of Antioch during a visit to the East, and having determined to summon him as a successor to Nectarius in the patriarchal throne of Constantinople, Chrysostom was, in the year 398, secretly inveigled from the scene of his early labours to the perilous splendour of a dignity which he had hitherto shunned; and from this time forward he seems to have enjoyed but little peace. Having incurred the hatred of Theophilus, Archbishop of Alexandria, that false and wicked prelate by disseminating against his supposed rival the vague charge of Origenism, and enlisting against him the suspicions of the honest but credulous Epiphanius, bishop of Cyprus, with the assistance of Eudoxia managed to get Chrysostom condemned by a packed and incompetent synod at Chalcedon, known by the name of the Synod of the Oak. It would have been easy for Chrysostom to save himself by appealing to the devoted multitude, whose passions he swayed with unequalled power. But fearing the excesses to which they might be stimulated by their affection for himself, he yielded to the Imperial messenger, and left Constantinople. From this banishment he was almost immediately recalled, but only to be in a few months expelled from his episcopate. Contrary to the secret hopes of his fanatic persecutors, he reached in safety, after many toils and sufferings, the dreary town of Cucucus in Armenia. Neither the rigour of climate nor the miseries of a perilous exile quenched his glowing zeal in God's service, and from his distant retirement he still continued to uphold the faith and courage of his flock. But the implacable resentment of his enemies, not yet sated, procured his instant removal (A. D. 407) to the remote solitude of Pityus in Pontus. Exhausted by past sufferings, he sank under the heat and weariness of this journey, and died on the way, at Comana in Pontus, Sept. 14, A. D. 407, in the sixtieth year of his age. His favourite words—*δέξα τῷ θεῷ πάντων ἕνεκα*—were the last he ever uttered, and they form the fittest motto for a noble and unselfish life. The love and reverence with which he was regarded produced in Constantinople the schism of the Johannites, which was only healed

* If the Narcissus of Rom. xvi. 11 was the celebrated freedman of Claudius, the Epistle to the Romans, written shortly before the Apostle's last visit to Jerusalem, cannot be placed so late as A. D. 58 or 59, for Narcissus died very soon after Nero's accession, Tac. *Ann.* xiii. 1.

by the patriarch Proclus, thirty years after Chrysostom's death, when his mortal remains were transferred by Theodosius II. from their obscure resting-place to a splendid sepulchre in the imperial city.

As a zealous and laborious minister, as a brave and orthodox bishop, and as a cheerful martyr, Chrysostom stands very high in the veneration of the Christian Church. In several aspects his character resembles that of his namesake, the great Forerunner of Christianity. As a preacher he has bequeathed to us many sermons, which though defaced by the oratorical conceits of his age, yet burn with the genuine earnestness of true eloquence, inspired by deep conviction and passionate feeling. Without the learning of Jerome, or the profundity of Augustine, in power and picturesqueness of language he surpasses them both, and stands unrivalled among the early Christian orators for the fire and beauty of his style. As an exegetical writer he ranks deservedly high. Free from all unwise spirit of system, and from the vague allegorising mysticism of the Origenistic school, his explanations are distinguished by the clearness with which he seizes and illustrates the grammatical and historical meaning of the text, and the force with which he deduces from it a practical moral bearing. It is chiefly to his wise and common-sense example that we owe the useful commentaries of such men as Theodoret, Theophylact, and Œcumenius; and the manly intellectual vigour of all his works derives additional value from the sincere Christian feeling, the charity, the humility, and the reverence which pervades everything which he wrote. For this reason, Chrysostom demands an important place in the history of exegesis; he never *twists* his text into a meaning like Jerome and Augustine, or foists into it some mystic lesson like Origen and Clemens of Alexandria, or obscures it with idle speculations for the display of his ingenuity. His value best appears by comparing his brief, lucid, practical explanation of such a verse as Rom. iv. 16, given in half a dozen words, with Augustine's long discussions about foreknowledge, reprobation, and freewill; or again, by contrasting his moral and practical commentary on the first chapter of Genesis, with the *Hexæmeron* of Ambrose, or the subtle speculations of Basil and Hippolytus (Neander, *Ch. Hist.* iv. 428; Hagenbach, *Hist. of Doctr.* i. 248, 317, Engli. Transl.)

Chrysostom's works were very numerous. Suidas (s.v. Ἰωάννης) says that there were more than he could number. With the exception of his book *De Sacerdotio*, lib. vi., the majority of his works consist of homilies on almost every book of Scripture, of which the most important are those on Genesis, the Psalms, the first eight chapters of Isaiah, and St. Matthew. His other homilies may be classed (as has been done by Hagenbach) under four heads.—1. Separate lectures on Scripture narratives and texts, as on the parable of Dives and Lazarus, etc. 2. Discourses on Christian duty, on prayer, repentance, etc. 3. Occasional sermons, like the twenty-one discourses on the statues, the oration on Eutropius, etc. 4. Festival sermons on the commemorations of apostles and martyrs. Each homily usually consists of three parts; 1. the Exordium (*παρασκευή*), often admirably adapted to enchain the hearer's attention; 2. The Exegesis or exposition, generally consisting of a clear and simple paraphrase; 3. The Applica-

tion, in which he does not dwell on the *loci communes* of morality, but generally develops with wonderful power some of those favourite and pregnant apophthegms which have been called his 'Golden Paradoxes,' which, although they frequently recur in his sermons, are treated with a beautiful diversity of style and illustration. Such are, among others, the sayings, 'It is far easier to live well than wickedly;' 'Light and trifling sins must be more carefully guarded against than great ones;' 'No punishment is more dreadful than an evil conscience;' 'No one can be injured except by himself;' 'It is better to suffer than to inflict an injury;' 'Charity is the most lucrative of pursuits;' 'Contented ignorance of some subjects is the highest wisdom' (see Sixtus Senensis *Bibl. Sanct.* l.c.) Chrysostom's complete works have been published by Savil, Eton, 1613, 8 vols.; Fronto Ducaens, Paris, 1609, 12 vols.; Montfaucon, Paris, 1718, 13 vols.; re-edited by Suiner, Paris, 1835. This is the best and most useful edition. Of single works the six books on the Priesthood have been published by J. A. Bengel, 1725; the *Orations on Eutropius*, by Orelli, 1828; and various German and English translations of select homilies—as those on St. Matthew, by J. W. Feder, Augs. 1786; J. A. Cramer, Leip. 1748; on St. John, by Schneider, Augs. 1788; on the Statues, by Wagner, Vienna, 1838; and in the Oxford *Library of the Fathers*. A list is given by Hagenbach (s.v. *Chrysostom* in Herzog's *Cyclopædia*).—F. W. F.

CHUB (כּוּב). In Ezek. xxx. 5 this occurs as the name of a people, who, along with Ethiopia,

Phut, Lud, all the mixed people (כּל עַרְבִים), and the sons of the land of the covenant (doubtless the Jews who had gone down to Egypt), are mentioned as in alliance with Egypt, and destined to share her fate. The name does not occur elsewhere in Scripture, nor does it appear to have been in the copy used by the LXX. Various conjectures have been offered as to the locality of the nation thus designated. Michaelis contends for *Kōbē*, a fort mentioned by Ptolemy (iv. 7, sec. 10) as situated on the Indian sea; and others have adduced other names of places in Africa of similar sound, such as *Xōbār* (iv. 2) and *Kōβτιον* (iv. 5). Bochart suggests the town Paliurus in Marmarica (Strabo xvii. 838), because in Syriac כּוּב means *Paliurus*. All

this helps little, and is very precarious. It has been proposed to read כּוּב in place of כּוּב (Ges. *Thes.* i. 21), and to understand it of Nubia; in support of this may be adduced the rendering of the Arab. vers., 'the inhabitants of Nubia,' and the reading כּוּב, found in one of De Rossi's MSS. (cod. 409); but a fatal objection to it is that the Bible has already another name for Nubia, viz., כּנַעַן, which it always uses. Hitzig suggested

כּוּב as the proper reading (*Beg. der Kritik*, p. 129), but this he has himself since rejected, on the ground chiefly that the O. T. knows only one people of the לּוּבִים and no לּוּב (*Kurzgef. Exeget. Hdb. in Eszechiel*, in loc.) The suggestion of Hävernick, that the name Chub is to be connected with *Kufa*, which occurs on the Egyptian monuments as that of a people conquered by the Egyptians (Wilkinson, *Anc. Egypt.* i. 367, 371) would be deserving of notice were it not that it involves the somewhat

violent proposition that a people, of whom we only know that they were the allies of the Egyptians, should be identified with a people of whom we only know that they were the conquered enemies of the Egyptians; though it is certainly possible that they who were at an early period foes, may at a later period have become allies. But for the objection thus raised, this is by much the most probable of any of the conjectures advanced. Worthy of notice also is the suggestion of Fürst, who says—'It is possible that it is to be connected with *Coba*, the existing name of an Ethiopian port, and which, perhaps, was formerly the name of a district' (*Heb. u. Chald. H. W. B.*)—W. L. A.

CHURCH (Ἐκκλησία). The original Greek word, in its larger signification, denotes a number of persons called together for any purpose, an assembly of any kind, civil or religious. As, however, it is usually applied in the N. T. to religious assemblages, it is very properly translated by 'assembly,' in the few instances in which it occurs in the civil sense (Acts xix. 32, 39, 41). It is, however, well to note that the word rendered 'assembly' in these verses is the same which is rendered 'church' everywhere else.

In a few places the word occurs in the Jewish sense, of a congregation, an assembly of the people for worship, either in a synagogue (Matt. xviii. 17) or generally of the Jews regarded as a religious body (Acts vii. 38; Heb. ii. 12). The text last cited is quoted from Ps. xxii. 22; where the Sept. uses Ἐκκλησία for the Hebrew קהל, which has the same meaning, namely, assembly or congregation. Elsewhere also this word, which we render 'church' in the N. T., is used by the Sept. for the Hebrew word which we render 'congregation' in the O. T.

But the word most frequently occurs in the Christian sense of an assemblage (of Christians) generally (1 Cor. xi. 18). Hence it denotes a church, the Christian church; in which, however, we distinguish certain shades of meaning, viz.—1. A particular church, a church in a certain place, as in Jerusalem (Acts viii. 1; xi. 22, etc.), in Antioch (Acts xi. 26; xiii. 1, etc.), in Corinth (1 Cor. i. 2; 2 Cor. i. 1), etc. etc. 2. Churches of (Gentile) Christians, without distinguishing place (Rom. xvi. 4). 3. An assembly of Christians which meets anywhere, as in the house of any one (Rom. xvi. 5; 1 Cor. xvi. 19; Philem. 2). The Church universal—the whole body of Christian believers (Matt. xvi. 18; 1 Cor. xii. 28; Gal. i. 13; Eph. i. 22; iii. 10; Heb. xii. 23, etc.)—J. K.

CHUSHAN-RISHATHAIM (כִּוְשָׁן רִישָׁתַּיִם); Sept. Χουσαρσαθαίμ), a king of Mesopotamia, by whom the Israelites were oppressed for eight years, (B.C. 1394 to B.C. 1402) until delivered by Othniel (Judg. iii. 8-10).

CHUZA, prop. CHUZAS (Χουζᾶς), steward of Herod Antipas, whose wife Joanna was one of those who had been healed by Christ, and who employed their means in contributing to his wants and those of his apostles (Luke viii. 3).

CILICIA (Κιλικία), the south-eastern part of Asia Minor, bounded on the W. by Pamphylia; separated on the N. from Cappadocia by the Taurus range, and on the E. by Amanus from Syria; and having the gulf of Issus (Iskenderoon)

and the Cilician Sea (Acts xxvii. 5) on the South. By the ancients the eastern part was called Cilicia Propria (ἡ ἰδία Κιλικία, Ptolemy), or the level Cilicia (ἡ πεδιάς, Strabo); and the western, the rough (ἡ τραχεία, Strabo xiv. 5), or mountainous (ἡ ὄρεινή, Herod. ii. 34). The former was well-watered, and abounded in various kinds of grain and fruits (Xenoph. *Anab.* i. 2, sec. 22). Cilicia—dives bonis omnibus terra. Ammianus Marcell. xiv. 3, sec. 1. The chief towns in this division were *Issus* (Xenoph. *Anab.* i. 4), as the south-eastern extremity, celebrated for the victory of Alexander over Darius Codomanus (B.C. 333), and not far from the passes of Amanus (τῶν Ἀμανίδων λεγομένων Πυλῶν. Polyb. xii. 17); *Solæ*, originally a colony of Argives and Rhodians, the birth-place of Menander, the comic poet (B.C. 262), of the stoic philosopher Chryssippus (B.C. 206), and of Aratus, author of the astronomical poem τὰ Φαινόμενα (B.C. 270); and *Tarsus*, the birth-place of the Apostle Paul [TARSUS]. Cilicia Trachæa furnished an inexhaustible supply of cedars and firs for ship-building; it was also noted for a species of goat, of whose hair a cloth (*cilicium*) was manufactured for cloaks and tents (Varro *de Re Rustica*, lib. ii. cap. xi.) Its breed of horses was so superior, that 360 (one for each day of the year) formed part of the annual tribute to the king of Persia (Herod. iii. 90). The neighbourhood of Corycus produced large quantities of Saffron (Crocum sylvestre optimum. *Prima nobilitas Cilicio*, et ibi in Coryco monte, Plin. *Nat. Hist.* xxi. 6, 17). Herodotus says that the first inhabitants of the country were called Hypachæi, Ἵπαχαιοί; and derives the name of Cilicia from Cilix, son of Agenor, a Phœnician settler (vii. 91). He also states that the Cilicians and Lycians were the only nations within the Halys who were not conquered by Cræsus (i. 28). Though partially subjected to the Assyrians, Medes, Persians, Syrians, and Romans, the Eleuthero- (or free) Cilicians, as the inhabitants of the mountainous districts were called, were governed by their own kings (Reguli, Tacit. ii. 78), till the time of Vespasian. The sea-coast was for a long time occupied by pirates, who carried on the appropriate vocation of slave-merchants, and found ample encouragement for that nefarious traffic among the opulent Romans (Mannert, vi. 1; Strabo xiv. 5); but at last their depredations became so formidable, that Pompey was invested with extraordinary powers for their suppression, which he accomplished in forty days. He settled the surviving freebooters at Solæ, which he rebuilt and named Pompeiopolis. Cicero was proconsul of Cilicia (A.U.C. 702), and gained some successes over the mountaineers of Amanus, for which he was rewarded with a triumph (*Epist. ad Fam.* xv. 4). Many Jews were settled in Cilicia (Acts vi. 9; Philo, *De legat. ad Cæsum*, sec. 36).

According to the modern Turkish divisions of Asia Minor, Cilicia Proper belongs to the Pashalic of Adana; and Cilicia Trachæa to the Liwah of Itehl in the Mousselimlik of Cyprus (Conybeare and Howson's *St. Paul*, 2d ed., 1858, vol. i. pp. 24-26, 291; Mannert's *Geographie der Griechen und Römer*. vi. 2, pp. 32-113.—J. E. R.

CINNERETH, **CINNERETH**, and **CINNEROTH** (כִּנְרֶת, כִּנְרֹת; Sept. Κερεթθ). The name of a fortified town in Naphtali (Josh. xix. 35), situated on the shore of the Sea of Galilee,

and which gave that sea its ancient name יַם כְּנֶרֶת (Num. xxxiv. 11). It was also the name of a district apparently encircling the town (1 Kings xv. 20). Jerome says that Tiberias was originally called Cinnereth; but he is evidently giving a mere tradition, as his words are 'seruit hoc primum appellatum nomine' (*Onomast. s. v. Cinnereth*). Reland denies that Cinnereth could have been situated at Tiberias. His reason is founded on Matt. iv. 13, where Capernaum is said to be 'in the borders of Zabulon and Nephthali.' Now Capernaum lay six miles at least north of Tiberias, and hence Tiberias must have been so far south of Naphtali. The passage, however, will scarcely bear such a strict interpretation. Jerome's view is opposed to that of the Jewish rabbins, who state that Tiberias was built on the site of *Rakkath* (Lightfoot, *Opp.* ii. 223); and in this they are supported by Joshua xix. 35-38, from which it appears that the territory of Naphtali included the whole western shore of the Sea of Galilee. The principal towns are enumerated, apparently beginning at the south. Among them are Hammath, Rakkath, and Cinnereth. There can be little doubt that Hammath was situated at the *Hammam*, or warm springs, a mile south of Tiberias; Rakkath would then be Tiberias; and the site of Cinnereth would be to the north along the shore, probably somewhere in the little plain of Gennesaret. Some maintain that Gennesaret was just a more modern form of the ancient Hebrew Cinnereth, and so it is explained in the Targums (Lightfoot, *Opp.* i. 496. GENNESARET).—J. L. P.

CIRCUMCISION (מִילָה, περιτομή), a rite or usage, which consisted in the cutting off of the foreskin (עֶרְלָה, ἀκροβυστία, *præputium*). We shall consider—

1. *The History of this among the Jews.*—When God announced to Abraham that he would establish his covenant with him, he said to him, 'This is my covenant, which ye shall keep between me and you, and thy seed after thee: Every man-child among you shall be circumcised. And ye shall circumcise the flesh of your foreskin; and it shall be a token of the covenant betwixt me and you' (Gen. xvii. 10, 11). It was also ordained that this should be extended to servants belonging to Abraham and his seed, as well as to their own children; and that in the case of children it was to be done on the eighth day after birth. This was appointed as an ordinance of perpetual obligation in the Abrahamic family, and the neglect of it entailed the penalty of being cut off from the people (12-14). In compliance with this, Abraham, though then ninety-nine years of age, was himself circumcised and all his household, including Ishmael. On the birth of his son Isaac, the rite was attended to in respect of him (Gen. xxi. 4); and it continued to be observed by his posterity, and distinctively to characterise them from among the people amidst whom they dwelt (Gen. xxxiv. 14, 15). The usage thus introduced by Abraham was formally enacted as a legal institute by Moses (Lev. xii. 3; comp. John vii. 23); and it was appointed to be observed in relation to all who became proselytes from heathenism to Judaism (Exod. xii. 48; comp. Judith xiv. 10; Maimonides, *Issure Biah*, c. 13, cited by Lightfoot, *Harmonia Evang.*, sec.

12). During the passage through the wilderness, the practice, from some cause, fell into disuse, so that of those who entered Canaan none had been circumcised. As this was fatal to their title under the covenant to take possession of the land, Joshua, in obedience to God's command, caused all the males to be circumcised, and thus rolled away the reproach from Israel (Josh. v. 2-9). From this time forward it became the pride of the nation to observe this ordinance; on all those people who did not observe it they looked down with contempt, not to say abhorrence (Judg. xiv. 3; xv. 18; 1 Sam. xiv. 6; xvii. 26; 2 Sam. i. 20; Is. lii. 1; Ezek. xxxi. 18; Eph. ii. 11, etc.); and so much did it become a rite distinctive of them, that their oppressors sought to prevent their observing it, an attempt to which they refused to submit though threatened with the last penalties in case of disobedience (1 Maccab. i. 48, 50, 60-62). The introduction of Christianity was the signal for the abolition of this rite in the Church of God; as the old covenant had waxed feeble, and was passing away, that which was the token of it also ceased to be binding; the rule was proclaimed that 'in Christ Jesus neither circumcision availeth anything nor uncircumcision, but a new creature' (Gal. vi. 15; Col. iii. 11); though among the Jewish Christians were still found many who clung tenaciously to their ancient distinctive rite, and would have imposed it even on the Gentile converts to Christianity (Acts xv. 1; Gal. vi. 12, etc.) Our Lord himself was circumcised, because it became him who was of the seed of Abraham according to the flesh to fulfil all righteousness, and because he was 'a minister of the circumcision for the truth of God, to confirm the promises made unto the fathers' (Rom. xv. 8); and Paul caused Timothy to be circumcised to avoid offence to the Jews, his mother being a Jewess; but the spirit of Christianity was averse from such institutions (Acts xv. 1-11; Gal. ii. 3, etc.); for the outward carnal circumcision it sought to substitute that of the heart (Rom. ii. 28, 29), 'the circumcision not made with hands in putting off the sins of the flesh, even the circumcision of Christ' (Col. ii. 11).

Among the ancient Jews, the rule that circumcision should take place on the eighth day after birth was rigidly followed (Luke i. 59; ii. 21; Phil. iii. 5), save in such very exceptional cases as those mentioned, Exod. iv. 25, Josh. v. 5. Even their reverence for the Sabbath did not prevent the Jews from observing it on that day (John vii. 22, 23); according to the Rabbins circumcision 'pellit Sabbatum' (Lightfoot, *Hor. Heb. in Joan* vii. 22). The operation might be performed by any Israelite, but usually it was performed by the father of the child; in special cases women might perform it (Exod. iv. 25). The instrument used in the earlier times was a sharp stone or a knife of flint (Exod. iv. 25; Josh. v. 2, 3; comp. the λίθος Αἰθιοπικος, used by the Egyptians in preparing bodies for embalming, Herod. ii. 86).* It was usual to con-

* The following is said to have been the mode of performing the operation:—Circumcisor imponit mentulae bacillum et præputium quantum potest super illum extendit, deinde forcipe partem ejus prehendit et novacula præcidit. Deinde duobus pollicis unguibus præputium arripit et devolvit, donec glans tota denudatur; quo facto, sanguinem, exsugit donec advenerit sanguis ex remotioribus

nect the naming of the child with the circumcision (Gen. xxi. 3, 4; Luke i. 59; ii. 21) a practice which probably had respect to the fact that it was in connection with the institution of the rite that God gave to the ancestor of the race his name of Abraham (Gen. xvii. 5).

Jews who were ashamed of their nation, or unwilling to endure reproach because of being circumcised, occasionally used means to obliterate this distinctive mark of their descent (1 Maccab. i. 15; Joseph. *Antiq.* xii. 5. 1). Sometimes this was done by a surgical operation, such as Celsus describes (*De Medic.* vii. 25; comp. Galen, *Meth. Med.* xiv. 16; Paul. Aegin. vi. 53; Epiphani. *De pond. et Mens.*, p. 538, ed. Basil. 1544); sometimes by other means (Dioscor. iv. 157). To this it has been supposed the apostle alludes 1 Cor. vii. 18 (Wetstein, *in loc.*, Schlaeger and Groddeck in Ugolini, *Thes.* xxii.)

For the opinions of the rabbins concerning circumcision, see Otho, *Lex. Rabbin. Philol.*, and for the practice of the modern Jews, see Buxtorf, *Synagoga Judaica*, ch. 2.

2. *Circumcision as practised by other Nations.*—Herodotus tells us that the Egyptians, the Colchians, the Ethiopians, the Phœnicians, as well as the Syrians in Palestine, were circumcised (*Hist.* ii. 104); though from another statement of the same writer, it would appear that among the Egyptians this was a law only for the priests (ii. 36; see Wesseling's note); and with this falls in the fact that Apion, an Egyptian, was uncircumcised, and only submitted to the rite when it was too late, in hopes of finding the cure of a painful disease (Joseph. *Cont. Ap.* ii. 13). The Egyptians, moreover, are, along with the Edomites, the Ammonites, and the Moabites, classed by Jeremiah (ix. 25, 26) among 'the uncircumcised.' The passage, it is true, in its opening clause בל מול בערלה, which may be rendered 'all the circumcised uncircumcised,' or more literally, 'every one circumcised in circumcision,' or 'with a foreskin,' may seem to include the nations whose names follow among the circumcised, as being so in flesh though not in heart; but as the closing clause of the verse plainly distributes the totality, the בל, of the first clause, and as in so doing a distinction is made between the Jews as circumcised in flesh but not in heart, and the nations as uncircumcised in flesh as well as in heart, we must understand the first clause in accordance with this; and in this case the rendering in the A. V., 'the circumcised with the uncircumcised,' expresses the real sense of the writer. On the other hand, we are told that the Troglodytes of Africa (Diodorus, iii. 31), all with the exception of the Koloboi, practised circumcision, having learned it from the Egyptians. Jerome also affirms that 'of the Egyptians, Idumeans, Ammonites, and Moabites, the greater part were circumcised' (*In Jer.* ix. 25); and Barnabas says that 'so are all the Syrians and Arabians . . . nay, even the Egyptians are circumcised' (sec. 9); a statement which cannot be accepted to the full extent, but which serves to shew that it was commonly believed that other nations besides the Jews observed this rite. Jerome

also mentions the 'Saracens of the desert' as having this usage; and this is confirmed by Josephus (*Antiq.* i. 12. 2). That it was not, however, originally universal among the tribes of the desert is clear, from the narrative in Exod. iv.; the conduct and feeling of Zipporah shew that to the Midianites the rite was strange and horrible. Among the Arab tribes of more recent times the usage is common, but not universal (Niebuhr, *Arabie* i. c. 19); that it was older than Mohammed, and that he regarded it merely as a usage and not as a rite, has been inferred from his silence regarding it in the Korân. Among the Abyssinian Christians the practice still subsists, and is extended to females as well as males; a fact which seems to shew that it must have come to them from some other source than through Judaism. The same is true of the Coptic Christians (Niebuhr, *l. c.*) Among the Arabs also it is practised on women, though not commonly (*Ibid.*) It is found also among some of the African tribes; and traces of it have been observed among the natives of some of the South Sea Islands (Pickering, *Races of Men*, 153, 199, 200, etc.)

On comparing these different accounts one cannot but be struck with the conflicting character of much of the evidence. There is hardly a single statement made by one authority which is not contradicted by some other. On the whole, however, the presumption remains that circumcision was practised by other nations besides the Hebrews. Of these nations some evidently derived it from the Hebrews, others from the Egyptians. The question as to the origin of the usage, therefore, lies entirely between these two.

This inquiry is not foreclosed, as some have thought, by the account in Gen. xvii. 11, ff., and our Lord's declaration recorded in John vii. 22, 23. These passages undoubtedly preclude the supposition that the Hebrews borrowed the rite from the Egyptians or any other nation; but they do not shut us up to the conclusion that we have in the former of them the account of the origin of the practice. The mere fact that God appointed it, as the token of his covenant with Abraham, is no proof that it was then originated; for God might have selected a practice already in use among other nations, and given it a new significance by the special use to which he consecrated it; just as he made a natural phenomenon, with which men must have been familiar from the creation, the sign of his covenant with Noah (Gen. ix. 12-17); or as our Lord selected an ordinance already in use to occupy under the new dispensation a place analogous to that which circumcision held under the old. It is open, therefore, for us to ask whether the usage is to be regarded as purely Hebrew in its origin, or whether it may not have had a more general source. This question is substantially whether, seeing the Hebrews did not borrow it from the Egyptians, the Egyptians borrowed it from them.

Now, it must be asserted that it is quite possible that such may have been the case. The consideration which is commonly adduced as conclusive against it, viz., that the Egyptians would never have borrowed any practice from a despised race like that of the Israelites, is of no weight at all; for, however despised the Israelites were in the times immediately preceding the Exodus, it must be remembered that Abraham and Isaac were received in Egypt as princes, who associated with its

corporis partibus, vulnerique emplastrum imponit (Otho, *Lex. Rabbin. Philol.*, p. 133; comp. Buxtorf, *Synag. Jud.*, cap. ii.)

chief men, and that Joseph's position in Egypt was second only to that of the Pharaoh himself. From such men there would be no disgrace in borrowing any usage sanctioned by them; and as with them it was a *sacred* usage, this may account for its becoming in Egypt a priestly institute, and for its being found among the Colchians, who were originally soldiers from Egypt, and as such, also a sacred class. It is worthy of notice also that the information we possess of the existence of the usage in Palestine remounts to a far higher antiquity than the information we have regarding its existence in Egypt; which gives a presumption *pro tanto* in favour of its having originated with the Hebrews. Herodotus, it is true, says that the Palestinian Syrians (meaning by them probably the Jews) themselves acknowledge that they have derived it from the Egyptians; but this must be admitted to be a mistake on the part of the Father of History, as the sacred books of the Jews amply shew. So far, then, the probability seems in favour of the conclusion that the Egyptians borrowed this rite from the Hebrews. When, however, we consider that the practice had certain hygienic uses for which it was followed by the Egyptians and other nations, the scale of probability seems rather to incline to the side of the conclusion that the practice had its origin in the discovery of these uses, and was probably known in Egypt before the time of Abraham.

But it may be asked if the usage was not originally and from the first exclusively Hebrew, how came it to be *distinctive* of the Hebrew people? That it was so cannot be doubted. The entire phraseology of Scripture shews that the Jews themselves regarded it as such; the fact that those who were ashamed of their nation sought to obliterate this mark of their descent confirms this; and we may appeal to such a statement as that of Tacitus, who says of the Jews 'circumcidere genitalia instituerunt ut diversitate noscantur' (*Hist.* v. 5), and to such allusions as those of Juvenal (*Sat.* xiv. 104) and Martial (*Epig.* vii. 81) as tending to the same conclusion. But wherein did this distinctiveness exist if other nations besides the Jews practised circumcision? To this it may be replied—1. That they alone practised it as a religious rite; with other nations it was a usage, a custom more or less generally observed; with the Jews it was a religious rite, and this gave it a speciality in their case, just as baptism by being made a religious rite becomes a special mark of a Christian, though other nations practise 'divers baptisms.' 2. Among the Jews alone was circumcision made universally imperative by statute; with other nations it might be observed or not as circumstances dictated; with the Jews it could not be omitted without exposing to the severest penalties. 3. The Jews alone practised it on children; with other nations it was delayed till some occasion in adult age rendered it necessary, but with the Jews it was invariably observed on the eighth day after birth. The only nation who approached to the Jews in this respect was the Arabs, who delayed it only till the child was past teething (*Abulfedâ Annal. Muslem.*) In consequence of these peculiarities the presumption was that every circumcised man was a Jew, and if he was not, his being in that state was a thing to be accounted for by some special reason.

3. *Meaning and use of the rite.*—Circumcision, as practised by the Gentiles, was simply an expedient

to promote health, facilitating cleanliness, and preventing certain painful afflictions, such as that of the *ἀσθραξ*, to which in hot climates men are subject (Philo *De Circumcis.*, *Opp.* ed. Hœschel, p. 810; Joseph. *cont. Apion.* ii. 13; Niebuhr *De l'Arabie*, ch. 19). In so far as it served this end the Israelites had, of course, the benefit of it; but that this formed the reason and design of its appointment among them by God, though asserted by some men of learning and ability, seems utterly untenable; for, in the first place, this opinion is without the slightest support from Scripture; often as the subject is referred to there, we find no hint as to this being the purpose of the observance; 2dly, This hypothesis is quite opposed to the account given by Moses of the introduction of the rite among the Israelites; 3dly, It is absurd to suppose that a mere prophylactic usage should by God be elevated to the solemnity of a religious ordinance; 4thly, Whatever advantages in a hygienic respect might accrue from the practice, these were confined to individuals; circumcision is not necessary for health to men generally in hot climates (Niebuhr, *loc. cit.*); and therefore to oblige the whole male community to undergo this process in infancy for purposes of health, would have been to act as unwise a part as if it had been enjoined that every one should lose a limb, because it was possible that some might contract severe disease in that limb if allowed to remain; and 5thly, If circumcision was a mere hygienic precaution, why should it have been abolished by Christianity? why should the apostles have held it to be so hostile to Christianity? and why should the difficulty of becoming a Christian have been increased by the prohibition to those who embraced Christianity of a necessary condition of their children's health? These considerations seem to us sufficient to demonstrate the error and absurdity of the opinion they are intended to set aside.

In seeking to determine the meaning and use of a biblical institute, our proper course is to examine what the Bible teaches on the subject. Now, in relation to circumcision, the teaching of Scripture is most explicit on this head. When first appointed by God, circumcision was expressly set forth as a token of the covenant which God had made with Abraham; and the Apostle tells us that Abraham received 'the sign of circumcision as a seal of the righteousness of that faith which he had, being yet uncircumcised' (Rom. iv. 11); so that to Abraham it was not only a sign or token of God's covenant, but also an obligation or certificate that he was in a state of acceptance before he was circumcised. As a Mosaic institution it was also the sign of the covenant which God made with Israel, which is hence called the 'covenant of circumcision' (Acts vii. 8). In consequence of this it became the medium of access to the privileges of the covenant, and entailed on all who received it an obligation to fulfil the duties which the covenant imposed (Rom. ii. 25; iii. 1; Gal. v. 3). Circumcision served also to separate the people of the Jews from the rest of the nations, as a people set apart to God. These were its *uses*. As respects its *meaning*, that was symbolical, and the things which it symbolised were two; 1. Consecration to God; and 2. Mental and spiritual purification (Exod. vi. 12; Lev. xix. 25; Deut. x. 16; xxx. 6; Is. lii. 1; Jer. iv. 4; vi. 10; Rom. ii. 25–29; Col. ii. 11, et. *comp.* Philo *De Circumcisione*;

Jones, *Figurative Language of Scripture*, Lect. v. p. 135). 'There was thus involved the concept of *consecration*, and along with this that of *reconciliation*, in circumcision; and it was thereby, as Ewald rightly remarks (*Alterth*, p. 95), an offering of the body to Jehovah, which according to the true meaning of all the offerings, as fully developed and raised to their true elevation by the prophets, had to be presented to Him as an offering of the soul. Only as this inner offering was perfectly presented could the obligation to be a priestly kingdom and a holy people be fulfilled' (Vaihinger in Herzog's *Real-Cyc.* ii. 110.)

On this subject in general, see Spencer *De Legibus Heb. ritualibus* i. 5; Michaelis, *Commentaries on the Law of Moses* iii. 58-93; Witsius *De Foedere* Bk. iv. 6, 8; Winer *Real-W. B.*, s. v. *Beschneidung*; Herzog's *Real-Cyclop.*, *ibid.*, etc.—W. L. A.

CISTERN. (בּוֹר, from בָּאָר, to dig. Sept. λάκκος). In a country which has scarcely more than one perennial stream, where fountains are not abundant, and where the months of summer pass without rain, the preservation of the rain water in cisterns must always have been a matter of vast importance, not only in the pasture-grounds, but in gardens, and, above all, in towns. Hence the frequent mention of cisterns in Scripture, and more especially of those which are found in the open country. These were, it seems, the property of those by whom they were formed (Num. xxi. 22). They are usually little more than large pits, but sometimes take the character of extensive subterranean vaults, open only by a small mouth, like that of a well. They are filled with rain water, and (where the climate allows) with snow during winter, and are then closed at the mouth with large flat stones, over which sand is spread in such a way as to prevent their being easily discovered. If by any chance the waters which the shepherd has thus treasured up are lost by means of an earthquake or some other casualty, or are stolen, both he and his flocks are exposed to great and imminent danger; as are also travellers who hasten to a cistern and find its waters gone. For this reason a failure of water is used as the image of any great calamity (Is. xli. 17, 18; xlii. 3). There is usually a large deposit of mud at the bottom of these cisterns, so that he who falls into them, even when they are without water, is liable to perish miserably (Gen. xxxvii. 22, 27; Jer. xxxviii. 6; Lam. iii. 53; Ps. xl. 2; lxix. 15). Cisterns were sometimes used, when empty, as prisons, and indeed prisons which were constructed underground received the same name, בּוֹר (Gen. xxxix. 20; xl. 15).

In cities the cisterns were works of much labour, for they were either hewn in the rocks or surrounded with subterranean walls, and lined with a fine incrustation. The system which in this respect formerly prevailed in Palestine is, doubtless, the same that exists at present; and indeed there is every probability that most of the cisterns now in use were constructed in very ancient times. Robinson assures us (i. 480, ff.) that 'the main dependence of Jerusalem at the present day is on its cisterns; and this has probably always been the case.' He then mentions the immense cisterns now and anciently existing within the area of the Temple; supplied partly by rain water, and partly by an aqueduct from Solomon's Pools, and which,

of themselves, would furnish a tolerable supply in case of a siege. 'But, in addition to these, almost every private house in Jerusalem, of any size, is understood to have at least one or more cisterns, excavated in the soft limestone rock on which the city is built. The house of Mr. Lanneau, in which we resided, had no less than four cisterns; and as these are but a specimen of the manner in which all the better class of houses are supplied, I subjoin here the dimensions:—

	Length.	Breadth.	Depth.
I.	15 feet.	8 feet.	12 feet.
II.	8 "	4 "	15 "
III.	10 "	10 "	15 "
IV.	30 "	30 "	20 "

This last is enormously large, and the numbers given are the *least* estimate. The cisterns have usually merely a round opening at the top, sometimes built up with stonework above, and furnished with a curb and a wheel for the bucket; so that they have externally much the appearance of an ordinary well. The water is conducted into them from the roofs of the houses during the rainy season; and, with proper care, remains pure and sweet during the whole summer and autumn. In this manner most of the larger houses and the public buildings are supplied. The Latin convent, in particular, is said to be amply furnished; and in seasons of drought is able to deal out a sufficiency for all the Christian inhabitants of the city.

Most of these cisterns have undoubtedly come down from ancient times; and their immense extent furnishes a full solution of the question as to the supply of water for the city. Under the disadvantages of its position in this respect, Jerusalem must necessarily have always been dependent on its cisterns; and a city which thus annually laid in its supply for seven or eight months could never be overtaken by a want of water during a siege. Nor is this a trait peculiar to the Holy City; for the case is the same throughout all the hill-country of Judah and Benjamin. Fountains and streams are few, as compared with Europe and America; and the inhabitants, therefore, collect water during the rainy season in tanks and cisterns in the cities, in the fields, and along the high roads, for the sustenance of themselves and of their flocks and herds, and for the comfort of the passing traveller. Many, if not the most, of these are obviously antique; and they exist not infrequently along the ancient roads which are now deserted. Thus, on the long-forgotten way from Jericho to Bethel, 'broken cisterns' of high antiquity are found at regular intervals. That Jerusalem was thus actually supplied of old with water is apparent also from the numerous remains of ancient cisterns still existing in the tract north of the city, which was once enclosed within the walls' [RESERVOIRS].

CITHERN. [MUSICAL INSTRUMENTS.]

CITIES. [TOWNS.]

CITIES OF REFUGE. Among the Jews the 'cities of refuge' bore some resemblance to the asylum of the classic nations [ASYLUM], but were happily exempt from the evil consequences to which they were apt to lead, and afford, even to the present day, no mean proof of the superior wisdom and benignant spirit of the Jewish laws.

The institution was framed with a view to abate

the evils which ensued from the old-established rights of the blood-avenger [BLOOD-REVENGE], and thereby to further the prevalence in the nation of a mild, gentle, and forgiving spirit.

From the laws on this point (Exod. xxi. 13; Num. xxxv. 9-34; Deut. xix. 1-13) it appears that Moses set apart out of the sacerdotal cities six as 'cities of refuge.' There were, on the eastern side of the Jordan, three, namely, 'Bezer in the wilderness, in the plain country of the Reubenites, and Ramoth in Gilead of the Gadites, and Golan in Bashan of the Manassites' (Deut. iv. 43); on the western side three, namely, 'Kedesh in Galilee in Mount Naphtali, and Shechem in Mount Ephraim, and Kirjath-arba, which is Hebron, in the mountain of Judah' (Josh. xx. 7). If found desirable, then other cities might be added. An inspection of the map will show how wisely these places were chosen so as to make a city of refuge easy of access from all parts of the land. To any of these cities a person who had unawares and unintentionally slain any one might flee, and if he reached it before he was overtaken by the avenger of blood, he was safe within its shelter, provided he did not remove more than a thousand yards (Num. xxxv. 5) from its circuit, nor quit the refuge till the decease of the high-priest under whom the homicide had taken place. If, however, he transgressed these provisions, the avenger might lawfully put him to death. The roads leading to the cities of refuge were to be kept in good repair. Before, however, the fugitive could avail himself of the shelter conceded by the laws, he was to undergo a solemn trial, and make it appear to the satisfaction of the magistrates of the place where the homicide was committed that it was purely accidental. Should he, however, be found to have been guilty of murder, he was delivered 'into the hand of the avenger of blood, that he might die.'

And the Israelites were strictly forbidden to spare him either from considerations of pity or in consequence of any pecuniary ransom. This disallowal of a compensation by money in the case of murder shews a just regard for human life, and appears much to the advantage of the Hebrew legislation when compared with the practice of other countries (Athens, for instance, and Islam), in which pecuniary atonements were allowed, if not encouraged, and where, in consequence, the life of the poor must have been in as great jeopardy as the character of the wealthy.

The asylum afforded by Moses displays the same benign regard to human life in respect of the homicide himself. Had no obstacle been put in the way of the Goel, instant death would have awaited any one who had the misfortune to occasion the death of another. By his wise arrangements, however, Moses interposed a seasonable delay, and enabled the manslayer to appeal to the laws and justice of his country. Momentary wrath could hardly execute its fell purposes, and a suitable refuge was provided for the guiltless and unfortunate.

Yet as there is a wide space between the innocence of mere homicide and the guilt of actual murder, in which various degrees of blame might easily exist, so the legislator took means to make the condition of the manslayer less happy than it was before the act or the mischance, lest entire impunity might lead to the neglect of necessary precaution and care. With great propriety, there-

fore, was the homicide made to feel some legal inconvenience. Accordingly he was removed from his patrimony, restricted in his sphere of locomotion, affected indirectly in his pecuniary interests, and probably reduced from an affluent or an easy station to one of service and labour (Michaelis, *Mos. Recht*, vi. 4). Should any reader still think that this treatment of a manslayer was unnecessarily severe, let him advert to the spirit of the age, and especially study the recognised rights of the next of kin to a slain person, and he will most probably be ready to allow that everything was done in this matter which circumstances admitted. The benefit of the protection afforded was common to strangers and sojourners with native Israelites.

What ensues rests on the authority of the Rabbin. In order to give the fugitive all possible advantage in his flight, it was the business of the Sanhedrim to make the roads that led to the cities of refuge convenient by enlarging them and removing every obstruction that might hurt his foot or hinder his speed. No hillock was left, no river was allowed over which there was not a bridge, and the road was at least two and thirty cubits broad. At every turning there were posts erected bearing the words *Refuge, Refuge*, to guide the unhappy man in his flight; and two students in the law were appointed to accompany him, that if the avenger should overtake him before he reached the city, they might attempt to pacify him till the legal investigation could take place.

When once settled in the city of refuge, the manslayer had a convenient habitation assigned him gratuitously, and the citizens were to teach him some trade whereby he might support himself. To render his confinement more easy, the mothers of the high-priests used to feed and clothe these unfortunate fugitives, that they might not be impatient and pray for the death of their sons, on whose decease they were restored to their liberty and their property. If the slayer died in the city of refuge before he was released, his bones were delivered to his relations, after the death of the high-priest, to be buried in the sepulchre of his fathers (Lewis, *Origines Hebraice*).

That the right of asylum among the Jews was in later periods of their history so extended as to open the door to great abuses may be inferred from I Maccab. x. 43, where unqualified impunity and exemption from both liabilities and penalties are promised under the influence, not of the Mosaic law, but of heathen morals and ambition, to 'whosoever they be that flee unto the temple at Jerusalem, or be within the liberties thereof.'

In the words now cited reference appears to be made to a custom which prevailed from very early times, both among the chosen people and the nations of the world, of fleeing, in case of personal danger, to the altar. With the Jews it was customary for the fugitive to lay hold of the horns of the altar, whether in the tabernacle or temple; by which, however, shelter and security were obtained only for those who had committed sins of ignorance or inadvertence; thus true did Moses remain to his principle that the wilful shedding of human blood could only by blood be atoned—a principle which the advances of civilization and the spread of the gentle spirit of the Gospel have caused to be questioned, if not exploded (Exod. xxi. 14; I Kings i. 50; ii. 28). From the two last passages it seems that state criminals also sought the

protection of the altar, probably more from the force of custom than any express law. Their safety, however, depended on the will of the king; for in the passages referred to it appears that in one case (that of Adonijah) life was spared, but in the other (that of Joab) it was taken away even 'by the altar.' Compare Matt. xxiii. 35.—J. R. B.

CITIZENSHIP. Strict isolation did by no means, as some suppose, form the leading principle in the system of theocracy as laid down by Moses, since even non-Israelites, under the various names of גֵר, נִכְרִי, or תוֹשֵׁב, not only were allowed to reside in Palestine, but had the fullest protection of the law, equally with the native Israelites (Exod. xii. 19; Lev. xxiv. 22; Num. xv. 15; xxxv. 15; Deut. i. 16; xxiv. 17: the law of usury, Deut. xxiii. 20, made, however, an exception), and were besides recommended in general terms by Moses to humanity and charity (Exod. xxii. 21; xxiii. 9; Lev. xix. 33, 34; Deut. x. 18; comp. Jer. vii. 6; Mal. iii. 5; Joseph. *Contra Ap.* ii. 29, 30), as well as to a participation in certain prerogatives granted to the poor of the land, such as a share in the tithes and feast-offering, and the harvest in the Jubilee-year (Deut. xiv. 29; xvi. 10, 14; xxvi. 11; Lev. xxv. 6). In return, it was required on the part of non-Israelites not to commit acts by which the religious feelings of the people might be hurt (Exod. xx. 10; Lev. xvii. 10; xviii. 26; xx. 2; xxiv. 16; Deut. v. 14. The eating of an animal which had died a natural death, Deut. xiv. 21, seems to have been the sole exception). The advantage the Jew had over the Gentile was thus strictly spiritual, in his being a citizen, a member

of the theocracy, of the קהל יהוה (community of God), on whom positive laws were enjoined. [CONGREGATION.] But even to this spiritual privilege Gentiles were admitted under certain restrictions (Deut. xxiii. 7, 8); thus we find among the Israelites Doeg, an Edomite (1 Sam. xxii. 9), as also Uriah, a Hittite (a Canaanite, 2 Sam. xxiii. 39). The only nations that were altogether excluded from the citizenship of the theocracy by especial command of the Lord, were the Ammonites and Moabites, from a feeling of vengeance against them (Deut. xxiii. 3*); and in the same situation were all castrated persons, and bastards, from a feeling of disgrace and shame (Deut. xxiii. 1-6). In the time of Solomon, no less than 153,600 strangers were resident in Palestine (2 Chron. ii. 17).

Roman citizenship (*πολιτεία*, Acts xxii. 28, *jus civitatis*, *civitas*) was granted in the times of the Emperors to whole provinces and cities (Dio Cass. xli. 25; Suet. *Aug.* 47), as also to single individuals, for some service rendered to the state or the imperial family (Suet. *Aug.* 47), or even for a certain sum of money (Acts xxii. 28; Dio Cass. xli. 24). The Apostle Paul was a Roman citizen by family (Acts, *l.c.*), and hence his protesting against corporal or capital punishment (Acts xvi. 37; comp. Cic. *in Verr.* v. 63, 66; Euseb. *Hist. Eccles.* v. 1, etc.)—E. M.

CITRON. [TAPUACH.]

CLARISSE, THEOD. ADR., a Dutch divine, professor of theology at Groningen, who died at Leyden, 25th Sept. 1828. Besides some academic programmata of various import, he issued a valuable exegetical work, entitled *Psalmi 15 Hammaïloth Philologicæ et criticæ illustrati*, Lug. Bat. 1819.—†

CLARIO (CLARIUS), ISIDORE, born at Chiari in Brescia in 1495, and died in 1555. He was a monk of the Benedictine order, and was successively prior of the monastery of St. Peter at Modena, abbot of Pontida and of St. Mary in Cesena, and Bishop of Foligno. He was famous as a pulpit orator, and in the Council of Trent, of which he was a member, he no less distinguished himself in debate. His principal work was a corrected edition of the Vulgate, with annotations on the difficult passages, Ven. 1542. He asserted that he had corrected it in 8000 places, a service which was rewarded by his book being placed in the *Index Expurgatorius*. Afterwards it was allowed to be read, the preface and prolegomena being omitted. The notes are inserted in the *Critici Sacri*; they are of little value, and are chiefly taken without acknowledgment from Sebastian Münster.—W. L. A.

CLARKE, ADAM, LL.D. A celebrated Wesleyan divine, born of humble parents in the north of Ireland, 1762. Owing to the poverty of their circumstances his education was extremely limited, and though, by dint of unwearied energy and perseverance, he afterwards became remarkable for the extent and variety of his learning, it may be doubted if he ever thoroughly supplied his early deficiencies. His parents were Methodists, and members of the congregation of Breedon, the friend of Wesley, through whose influence young Adam was introduced to the notice of Wesley himself, and admitted to a school founded by him at Kingswood, near Bristol. He had previously been apprenticed to a linen manufacturer, but had left on finding the business ungenial to his studious habits. While at school he got hold of a Hebrew grammar, which gave him the first impulse to the study of that and the cognate languages for which he was afterwards famous. In 1782 he was ordained by Wesley himself, and sent as an itinerant preacher to the neighbourhood of Bradford, Wilts. Subsequently he came to London, and was much followed as a preacher. The university of St. Andrews gave him the degree of M. A. and of D.D. In 1802 he published his *Bibliographical Dictionary*, which gained him a great reputation, so that he was even selected by the Record commission to edit Rymer's *Fœdera*, a task to which he confesses he was unequal. He, however, laboured at it sedulously for some years, and the first vol. and part of the second was published with his name, after which he retired. He also wrote *Lives of the Wesley Family*, in which he strangely suggested an Arabic origin for that name. But his great work, to which all his studies were subsidiary, was his *Commentary on the Holy Scriptures*, of which the first vol. appeared in 1810, and the eighth and last in 1826. This excited much attention, from the peculiarity of opinions expressed in it on the subject of the Fall. It is, however, that on which his fame still rests, and must be regarded as a valuable contribution to biblical literature. Dr. Clarke was the means of establishing a

* [And yet we find Zelek the Ammonite among David's 'mighty men' (2 Sam. xxiii. 37). This would seem to shew that even they were not hopelessly excluded.]

Methodist mission to the Shetland Isles. He also founded schools in his native province of Ulster some time before his death by cholera in 1832.—S. L.

CLARKE, SAMUEL, D.D., a celebrated philosopher, divine, and mathematician, was a native of Norwich, where he was born Oct. 11, 1675. He was educated at the Free School in that city, and at Caius College, Cambridge. He devoted himself first to philosophy, but subsequently having turned his thoughts to divinity, he studied the scriptures in the original languages, and the early Christian writers. He was ordained by Moore, Bishop of Norwich, and became his chaplain. In 1701 he published *A paraphrase upon the Gospel of St. Matthew*; and in 1702 *Paraphrases upon the Gospels of St. Mark and St. Luke*, which were followed by a third volume upon St. John. These were afterwards printed in two vols. 8vo, and have since passed through several editions. He intended to have gone on with the rest of the N. T., but was accidentally prevented. The work has been continued by Pyle. Moore gave him the rectory of Drayton near Norwich, and a parish in the city. In 1704 he was appointed Boyle's lecturer, and chose for his subject 'the Being and Attributes of God.' This discourse being popular he was re-elected the following year, and chose 'the Evidences of Natural and Revealed Religion,' for his subject. These two works were afterwards printed together, as 'A Discourse concerning the Being and attributes of God, the obligations of natural religion, and the truth and certainty of the Christian Revelation, in opposition to Hobbes, Spinoza, the author of the *Oracles of Reason*, and other deniers of natural and revealed religion.' His other writings are numerous; they are chiefly of a theological cast. He enjoyed several pieces of preferment, and it is said that Queen Anne would have made him Archbishop of Canterbury, but Gibson, the Bishop of London, replied, 'Madam, Dr. Clarke is the most learned and eloquent man in your Majesty's dominions, but he is no Christian,' with reference to his views on the Trinity. On Sunday, May 10, 1729, as he was going to preach before the Lords Justices at Serjeants' Inn, he was seized with illness, and died the following Saturday. Voltaire has called Clarke 'un moulin à raisonnement.'—S. L.

CLAUDA is the name of a small island off the south coast of Crete (Candia), about 20 miles to the south-west of Cape Matala, the most southerly point of Crete, where its coast slopes away in a north-west direction and forms a bight, which has Claudia for its seaward boundary. This island, which is about 7 miles long and 3 broad, occupies a prominent point in the voyage of St. Paul, as narrated in Acts xxvii. (see verse 16). Its west shore, which trends in a north-west direction, and is prolonged by 'some rocks adjacent,' would 'afford the advantage of comparatively smooth water for some twelve or fifteen miles' (Adm. Penrose's MS. in C. and H.'s *St. Paul*, ii. 336) to a ship 'caught,' as St. Paul's was, with 'a tempestuous wind' from the north-east. Accordingly, under the lee shore of Claudia were those skilful precautions of 'hoisting in the boat,' 'undergirding' [or frapping] 'the ship,' and making her snug by 'lowering the gear' (Smith's *Voyage, etc., of St. Paul* [2d ed.] p. 106), taken, which kept the ship

from foundering under the pressure of a fortnight's gale in Adria, and preserved her for the rough remedy of a wreck on the island of Melita. The Greek name of the island appears in several forms; *Κλαύδα* or *Κλαυδίη* in most MSS. and versions; but *Καύδα* in *Cod. Vat.* and Lachmann; and *Κανδύ* and *Γαυδός* in Suidas; while Ptolemy and Hierocles call it *Κλαυδός*. Pomponius Mela, and Pliny, designate it *Gaudos*, which is in fact its present Greek name—Gaudonesi, or island of Gaudos, which has been Italianised into *Gozzo*, not, of course, to be confounded with the somewhat larger island of the same name close to Malta. 'Mr. Brown was informed upon the spot that the island still retained its ancient name, Claudia, or Chlautha Nesi, *Κλαυδα*, or *Κλαυδα Νηος*' (see Smith's *Voyage, etc.*, p. 93). Pococke, *Description of the East*, vol. ii. pt. 1, p. 240, gives an account of the isle and its inhabitants; he also says 'the road for shipping is on the north.'—P. H.

CLAUDIA (*Κλαυδία*), a Christian female of Rome, the wife of Pudens (2 Tim. iv. 21). The attempt to identify this Claudia with the British lady Claudia, whose marriage to Pudens is celebrated by Martial (*Epig.* iv. 13), rests on no foundation beyond the identity of the names of the parties, and the fact that Martial calls Pudens 'sanctus,' and says he was a corrector of his verses. But such reasons are very weak. The identity of names so common as Pudens and Claudia, may be nothing more than a mere accidental coincidence that proves nothing; as for the term 'sanctus,' it is precisely the term which a heathen would not have applied to a Christian, whom he would have regarded as the adherent of a 'prava superstitio' (Plin. *Ep. ad Traj.*); and as respects Pudens's correction of Martial's verses, until we know whether that was a correction of their style or a correction of their morals (in which case Pudens really must have done his work of correction very badly), we can build nothing on it. On the other hand, the immoral character of Martial himself renders it improbable that he should have had a Christian and a friend of St. Paul among his friends. Further, Paul's Pudens and Claudia, if husband and wife, must have been married before A.D. 67, the latest date that can be assigned to Paul's writing. But Martial's epigram must have been written after this, perhaps several years after, for he came to Rome only in A.D. 66; so that if they were married persons in 67, it is not likely Martial would celebrate their nuptials years after this. And, in fine, if Paul's Pudens and Claudia were unmarried at the time of his writing, they must at least have been persons of standing and reputation among the Christians; and in this case can it be supposed that a poet meaning to gratify them would invoke on them the favour of heathen deities, whom they had renounced with abhorrence? Burdened with these difficulties, the hypothesis seems deserving only of prompt rejection.—W. L. A.

CLAUDIUS (*Κλαυδῖος*), Emperor of Rome, is mentioned twice in the N. T., in the Acts xi. 28, and xviii. 2. Bishop Pearson (*Annales Paulini*) has arranged the events of St. Paul's public life according to the years of the Imperial reigns; in this register the beginning of Claudius' reign synchronizes with St. Paul's preaching in Syria and the mission of Barnabas to Antioch (Acts xi. 22);

and the termination of it with his arrival at Ephesus and the opening of his ministry in that city with his public discussions, for three months, with the Jews in their synagogue (Acts xix. 8). As this reign is of importance in connection with the history of the N. T., we propose to transfer to our pages, with due acknowledgment, the article of Winer (*Biblisch. Realw.* ii. 231, 232), in which the chief events, with their copious authorities, are succinctly put together. Our care will simply be to give a correct translation of the Art., verify the references, and add an occasional one to English authors.* 'The name of Claudius in full was Tib. Claudius Nero Drusus Germanicus; he was the fourth Roman emperor, and succeeded Caius Caligula, reigning from Jan. 24. A.D. 41, to Oct. 13, A.D. 54 (Suetonius, *Calig.* 58, *Claud.* 45). He was the 'mentally neglected,' Tacitus *Ann.* vi. 46. 1, Suet. *Claud.* 2) son of Nero Drusus, born at Lyons (Aug. 1, A.U.C. 744), and led an entirely inglorious life in privacy before his elevation to the throne. It was chiefly through Herod Agrippa I. that his nomination to the imperial purple was brought about (Josephus, *Antiq.* xix. 2 (sec. 1), 3, 4; Suet. *Claud.* 10 [Merivale, *Romans under the Empire*, v. 474, 475]), and Claudius, when on the throne, shewed himself, in return for this good service, not only an especial benefactor of Agrippa, whose territories he enlarged by the addition of Judea, Samaria, and some districts of Lebanon (Joseph. *Antiq.* xix. 5. 1, Dio Cass. lx. 8), and because of whom he granted the Jews freedom of worship (*Antiq.* xx. i. 1, 2), but also conferred on his brother Herod the sovereignty of Chalcis (*Antiq.* xix. 5. 1), and after Agrippa's death gave to this same brother the oversight of the Temple of Jerusalem (*Antiq.* xx. i. 3). The Jews in Asia and Egypt were, in the beginning of his reign, treated by Claudius with great moderation (*Antiq.* xix. 5. 2, 3, and xx. i. 2); but the Jews of Palestine seem to have suffered much oppression at the hands of his governors (Tacitus, *Hist.* v. 9, etc.). During the reign of Claudius there arose famines in divers places, in consequence of bad harvests (Comp. Dio Cass. lx. 11; [ix. p. 949, ed. *Reimar*]; Aurel. Victor, *De Cæs.* c. 4; Eusebius *Chron. Arn.* i. 269, 271 [ed. *Seal.* p. 79]; Tacit. *Annal.* xii. 43; Kuinoel, on *Acts* xi. 28 [See also Biscoe, on *Acts*, pp. 60, 66; Pearson, *Annal. Paul s. anno Claudii* 4; Jahn's *Hebrew Commonwealth* (trans.) p. 367; Lardner, *Credibility*, i. 11. 2; above all, Kitto, *Daily Bible Illustrations*, last vol. ['Agabus and the death'], pp. 229-232), and one of these visited Palestine and Syria (Acts xi. 28-30), in the time of the Procurators Cuspius Fadus and Tiberius Alexander (Joseph. *Antiq.* xx. 2. 6; v. 2), which possibly lasted several years. Owing to a tumult of the Jewish inhabitants of Rome, the emperor was induced to expel them from the city (Sueton. *Claud.* 25). 'Judeos impulsore Chresto assidue tumultuantes Roma expulsi;' comp. Acts xviii. 2 [and Winer's art. 'ROM.' ii. 335, where he says, 'but they soon returned, and in later reigns became numerous' (comp. Jahn's *Hebrew Commonwealth*, trans. p. 371, and Acts xxviii. 17, 23), 'although heavily burthened with taxes (Sueton. *Domit.* 12) and even reduced sometimes to mendicancy' (Juvenal, iii. 14)]. Winer then discusses the

two different opinions, as to whom Suetonius meant by *Chrestus*; whether some Hellenist, who had excited political disturbances [as Meyer and De Wette suppose; see Conybeare and Howson, *St. Paul* (1st ed.) i. 414], the name *Chrestus* frequently occurring as borne by manumitted slaves; or whether, as there is good reason to think (Lipsius, on Tacit. *Annal.* xv. 44; Grotius on *Acts* xviii. 2; Neander *Ch. Hist.* (Bohn) i. 129), Suetonius does not refer to some actual dissension between Jews and Christians: although he does this in a very indistinct manner, confounding the name *Christ*, which was most unusual as a proper name, with the much more frequent appellation of *Chrestus* (See Tertullian, *Apol.* 3; Lactantius, *Instit.* iv. 7. 5 [and Milman, *Hist. of Christianity*, i. 430]. Orosius, *Hist.* vii. 6, places Claudius' edict of banishment in the ninth year of his reign (i.e., 49 or 50 A.D.), and he refers to Josephus, who, however, says nothing about the matter). [In King Alfred's Anglo-Saxon Version of Orosius, however, this reference to Josephus does not occur; the register simply connects the expulsion with a famine — 'In the ninth year of his government there was a great famine in Rome, and Claudius ordered all the Jews that were therein to be driven out.' Bosworth's Orosius, pp. 119 of the Saxon, and 179 of the Trans. See this statement of Orosius commented on by Scaliger, *Animadv.* on Euseb. *Chron.* p. 192]. On the contrary, Pearson (*Ann. Paulin.*), and Vogel (in *Gabler's Journal*), without, however, giving decisive grounds for their opinion, suppose Claudius' twelfth year (i.e., A.D. 52) to be the more likely one. With Anger (*de temporum ratione in Act. Apost.* p. 118), one might on negative grounds assert, that so long as Herod Agrippa was at Rome with Claudius, the edict of expulsion would hardly be published; i.e., previous to the year A.D. 49. [Dr. Burton, however, on *the Chronology of the Acts, etc.*, p. 26, puts the date of the edict some time between A.D. 41 and 46, supporting his opinion by the fact, 'that no mention is made of Claudius' decree in the Annals of Tacitus which have come down to us; and that, since the lost books of the Annals occupy the first six years of the reign of Claudius, it is probable that Tacitus mentioned this decree in one of those books.'] The reign of this weak emperor, who was ruled by his wife Agrippina (Sueton. xxix.), was not altogether an inglorious one (Sueton. xx. etc.), although his domestic life was contemptible. [See, however, Merivale for a vindication of Claudius from some of the charges which tradition has affixed to his name with doubtful propriety; *Romans under the Empire*, vol. v. pp. 478, 479, 480, 597, 598]. He was poisoned by Agrippina after a reign of more than thirteen years (Tacitus, *Ann.* xii. 66; Sueton. *Claud.* 44); Josephus, *Antiq.* xx. 8. 1; *Bell. Jud.* ii. 12. 8, [who in both these passages makes the reign of Claudius 'thirteen years, eight months, and twenty days.']—P. H.

CLAUDIUS LYSIAS. [LYSIAS.]

CLAUDIUS FELIX. [FELIX.]

CLAY, a substance frequently mentioned in Scripture, chiefly with reference to its employment by the potter, the elegant and useful forms assumed by the rude material under his hands supplying a significant emblem of the Divine power over the

* Our additions are placed within brackets.

destinies of man (Is. lxiv. 8; Rom. ix. 21). A remarkable allusion to the use of clay in sealing occurs in Job xxxviii. 14, 'It is turned as clay to the seal.' This may be explained by reference to the ancient practice of impressing unburnt bricks with certain marks and inscriptions which were obviously made by means of a large seal or stamp. We trace this in the bricks of Egypt and Babylon [BRICKS]. Modern Oriental usages supply another illustration. Travellers, when entering the khans in towns, often observe the rooms in which goods have been left in charge of the *khanjee* sealed on the outside with clay. A piece of clay is placed over the lock, and impressed by a large wooden stamp or seal.—J. K.

CLAYTON, ROBERT, D.D. (1695-1758), Bishop successively of Killala, Cork, and Clogher; of the Arian, or, more correctly speaking, the Subordinationist school of theology. In 1751 he gave rise to a considerable controversy by the publication of a work entitled *An Essay on the Spirit*. It subsequently appeared, that although Clayton's name was attached to the dedication, the work was not written by him. In 1756 he proposed, in the Irish House of Lords, the omission of the Nicene and Athanasian creeds from the Liturgy. In the following year he more directly impugned the doctrines of the Irish Church in the third part of his *Vindication of the History of the Old and New Testament*. In consequence of this, measures were taken for a legal prosecution of the bishop, but his death occurring shortly afterwards, all further action was stayed. His more important works are, *The Chronology of the Hebrew Bible vindicated, the facts compared with other ancient histories, and the difficulties explained, from the flood to the death of Moses, together with some conjectures in relation to Egypt during that period of time, 1747, 4to.* This work contains much curious learning, but will not now greatly assist the Bible student in the elucidation of chronological difficulties. *A dissertation on Prophecy, 1749, 8vo.* *An Impartial inquiry into the time of the coming of the Messiah, together with an abstract of the evidence on which the Belief of the Christian Religion is founded, 1751, 8vo.* In these two works the opinion is advocated with much learning and ingenuity that the restoration of the Jews and the downfall of the papacy will occur about the year 2000. *A Vindication of the Histories of the Old and New Testament, in answer to the objections of the late Lord Bolingbroke, Part i. 1752; Part ii. 1754; Part iii. 1757, 8vo.* In the earlier parts of this work the objections of Bolingbroke are skillfully met; in the latter, as already intimated, occasion is taken for an attack upon Trinitarian and Calvinistic views.

His other works are, *An Introduction to the History of the Jews*. This is said to have been his earliest publication. It was translated into French and published at Leyden, 1747, 4to. *Letters between the Bishop of Clogher and William Penn on the subject of Baptism, 1755, 8vo.* *A Journal from Grand Cairo to Mount Sinai and back again. Translated from a Manuscript written by the Prefetto of Egypt, in company with the Missionaries de propaganda Fide at Grand Cairo; To which are added some remarks on the Origin of Hieroglyphics and the Mythology of the ancient Heathens, 1753, 4to.* This was published with the view of exciting

attention to the ancient inscriptions still existing in the Wady Mukatkeb.—S. N.

CLEMENT (Κλήμης), a person mentioned by Paul (Phil. iv. 3), as one whose name was in the book of life. For the meaning of this phrase, see BOOK OF LIFE. This Clement was, by the ancient church, identified with the bishop of Rome of the same name (Euseb. *Hist. Eccles.* iii. 4; *Constitut. Apost.* vii. 46); and that opinion has naturally been followed by Roman Catholic expositors. It cannot now be proved incorrect; but the suspicion exists that the case here may be as with many other names in the N. T., which have been assigned to celebrated persons of a later period. Clement is said to have lived to the third year of the emperor Trajan (A. D. 100), when he suffered martyrdom.

There is an epistle of Clement to the Corinthians, which was highly esteemed by the ancient church, and was publicly read in many churches [EPISTLES OF THE APOSTOLICAL FATHERS].—J. K.

CLEOPAS (Κλεόπας), one of the two disciples to whom Jesus appeared in the way to Emmaus (Luke xxiv. 18). He is not to be confounded with the Cleophas, who was also called Alphæus. [Cleopas is a Greek name, probably contracted from Κλεόπατρος, whilst Clopas = ܟܠܦܐ, is Aramaic].

CLEOPATRA. The name of two princesses mentioned in the Apocrypha. 1. In Esth. xi. 1. This was probably the grand-daughter of Antiochus III. His daughter Cleopatra married Ptolemy Epiphanes, by whom she had two sons, Ptolemy Philometor, and Ptolemy Physcon, and one daughter—the Cleopatra in question. She married both her brothers in succession. The Ptolemy referred to in Esth. xi. 1 is Ptolemy Philometor.

2. In 1 Maccab. x. 57. This was the daughter of the Cleopatra of the last paragraph and Ptolemy Philometor. She married, first, Alexander Balas; secondly, Demetrius Nicator; thirdly, Antiochus Ledetmes. She was poisoned by her son Antiochus Grypus, 121 B. C.—H. W.

CLEOPHAS (Κλωπᾶς), or rather Clopas, who was also called Alphæus, which see.

CLERICUS. [LE CLERIC.]

CLIMATE. [PALESTINE.]

CLOUD. The allusions to clouds in Scripture, as well as their use in symbolical language, must be understood with reference to the nature of the climate, where the sky scarcely exhibits the trace of a cloud from the beginning of May to the end of September, during which period clouds so rarely appear, and rains so seldom fall, as to be considered phenomena—as was the case with the harvest rain which Samuel invoked (1 Sam. xii. 17, 18), and with the little cloud, not larger than a man's hand, the appearance of which in the west was immediately noticed as something remarkable not only in itself, but as a sure harbinger of rain (1 Kings xviii. 44).

As in such climates clouds refreshingly veil the oppressive glories of the sun, clouds often symbolize the Divine presence, as indicating the splendour, insupportable to man, of that glory which they wholly or partially conceal (Exod. xvi. 10;

xxxiii. 9; xxxiv. 5; xl. 34, 35; Num. xi. 25; xxi. 5; Job xxii. 14; Ps. xviii. 11, 12; xvii. 2; civ. 3; Is. xix. 1; Matt. xvii. 5; xxiv. 30, etc.; Acts i. 9; Rev. i. 7; xiv. 14, 16). Somewhat allied to this use is that which makes clouds the symbols of the Divine power (2 Sam. xii. 12; Ps. lxxviii. 34; lxxxix. 6; civ. 3; Nahum i. 3).

Clouds are also the symbol of armies and multitudes of people (Jer. iv. 13; Is. lx. 8; Heb. xii. 1). This is often very scientifically explained by the information that clouds are composed of innumerable drops of rain or vapour. This, although true, is certainly not the truth which the Hebrew poets had in view. Any one who has noticed the effect of a large and compact body of men upon the surface of an extensive plain, moving like a cloud in the clear sky, or who has seen a similar body of men upon the side of a distant hill, will find a more obvious source of the comparison.

There are many other dispersed symbolical allusions to clouds in Scripture not coming under these descriptions; but their purport is in every case too obvious to need explanation (see particularly Prov. xvi. 15; Eccles. xii. 2; Is. iv. 5; xlv. 22; 2 Pet. ii. 17; Jude 12).—J. K.

CLOUD, PILLAR OF (עַמּוּד עֲנַן, עַמּוּד הָעָנָן, or עַמּוּד עֲנַן; Sept. *σύλος νεφέλης, πυρός*), the emblem of the Divine Presence, which accompanied the Israelites in their journeyings in the wilderness by day, and which at night assumed the appearance of a pillar of fire (Exod. xiii. 21; xiv. 24; Num. xiv. 14). When the cloud was not removed the host rested, when it was taken up they went on their journey (Exod. xl. 36, 37; Num. ix. 17). At times it was not only the symbol but the mode of the Divine presence (Num. xii. 5). The Lord talked with Moses from it (Exod. xxxiii. 9). Modern Germans explain it of a natural appearance, or of the holy fire carried before the host from off the altar. But it is clearly spoken of as miraculous, and gratefully remembered in after ages by pious Israelites (Ps. cv. 39; lxxviii. 14; Wisd. x. 17) as a token of God's special care of their fathers. It is said that caravans still carry beacons of fire before them in a somewhat similar way, and traces of a like custom are found in classical writers, e.g., Q. Curtius 3. 3. 9; ordo agminis Persarum talis fuit. Ignis quem ipsi sacrum et æternum vocant argenteis altariis præferebatur; and 5. 2. 7, he says, that because all in Alexander's army could not hear the trumpet, Ergo periticam quæ undique conspici posset supra prætorium statuê ex qua signum eminebat pariter omnibus conspicuum. Observabatur ignis noctu fumus interdiu. See also an account of an appearance of fire by night in the expedition of Timoleon to Italy, Diod. Sic. 16. 66. Isaiah has a remarkable allusion to it (iv. 5), and St. Paul (1 Cor. x. 1, 2).—S. L.

CNIDUS (Κνίδος), otherwise GNIDUS, a town and peninsula of Doris in Caria, jutting out from the south-west part of Asia Minor, between the islands of Rhodes and Cos. It was celebrated for the worship of Venus (Strabo, xiv. p. 965; Plin. *Hist. Nat.* xxxv. 15; Hor. *Carin.* i. 30). The Romans wrote to this city in favour of the Jews (1 Maccab. xv. 23), and St. Paul passed it in his way to Rome (Acts xxvii. 7).

COACH (כַּבֵּשׂ), a species of reptile, placed among the unclean animals, Lev. xi. 30. In the A. V. it is rendered *chameleon*, and this is the rendering of the Sept. and the Vulg. The Arabic version makes it a species of land-crocodile. Bochart contends that it is a species of lizard, the *atworlo* or *guaril* of the Arabs (properly *waran*), the *Lacerta Nilotica* of naturalists. From its name (כַּבֵּשׂ = strength), we may presume that it was a large and powerful reptile, so that Bochart may be correct in his conjecture. Robinson's coasts killed one 3 feet 8 inches in length on the guide of the Dead Sea (*Bib. Res.* ii. 253).—W. L. A.

COAL. The Hebrew words most frequently and properly translated coal are two, נַחַל and נַחֲלֵת, and פַּחַם. Though the Hebrews seem to have frequently used the word נַחַל in the same generic sense as we do when we say a ton of coals, meaning coals not yet burnt, a pan of coals, meaning coals on fire, and as the Greeks, though not so loosely, apply *ἀνθρακία*, and the Romans *carbo*, yet when precision required it, the Hebrews, as well as ourselves and the Greeks and Romans, knew how to express the difference in the case of ignited coals, which they most commonly do by the addition of נֶשֶׁה, a distinction preserved in the Septuagint by the word *πῖρ* (though the Septuagint often introduces this word when the sense of the single Hebrew word seems to require it, and generally with great correctness); and which distinction is also generally preserved in the Vulgate by the use of the appropriate word *pruna*—Serv. *ad Æn.* xi. 788: 'Docet hoc esse discrimen inter prunam et carbonem, quod, illa accensa sit, hic verò extinctus. Sed etiam dum ardet carbo dicitur' (Facciolati). The following classification is offered, comprehending all the instances in which נַחַל and נַחֲלֵת occurs:—First, in its generic and indefinite application, that is, meaning coal whether ignited or not; 2 Sam. xiv. 7, 'They shall quench my coal which is left'; Sept. *ἀνθρακία*; Vulg. *scintillam*; evidently ignited, used tropically for posterity, like, נֵר, 1 Kings xv. 4, and several other passages; Job xli. 13 [A. V. 21], 'His breath kindleth coals,' *ἀνθρακες, prunas, i. e., coals not before ignited*: Is. xvii. 14, 'Not a coal to warm at,' but here the word *לחמה* decides the ignition, *ἀνθρακας πυρός, prunæ*: Ps. xviii. 8, 'Coals were kindled at it,' *ἀνθρακες, carbones succensu sunt*: Ps. cxx. 4, 'With coals of juniper,' Sept. *σὺν τοῖς ἀνθραξὶ τοῖς ἐρημικοῖς*; Vulg. *cum carbonibus desolatoriiis*: Prov. vi. 28, English version supplies (hot) coals: Sept. *addis πυρός to ἀνθράκων, prunas*: Prov. xxv. 22, 'Shall heap coals of fire upon his head,' Sept. supplies *πυρός, prunas*: Is. xlv. 19, 'Upon the coals,' *ἀνθράκων, carbones*: Ezek. xxiv. 11, 'Upon the coals,' *ἀνθρακας, prunas*.

Our second class consists of instances in which the word נֶשֶׁה is added in order to fix the sense of ignition.—Lev. xvi. 12, 'A censer full of burning coals of fire,' *ἀθράκων πυρός, prunis*: 2 Sam. xxii. 9, 13, 'Coals of fire were kindled at it,' *ἀνθρακες πυρός, carbones ignis*: Ps. xviii. 12, 'The coals of fire passed,' *ἀνθρακες πυρός, carbones ignis*: Ps. cxl. 10, 'Let burning coals fall on them,' *ἀνθρακες πυρός carbones*: Ezek. i. 13, 'Coals of fire,' *ἀνθράκων πυρός, carbonum ignis*: Ezek. x. 2, 'Coals of fire,' *ἀνθράκων πυρός, prunis ignis*.

The other Hebrew word translated coal is פַּחַם

It occurs only three times:—Prov. xxvi. 21, לְנֹחֵלִים פָּחַם, 'As coals are to burning coals, and wood to fire,' etc., Ἐσχάρα ἀνθραξι, sicut carbones ad prunas: here the word פָּחַם plainly means unignited coal (Qu. mineral coal?), as appears from the parallel comparison, and 'as wood to fire,' Is. xlv. 12, 'The smith worketh in the coals,' the Sept. has no corresponding word, but old commentators read ἐν ἀνθραξι, in prunis. Is. liv. 16, 'The smith that bloweth the coal in the fire,' ἀνθρακας, prunas. From the foregoing analysis it appears that the word נֹחֵל often means coals thoroughly ignited; but פָּחַם, coal before being ignited.

There are several instances in which the word 'coal' in our version is an improper translation. 1 Kings xix. 6, עֵנַת רֻצְפִים 'a cake baked on the coals,' ἐγκυρβίαις, subcinericius panis. רֻצֵף here properly means a hot stone (a pavement, Esth. i. 6, and elsewhere), and עֵנַת רֻצְפִים properly means small cakes baked under ashes—a common food to this day among the Orientals, especially when travelling [BREAD]. רֻצֵף is also a hot stone thrown into milk or broth in order to heat it (Gesenius). Another mis-translation occurs (Hab. iii. 5), 'Burning coals went forth at his feet,' in the margin 'burning diseases' (Deut. xxx. 24). The Sept. varies widely; the Vulgate still more widely—'egredietur diabolus,' which is, however, explained as pestis by the commentators. Another mis-translation is (Lam. iv. 8), 'Their visage is blacker than a coal;' margin, 'darker than blackness;' חֶשֶׁן מִשְׁחֹר, ὑπὲρ ἀσβόλης, super carbones. Another mis-translation occurs (Cant. viii. 6), 'the coals thereof are coals of fire;' רֻשְׁפֵי אֵשׁ, περίπτερα αὐτῆς, περίπτερα πυρός, Ald. ἀνθρακες πυρός, ut lampades ignis. A questionable translation occurs (Is. vi. 6), 'a live coal,' רֻצְפָה, ἀνθρακα πυρός, calculus; but the Rabbis render it 'coal.' The instances of the word coal in the N. T. remain to be noticed:—(John xviii. 18), 'a fire of coals,' ἀνθρακιά, ad prunas. The word here evidently means a mass of live charcoal (so Suid. ἀνθρακιά πεφυρακτωμένοι ἀνθρακες, who gives an adage which makes a plain difference—ψῆ τῆν τέφραν φεύγων, εἰς ἀνθρακίαν πέτρης, which may be exactly paralleled by a well-known English adage). (Eccl. viii. 10; xi. 32, occur in the same sense in the Apocrypha).—C. H. S. [Whether in any of these passages the coal referred to is natural coal is matter of doubt. It may have been so, for coal is found in Syria; but there is nothing to render this certain or more probable than that it is to artificial fuel that they relate].

COCCEIUS (COCH), JOHANN, was a native of Bremen, where he was born in 1603. In 1650 he was appointed Professor of Theology at Leyden, where he died in 1669. He was a man of profound scholarship, especially in Hebrew and Rabbinical literature. Besides many works of a dogmatical and polemical cast, a Hebrew Lexicon, etc., he wrote commentaries on most of the books of the Bible. He also edited the *Moreh Nevochim* of Maimonides, and the Talmudic Tracts *Sanhedrin* and *Maccotli*. He occupies a prominent place among the adherents of the mystical and spiritualizing school of interpreters. He maintained that every passage has as many meanings as it can be made to bear; and everything in the O. T. he regarded as typical of Christ and his church. He

held also Millenarian views. His works have been collected in 12 vols. fol., Amst. 1701, of which two contain his posthumous publications. His fame rests chiefly on his services to Hebrew philology. His *Lexicon et Commentarius Sermonis Heb. et Chald.* had a wide circulation. It was twice re-edited by Maius, Frankfurt 1689, and 1714, fol.; and again by Schulz in 1777; and again in 2 vols. 8vo, in 1793-96. The last edition, however, is much altered from the author's original, and has in it hardly a vestige of anything Cocceian.—W. L. A.

COCK (ἀλέκτωρ; in Hebrew possibly נָבֵר *Gaber*, if Jerome's version of Is. xxii. 17, 18 be correct: our version of the passage is obscure). It is somewhat singular that this bird and poultry in general should not be distinctly noticed in the Hebrew Scriptures. They were, it may be surmised, unknown in Egypt when the Mosaic law was promulgated, and, though imported soon after, they always remained in an undetermined condition, neither clean nor unclean, but liable to be declared either by decisions swayed by prejudice, or by fanciful analogies; perhaps chiefly the latter; because poultry are devourers of unclean animals, scorpions, scolopendra, small lizards, and young serpents of every kind.

But although rearing of common fowls was not encouraged by the Hebrew population, it is evidently drawing inferences beyond their proper bounds, when it is asserted that they were unknown in Jerusalem, where civil wars, and Greek and Roman dominion, had greatly affected the national manners.

In the denials of Peter, described in the four Gospels, where the cockcrowing is mentioned by our Lord, the words are plain and direct, not we think admitting of cavil, or of being taken to signify anything but the real voice of the bird, the ἀλεκτοροφωνία, as it is expressed in Mark xiii. 35, in its literal acceptation, and not as denoting the sound of a trumpet, so called, because it proclaimed a watch in the night; for, to what else than a real hen and her brood does our Saviour allude in Luke xiii. 34, where the text is proof that the image of poultry was familiar to the disciples, and consequently that they were not rare in Judæa? To the present time in the East, and on the Continent of Europe, this bird is still often kept, as amongst the Celte (Cæsar, *Bell. Gall.* iv. 12), not so much for food as for the purpose of announcing the approach and dawn of day.—C. H. S.

COCKATRICE. [TSIPHONI.]

COCKCROWING. The cock usually crows several times about midnight, and again about break of day. The latter time, because he then crows loudest, and his 'shrill clarion' is most useful by summoning man to his labours, obtained the appellation of the cockcrowing emphatically, and by way of eminence; though sometimes the distinctions of the first and second cockcrowing are met with in Jewish and heathen writers (Bochart, vol. iii. p. 119). These times, and these names for them, were, no doubt, some of the most ancient divisions of the night adopted in the East, where 'the bird of dawning' is most probably indigenous. The latter ἀλεκτοροφωνία was retained even when artificial divisions of time were invented. In our Lord's time the Jews had

evidently adopted the Greek and Roman division of the night into four periods, or watchings; each consisting of three hours; the first beginning at six in the evening, ἐν τῇ δευτέρῃ φυλακῇ, καὶ ἐν τῇ τρίτῃ φυλακῇ (Luke xii. 38); τετάρτη δὲ φυλακῇ τῆς νυκτός (Matt. xiv. 25; Mark vi. 48). These watches were either numbered first, second, third, and fourth, as now specified, or were called ὕπν, μεσονύκτιον, ἀλεκτροροφῶνια, πρῶτ. These are all mentioned (Mark xiii. 35; Veget. *Re Milit.* iii. 8, 'In quatuor partes ad clepsydum sunt divisae vigiliae, ut non amplius quam tribus horis nocturnis, necesse est vigilare,' Censorin, *de Die Natal.* Περὶ φ. τετάρτην, vide Joseph. *Antiq.* xviii. 9, C. Περὶ φ. δευτέραν, Diod. Sic. 18. 40; Xen. *Anab.* iv. 1. 5).

It has been considered a contradiction that Matthew (xxvi. 34) records our Lord to have said to Peter, πρὶν ἀλέκτορα φωνῆσαι, τρίς ἀπαρνήσῃ με, whereas St. Mark. (xiv. 30) says, πρὶν ἢ δις φωνῆσαι. But Matthew, giving only the *general sense* of the admonition (as also Luke xxii. 34; John xiii. 38), evidently alludes to that only which was *customarily* called the cockcrowing, but Mark, who wrote under Peter's inspection, more accurately recording the *very words*, mentions the *two* cockcroings (Wetstein on Mark xiv. 30; Scheuchzer, *Phys. Sacr.* on Mark xiii. 35; Whitby's *Note* on Matt. xxvi. 34). Δς, in Mark, is for ἐκ δευτέρου, and τρίς is explained, semel iterumque, plus simpliciter vice, a certain for an uncertain number, as I Cor. xii. 28. So Eusth. *ap. Schl. Lex.* says τρίς is for πολλάκις. Thus the seeming contradiction, at least, between Mark and the other Evangelists is removed (Lightfoot, *Hor. Heb.*; Byzaeus *de morte Christi*, ii. 6; Reland, *Orat. de Gall. Cantu*; Altmann *De Gallicin.*; Biel *Animad.* ad J. G. Altmann; Ansaldo *Comment.*, the four last in Ugolini, *Thesaur.* vol. xxvii. Ven. 1763; Adam's *Roman Antiq.* Boyd's Ed. 269; Winer, *Biblisches Real-Wörterbuch*, Leipzig, 1833, art. Hühner).—J. K.

COCKLE. [BA'SHAH.]

CODDÆUS, WILHELM, Professor of Hebrew at Leipzig about the beginning of the 17th century. He published *Hoseas propheta Ebr. et Chald. cum duplici vers. Lat. et comment. ebraicis trium doctiss. Judoorum; Masora item parva, ejusque et comment. Lat. quoque interpret. Accedunt in fine succinctæ sed necessariae Annot.* 4to Lug. Bat. 1621. A very useful book.—W. L. A.

COELESYRIA (Κοίλη Συρία). This name does not occur in Scripture, but there can be little doubt that a part at least of Coelesyria was included in that 'Valley of Lebanon' (בקעת הלבנון) mentioned by Joshua (xi. 17; xii. 7), the extent of which has been too much restricted by recent geographers. The name 'Valley of Lebanon' could scarcely be applied with propriety *exclusively* to that section of the great valley which lay at the base of Hermon, at a considerable distance from the range of Lebanon. Doubtless Baal-Gad was situated 'under Mount Hermon;' but we have reason to believe that 'the Valley of Lebanon' includes the whole of that valley which separates the ridge of Hermon from that of Lebanon. It seems that at a subsequent period this valley was called by Amos, apparently in contempt, 'the valley of

the idols' (בְּקַעַת הַבָּנִים, chap. i. 5). The name was most appropriate. The whole sides of the valley are thickly studded with old heathen temples. The writer has visited no less than fourteen of them, and he has heard of several others. Some of them were of great size and splendour, such as those of Baalbek, Mejdell, Niha, and Hibbariyyeh. This appears in fact to have been the chosen house of idolatry (Porter's *Damascus*, i. 12; ii. 320; Robinson, *B. R.* iii. 438, 492, 529; *Handbook of S. and P.*, 568, 570). The modern name of the valley confirms the above view. It is called *El-Bukaa* (البقاع), which is strictly the same as the Hebrew *Bikah* (בקעה).

In the Apocryphal books the name Coelesyria frequently occurs, and is used to denote one of the political divisions of Syria under the Persian satraps (1 Esdr. ii. 17; iv. 48), and subsequently under the Seleucidae (1 Maccab. x. 69; 2 Maccab. viii. 8). Its extent is not defined, but it appears to have embraced the whole region extending from Hamath to Beersheba, and from Phœnicia to the Arabian desert. Polybius employs the name in the same general way, and states that Coelesyria and Phœnicia formed the chief scene and cause of the struggles between the rival dynasties of the Seleucidae and the Ptolemies (*Hist.* ii. 71; iii. 1; v. 80, etc.) Strabo gives two widely different accounts of Coelesyria. In one place he thus describes it—*ὄδο ἐστὶν ὁρη τὰ ποιοῦντα τὴν Κοίλην καλουμένην Συρίαν, ὡς ἂν παράλληλα, ὅ, τε Λίβανος καὶ ὁ Ἄντι-λίβανος* (*Geog.* xvi., p. 517). Here he confines Coelesyria within what appears to be its proper limits; while, in another place, he makes it include the whole country extending from Seleucia to Egypt and Arabia (p. 520). Pliny appears to apply the name only to the valley along the eastern base of Lebanon (*H. N.* v. 17). Josephus includes in Coelesyria the whole valley of the Jordan, as well as that between Lebanon and Anti-Lebanon. He calls the Ammonites and Moabites inhabitants of Coelesyria (*Antiq.* i. 11. 5). Ptolemy mentions as towns of Coelesyria, Damascus, Scythopolis, and Gerasa, thus shewing that he agreed with Josephus (v. 25, cf. Joseph. *Antiq.* xiii. 13. 2 and 3).

From these various notices it will be seen that ancient writers used the name Coelesyria with great latitude of meaning. The cause of this it is not difficult to explain. After the Macedonian conquest the name was applied by the Greeks to the great valley lying between Libanus and Anti-Libanus. It was descriptive of its physical aspect—the Greek Κοίλη corresponding to the Hebrew בקעה. The Jordan valley was a continuation of Coelesyria on the south, as was the Orontes valley on the north, so that the term Κοίλη being equally applicable to them, they were subsequently included. Hence those writers who had not a very accurate knowledge of the country came to apply the name indefinitely to the whole of southern Syria east of Phœnicia. Under Roman rule the bounds of Coelesyria became somewhat more contracted, the valley of the Orontes being excluded on the north, and the province of Judea on the south.

Coelesyria, properly so called, included only the valley between the parallel ranges of Libanus and Anti-Libanus. Strabo's first description of it is consequently the most accurate, he says the valley was also called Marsyas (*Geog.* xvi.) This great

valley forms the most striking feature in the physical geography of central Syria. It is a northern continuation of the remarkable crevasse down which the Jordan flows. It runs from S.W. to N.E., and is seventy miles long by from three to seven broad. It is quite flat, and the soil is in general rich, and abundantly watered by streams from the mountain ranges. As seen in early spring from the heights of Lebanon, it resembles a vast sea of verdure, here and there dotted with little conical mounds, like islands, on most of which villages are perched. The watershed near the centre of the plain has an elevation of about 3000 feet above the sea, and toward each end there is a very gentle but regular descent. On the north it is drained into the Orontes, and on the south into the Litany. Near the watershed, on the eastern side of the valley, lie the magnificent ruins of Baalbek. Twenty miles southward, at the base of Anti-Libanus, is the site of Chalcis, once a royal city, now a desolate heap. Opposite the latter, in a wild mountain gorge, is Zahleh, the modern capital of Lebanon. It was recently burned by the Druzes. At the extreme northern end of the plain is the great fountain of the Orontes, the *Ain* of Num. xxxiv. 11; and a few miles east of it, on the banks of the Orontes, is Riblah. Not one half of Coele Syria is now under cultivation, yet it is the granary of the neighbouring mountains. Full descriptions of Coele Syria may be seen in the following works:—Robinson, *B. R.* iii.; Stanley, *S. and P.*; *Handbook of S. and P.*; Reland, *Palestina*; Bochart, *Geogr.*; Ritter, *Pal. und Syr.*—J. L. P.

COFFER. [ARGAZ.]

COFFIN. [BURIAL.]

COKE, THOMAS, LL.D., was born at Brecon, in South Wales, 9th September 1747. He was educated at Oxford, and having received orders, was appointed to the curacy of South Petherton, where his zeal in good doing was met with so much opposition as obliged him to retire from his post in 1776. He subsequently cast in his lot with the Wesleyans, and was ever afterwards, till his death at sea on the 3d of May 1814, on his way to India, with the object of establishing the Wesleyan missions there, the faithful and indefatigable coadjutor of John Wesley in his multifarious evangelistic efforts both at home and abroad. He wrote and published *A Commentary on the Old and New Testaments*, Lond. 1803, 6 vols. 4to. This work is chiefly a compilation, the materials of which were drawn for the most part from the Commentary of the unfortunate Dr. Dodd. It is neither critical nor profound, but useful, nevertheless, as a practical exposition of the Divine Word.—W. J. C.

COLINÆUS, SIMON, a celebrated Parisian printer, father-in-law to Robert Stephens. He issued an edition of the Greek N. T., 8vo, Par. 1584. This edition contains simply the text, without notes or even preface. The text is a combination of the Complutensian and the 3d edition of Erasmus, but Mill detected more than 150 readings which are not traceable to either of these sources. As most of these have been found in MSS. collated since the publication of this edition, it is presumed that Colinæus based his text on MS. authority as well as that of the printed editions.

He probably consulted the Parisian codices. Some of his readings are very good. Beza has charged him (*Tract. ad Defens. et Reprehens. Castellionis*, p. 502) with allowing emendations from mere conjecture to be introduced, but from this charge Mill has amply defended him (*Prolegg. ad N. T.* p. cxv.) This edition was never reprinted, nor does it seem to have exercised much influence on subsequent editions.—W. L. A.

COLLAR. This is the rendering in the A. V. of, 1. נְטִיפָה (Judg. viii. 26), which properly means *ear-ring*, or rather *ear-drop* or *pendant*, from נָטַף, to drop [EAR-RINGS]; 2. פִּי (Job xxx. 18), where פִּי, literally *mouth* or *opening*, is used to denote the hole of a seamless robe through which the head was inserted, and which fitted tight to the throat (Exod. xxxix. 23; Comp. Braun, *De Vest. Sacerdot.* Heb. ii. 2; See on Job, in loc.) Ewald takes כַּפִּי as a proposition, as in Exod. xvi. 21, where it has the sense of *in proportion to*, and renders it by 'like' 'it girds me like my smock' or 'undergarment.' So also Hirzel, 'als wie mein leibrock umgürtet es mich;' Renan, 'elle me serre comme ma tunique.' In ch. xxxiii. 6, we have כַּפִּי thus, 'I, like thee (כַּפִּיךָ), to God' (Cf. Noldius, *Concord. Partic. Heb.* s. v.) When, however, we find the LXX. and the Vulg. supporting the common rendering, there seems the less reason for deserting it.—W. L. A.

COLONY (Κολώνια). This designation is applied to Philippi in Macedonia (Acts xvi. 12). Augustus Cæsar had deported to Macedonia most of the Italian communities which had espoused the cause of Anthony; by which means the towns of Philippi, Dyrrachium, etc., acquired the rank of Roman colonies (Dion Cass. p. 455). They possessed the *jus coloniarium* (Plin. *Hist. Nat.* v. 1), i. e., so called *jus Italicum* (*Digest. Leg.* viii. 8), consisting, if complete, in a free municipal constitution, such as was customary in Italy, in exemption from personal and land taxes, and in the commerce of the soil, or the right of selling the land.—J. K.

COLOSSE, properly COLOSSÆ (Κολοσσαί), a city of Phrygia, on the river Lycus (now Gorduk), not far from its confluence with the Mæander, and near the towns of Laodicea, Apamea, and Hierapolis (Col. ii. 1; iv. 13, 15; comp. Plin. *Hist. Nat.* v. 41; Strabo, xii. p. 576). [The reading of the best MSS. of the N. T. is Κολοσσαί. There can be no doubt that Κολοσσαί is the proper spelling of the name, but the other was probably in accordance with the common pronunciation, and on this account was used by Paul.] A Christian church was formed here very early, probably by Epaphras (Col. i. 7; iv. 12, *sg.*), consisting of Jews and Gentiles, to whom Paul, who does not appear to have ever visited Colosse in person (Col. ii. 1), addressed an Epistle from Rome. Not long after the town was, together with Laodicea and Hierapolis, destroyed by an earthquake. This, according to Eusebius, was in the ninth year of Nero; but the town must have been immediately rebuilt, for in his twelfth year it continued to be named as a flourishing place (Nict. *Chron.* p. 115). It still subsists as a village named Khonas, an identification which is due to Mr. Hamilton (*Res. in Asia Minor*, i. 508). The huge range of Mount Cad

mus rises immediately behind the village, close to which there is in the mountain an immense perpendicular chasm, affording an outlet for a wide mountain torrent. The ruins of an old castle stand on the summit of the rock forming the left side of this chasm. There are some traces of

194. Colossæ:—[Khonas.]

ruins and fragments of stone in the neighbourhood, but barely more than sufficient to attest the existence of an ancient site; and that this site was that of Colossæ is satisfactorily established by the Rev. F. V. J. Arundell, whose book (*Discoveries in Asia Minor*) contains an ample description of the place.

COLOSSIANS, EPISTLE TO THE.—That this Epistle is the genuine production of the apostle Paul is proved by the most satisfactory evidence, and has never indeed been seriously called in question (see Lardner, *Credibility*; Davidson, *Introd.* ii. 426). The objections which Schwegler, Baur, etc., have urged against the authenticity of this Epistle, rest chiefly on minute details, which we cannot examine here; the reader will find them discussed by De Wette, *Einleit.* sec. 144, and Alford, *Gr. Test.* It is less certain, however, *when* and *where* it was composed by him. The common opinion is that he wrote it at Rome during his imprisonment in that city (Acts xviii. 16, 30). Erasmus, followed by others, supposes that Ephesus was the place at which it was composed; but this suggestion is obviously untenable from its incompatibility with the allusions contained in the Epistle itself to the state of trouble and imprisonment in which the Apostle was whilst composing it (i. 24; iv. 10, 18). In Germany, the opinions of theologians have been divided of late years between the common hypothesis and one proposed by Dr. David Schulz, viz., that this Epistle, with those to the Ephesians and Philemon, was written during the Apostle's two years' imprisonment at Cæsarea previous to his being sent to Rome. This opinion has been adopted and defended by Schott, Böttger, Wiggers, and Reuss, whilst it has been opposed by Neander, Steiger, Harless, Rückert, Credner, Bleek, and others. It is admitted that there is

nothing in the Epistles themselves which renders the common opinion improbable; but it is contended that there are various considerations of a general kind which tend to make the view of Schulz preferable. We shall briefly state the leading arguments in favour of this opinion, along with the counter-arguments of those who oppose it:—1. It is highly improbable that Paul would allow two years of easy imprisonment (Acts xxiv. 23-27) to pass away without writing to some of the churches at a distance, especially as he tells us that upon him 'came daily the care of all the churches,' 2 Cor. xi. 28), and as we find that he secured time for this even when most actively employed in his public apostolic labours. To this it is replied, that admitting the facts here assumed, they only prove that Paul *might* have employed himself during these two years in epistolary correspondence with distant churches, but afford no certain evidence that he really did so, far less that he wrote then the very epistles in question. 2. These epistles bear evident marks of having been written in consequence of communications made personally to Paul by parties connected with the churches to which they were addressed; and there is greater probability of his receiving such communications at Cæsarea than at Rome, especially during the earlier part of his residence there, to which these epistles (if written at Rome) must be ascribed. But it is replied to this, that distant as Rome was from the churches of Asia Minor, there is nothing unlikely in the supposition that Epaphras and others may have undertaken a journey thither to consult the Apostle about the state of these churches, threatened as they were with danger; and, for anything we know to the contrary, many of the Asiatic Christians may have had occasion to be at Rome at any rate on affairs of their own. 3. There is no small difficulty in supposing that in the early part of the Apostle's residence at Rome, all the parties mentioned in these epistles, viz., Timothy, Aristarchus, Mark, Jesus-Justus, Epaphras, Luke, Demas, Onesimus, Tychicus, should be found there with him, especially as we are told (Acts xxvii. 2) that only Aristarchus accompanied Paul and Luke from Cæsarea, and as, in the epistles known to have been written from Rome, only two of the parties above mentioned, Timothy and Luke, are referred to as with the Apostle (Phil. i. 1; ii. 19; 2 Tim. iv. 11); whilst, on the other hand, from Acts xx. 4, we learn that some at least of these parties were with Paul at Cæsarea. In answer to this it is said, that it does not appear other than natural that Paul should have gathered around him in his imprisonment those young men who had elsewhere been the companions and instruments of his operations, and have used them for the purpose of maintaining a continual intercourse with distant churches according to their circumstances and wants. 4. The appearance of Onesimus, the slave of Philemon, at the place where Paul was, *very soon*, *πρὸς ὥραν*, after he had left his master at Colossæ (Philem. ver. 15), agrees better with the supposition that Paul was at Cæsarea, than with the supposition that he was at Rome. To this it is replied, that Rome was the most likely of all places for a fugitive slave to betake himself to, and that with respect to the expression *πρὸς ὥραν*, it is so vague, and is used so obviously as an antithesis to *αἰώνιον* in the same verse, that nothing certain can be argued from it.

5. The request of Paul to Philemon (ver. 22), that he would provide him a lodging at Colossæ, as he hoped to visit that place shortly, agrees better with the supposition that this epistle was written at Cæsarea, whilst yet hopes might be entertained of his liberation, than that it was written at Rome, when his expectations of freedom must have become faint, and whence, according to his avowed purpose (Rom. xv. 28), he was more likely, in case of being liberated, to travel westwards into Spain than to return to Asia. The answer to this is, that though the Apostle had originally designed to journey from Rome to Spain, the intelligence he received of the state of things in the churches of Asia Minor may have determined him to alter his resolution; and upon the whole, we know so little of the Apostle's relations during his imprisonment at Rome, that it is not safe to build much upon any such allusions. In a very able article in the *Studien und Kritiken* for 1838, the whole question has been subjected to a new investigation by Dr. Julius Wiggers of the University of Rostock, who comes to the conclusion, that of the facts above appealed to, none can be regarded as *decisive* for either hypothesis. He inclines, however, to the opinion of Schulz, chiefly on the grounds that Paul, in writing to the Ephesians, makes no mention of Onesimus, who accompanied Tychicus, the bearer of his epistle to that church, and that *both* in this epistle and in that to the Colossians, he states that he had sent Tychicus *εἰς αὐτὸ τοῦτο, ἵνα γνῶτε τὰ περὶ ἡμῶν, καὶ παρακαλέση τὰς καρδίας ὑμῶν* (Eph. vi. 22; Col. iv. 8 [according to the best MSS.]) The former of these, Wiggers thinks, can be accounted for only on the supposition that Tychicus and Onesimus having to set out from Cæsarea, would reach Colossæ *first*, where the latter would tarry, so that he did not *need* to be commended to the church at Ephesus; the latter of these, he thinks, indicates that the place where Tychicus was to set out was one from which he might proceed *either* to Colossæ or to Ephesus first, not one from which he had, as a mere matter of course, to pass through Ephesus in order to reach Colossæ; and hence he infers that Cæsarea, and not Rome, was the place whence these epistles were dispatched (*Stud. u. Krit.* 1841, sec. 436). We cannot say that these two considerations appear to us so cogently decisive of this question as they do to Dr. Wiggers. For, not to insist upon the obvious incoherence of the one with the other, it does not by any means appear *necessary* that Paul should have commended Onesimus to the care of the church at Ephesus in case of his passing through that city, seeing he was the companion of one whose introduction would be enough to secure their kind offices on his behalf; and surely there is nothing improbable in the supposition that Paul should have sent Tychicus on the same errand both to Colossæ and to Ephesus, even though he must needs pass through the one to reach the other. A recent writer has urged some chronological difficulties, which he thinks decisive of the question in favour of Cæsarea. 'If,' says he, 'these epistles are genuine, and also Philipians and 2 Timothy, it is impossible to reduce all chronologically to the time of Paul's imprisonment at Rome. This appears from the following dates:—1. Paul narrates, 2 Tim. iv. 12, that he has sent Tychicus to Ephesus; now, since in Eph. vi. 21, and Col. iv. 7, he announces this mission, 2 Tim.

must have been written *after* these. 2. When Paul wrote to the Colossians, etc., Timothy was with him (Col. i. 1; Philem. 1); consequently 2 Tim., by which Timothy was summoned to Rome, was written *before* these. 3. According to Col. iv. 14, Demas is with Paul, but, according to 2 Tim. iv. 10, he has already left him, so that the latter epistle is the later. 4. Timothy is commanded to bring Mark (iv. 11); but, according to Col. iv. 10, he is already with him; consequently, 2 Tim. was written earlier' (Reuss, *Gesch. der Heil. Schr. des N. T.* p. 97, 3d edit.) These chronological difficulties, he thinks, will be all avoided if we suppose Eph., Col., and Philem., to have been written at Cæsarea, when the persons mentioned were present with him, and that they, having separated from him, he on his arrival at Rome sent for Timothy. There is certainly considerable weight in this, and on the supposition that 2 Tim. was written during St. Paul's imprisonment at Rome, recorded in Acts xxiv., we do not see how it is to be got over. But these chronological difficulties may be avoided as well by supposing that 2 Tim. was written during a second imprisonment of the apostle at Rome; and as there are many considerations which lead to this conclusion, we are free to prefer this solution of the difficulties to that proposed by Reuss. There thus appears to be no reason strongly urging us to believe that these epistles were written at Cæsarea; and, as in such a case, the testimony of tradition may be fairly admitted as adequate to decide the question, we abide by the conclusion, that Paul wrote these epistles at Rome during his first imprisonment there. Nor are there wanting notices in the epistles themselves which favour this conclusion, as—1. The fact, that whilst writing these epistles Paul was at liberty to preach the gospel (Eph. vi. 19, 20; Col. iv. 3, 4, 11), a statement which we know to be true in respect of his imprisonment at Rome, but which we do not know to be true of his imprisonment at Cæsarea; 2. The fact, that whilst writing these epistles he was a *prisoner in chains* (Eph. vi. 20; Col. iv. 3; Philem. 10), which is true of his imprisonment at Rome, but is apparently not true of his imprisonment at Cæsarea, where he seems to have been a *prisoner in custodia libera* (Acts xxiv. 23).

In what *order* these three epistles were written it is not possible clearly to determine. Between that to the Colossians and that to the Ephesians the coincidences are so close and numerous (see Horne's *Introduction*, vol. iv. p. 381; Davidson, ii. 344) that the one must have been written immediately after the other, whilst the mind of the Apostle was occupied with the same leading train of thought. By the greater part the priority is assigned to the Epistle to the Ephesians; though for this no more convincing argument has been adduced than that urged as conclusive by Lardner, viz., the omission of Timothy's name in the salutation of the Epistle to the Ephesians, from which it is inferred that this epistle was written before the arrival of Timothy, and consequently before the writing of that to the Colossians, in which his name occurs along with that of the Apostle's. But this assumes that the *only* possible reason for the omission was the absence of Timothy from Rome, an assumption which can hardly be granted, as other reasons besides this may be supposed; and moreover, even supposing the arrival of Timothy took place in the brief interval between the writing of

the two epistles, yet, as the two were sent off together, we can hardly say it was the *absence* of Timothy which caused the omission in that to the Ephesians, for had the Apostle thought it necessary, he would have inserted it before sending off the epistle. For the priority of the Epistle to the Colossians, it has been argued that this supposition best explains the force of the conjunction *καὶ* before *ὑμεῖς* in Eph. vi. 21, which seems to imply that the same knowledge had been conveyed to *others*; and as Paul makes the same statement to the Colossians, but without the *καὶ ὑμεῖς*, it is argued that the recollection of having made that statement being in his mind when he was writing to the Ephesians, he expressed himself in the manner above noted. This, it must be allowed, is not very satisfactory; for, as an argument, it holds good only on the supposition either that the Epistle to the Colossians was to be read *also* and *first* by the Ephesians, or that the Apostle fell unconsciously into the mistake of supposing, that because what he had written to the Colossians was fresh in his own recollection, it must be as well known to the Ephesians. There is much more force in the argument based on the different tone and train of sentiment in the two epistles; that to the Colossians having much more the appearance of what would be called forth on the first contemplation of the subject, while in that to the Ephesians there seems to be more of the fulness, maturity, and elevation, which flow from greater familiarity with the subject (see Neander, *Apostol. Age*, I. 329; Alford, N. T. iii. Proleg. 41). This, however, is a subjective reason, of the force of which different persons might judge very differently. The Epistle to Philemon being a mere friendly letter, intended chiefly to facilitate the reconciliation of Onesimus to his master, was probably written immediately before the departure of the party by whom it was to be carried.

The Epistle to the Colossians was written, apparently, in consequence of information received by Paul through Epaphras concerning the internal state of their church (i. 6-8). Whether the Apostle had ever himself before this time visited Colosse is matter of uncertainty and dispute. From ch. ii. 1, where he says, 'I would that ye knew what great conflict I have for you and for them at Laodicea, and for as many as have not seen my face in the flesh,' etc., it has by some been very confidently concluded that he had not. To this it is replied by Theodoret, Lardner, and others, that Paul does not intend to *include* the Colossians and Laodiceans among those who had not seen his face, but specifies the latter as a distinct class; as is evident, they think, from his using the *third* person in v. 2. This latter consideration, however, is of no weight, for the use of the third person here is easily accounted for on the principle that the pronoun takes the person of the nearer noun rather than that of the more remote (cf. Gal. i. 8); and it certainly would be absurd to maintain that all contained in the second verse has no relation to the Colossians and Laodiceans, notwithstanding the reference to them in ver. 1, and again in ver. 4. As respects the words in ver. 1, they will, in a mere philological point of view, bear to be understood in either way. It has been urged, however, that when, in ver. 5, the Apostle says, 'though I am absent in the flesh, yet am I with you in the spirit,' etc., his language is strongly indicative of his

having formerly been amongst the Colossians, for the verb *ἀπέμει* is used properly only of such absence as arises from the person's *having gone away* from the place of which his absence is predicated. In support of the same view have been adduced Paul's having twice visited and gone through Phrygia (Acts xvi. 6; xviii. 23), in which Colosse was a chief city; his familiar acquaintance with so many of the Colossian Christians, Epaphras, Archippus, Philemon (who was one of his own converts, Phil. 13, 19), and Apphia, probably the wife of Philemon [APPHIA]; his apparent acquaintance with Onesimus, the slave of Philemon, so that he recognised him again at Rome; the cordiality of friendship and interest subsisting between the Apostle and the Colossians as a body (Col. i. 24, 25; ii. 1; iv. 7, etc.); the Apostle's familiar acquaintance with their state and relations (i. 6; ii. 6, 7, etc.); and their knowledge of so many of his companions, and especially of Timothy, whose name the Apostle associates with his own at the commencement of the epistle, a circumstance which is worthy of consideration from this, that Timothy was the companion of Paul during his first tour through Phrygia, when probably the Gospel was first preached at Colossæ. Of these considerations it must be allowed that the cumulative force is very strong in favour of the opinion that the Christians at Colosse had been privileged to enjoy the personal ministrations of Paul. At the same time, if the Colossians and Laodiceans are not to be included among those of whom Paul says they had not seen his face, it seems unaccountable that in writing to the Colossians he should have referred to this class at all. If, moreover, he had visited the Colossians, was it not strange that he should have no deeper feeling towards them than he had for the multitudes of Christians scattered over the world whose faces he had never seen? In fine, as it is quite *possible* that Paul may have been twice in Phrygia without being once in Colosse, is it not easy also to account for his interest in the church at Colosse, his knowledge of their affairs, and his acquaintance with individuals among them, by supposing that members of that church had frequently visited him in different places, though he had never visited Colosse?

A great part of this Epistle is directed against certain false teachers who had crept into the church at Colosse. To what class these teachers belonged has not been fully determined. Heinrichs (*Nov. Test. Koppian.* vol. vii. part ii. p. 156) contends that they were disciples of John the Baptist. Michaelis and Storr, with more show of reason, conclude that they were Essenes. Hug (*Introd.* vol. ii. p. 449, E. T.) traces their system to the Magian philosophy, of which the outlines are furnished by Iamblichus. But the best opinion seems to be that of Neander (*lib. cit.* i. 374, ff.) by whom they are represented as a party of speculatists who endeavoured to combine the doctrines of Oriental theosophy and asceticism with Christianity, and promised thereby to their disciples a deeper insight into the spiritual world, and a fuller approximation to heavenly purity and intelligence than simple Christianity could yield. Against this party the Apostle argues by reminding the Colossians that in Jesus Christ, as set before them in the Gospel, they had all that they required—that he was the image of the invisible God, that he was before all things, that by him all things consist,

that they were complete in him, and that he would present them to God holy, unblameable, and unreprouvable, provided they continued steadfast in the faith. He then shews that the prescriptions of a mere carnal asceticism are not worthy of being submitted to by Christians; and concludes by directing their attention to the elevated principles which should regulate the conscience and conduct of such, and the duties of social and domestic life to which these would prompt.

In the conclusion of the epistle, the Apostle, after sending to the Colossians the salutations of himself and others who were with him, enjoins the Colossians to send this epistle to the Laodiceans, and that they likewise should read *την ἐκ Λαοδικείας*. It is disputed whether by these concluding words Paul intends an epistle from him to the Laodiceans or one from the Laodiceans to him. The use of the preposition *ἐκ* favours the latter conclusion, and this has been strongly urged by Theodoret, Chrysostom, Jerome, Philastrius, Cæcumenius, Calvin, Beza, Storr, and a multitude of other interpreters. Winer, however, clearly shews that the preposition here may be under the law of attraction, and that the full force of the passage may be thus given—'that written to the Laodiceans and to be brought from Laodicea to you' (*Grammatik d. Neutestamentl. Sprachidioms*, s. 434, Leipz. 1830). It must be allowed that such an interpretation of the Apostle's words is in itself more probable than the other; for supposing him to refer to a letter from the Laodiceans to him, the questions arise, How were the Colossians to procure this unless he himself sent it to them? And of what use would such a document be to them? To this latter question it has been replied that probably the letter from the Laodiceans contained some statements which influenced the Apostle in writing to the Colossians, and which required to be known before his letter in reply could be perfectly understood. But this is said without the slightest shadow of reason from the epistle before us; and it is opposed by the fact that the Laodicean epistle was to be used by the Colossians *after* they had read that to themselves (*ὅταν ἀναγνώσθῃ, κ. τ. λ.*) It seems, upon the whole, most likely that Paul in this passage refers to an epistle sent by him to the church in Laodicea at the same time with that to the church at Colossæ. It is probable also that this epistle is now lost, though the suggestion of Grotius that it was the same with the canonical Epistle to the Ephesians has found some advocates [EPHESIANS, EPISTLE TO THE]. The extant epistle to the Laodiceans is on all hands allowed to be a clumsy forgery (Michaelis, *Introd.* vol. iv. p. 124, ff.; Hug, *Introd.* ii. 436; Steiger, *Colosserbr. in loc.*; Heinrichs, *in loc.*; Raphael, *in loc.*)

Commentaries—Davenant, Cantab. 1627, fol., translated by the Rev. J. COLOURS. The names of colours occurring in the O. T. are the following:—1. לָבָן; 2. צַה; 3. חֹר; 4. שֵׁב; 5. שָׁהַר; 6. הַיּוֹם; 7. אֲדָם; 8. צְהוּב; 9. יָרֵק; 10. שְׁרָרָק; 11. צְהָר; 12. הַכְּלֵת; 13. נֶקֶד; 14. טְלוּא; 15. בֶּרֶד; 16. הַבְּלֵת; 17. אֲרָנְמוֹן; 18. תּוֹלַעַת שָׁנִי; 19. יָשָׁר. Of

these the first nine are simple natural colours; the next six are compound natural colours; and the remaining four are artificial colours. Besides these, such words as שֵׁשׁ, שׁוּשַׁן, בְּרִין are used to describe *white* objects; but in them the term is properly the designation of the object, not of its colour; the colour in fact is expressed only in the translation. In the N. T. the colours mentioned are λευκός, μέλας, πυρρός, χλωρός, πορφύρα, πορφύρεος, κόκκινος.

I. DESCRIPTION OF COLOURS.

A. Simple Natural Colours.

1. לָבָן. By this the Hebrews properly designated the simple natural colour *white*. It is applied to a fleece (Gen. xxx. 35, 37), to milk (Gen. xlix. (12), to manna (Exod. xvi. 31), to hair diseased by leprosy (Lev. xiii. 3), to garments (Eccles. ix. 8), to horses (Zech. i. 8), etc. The corresponding Greek term is λευκός, though this is sometimes used in the N. T. to designate something more than mere *whiteness*—the dazzling brilliancy of light reflected from a bright surface (Matt. xvii. 2; xxviii. 3; Rev. i. 14; comp. Joseph. *De Bell. Jud.* v. 5, 6; Hengstenberg on Rev. i. 14).

2. צַה. This word, from צָהָה, to be bright, of a dazzling white, is sometimes used to denote that which is bright, clear, shining (Is. xviii. 4; Jer. iv. 11; Is. xxxii. 10). It is used once of colour (Song of Songs v. 10), where it is joined with אֲדָוֶם, and designates the natural white of a healthy and beautiful countenance. It is said to be the intensive of לָבָן, but this may be doubted; לָבָן is used to describe the purest white; צַה rather describes the brilliancy of the complexion than the intensity of the colour. Sept. λευκός.

3. חֹר. This word occurs only in the Chaldee of Dan. vii. 9; but it stands connected with the Hebrew חֹר, *white linen*, and the verb חָוַר, to become white, as the face does when shame causes paleness (Is. xxix. 29). It is used in Dan. of snow, to the whiteness of which the colour of the garment of the Ancient of days is compared. Sept. λευκός.

4. שֵׁב or שֵׁבֵב, to be gray or hoary (1 Sam. xii. 2); hence שֵׁבֵבָה, grayness or hoariness (Hos. vii. 9; Sept. ποταλά).

5. שָׁהַר. This is the proper term for *black*. It is applied to hair (Lev. xiii. 31, 37), to horses

(Zech vi. 2), to the plumage of a raven (Song v. 11). It is used also for a swarthy countenance (Song i. 5). The verb from which it comes is used (Job xxx. 30) of the countenance blackened by disease. Sept. μέλας, except in Lev. xiii. 31, where we have ξανθίζουσα, probably in consequence of the use of this word in the preceding verse.

6. הוּם, of a *dark-brown* hue, from הוּם to be burnt, to be dark-coloured; used of sheep (Gen. xxx. 32, ff.). Sept. φαίς (= χρώμα σύνθετον ἐκ μέλανος καὶ λευκοῦ, ἤγουν μίχρον, Suidas.)

7. אָדָם, the proper term for *red*; used of garments stained with blood (Is. lxiii. 2); of a heifer (Num. xix. 2); of a horse (not as Gesenius suggests, because of its being of a chestnut or bay colour, but because of its symbolically indicating bloodshed and war, Zech. i. 8; vi. 2); of water (2 Kings iii. 22) coloured either by red earth (Ewald, Keil, Fürst), or by the rays of the rising sun (Thenius); of the complexion of a young and beautiful person (Song v. 10); comp. אֲדָמוּ, Lam. iv. 7. To express the subordinate idea of *reddish*, a diminutive from this word אֲדָמָה is used (Lev. xiii. 10; xiv. 37). From it also is taken the name אֲדָמָה, which designates the ruby or the garnet.

8. צָהָב. This word is used (Lev. xiii. 30) to describe the colour of the hair of a leprosy person. In the A. V. it is rendered *yellow*; LXX. ξανθίζουσα; Vulg. flavus. It was probably of a dun yellow inclining to red.

9. יֶרֶק, a *pale green* colour, inclining to yellow; used of fresh herbs (2 Kings xix. 26; Is. xxxvii. 27), and as a noun to designate the produce of the garden generally (גַּן יֶרֶק, a garden of herbs, Deut. xi. 10, etc.; comp. our *greens*). Another noun from the same root, יֶרֶק, *yereq*, is used to designate generally all vegetable products (Gen. i. 30; ix. 3, etc.) Another cognate noun יֶרֶקֶן *yeraqon*, is used of the greenish pallor which fear produces on the countenance (Jer. xxx. 6), as well as the peculiar greenish yellow hue of withering plants (Deut. xxviii. 22; Am. iv. 9; Hag. ii. 17; A. V. *blasting*). Where the yellow predominated still more over the green the word used was יֶרֶקֶן *yeraqon* (Lev. xiii. 49; xiv. 37, *greenish*, A. V.; Ps. lxxviii. 14, *yellow*, A. V.) The word רַעַן *ra'anani*, is frequently translated *green* in the A. V., but it has no direct relation to *colour*; it means fresh, vigorous, flourishing; it is green only in the translation.

B. Mixed Natural Colours.

1. פֶּקֶק, *fox-coloured* or *chestnut*, a mixture of red and brown (Zech. i. 8). On the ground that this term is applied to grapes (Is. xvi. 8), it has been contended that it means also *purple*; but the juiciest grapes are not so much purple as reddish brown.

2. צָהָר, applied to asses (Judg. v. 10). It comes from the same root as צָהָב, and the only reason assigned for regarding it as having any different meaning from that word, is, that perfectly white asses are so rare, that it cannot be supposed it was a common thing for judges to ride on them. Hence the rendering *white-red* has been advocated (Gesenius, Fürst, Bertheau), meaning by that white and red mixed, or red spotted with white. But asses might be called white, though not *perfectly* white; and it is evident from the style of address

in the passage cited, that the distinction named was a rare one. In the East at the present day the breed of white asses is carefully preserved for the use of state dignitaries.

3. עֶקֶר. This is applied to he-goats, and is rendered in the A. V. *ring-streaked* (Gen. xxx. 35, ff.); Sept. βαντοί; Sym. λευκόποδες; Targ.

רְנוּלִיא. According to the last two, with which the Arabic version also agrees, the peculiarity specified is that of being white-footed. But this requires an Arabic etymology, and it seems better to trace the word to the Hebrew עֶקֶר, to streak or mark with bands, and to understand it of a skin marked with white bands.

4. נֶקֶק, used also of sheep or goats (Gen. xxx. 32, ff.); A. V. *speckled*; Sept. ποικίλος, probably white spots on a dark ground.

5. טְלוּיא (Gen. xxx. 32, ff.); A. V. *spotted*, perhaps white and black intermixed; the white portions being larger than where נֶקֶק is used.

6. בָּבֵר, used of goats (Gen. xxxi. 10), and of horses (Zech. vi. 3, 6). It probably means *piebald*, in which the portions of white are still larger than in the preceding. (Jacob was to have all the goats that had any *white* in them, whether merely speckled or spotted, or piebald or streaked).

C. Artificial Colours.

1. תִּבְכֵּת. This word, wherever it occurs, the LXX. render by ὑάκινθος, or ὑάκινθινος, except at Num. iv. 7, where δισπέρφυρον is used; and in this rendering Philo, Josephus, and the Church Fathers concur (Bochart, *Hieroz.* ii. 5; 10, p. 728). We may therefore regard them as synonymous terms. But what colour is *Hyacinth*? This name belongs both to a flower and a gem. The flower, however, is of various hues, and the gem is said by some to be the sapphire, by others the amethyst, and by others the carbuncle. We must, therefore, go into a wider field of induction, and see how the terms ὑάκινθος and ὑάκινθινος are applied by the ancients, if we would determine with any approximate certainty the colour thus denoted. Now we find Homer comparing hair to it (*Odys.* vi. 231; xxiii. 158, where Eustathius says it indicates *black* hair); so also Theocritus (*Idyll.* x. 28) says the hyacinth is *black*. That in the latter case, however, black is used in the sense of dark-coloured, is evident from the same term being applied in the same line to the violet (τὸν μέλαν ἐντὶ, comp. Virgil's *Niger*, *Ecl.* ii. 18). Ovid expressly says that the colour of the hyacinth is *purple* (*Met.* x. 213); Virgil that it is *red* (*Ecl.* iii. 63) and *ferruginous* (*Georg.* iv. 183), that is, as Servius explains, 'vicinus purpure subnigræ;' and Pliny identifies its colour with that of the *vaccinium* or blackberry (xvi. 18, cf. xxi. 26), and says that it is 'color violaceus dilutus' (xxxvii. 9). It is represented also continually as the colour of the heavens and of the sea. Philo (*de vit.* *Mosis* iii. p. 671) calls it σμυβόλον, or ἐκμαγεῖον ἀέρος, and with this Josephus (*Antiq.* iii. 6. 4; 7. 8) accords. The Gemara says, 'techelet similis mari et mare firmamento' (*Menach.* 4); Abarbanel (on Exod. xxv. 4) describes it as 'sericum infectum colore, qui mari similis est;' and Kimchi makes it *azure* or *ultramarine*. This would lead to the conclusion that the colour called by the ancients hyacinthine was *blue*; and as blue

deepens into black, especially when we look into the depths of the air or of the sea, this will account for the term being applied as synonymous with purple or black. The hair, like a hyacinth, of Homer was doubtless dark shining hair, which, seen under certain aspects, had a purplish hue; just as claret wine appears blue or purple according to the light. The conclusion at which Bochart arrives as the result of his elaborate investigation is, that the hyacinthine colour 'eundem esse cum coeruleo aut saltem illi vicinum;' and with this most have concurred. Hartmann (*Die Hebräerin am Putzische*, i. 374; iii. 128, etc.), whom Gesenius and Winer follow, contends that it was properly the purple or violet colour; but his principal reason for this, viz., that the ancients often identify it with πορφύρα, is without weight, inasmuch as we know that they used this word so widely as to comprehend a vast range of colours, so that 'omnia splendida, elegantia, venusta et nitescientia vocantur purpura' (Ugolini, *Thes. Antiq. Sac.* xiii. p. 299); thus Horace speaks of 'Purpurei olores' (*Od.* iv. 1, 10); Virgil celebrates a 'Ver purpureum' (*Ec.* ix. 40); and Aulus Gellius tells us, that when a poet whom he quotes says of the wind, 'purpurat undas,' he means 'quod ventus mare crispificans nitescit' (*Noct. Att.* xviii. 11). In Scripture this term is applied to a string or loop (*Exod.* xxvi. 4), to a veil or cloth (xxvi. 31), to a lace or fringe (xxviii. 28), and to the priest's robe (xxviii. 31), and to cloth stuffs (*Ezek.* xxvii. 24).

2. אַרְבָּנוֹן. All are agreed that this is properly what we now call *purple*—'color sanguinis concreti, nigricans aspectu, idemque suspectu refulgens' (Plin. *H. N.* ix. 38). The purple, *καρ' ἐξόχην*, was the *δελφαιος* or Tyrian purple, the dye of which was obtained from the *murex Tyrius*. It is supposed by some that the reference is to this mollusk in Song vii. 5, where the hair of the bride is compared to אַרְבָּנוֹן, but it is probably to the *colour* of the hair as dark and lustrous that the allusion is. This word is frequently combined with the preceding, an additional evidence that the latter was not regarded as properly a purple.

3. תוֹלַעַת שָׁנִי. These words mean literally *worm of lustre*, or *bright worm* (from Ar. سنا, to shine), and they are used to designate an insect, or species of woodlouse (*coccus ilicis*, Linn.), which haunts the leaves of the *ilex aculeata*, from which the dye of the *crimson* was procured. The corresponding Greek name is κόκκος, and by this the LXX. invariably render it. The coccus is frequently called the Phœnician colour, because chiefly produced by the Phœnicians; it was highly esteemed by the ancients, and was the colour adopted by men of high rank (Martial, *Epig.* ii. 39, i; iii. 2, 11, etc. Sueton. *Domit.* 4. Comp. Gen. xxxviii. 28; Jer. iv. 30; Matt. xxvii. 28, etc.). Many of the furnishings of the tabernacle, and some parts of the priests' clothing, were of this colour (*Exod.* xxviii. 5; xxxviii. 18; xxxix. 1, ff.; Num. iv. 8, etc.). Sometimes שָׁנִי alone is used (Gen. xxxviii. 28-30), and sometimes תוֹלַעַת alone (Is. i. 18) for this colour. In the A. V. it is generally translated *scarlet*.

4. אֶשְׁתָּר. This word occurs Jer. xxii. 14; Ezek. xxiii. 14; in the former of which places it is

rendered by the LXX. by μίλτος, in the latter by γράφτις. That it was a dye of a red colour is certain, but opinions are divided between identifying it with *red lead* and with *vermilion*. As this colour was used in fresco paintings, it is probably the vermilion still discernible on the sculptures of the Assyrian palaces (Bonomi, *Nineveh and its Palaces*, p. 206).

II. SYMBOLICAL SIGNIFICANCE OF COLOURS.

Throughout antiquity colour occupied an important place in the symbology both of sentiment and of worship. Of the analogies on which these symbolical meanings were founded, some lie on the surface, while others are more recondite. Thus *white* was everywhere the symbol of *purity* and the emblem of *innocence*; hence it was the dress of the high priest on the day of atonement, his holy dress (*Lev.* xvi. 4, 32); the angels as holy (*Zech.* xiv. 5; *Job* xv. 15), appear in white clothing (*Mark* xvi. 5; *John* xx. 12); and the bride, the Lamb's wife, was arrayed in white, which is explained as emblematical of the *δικαιώματα τῶν ἀγίων* (*Rev.* xix. 8). White was also the sign of *festivity* (*Eccl.* ix. 8; comp. the *albatus* of Horace, *Sat.* ii. 2, 6) and of *triumph* (*Zech.* vi. 3; *Rev.* vi. 2; see Westein, *N. T.* in loc.). As the light-colour (comp. *Matt.* xvii. 2, etc.) white was also the symbol of *glory* and *majesty* (*Dan.* vii. 9; comp. *Ps.* civ. 2; *Ezek.* ix. 3, ff.; *Dan.* xii. 6, ff.; *Matt.* xxviii. 3; *John* xx. 12; *Acts* x. 30). As the opposite of white, *black* was the emblem of *mourning*, *affliction*, *calamity* (*Jer.* xiv. 2; *Lam.* iv. 8; v. 10; comp. the *atratus* and *toga pulla* of Cicero in *Vatin.* 13); it was also the sign of *humiliation* (*Mal.* iii. 14) and the omen of *evil* (*Zech.* vi. 2; *Rev.* vi. 5). *Red* indicated, poetically, *bloodshed* and *war* (*Nah.* ii. 4 (A. V. 3); *Zech.* vi. 2; *Rev.* vi. 4). *Green* was the emblem of *freshness*, *vigour*, and *prosperity* (*Ps.* xcii. 15; *lii.* 10; xxxvii. 35). *Blue*, or *hyacinth*, or *caerulean*, was the symbol of *revelation*; it was pre-eminently the celestial colour, even among heathen nations (comp. e.g., *Jer.* ix. 10 of the idols of Babylon, and what Eusebius says, *Præp. Evang.* iii. 11, of the *δημιουργός Κνήφ*, and the *Crishna* of the Hindoo mythology); and among the Hebrews it was the Jehovah colour, the symbol of the revealed God (comp. *Exod.* xxiv. 10; *Ezek.* i. 26). Hence it was the colour predominant in the Mosaic ceremonial; and it was the colour prescribed for the ribbon of the fringe in the border of the garment of every Israelite, that as they looked on it they might remember all the commandments of Jehovah (*Num.* xv. 38, 39). With *purple*, as the dress of kings, were associated ideas of *royalty* and *majesty* (*Judg.* viii. 26; *Esth.* viii. 15; *Song* iii. 10; vii. 5; *Dan.* v. 7, 16, 29; comp. *Odys.* xix. 225, the *pallium purpureum* of the Jupiter Capitolinus at Rome, the *purpurea vestis* of Phœbus (Ovid. *Melam.* ii. 1, 23), the *χλαμύδες πορφύρα* of the Dioscuri (Pausan. iv. 27), the *πορφυρογέννητος* of the Byzantines, etc.) *Crimson* and *scarlet*, from their resemblance to blood (probably) became symbolical of life; hence it was a crimson thread which Rahab was to bind on her window as a sign that she was to be saved alive when Jericho was destroyed (*Josh.* ii. 18; vi. 25), and it was crimson which the priest was to use as a means of restoring those who had contracted defilement by touching a dead body (*Num.* xix. 6-22). From

its intensity and fixedness this colour is also used to symbolize what is indelible or deeply engrained (Is. i. 18). The colours chiefly used in the Mosaic ritual were white, hyacinth (blue), purple, and crimson. It is a superficial view which concludes that these were used merely from their brilliancy (Braun, *de Vest. Sa. Heb.*; Bähr, *Sym. d. Mos. Cult.*)—W. L. A.

COMFORTER. [PARACLETUS.]

COMMENTARY. In the discussion of this subject we propose to pursue the following arrangement:—

1. To inquire what is meant by commentary.
2. To notice different kinds of commentary.
3. To mention the prominent defects of existing commentaries.
4. To review the leading and best known commentaries.

1. By *commentary*, in its theological application, is usually meant an exhibition of the meaning which the sacred writers intended to convey; or a development of the truths which the Holy Spirit willed to communicate to men for their saving enlightenment. This is usually effected by notes more or less extended—by a series of remarks, critical, philological, grammatical, or popular, whose purport is to bring out into view the exact sentiments which the inspired authors meant to express. The ideas contained in the O. and N. T. are thus transferred into other languages, and rendered intelligible by the help of oral or written signs. There is a high and sacred meaning in the words of holy men who spake as they were moved. To adduce this in a perspicuous form is the important office of the commentator. As there never has been, and from the nature of the case there never can be, a universal language, God selected for the revelation of his will those languages which were in all respects the fittest media for such a purpose. Hence arises the necessity of transplanting from these individual dialects the momentous truths they were selected to express; and of clothing in the costume of various people, as far as that costume can be adapted to such an object, the precise sentiments which were in the minds of the inspired writers. It is true that this can only be imperfectly done, owing to the various causes by which every language is affected; but the *substance* of revelation may be adequately embodied in a great variety of garb. The truths that make wise unto salvation are capable of being fairly represented in every tongue and dialect under heaven. There is an adaptation in their nature to the usage of every language that can possibly arise. The relation of immortal beings to their great Creator is everywhere the same; and the duties consequent upon such a relation are also identical. Their wants and necessities, too, are essentially alike. Hence there is a peculiar fitness in divine truth for appearing without injury in the linguistic costumes of different tribes.

The characteristics of commentary are,—

(a.) An elucidation of the meaning belonging to the words, phrases, and idioms of the original.

The signification of terms is generic or specific. A variety of senses also belongs to the same term, according to the position it occupies. Now a commentary points out the particular meaning belonging to a term in a particular place, together with the reason of its bearing such a sense. So with phrases. It should likewise explain the construc-

tion of sentences, the peculiarities of the diction employed, the difficulties belonging to certain combinations of words, and the mode in which they affect the general meaning. But this is only a small part of the business belonging to a commentator. He may be able to unfold the significations of words with discriminating nicety; with the genius of language he may be familiar; he may clearly perceive all its idioms, and rightly apprehend its difficult phrases; in short, as far as verbal criticism is concerned, he may be a consummate master, while he may prove an indifferent commentator. True commentary embraces much more than an acquaintance with isolated words and phrases, or with the grammatical principles of the Hebrew and Greek languages. It fills a more extended and elevated sphere than simple philology. It takes a higher range than lexical minutæ or rhetorical adjustment. These, indeed, form one of its elements; but they are far from being the only feature by which it is distinguished.

(b.) Another characteristic of commentary is an exhibition of the writer's scope, or the end he has in view in a particular place. It ascertains the precise idea he intended to inculcate in a given locality, and how it contributes to the general truth enforced. Every particle and word, every phrase and sentence, form links in the chain of reasoning drawn out by an inspired author—steps in the progress of his statements. It is therefore essential to perceive what contribution they make to the import of an entire passage, whether in the way of enriching or qualifying the sentiments embodied. A commentary should thus exhibit the design of a writer in a certain connection—the arguments he employs to establish his positions, their coherence with one another, their general harmony, and the degree of importance assigned to them. The drift of a discourse should never be lost sight of; else an author will be misunderstood and misinterpreted.

(c.) In addition to this, the train of thought or reasoning pursued throughout an entire book or epistle, the various topics discussed, the great end of the whole, with the subordinate particulars it embraces, the digressions made by the writer—these and other particulars of a like nature should be pointed out by the true commentator. The connection of one argument with another, the consistency and *ultimate* bearing of all the statements advanced—in short, their various relations, as far as these are developed or intimated by the author, should be clearly apprehended and intelligently stated. There is a plan or purpose that pervades every book, epistle, or prophecy of the sacred writers; a plan which does not indeed wholly exclude, but usually takes precedence of, other objects to which the book may be subservient. To trace such a plan, as it is carried out by the original writer, and to unfold the particular mode in which it promotes the highest interests of mankind, is one of the chief characteristics of commentary.

(d.) Another characteristic of commentary is, that it presents a comparison of the sentiments contained in one book, or one entire connected portion of Scripture, with those of another, and with the general tenor of revelation. A beautiful harmony pervades the Bible. Diversities, indeed, it exhibits, just as we should expect it *à priori* to do; it presents difficulties and mysteries which we cannot fathom; but, with this variety, there is a uniformity worthy of the wisdom of God. All his works are distin-

guished by the same kind of arrangement ; and the revelation of his will forms no exception. A commentator should therefore bring into juxtaposition the various portions of the divine word, and point out their divine symmetry. He should be able to account for diversities of sentiment, in reference to the same topic, that appear in the pages of books written at different periods, and addressed to individuals or communities whose circumstances, intellectual and physical, were dissimilar. An exposition that fails to do this is deficient in one of its highest qualities. Without it, religious truth will be seen in disjointed fragments ; no connected system, progressive and harmonious in its parts, will meet the eye. The adaptation of the entire scheme of revelation to the salvation of mankind will be dimly apprehended, while there is no comprehensive survey of its fair proportions.

From what has been stated in regard to the constituents of commentary, it will also be seen that it differs from *translation*. The latter endeavours to find in another language *equivalent terms* expressive of the ideas which the words of the Hebrew and Greek languages were framed to convey. It seeks to embody the same sentiments as are contained in the Scriptures, by means of phraseology closely corresponding in its symbolical character to the diction of the Bible. It is easy to see, however, that in many cases this cannot be done ; and that in others it can be effected very imperfectly. There are and must be a thousand varieties of conception expressed in the original languages of Scripture, of which no other can afford an adequate representation. The inhabitants of the countries where the sacred books were written lived amid circumstances in many respects diverse from those of other people. These circumstances naturally gave a colouring to their language. They affected it in such a way as to create terms for which there are no equivalents in the languages of tribes who are conversant with different objects, and live amid different relations. Translation fails in numerous instances, just because the language of one people contains words and idioms to which that of none other presents fit counterparts. In such a case, no expedient is left but *circumlocution*. By the help of *several phrases*, we must try to approximate at least the sentiment or shade of thought which the inspired writers designed to express. Where *exact representatives* cannot be found, we bring together *various terms* which may give as vivid a representation of the original as can be effected through the medium of the language in which the interpretation is given. *Commentary* is thus more diffuse than *translation*. Its object is not to find words in one language corresponding to those of the original languages of the Scriptures, or nearly resembling them in significance, but to set forth the meaning of the writers in notes and remarks of considerable length. *Paraphrase* occupies a middle place between translation and commentary ; partaking of greater diffuseness than the former, but of less extent than the latter. It aims at finding equivalent terms to those which the sacred writers employ, accompanied with others that appear necessary to fill up the sense, or to spread it out before the mind of the reader in such a form as the authors themselves might be supposed to have employed in reference to the people to whom the paraphrast belongs. *Scholia* differ from commentary only in brevity. They are short notes on passages of Scripture. Sometimes difficult

places alone are selected as their object ; at other times they embrace continuously an entire book. In every case *brevity* is, or ought to be, their distinguishing feature.

2. There are two kinds of commentary which we shall notice, viz., the *critical* and the *popular*. The former contains grammatical and philological remarks, unfolds the general and special significations of words, points out idioms and peculiarities of the original languages, and always brings into view the Hebrew or Greek phraseology employed by the sacred writers. It dilates on the peculiarities and difficulties of construction which may present themselves, referring to various readings, and occasionally bringing into comparison the sentiments and diction of profane writers where they resemble those of the Bible. In a word, it takes a wide range, while it states the processes which lead to results, and does not shrink from employing the technical language common to scholars. In this way the meaning of the original is brought out. Extended dissertations are sometimes given, in which the language is made the *direct subject* of examination ; and the aid of lexicons and grammars called in to support or confirm a certain interpretation. *Popular* commentary states in perspicuous and untechnical phraseology the sentiments of the holy writers, without usually detailing the steps by which that meaning has been discovered. It leaves philological observations to those whose taste leads them to such studies. All scientific investigations are avoided. Its great object is to present, *in an attractive form*, the thoughts of the sacred authors, so that they may vividly impress the mind and interest the heart. It shuns all peculiarities that might repel the simple-minded, reflecting reader of the Bible, and endeavours to adduce the truth of God without minute details or tedious digressions. It avoids everything that a reader unacquainted with Hebrew and Greek would not understand ; and occupies itself solely with the *theology* of the inspired authors—that holy sense which enlightens and saves mankind. This, however, is rather what popular commentary *should do*, than what it *has hitherto done*. We have described the *appropriate sphere* of its duty, rather than the province which it has actually occupied.

The limits of *critical* and *popular* commentary are not so wide as to prevent a partial union of both. Their ultimate object is the same, viz., to present the exact meaning which the sacred writers intended to express. Both may state the import of words and phrases ; both may investigate the course of thought pursued by prophets and apostles. They may develop processes of argumentation, the scope of the writers' remarks, the bearing of each particular on a certain purpose, and the connection between different portions of Scripture. In these respects *critical* and *popular* commentary may substantially coincide. Perhaps the union of both presents the best model of commentary, provided the former be divested of learned parade or repulsive technicalities ; and the latter be perspicuously full. Yet there is much difficulty in combining their respective qualities. In *popularising* the critical, and in elevating the popular to the standard of intelligent interpretation, there is room for the exercise of great talent. The former is apt to degenerate into *philological sterility* ; the latter into *trite reflection*. But by *vivifying* the one, and *solidifying* the other, a good degree of affinity may

be effected. The results which learning has attained, by processes unintelligible to all but the scholar, may surely be presented to the unlearned reader so as to be understood and relished. And what are the results which it is the great object of every commentator to realise? They are simply the *ideas* which the inspired writers designed to set forth. These constitute *theology*. They are emphatically the *truth*. They are the mind of God, as far as he has thought fit to reveal to men—the pure and paramount realities whose belief transforms the sinner into the saint. The commentator who comes short of this important end, or fails in exhibiting the whole counsel of God in its gradual unfoldings, is not successful. It matters little whether he possess profound learning, if he cannot exhibit in all their strength and richness the exact thoughts of the holy men who wrote. To this all his erudition should be subordinate. Critical and antiquarian knowledge should only be regarded as a mean of arriving at such an object. Geographical, chronological, and historical remarks should subservise the purpose just stated. The building about which they are employed they should *raise, strengthen, or consolidate*. As long as they contribute nothing to the rearing or cementing of its parts, they are useless lumber. The grand question with every commentator should be, what did the Holy Ghost mean to express by such a phrase or sentence? What train of thought does the inspired writer pursue? what truth does he design to teach, what doctrine to embody, what duty to inculcate? Am I exhibiting as the mind of the Spirit what I have sufficient reason to believe to be really such? Have I examined everything within my reach, which could be supposed to throw light on the original, or aid in understanding it? Has every known circumstance been taken into account? These and similar questions should never be lost sight of by the intelligent commentator. In proportion as he is actuated by the motives they imply will he produce a solid and safe exposition, such as the sacred original was truly meant to exhibit.

3. The prominent defects of existing commentaries.

(a.) *Prolivity*. This defect chiefly applies to the older works: hence their great size. It is not uncommon to meet with a large folio volume of commentary on a book of Scripture of moderate extent. Thus Byfield, on the Epistle to the Colossians, fills a folio volume; and Venema, on Jeremiah, two quartos. Peter Martyr's 'most learned and fruitful commentaries upon the Epistle to the Romans' occupy a folio, and his 'commentaries upon the book of Judges,' another tome of the same extent. But Venema on the Psalms, and Caryl on Job, are still more extravagant, the former extending to no less than six volumes quarto, the latter to two goodly folios. It is almost superfluous to remark that such writers wander away, without confining themselves to exposition. We do not deny that even their extraneous matter may be good and edifying to those who have the patience to wade through its labyrinths; but still it is not *commentary*. It is not a simple elucidation of the meaning which the sacred writers intended to express. To say everything that it is almost possible to say on a passage, or to write down what first comes up in the mind, and nearly in the same form in which it suggests itself, is far from giving

the true sense, which ought ever to be *the one object* in view. It is very easy to write, *currente calamo*, anything however remotely connected with a passage, or to note down the thoughts as they rise; but to *think out* the meaning of a place, to exercise independent mental effort upon it, to apply severe and rigid examination to each sentence and paragraph of the original, is quite a different process. To exhibit in a lucid and self-satisfying manner the results of deep thought and indomitable industry, is far from the intention of those prolix interpreters, who, in their apparent anxiety to compose a *full* commentary, present the reader with a chaos of annotations, burying the holy sense of the inspired writers beneath the rubbish of their prosaic musings.

(b.) Some commentators are fond of detailing various opinions, without sifting them. This also we reckon a defect. They procure a number of former expositions, and write down out of each what is said upon a text. They tell what one and another learned annotator affirms; but do not search or scrutinise his affirmations. No doubt an array of names looks imposing; and the reader may stare with surprise at the extent of research displayed; but nothing is easier than to fill up pages with such patchwork, and to be as entirely ignorant of the nature of commentary as before. The intelligent reader will be inclined to say, What matters it to me what this rabbi has said, or that doctor has stated? I am anxious to know *the true sense* of the Scriptures, and not the varying opinions of men concerning them. I long to have the refreshing truths of the Bible presented to me in their native purity, just as they are found in the pages of inspiration. Do not perplex me with the notions of numerous commentators, many of whom were utterly incompetent for their task; but let me see the mind of the Spirit fully and fairly exhibited, without the artificial technicalities of scholastic theology. It is a work of supererogation to collect a multitude of annotations from various sources, most of which the industrious collector knows to be improbable or erroneous. It is folly to adduce and combat interpretations, from which the common sense and simple piety of an unsophisticated reader turn away with instinctive aversion. If *plausible views* be stated, they should be thoroughly analysed. But in all cases the *right meaning* ought to be a *prominent* thing with the commentator; and *prominently* should it be manifested, surrounded, if possible, with those hues which Heaven itself has given it, and qualified by such circumstances as the Bible may furnish.

(c.) Another defect consists in dwelling on *the easy* and evading the *difficult passages*. This feature belongs especially to those English commentaries which are most current among us. By a series of appended remarks, plain statements are expanded; but wherever there is a real perplexity, it is glozed over with marvellous superficiality. It may be that much is said *about* it, yet there is no penetration beneath the surface; and when the reader asks himself what is the true import, he finds himself in the same state of ignorance as when he first took up the Commentary in question. *Pious reflections* and *multitudinous inferences* enter largely into our popular books of exposition. They *spiritualise* but do not *expound*. They *sermonise* upon a book, without catching its spirit or comprehending its meaning. All this is out of place. A

preaching, spiritualising commentary does not deserve the appellation of *commentary* at all. When a writer undertakes to educe and exhibit the true sense of the Bible, he should not give forth his own meditations, however just and proper in themselves. Put in the room of *exposition*, they are wholly out of place. The simple portions of the Bible are precisely those which require little to be said on them; while to the more difficult superlative attention should be paid. But the reverse order of procedure is followed by our popular commentators. They piously descant on what is well known, leaving the reader in darkness where he most needs assistance.

The intelligent part of the public are beginning to see that no one man, be his industry what it may, is competent to write a commentary on the whole Bible. Let him possess vast learning, great abilities, sound judgment, mental acumen, and indefatigable zeal, he will still find it impossible to produce a solid commentary on all the canonical books. It is true that one person may write *what is commonly styled a commentary* embracing the entire Bible, but how little of independent inquiry does such a work present! How feebly does it trace out the course of thought pursued by each of the inspired writers, the numerous allusions to manners and customs, the whole meaning of the original. Much, very much, is left untouched by it. It pursues an easy path, and difficulties vanish before it, because the *highest object* of the right-minded interpreter, so far from being attained, is not sought to be realised. There may be a great amount of writing—the thoughts of preceding commentators may be given in another costume with appended reflections; but, in all this, there is no profound or satisfying investigation. The mere surface of revelation is skimmed. The work is performed perfunctorily. Nothing of value is added to former interpretations. The essence and spirit of the original are to a great extent unperceived. The shades and colourings of thought are unreflected. Two or three books are quite sufficient for one man, to whatever age he may attain. By *intelligently expounding* them, he will do more to advance the cause of sacred interpretation, than if he were to travel over the entire field of the Bible. We prefer a sound and able commentary on one book, to a prosing expansion of stale remarks on all. It displays more real talent, as it exhibits more independent thought. We value highly the labours of those men who devote themselves to a few books, with an honest determination to ascertain their true meaning, and with such qualifications intellectual, moral, and literary, as have been already noticed. If they be men of the right stamp, we may expect great benefit from their investigations. As for those who have the self-confidence to undertake the exposition of all Scripture, we are inclined to pass by their harmless drudgery, never looking to it for true exposition. They are mere hewers of wood and drawers of water. They collect the observations of others; but it will be found that *sermonising* and *discursive* annotations fill up their lengthened pages.

4. We shall very briefly refer to the principal commentators on the Bible.

Calvin.—In all the higher qualifications of a commentator Calvin is pre-eminent. His knowledge of the original languages was not so great as that of many later expositors; but in developing

the meaning of the sacred writers, he has few equals. It has been well remarked that he chiefly attended to the *logic* of commentary. He possessed singular acuteness, united to a deep acquaintance with the human heart, a comprehension of mind by which he was able to survey revelation in all its features, and an enlightened understanding competent to perceive sound exegetical principles, and resolute in adhering to them. He can never be consulted without advantage; although all his opinions should not be followed. His works present specimens of exegesis that deserve to be ranked among the best extant, because they are occupied with the *spiritual essence* of the Bible—with the *theology* of the inspired writers.

Beza.—Beza's talents are seen to great advantage in expounding the argumentative parts of the Bible. He possessed many of the best exegetical qualities which characterised his great master. In tracing the connection of one part with another, and the successive steps of an argument, he displays much ability. His acuteness and learning were considerable. He was better acquainted with *the theology* than the *criticism* of the N. T.

Hammond.—This learned annotator was well qualified for interpretation. His paraphrase and annotations on the N. T. possess considerable value; and many good specimens of criticism are found in his notes. Yet he has not entered deeply into the spirit of the original, or developed with uniform success the meaning of the inspired writers. Many of the most difficult portions he has superficially examined, or wholly mistaken.

Poole.—Poole's annotations on the Holy Bible contain several valuable, judicious remarks. But their defects are numerous. The pious author had only a partial acquaintance with the original. He was remarkable neither for profundity nor acuteness. Yet he had piety and good sense, amazing industry, and an extensive knowledge of the older commentators.

Poli Synopsis Criticorum.—In this large work, the annotations of a great number of the older commentators are collected and condensed. But they are seldom sifted and criticised, so that the reader is left to choose among them for himself. Such a chaos of remarks is apt to confuse the mind. Whoever has time, patience, and discrimination, may find correct exegesis scattered through the whole; but simpler and more direct commentary is much to be preferred.

Grotius.—This very learned writer investigates the literal sense of the Scriptures with great diligence and success. He had considerable exegetical tact, and a large acquaintance with the heathen classics, from which he was accustomed to adduce parallels. His taste was good, and his mode of unfolding the meaning of a passage, simple, direct, and brief. His judgment was sound, free from prejudice, and liberal beyond the age in which he lived. As a commentator he was distinguished for his uniformly good sense. But he wanted the depth and acuteness of Calvin. It has been said without reason, that he found Christ nowhere in the O. T. It is true that he opposed the Cocceian method, but in this he should be commended. His chief defect is in *spiritual discernment*. Hence he sometimes rests in the literal meaning, where there is a higher or ulterior reference.

Le Clerc.—Excellent notes are interspersed throughout the commentaries of this author, which

the younger Rosenmüller transcribed into his *Scholæ*. His judgment was good, and his mode of interpretation perspicuous. From his richly stored mind he could easily draw illustrations of the Bible both pertinent and just. Yet he was very defective in theological discrimination. Hence, in the *prophetic* and *doctrinal* books, he is unsatisfactory. It has been thought, not without truth, that he had a rationalistic tendency. It is certain that he exalted his own judgment highly, and pronounced dogmatically where he ought to have manifested a modest diffidence.

Calmet.—Calmet is perhaps the most distinguished commentator on the Bible belonging to the Roman Catholic Church. In the higher qualities of commentary his voluminous work is very deficient. It contains a good collection of historical materials, and presents the meaning of the original where it is already plain; but his historical apparatus needs to be purified of its irrelevant, erroneous statements; while on the difficult portions no new light is thrown.

Patrick, Lowth, Arnald, and Whitby.—Bishop Patrick had many of the elements belonging to a good commentator. His learning was great when we consider the time at which he lived; his method brief and perspicuous. Lowth was inferior to Patrick. Whitby presents a remarkable compound of excellencies and imperfections. In philosophy he was a master. In critical elucidations of the text he was at home. Nor was he wanting in acuteness or philosophical ability. His judgment was singularly clear; and his manner of annotating straightforward. Yet he had not much comprehensiveness of intellect, or a deep insight into the spiritual nature of revelation. The sublime harmony of the N. T. was but dimly seen by him. In the spirit of a high relish for the purity of the Gospel he seldom mounts up into its mysteries. Deeply baptized in the Spirit's influences he could not have been, else many of his expository notes would have been different.

Henry.—The name of this good man is venerable, and will be held in everlasting remembrance. His commentary does not contain much *exposition*. It is full of *sermonising*. It is surprising, however, to see how far his good sense and simple piety led him into the doctrine of the Bible, apart from many of the higher qualities belonging to a successful commentator. In thoroughness and solidity of exposition he is not to be named with Calvin. His prolixity is great. *Practical preaching* is the burden of his voluminous notes.

Gill.—The prominent characteristic of Gill's commentary is *heaviness*. It lacks condensation and brevity. The meaning of the inspired authors is often undeveloped, and more frequently distorted. It has the lumber and rubbish of learning, without learning itself.

Doddridge.—The taste of this pious commentator was good, and his style remarkably pure. He had not much acumen or philosophy in his nature; but he had an excellent judgment, and a calm mode of inquiry. His paraphrase leaves much unexplained, while it dilutes the strength of the *original*. It is too discursive and sermonising. The notes are few, and ordinarily correct.

Scott.—The prevailing characteristic of Scott's commentary is judiciousness in the opinions advanced. The greater portion of it, however, is not *proper exposition*. The pious author preaches

about and paraphrases the original. His simplicity of purpose generally preserved him from mistakes; but as a commentator he was neither acute nor learned. He wanted a competent acquaintance with the original, power of analysis, a mind unprepossessed by a doctrinal system, and penetration of spirit.

A. Clarke.—In most of the higher qualities by which an interpreter should be distinguished, this man of much reading was wanting. His historical and geographical notes are the best. But he had no philosophical ability. His prejudices warped his judgment. His philology is not unfrequently puerile. Acuteness and penetration are not seen in his writings. There is no deep insight into the mind of the sacred writers.

The Greek Testament of *Alford* contains a critical and exegetical commentary now completed. This is a very valuable work. The learned author has produced a good commentary, pervaded by sound sense, skill, theological perspicacity, and spiritual perception. The labours of those who have preceded him, especially of De Wette and Meyer, have been freely used; nor has Stier been forgotten in the Gospels. But the writer has everywhere exercised his own independent judgment, and stamped the whole with the impress of a reflecting mind. The work is an immense advance upon the three volumes of Bloomfield, or his *Recensio Synoptica* with its ill-digested gatherings.

In addition to these commentaries on all Scripture, or one of the Testaments, there are numerous expositions of separate books, which should not be omitted. A few are worthy of mention:—

1. *Kalisch* has commented on Exodus and Genesis learnedly and copiously. Few works in English can be compared to these expositions in thoroughness and ability. We trust that the learned writer may be spared to complete his gigantic task of going through the O. T. in the same way.

2. *Stuart*.—This esteemed writer, after furnishing examples of solid commentary on the epistles to the Hebrews and Romans, undertook a copious and learned exposition of the Apocalypse, as also of the Proverbs and Ecclesiastes. The author has endeavoured to enter fully into the spirit of the sacred writers, evading no difficulty, and tracing the course of their reasoning with considerable success. He has consequently thrown much light on the difficult books he expounds.

3. *Hodge* has written commentaries on the epistles to the Romans, Ephesians, and Colossians, in which he cannot be said to have gone beyond Calvin, whose theology he seems to follow.

4. *Alexander* of Princeton has published a very learned and valuable commentary on the prophecies of Isaiah—the most elaborate exposition of the prophet in the English language. He has also commented on the Psalms, Acts of the Apostles, and the Gospels of Matthew and Mark, but less successfully.

5. *Henderson*.—This writer has published good commentaries on Isaiah, Jeremiah, Ezekiel, and the minor prophets. In point of learning the works are very respectable, while they are pervaded by a true spirit of theological research.

6. *Ellicott* has published *grammatical* and *critical* commentaries on various epistles of St. Paul, which possess much excellence. The writer is well fitted for his task, and adheres very faithfully to what he proposes. His works are by far the best of their kind in the English language.

7. *Eadie* has published commentaries on the epistles to the Ephesians, Colossians, and Philipians, containing a large amount of good materials. Too much, however, of Scotch theology is attributed in them to the apostle, and the esteemed commentator preaches rather often.

8. *Stanley*.—This able writer is the author of an excellent commentary on the epistles to the Corinthians.

9. *Fowell* has commented on the epistles to the Thessalonians, Galatians, and Romans, with great philosophical ability and theological freedom. The essays or excursus interspersed evince no small exegetical excellence. The learned commentator has indulged in a style of criticism which is fitted to alarm the timid, and even to startle the more cautious theologian at times. His work is at once profound and suggestive.

We cannot characterise other commentators on separate books of Scripture, such as Phillips and De Burgh on the Psalms; Ginsburg's able volumes on the Song of Solomon and Ecclesiastes; Maclean on the Epistle to the Hebrews; Preston on Ecclesiastes, etc., etc. It would detain us too long even to enumerate the majority of them. On each book two or three may be selected as the best, and the rest safely neglected.

The modern Germans, prolific as they are in theological works, have seldom ventured to undertake an exposition of the whole Bible. Each writer usually confines himself to the task of commenting on a few books. In this their wisdom is exhibited. Yet they do not always excel in good specimens of commentary. They are often *word-explainers*. In pointing out various readings, in grammatical, historical, and geographical annotations, as also in subtle speculations respecting the genius of the times in which the writers of the Bible lived, they are at home. In the *lower criticism* we willingly sit at their feet and learn. But with regard to the *higher*—in all that pertains to the *logic* of commentary, in development of the sense and sequence they are wanting. Refined notions frequently usurp the place of practical piety; and the minutæ of verbal criticism furnish them nutriment apart from the rich repast of theological sentiment and sanctifying truth. But there are noble exceptions.

E. F. C. Rosenmüller.—The *Scholia* of this laborious writer extend over the greater part of the O. T. Looking to the last editions, they are unquestionably of high value. They bring together a mass of annotation such as is sufficient to satisfy the desires of most biblical students. Yet the learned author undertook too much to perform it in a masterly style. Hence his materials are not properly sifted, the chaff from the wheat. He has not drunk deeply into the spirit of the inspired authors. He seems indeed not to have had a soul attuned to the spirituality of their utterances, or impregnated with the celestial fire that touched their hallowed lips. His father, the author of the *Scholia* on the N. T., is a good *word-explainer* for students beginning to read the original. He has not produced a masterly specimen of commentary on any one book or epistle.

Olshausen.—A good example of commentary on the N. T. has been given by this writer. It is an excellent specimen of exposition. Verbal criticism is but sparingly introduced, although even here the hand of a master is apparent. The

author is intent on higher things. He investigates the thought, traces the connection, puts himself in the same position as the writers, and views with much ability the narratives and reasonings of the inspired writers. The critical and popular are admirably mingled. Four volumes were completed when the writer was prematurely cut off. Of these the first two are the best. The work has been continued and completed by Ebrard and Wiesinger; who, though painstaking scholars, cannot be regarded as possessing high exegetical ability.

Lücke on the writings of John. The best commentator on John's writings in Germany is the learned and able Lücke, who did not live to complete the exposition of the Apocalypse, though he wrote an elaborate introduction, which left nothing to be desired in regard to the literature of the book. On the Gospel, his volumes will always occupy a prominent place. He is less successful in his exposition of the epistles, which he had intended to improve had his life been spared.

Gesenius's commentary on Isaiah was an epoch-making book. Nor can it be said to be superseded by the many later expositions of the same prophet. As might be expected, its philological, historic, and archæological side is the strongest and ablest.

De Wette.—This learned critic has commented on the N. T. with rare skill and excellence. He has fine taste, exegetical tact, wonderful power of condensation, clear perception of difficulties, a bold method of meeting them, and an eye for detecting the sequence of ideas and propositions. His work exhibits both a compendium of the expositions of his predecessors and an excellent exegetical commentary of his own, in the briefest and most lucid words. The labour of many years is here compressed into small space. Its value can hardly be over-estimated. There is nothing equal to it. His work on the Psalms is an excellent manual of interpretation which none can safely dispense with, notwithstanding the depreciating remarks made upon it by Ewald.

Meyer.—The critical and exegetical commentary of Meyer on the N. T. bears greater resemblance to De Wette's than any other. In some of the books he had the co-operation of Lunemann, Huther, and Dürstendieck, all able expositors. The whole work possesses a sterling value, and cannot be dispensed with by any theologian. As might be expected, it is of unequal merit. The commentaries on the Epistles to the Corinthians are the best. Meyer has neither the taste nor exegetical tact of De Wette; but in some other qualities he is superior. His theological stand point is not very different.

The *Exegetical Hand-Book* to the O. T. is a compressed compendium of expositions embracing all the canonical books. The writers are Hitzig, Thénien, Bertheau, Knobel, Hirzel, and J. Olshausen. It is difficult to characterise a production so unequal. Pervaded by considerable learning, it often exhibits a want of judgment and thoroughness. Hitzig, the chief writer, is too fond of far-fetched interpretations; and has no sympathy with the poets of the O. T., whom he converts into prose-writers; or, at least treats them as if they were. Hirzel, Knobel, and Thénien, excel Hitzig in all the qualities that constitute useful commentators; though they are his inferiors in philological acuteness and grammatical knowledge of Hebrew.

Ewald.—This learned critic has published commentaries more or less extended, on the poetical and prophetic books of the O. T., on the first three gospels and the writings of John, and on Paul's epistles. All are pervaded by the genius of the author, whose critical sagacity and rare talents are acknowledged by every right-minded reader. On the O. T. he is at home, and has shed a flood of light on the history and books of the Hebrews. Ewald is an *epoch-making* man.

Umbreit wrote what he termed a *practical* commentary on the O. T. prophets, besides expositions of Job, the Proverbs, Ecclesiastes, and Song of Solomon. These contain many good and useful things, but do not possess first-rate excellence.

Tholuck.—The commentaries of this eminent writer on various books, especially those on the Sermon on the Mount, and the Epistle to the Romans, as they appear in the last editions, exhibit high exegetical excellence. While the author investigates critically phrases and idioms, he ascends into the region of ideas, unfolding the sense with much skill and discernment. His commentary on John, even in its most recent form, is more popular than the rest; though now superior to that on the Epistle to the Hebrews. His exposition of the Psalms satisfied none. In the O. T. the author is hardly at home; his knowledge of Hebrew being imperfect.

Hengstenberg.—This learned writer has published commentaries on the Psalms, Canticles, Ecclesiastes, and Apocalypse. He is better fitted for explaining the Old than the New T. His work on the Psalms is the best. But it is lengthy and laboured; though a very valuable contribution towards the understanding of the book. Its philology is inferior to its theology, and the latter itself cannot be always approved.

Delitzsch.—This able scholar has commented on the Epistle to the Hebrews, the Book of Genesis, the Song of Solomon, Habakkuk, and the Psalms. He has no lack of learning, nor of pious sympathy with the writers. But we have little confidence in his judgment. He is deficient in many of the higher qualities of a good expositor; especially in a clear and condensed exhibition of the writers' meaning.

Hupfeld.—This learned scholar's exposition of the Book of Psalms is a model of thorough exposition, critical and theological.

Bleek.—The erudite Bleek published but one commentary—viz., that on the Epistle to the Hebrews. It is constructed on the exhaustive principle, leaving hardly anything untouched or undiscussed. It is thorough and masterly; but tedious and somewhat heavy.

Fritzsche wrote commentaries on the Gospels of Matthew and Mark, and the Epistle to the Romans, which are unrivalled specimens of the grammatical and critical. The author had no equals in his knowledge of N. T. Greek, not even in Winer and Bleek. But in all the higher qualities of commentary, his works are very deficient.

Stier.—This voluminous writer has commented very copiously on the words of the Lord Jesus in the Gospels, the Epistles of James and Jude, the Epistle to the Hebrews, Isaiah, and seventy select Psalms, etc. He is a better expositor of the N. T. than of the O., and is fonder of its theological aspect than of the plain meaning. More compression and less of the homiletic character

would improve his works; which, however, are of considerable value, because the author has a degree of spiritual insight into Scripture denied to many of his countrymen.

Keil.—This orthodox theologian has written good commentaries on the Books of Joshua and Kings; which are superseded by those in the Exegetical Hand-Book on the same.

We cannot afford space to speak particularly of Hävernick on Daniel and Ezekiel; of Billroth on the Corinthians, now nearly superseded by the later works of De Wette, Meyer, Rückert, Osiander, Stanley, and others; of Baehr on the Colossians; of Philippi on the Romans; and of Harless on the Ephesians, which Tholuck thinks the best specimen of commentary extant. The number of such expository treatises on books of the N. and O. T. is continually augmenting, and unless a work of the kind has some peculiar or marked excellence, it is soon liable to be superseded by a later, into which all the valuable material is incorporated.—S. D.

COMMERCE. The idea conveyed by this word is represented in the sacred writings by the word trade; the Hebrew term *רקל* *rekel* signifying literally 'trade' or 'traffic.'

Commerce, in its usual acceptation, means the exchange of one thing for another—the exchange of what we have to spare for what we want, in whatever country it is produced. The origin of commerce must have been nearly coeval with the world. As pasturage and agriculture were the only employments of the first inhabitants, so cattle, flocks, and the fruits of the earth were the only objects of the first commerce, or that species of it called barter. It would appear that some progress had been made in manufactures in the ages before the flood. The building of a city or village by Cain, however insignificant the houses may have been, supposes the existence of some mechanical knowledge. The musical instruments, such as harps and organs, the works in brass and in iron exhibited by the succeeding generations, confirm the belief that the arts were considerably advanced. The construction of Noah's ark, a ship of three decks, covered over with pitch, and much larger than any modern effort of architecture, proves that many separate trades were at that period carried on. There must have been parties who supplied Noah and his three sons with the great quantity and variety of materials which they required, and this they would do in exchange for other commodities, and perhaps money. That enormous pile of building, the tower of Babel, was constructed of bricks, the process of making which appears to have been well understood. Some learned astronomers are of opinion that the celestial observations of the Chinese reach back to 2249 years before the Christian era; and the celestial observations made at Babylon, contained in a calendar of above nineteen centuries, transmitted to Greece by Alexander, reach back to within fifteen years of those ascribed to the Chinese. The Indians appear to have had observations quite as early as the Babylonians.

Such of the descendants of Noah as lived near the water may be presumed to have made use of vessels built in imitation of the ark—if, as some think, that was the first floating vessel ever seen in the world—but on a smaller scale, for the purpose of crossing rivers. In the course of time the de-

scendants of his son Japhet settled in 'the isles of the Gentiles,' by which are understood the islands at the east end of the Mediterranean Sea, and those between Asia Minor and Greece, whence their colonies spread into Greece, Italy, and other western lands.

Sidon, which afterwards became so celebrated for the wonderful mercantile exertions of its inhabitants, was founded about 2200 years before the Christian era. The neighbouring mountains, being covered with excellent cedar-trees, furnished the best and most durable timber for ship-building. The inhabitants of Sidon accordingly built numerous ships, and exported the produce of the adjoining country, and the various articles of their own manufacture, such as fine linen, embroidery, tapestry, metals, glass, both coloured and figured, cut, or carved, and even mirrors. They were unrivalled by the inhabitants of the Mediterranean coasts in works of taste, elegance, and luxury. Their great and universally acknowledged pre-eminence in the arts procured for the Phœnicians, whose principal seaport was Sidon, the honour of being esteemed, among the Greeks and other nations, as the inventors of commerce, ship-building, navigation, the application of astronomy to nautical purposes, and particularly as the discoverers of several stars nearer to the north pole than any that were known to other nations; of naval war, writing, arithmetic, book-keeping, measures and weights; to which it is probable they might have added money.

Egypt appears to have excelled all the neighbouring countries in agriculture, and particularly in its abundant crops of corn. The fame of its fertility induced Abraham to remove thither with his numerous family (Gen. xii. 10).

The earliest accounts of bargain and sale reach no higher than the time of Abraham, and his transaction with Ephron. He is said to have weighed unto him '400 shekels of silver, current money with the merchant' (Gen. xxiii. 16). The word merchant implies that the standard of money was fixed by usage among merchants, who comprised a numerous and respectable class of the community. Manufactures were by this time so far advanced, that not only those more immediately connected with agriculture, such as flour ground from corn, wine, oil, butter, and also the most necessary articles of clothing and furniture, but even those of luxury and magnificence, were much in use, as appears by the ear-rings, bracelets of gold and of silver, and other precious things presented by Abraham's steward to Rebecca (Gen. xxiv. 22, 53).

In the book of Job, whose author, in the opinion of the most learned commentators, resided in Arabia, and was contemporary with the sons of Abraham, much light is thrown upon the commerce, manufactures, and science of the age and country in which he lived. There is mention of gold, iron, brass, lead, crystal, jewels, the art of weaving, merchants, gold brought from Ophir, which implies commerce with a remote country, and topazes from Ethiopia; shipbuilding, so far improved that some ships were distinguished for the velocity of their motion; writing in a book, and engraving letters or writing on plates of lead and on stone with iron pens, and also seal-engraving; fishing with hooks, and nets, and spears; musical instruments, the harp and organ; astronomy, and names given to particular stars. These

notices tend to prove that, although the patriarchal system of making pasturage the chief object of attention was still maintained by many of the greatest inhabitants where the author of the book of Job resided, the sciences were actively cultivated, the useful and ornamental arts in an advanced state, and commerce prosecuted with diligence and success; and this at a period when, if the chronology of Job is correctly settled, the arts and sciences were scarcely so far advanced in Egypt, from whence, and from the other countries bordering upon the eastern part of the Mediterranean Sea, they afterwards gradually found their way into Greece.

The inhabitants of Arabia appear to have availed themselves, at a very early period, of their advantageous situation between the two fertile and opulent countries of India and Egypt, and to have obtained the exclusive monopoly of a very profitable carrying trade between those countries. They were a class of people who gave their whole attention to merchandise as a regular and established profession, and travelled with caravans between Arabia and Egypt, carrying upon the backs of camels the spices of India, the balm of Canaan, and the myrrh produced in their own country, or of a superior quality from the opposite coast of Abyssinia—all of which were in great demand among the Egyptians for embalming the dead, in their religious ceremonies, and for ministering to the pleasures of that superstitious and luxurious people. The merchants of one of these caravans bought Joseph from his brothers for twenty pieces of silver, that is about £2 : 11 : 8 sterling, and carried him into Egypt. The southern Arabs were eminent traders, and enjoyed a large proportion, and in general the entire monopoly, of the trade between India and the western world, from the earliest ages, until the system of that important commerce was totally overturned when the inhabitants of Europe discovered a direct route to India by the Cape of Good Hope.

At the period when Joseph's brethren visited Egypt, inns were established for the accommodation of travellers in that country and in the northern parts of Arabia. The more civilized southern parts of the peninsula would no doubt be furnished with caravanserais still more commodious.

During the residence of the Israelites in Egypt manufactures of almost every description were carried to great perfection. Flax, fine linen, garments of cotton, rings and jewels of gold and silver, works in all kinds of materials, chariots for pleasure, and chariots for war, are all mentioned by Moses. They had extensive manufactories of bricks. Literature was in a flourishing state; and, in order to give an enlarged idea of the accomplishments of Moses, it is said he was 'learned in all the wisdom of the Egyptians' (Acts vii. 22).

The expulsion of the Canaanites from a great part of their territories by the Israelites under Joshua, led to the gradual establishment of colonies in Cyprus, Rhodes, and several islands in the Ægean Sea; they penetrated into the Euxine or Black Sea, and, spreading along the shores of Sicily, Sardinia, Gaul, Spain, and Africa, established numerous trading places, which gradually rose into more or less importance. At this period mention is first made of Tyre as a strong or fortified city, whilst Sidon is dignified with the title of Great.

During the reign of David, king of Israel, that powerful monarch disposed of a part of the wealth obtained by his conquests in purchasing cedar-timber from Hiram, king of Tyre, with whom he kept up a friendly correspondence while he lived. He also hired Tyrian masons and carpenters for carrying on his works. Solomon, the son of David, cultivated the arts of peace, and indulged his taste for magnificence and luxury to a great extent. He employed the wealth collected by his father in works of architecture, and in strengthening and improving his kingdom. He built the famous Temple and fortifications of Jerusalem, and many cities, among which was the celebrated Tadmor or Palmyra. From the king of Tyre he obtained cedar and fir, or cypress-timbers, and large stones cut and prepared for building, which the Tyrians conveyed by water to the most convenient landing-place in Solomon's dominions. Hiram also sent a vast number of workmen to assist and instruct Solomon's people, none of whom had skill 'to hew timber like the Sidonians.' Solomon, in exchange, furnished the Tyrians with corn, wine, and oil, and received a balance in gold. Solomon and Hiram appear to have subsequently entered into a trading speculation or adventure upon a large scale. Tyrian shipwrights were accordingly sent to build vessels for both kings at Eziongeber, Solomon's port on the Red Sea, whither he himself went to animate them with his presence (2 Chron. viii. 17). These ships, conducted by Tyrian navigators, sailed in company to some rich countries called Ophir and Tarshish, regarding the position of which the learned have multiplied conjectures to little purpose. The voyage occupied three years; yet the returns in this new found trade were very great and profitable. This fleet took in apes, ebony, and parrots on the coasts of Ethiopia, gold at Ophir, or the place of traffic whither the people of Ophir resorted; it traded on both sides of the Red Sea, on the coasts of Arabia and Ethiopia, in all parts of Ethiopia beyond the straits when it had entered the ocean; thence it passed up the Persian Gulf, and might visit the places of trade upon both its shores, and run up the Tigris or the Euphrates as far as these rivers were navigable.

After the reign of Solomon the commerce of the Israelites seems to have very materially declined. An attempt was made by Jehoshaphat, king of Judah, and Ahaziah, king of Israel, to effect its revival; but the ships which they built at Eziongeber having been wrecked in the harbour, the undertaking was abandoned. It does not appear that they had any assistance from the Phœnicians in fitting out this fleet. Great efforts were made by the Egyptians to extend the commerce of their country, among which, not the least considerable was the unsuccessful attempt to construct a canal from the Nile to the Arabian Gulf.

The rising prosperity of Tyre soon eclipsed the ancient and long-flourishing commercial city of Sidon. About 600 years before Christ her commercial splendour appears to have been at its height, and is graphically described by Ezekiel (xxvii.) The imports into Tyre were fine linen from Egypt; blue and purple from the isles of Elisha; silver, iron, tin, and lead from Tarshish—the south part of Spain; slaves and brazen vessels from Javan or Greece, Tubal, and Meshech; horses, slaves bred to horsemanship, and mules from Togarmah; emeralds, purple, embroidery,

fine linen, corals, and agates from Syria; corn, balm, honey, oil, and gums from the Israelites; wine and wool from Damascus; polished iron-ware, precious oils, and cinnamon from Dan, Javan, and Mezo; magnificent carpets from Dedan; sheep and goats from the pastoral tribes of Arabia; costly spices, some the produce of India, precious stones, and gold from the merchants of Sheba or Sabæa, and Ramah or Regma, countries in the south part of Arabia; blue cloths, embroidered works, rich apparel in corded cedar-chests, supposed to be original India packages, and other goods from Sheba, Ashur, and Chilmad, and from Haran, Canneh, and Eden, trading ports on the south coast of Arabia. The vast wealth that thus flowed into Tyre from all quarters brought with it its too general concomitants—extravagance, dissipation, and relaxation of morals.

The subjection of Tyre, 'the renowned city which was strong in the sea, whose merchants were princes, whose traffickers were the honourable of the earth,' by Cyrus, and its subsequent overthrow by Alexander, after a determined and most formidable resistance, terminated alike the grandeur of that city, and the history of ancient commerce, as far as they are alluded to in Scripture (Anderson's *History of Commerce*; Vincent's *Commerce and Navigation of the Indian Ocean*; Heeren's *Researches*; Barnes's *Ancient Commerce of Western Asia*, in *American Biblical Repository*, 1841).—G. M. B.

CONCORDANCE, the name assigned to a book which gives the words contained in the Holy Scriptures in alphabetical order, with a reference to the place where each may be found. This is the essential idea of a concordance. Other ancillary information may be presented in concordances, such as a separate order of proper names, the meanings which, in the compiler's opinion, important words are found to bear, and the etymological signification of appellatives, etc. There are two great distinctive principles on which concordances may be constructed—either to present every word found in the Bible, or only the leading and most important words. The adoption of the first necessarily swells a book to inconvenient dimensions, and renders its use in the ordinary purposes of study somewhat onerous and inconvenient. But great judgment is requisite in compiling a concordance on the other principle, lest words of less importance should be preferred to those of greater; and as importance is altogether a relative matter, the selection made by the author may omit words which some, if not many, readers would desiderate. The Germans also make a distinction between concordances of things and concordances of words; the first comprising in detailed and alphabetical form the subject-matter of the sacred volume; the second corresponding with the ordinary English notion of a concordance. Concordances, too, vary with the languages in which, or for which, they are constructed, as for the original Hebrew and Greek, or for the several versions of the Scriptures, such as the Vulgate, the German, the English, etc.

It is not here intended to present a full or a chronological history of all the concordances which have been produced, but to put down those particulars which seem to combine interest and utility.

Writings of this kind imply that the sacred Scriptures are regarded with reverence, held to be authoritative in religion, and are made the subject of appeal alike in learning, teaching, and disputation. It is to the wide-spread conviction of the plenary and even verbal inspiration of the Bible, that the world is indebted for the care, diligence, learning, and self-denial which have been employed in constructing and perfecting the concordance.

The utility of concordances in the way of exegesis, is based on the position that the several parts of divine revelation are consistent with each other and form harmonious elements in one grand system of spiritual truth, so that by comparing together parallel passages, what is clear may be exemplified and confirmed, and what is dark may be expounded. Books of this sort, too, are of service to the Christian teacher, as affording facilities by means of those fragmentary recollections of words and things which the mere hearing of the Scriptures read leaves in the mind, for readily discovering the particular book and verse where any desired passage is to be found; and also as enabling him, with comparatively little trouble, to take a survey of what the Bible contains in regard to any particular subject which he may have to handle.

Antony of Padua (born A.D. 1195, died 1231) is said to have produced the first work of the kind, entitled *Concordantiæ Morales*, which was formed from the Vulgate translation. Hugo de Santo Caro, better known as Cardinal Hugo, a Dominican monk, who died about 1262, followed Antony in 1244, by compiling for the Vulgate a concordance of the Scriptures. Having given himself sedulously to the study of holy writ, with a view of writing a commentary thereon, he was, in order to facilitate his labour, led to project and undertake to form a concordance, calling to his aid his brother monks to the number of no fewer than five hundred. Their labours have been a rich storehouse for subsequent compilers. The concordance thus made was improved by Conrad of Halberstadt, who flourished about 1290, and by John of Segovia in the ensuing century.

These works seem to have led to the first Hebrew concordance, which was produced by Rabbi Mordecai Nathan, which he began in 1438, and finished in 1448, after ten years' hard labour by himself and some assistants. It was first printed at Venice in 1523, fol., by Dan. Bomberg; then in Basle in 1581, and afterwards at Rome in 1621. It is entirely Hebrew, and entitled *The Light of the Way*. In 1556 it was translated into Latin by Reuchlin, but both the Hebrew and the Latin editions are full of errors.

These errors were for the most part corrected and other deficiencies supplied by Calasio, a Franciscan friar, who published *Concordantiæ Sacr. Bibl. Hebr. et Latin.* Romæ, 1621, 4 vols. fol. [CALASIO], and still better in *Concordantiæ Bibl. Ebraicæ, nova et artificiosa methodo disposita*, Basil, 1632, fol. This is the production of John Buxtorf, the father, but was published by his son. It takes for its basis the work of Rabbi Nathan, though it is much better arranged, more correctly printed, the roots more distinctly ascertained, and the meanings more accurately given; but as the references are made by Hebrew letters, and relate to the Rabbinical divisions of the O. T., it is of

little service, unless the student is familiar with the Masoretic system. This work was abridged under the title of *Fons Leonis*, etc., Berolini, 1677, 8vo. The concordance of Calasio was republished in London under the direction of W. Romaine, 1747-49, 4 vols. fol., and under the patronage of all the monarchs in Europe, not excepting the pope himself. Before this republication, however, there appeared, in 1679 (Kopenh. fol.), Ch. Nolde *Concor. particularum Ebr. Chaldaicarum*. Reference may also be made to Simonis *Onomasticon V. T.*, Halle, 1741, fol. But the best and, at least to the English reader, most important work on this subject is, *The Hebrew Concordance, adapted to the English Bible, disposed after the manner of Buxtorf*, by John Taylor, D.D., London, 1754, 2 vols. fol. Dr. Taylor was an eminent Presbyterian divine at Norwich, the author of several publications which shew great industry and learning. His concordance is by far the most complete work of the kind. It was the fruit of many years' labour, and has left little room for improvement. The patronage of all the English and Irish bishops recommended the work to the world.

An edition of Buxtorf's *Hebrew Concordance*, which has received so much care and attention on the part of the author, as nearly to deserve the name and bear the character of a new work—*Hebräischen und Chaldäischen Concordanz zu den Heiligen Schriften Alten Testaments*, von Dr. Julius Fürst (Leipzig, Tauchnitz; London, Nutt), offers one of the most useful aids to the study of the Bible that have ever appeared. The necessity of such a work as the present arises not only from the errors found in Buxtorf and the comparative rarity of the work, but also from the great advances which, since the time when Buxtorf's work appeared (A.D. 1632), have been made both in the knowledge of the Shemitic languages, in the general science of theology, and the particular department of biblical exegesis. We may specify one or two of the advantages offered by this work. In addition to those of a more mechanical kind, such as a good type and clear arrangement, there are, 1. A corrected text, founded on Hahn's *Vanderhoogt*; 2. The Rabbinical significations; 3. Explanations in Latin, giving the etymology of the Rabbinical; illustrations from the three Greek Versions, the Aramaic Paraphrase, the Vulgate, etc.; the Greek words employed by the Seventy as renderings of the Hebrew; together with philological and archaeological notices, so as to make the Concordance contain an ample Hebrew lexicon. This work is far preferable to Taylor's *Hebrew Concordance*, which is now not easily met with. Every theological library which has not a copy of Fürst must be considered as wanting an essential requisite. The work, when known, will, we are assured, be welcomed by English scholars.

The best Greek concordance to the Septuagint is that which bears the title—A. Trommii *Con. Græc. Vers. vulgo dic. LXX. Interpret.* Amst. 1718, 2 vols. fol. The author of this learned and most laborious work was minister of Groningen, and published the concordance in the eighty-fourth year of his age. He was born in 1623, and died in 1719. It follows the order of the Greek words of which it first gives a Latin translation, and then the Hebrew word or words for which the Greek term is used in the Seventy. Then the different places in which the words occur follow in the

order of the several books and chapters. When the word occurs in any of the ancient Greek translators, Aquila, Symmachus, or Theodotion, the places where it is found are referred to at the end of the quotations from the Sept. The words of the Apocrypha are placed at the end of each enumeration. There are two indices at the end of the work; one Hebrew and Chaldaic, by examining which the Greek term used in the Septuagint for any Hebrew or Chaldee word is seen at once, with the Latin version and the place where it is found in the concordance, so that Tromm serves in a measure for a Hebrew concordance; the other index contains a lexicon to the Hexapla of Origen, and comprehends the Greek words in the fragments of the old Greek translators published by Montfaucon.

Proposals have been issued, 1854, for a new Concordance to the LXX., by the Rev. R. Wells Whitford, M.A., the basis of which is to be the text of the Complutensian Polyglott, which the same gentleman is about to edit separately, with critical notes. The labours of all former scholars in this department will be consolidated, and reference made to all the texts of the Septuagint of any critical value.

The first Greek concordance to the N. T., now exceedingly rare, is entitled *Xysti Betuleii Concordantiæ Græcæ Novi Testamenti*, Basil, 1546, fol. The author, whose real name was Birk, was a minister of the Lutheran church; he was born in 1500, and died at Augsburg in 1554. A concordance to the Greek N. T., projected and partly executed by Robert Stephens, and completed and published by his son Henry (Genev. 1594, fol.), is too inaccurate to merit more than a passing notice. The ensuing is the work which the divine should possess—*Erasmii Schmidii Novi Testamenti Ἱ. C. Græci; hoc est, originalis lingue τραπεζίων*, etc. Vetemb. 1638, fol. The author, a Lutheran divine, was a professor of the Greek language in the university of Wittemberg, where he died in 1637. In 1717 a revised edition was published at Gotha, of which a handsome reprint, in 2 vols. 8vo, was issued from the Glasgow University press in 1819. An abridged edition of this has been printed by the Messrs. Bagster of London, being one of their 'Polymicrian Series.'

A new and very superior edition of Schmid's *ταπεινών* has recently been put forth by C. H. Bruder, who has improved the work so as to bring it into accordance with the advanced and enlightened views on critical and hermeneutical subjects which characterize what may be termed the scientific theology of Germany in the present day. Among the advantages of this edition, let it suffice to specify, 1. Fulness, accuracy, and correspondence with Griesbach's edition; 2. Regard has been paid to the editions of Lachmann and Scholz; all the readings of the Elzevirs, Mill, Bengel, Knapp, Tittmann, Scholz, and also of Erasmus, Robert Stephens' third edition, and of Schmid himself, are either given or pointed out. The student is presented also with a selection of readings from the most ancient MSS., from the interpreters of Scripture who lived in the earlier ages of the church, and the works of the ecclesiastical fathers; no various reading possessing critical value is omitted. This, indeed, is a work of so much value, that no good theological library can be without it; and when its worth and utility come to be

known in this country, it will soon supersede the ordinary editions and reprints of Schmid's *Concordance*. It is put forth under the auspices of Tauchnitz of Leipsic, and has reached a second edition.

One of the most valuable aids for the general study of the N. T. which modern times have produced is '*The Englishman's Greek Concordance of the New Testament*'; being an attempt at a Verbal Connection between the Greek and the English Texts. London, 1839.' The work, which is carefully compiled and beautifully got up, takes Schmid as its basis. The plan is to present in alphabetical succession every word which occurs in the Greek N. T. with the series of passages (quoted from the English translation) in which each such word occurs; the word or words exhibiting the Greek word under immediate consideration being printed in italic letters.

The '*Englishman's Hebrew and Chaldee Concordance*,' by the same parties, discharges the same duties in relation to the O. T. Both works have engaged the *con amore* exertions of the editors, and reflect great credit on their zeal and learning.

In consequence of the revived study of the Bible and of the Christian fathers, as well as the greater interest felt in religion and religious inquiries which the last quarter of a century has witnessed in France, and especially in Paris, a new Concordance to the Latin Vulgate has recently been produced: '*Concordantiæ Biblior. Sacr., Vulgatæ Editionis, Recensite, multoque prioribus auctores, emendante, accuratus denuo colligente et cum omnibus Bib. textibus conferente T. P. Dutripon*.' London, Nutt, Fleet Street. This work is founded on that of Cardinal Hugo, which, though executed by fifty different compilers (chiefly Benedictine monks), is far from being either accurate or complete. The editor appears to have discharged his duty with great care and labour; and the printer has well performed his part. The points in which this edition contains improvements, in comparison with the last of those which preceded it, are numerous and important. It may be sufficient to state that it contains 22,000 passages not to be found in previous Concordances to the Vulgate. Some of the additions, indeed, seem rather suited to the peculiar condition of biblical study in the Catholic communion than to the requirements of the general theologian; nevertheless, the work is a valuable contribution to biblical literature, and must in this country be regarded with peculiar pleasure, as both a result and an instrument of an increase of Scriptural knowledge on the part of our Catholic brethren. The Archbishop of Paris has accepted the dedication of the Concordance to himself; and it has been approved by most of the archbishops and bishops of France and Belgium.

The work of Andrew Symson, *Lexicon Anglo-Græco-Latin. N. T.*, London, 1658, fol., is rather a dictionary than a concordance, and formed on so bad a plan as to be of little service. A much better book is *A Concordance to the Greek Testament, with the English Version to each Word, the principal Hebrew roots corresponding to the Greek words of the Septuagint, with short Critical Notes, and an Index*, by John Williams, LL.D., Lond. 1767, fol.

The first concordance to the English version of the N. T. was published without date, but certainly before 1540, by 'Mr. Thomas Gybson,'

being chiefly, as appears probable from the prefatory epistle to the reader, the work of the famous printer John Day. It is entitled *The Concordance of the N. T., most necessary to be had in the hands of all such as desire the communication of any place contained in the N. T.* The first English concordance to the entire Bible was by John Marbeck—*A Concordance, that is to saie, a Worke wherein by the order of the letters of the A, B, C, ye maie readly find any worde conteigned in the whole Bible, so often as it is there expressed or mentioned*, Lond. 1550, fol. Till the year 1555, when Robert Stephens published his concordance, it was not customary to mark the verses in books of this sort. At first it was thought sufficient to specify the chapter with the letters *a, b, c, d*, as marks to point out the beginning, middle, and end of each chapter. But in 1545 Robert Stephens divided the Bible into verses, thus preparing the way for a more exact reference in concordances, etc.; but Marbeck does not appear to have been under the influence of this improvement, as his work refers merely to the chapters. In Townley's *Bib. Lit.* vol. iii. p. 118, may be found some interesting particulars respecting Marbeck's condition in life, labours, and ill-treatment.

The following work, which appeared in the same year as the last, is a translation from the German—*A Briefe and a Compendious Table, in manner of a Concordance, opening the way to the principall Histories of the whole Bible and the most comon articles groundend and comprehended in the Neue Testament and Olde, in manner as amply as doeth the great Concordance of the Bible. Gathered and set forth by Henry Bullinger, Leo Jude, Conrade Pellicane, and by the other ministers of the Church of Liguria. Translated from the Hygh Almayne into English by Walter Lynne. To which is added, a Translation of the Third Booke of Machabees*, 8vo 1550. Lynne, the translator, was an English printer, who flourished about the middle of the 16th century, a scholar, author, and translator of several books.

Several English concordances of greater or less value were superseded by the correct and valuable work of Alexander Cruden, entitled *A Complete Concordance to the Holy Scriptures of the Old and New Testament, etc.*; to which is added, *a Concordance to the books called Apocrypha*, 1737, 4to. Three editions were published by the author during his life, and many have appeared since his death. The London edition of 1810 is the best standard edition. The work is complete, the definitions accurate, and the references correct. Several useful editions of Cruden have been put forth by the Messrs. Bagster, which are worth far more than their cost. The same publishers have issued *An Alphabetical Index of the Holy Scriptures, comprising the Names, Characters, and Subjects, both of the Old and New Testament*, in two different sizes, which the biblical student will find very serviceable. In a 'Memoir of Mr. Alexander Cruden,' prefixed to an edition published in 1823, and since, are given some interesting but painful particulars respecting this worthy and industrious man, to whom the religious world is so deeply indebted.

At a time when German theological literature is beginning to receive some of its merited attention, it may not be unacceptable to mention a valuable concordance for the German Bible—*Biblishe*

Hand-Concordanz für Religionslehrer und alle Freunde der Heiligen Schrift, Leipzig, 1841. The work is more comprehensive than similar writings in the English language. It is divided into three parts:—1. A full and complete register of all the words found in the Bible; 2. An index of the most important things, subjects, and ideas found in the Bible, with references to the places where they lie in the sacred volume; as, for instance, under the head—'Lord's Supper—a meal commemorative of the death of Jesus—it brings us into intimate fellowship with Christ;—the worthy participation of the same; spiritual enjoyment of the flesh and blood of Christ,' etc. The third part gives the leading doctrines of Christianity systematically arranged, drawn up according to Luther's *Catechism*, and accompanied by Scriptural proofs. (Orme's *Bibliotheca Biblica*; Watt's *Bibliotheca Britannica*; Winer's *Handbuch*; Röhr's *Kritische Prediger-Bibliothek*, 1841, and the articles in this work under the name of the authors.)—J. R. B.

CONCUBINE, in a scriptural sense, means a wife of second rank (פְּלוּנָה, or פְּלוּנָה).

The position thus sustained did not interfere with that of the wife, nor did it entail disgrace on her who sustained it. The concubine had her own place, her own rights, and her own duties. As a general rule she was a slave in the house, and assumed her position in obedience to the will of her master or mistress, without any ceremonial. Her sons ranked below those of the wife, and could inherit from their father only by his will (Gen. xxi. 10; xxiv. 36; xxv. 6). The unfaithfulness of a concubine was regarded as whoredom (Judg. xix. 2; 2 Sam. iii. 7, 8), but it was not punished as was that of a wife (Lev. xix. 20). Such a case, however, as that mentioned (Judg. xix.), where not only is the possessor of the concubine called her 'husband' (ver. 3), but her father is called his father-in-law and he his son-in-law (4, 5), shews how nearly the concubine approached to the wife. Hired women, such as 'uxores mercenariæ conductæ ad tempus ex pacto,' whom Amnianus Marcellinus attributes to the Saracens (xiv. 4), were unknown among the Hebrews. A concubine, though a slave, could not be sold, but, if her master wished to part with her, must be sent away free (Deut. xxi. 14). Such concubines had Nahor (Gen. xxii. 24), Abraham (xxv. 6), Jacob (xxxv. 22), Eliphaz (xxxvi. 12), Gideon (Judg. viii. 31), Saul (2 Sam. iii. 7), David (2 Sam. v. 13; xv. 16; xvi. 21), Solomon (1 Kings xi. 3), Caleb (1 Chron. ii. 46), Manasseh (*ib.* vii. 14), Rehoboam (2 Chron. xi. 21), Abiah (2 Chron. xiii. 21), and Belshazzar (Dan. v. 2).

To judge from the conjugal histories of Abraham and Jacob (Gen. xvi. and xxx.), the immediate cause of concubinage was the barrenness of the lawful wife, who in that case introduced her maid-servant, of her own accord, to her husband, for the sake of having children. Accordingly we do not read that Isaac, son of Abraham, had any concubine, Rebecca, his wife, not being barren. In process of time, however, concubinage appears to have degenerated into a regular custom among the Jews, and the institutions of Moses were directed to prevent excess and abuse in that respect, by wholesome laws and regulations (Exod. xxi. 7-9; Deut. xxi. 10-14). To guard their adult

male offspring from debauchery before marriage, parents, it appears, used to give them one of their female slaves as a concubine. She was then considered as one of the children of the house, and she retained her rights as a concubine even after the marriage of the son (Exod. xxi. 9, 10). When a son had intercourse with the concubine of his father, a sort of family punishment, we are informed, was inflicted on him (Gen. xxxv. 22; 1 Chron. v. 1).

In the Talmud (tit. *Ketuboth*), the Rabbins differ as to what constitutes concubinage; some regarding as its distinguishing feature the absence of the betrothing ceremonies (sponsalia), and of the כתובה (libellus dotis), or portion of property allotted to a woman by special engagement, and to which she was entitled on the marriage day, after the decease of the husband, or in case of repudiation; others, again, the absence of the latter alone. [Otho, *Lex. Rabbin. Phil.* p. 151; Selden, *Fus Nat. et Gent.* v. 7, 8; *De Successionibus* iii.; *Uxor. Hebr.* etc.; Michaelis, *Laws of Moses*, vol. i. p. 455-466].

CONDUIT. By this word in the A. V. is rendered the Hebrew תעלה, which, from עלה to sink, to be deep (not, as Gesenius says, from עלה, to ascend), means primarily a trench, or place for water to flow in (1 Kings xviii. 32, 35), and secondarily, a constructed aqueduct, channel, or canal. In this latter sense it is used of a conduit on the west side of Jerusalem, which passed through the fuller's field, and conveyed water from the pool of Gihon, or upper pool, into the city (2 Kings xviii. 17; Is. vii. 3; xxxvi. 2); this seems at first to have been an open channel, but it was inclosed with masonry by Hezekiah (2 Kings xx. 20; 2 Chron. xxxii. 30; Sirac. xlvi. 17); it is believed to have conducted water from the existing Birket el-Mamilla to the existing Birket el-Hummâm, or Pool of Hezekiah, within the city (Robinson, i. 483, ff.; Bertheau, *Die Büch. der Könige*, p. 409). This is the only aqueduct expressly mentioned in Scripture; it is probable, however, that others existed, especially one leading from the pools of Solomon to the temple, and the overflow of which was conveyed through the pool of Siloam, by a subterranean passage in the rocky elevation Ophel, to the 'King's pool' of Nehemiah (ii. 14), called also by Josephus 'Solomon's pool' (*Bell. Jud.* v. 4. 2) now the 'Fountain of the Virgin.' Both still exist; and both were probably originally the work of Solomon (Robinson, i. 390, 498, ff.; 514, ff.; Maundrell, p. 456, ff.; Bohn's edition; Richardson, *Travels*, ii. 379; Bertheau, *l. c. Anh.* sec. 9; Schultz, *Ferusalem*, p. 40).—W. L. A.

CONEY. [SHAPHAN.]

CONGREGATION, the supreme political body of the Hebrew nation, duly met in congress, is designated in the original by two words of nearly equal frequency in the sacred writings עדה, from עד to appoint, also to bring together; and קהל, from קהל, i. q. καλέω, to convoke (Sept. ἐκκλησία, συναγωγή; Vulgate, *Congregatio*, *Cætus*, *Ecclesia*). The phrase, 'tabernacle of the Congregation,' however, which so frequently occurs as indicating the place of meeting, is described by neither of these

words, but by מועד [אהל]; the versions consistently mark the difference also, the LXX. invariably translating this phrase by ἡ σκηνὴ τοῦ μαρτυρίου and the Vulg. by *tabernaculum testimonii*. [Although when the word מועד occurs without the אהל (as in Num. xvi. 2) it has somewhat of the ambiguity of the Latin *Curia*, which equally well signifies the *Senate* and the *Senate House*. In this passage מועד is translated by Βουλὴ and *Tempus Concilii*; in many other passages the word is variously rendered; but generally bears reference to a set time or place, e. g. in Lam. i. 15, A. V. renders it *assembly*; but in ii. 6, *place of assembly* and *solemn feast*; the LXX. and Vulgate are equally capricious,—καρπὸς and *tempus* standing in Lam. i. 15 and ἐορτή, *tabernaculum* and *festivitas* in ii. 6].* There is good reason to believe that, not unlike the Servian constitution of the Roman people (Arnold's *History of Rome*, i. 70), the Hebrew nation from the first received a twofold organisation, *military* as well as *political*. (Compare Exod. xii. 51; Num. i. 3 (and *throughout*); Num. xxvi. 3; and 1 Chron. vii. 4 and 40. See also Lowman's *Dissertation on the Civil Government of the Hebrews*, 159, 186, etc.) The classification of the people is very clearly indicated in Josh. vii. 14-18. (1) The *Tribe* (מטה or שבט) was divided into clans, *gentes*, A. V. 'families,' (משפחות). (2) Each *Mishpachah* comprised a number of *familie*, A. V. 'Houses,' בתים. (3) Each בית or 'house' was made up of qualified 'men,' fit for military as well as political service, being twenty years old and upward (Num. i. 3). The word which describes the individual member of the body politic, נבר [plur. נברים], is very significant; for it means *vir a robore dictus*, (Gesenius, *Thes.* i. 262), 'a man of valour' from נבר, to be strong (Fürst. *Hebr. Wörterb.* i. 239; Meier *Hebr. Wurz.* w.-b. 251).

Now it was the organic unit of the twelve tribes, which constituted in the highest and truest sense the עדה or קהל, i. e., 'Congregation'—convened duly for a competent purpose. (Kurtz, *Hist. Old Covt.* [Clark] ii. 163). As with the Greeks there was an *ἀριπλία*, and with the Latins a *Deminitio Capitis*, so there were sundry faults which deprived a home-born Israelite (אזרח, LXX. Ἀυτοχθων, Vulg. *indigena*; or אה, ἀδελφος, *civis*, in Deut. i. 16) of his privilege as a member of the national assembly (See Deut. xxiii. 1-8 [comp. with Neh. xiii. 1-3]; also Exod. xii. 17, 19; xxx. 33, 38; xxxi. 14; Lev. vii. 20, 21, 25, 27; xvii. 4, 9, 10, 14; xviii. 29; xix. 8; xx. 3, 6, 17, 18; xxii. 3; xxiii. 29; Num. ix. 13; xv. 31; xix. 20). On the other hand, the franchise or *civitas* was conferred (with certain exceptions, such as are mentioned in Deut. xxiii. 3) on foreigners גרים (A. V. *strangers*; LXX. *προσῆλυται*; Vulg. *peregrini*) after they had qualified themselves by circumcision,† (Exod. xii.

* This word מועד is the most frequent original equivalent of our noun 'congregation.' Apart from אהל (tabernacle), it has a highly generic sense, including all the holy assemblies of the Jews. In this Art. we confine our description to the political institution, indicated by the other terms. For the religious import of 'Congregation' see CONVOCATION.

† This is the Mosaic requirement. In later times

19; Lev. xix. 34; Deut. xxix. 11, comp. with Is. lvi. 6, 7). The words, which stand at the head of our article to express the national congregation, sometimes imply (1) a meeting of the whole mass of the people; sometimes (2) a congress of deputies (Jahn's *Hebrew Republic*, 243). (1.) At first when the entire nation dwelt in tents in their migration from Egypt to Canaan under the immediate command of the great legislator, the Congregation seems to have comprised every qualified Israelite, who had the right of a personal presence and vote in the congress. In Exod. xxxv. 1, this

ample assembly is designated בְּלִיעָדָה בְּנֵי יִשְׂרָאֵל, *i.e.*, the entire Congregation of the Sons of Israel [πᾶσα συναγωγὴ υἱῶν Ἰσραὴλ, *omnis turba filiorum Israel*].

Similarly in Num. xvii. 19, the phrase is כָּל־הָעֵדָה all the Congregation [πᾶσα ἡ συναγωγὴ, *omnis multitudo*], while in Lev. xvi. 17 we have כָּל־קְהָלָא

יִשְׂרָאֵל [πᾶσα συναγωγὴ Ἰσραὴλ, *universus cœtus Israel, the entire assembly of Israel*]. We should have no difficulty in supposing that every member of the 'Edah was present at such meetings as these, in the lifetime of Moses and before the nation was dispersed throughout its settlements in Canaan, were it not that we occasionally find, in later times, an equally ample designation used, when it is impossible to believe that the nation could have assembled at one place of meeting; *e.g.*, in Josh. xxii 12, where 'the whole congregation of the children of Israel' is mentioned; and again still later, as at the dedication of Solomon's temple in 1 Kings viii. 14; 2 Chron. i. 5. (2.) From this impossibility of personal attendance in the national congregation, we should expect to find a *representative* constitution provided. Accordingly, in Num. i. 16, we read of persons called בְּרֹאֵי הָעֵדָה, not, as in A. V., *renowned of the C.*; but, *wont to be called to the C.* (Michaelis, *Laws of Moses, trans.*, i. 230).

In xvi. 2, they are still more explicitly styled נְשִׂיָאֵי הָעֵדָה מוֹעֵד, *i.e.*, *chiefs of the C. who are called to the Convention* [σύντακτοι βουλευῆς, *qui tempore concilii vocabuntur*]. While in Exod. xxxviii. 25 occurs the phrase בְּקֹרְיֵי הָעֵדָה, *those deputed to the assembly*, which exactly describes delegated persons. From Josh. xxiii. 2 and xxiv. 1, it would appear that these deputies were—(1) 'The elders' (called בְּרֹאֵי הָעֵדָה, 'elders of the C.', in Lev. iv. 15), as if deputed thereto; and 'elders of Israel,' or 'of the people,' as if representing them and nominated by them (Deut. i. 13). (2) 'The heads,' רִאשִׁים, *i.e.*, 'The princes of the tribes' (Num. i. 4, 16); and the chiefs of the *Mishpachoth*, or 'families' (xxvi., *passim*). (3) 'The judges'; not of course the extraordinary rulers beginning with Othniel, but the שֹׁפְטִים referred to in Deut. xvi. 18, stationed in every great city, and summoned probably as *ex officio* members to the congregation. (4) 'The officers' (שָׂטְרִים, γραμματεῖς, *magistri*; whom Jahn calls *genealogists*, and Gesenius *magistrates*), whether central, as in Num. xi. 16, or provincial, as in Deut. xvi.

baptism and oblation were added—Selden, *De Synod. Ebr.* i. 3. 38; J. Alting, *Dissert.* vii. 248 sec. 24; Nicolai's note on Sigonius, *De Repub. Ebr.* i. 6. p. 95. The privileges of the full proselyte were equal to those of the native Israelite. [PROSELYTE.]

18. These four classes of men, in addition to official duties, seem to have had attached to their offices the prerogative of representing their countrymen at the national convention or 'Edah. We have not classed among these delegates either the 'Jethronian prefects' (Exod. xviii. 15; Deut. i. 13-15) or the seventy elders (Num. xi. 16), for they were undoubtedly included already in one or other of the normal classes (comp. Num. xi. 16 and Deut. i. 15). The members of the Congregation were convened by the ruler, or judge, or king, for the time being; *e.g.*, by Moses, *passim*; by Joshua (xxiii. 1, 2); probably by the high-priest (Judges xx. 27, 28); frequently by the kings—by David (1 Chron. xiii. 2); by Solomon (1 Kings viii. 5, etc.); by Jehoshaphat (2 Chron. xx. 4, 5); by Hezekiah (2 Chron. xxx. 2); probably by the Tirshathas afterwards (see Ezra x. 8, 9, 12); and by Judas Maccabæus (1 Maccab. iii. 42-46). The place of meeting was at the door of the Tabernacle of the Congregation [*supra*]; sometimes, however, some other place of celebrity was selected—as *Shechem* by Joshua (xxiv. 1); *Mizpeh* (Judg. xx. 1); *Bezek* by Saul; and *Gilgal* by Samuel (1 Sam. xi. 8, 15). As long as the Israelites were encamped in the wilderness, the 'Edahs were convened by the sound of silver trumpets. From Num. x. 2-4, it appears that the blowing of one trumpet only was the signal for a more select convention, composed only of the heads of the *Mishpachoth* and the princes of the tribes; whereas when both trumpets sounded the larger congregations met. But after the occupation of Canaan, when this mode of summons would be clearly ineffectual, the Congregations seem to have been convened by messengers (Judg. xx. 1, 12; 1 Sam. xi. 7, 8). As to the powers and authority of the Congregation—it was not a legislative body: 'Juris illius Majestatis quod in ferendis legibus est positum nihil quicquam penes illum (cœtum);' Conringius, *De Rep. Hebr.*, sec. 10, p. 246. The divine law of Moses had already foreclosed all Legislation, properly so-called; there was only room for bye-laws (Sherlock, *Dissert.* iii. 317). Nor was the taxing power within the competency of the Israelite 'Edah: 'the national revenues of the state were so settled in the tithes and other offerings, and there being no soldiery in pay, all holding their estates by military service, there was no room for new or occasional taxes; so that the Hebrew parliament could have no business either to make new laws, or to raise money' (Lowman, *Dissert.* p. 135). But there was, for all that, a large residue of authority, which sufficiently guaranteed the national autonomy. (1) The Divine Law itself was deliberately submitted to the 'Edah for acceptance or rejection (Exod. xix. 3-9, and xxiv. 3). (2) Their chiefs were submitted to this body on appointment for its approval; *e.g.*, Joshua (Num. xxvii. 19); Saul (1 Sam. x. 24); Saul again, on the renewal of the kingdom (1 Sam. xi. 15); David (2 Sam. v. 1-3); Solomon (1 Chron. xxix. 22); so the later kings—we take as an instance Joash (2 Chron. xxiii. 3). (3) The 'Edah seems to have had the power of staying the execution of a king's sentence (as in Jonathan's case, where 'the rescue' was not by force or violence, but by constitutional power [יִפְדֶּה] carries with it the idea of authority) (1 Sam. xiv. 44, 45). (4) As in our Parliament, if it had not actually the prerogative of making peace

and war, it possessed the power of checking, by disapprobation, the executive authority (See Jōshua ix. 15; comp. with verse 18). In later times, indeed, the prince seems to have laid questions of foreign alliance, etc., before the Congregation, either for deliberation or approbation, or both (See the case of Simon Maccabæus in 1 Maccab. xiv. 18-23). (5) But in the absence of a ruler, the 'Edah' apparently decided itself on war or peace (Judg. xx. 1, 11-14; also xxi. 13-20). (6) The Congregation was a high court of appeal in cases of life and death (Num. xxxv. 12, 24, 25). (7) Capital punishment was not inflicted without the cognisance of the 'Edah, and the execution of the sentence was one of its functions (Lev. xxiv. 10-14; Num. xv. 32-36). Lastly, the Congregation was consulted by Hezekiah and Josiah in their pious endeavours to restore religion (2 Chron. xxx. 2-4; xxxiv. 29). When David mentions his

'praises in the great congregation' (קהל רב, Ps. xxii. 26, *et alibi*), it is probably in reference to his 'composition of Psalms for the use of the Israelitish church, and the establishment in its full splendour of the choral Levitical service' (Thrupp, Ps. i. 141), in all which he would require and obtain the co-operation and sanction of the 'Edah. After the rejection of the Theocratic constitution by Jeroboam, the Congregation sometimes receives a more

limited designation, *e.g.*, בלִהקהל בירושלם, 'All the C. of Jerusalem' (2 Chron. xxx. 2), and בלִקהל יהודה, 'All the C. of Judah,' πᾶσα ἡ ἐκκλησία Ἰουδα (ver. 25). The phrase 'C. of Israel' is used indeed twice in this later period (see 2 Chron. xxiv. 6, and xxx. 25); but in the former passage the expression directly refers to the original institution of Moses, and in the latter to the company whom Hezekiah invited out of the neighbouring kingdom to attend his passover, which the LXX. well indicates by a unique translation, οἱ εὐπεθέστες ἐξ Ἰσραήλ.

In the time of our Lord the supreme assembly of the Jewish nation had dwindled into the comparatively modern institution of the Sanhedrim (N. T., συνέδριον for συναγωγή, is used in N. T. in a new and different sense. See SYNAGOGUE.) Few questions have been more contested in Hebrew archæology than that, which asserts the identity of the ancient 'Edah or Congregation with it. Rabbinical authorities contend for the identity—'Per Congregationem Israelis significatur Synhedrium,' says R. Solomon (on Lev. iv.) But the authority of the Talmudists in such cases is very low with the learned.—Lowman, *Dissert.* p. 151; Patrick on Exod. xviii. 25; Calmet, *Dissert. sur la Police des Hebreux* (prefixed to his Comment. on Numbers); Bertram, *de Rep. Hebr.*, by L'Empereur; and Lightfoot, *Ministerium Templi* (which two works are in Ugolini *Thesaur.* voll. iv. ix., and with the treatises of Cunæus and Sigonius contain much, but desultory, information on the subject of this art.) See also COUNCIL; SANHEDRIM.—P. H.

CONIAH. [JECONIAH.]

CONONIAH (כּוֹנִיָּהוּ; Χωνίας Vat.; Χωνενίας Alex.; Chonenias). A Levite who had the charge of 'the offerings, and the tithes, and the dedicated things,' by the command of King Hezekiah (2 Chron. xxxi. 12, 13). The name is spelt *Conan-*

iah in the A. V. 2 Chron. xxxv. 9, though the same as above in the original.—J. E. R.

CONVOCATION (מִקְרָא) [plur. construc

מִקְרָאִים] from קָרָא, to call; this noun, with its usual adjunct, is translated in all the passages of the Pentateuch by the adjectives ἀγία and κλητή, or ἁγιος [scil. ἡμέρα] in the Sept.; and in the Vulg. by *sanctus, celeberrimus* or *sancta, solemnis, and venerabilis* [scil. dies], is an appellative word used in nineteen out of the twenty-three times of its occurrence, in apposition with the names of certain Jewish holidays. Like the Greek παρῆγωγος (Smith's *Dictionary of G. and R. Antig.* p. 861), it signifies 'a meeting or solemn assembly of a whole people for the purpose of worshipping at a common sanctuary.' The religious import of the term is further indicated by the addition of the epithet קָדֹשׁ, *q. d.*, 'Holy Convocation.' The phrase is applied—[1.] To the FEASTS. 1. To the *Sabbaths*, all which were 'Holy Convocations' (Lev. xxiii. 2, 3). 2. To the *Passover, first day* (Exod. xii. 16; Lev. xxiii. 7; Num. xxviii. 18). To the *same, last day* (Exod. xii. 16; Lev. xxiii. 8; Num. xxviii. 25). 3. To the *Pentecost* (Lev. xxiii. 21). 4. To the *Feast of Trumpets* on the first of Tisri, the New Year's day of the Civil year (Lev. xxiii. 24; Num. xxix. 1). 5. To the *Feast of Weeks, or First-fruits* (Num. xxviii. 26). 6. To the *Feast of Tabernacles, first day* (Lev. xxiii. 35; Num. xxix. 12); To the *same, last day* (Lev. xxiii. 36). 7. As introductory to the enumeration of these feasts (Lev. xxiii. 4); as closing it (ver. 37). [2.] To the one great FAST, the *Day of Atonement* (Lev. xxiii. 27; Num. xxix. 7). To the deep solemnities of 'the Holy Convocation,' whether of joy, or of sorrow ['afflicting the soul,' see last two reff.] one great feature was common, marked by the command, 'ye shall do no servile work therein' (See all the reff.); or more fully in Exod. xii. 16, 'no manner of work shall be done in them, save that which every man must eat, that only may be done of you.' [Such as are curious about the Rabbinical opinions of what might be done and what not on these occasions, may find them in Buxtorf's *De Synagoga Judaica*, especially c. xix.; the joyous celebrations are described in c. xxi.; and the expiatory in c. xxv. xxvi. (Ugolini *Thes.* iv. 988-1052)]. With this may be compared Strabo's statement, book x.—Κωνὸν τοῦτο καὶ τῶν Ἑλλήνων καὶ Βαρβάρων ἐστὶ, τὸ τὰς ἱεροποιίας μετ' ἀνάθεμας ἑορταστικῆς ποιεῖσθαι.

In the four passages not enumerated above, מִקְרָא is unaccompanied by קָדֹשׁ, and loses its specific meaning. In Num. x. 2 it is used with עָרָה in *construct* state, *q. d.*, 'summoning or convoking an 'Edah' [CONGREGATION].' In Neh. viii. 8, it signifies 'the reading,' or public recitation of the book of the law by order of Ezra and Nehemiah and certain Levites. In Is. i. 13, it is found with the cognate verb [Kal. *Inf.*, used nominally, קָרָא מִקְרָא, *q. d.*, 'the calling of assemblies']. In Is. iv. 5, it either bears the general meaning of a religious assembly, or (according to Gesenius, *Thes.* 1233), the porch of the temple, where such assembly was held.

It is the word מוֹעֵד [A.V. *congregation, feast* (of the Lord)], which is always found in connection with our phrase 'Holy Convocation,' in Lev.

xxiii. and Num. xxviii. xxix.—and not ערה or קהל, which seems to shew, that although in A.V. the three words are confounded in the common rendering *congregation*, yet these last two bear the *political* sense, and leave the *religious* one to מועד, and to that which stands at the head of this Art. [CONGREGATION.]—P. H.

COPTIC VERSION. [EGYPTIAN VERSIONS.]

CORAL. [PENINIM; RAMOTH.]

CORBAN (קֶרְבָּן; N. T. Κορβάν), a Hebrew word employed in the Hellenistic Greek, just as the corresponding Greek word δῶρον was employed in the Rabbinical Hebrew (Buxtorf, *Lex. Rab.* col. 579) to designate an oblation of any kind to God. It occurs only once in the N. T. (Mark vii. 11), where it is explained (as also by Josephus, *Antiq.* l. 4, c. 4, sec. 4, *Contra Ap.* l. 1, sec. 22) by the word δῶρον. There is some difficulty in the construction and exact meaning of this passage and the corresponding one, Matt. xv. 5. The grammatical difficulty arises from the sentence being apparently incomplete. This difficulty our translators, following Beza, solve, by supplying the words 'he shall be free' (*insons erit*). Most critics, however, regard the following verse (Matt. xv. 6, Mark vii. 12) as the apodosis of the sentence, the *καὶ* being redundant 'more Hebraeo,' according to Grotius, or rather serving to indicate the conclusion (De Wette, *Kurze Erklärung des Ev. Matt.* p. 151; see also Winer, *Gram. der N. T. Sprachidioms*, sec. 66, p. 537). The more important point, however, is to ascertain the precise meaning of the expression *κορβάν* (ὅ ἐστι δῶρον) ὃ ἐὰν ἐξ ἐμοῦ ὠφελῆσθῃς. Many interpreters, at the head of whom stands Beza, supply *ἐστὶ* after the word *κορβάν*, and suppose that a gift of the property of the son had actually been made to the service of God (see Olshausen, *Biblicher Commentar.* on Matt. xv. 5). The sense is then, 'Whatever of mine might benefit thee is corban, is already dedicated to God, and I have therefore no power over it.' Others, more correctly, as we think, supply *ἔστω* rather than *ἐστὶ*, and translate, 'Be it corban (that is, devoted) whatever of mine shall profit thee' (Campbell's translation, see his note on the passage). Lightfoot (*Hor. Hebr.* on Matt. xv. 5) notices a formula of frequent occurrence in the Talmud (in the treatises Nedarim and Nazir) which seems to be exactly that quoted by our Lord, קֶרְבָּן שְׂאֵנִי הִנְנֶה לָךְ, '[Be it] corban, [as to] which I may be profitable to thee.' He, as well as Grotius, shews that this and similar formulæ were not used to signify that the thing was actually devoted, but was simply intended to prohibit the use of it from the party to whom it was thus made corban, as though it were said, 'If I give you anything or do anything for you, may it be as though I gave you that which is devoted to God, and may I be accounted perjured and sacrilegious.' This view of the passage certainly gives much greater force to the charge made by our Lord, that the command 'Whoso curseth

father or mother let him die the death' was nullified by the tradition. It would, indeed, seem surprising that such a vow as this (closely analogous to the modern profanity of imprecating curses on one's self if certain conditions be not fulfilled) should be considered to involve a religious obligation from which the party could not be freed even if afterwards he repented of his rashness and sin. It appears, however, from Rabbinical authority, that anything thus devoted was ir reclaimable (Grotius, *Annotationes in Matt.* xv. 5), and that even the hasty utterance of a word implying a vow was equivalent to a vow formally made (Lightfoot, *Hor. Hebr.*) This, indeed, seems to be the force of the expression used in Mark, *καὶ οὐκ ἐτι ἀφιέρε, κ. τ. λ.*, 'ye suffer him no more to do aught for his father or his mother.' A more striking instance of the subversion of a command of God by the tradition of men can hardly be conceived.—F. W. G.

CORBE (Χορβέ; *Choraba*), 1 Esd. v. 12. A name answering to *Zaccai* in Ezra ii. 9, and Neh. vii. 14.—J. E. R.

CORD. This word occurs in the A. V. as the translation of—ו. חֶבֶל (Josh. ii. 15; Esth. i. 6; Job xxxvi. 8; xli. i. [xl. 25]; Ps. cxl. 6; Prov. v. 22; Eccl. xii. 6; Is. v. 18; xxxiii. 20; Jer. xxxviii. 6, 13; Ezek. xxvii. 24; Hos. xi. 4; Mic. ii. 5), a word which properly signifies a *string* or *rope*, and is elsewhere in the A. V. translated 'tacklings' (Is. xxxiii. 23), 'ropes' (1 Kings xx. 31, 32), 'sorrows' (Ps. xviii. 4, 5), a 'line' for measuring (Amos vii. 17, joined with מורה, Zech. ii. 5 [ii. 1], etc.) 2. מִיתָר (Job xxx. 11), a word properly designating that which is used to bind; hence יתרים חיים, 'new cords' (Judg. xvi. 7, 'green withs,' A. V.); it is used also for the string of a bow (Ps. xi. 2). 3. מִיתָרָה (Exod. xxxv. 18; Num. iii. 37; Is. liv. 2; Jer. x. 20), also rendered 'string' of a bow (Ps. xxi. 12). 4. חֵטָה (Eccl. iv. 12), also rendered 'line' of thread (Josh. ii. 18), 'thread' (Gen. xiv. 23; Judg. xvi. 12; Song iv. 3); 'line' for measuring (1 Kings vii. 15). 5. עֵבֶה (Judg. xv. 13; Ps. ii. 3; xviii. 27; cxxix. 4), rendered also 'rope' (Judg. xvi. 11, 12; Is. v. 18), 'bond' (Job xxxix. 10), 'wreathen chains' (Exod. xxxviii. 24, comp. ver. 14). 6. σχοῖνιον (John ii. 15), 'ropes' (Acts xxvii. 32).

Besides their literal meanings, these words are used in various figurative acceptations in Scripture. Thus we have the 'cords of sin' (Prov. v. 22), 'cords of vanity' (Is. v. 18), 'cords of death' and 'of hell' (Ps. xviii. 4, 5), 'cords of affliction' (Job xxxvi. 8), 'bands of love' (Hos. xi. 4), as emblematical expressions of the attractive or controlling power of these qualities or objects. The expression 'cords of a man' (Hos. xi. 4) may mean either 'inducements such as a man would use,' or 'inducements such as would avail with a man;' from the contrast to the 'heifer' of x. 11, which needs to be drawn by outward force, the latter seems the preferable explanation. In Job iv. 21, 'their cord' (A. V. excellency) means the soul or life, with allusion to the cord of a tent, the removal of which causes it to collapse and fall down (*Lebensfaden Hitzig, innre sehne Ewald, la corde de leur tente Renan*); and in Eccl. xii. 6, the same

fact is represented by another allusion drawn from cords, the snapping asunder of the silver cord by which a lamp is suspended, so that it falls and is destroyed. The 'loosing of the cord' (Job xxx. 11), if we read יָתַר as in the text, will mean 'the giving licence to,' *i.e.*, the enemies of the speaker would throw off restraint and afflict him; or if we follow the *K'ri*, and read יָתַר, it will mean the relaxing of strength, *i.e.*, God would weaken and afflict the speaker; in the former case the metaphor is taken from *reins* (comp. *laxare habenas*), in the latter from a *bowstring*. From the use of the measuring line in defining property, 'cord' or 'line' came to be used in the sense of *inheritance* or *defined territory* (Deut. iii. 4; A. V. *region*; Josh. xvii. 14, A. V. *portion*; Ps. xvi. 6; Ezek. xlvii. 13); 'to cast a cord' (Mic. ii. 5) to denote the determining of a property. To put ropes on the head (1 Kings xx. 31) was a token of submission.

Of what materials cords or ropes were made among the Hebrews we cannot certainly say, except that some of the articles so named were composed of gold and silver threads (comp. Exod. xxviii. 14, 22, 24; xxxix. 3, 15, 17; Eccl. xii. 6). Those in common use were probably made of flax or rushes (comp. *σχουρίον*, and the use of *אֶמְוֹן*, Job xli. 2); bowstrings were probably made of the entrails of animals; perhaps strips of hide, or the fibre of plants may have been used, as was the case among the Egyptians (Wilkinson, *Anc. Egypt*. iii. 143, 210).—W. L. A.

CORE (Κορῆ, *Apocr.* τοῦ Κ., *N. Test.* Core), Ecclus. xlv. 18, Jude 11. The Korah of the book of Numbers, the associate of Dathan and Abiram.—J. E. R.

CORIANDER. [GAD.]

CORINTH, a Grecian city, placed on the

195. Corinth.

isthmus which joins Peloponnesus (now called the Morea) to the continent of Greece. A lofty rock rises above it, on which was the citadel, or the Acrocorinthus (Livy, xlv. 28). It had two harbours: Cenchreæ, on the eastern side, about 70 stadia distant; and Lechæum, on the modern Gulf of Lepanto, only 12 stadia from the city (Strabo, viii. 6). Its earliest name, as given by Homer, is *Ephyre*; and mysterious legends connect it with Lycia, by means of the hero Bellerophon, to whom a plot of ground was consecrated in front of the city, close to a cypress grove (Pausanias, ii. 2). Owing to the great difficulty of weathering Malea, the southern promontory of Greece, merchandise passed through Corinth from sea to sea; the city becoming an *entrepôt* for the goods of Asia and Italy (Strabo, viii. 6, 20). At the same time it

commanded the traffic by land from north to south. An attempt made to dig through the isthmus was frustrated by the rocky nature of the soil; at one period, however, they had an invention for drawing galleys across from sea to sea on trucks. With such advantages of position, Corinth was very early renowned for riches, and seems to have been made by nature for the capital of Greece. The numerous colonies which she sent forth, chiefly to the west and to Sicily, gave her points of attachment in many parts; and the good will, which, as a mercantile state, she carefully maintained, made her a valuable link between the various Greek tribes. The public and foreign policy of Corinth appears to have been generally remarkable for honour and justice (Herod. and Thucyd. *passim*); and the Isthmian games, which were celebrated there every

other year, might have been converted into a national congress, if the Corinthians had been less peaceful and more ambitious.

When the Achean league was rallying the chief powers of southern Greece, Corinth became its military centre; and as the spirit of freedom was active in that confederacy, they were certain, sooner or later, to give the Romans a pretence for attacking them. The fatal blow fell on Corinth (B.C. 146), when L. Mummius, by order of the Roman Senate, barbarously destroyed that beautiful town (Cicero, *Verr.* i. 21), eminent even in Greece for painting, sculpture, and all working in metal and pottery; and as the territory was given over to the Sicyonians (Strabo, *l. c.*), we must infer that the whole population was sold into slavery.

The Corinth of which we read in the N. T. was quite a new city, having been rebuilt and established as a Roman colony, and *peopled with freed men from Rome* (Pausanias and Strabo, *u. s.*) by the dictator Cæsar, a little before his assassination. Although the soil was too rocky to be fertile, and the territory very limited, Corinth again became a great and wealthy city in a short time, especially as the Roman pro-consuls made it the seat of government (Acts xviii.) for southern Greece, which was now called the province of Achaia. In earlier times Corinth had been celebrated for the great wealth of its Temple of Venus, which had a gainful traffic of a most dishonourable kind with the numerous merchants resident there—supplying them with harlots under the forms of religion. The same phenomena, no doubt, reappeared in the later and Christian age. The little which is said in the N. T. seems to indicate a wealthy and luxurious community, prone to impurity of morals; nevertheless, all Greece was so contaminated, that we may easily overcharge the accusation against Corinth.

The Corinthian Church is remarkable in the Epistles of the Apostle Paul by the variety of its spiritual gifts, which seem for the time to have eclipsed or superseded the office of the elder or bishop, which in most churches became from the beginning so prominent. Very soon, however, this peculiarity was lost, and the bishops of Corinth take a place co-ordinate to those of other capital cities. One of them, Dionysius, appears to have exercised a great influence over many and distant churches, in the latter part of the second century (Eusebius, *Hist. Eccles.* iv. 23).—F. W. N.

CORINTHIANS, EPISTLES TO THE.—FIRST EPISTLE. The testimony of Christian antiquity is full and unanimous in inscribing this inspired production to the pen of the Apostle Paul (Lardner's *Credibility, Works*, vol. ii. *plur. loc.*; Davidson, *Intrad.* ii. 253, ff.; Schott, *Isagoge in N. T.*, pp. 236, 239, sqq.), and with this the internal evidence arising from allusions, undesigned coincidences, style, and tone of thought, fully accords. The only person who has been found to cast a doubt on its genuineness is the eccentric and extreme Bruno Bauer. The epistle seems to have been occasioned partly by some intelligence received by the Apostle concerning the Corinthian church from the domestics of Chloe, a pious female connected with that church (i. 11), and, probably, also from common report (*ἀκούεται*, v. i.); and partly by an epistle which the Corinthians themselves had addressed to the Apostle, asking advice and instruction on several points (vii. 1), and which probably

was conveyed to him by Stephanas, Fortunatus, and Achaicus (xvi. 17). Apollos, also, who succeeded the Apostle at Corinth, but who seems to have been with him at the time this epistle was written (xvi. 12), may have given him information of the state of things among the Christians in that city. From these sources the Apostle had become acquainted with the painful fact that since he had left Corinth (Acts xviii. 18) the church in that place had sunk into a state of great corruption and error. One prime source of this evil state of things, and in itself an evil of no inferior magnitude, was the existence of schisms or party divisions in the church. 'Every one of you,' Paul tells them, 'saith I am of Paul, and I of Apollos, and I of Cephas, and I of Christ' (i. 12). This has led to the conclusion that four great parties had arisen in the church, which boasted of Paul, Apollos, Peter, and Christ, as their respective heads. By what peculiarities of sentiment these parties may be supposed to have been distinguished from each other, it is not difficult, with the exception of the last, to conjecture. The existence in many of the early churches of a strong tendency towards the ingrafting of Judaism upon Christianity is a fact well known to every reader of the N. T.; and though the church at Corinth was founded by Paul and afterwards instructed by Apollos, yet it is extremely probable that as in the churches of Galatia so in those of Achaia this tendency may have been strongly manifested, and that a party may have arisen in the church at Corinth opposed to the liberal and spiritual system of Paul, and more inclined to one which aimed at fettering Christianity with the restrictions and outward ritual of the Mosaic dispensation. The leaders of this party probably came with letters of commendation (2 Cor. iii. 1) to the Corinthian church, and it is possible that they may have had these from Peter; but that the party itself received any countenance from that Apostle cannot be for a moment supposed. Rather must we believe that they took the name of 'the Apostle of the circumcision' as the designation of their party for the sake of gaining greater authority to their position; at any rate they seem to have used Peter's acknowledged place among the apostles to the disparagement of Paul, and hence his retort (2 Cor. xi. 5). The vehement opposition of this party to Paul, and their pointed attack upon his claims to the Apostolic office, would naturally lead those who had been Paul's converts, and who probably formed the major part of the church, to rally round his pretensions and the doctrines of a pure and spiritual Christianity which he taught. Closely allied with this party, and in some respects only a subdivision of it, was that of Apollos. This distinguished individual was not only the friend of Paul, but had followed up Paul's teaching at Corinth in a congenial spirit and to a harmonious result (iii. 5, etc.) Between the party, therefore, assuming his name, and that ranking itself under the name of the Apostle, there could be no substantial ground of difference. Perhaps, as Apollos had the advantage of Paul in mental polish, and especially in facility in public speaking (Acts xviii. 24; comp. 2 Cor. x. 10), the sole ground on which his party may have preferred him was the higher gratification he afforded by his addresses to their educated taste than was derived from the simple statements of the Apostle concerning 'Christ and him crucified.' Thus far all, though almost purely conjectural, is

easy and probable; but in relation to the fourth party—that which said, ‘I am of Christ’—it has been found extremely difficult to determine by what peculiar sentiments they were distinguished. The simplest hypothesis is that of Augustine (‘alii qui nolebant edificari super Petrum, sed super petram [dicebant] Ego autem sum Christi,’ *De verb. Dom.*, Serm. 13), whom Eichhorn (*Einleit.* iii. 107), Schott (*Isagoge in N. T.*, p. 233), Pott (*N. T. Koppian.* vol. v. part i., p. 25), Bleek (*Einl.*, p. 397), and others follow, viz., that this party was composed of the better sort in the church, who stood neutral, and declining to follow any mere human leader, declared themselves to belong only to Christ, the common Lord and the Leader of all. This opinion is chiefly based on 1 Cor. iii. 22, 23, where it is supposed the four parties are alluded to and that of Christ alone commended. But this seems a forced and improbable interpretation of that passage; the words *ὅτις δὲ Χριστοῦ* being much more naturally understood as applying to all the Corinthians, than as describing only a part of them. This opinion, moreover, hardly tallies with the language of the Apostle concerning the Christ-party, in 1 Cor. i. 12, and 2 Cor. x. 7, where he evidently speaks of them in terms of censure, and as guilty of dividing Christ. Another hypothesis is that suggested by Storr (*Notitie Historica epistoll. ad Cor. interpretationi servientes. Opusc. Acad.*, vol. ii. p. 242), and which has been followed, among others, by Hug (*Introd.*, p. 524; Fosdick’s Tr.), Bertholdt (*Einl.* s. 3320), and Krause (*Pauli ad Cor. Epistola Grace.*, etc., *Proleg.*, p. 35), viz., that the Christ-party was one which, professing to follow James and the other brethren of the Lord, as its heads, claimed to itself, in consequence of this relationship, the title *οἱ τοῦ Χριστοῦ*, by way of eminence. To this it has been objected, that had the party in question designed, by the name they assumed, to express the relationship of their leader to Jesus Christ, they would have employed the words *οἱ τοῦ κυρίου*, not *οἱ τοῦ Χριστοῦ*, the former being more correctly descriptive of a personal, and the latter of an official, relationship. Besides, as Olshausen remarks, ‘the party of James could not be precisely distinguished from that of Peter; both must have been composed of strenuous Jew-Christians. And, in fine, there is a total absence of all positive grounds for this hypothesis. . . . The mere naming of ‘the brethren of the Lord’ in 1 Cor. ix. 5, and of James in 1 Cor. xv. 7, can prove nothing, as this is not in connection with any strictures on the Christ-party, or indeed on any party, but entirely incidentally; and the expression *ἠνωσκειν Χριστὸν κατὰ σάρκα* (2 Cor. v. 16) refers to something quite different from the family-relations of the Saviour: it is designed to contrast the purely human aspect of his existence with his eternal heavenly essence’ (*Biblische Comment.* bd. iii. abt. I, s. 457; comp. Billoth, *Commentary on the Corinthians*, vol. i. p. 11, Eng. Tr.) In an able treatise which appeared in the Tübingen *Zeitschrift für Theologie* for 1831, part iv. p. 61, Baur has suggested that, properly speaking, there were only two parties in the Corinthian church—the Pauline and the Petrine; and that, as that of Apollus was a subdivision of the former, that of Christ was a subdivision of the latter. This subdivision, he supposes, arose from the opposition offered by the Petrine party to Paul, which led some of them to

call in question the right of the latter to the apostleship, and to claim for themselves, as followers of Peter, a closer spiritual relationship to the Saviour, the honour of being the alone genuine and apostolically-designated disciples of Christ. This opinion is followed by Billoth, and has much in its favour; but the remark of Neander, that ‘according to it the Christ-party would be discriminated from the Petrine only in name, which is not in keeping with the relation of this party-appellation to the preceding party-names,’ has considerable weight as an objection to it. Neander himself, followed by Olshausen, supposes that the Christ-party was composed of persons ‘who repudiated the authority of all these teachers, and independently of the apostles, sought to construct for themselves a pure Christianity, out of which probably they cast everything that too strongly opposed their philosophical ideas as a mere foreign addition. From the opposition of Hellenism and Judaism and from the Helleno-philosophical tendency at Corinth, such a party might easily have arisen. . . .

To such the Apostles would seem to have mixed too much that was Jewish with their system, and not to have presented the doctrines of Christ sufficiently pure. To Christ alone, therefore, would they professedly appeal, and out of the materials furnished them by tradition, they sought, by means of their philosophic criticism, to extract what should be the pure doctrine of Christ’ (*Apostol. Zeitalt.* s. 205; vol. i., p. 273 of Eng. Tr.) The reasoning of the Apostle in the 1st, 2d, 12th, 13th, 14th, and 15th chapters of the 1st Epistle seems clearly to indicate that some such notions as these had crept into the Church at Corinth; and, upon the whole, this hypothesis of Neander commends itself to our minds as the one which is best maintained and most probable. At the same time, we have serious doubts of the soundness of the assumption on which all these hypotheses proceed, viz., that there really were in the Corinthian church sects or parties specifically distinguished from each other by peculiarities of doctrinal sentiment. That erroneous doctrines were entertained by individuals in the church, and that a schismatical spirit pervaded it, cannot be questioned; but that these two stood formally connected with each other may fairly admit of doubt. Schisms often arise in churches from causes which have little or nothing to do with diversities of doctrinal sentiment among the members; and that such were the schisms which disturbed the church at Corinth appears to us probable, from the circumstance that the existence of these is condemned by the Apostle, without reference to any doctrinal errors out of which they might arise; whilst, on the other hand, the doctrinal errors condemned by him are denounced without reference to their having led to party strifes. From this we are inclined to the opinion that the schisms arose merely from quarrels among the Corinthians as to the comparative excellence of their respective teachers—those who had learned of Paul boasting that he excelled all others, and the converts of Apollus and Peter advancing a similar claim for them, whilst a fourth party haughtily repudiated all subordinate teaching, and pretended that they derived all their religious knowledge from the direct teaching of Christ. The language of the Apostle in the first four chapters, where alone he speaks directly of these schisms, and where he resolves their criminality not into their relation to

false doctrine, but into their having their source in a disposition to glory in men, and be regarded as greatly favouring this view. Comp. also 2 Cor. v. 16.

Besides the schisms and the erroneous opinions which had invaded the Church at Corinth, the Apostle had learned that many immoral and disorderly practices were tolerated among them, and were in some cases defended by them. A connection of a grossly incestuous character had been formed by one of the members, and gloried in by his brethren (v. 1, 2); law-suits before heathen judges were instituted by one Christian against another (vi. 1); licentious indulgence was not so firmly denounced and so carefully avoided as the purity of Christianity required (vi. 9-20); the public meetings of the brethren were brought into disrepute by the women appearing in them unveiled (xi. 3-10), and were disturbed by the confused and disorderly manner in which the persons possessing spiritual gifts chose to exercise them (xii. xiv.); and in fine the *ἀγάπαι*, which were designed to be scenes of love and union, became occasions for greater contention through the selfishness of the wealthier members, who, instead of sharing in a common meal with the poorer, brought each his own repast, and partook of it by himself, often to excess, while his needy brother was left to fast (xi. 20-34). The judgment of the Apostle had also been solicited by the Corinthians concerning the comparative advantages of the married and the celibate state (vii. 1-40), as well as, apparently, the duty of Christians in relation to the use for food, of meat which had been offered to idols (viii. 1-13). For the correction of these errors, the remedying of these disorders, and the solution of these doubts, this epistle was written by the Apostle. It consists of four parts. The first (i. iv.) is designed to reclaim the Corinthians from schismatic contentions; the second (v. vi.) is directed against the immoralities of the Corinthians; the third (vii. xiv.) contains replies to the queries addressed to Paul by the Corinthians, and strictures upon the disorders which prevailed in their worship; and the fourth (xv. xvi.) contains an elaborate defence of the Christian doctrine of the resurrection, followed in the close of the epistle by some general instructions, intimations, and greetings.

From an expression of the Apostle in ch. v. 9, it has been inferred by many that the present was not the first epistle addressed by Paul to the Corinthians, but that it was preceded by one now lost. For this opinion, however, the words in question afford a very unsatisfactory basis. They are as follows:—*ἔγραψα ὑμῖν ἐν τῇ ἐπιστολῇ, κ. τ. λ.* Now these words must be rendered either 'I have written to you in *this* epistle,' or 'I wrote to you in *that* epistle;' and our choice between these two renderings will depend partly on grammatical and partly on historical grounds. As the *ῥοριστ* *ἔγραψα* may mean either 'I wrote' or 'I have written,' nothing can be concluded from it in either way. It may be doubted, however, whether, had the Apostle intended to refer to a former epistle, he would have used the article *τῇ* simply, without adding *προτέρα*; whilst, on the other hand, there are cases which clearly shew that had the Apostle intended to refer to the present epistle, it was in accordance with his practice to use the article in the sense of '*this*' (comp. *ἡ ἐπιστολὴ* Col. iv. 26, *τὴν ἐπιστ.* 1 Thess. v. 27). In support of

this conclusion it may be added, 1st, that the Apostle had really in this epistle given the prohibition to which he refers, viz., in the verses immediately preceding that under notice; and that his design in the verses which follow is so to explain that prohibition as to preclude the risk of their supposing that he meant by it anything else than that *in the church* they should not mingle with immoral persons; 2d, that it is not a little strange that the Apostle should, only in this cursory and incidental manner, refer to a circumstance so important in its bearing upon the case of the Corinthians as his having already addressed them on their sinful practices; and 3d, that had such an epistle ever existed, it may be supposed that some hint of its existence would have been found in the records of the primitive Church, which is not the case. On these grounds we strongly incline to the opinion that the present is the first epistle which Paul addressed to the Corinthians (Bloomfield, *Recensio Synopt.* in loc.; Billroth's *Commentary*, E. T., vol. i. p. 4, note a; Lange, *Apost. Zeitalt.* i. 205).

From 2 Cor. xii. 14, and xiii. 1, comp. with 2 Cor. ii. 1, and xiii. 2, it has appeared to many that before the writing of that epistle Paul had *twice* visited Corinth, and that one of these visits had been after the Church there had fallen into an evil state; for otherwise his visit could not have been described as one *ἐν λύπῃ*, and one during which God had humbled him before them. By others this second visit to Corinth has been denied. There are difficulties on both sides; but the balance of probability seems in favour of the affirmative. The words *τρίτον τοῦτο ἔρχομαι* of 2 Cor. xiii. 1, naturally convey the idea that the Apostle was then purposing a third visit to Corinth; and the words *τρίτον τοῦτο ἐτοίμως ἔχω ἐλθεῖν πρὸς ὑμᾶς* are to the same effect. To this it is replied that the latter passage means only, 'I am a third time *prepared* to come,' and that, in accordance with this, the former may be rendered, 'This third time I am purposing to come to you;' so that it is not of a third *visit*, but simply of a third *purpose* to visit that Paul speaks. But this can hardly be accepted; for (1) though *ἔρχομαι* may signify 'I am coming' in the sense of 'purposing to come,' the whole phrase *τρίτον τοῦτο ἔρχ.* cannot be rendered 'this is the third time I have purposed to come to you;' as De Wette remarks (*Erklärung* in loc.), it is only when the purpose is close on its accomplishment, not of an earlier purpose, that *ἔρχομαι* can be so used. (2) The contrast of *τρίτον* in xiii. 1 with *δευτέρον* in ver. 2, leads to the conclusion that it is of a third visit, and not of a third purpose to visit, that Paul is writing; he had told them formerly when he was present with them the second time, and now when absent, in announcing a third visit, he tells them again, etc. Some, it is true, propose to render, as in the A. V., *ὡς παρών* by *as if present*, so as to make the Apostle intimate that he had not been oftener than once before at Corinth; but it is very doubtful if *ὡς* is ever used to express the supposition of a case which does not exist (1 Cor. v. 3 is not a case in point, for there the case supposed actually did exist), and, moreover, as it is connected here as well with *ἄπὼν* as with *παρών*, if we translate it 'as if,' the whole clause will read thus, 'I tell you beforehand, as if I were present the second time, and were now absent,' etc., which is of course as inadmissible on the

ground of sense as the rendering in the A. V. is on critical grounds. (3) In *xiii. 14* the Apostle intimates his being ready to go to Corinth in connection with his resolution not to be burdensome to the Christians there. Now, as it was not Paul's purpose to visit them that could impose any burden on them, but his actual presence with them, there seems no fitness in such a connection in his telling them of his mere repeated purpose to visit them; in order to make congruity out of this, we must regard him as saying, 'I was not burdensome to you when with you before, and now I have a third time formed a purpose to visit you; but when I make out this visit, I will not be burdensome to you any more than at first, though it be a thrice-purposed visit.' Surely to find all this in the few words he utters is to attribute to the Apostle a somewhat improbable breviloquence. On these grounds, the majority of scholars have decided for a double visit of the Apostle to Corinth before the writing of the second epistle. On the other hand, such a passage as *2 Cor. i. 15, 16*, presents a serious difficulty in the way of such a supposition. There the Apostle speaks of a *second* benefit as to be anticipated by the Corinthians from his visiting them; from which it is argued that he could only have been there *once* before, else would he have used consistent language, and spoken of a *third* benefit, and not a *second* only. To escape from this difficulty various expedients have been devised, such as taking *δευτέραν χάριν* here = *διπλὴν χάριν* (Bleek and Neander, after Chrysost. and Theodoret), and supposing the term of the Apostle's residence at Corinth (*Acts xviii. 1-11*) divided into two parts, in the interval between which he had made a short excursion from Corinth and back again, so that in one sense he had twice before visited that city, and, in another sense, had only once before visited it. But these are violent expedients, too manifestly devised to save a previous hypothesis to be accepted. The only tenable solution seems to be that proposed by Meyer, who takes the *δευτέρα χάρις*, in connection with the *πάλιν ἀπὸ Μακεδονίας ἐλθεῖν πρὸς ὑμᾶς*; he determines to visit them first before going to Macedonia, and thereby secure to them a double benefit by going from thence to Macedonia, and returning to them from Macedonia in place of going to the later place first. (See, on the one side of this question, Bleek, *Stud. u. Krit.* 1830; *Einleit.*, p. 393; Neander, *Apostol. Zeitalt.* i. 326, ff., E. T., i. 253; on the other, Davidson, *Introd.* II. 213, ff.; Lange, *Apost. Zeitalt.*, i. p. 199, ff.) On the supposition of a second visit made by Paul to Corinth, the question arises—Did it precede also the writing of the first epistle? On this point the *Acts* give us no help, as the writer is totally silent concerning this second visit of Paul to Corinth. But we may safely infer from *2 Cor. i. 15, 16, 23*, that Paul had not been at Corinth between the writing of the first and second epistles; so that we must place his second visit before the writing of the first epistle. When this second visit took place we can only conjecture; but Billroth's suggestion that it was made sometime during the period of Paul's residence of three years at Ephesus (*Acts xx. 31*), perhaps on the first reception of unpleasant news from Corinth, is extremely probable. Supposing the Apostle to have made this short visit and to have returned to Ephesus, his first epistle may have been written either in that city or in Macedonia, through which Paul pro-

bably journeyed on his way from Corinth to Ephesus. This latter is the traditional opinion (see the addition to *ch. xiii.* in some MSS.), and is supposed to be favoured by the way in which Paul speaks of Ephesus (*1 Cor. xv. 32*) as a place in which he *had been* rather than one in which he *was* when writing this epistle. It is, however, so clearly incompatible with certain other statements in the epistle (*e.g.*, *xvi. 5, 8, 19*) that it must be pronounced utterly untenable. Most agree in regarding Ephesus as the place where this epistle was written. From the allusion to the Passover in *ch. v. 7, 8*, most have inferred that the epistle was written at the time of Easter; but this does not necessarily follow from the Apostle's allusion. As to the year, great diversity of opinion prevails, but most are agreed that it was not earlier than 56 or later than 59. Meyer makes it 58; De Wette 58 or 59; Hug 57; Davidson 57.

The subscription above referred to intimates that this epistle was conveyed to Corinth by Stephanus, Fortunatus, Achaicus, and Timothy. As respects the last named there is evidently a mistake, for from *ch. xvi. 10*, it appears that Timothy's visiting Corinth was a thing not certain when this letter was finished, and from *2 Cor. viii. 17, 18*, it appears that Timothy did not visit Corinth till afterwards. Comp. also *Acts xix. 22*. As respects the others, this tradition is probably correct.

SECOND EPISTLE. Not long after the transmission of the first epistle, the Apostle left Ephesus in consequence of the uproar excited against him by Demetrius the silversmith, and betook himself to Troas (*Acts xix. 23, sq.*) Here he expected to meet Titus with intelligence from Corinth of the state of things in that church. According to the common opinion Titus had been sent by Paul to Corinth, partly to collect money in aid of the distressed Christians in Palestine, partly to observe the effect of the Apostle's first epistle on the Corinthians; but Billroth, Rückert, and others, rather suppose him to have been sent before the writing of the first epistle solely for the former of these purposes, and that he remained in Corinth till after the reception by the church there of that epistle, while Bleek (*Studien und Kritiken*, Jahrg. 1830, s. 625; comp. Neander's *Hist. of the Apostolic Age*, vol. i. p. 266, E. T.) suggests that Titus may have been despatched with an epistle now lost, and written between the first and second of those still extant. This hypothesis of a 'lost epistle' seems to be the convenient resource of the German critics for the removal of all difficulties, but in the absence of any direct evidence in its support, it cannot, in this case, be admitted to be worthy of consideration. Billroth's hypothesis rests also upon a very unstable basis, as Neander shews, by whom the common opinion is espoused and defended (vol. i. *l. c.*) In this expectation of meeting Titus at Troas, Paul was disappointed. He accordingly went into Macedonia, where, at length, his desire was gratified, and the wished-for information obtained (*2 Cor. ii. 13; vii. 15, sq.*)

The intelligence brought by Titus concerning the church at Corinth was on the whole favourable. The censures of the former epistle had produced in their minds a godly sorrow, had awakened in them a regard to the proper discipline of the church, and had led to the exclusion from their fellowship of the incontinent person. This had so wrought on the mind of the latter that he had

repented of his evil courses, and shewed such contrition that the Apostle now pities him, and exhorts the church to restore him to their communion (2 Cor. ii. 6-11; vii. 8, *sq.*). A cordial response had also been given to the appeal that had been made on behalf of the saints in Palestine (ix. 2). But with all these pleasing symptoms there were some of a painful kind. The anti-Pauline influence in the church had increased, or at least had become more active; and those who were actuated by it had been seeking by all means to overturn the authority of the Apostle, and discredit his claims as an ambassador of Christ.

This intelligence led the Apostle to compose his second epistle, in which the language of commendation and love is mingled with that of censure, and even of threatening. This epistle may be divided into three sections. In the first (i.-iii.) the Apostle chiefly dwells on the effects produced by his first epistle and the matters therewith connected. In the second (iv.-ix.) he discourses on the substance and effects of the religion which he proclaimed, and turns from this to an appeal on behalf of the claims of the poor saints on their liberality. And in the third (x.-xiii.) he vindicates his own dignity and authority as an apostle against the parties by whom these were opposed. The divided state of feeling in the Apostle's mind will account sufficiently for the difference of tone perceptible between the earlier and later parts of this epistle, without our having recourse to the arbitrary and capricious hypothesis of Semler (*Dissert. de duplice appendice Ep. ad Rom. Hal. 1767*) and Weber (*Prog. de numero epp. ad Cor. rectius constituendo, Vitæ. 1798*) whom Paulus follows, that this epistle has been extensively interpolated.

Commentaries.—On both epistles: Wolf. Musculus (Bas. 1559, fol.); Aretius (Morg. 1583, fol.); Bullinger (Tig. 1534-35, 2 vols. 8vo); Moshem (vol. i., Flensb. 1741; vol. ii., 1762, 4to); Baumgarten (Halle, 1761, 4to); Morus (Leipz. 1794, 8vo); Flatt (Tüb. 1827, 8vo); Billroth (Leipz. 1833, 8vo; E. T., 2 vols. 12mo, Edin. 1837-38); Rückert (Leipz. 1836-37, 2 vols. 8vo); Osiander (Stuttg. 1847); Stanley (Lond. 1858, 2 vols. 8vo); Kling (Vielef. 1861). On the first epistle: Schmid (Hamb. 1704, 4to); Krause (Franf. 1790, 8vo); Heydenreich (Marb. 1825-28, 2 vols. 8vo); Pott (in Nov. Test. Koppian., vol. v. par. i., Gött. 1826, 8vo); Peile (Lond. 1848, 8vo). On the second epistle: Emmerling (Lips. 1823, 8vo); Fritzsche (Lips. 1824, 8vo); Scharling (Kopenh. 1840, 8vo). The various questions of a critico-historical character touching these epistles are very fully discussed by Davidson in his *Introduction to the N. T.*, i. 208-285.—W. L. A.

CORMORANT. [SALACH.]

CORN. [BAR; DAGAN.]

CORNELIUS. The centurion of this name, whose history occurs in Acts x., most probably belonged to the Cornelii, a noble and distinguished family at Rome. He is reckoned by Julian the Apostate as one of the few persons of *distinction* who embraced Christianity. He held his command as a centurion (*ἐκατοντάρχης*) in the *Italic* band; so called from its consisting chiefly of Italian soldiers, formed out of one of the six cohorts granted to the procurators of Judæa, five of which cohorts were stationed at Cæsarea, the usual residence of

the procurators. The *religious position* of Cornelius, before his interview with Peter, has been the subject of much debate. On the whole, he appears to us to have been one of a class consisting of Gentiles who had so far benefited by their contact with the Jewish people as to have become convinced that theirs was the true religion, who consequently worshipped the true God, were acquainted with the Scriptures of the O. T., most probably in the Greek translation, and observed several Jewish customs, as, for instance, their hours of prayer, or anything else that did not involve an act of special profession. This class of persons seems referred to in Acts xiii. 26, 43, where they are plainly distinguished from the Jews, though certainly mingled with them. From this class we regard Cornelius as having been selected of God to become the *firstfruits of the Gentiles*. His character appears suited, as much as possible, to abate the prejudices of the Jewish converts against what appeared to them so great an innovation. It is well observed by Theophylact, that Cornelius, though neither a Jew nor a Christian, lived the *life* of a good Christian. He was *εὐσεβής*, influenced by spontaneous reverence to God. He practically obeyed the restraints of religion, for he feared God, and this latter part of the description is extended to all his family or household (x. 2). He was liberal in alms to the Jewish people, which shewed his respect for them; and he 'prayed to God always,' at all the hours of prayer observed by the Jewish nation. Such piety, obedience, faith, and charity, prepared him for superior attainments and benefits, and secured to him their bestowment (Ps. xxv. 9; l. 23; Matt. xiii. 12; Luke viii. 15; John vii. 17).

The remarkable circumstances under which these benefits were conferred upon him are too plainly and forcibly related in Acts x. to require much comment. While in prayer, at the ninth hour of the day, he beheld, in waking vision, an angel of God, who declared that 'his prayers and alms had come up for a memorial before God,' and directed him to send to Joppa for Peter, who was then abiding 'at the house of one Simon, a tanner.' Cornelius sent accordingly; and when his messenger had nearly reached that place, Peter was prepared by the symbolical revelations of a noonday ecstasy, or trance, to understand that nothing which God had cleansed was to be regarded as common or unclean.

The inquiries of the messengers from Cornelius suggested to Peter the application of his vision, and he readily accompanied them to Joppa, attended by six Jewish brethren, and hesitated not to enter the house of one whom he, as a Jew, would regard as unclean. The Apostle waived the too fervent reverence of Cornelius, which, although usual in the East, was rendered by Romans only to their gods; and mutual explanations then took place between him and the centurion. After this the Apostle proceeded to address Cornelius and his assembled friends, and expressed his conviction that the Gentiles were no longer to be called unclean, and stated the leading evidence and chief doctrines of the Gospel. While he was discoursing, the miraculous gifts of the Holy Spirit, contrary to the order hitherto observed of being preceded by baptism and imposition of hands, fell on his Gentile auditors. Of this fact Peter and his companions were convinced, for they heard

them speak with tongues, foreign and before unknown to them, and which Peter and his companions knew to be such by the aid of their own miraculous gifts, and, under divine impulse, glorify God as the author of the Gospel. The Jewish brethren who accompanied Peter were astonished upon perceiving, by these indubitable indications, that the Holy Spirit was poured out upon the Gentiles, as upon themselves at the beginning (x. 45). Peter, already prepared by his vision for the event, and remembering that baptism was by the command of Jesus, associated with these miraculous endowments, said, 'Can any man forbid water that these should not be baptized, who have received the Holy Ghost as well as we?' and agreeably to the apostolic rule of committing the administration of baptism to others, and, considering that the consent of the Jewish brethren would be more explicit if they performed the duty, he ordered *them* to baptize Cornelius and his friends, his household, whose acceptance as members of the Christian church had been so abundantly testified.—J. D. F.

CORNER. Besides the ordinary use of this word in Scripture, it is employed metaphorically for a place of obscurity (Acts xxvi. 26), or of secrecy, whether for purposes of craft, or for purposes of safety (Prov. vii. 8, 12; Deut. xxxii. 26). It is used also to denote the points in which the angles contained by the lines bounding the earth, supposed to be a square, found their vertices; hence the phrase, 'the four corners of the earth,' for the whole habitable world (Is. xi. 12; Rev. vii. 1); and from this 'the four corners' of any place came to denote the whole or every part of it (Job i. 19; Jer. ix. 26; Ezek. vii. 2; Zeph. iii. 6, A. V. towers, etc.)—W. L. A.

CORNERS OF BEARDS. [BEARD.]

CORNERS OF FIELDS. [ALMS.]

CORNER-STONE. The symbolical title of 'chief corner stone' (*λίθος ἀκρογωνιαίος*) is applied to Christ in Eph. ii. 20, and 1 Pet. ii. 6, which last passage is a quotation from Is. xxviii. 16, where the Septuagint has the same words for the Hebrew פִּנָּה פִּנָּה. There seems no valid reason for distinguishing this from the stone called 'the head of the corner' (*κεφαλὴ γωνίας*, Matt. xxi. 42; which is the Sept. translation of פִּנָּה פִּנָּה in Ps. cxviii. 22), although some contend that the latter is the top-stone or coping. The *λίθος ἀκρογωνιαίος* or 'corner-stone' was a large and massive stone so formed as when placed at a corner, to bind together two outer walls of an edifice. This properly makes no part of the *foundation*, from which it is distinguished in Jer. li. 26; though, as the edifice rests thereon, it may be so called. Sometimes it denotes those massive slabs which, being placed towards the bottom of any wall, serve to bind the work together, as in Is. xxviii. 16. Of these there were often two layers, without cement or mortar (Bloomfield, *Revens. Synop.* on Eph. ii. 20). This explanation will sufficiently indicate the sense in which the title of 'chief corner-stone' is applied to Christ.—J. K.

CORNET. [MUSICAL INSTRUMENTS.]

CORRODI, HEINRICH, a distinguished critic of the last century, was born July 31st, 1752, and educated by his father in Zürich. He was ordained as a preacher, but soon felt that his weakness of

voice disqualified him for the office. Having visited the university of Halle, and received Semler's impression on his susceptible mind, he returned to Zürich, and in 1786 became professor in the gymnasium there. He died September 14, 1793. He was a man of great zeal for knowledge, insatiable in his thirst after it, and restless in his endeavour to solve new problems. His theological views were in the main a development of Semler's. His principal work is the *Kritische Geschichte des Chiliasmus*, 1781, etc., 4 vols. He is also the author of *Die Beleuchtung der Geschichte des jüdischen und christlichen Bibeldkanon's*, 1792, 2 vols.; *Beiträge zur Beförderung des vernünftigen Denkens in der Religion*, 1780, etc., 18 Hefte; and of a German translation of the letters of Dutch divines respecting R. Simon's critical history of the O. T., 1779. Corrodi was an uncompromising opponent of mysticism and orthodoxy; a strenuous advocate of rationalistic religion.—S. D.

COS OR KOS (Κῶς) is the ancient name of the island which is now called *Stanko* or *Stanchio*, as if 'τὰν Κῶ', (Rawlinson's *Herodotus*, iv. 87). It lies off the south-west of Asia Minor, at the entrance of the Gulf of Budsun (*Ceramicus Sinus*) which runs into Caria, between the far-projecting peninsulas on which once stood the cities of Halicarnassus (north), and Cnidus (south). The island stretches from north-east to south-west a length of about twenty-one miles, while its greatest breadth is not more than six miles. It (or more probably its chief town bearing the same name, and anciently,* as well as now, forming an excellent anchorage at the north-east extremity of the island) is mentioned once in the N. T. (Acts xxi. 1) in St. Luke's account of St. Paul's third missionary journey. *Cos*, or rather 'Coos,' occurs in the homeward route as the point reached next after Miletus, where the great Apostle took his memorable and affecting farewell of the Ephesian presbytery. It is about forty nautical miles due south from Miletus (C. and H.'s *St. Paul*, 1st ed., ii. 226), and St. Paul, after a favourable sail [*εὐθὺς ὁρμήσωντες*] arrived here in the evening. The ship did not proceed on the voyage until 'the day following' [*τῆ δὲ ἐξῆς*]; so that the apostle spent the night in this harbour, but whether ashore with some faithful disciples, or on board, cannot be conjectured. This island is mentioned (as 'Cos') in 1 Maccab. xv. 23, among other insular and continental places around, as containing Jewish residents whom the 'Consul Lucius' [Lentulus] wished to have protected. In Josephus (*Antiq.* xiv. 10. 15) an edict of similarly favourable tenor towards the Jews of 'Cos,' is mentioned as emanating from 'Caius Phanius, son of Caius, imperator and consul, and addressed to the local magistrates.' 'Cos' occurs thrice besides in Josephus, in *Antiq.* xiv. 7. 2; xvi. 2. 2, and in *Wars of the Jews*, i. 21. 11; from the first passage we learn that the Coan Jews were a wealthy community in the time of Mithridates, who pillaged them; while the last informs us that 'the people of Cos' were amongst those lucky foreigners whom the magnificent Herod

* So says Scylax, Νῆσος Κῶς, καὶ πόλις καὶ λιμὴν κλειστός, for confirmation of this by modern travellers, see Conybeare and Howson's *St. Paul* (1st ed.) vol. ii. p. 226.

bestowed his ample favours on, most probably to conciliate the Jews, who seemed to be numerous there; these friendly relations continued under his son Herod the tetrarch, judging from one of Böckh's inscriptions (No. 2502). But this island is still more renowned from the abundant notices of it in classic writers. Even in Homer's time it was very populous (*Il. E*, 255. O, 28).

It was originally colonized by Dorian settlers from Epidaurus, who established the worship of Æsculapius, to whom a magnificent temple was dedicated at the chief town (Strabo, xiv. 653, 657; Pliny, xxix. 2. See also Müller's *Dorians*, ii. 114). Cos was one of the six cities which comprised the Dorian Hexapolis (afterwards reduced to a Pentapolis), leagued as a sacred Amphictyony in honour of the Triopian Apollo (Herod. i. 144). Thucydides, who calls the capital *Cos Meropis* (Κῶν τὴν Μεροπίδα), mentions its destruction in his own time by a tremendous earthquake (*B. Pel.* viii. 41). It suffered a like fate the second time in the reign of Antoninus, but it was soon afterwards rebuilt by that munificent prince (Pausanias, viii. 43). It was the birthplace of Apelles, Hippocrates, and Ptolemy Philadelphus (Pliny, xxxv. 10; Strabo, xiv. p. 657; Ovid, *de Arte Am.* x. 401; Theoc. xvii. 57). Strabo, also, in the same book, commends the extreme fertility of this beautiful island, especially in its wine, which vied with the Lesbian and Chian vintage (ἡῶος εὐκαρπὸς πάσα, οὐκ ἔδ' ἀπότην). Pliny also speaks of the 'Amphoræ Coæ' (xxv. 12. 46). It retains its celebrity, exporting fruits and wines to Egypt and all parts of the Archipelago. Dr. Clarke says that it also supplies the markets of Constantinople with land tortoises, which are highly esteemed by Turkish epicures. There still exists in the public square of Cos the enormous plane tree, probably the largest in the world, supposed to be 1000 years old, which the geographers of the sixteenth and seventeenth centuries celebrated, and Dr. Clarke described. Cos was also famous for produce of another kind—the extreme beauty of its youths (*Athenæus*, i. p. 15). The scene of one of Theocritus' *Bucolics* is laid in this island (*Id.* vii.), and the Scholiast (v. 5) states that the poet had sojourned there for some time (*Cramer's Asia Minor*, ii. 241). The manufacturing skill of its artisans in the finest textile fabrics and precious stones has been eulogised by many poets (Horace, *Od.* iv. 13; Catullus, lxx. 4; Tibullus, ii. 3. 53; Propertius, i. 2. 2). The *clari lapides* mentioned by Horace, were probably pearls, and are called by Catullus *pelluciduli lapides*. But this exquisite manual skill of these old islanders has not only been celebrated in poetry; Aristotle also refers to their textile fabrics (*De Hist. Animal.* v. 19, ed. Du Val, 850; so Pliny, xi. 22). When Pliny says that (according to the report of some) the silk was the produce of the *native* worm, he must not be regarded as stating a fact. The silkworm was not a native of Cos; the silk for the Coan loom was imported from India (*Bl. Ugolini Sacerdot. Hebr. in Thes.* iv. 188; J. G. Orelli, *on Horace*; vol. i. p. 609). For other authorities on the copious literature connected with this island, see Cellarius, *Geog. Antiq.* ii. 16; Winer, *Bibl. Realk.-b.* i. 673; Küster, *de Cos insula*; Sonnini, *R. u. Griechenl.* 80, ff.; Mannert, vi. 3. 243, ff.; and Dr. Howson (*Art. Cos in Smith's Greek and Roman Geography*) who refers to Ross's *Reisen nach Kos*, u. s. w. (Halle, 1852), as containing

the best description of this renowned gem of the Ægean.—P. H.

COSAM. A name occurring in the genealogy of our Lord as given by Luke (iii. 28). It is found nowhere else, and nothing is known of the person bearing it beyond what Luke states.—W. L. A.

COSIN, JOHN, an English prelate, was born at Norwich in 1594, and died in 1672. He was successively master of Peterhouse (1634), dean of Peterborough (1640), and bishop of Durham (1660). The only work he published during his life is his *Scholastical History of the Canon of Holy Scripture*, etc., 4to Lond. 1657. This was prepared during his residence in Paris, when suffering exile in consequence of a vote of the House of Commons in 1640; it was reprinted after his death, in 1672. It is a work of careful and accurate scholarship. He wrote also a *Letter to Dr. Collins on the Sabbath*, dated Jan. 24, 1632, which was published after his death; also a *History of Popish Transubstantiation*, Lond. 1675, 8vo. All his writings bear marks of solid learning, sober and judicious thinking, and acute reasoning.—W. L. A.

COTTON. [KARPAS.]

COTTON, JOHN, B.D., was born at Derby in 1585, and died at Boston, New England, in 1652. He was educated at Cambridge, and was for some time minister of Boston in Lincolnshire; but having adopted Congregationalist sentiments, he resigned his living, and to escape the fury of Laud emigrated to America. He was a man of learning and ability, a vigorous writer, and a strenuous polemic. His most famous controversy was with Roger Williams, regarding what the latter stigmatized as the 'Bloody Tenet of Persecution for conscience's sake,' in which, strange to say, the exiled Independent contended for the right of the civil magistrate to interfere in defence of the truth. Besides his polemical writings, he published *A brief exposition of the whole of Canticles*, etc., Lond. 1642; *A brief exposition, with practical observations upon the whole book of Ecclesiastes*, sm. 8vo, Lond. 1654; *A practical commentary upon the 1st Epistle of John*, fol. Lond. 1656. These are excellent specimens of the usual style of Puritan exposition, but free from the prolixity which often marks the works of this school.—W. L. A.

COUCH. [BED.]

COUNCIL. [SANHEDRIM.]

COURT. [HOUSE; TEMPLE.]

COUTH (Κουθᾶ, *Phuta*, 1 Esdr. v. 32). No name corresponding to this is to be found either in Ezra (ch. v.), or in Nehemiah (ch. vii.)—J. E. R.

COVENANT (בְּרִית; Sept. and N. T. διαθήκη). This term is applied in Scripture to—I. *Contracts and alliances between men*. Thus it is used of the paction existing between Abraham and the Amorite chiefs (Gen. xiv. 13), and that made between him and Abimelech (Gen. xxi. 32); of the alliance proposed by the messengers of the Gibeonites between them and Joshua (Josh. ix. 6); of an agreement between friends, such as that between David and Jonathan (1 Sam. xviii. 3); of the contract between husband and wife (Mal. ii. 14).

In forming a covenant various rites were used. The simplest act was that of the parties joining hands, and thereby pledging faith to each other (Ezek. xvii. 18, comp. 1 Chron. xxix. 24). From the earliest times an oath was taken by those entering into the paction (Gen. xxi. 31, 32; xxvi. 28); and sometimes memorial stones, or heaps of stones, were set up as tokens of the mutual engagement (Gen. xxxi. 46). The parties seem also to have feasted together (Gen. xxvi. 30); and this has appeared to some to have formed so essential a part of the transaction, as to have given its name to it (ברית, from ברה to eat; see Lee, *Lexicon* in loc.). Others, however, derive the name from another ceremony frequently observed in the making of covenants, viz., the slaying of sacrificial victims, and the passing of the parties between the parts of the victims laid out for this purpose (Gen. xv. 8-11; Jer. xxxiv. 18, 19). The meaning of this was probably, that they appealed to the Deity, to whom the victims were offered, in attestation of their sincerity, and imprecated on themselves as utter destruction as had befallen the victims, should they prove unfaithful to their pledge. That there is an allusion to this in the phrase commonly used to denote the making of a covenant, כרת ברית, literally to cut a covenant (comp. Gr. *ὄρκια τέμνειν*; Lat. *foedus icere, percutere, ferire*), can hardly be doubted; but that the word ברית itself is derived from this, is asserted without proof. The derivation from ברה, to eat, is favoured by the use of the expression, 'a covenant of salt' (Num. xviii. 19; 2 Chron. xiii. 5). To say that this merely indicates perpetuity, is to say nothing; for all covenants are designed to be perpetual so long as the relations of the parties last; and though salt may be the means of preserving from decay, it is not simply in itself a symbol of perpetuity. The allusion is rather to the eating of salt by the parties as a sign or token of adherence to their engagement. This custom still subsists among the Arabs, with whom no engagement is so strong as one over which the parties have eaten salt (Rosenmüller, *Morgenland* ii., No. 299); and among the Greeks also, salt was the symbol of alliance and friendship (Eustath. ad *Il.* i. 449; x. 648). The physical fact at the basis of this, is probably the antiseptic quality of salt; but it is not of this itself that the salt is the symbol, so much as of the effect thence resulting: as salt preserves from decay, so shall the alliance or contract over which it is eaten be sacredly kept permanent. Hence the injunction, Lev. ii. 13.

II. *God's gracious arrangements for man's behoof.* Among other instances of anthropomorphic forms of speech employed in Scripture, is the use of the term *covenant*, to designate the divine dealings with mankind, or with individuals of the race. In all such cases, the proper idea of a covenant or mutual contract between parties, each of which is bound to render certain benefits to the other, is obviously excluded, and one of a merely *analogical* nature substituted in its place. Where God is one of the parties, and man the other, in a covenant, all the benefits conferred must be on the part of the former, and all the obligations sustained on the part of the latter. Such a definition, therefore, of a divine covenant as would imply that both parties are under conditions to each other is obviously incorrect, and incompatible with the relative position of the parties. Even such a definition as the following:—'Foedus Dei cum hominibus est pro-

missio bonorum cum conditione,' which is that given by Morus (*Epitome Theol. Christ.* p. 160), is objectionable, on the ground of its implying that the exercise of God's grace to man is *dependent* upon something which man has to render to God. We should prefer defining God's covenant with man as a gracious engagement on the part of God to communicate certain unmerited favours to men, in connection with a particular constitution or system, through means of which these favours are to be enjoyed. Hence in Scripture the covenant of God is called his 'counsel,' his 'oath,' his 'promise' (Ps. lxxxix. 3, 4; cv. 8-11; Heb. vi. 13-20; Luke i. 68-75; Gal. iii. 15-18, etc.); and it is described as consisting wholly in the gracious bestowal of blessing on men (Is. lix. 21; Jer. xxxi. 33, 34). Hence also the application of the term covenant to designate such fixed arrangements, or laws of nature, as the regular succession of day and night (Jer. xxxiii. 20), and such religious institutions as the Sabbath (Exod. xxxi. 16; circumcision (Gen. xvii. 9, 10); the Levitical institute (Lev. xxvi. 15); and in general any precept or ordinance of God (Jer. xxxiv. 13, 14); all such appointments forming part of that system or arrangement in connection with which the blessings of God's grace were to be enjoyed. In accordance with this is the usage of the verbs הִקַּמְתִּי, בָּרַתִּי, and שָׂמַתִּי to denote the forming of a divine covenant with man, all of which indicate the perfect sovereignty of God in the matter.

As human covenants were usually ratified by sacrifices, so were the divine covenants; the design of which was to shew that without an atonement there could be no communication of blessing from God to man. Thus, when God made a covenant with Abraham, certain victims were slain and divided into halves, between which a smoking furnace and a burning lamp, the symbols of the divine presence, passed, to indicate the ratification of the promises conveyed in that covenant to Abraham; and here it is deserving of notice, as illustrating the definition of a divine covenant above given, that the divine glory *alone* passed between the pieces; whereas had the covenant been one of mutual stipulation, Abraham also would have performed the same ceremony (Gen. xv. 1-18; cf. Rosenmüller, *in loc.*) In like manner, the Levitical covenant was ratified by sacrifice (Exod. xxiv. 6-8); and the Apostle expressly affirms, on this ground, the necessity of the death of Christ, as the mediator of the new covenant (Heb. ix. 15). In supporting this assertion, the writer uses the term *διαθήκη* in a way which has caused much perplexity to interpreters. The A. V. renders the word by *testament* throughout the context. But the use of *καὶ* here, in contrast with *πρώτη*, as applied to *διαθήκη*, plainly shews that the latter is to be taken in the sense of *covenant* in ver. 15. It is also plain, that in ver. 20 we must give it the same meaning. But can it have this meaning in ver. 16 and 17? The difficulty here arises from the use of *διαθέμενος* in ver. 16. This word denotes properly the person by whom the *διαθήκη* has been made or established; it cannot mean, as some have proposed, 'the victim.' But how can the validity of a covenant be said to depend on the death of him by whom it is made? For to say that the Apostle's meaning is, that man in entering into covenant with God must give himself up to death, and that this is denoted by the sacrifice

he presents (Ebrard), is to offer what is too far-fetched to be accepted. It would seem from this, that we are shut up to the rendering 'testament' and 'testator' here. On the other hand, however, it seems highly improbable that the author would employ a word in the centre of his reasoning in a different sense from that in which it is used throughout the context; and besides, in what sense can it be said that wherever there is a testament it necessarily involves the notoriety or forensic establishment (*φέρεσθαι*) of the death of the testator? or that a will is rendered firm or sure (*βεβαία*) upon dead persons or things, and is invalid so long as the testator lives? The will surely is as good and sure in itself the moment it is duly signed, as it can be at the time of the testator's death, though it does not take effect till then. It is difficult also to follow out the Apostle's reasoning here on the supposition that he is speaking of a testament and a testator. The passage is full of difficulty, and nothing very satisfactory has yet been advanced upon it. The only gleam of light that seems to offer itself comes in connection with the proposal to take *διαθέμενος* in the sense of the *person who establishes or confirms*? It is of this the writer is speaking here; not of the making of the *διαθήκη*, or of the publishing, or of the proving of it, but of the constituting it a firm and stable thing, as is evident from his use of *βεβαία* and *ισχύει* in the next verse. Now, *διατίθεσθαι* is used in the LXX. frequently as the equivalent of *קָיָה*, which properly means *to cause to stand, or to establish or confirm*; and in this sense it is used in relation to a *διαθήκη*, Gen. ix. 17. It is also used in this relation as the equivalent of *קָיָה*, *to constitute, or confirm*, in Josh. vii. 11. In Wisd. of Sol. xviii. 9, we read *τὸν τῆς Θεότητος νόμον διέθετο*, which can only mean, 'they set up or established, or held valid the law of the Deity.' Now, if this rendering be admitted, the difficulty of the passage will somewhat disappear. Christ, says the Apostle, has died to give effect to the first covenant, that depending on his dying; 'for, where a covenant is, there is a necessity that there be adduced (*φέρεσθαι* = *adferri, proferri*) the death of that which confirms it; [and this is necessary], for a covenant is firm over dead [objects], since it is never at any time valid whilst the [sacrifice] which confirms it lives.' The only difficulty left, is that which arises from the use of the masculine *διαθέμενος* here; but may not this be accounted for by the writer having in his mind Christ as the confirmer of that covenant which he had chiefly in his view here?

Of the divine covenants mentioned in Scripture the first place is due to that which is emphatically styled by Jehovah, 'My covenant.' This is God's gracious engagement to confer salvation and eternal glory on all who come to him through Jesus Christ. It is called sometimes 'the everlasting covenant' (Is. lv. 3; Heb. xiii. 20); to distinguish it from those more temporary arrangements which were confined to particular individuals or classes; and the *second*, or *new*, or *better covenant*, to distinguish it from the Levitical covenant, which was *first* in order of time, because first ratified by sacrifice, and became *old*, and was shewn to be *inferior*, because on the appearance of the Christ in dispensation it was superseded, and passed away (Jer. xxxi. 31; Gal. iv. 24; Heb. vii. 22; viii. 6-13; ix. 15-23; xii. 24). Though this covenant was not,

strictly speaking, ratified before the death of Christ, the great sacrificial victim (Heb. xiii. 20), yet it was revealed to the saints who lived before his advent, and who enjoyed salvation through the retrospective power of his death (Rom. iii. 25; Heb. ix. 15). To the more highly favoured of these God gave specific assurances of his gracious purpose, and on such occasions he was said to establish or make his covenant with them. Thus he established his covenant with Noah (Gen. ix. 8, 9); with Abraham (Gen. xvii. 4, 5); and with David (Ps. lxxxix. 3, 4). These were not distinct covenants, so much as renewals of the promises of the everlasting covenant, coupled with certain temporal favours, as types and pledges of the fulfilment of these promises.

The old or Sinaitic covenant was that given by God to the Israelites through Moses. It respected especially the inheritance of the land of Canaan, and the temporal blessings therewith connected; but it stood related to the new covenant, as embodying a typical representation of those great truths and blessings which the Christian dispensation unfolds and conveys.

In the system of a certain class of theologians great importance is attached to what they give technically called 'the covenant of works.' By this they intend the constitution established by God with Adam during the period of his innocence. So far as this phraseology is not understood to imply that man, even in his sinless state, was competent to bind Jehovah by any conditions, it cannot be objected to. It seems also to have the sanction of one passage of Scripture, viz., Hos. vi. 7, which Montanus, Grotius, Castalio, Burk, Rosenmüller, Newcome, Hitzig, and almost all the best interpreters, agree in rendering thus: 'But they like Adam have transgressed the covenant.'

Theologians have also spoken of 'the covenant of redemption,' by which they mean an engagement entered into between God the Father and God the Son from all eternity, whereby the former secured to the latter a certain number of ransomed sinners, as his church or elect body, and the latter engaged to become their surety and substitute. By many the propriety of this doctrine has been doubted; but the references to it in Scripture are of such a kind that it seems unreasonable to refuse to admit it. With it stand connected the subjects of election, predestination, the special love of Christ to his people, and the certain salvation of all that the Father hath given him.

Sometimes a mere human contract is called God's covenant, in the sense of involving an appeal to the Almighty, who, as the Judge of the whole earth, will hold both parties bound to fulfil their engagement. Compare 1 Sam. xx. 8; Jer. xxxiv. 18, 19; Ezek. xvii. 18, 19. Witsius, *De Economid Fœderum*; Russell, *On the Old and New Covenants*, 2d edit. 1843; Kelly, *The Divine Covenants: their nature and design*, etc. Lond. 1861.)
—W. L. A.

COVERDALE, MYLES, is supposed to have been born in 1488, in the district of Coverdale, in the parish of Coverham, near Middleton, in the North Riding of Yorkshire, and to have derived his name from the district of his birth. He studied in the monastery of the Augustines at Cambridge, of which the celebrated Dr. Robert Barnes was prior at that time; was admitted to priest's orders by

John, Bishop of Chalcedon, at Norwich in 1514; and took the degree of Bachelor of Canon Law at Cambridge about 1530. We then lose sight of him until 1535, when he published, on the 4th of October, his translation of the Bible. It will be seen hereafter, that Coverdale must have been on the Continent during this period engaged in the translation and printing of the Scriptures, and that he was admitted to the degree of D.D. at Tübingen whilst there. Two other editions of Coverdale's versions appeared in 1537, and the so-called Mathewe's Bible [CRANMER], which was edited by John Rogers in the same year, also embodies Coverdale's version from the end of Chronicles to the end of the Apocrypha, with the exception of Jonah, which is translated by Tyndale. In 1538 Coverdale was engaged in Paris under the direction of Cromwell, Earl of Essex, in carrying through the press another edition of the Bible with annotations, etc., which was suddenly interrupted by an order from the inquisition. He succeeded, however, in removing the greater part of the impression, together with the type, to London, where he finished it in April 1539, and it was presented to Henry VIII. by Cranmer. In 1540, when his protector Cromwell and his friend Dr. Barnes were executed, Coverdale again went to Germany, took up his abode at Bergzabern in the Duchy of Deux-ponts, where, possessing a knowledge of the German language, he obtained a pastoral charge and kept a school, by which he supported himself. After spending eight years in exile and in poverty, Coverdale was recalled to England in 1548, shortly after the accession of Edward VI., when he married Elizabeth Macheson, a person of Scotch extraction, and was appointed, through the exertions of his friend Cranmer, one of the king's chaplains, and almoner to the queen Catherine. He published a new edition of his Bible in 1550, of which a re-issue with a new title page appeared in 1553, and was consecrated Bishop of Exeter on the 13th of August 1551. This honourable position he did not, however, long enjoy, as at the death of Edward (1553) and the accession of Mary, he, together with other protestant bishops, was deprived of his bishopric and imprisoned, and was only released through the personal intercession of the King of Denmark with the Queen in 1555, when he retired to Denmark. He was subsequently appointed preacher to the exiles in Friesland, and thence invited by the Duke of Deux-ponts to his former charge at Bergzabern. Three years afterwards (1558) we find him at Geneva, where he joined the exiles in the letter they addressed to their fellow-exiles at Basle, Strasburg, Frankfort, etc., entreating them to submit to an amicable agreement on their return home, in such matters of religion as should be agreed upon by authority, and where he also assisted in that translation of the Bible into English which is called the *Geneva version*, the New Testament of this version having appeared in 1557. [GENEVA VERSION]. He returned from his second exile towards the end of 1558, assisted, on the 17th December, with bishops Barlow, Scory, and Hodgkin, at the consecration of Archbishop Parker, took the degree of D.D. at Cambridge in 1563, was presented in 1564 to the living of St. Magnus, London Bridge, which he resigned in 1566, and died in February 1569, at the age of eighty-one. He was buried on the 19th of February in St. Bartholomew's Church, which

stood behind the Exchange, and when this church was taken down in 1840 to make room for the New Exchange, Coverdale's remains were removed to St. Magnus, the church in which he officiated towards the end of his life.

As to the merits of *Coverdale's translation of the Bible*, nothing can be more plain than this great reformer's statement on the very title-page, that he has 'faithfully and truly translated out of Douche and Latin into Englishe,' and his honourable acknowledgment of the 'interpreters' he *has followed*, in the prologue to the Christian Reader—'I have had sondrye translacions, not only in Latyn but also of the Douche interpreters; whom (because of theyr synguler gyftes and speciall diligence in the Bible) I have ben the more glad to folowe for the most parte, accordynge as I was requyred.' And the most cursory comparison of his version with the German-Swiss Bible, published by Froshover in 1531 [ZURICH VERSION], will shew that Coverdale has generally translated this version, and has even followed the Swiss construction and adopted its very *parentheses*. Yet Whittaker in his Historical and Critical inquiry into the Interpretation of the Hebrew Scriptures, asserts that 'if Coverdale's words have any meaning at all, they signify that he translated from the Hebrew' (p. 50), that he mentions the Latin because if he had openly declared that he forsook it for the original Hebrew, he would have rashly endangered his personal safety (p. 51), and that he translated from the Hebrew is evident from the fact that 'he has sometimes deserted all those four versions' (*i. e.*, the Sept., Vulg., Pagninus and Luther). 'One instance, in Is. lvii. 5, will be given at length. It is so remarkable an illustration of the preceding observations and so highly honourable to the venerable translator, that it may be considered as *singly* sufficient in deciding this point' (p. 52). Whittaker then gives the different renderings of the Sept., Vulg., Pagn., and Luther, and shews how Coverdale deviates from all of them. We cannot do better than give Coverdale's version of this very passage, and the Swiss, in parallel columns.

Coverdale's Version,
Is. lvii. 5.—Ye take
yours pleasure vnder the
okes, & vnder all grene
trees, the childe beyng
slayne in the valleys, &
dennes of stone.

The Swiss or Zurich
Bible, Is. lvii. 5.—Ir
habend hitzen genom-
men vnder den Eychen,
vnder allen grünen böu-
men, die kind in den
toblen gemetzget, vnd in
den hülinen der velsen.

Nothing can be more literal, and be it remembered that Coverdale here follows word for word the Swiss Bible, though the Swiss deviates from the Hebrew as well as from all the ancient versions. Yet this is the passage which not only convinced Whittaker that Coverdale's version is made from the Hebrew, but which has led Anderson (*Annals*, i. 564) and others to make assertions equally strong. Now the fact that Coverdale translated the Swiss Bible clears up two difficulties which have hitherto been felt in connection with his life and biblical labours, viz., to find out the place where he was when he suddenly disappeared between 1529 and 1535, and where the first edition of his Bible was published. Henceforth there can be no doubt that Coverdale was during this period with Christopher Froshover,

the celebrated patron of the English Reformers who were exiled in the reign of Queen Mary, and printer of protestant versions of the Bible, and that his translation was printed by Froshover. The latter point is moreover corroborated by the type, which is the same as that in which Froshover's Bibles are printed. The limits of the article preclude a more minute investigation of this subject. We must therefore refer to our Historical and Critical Commentary on Ecclesiastes, Longman 1861, Appendix ii., where the subject is more fully discussed.—C. D. G.

COW. [BAQAR; SHOR.]

CRADOCK, SAMUEL, B.D., an eminent and learned nonconformist divine, born in 1672. He was educated at Emmanuel College, Cambridge, of which he became fellow, and was presented to the college living of North Cadbury. He was one of the famous two thousand ejected for nonconformity in 1662; when he retired to an estate of his own at Wickham Brook where he died in 1706. He wrote and published the following works in biblical literature. *The History of the Old Testament methodized according to the order and series of Time; in which the difficult passages are paraphrased, the seeming contradictions reconciled, the rites and customs of the Jews opened and explained: To which is annexed a short History of the Jewish affairs from the end of the Old Testament to the birth of our Saviour*, folio, Lond. 1683. *The Harmony of the four Evangelists and their Text methodized; seeming contradictions explained, etc.*, folio, Lond. 1688. *The Apostolical History: also A Narration of the Times and Occasions of the Apostolical Epistles, together with a brief Paraphrase on them*, Lond. 1672, folio. *A brief Exposition of the Revelation*, Lond. 1692. All these works bear the distinct stamp of their author's mind. They are serious and solid; full of well digested thought, clear in their arrangement, and unaffected in their style. They have been greatly recommended by Archbishop Tillotson, Bishop Reynolds, and others. Dr. Doddridge says, 'They are very valuable; and I think I never, on the whole, read any one author that assisted me more in what relates to the N. T.'—W. J. C.

CRAMER, JOHANN ANDREAS, was born in Saxony, 29th January 1723. In 1742 he went to Leipzig to study theology. In 1748 he became pastor at Crellwitz, whence he was soon transferred to Quedlinburg; and in 1754 to Copenhagen, as German court-preacher to the Danish king Frederick V. Here he was most highly esteemed. In 1771, having been deposed from his office, he went to Lübeck as superintendent; and in 1774 became professor of theology in the university of Kiel. Here he lived and laboured till his death, which took place in June 1788. Cramer was a poet as well as a theologian, and exerted an important influence on the development of German poetry, and the improvement of the language. He published a *Poetische Uebersetzung der Psalmen* in 4 parts, 1755-64; *Der Nordische Aufseher*, 1758-60, 3 vols.; *Andacht in Gebeten, Betrachtungen und Liedern ueber Gott, seine Eigenschaften und Werke*, 2 parts, 1764-65; *Evangelische Nachahmungen der Psalmen David's und andere geistliche Lieder*, 1769; *Neue geistliche Oden und Lieder*, 1775; and his collected poems were finally published at Leipzig

in three parts, '*Sämmtliche Gedichte*,' 1782, 1783. Along with Klopstock, he prepared and published a general '*Gesungbuch zum Gebrauch in den Gemeinden des Herzogthums Schleswigholstein*, Kiel, 1780.—S. D.

CRANE. [AGUR; SUS].

CRANMER, THOMAS, the first Protestant Archbishop of Canterbury, and 'the great master-builder of the Protestant Church of England' (Le Bas), was born July 2, 1489, at Aslacton, in the county of Nottingham. His father, according to Strype, was 'a gentleman of right ancient family, whose ancestor came in with the Conqueror.' In this work it is only with his exertions for the translation and propagation of the Holy Scriptures that we have to do. In this achievement Cranmer's name stands out in bold relief with those of Wycliffe, Tyndale, Coverdale, Parker, and many others, who wrought either by their learning or their influence in the long labour of two centuries and a half in giving to the nation the English Bible. We propose to give a brief description of Cranmer's share in this great work, referring for authorities to the two excellent editions of the Martyr's Remains,* which have been published within the last thirty years. (I.) From the first moment of his advancement Cranmer was impatient for the circulation of the Scriptures in the vulgar tongue; and in 1534 he had actually prevailed on the Convocation to frame an address to the king beseeching him to decree that the Bible should be translated into English, and that the task should be assigned to such honest and learned men as his Highness should be pleased to nominate. The king consented after much persuasion. The archbishop, in pursuance of his design, divided Tyndale's translation of the N. T. into nine or ten parts, which he distributed among the most learned bishops of the time, requiring that each of them should send back his portion carefully corrected by an appointed day. The project was strongly resisted by Stokesley, Bishop of London, and the Romish party, and eventually fell to the ground; not, however, until some advance had been made in critical labour, which Cranmer probably turned to account afterwards in his own revision of the Great Bible (see *below*). But amidst these disappointments, he had the joy of receiving at his house at Ford, near Canterbury, an impression of the whole Bible in English, which had been completed under his private encouragement by two enterprising publishers, Grafton and Whitchurch. It appeared in one great folio volume, known by the title of *Matthew's Bible*. This name was, however, undoubtedly fictitious. The translation seems to have been mainly a reprint of that which had been a year or two previously published by Coverdale and Tyndale; the printing was conducted abroad; the uncertainty of the place, no less than the fictitiousness of the editor's name, affords proof of the perilous nature of the undertaking. Foxe and Strype allege Hamburg as the place, Mr. Lewis,

* 1. *The Remains of Thos. Cranmer, D.D., Archbishop of Canterbury, collected and arranged by the Rev. Henry Jenkyns, M.A., etc.*, Oxford, 1833, 4 vols. 8vo.

2. The two large vols. of the Parker Society, edited by the Rev. John Edmund Cox, M.A., Lond. 1844-46.

Marpurg, in the province of Hesse; there can be little doubt that the work was executed at some German press. It appears on comparison with Tyndale's edition of 1534 that the N. T. of this Bible was substantially a reprint of that martyr's version—there are not many alterations. The Pentateuch is also Tyndale's, with certain small variations, in which Coverdale's assistance seems to have been resorted to. From Joshua to Chronicles we have probably the translation made by Tyndale, but left unpublished by him. The rest of the O. T. is Coverdale's, slightly revised. Some of Tyndale's prologues and notes are retained, and at the end of the O. T. the letters W. T. are printed in very large letters curiously flourished. Beneath the *nominis umbra* of the title-page, Thomas Matthew, Foxe (folio iii. 98) expressly says was concealed the honoured name of John Rogers, the proto-martyr of the Marian persecution, and the friend of Tyndale. In confirmation of the general opinion of Rogers' connection with the work, there is found prefixed to the Bible an exhortation to the study of the Holy Scriptures, with the initials J. R. appended at the close. And that Rogers assumed the name of Matthew is corroborated also by the curious fact that in Mary's reign he was condemned to be burnt by the name of Rogers *alias* Matthew. On receiving with so much joy this complete work, Archbishop Cranmer at once dispatched a copy to Cromwell with a letter (Jenkyns, i. 196, 197; Parker Society, *Letters*, etc., p. 344), highly commending the translation as 'better than any other heretofore made,' and earnestly entreating the powerful viceregent to use his best endeavours to 'obtain his grace [the king] a licence that the same may be sold, and read of [by] every person without danger,' etc. This letter was dated 'at Forde, the 4th day of August [1537].' In the next year occurred the memorable event, for the first time in our history, of the *authoritative publication of the English Bible*. (Stow, *Annals*, as quoted by Jenkyns, i. 200, note i.) II. In the year 1539 appeared the first edition of *The Great Bible*, a revision of Matthew's Bible. In the April of the following year another edition appeared, with this title, *The Byble in Englyshe, that is to saye, the content of at the Holy Scrypture, both of ye Olde and Neue Testmt., with a prologe therunto made by the Reverende Father in God, Thomas, Archbishop of Canterbury*. (Printed by Richard Grafton. Cum privilegio ad imprimendum solum, MDXL.) This 'prologue' seems to have been afterwards inserted in some copies of 1539, and the two editions have been often confounded. But on a critical examination of the two, the latter is found to contain very different renderings; e.g., Is. lvii. is added as varying in its translation conspicuously in the two editions. As Cranmer evidently wrote the preface for the latter edition, it is probable that the considerable revision apparent in this edition was the work of the archbishop also; probably he availed himself at last of the corrections made in the old version by the bishops to which we have already referred. A letter of the primate is extant (Jenkyns, i. 290; P. Soc., *Letters*, p. 396), in which he alludes to this preface, which he had submitted to Cromwell that he might ascertain the king's pleasure about its publication with the Bible; the author trusted that, 'so his Grace allowed the same, it might both encourage many slow readers, and also stay

the rash judgments of them that read.' This prologue or preface is reprinted in Jenkyns (ii. 104-117), and the Parker Society's vol. (*Misc. Writings and Letters*, p. 118-125). It was an intense satisfaction to the noble heart of Cranmer to find his efforts for the better understanding and circulation of the Scriptures among all sorts of people so well appreciated. 'It was wonderful,' says Strype (*Life of Cranmer*, vol. i., p. 91), 'to see with what joy this book of God was received, not only among the learned sort and those that were noted for lovers of the Reformation, but generally all England over by the vulgar and common people; and with what greediness God's word was read, and what resort to the places where the reading of it was.' When the Romish party got the ascendancy later in Henry's reign, the king grew more averse to Scripture translation. On one occasion Gardiner, Bishop of Winchester, and his party, proposed a new translation of the N. T., with the ill-concealed object of frustrating the influence of the vernacular versions by publishing a sort of travestie of the Latin Vulgate, nominally giving the people the Scriptures, but at the same time obscuring their sense in unintelligible phraseology. The archbishop signally defeated this insidious mischief by inducing the king (whose invariable protection and favour to Cranmer is the best trait of his fame) to decree that all further revision of Scripture versions should be referred to the universities. Throughout the reign of Edward VI., Cranmer's Bible was the authorised version. Nothing like a new translation was executed. One indeed was projected, but circumstances set it aside. Bucer and Fagius were invited into England by Cranmer and Protector Somerset. 'As it had been a great while Cranmer's most earnest desire that the Holy Bible should come abroad in the greatest exactness and true agreement with the original text, so he laid this work upon these two learned men: first, that they should give a clear, plain, and succinct interpretation of the Scripture, according to the propriety of the language; and, secondly, illustrate difficult and obscure places, and reconcile those that seemed to be repugnant to one another. And it was his will and advice, that to this end and purpose their public readings should tend. This pious and good work by the archbishop assigned to them they most gladly and readily undertook. For their more regular carrying on this business, they allotted to each other, by consent, their distinct tasks. Fagius, because his talent lay in the Hebrew learning, was to undertake the O. T., and Bucer the New' (Strype's *Life of Cranmer*, i. 281). The archbishop's project, however, was soon after disappointed by the illness and death of his distinguished friends. If he could not gratify his desire to secure the very best translation possible in that age, Cranmer wisely laboured to encourage the careful study of that which existed. Archbishop Cranmer's various services of a *literary* description in connection with the progress of the Reformation are enumerated and described chronologically with great accuracy, perspicuity, and a masterly knowledge of the subject, in Mr. Jenkyn's *preface* to his edition of Cranmer's *Remains*, to which we have so often referred. Cranmer's well-known death of a martyr at the stake took place in the Broad Street, Oxford, in front of Balliol College, March 21, 1556.—P. H.

CRATES (Κράτης) is mentioned, 2 Maccab. iv. 29, as the governor of the Cyprians (τὸν ἐπὶ τῶν Κυπρίων), and as left by Sostrates eparch of the Acropolis in his place, when summoned before Antiochus Epiphanes.—†.

CREATION—the origin of the material world, and of the life with which it has been adorned—has been aptly termed ‘the mystery of mysteries.’ The exercise of infinite power by an infinite Being must of necessity transcend all human thought and experience; and, apart from revelation, we can only know that some power has been exercised by our witnessing the effect produced. Much, nevertheless, concerning the wondrous works of the creation can be reached by the mind of man. The steps by which the formation of this planet, the stage of our existence, was built up from its chaotic foundations—the order in which life, in its various forms, has been poured out upon it, and the laws which have regulated the execution of the mighty work, are items of knowledge to which the human intellect may be guided by the lights of physical science and inductive philosophy; but the Bible alone furnishes us with the information that the Almighty was the designer and architect of the fair fabric, the creator of its various inhabitants; and that he has been present with, and sustaining, his work in all its stages from the beginning. It is plain, therefore, that in the study of the vast subject of the works of the creation, the man of science can no more reject or overlook the teachings of Scripture, when it is proved to be a divinely inspired revelation, than the religionist can ignore the facts of science, when they have been established by faithworthy evidence; and yet, the errors which have operated most prejudicially to the development of truth, have arisen from the unnatural hostility which has existed between the two classes of inquirers—those who have been seeking it in His Word, and those who have been seeking it in His works. In this article we shall endeavour to shew, not only that there is no variance between the testimonies of these two labourers in the cause of truth, but that, while, on the one hand, the Mosaic narrative of the creation has been authenticated to be of divine origin by the discoveries of the philosopher, so, on the other, the teachings of that revelation have furnished the philosopher with truths, regarding the origin of life, that science is powerless to supply.

It is a fact of vast moment, and of interest the most profound, that the book of Genesis, the most ancient written record that is known to be in existence, opens with a history or detail of all that is pre-eminently ancient in the world, using that term in its largest sense. It reaches back through the unmeasured space of time to ‘the beginning,’ when the heaven and the earth were called into being by the word of the Creator; and after recording in concise and simple language a progressive furnishing of our planet with light, and its various forms of life, the work of the Almighty is crowned with the creation of man, made in his own image, endowed with intelligence, reason, and responsibility, the ordained head and master of all the creatures with which he was surrounded. With the exception of some rude and traditional fables of heathen writers of antiquity, we have no reason to suppose that any other record of the order and manner of the creation was known to, or suggested by, any

of the human race until a comparatively recent period, though the materials for such a record were everywhere to be found, and no person of common observation could fail to perceive that the remains of innumerable organisms, both animal and vegetable, which had lived and died on our planet, were to be discovered in the rocks and stones which compose its crust. But all was silent in this vast cemetery of bygone generations of life; and those valuable testimonies of pre-Adamite existences remained an undigested and apparently chaotic mass, until the persevering industry and patient research of the geologists of these latter days reduced confusion to system and order, and presented to view a consistent and intelligible record of the various phases which the globe has presented, and the successive races of animals and plants with which it has been adorned, from the beginning to the human era.

The sciences of geology and palæontology cannot be said to have been in existence for more than eighty years. But they had scarcely begun to assume the form and lineaments of sciences, when that jealousy, which has never since the days of Galileo ceased to exist to some extent between the religionist and the natural philosopher, began to evince itself. The religionist was alarmed by rumours that the rocks, under the searching eye of the geologist, disclosed a state of facts which was wholly at variance with the Mosaic detail of the manner and order of the creation; and the studies of the geologist were, without much inquiry, condemned and denounced, in no very measured terms, as destructive of the doctrine of the divine inspiration of the Scriptures, and as infidel in their inception and tendency. On the other hand, the man of science was not slow in retorting, that if the record of Moses was of divine origin, it had nothing to apprehend from the development of facts; and that if it could not bear the test of physical truth, it must give way, even though it stood on the threshold of the treasury of inspiration; for that, in such a crisis, the testimony of the senses with which man has been endowed for his guidance must prevail against mere matters of faith. In argument the man of science had the advantage, but in practice he erred, by too frequently assuming geological facts and Scripture interpretation without sufficient inquiry; and so contributed, by hastily formed conclusions, to put asunder the word and the works of God, which, by the decrees of Omnipotence, must ever be joined together.

The contest in its early stages was carried on by those religionists who construed the Mosaic days of the creation to have been six successive natural days of twenty-four hours each, measured by the revolution of our globe on its axis; and the objection of the geologist was founded on the obvious impossibility or absurdity that the world could have been stocked with the various animal and vegetable organisms, whose remains have been found in the crust of the earth, in the brief period of the six natural days that preceded the birth of Adam. The evidence was incontrovertible, that for untold ages before that event generation upon generation of extinct animals had lived and died upon the earth.

To meet this difficulty, which threatened to blot out the first page of the Scriptures as an inspired revelation, and which was obviously subversive of the authenticity and inspiration of all Scripture, a host of champions arose, who, instead of examining

with patience, and testing with care, the alleged facts of geology, recklessly denied their existence, or sought to explain and account for them as wholly inadequate, and in many instances, on false and absurd principles and grounds. Some ascribed the existence of fossil remains to the flood in the days of Noah; others, to what was termed a plastic power that existed as one of the natural laws of matter; and others again insisted that the various systems of rocks were created by the fiat of the Almighty with the fossil remains of animals that had never lived, and of plants that had never grown, imbedded in them. These were the reasonings of Granville Penn, Fairholm, Kirby, Sharon Turner, Gisborne, Taylor, Dean Cockburne, etc.; and of them it is unnecessary to say more, than that the progress of scientific discovery has extinguished their arguments, not only without injury to the cause of Scripture truth, but with the effect of establishing it on a surer basis.

Another class of inquirers sought to solve the difficulty by conceding the well-established facts of geology and the geological explanations of those facts, but suggesting that the imperfection of our knowledge of the original Hebrew, at the present day, was such as to preclude all certainty of a right interpretation of its meaning. This was the position of Babbage; while Baden Powell insisted that the narrative of the creation is couched in the language of mythic poetry, and was not intended to be a historical detail of natural occurrences. It is satisfactory to know that the necessity for arguments so injurious in their tendencies to the cause of the truth and integrity of the Bible no longer exists; for the precision of the Mosaic phraseology will be found confirmed by every step that has been taken in the development of the truths of geology.

At an early period of this controversy, Dr. Chalmers, whose sagacious mind and prudent foresight comprehended the importance of this issue between the facts of geology and the language of the Scriptures, propounded the proposition, that 'the writings of Moses do not fix the antiquity of the globe,'—that after the creation of the heavens and the earth, which may have comprehended any interval of time and any extent of animal and vegetable life, a chaotic period ensued, when death and darkness reigned upon our globe, and the earth became, in Scripture language, 'without form and void,' and all that had previously existed was, by some catastrophe, blotted out, and a new world of light and life produced, by fiats of the Deity, in a period of six natural days, closing with the birth of Adam; and thus the world which now exists was cut off from that which preceded it by a period of black chaotic disorder. The geologist had thus ample room for the existence of all the organisms whose remains are found in the rocks that compose the crust of the earth; and he might labour in his investigation of the nature and order of geological events, without endangering the truth of the Mosaic record of the creation.

The position of the learned theologian did good service throughout the years in which the science of geology was attaining to its present stature and state of development, and emancipating itself from the errors and imperfections of the days of its infancy. But time rolled on, and geological science, in its progress to maturity, accumulated facts that proved the proposition of Dr. Chalmers to be based on a fallacy; and the evidence became abun-

dant, and sufficient to establish, as a well-ascertained truth, that between the animal and vegetable existences of the primeval or pre-Adamite world and those of our own era, no interruption or blank has occurred, inasmuch as many of the existing species were contemporaneous with some of these that we know to have become extinct long before man was an inhabitant of the globe. Thus the position of Dr. Chalmers, which requires a complete interruption of pre-existing organisms, falls to the ground.

To avoid this difficulty, Dr. Pye Smith, in his *Geology and Scripture*, suggested that the chaotic period had been confined and limited to one particular portion of the earth's surface, viz., that part which God was adapting for the dwelling-place of man and the animals connected with him. This section of the earth he designates as 'a part of Asia lying between the Caucasian range the Caspian sea and Tartary, on the north, the Persian and Indian seas on the south, and the mountain ridges which run, at considerable distances, on the eastern and western flanks;' and he suggests that this region was brought by atmospheric and geological causes into a condition of superficial ruin, or some kind of general disorder. This theory left to the geologist his unbroken series of plants and animals in all parts of the world, with the exception of this particular locality. But the explanation was never received with favour; and was obviously inconsistent with the language of Scripture, inasmuch as the term 'the earth,' in the first verse of the first chapter of Genesis, embraces the whole of the terrestrial globe, and 'the earth' that is, in the next verse, described as 'without form and void,' cannot be more restricted in its meaning and extent.

But, while the accumulation of scientific facts took from the champions of the authenticity and inspiration of the Mosaic record the position they had so long maintained against their adversaries, those facts, at the same time, furnished materials for the foundation of an argument of a more sound and satisfactory character, which operates, not only to rescue the Mosaic account of the creation from the imputation of positive misrepresentation (which was all that the propositions of Chalmers and Pye Smith assumed to do), but has added confirmation to the truth of the details which are presented to us in the first chapter of the Bible—supplying evidence that must satisfy every reflecting mind desirous of truth, that the pen that wrote the biblical history of the creation must have been guided by the omniscient Spirit of the most High.

The scheme of reconciliation of Scripture and geology to which we refer, has for its foundation the assumption that the Mosaic days designate periods of vast and undefined extent—that the six days of creation portray six long periods of time, which commenced with 'the beginning,' and have succeeded each other from thence through the various scenes depicted by Moses, up to and inclusive of the creation of man; and that the seventh day, on which God rested from his work of creation, is still current. Against such a construction of the word 'day,' in the Mosaic record, 'there is no sound critical or theological objection.' This is the admission of Dr. Buckland, who was one of the advocates for the natural day interpretation, and who would undoubtedly have adopted the word in its extended sense, if he could have reconciled the order of the creation as it appeared on the geological record which was in existence when the

Bridgewater Treatise was written, with the order of the creation recorded by Moses. Long before the question had assumed the importance and interest which the discoveries of geology have given to it, many well-informed philologists advocated the opinion that the Mosaic days were periods of long duration. Among the Jews, Josephus and Philo, and of Christians, Whiston, Des Cartes, and De Luc, have so expressed themselves; while of those who have written with full knowledge of geological facts, we have Cuvier, Parkinson, Jameson, Silliman, and Hugh Miller—all of them holding the opinion that the Mosaic days of creation were successive periods of long duration.

The argument against this interpretation of the word 'day,' derived from the language of the lawgiver in the institution of the Sabbath, has not been considered by the best biblical philologists as of weight sufficient to induce the rejection of an interpretation that will be found to satisfy all the requirements of geological science. The learned commentators, to whose opinions we have already referred, did not estimate the objection as of a serious, much less insurmountable, nature; and they evidently considered the allusions made by Moses, in the 20th chapter of Exodus, to the six days of creation, to have been by way of illustration or example, and not as the enunciation of a physical truth—that as God had made and furnished the world in six of *His* periods of time, and rested from his work, so man is to labour for *his* six periods of time, and to rest on the seventh.

The consistency or harmony of these two records of the creation—that of Moses and that of the geologist—has, in the foregoing interpretation of the word 'day,' been traced and vindicated by the late Hugh Miller in a lecture delivered by him to the 'Young Men's Christian Association' in the year 1855, and afterwards republished in *The Testimony of the Rocks*, and also by Dr. M'Causland in his *Sermons in Stones*. The former traced the consistency between the facts of geology and the events recorded by Moses as having occurred on the third, fifth, and sixth days or periods of creation, stating, that as a geologist, he was only called on to account for those three of the six days or periods, inasmuch as geological systems and formations regard the remains of the three great periods of plants, reptiles, and mammals, and those only; and 'that of the period during which light was created—of the period during which a firmament was made to separate the waters from the waters—or of the period during which the two great lights of the earth, with the other heavenly bodies, became visible from the earth's surface, we need expect to find no record in the rocks.' But the author of the latter work (*Sermons in Stones*) has proceeded further, to shew that geology confirms and establishes the truth of every statement in the record of Moses, from the beginning down to the creation of man—the original state of the globe 'without form and void'—the first dawn of light—the formation of the firmament, and the separation of the waters below from the waters above it—and the first appearance of the sun, moon, and stars, on the fourth day, intermediate between the creation of the vegetable world on the third, and the creation of the creeping things and birds on the fifth day.

A succinct sketch of the state of our knowledge of the physical structure of the earth, and of the

progressive introduction of the animal and vegetable creations with which it has, from time to time, been furnished, will enable the reader to satisfy himself of the harmony that exists between the word and the works of the Almighty Creator and Governor of the world. But for the more ample details of geological science, he must consult the following works:—*Lyell's Principles of Geology*; *Buckland's Bridgewater Treatise*; *Murchison's Siluria*; *Ansted's Practical Geology*; *Mantell's Medals of Creation*; *Miller's Old Red Sandstone*; *Jukes's Manual of Geology*; *Page's Advanced Text Book of Geology*, and the several other works to which reference will be found in the foregoing books.

The crust of the earth is composed of rocks, which have been formed, some by the action of fire, such as granite, basalt, porphyry, and greenstone, which are termed igneous rocks, and some by sedimentary deposit at the bottom of water, such as sandstone, limestone, shale, etc., which are known as aqueous or stratified rocks. Igneous rocks were first formed; and on these, from time to time, through the long ages of our planet's existence, were deposited the many successive layers of sedimentary stratified rocks, in which are found the fossil remains of the animals and plants which were in existence during the several periods of deposition. These layers of rocks have been frequently and extensively, throughout these eras of their formation, broken up and distorted by volcanic action, and the protusion of igneous rocks from beneath, upwards, and through them; and by which the mountain ranges, in all parts of the earth, have been elevated, and those diversities of land and sea which the face of our planet presents, have been formed.

The first aspect of the globe which the investigations of the cosmogonist have enabled us to realize, present to view a viscid igneous ball revolving on its axis, and wheeling its annual course around the sun, its centre of attraction. Its present oblate spheroidal form, flattened at the poles and elevated at the equator, is the exact form that a liquid sphere of the size and weight of the earth, revolving on its axis in twenty-four hours, would assume; and the still prevailing central heat, which is indicated by the gradual increase of temperature as we descend in mines from the surface in the direction of the earth's centre, reveals the igneous origin of the mass. The gradual cooling down of this fiery sphere, by radiation into space, would result in the formation of a crust of granite or some other igneous rock on the surface; and as the cooling progressed, the gases which are the constituents of water, and which are kept asunder by intense heat, would naturally combine, and thus the crust, in process of time, would be covered with an ocean. Thus we have all the elements requisite for the production of the first series of sedimentary rocks, which were formed out of the disturbed particles or detritus of the igneous crust at the bottom of the waters which encircled the globe. The lowest of our sedimentary rocks, gneiss and mica schist, which rest on the primordial granite, or some other rock of igneous origin, are found, on inspection, to be composed of the debris or broken particles of granite; and so far the foregoing theory of their origin is confirmed. This series of rocks has been styled 'metamorphic,' from the great change that has been wrought in their structure by the action

of the intense heat to which, at the time of their formation, they must have been exposed, and by which they have been partially crystallized, and their lines of stratification obliterated. They form a portion of that vast pile of the bottom rocks which have been termed 'the Cambrian,' and which have been calculated to be 25,000 feet, or nearly five miles, in depth or thickness.

Throughout the long ages occupied by the deposition of the mass of sediment of which these bottom rocks are composed, the temperature of the globe must have been very high, though gradually becoming more cool; and the traces of animal life in them are extremely rare and difficult to detect and identify. The scanty fossil remains which have been discovered by the industry and research of the geologist, reveal no type of animal life of a higher order than the zoophyte (a creature partly of animal and partly of a vegetable nature), annelids or sea-worms, and bivalve mollusks—all of them marine creatures devoid of the senses of sight and hearing; and with them have been found traces of fucoids or sea-weeds, but no land vegetation. In fact, all that has been discovered of organic matter in these rocks indicates a beginning of life at the time of their formation, and a beginning of life in the lowest and most humble of its forms.

Now, comparing this picture of the birth and infancy of our planet with the Mosaic description of the first day, or era of the creation, we shall find a remarkable coincidence between the revelation and the state of nature which the study of the rocks discloses to have prevailed at this early period of our planet's existence. 'The earth was without form and void'—unshapen and unfurnished—a conglomeration of gaseous elements, without animal or vegetable life within its chaotic precincts; and such must have been the aspect of our planet in its gaseous state, and when the igneous crust was in process of formation, and in the early stages of the Cambrian system, when it was nothing more than a dark and untenanted watery waste. 'And the Spirit of God moved on the face of the waters,' or, the life-giving spirit of the Creator brooded (for such, according to Gesenius, is the proper translation of the Hebrew word *מְרַחֵף*) on the waters,

vivifying or impregnating them with life, in the form of those first-born submarine creatures—zoophytes, annelids, and bivalve mollusks, all of them devoid of the organs of sight, which is some evidence that, conformably to the Mosaic record, life was on the earth before that light had penetrated to the surface through the encircling vapours which were produced by the central heat acting on and evaporating the waters of the great deep. The rays of the sun had not struggled through the misty zone that was wrapped round the tepid globe; but, by their gradual refrigeration, the vapours became less dense and opaque, and when God said, 'Let there be light,' there was light. Light was progressive on the face of the earth, lurid and dim; but still it was light, such light as that which visits the earth through a dense fog. Day and night succeeded each other. Evening was and morning was day one (for such is the proper translation of the Hebrew phrase which has been rendered, 'The evening and the morning were the first day'), though the daylight must, at that early date of its existence, have been of a twilight nature; and long ages must have elapsed before that the heat had

cooled down sufficiently to permit the orbs of sun, moon, and stars, to become visible to an eye situate at the earth's surface. This will be found to be the true explanation of the phenomenon of the appearance of the heavenly orbs on the fourth day.

The long era of the Cambrian formation was succeeded by another as extensive, during which the rocks which have been denominated 'the Silurian,' were formed, by sedimentary deposits, to the depth of 30,000 feet. The fossil remains of animals throughout this formation are abundant, and disclose the zoology of the era to have been confined to submarine invertebrates, zoophytes, mollusks, and crustaceans; and no vertebrate animal appears until the close of the era, when the remains of fishes are found in the beds which lie at the top of the Silurian, and just beneath those of the next formation. In the same place, the first traces of land vegetation make their appearance. But the animal and vegetable life of what may be properly termed the Silurian era was marine invertebrate. Light to some extent must have pervaded the earth during this period; for many of the mollusks, and all of the crustaceans, were furnished with eyes, some of them, as in the instance of the trilobite, of a peculiarly elaborate, and perfect structure. It appears to be a law of nature, that animals whose entire existence is passed in darkness, are either wholly devoid of the organs of sight, or, if rudimentary eyes are discoverable, they are useless for the purposes of vision, as exemplified in the animals of all orders, from the mollusk to the mammals, which have been discovered in the caverns of Illyria, and other caverns of South America, mentioned by Humboldt, in the Mammoth Caves of Kentucky, in deep wells, and in depths of the sea where no ray of light can penetrate. From this it follows, that the presence of a perfect eye proclaims the presence of light.

The Mosaic record of the creation of the second day portrays the formation of the firmament or atmosphere in language strangely accurate for one who, like Moses, must have been ignorant, not merely of the nature and offices of our atmosphere, but of its very existence. The Hebrew word which has been translated 'firmament' means 'expanse;' and there was no other word in the language descriptive of that which divides the waters which were above, in the clouds, from the waters which were below, upon the earth. The use of the expression, therefore, denotes their ignorance of that beautiful structure which is designated by our term 'the atmosphere;' and yet one out of the six days of the creation is set apart by Moses for its construction. On that day, therefore, the elastic fluid of the atmosphere was wrapped around our globe; and that it must have come into existence before the end of the Silurian era, is manifest from the fact of *vertebrate* fish having sported in the Silurian seas, inasmuch as animals of that description require the assistance of air to support their bodies in swimming through the waters. Land vegetation also appeared simultaneously with the fish, and atmospheric air was necessary for its existence.

The system that succeeded the Silurian was that in which the Devonian or Old Red Sandstone rocks were formed; and all geologists concur in stating, that the position in which these rocks are found indicates that the era was ushered in by violent

commotions, during which most of the principal mountain ranges in the world were thrown up. The fossil remains of this era, during which sedimentary rocks, which are calculated to be about 10,000 feet in thickness, were formed, present to our view, in addition to the previous existing orders of animals, vertebrate fish of the Placoid and Ganoid species. These have been graphically described by Hugh Miller, in 'The Old Red Sandstone,' as cartilaginous, and clad in strong integuments of bone composed of enamelled plates, instead of the horny scales which form the covering of the fish of the present day; and it has been suggested by Dr. Buckland, that this hard coating may have formed a defence against the injurious effects of water of a high temperature. The first traces of land vegetation have been found at the top of the Silurian, where the Old Red Sandstone rests on it, a circumstance that, coupled with the remarkable terrestrial convulsion which prevailed at the commencement of the system, confirms the Mosaic description of the work of the third day, viz., the first appearance of dry land above the waters, and the bringing forth of grass, herbs, and trees yielding fruit, each after its kind. The fossil remains of a small reptile, which is stated to have been found in a rock at the top of the Old Red Sandstone, have been supposed to be the first traces of terrestrial life upon the globe; but Professor Owen is of opinion, that the rock in question does not belong to the Old Red Sandstone formation, but to another long subsequent—the Trias.

The system that succeeded the Devonian is the Carboniferous, which is one of importance and interest to mankind, as having been the period of the formation of coal, iron, and the mountain limestone—a combination of products that have contributed so largely, in these latter days, to the comfort and convenience of the human race. The coal-measures, it is well ascertained, are the produce of profuse and extensive vegetation, and the nature of the plants of which it has been formed, are easily discoverable by a close examination of the mineral itself, which, on inspection, discloses them to have been almost entirely of the cryptogamic order, and such as would be produced in abundance in positions of *shade, heat, and humidity*. Ferns, calamites, and esquisitaceous plants preponderate, and wood of hard and ligneous tissue, which is, in a great measure, dependent on the unshaded light of the sunbeam, is of rare occurrence in this formation—while season rings, which result from the impact of the direct rays of sunlight on the tree, are not found at all in the fossil woods of this or the previous formation, though they appear in those of the succeeding systems. These phenomena (among others) indicate that, throughout the carboniferous era, the vapours that had been lifted up and sustained by the atmosphere from the time of its formation, had not been penetrated by the rays of the sun; or, more properly speaking, the clouds had remained unbroken between the sun and the earth; and at, or soon after its close, there must have been an increase of the luminous principle. Until the central heat had cooled down, the clouds that had been formed and fed by the steaming vapours of the tepid waters of the globe, must have continued to intercept the rays of the sun; and until they were dissolved, as we have reason to know they were at the close of the carboniferous era, the celestial bodies must have been invisible

to an earthly eye. But the veil of clouds having passed away, letting in the unclouded light of the sun, moon, and stars, and thereby revealing their orbs to earthly eyes, the accuracy of the Mosaic description of the first appearance of those heavenly bodies at this time, to be from thenceforth 'for signs and for seasons, and for days and years,' has been fully vindicated.

In confirmation of these views, it is remarkable that other geological phenomena, besides that of the absence of the season rings in the trees, indicate that there was no variation of seasons on our earth before the close of the carboniferous era. Temperature appears, up to that period, to have been tropical and uniform in all latitudes; for the fossil remains testify that the animals and plants that lived and grew in the carboniferous and preceding eras, at the equator, were of the same species as those that lived and grew at the same period in the arctic regions—and the coal-measures are as abundant in the high latitudes as in the temperate and tropical zones. These phenomena can only be accounted for by the continued prevalence of the central heat, and the consequent neutralization of the effect of the sun's rays, the influence of which now operates to produce the variety of seasons. The climatal condition of the earth in those ages must have been similar to those of a vast humid hothouse shaded from the direct radiance of the sun—and which would be eminently conducive to the production of a prolific vegetation, such as that which has been stored up in our extensive coal-measures.

The zoology of this era furnishes us with the first undoubted traces of terrestrial animal life, in the form of insects of the beetle and cockroach tribes, scorpions, and reptiles of the batrachian order—creatures which were adapted by nature to live in the dull, hazy, tepid atmosphere that overspread our planet before the unclouded rays of the sun had visited its surface.

At the close of the carboniferous era, another commenced, during which the system of rocks which has been denominated 'the Permian' system, was formed, the fossil remains of which indicate that great changes must have taken place in the physical constitution and aspect of the earth. The exuberant vegetation which had supplied the material of the coal-measures of the preceding formation had died away, and a vegetation of a higher order succeeded, shewing by reasonable evidence that the clouded atmosphere of the carboniferous and previous systems had been succeeded by a transparent atmosphere, through which the unimpeded sunbeam had reached the earth's surface. The animals, too, which inhabited the Permian earth disclose an advance in organic life. The Saurian, or true reptile, here made its first appearance; and the earliest traces of birds present themselves in the New Red Sandstone, a member of this system. The foot tracks of these birds, of immense magnitude, which stalked on the Permian sands and mud, are found impressed on the now hardened slabs of sandstone and shales of that formation, both in Scotland and in America.

The Permian was succeeded by the systems of the Trias and Oolite, whose fossil remains attest an advance in animal, as well as in vegetable, organization. Trees of the palm, pine, and cypress species were mingled with the diminished ferns, calamites, and conifers of the coal era; and with

this improved vegetation, a higher order of insects appears to have come into existence to feed on and enjoy the increasing bounties of Providence. But the peculiar and most striking feature of the age was the extraordinary increase, in number and magnitude, of the Saurian reptiles, which then peopled the earth. The Saurians were divisible into three distinct classes—the Terrestrial, or Dinosaurians; the Marine, or Elaniosaurians; and the Aerial, or Pterosaurians. They were all of them air-breathing creatures—amphibious, and more or less aquatic in their nature and habits; and with the birds whose tracks have appeared in these same systems, have been aptly described, as regards their extent both in number and size, in the Mosaic account of the work of the fifth day of the creation. The Hebrew words, which are translated in our version ‘the moving creature that hath life,’ ought more properly to be rendered ‘the reptile that hath the breath of life’ (vide Gesenius on the word שָׂרֵץ); and the ‘great whales’

of the next verse is more correctly rendered in the margin of our Bibles ‘great sea monsters;’ and the ‘living creature that moveth’ ought to be rendered the ‘living creature that creepeth’ (vide *Sermons in Stones*, p. 199 n., 8th ed.) With these corrections of the text of the A. V., it is obvious that the Mosaic record of the creation of the fifth day, is a record of the creation of the reptilian race of great sea monsters (*Elaniosauria*)—of the living creature that creepeth, which the waters brought forth abundantly (*Dinosauria*)—and of the winged fowl (*Pterosauria*, or *Pterodactyls* and Birds). These are designated by Moses as great and abundant; and the fossil remains of the reptilian inhabitants of earth, ocean, and air of the Oolite world, more especially of the Lias member of it, have revealed them to have then swarmed out in such amazing numbers, and of such vast dimensions, that geologists have always dwelt on the scenes which the earth of those days must have presented with astonishment and wonder, and have named that era ‘the age of reptiles.’ In all this we have a most interesting confirmation of the truth and accuracy of the Mosaic record of the creation of the fifth day.

The Chalk or Cretaceous system succeeded that of the Oolite, and presents little, if any, evidence of advance in creation. There is, however, a manifest decrease of the Saurian reptiles, which reigned in such abundance in the preceding formation, and some traces of the true mammal have, it is said, been found in this system. At all events, in the next formation, the Tertiary, we have distinct evidence of the existence of the mammal race of animals, including the quadruped mammifers, which are presented to view in the Mosaic record, as the cattle, beasts, and creeping things of the earth, the creation of the sixth day.

Last, and crowning work of all, Man, as the Mosaic record testifies, was introduced by his Creator, made in his own image, to have dominion over all the creatures that he had previously created and their descendants; and no fact is more conclusively established by geology, than that all the races of animals on the earth, from the zoophyte to the mammal, were in existence before the human race. No traces of human remains, or of any work of art, have been found below the superficial deposits, or outside coating of the

globe; and we may add, that there is no evidence of the introduction on the earth of any species of animal, whose progenitor was not in being before the human race became inhabitants of the earth. Man’s pedigree is of less antiquity than that of any other known creature, though, geologically and physically, he is at the top of the ascending orders or scale of created beings; for it is admitted by the most eminent and best informed geologists, that the well-attested facts of their science demonstrate that the plan or law of the creation was progressive, beginning with the zoophyte in the bottom rocks, and ascending through the succeeding formations in the advancing forms of the Mollusk, Crustacean, Fish, Reptile, and Mammal, culminating with Man—since which no new species has been introduced on the scene, and the Almighty Creator has been, in Scripture language, resting from his work on this the still current Sabbath of the creation.

The length of the time which has elapsed since our planet was a ball of liquid fire, and during which our world of light and life was elaborated in its various stages by the hands of the Almighty, admits of no calculation. It is not to be reckoned by days or years, or any known measure of time. We can only look at the vast piles of the sedimentary rocks which have been laid down at the bottom of the waters in that period, to the depth of fifteen miles at the lowest calculation, and ask how long was the space of time occupied in the formation of those masses by the slow process of depositing grain after grain of the particles of the matter of which they have been formed, and yet that is but a brief portion of duration when compared with that which must have been occupied by the cooling down of the globe, so as to admit of the existence of life upon its surface. It is sufficient for us to know the order of the various physical aspects presented by our globe from the time that it was ‘without form and void,’ and of the organisms with which it has, from time to time, been furnished. Without seeking to fix the exact length of the time which each day or period of the creation occupied, or at what particular points of the great geological eras were their respective commencements and terminations, the scientific evidence is clear and conclusive, that each item of the Mosaic creation came into existence in the precise order in which it is recorded to have made its appearance in the first chapter of Genesis. Both Moses and the geologist testify that the first organisms in which the mystery of life was presented were submarine, and that life on the earth existed before light. Both, also, concur in attesting the fact of the existence of submarine life long before that of land vegetation; and that land vegetation had sprung up before that the sun had become visible from the earth’s surface. They also agree in their testimonies that the sun’s unclouded ray had visited the face of our planet before the commencement of ‘the age of reptiles’—that this strange era of the swarming out of the giant Saurians on earth, sea, and air, preceded the appearance of the mammal races—and that all were denizens of the earth before the advent of Man to have the dominion over them.

This harmony of the two records supplies us with evidence of the authenticity and inspiration of the book of Genesis, the importance and value of which cannot be too highly estimated. By it, the

first pages of the Bible are stamped with the seal of truth, which gives us assurance that the whole canon of Scripture is of divine origin. Moses was necessarily ignorant of geology and its kindred sciences, and yet he was the author of a written record which describes with precision and accuracy, as far as it extends, the order in which our planet was furnished with light and life. He wrote, not for the purpose of instructing the Israelites in the science of cosmogony, but to establish a testimony that the universe was the work of the God who had led them forth from the land of Egypt, the house of their bondage; and thus to fortify them against the snares of idolatry in the land to which he was conducting them. But the omniscient spirit of the Almighty, who dictated and directed the pen of the scribe, did not permit it to record a fact that was inconsistent with those physical truths that have been developed by human research for the first time after the lapse of more than three thousand years. The Mosaic record of the creation, in thus revealing the hidden events of the past, becomes, as it were, a prophecy, the fulfilment of which is before our eyes, satisfactory and conclusive, and the corner stone of that edifice of the inspired Scriptures, which contains the knowledge of God's will, and of his divine purposes towards the children of men.

The mode or manner of the communication of these truths to the divine historian has been the subject of much inquiry and discussion; and it has been suggested, with much apparent reason, that the details of the creation presented to us by Moses were brought to his knowledge by means of a series of visions, in like manner as the events of futurity were disclosed to the minds of the prophets of old, who recorded them for our instruction. If we analyse the record, it will be found to have all the characteristics of a visional revelation of past events; for, with exception of the divine fiat which he heard, Moses describes only that which may have been optically presented to him—the earth unformed and unfurnished—the Spirit of God brooding on the face of the waters—the earliest dawn of light—the elevation of the clouds—the first appearance of dry land and land vegetation—the dissolution of the clouds above in the atmosphere, and the unveiling of the orbs of heaven—the swarming out of the Saurian reptiles—and the first appearance of the quadruped mammals, and of man; while those items of the creation which he could not have seen, such as the submarine invertebrate and vertebrate animals, and insects, are not mentioned.

It has been suggested by Hugh Miller, that there is a peculiar fitness in a revelation made by vision for conveying to the various generations of man that were to come into being throughout a long series of ages, an account of the creation which was to be received by multitudes who were to live and die in ignorance of the truths of physical sciences, such as geology and astronomy, as well as by those who, at a later period, are qualified to verify the description by the light of those sciences. The prophet, by describing what he had actually seen in plain and intelligible language, shocked no previously existing prejudice that had been founded on the apparent evidence of the senses—while, on the other hand, an enlightened age, when it had discovered the key to the description, would find it *optically* true in all its details. Had it been more

real and accordant with scientific truths, the evidence of inspiration would perhaps have been more striking to men of the present day; but to the many generations of those who were ignorant of those facts of science it would most probably have been rejected as absurd and fabulous. 'What,' observes Hugh Miller, 'would sceptics such as Hobbes and Hume have said of an opening chapter in Genesis that would describe successive periods—first of mollusks, star lilies, and crustaceans, next of fishes, next of reptiles and birds, then of mammals, and finally of man; and that would minutely portray a period in which there were lizards bulkier than elephants, reptilian whales furnished with necks slim and long as the bodies of great snakes, and flying dragons, whose spread of wing greatly more than doubled that of the largest bird? The world would assuredly not receive such a revelation.' This subject will be found discussed in *The Testimony of the Rocks*; *The Mosaic Record in Harmony with the Geological*; *Sermons in Stones*; *The Genesis of the Earth and Man*.

The Scriptures do not, as already observed, fix the age of the earth, or supply any means by which we could calculate the length of time that has elapsed since 'the beginning,' or the first appearance of any of the several items of the creation, with the exception of that of Adam; and as regards his birth, the biblical records have unfolded to us that nearly six thousand years have passed away since he became an inhabitant of the earth. Facts, however, have recently come to light, on which reasonings have been founded to establish the proposition that, though the extent of the human era must have been short indeed when compared with the vastness of the geological ages, yet some of the human race must have tenanted the earth at a time long anterior to that assigned by the Bible records to have been the date of Adam's birth. Mr. Leonard Horner's experimental researches in Egypt, instituted with a view to ascertain the depths of the sedimentary deposits in the valley of the Nile, have brought to light relics of works of art and specimens of man's handiwork, such as pieces of pottery and sculpture, that tend to prove the existence of intelligent manufacturers at a period of time that could not be less than eleven or twelve thousand years. But the premises from which this conclusion has been deduced are too uncertain and fallible to warrant such an extension of the commonly received age of man. The rate of accretion of sedimentary deposits of a river like the Nile is subject to so many varying external influences, that, as a measure of time, it may be most fallacious, and no reliance can be placed upon it as disproving the record of Moses.

But more importance has been ascribed to the discoveries in the gravel quarries of Abbeville and Amiens in the north of France, and also in Suffolk in England, of flint implements, such as hatchets, spears, arrow-heads, and wedges of rude manufacture, associated in undisturbed gravel, with the bones of extinct species of the elephant, rhinoceros, and other animals, whose remains are found in the diluvium formed by the last great geological revolution. If these implements are of artificial origin, they afford strong evidence that the races of men by whom they were manufactured, were the contemporaries of animals which geologists affirm could not have existed within the Scripture term of human life. Nevertheless, many of those best

acquainted with geological phenomena and the knowledge to be derived from them, have not admitted that this association of a mixture of the flint implements with the extinct animal remains is conclusive evidence of the co-existence in life of the manufacturer of the implements with those animals—and affirm that mere juxtaposition is no evidence of contemporaneity, when no remains of the human frame is to be found in the same place. The age of the diluvium, also, in which these remains have been discovered, uncertain as it was before, has been rendered still more so by the presence of these human relics in it. So that the question remains open; and the Scripture chronology of the human era, though rendered doubtful, has not been conclusively displaced.

It may be, that further evidence will be forthcoming to establish as a fact that man was an inhabitant of the earth at a period anterior to the assigned date of Adam's birth; but it is satisfactory to know that, even in that event, the truth of the Scripture record could be vindicated. It has been ably argued in a recent work, *The Genesis of the Earth and Man*, that the existence of a pre-Adamite race of human beings is not inconsistent with the sacred narrative of the birth of Adam and the history of his descendants. There are some passages in the Bible which rather imply the existence of human beings, not the offspring of Adam, such as the apprehension expressed by Cain of violence at the hands of those amongst whom he should become a fugitive when cast out from association with his own family. On the other hand, there are expressions to be found in the Scriptures, which apparently indicate the origination of all mankind from Adam. The meaning and purport of these passages have been discussed with ability in the foregoing work; and the author concludes that the Scripture evidence is strong in favour of the existence of a non-Adamic race both before and after the flood. From ethnology he finds that the varieties of the human species may be reduced to two stocks, but that to reduce it to one is scarcely possible. History, too, records the traditions of every civilized race, that a barbarous race was expelled or subdued by their ancestors; and, on philological grounds, he concludes that many languages exhibit traces of two sources of human speech. The subject is worthy of attention, and ought to be entertained and discussed, in a spirit of candour and forbearance, by those who are qualified to deal with it on philosophical and philological principles; for on this ground the Religionist may yet have to fight the battle of the evidences of Scripture inspiration.

The origin of the material world, or of that rocky framework of the globe, the abode of man and his associated animals and plants, can be traced back to a period when the now solid crust on which we stand formed a portion of a revolving mass of igneous matter; and with the aid of geological, chemical, and other physical sciences, we can follow it through its various vicissitudes since that time, and see how that, by the gradual operation of the ascertained laws of matter, the earth has assumed its present form and appearance. Cause and effect are adequate to explain the process by which chaotic matter has become a structure that proclaims the wisdom and goodness of the Omnipotent architect and builder, and a storehouse of the manifold wonders of nature and art with which we

are surrounded. The constancy of the union between cause and effect, in the estimation of one class of minds, is never separated from the existence of a sustaining and omnipotent intelligent power, by whom it was ordained that one should invariably follow the other; while to another class of reasoners, this consistency of Nature's law suggests an argument against the sustained efficient presence of the author of that law. As regards the process by which the *material world* has passed through its various phases to its present aspect, there has been little or no discussion arising out of these two modes of viewing the relations between God and his works; but the *origin of life*, or of the various species of animal and vegetable organisms, the receptacles of life, is a subject on which there has been much speculation, involving the principle of the continued efficient presence of the Deity with the onward march of vitality on our planet.

Each animal and plant has an ancestry of its own; and relationship by descent is admittedly that which constitutes identity of species—that is to say, all the animals of the world (and the same may be said of plants) which have descended from the same pair of ancestors belong to the same species. That there are many apparently different species of animals now in existence is obvious. But the question has been mooted, whether this distinction of species is a reality in nature, or whether all animals may not be lineally descended from one, or, at all events, a few original stocks. Geology teaches us that no animals of a higher order than zoophytes, mollusks, and crustaceans were inhabitants of our globe up to the close of the Silurian era; that the fish then, for the first time, made its appearance, and afterwards the reptile, in the Carboniferous era, and then the mammal, at a later period, in the Tertiary. Were the different species of zoophytes, mollusks, and crustaceans of the Silurian ages, and those of the succeeding and present eras, all of them the offspring of one pair, or of different pairs of ancestors, whose descendants had become thus varied by the operation of time and the changed conditions of life? Again, were the various species of fishes, reptiles, and mammals, descendants from their severally respective pairs of ancestors, or were they all of them lineal descendants of the previously existing inferior orders of animals of the Silurian and its preceding eras, and all thus related in blood to each other? If the various species had each their own separate first parents and lineage, then each of those ancestors must have been produced by a separate act of creative powers, or, as it has been termed, by a separate creative fiat, similar to that which kindled the first spark of life in the first living creature that stirred within the precincts of our planet; and thus the Creator must have been ever present with his work, renewing it with life in the various species of animals and plants with which it has from the beginning been supplied. On the other hand, philosophers have been found to insist that all the animals (and plants also) in the world, including man himself, have descended from one simple organism, and the operation of the pre-ordained laws of nature, without the interference of the Deity.

Thus, two French philosophers, De Maillet and La Marck, about the close of the last century, endeavoured to establish as a true proposition, that all the higher orders of animals and plants have been

derived by the immutable laws of nature from the first born and lowest items in the scale of physical life; and that life itself is producible by the agency of caloric and electricity from dead matter. They also held, that all the qualities and functions of animals have been developed by natural instinct, and a tendency to progressive improvement; and that organisation was the result of function, and not function of organisation. Their theory of life therefore was that the zoophyte, which was developed out of something still more simple, expanded itself into a mollusk or crustacean—that the crustacean was developed into a fish, fishes into reptiles and birds, and these again into quadruped mammals, and the mammal into man.

This theory, so dishonouring to God and degrading to man, was at once rejected as an absurdity by the common sense of mankind. It has, however, been revived, with a little variation, by the author of 'The Vestiges of the Natural History of Creation,' who has, in that work, reviewed the whole world of life which has been supplied by geology and natural history, and insists that 'the various organic forms that are to be found upon the earth are bound up in one—a fundamental unity pervades and embraces all, collecting them from the humblest lichen up to the highest mammifer in one system, the whole creation of which must have depended upon one law or decree of the Almighty, though it did not all come forth at one time. The idea of a separate creation for each must appear totally inadmissible;' and he argues that 'the whole train of animated beings, from the simplest and oldest up to the highest and most recent, are thus to be regarded as a series of advances of the principle of development, which have depended upon external physical circumstances, to which the resulting animals are appropriate.' And, as to the origin of vitality, he suggests that the first step in the creation of life upon this planet was a chemico-electric operation, by which simple germinal vesicles were produced, and that the advance from the simplest form of being to the most complicated was through the medium of the ordinary process of generation.

These speculations, whimsical and absurd in conception, but at the same time most mischievous in tendency, have long since been rejected by the most enlightened of our philosophers, basing their arguments on pure scientific principles and inductive reasoning. Professor Sedgwick, in his preface to the studies of the University of Cambridge, p. cxxviii, has pronounced that geology, 'as a plain succession of monuments and facts, offers one firm cumulative argument against the hypothesis of development.' Agassiz, Cuvier, and Hugh Miller have been equally strong in their condemnation of the theory.

The discussion of this question has been recently revived by the publication of Dr. Darwin's 'Origin of Species.' In this work an attempt has been made to solve the mystery of the creation of life, by seeking to establish the proposition that every species has been produced by generation from previously existing species. Dr. Darwin's hypothesis (for it is nothing more), is, that as man, acting on the principle of *selection*, causes different animals and plants to produce varieties, so in nature there is a similar power of selection, originated and carried on by the struggle of life, which tends to produce and perpetuate, by the operation of a natural

law, varieties of organisms as distinct as those which man creates among domesticated animals and plants. It must be conceded that by the principle of natural selection we can account for the origin of many varieties of the same species; but that is far short of the proposition, that an accumulation of inherited varieties may constitute a specific difference. No facts have yet been established to warrant the inference, that because man can produce varieties of species by selection among domesticated animals, that he could produce, or that nature has produced, by the application of the same principle, essentially distinct species. There has always, in the case of domesticated animals and plants, been a limit to man's power to produce varieties, in like manner as, in the operations of nature, the sterility of hybrids has raised a barrier against the multiplication of species, which cannot be passed.

Dr. Darwin believes that animals have descended from at most only four or five progenitors, and adds, that analogy would lead him one step farther, viz., to the belief that all animals and plants have descended from one prototype, and that 'the probability is that all the organic beings that have ever lived upon the earth have descended from some one primordial form, into which life was first breathed.' This admits that life has been produced upon our planet by one, if not more, divine creative fiat; and such being the case, it is more reasonable, as well as more natural, to account for the appearance of distinct species from time to time by the exercise of similar acts of divine power, than by a vain endeavour to link together animals in relationship by descent that are wholly dissimilar in organization, and in all the habits, propensities, and instincts of their lives.

It is admitted that the position is not confirmed by geological evidence, inasmuch as the many intermediate links which must necessarily have existed between the various species, are not found in the geological formations. There is no such finely graduated organic chain revealed by geology; for the groups of animals, as they existed, are as distinct and well defined in those ancient records as they are at the present day. To meet this admitted difficulty Dr. Darwin is driven to allege 'the extreme imperfection of the geological record,' arising, as he states, 'from an extremely incomplete examination of existing strata, and the small proportion which those existing strata bear to those others which have been deposited, and removed or swept away by denudation.' These are mere gratuitous assumptions, put forth without foundation, to prop up a failing theory. No well-informed geologist will be found to admit that imperfections could exist in the geological record to an extent sufficient to account for the absence of so many forms of life, as must, if Dr. Darwin's theory be true, have been in existence at some period of the world's history. Moreover, his suggestion that every past and present organism has descended from three or four original forms, requires us to suppose that life must have existed in the planet long before the deposition of the Cambrian and Silurian rocks, in which the first groups of life appear, and that the rocks in which these remains were deposited have been either removed or transformed. This hypothesis not only receives no countenance from the records of geology, but is contradicted by all the evidence which they supply. So many startling concessions required to uphold this theory of the production of

species by natural selection, without the direct intervention of the creative power of the Almighty, are sufficient to justify its rejection, even if the more direct arguments to which we have referred were wanting.

To those who have dwelt on the problem of the origin of life, it must be manifest that the probabilities are, that the subject lies beyond the confines of the regions of the knowledge that is attainable by human experience, and the exercise of man's reasoning faculties, and that it falls within the province of that class of intelligence which can only be communicated through the medium of a divine revelation. To those who thus regard the matter, the Mosaic record of the creation, authenticated as it has been by the facts of science, will be found to repay the obligation, by teaching the man of science that God did not leave His handiwork to be developed by the unassisted operation of pre-ordained laws; but at every stage of the production of animal and vegetable life 'He commanded and they were created,' each of them 'after his own kind,' and God saw each, 'and every thing that He had made, and behold, it was very good.'

The mind that submits to receive divine instruction from the only source from which it can be derived, will here find a solution of the difficulties which have embarrassed philosophers in their pursuit of the mysteries of the origin of life; for here is a divine revelation that each species of the animal and vegetable worlds was made after its own kind, by the direct interposition of the omnipotent Creator—that each was the result of a creative fiat, and was then sealed with the divine approval. And while, on the one hand, the man of science will discover nothing in the teachings of revelation that militates against the facts which he has collected without the aid of revelation, so, on the other hand, the religionist will find nothing in the well-established facts of science to cast a doubt on the well-understood revelations of Scripture. The harmony thus found to exist between the records of science and the records of the Bible, separated as they have been by centuries of darkness from each other, is highly instructive, and can only be accounted for by referring both to the same omniscient and omnipotent author—the one and only source of everlasting truth. Both tell us of works designed and executed by a combination of wisdom, power, and goodness; and while the Bible informs us that the Deity was and is present, as an efficient operating principle, at every stage of his work, the records of philosophy can supply no fact or argument that is inconsistent with the revelation. We are bound, therefore, to receive it as a truth within the province of the things that are revealed. Both tell us of a progress in creation from the lower to the higher orders of animal life; and while analogy, reasoning from the unvarying onward and upward march of mundane vitalities in the past ages of our planet's existence, assures the natural philosopher that at some epoch in the ages to come beings of a higher order than those of Adam's race will become inhabitants of our earth, the sacred records have added the intelligence that 'the first Adam is of the earth, earthly, the second Adam is the Lord from Heaven;' and 'as we have borne the image of the earth, we shall also bear the image of the heavenly.'

When the mind contemplates the various scenes of which our planet has been the theatre, each in advance of the preceding, it is impossible to limit

its glorious hereafter to any condition that can be realized by the imagination. At one time it was girded with a shoreless sea, and for ages its only inhabitants were lowly submarine invertebrates, of which the highest in rank was a Crustacean. At a subsequent period, its uncultivated land, its oceans and its air, were tenanted through an equally long space of time by nothing that was higher in the scale of animal life than Saurian reptiles, and at a later period by a higher order of quadruped mammals. And lastly, it became the abode of intelligent man, who, unlike all that had preceded him, can, from the platform of the present, review the past, and contemplate the future; and who has, in addition to the beauties of nature that have increased around him, encircled himself with the fair fabrics of art, and the conveniences and luxuries of civilized life. Compare this present scene with any of those that preceded it on the earth's surface,—let the mind realize the difference, and then ask of nature's progressive law, the exponent of God's will, what the future has in store for our planet? Should its next state be as high in comparison with the present as the present is high when compared with any of the pre-existing earthly scenes—should the next receptacle of the breath of life be as much above man in the scale of being as man is above the creatures which have tenanted the earth before him, how glorious will be the 'new earth'—how exalted the beings who will be its inhabitants! Mere philosophy, without the aid of revelation, may conduct the human intellect thus far in its reasonings and conclusions; but it requires the divine communications to the holy men of old to complete the picture, and assure the man *who will receive it*, that though worms destroy his body, yet in his flesh shall he see his God, and with his eyes behold the glories of the world to come.

Thus, the book of nature and the book of inspiration, when combined, embrace the whole history of organic and inorganic matter, which has expanded through that portion of eternal duration which lies between the beginning of our planet and the end of the Sabbath of creation—the seventh day, or period of the Mosaic narrative. The history of the past is authenticated by the discoveries of the present; and the inspired record of the future is—if we may so speak—rendered more sure by the analogy of the past. God has, in His goodness, provided for all the means of acquiring this important knowledge. It is for man to accept and use the gracious gift in its integrity, and apply every part of it to guide him into the paths of true wisdom—that wisdom which leads mankind to recognize the Creator in the several items of his creation, and to ascribe their being, not to nature, or to nature's laws—but to nature's God, and Him alone.—D. M'C.

CREDNER, KARL AUG., was born at Waltershausen, near Gotha. He studied at Jena, Bréslau, and Göttingen. In 1830 he became professor extraordinary of theology at Giessen, and in 1832 obtained the appointment of ordinary professor. He died in 1857. His writings are numerous; the principal are—*Der Proph. Joel übersetzt u. erklärt*, Halle, 1831; *Beiträge z. einleit. in die Bibl. Schr.* Bd. I. *Die Ewv. der Petriner od. Juden-christen*, Halle 1832, Bd. II. *Das Alttest. Urevangelium*, Halle, 1838; *Einleit. in das N. T.*, Halle, 1836; *Zur Gesch. d. Kanons*, Halle, 1847, new edition,

by Volckmar, with additions, Berl. 1860; *Das N. T. für denkende Leser*, 2 vols. Giess. 1841-43. Credner's works are very unequal. They contain the results of independent investigation, always scholarly and ingenious, often original and suggestive, but not seldom also ending in conclusions unsound and untenable. His Einleitung was left unfinished; his history of the Canon may be viewed as part of it. He contributed largely to the first edition of this Cyclopædia.—W. L. A.

CRELL, JOHN, one of the most distinguished Socinians of the 17th century, born at Helmebsheun, in Franconia, 1590. In 1606 he entered the university of Altorf. After making great proficiency in philological studies, he turned his attention to philosophy, especially to that of Aristotle, of which the influence is very apparent in his theological writings. At Altorf his intimacy with Professor Soner, a physician of eminence, a secret but active adherent of Socinus, led to his becoming an anti-trinitarian. The change in his sentiments was not suspected till he was called upon, as a necessary condition of taking office, to sign the Augsburg Confession, which, to his honour, he declined doing. To escape the consequences which would have probably ensued, he secretly left Altorf for Poland, where he met with a cordial reception from Count Sieminski, the wealthy and powerful patron of Socinianism, through whose influence he was appointed professor of Greek at Cracow in 1613. After three years he was made rector, and filled that office till 1621; he then devoted himself to preaching, in which he laboured for ten years with great assiduity, to his death in 1631. His superior talents and extensive acquirements, his unwearied diligence and great eloquence, justified the high esteem in which he was held. His writings consist of extensive commentaries on the books of the N. T., various polemical treatises, likewise ethical works on Aristotle and Christian morals. They are contained in the third and fourth volumes of the *Bibliotheca Fratr. Polon.*; Fock's *Socinianismus nach seiner Stellung in der Gesamtentwicklung des Christlichen Geistes*, etc., Kiel, 1847, p. 195.—J. E. R.

CRELL, SAMUEL, grandson of John Crell, born in 1660. He studied in the gymnasium of the Remonstrants at Amsterdam, and settled as a preacher at Königswalde. He afterwards removed to Berlin, and spent some time in the Netherlands and in England, where he became acquainted with Sir Isaac Newton, Dr. Grabe, and other eminent men, by whom he was highly esteemed. He died at a very advanced age, at Amsterdam, in 1747. He wrote several historical treatises on the ante-Nicene fathers, and one on the Introduction to St. John's Gospel. Though in general a disciple of Socinus, in some points he inclined to the views of Arminius. See Fock, *Socinianismus*, etc., p. 240.—J. E. R.

CRESCENS (Κρήσκης), an assistant of St. Paul, and generally supposed to have been one of the seventy disciples of Christ. It is alleged in the *Apostolical Constitutions* (vii. 46), and by the fathers of the church, that he preached the gospel in Galatia, a fact probably deduced conjecturally from the only text (2 Tim. iv. 10) in which his name occurs. There is a less ancient tradition (in Sophronius), according to which Crescens preached,

went into Gaul, and became the founder of the church in Vienna; but it deserves no notice, having probably no other foundation than the resemblance of the names Galatia and Gallia.—J. K.

CRETE (Κρήτη), one of the largest islands in the Mediterranean, now called Candia, and by the Turks Kiriid. It is 160 miles long, but of very unequal width, varying from thirty-five to six miles. It is situated at the entrance of the Archipelago, having the coast of the Morea to the south-west, that of Asia-Minor to the north-east, and that of Lybia to the south. Great antiquity was affected by the inhabitants, and it has been supposed by some that the island was originally peopled from Egypt, but this is founded on the conclusion that Crete was the Capthor of Deut. ii. 23, etc., and the country of the Philistines, which seems more than doubtful [CAPHTHOR]. Surrounded on all sides by the sea, the Cretans were excellent sailors, and their vessels visited all the neighbouring coasts. The island was highly prosperous and full of people in very ancient times; this is indicated by its 'hundred cities' alluded to in the epithet *ἐκατόπολις*, applied to it by Homer (*Il.* ii. 649). The chief glory of the island, however, lay in its having produced the legislator Minos, whose institutions had such important influence in softening the manners of a barbarous age, not in Crete only, but also in Greece, where these institutions were imitated. The natives were celebrated as archers. Their character was not of the most favourable description; the Cretans or Kretans being, in fact, one of the three K.'s against whose unfaithfulness the Greek proverb was intended as a caution—Kappadokia, Krete, and Kilikia (*τρία κάππα κελωνα Καππαδοκία, καὶ Κρήτη, καὶ Κιλίκια*). In short, the ancient notices of their character fully agree with the quotation which St. Paul produces from 'one of their own poets,' in his Epistle to Titus (i. 12), who had been left in charge of the Christian church in the island.—'The Cretans are always liars (*ἀεὶ ψεύσται*, eternal liars), evil beasts (*κακὰ θηρία*, Angl. 'brutes'), slow bellies' (*γαστέρες ἀργαί*, gorbellies, bellies which take long to fill). The quotation is usually supposed to have been from Calimachus's *Hymn on Jove*, 8; but Callimachus was not a Cretan, and he has only the first words of the verse, which Jerome says he borrowed from Epimenides, who was of Crete. Ample corroboration of the description which it gives may be seen in the commentators.

Crete is named in 1 Maccab. x. 67. But it derives its strongest scriptural interest from the circumstances connected with St. Paul's voyage to Italy. The vessel in which he sailed being forced out of her course by contrary winds, was driven round the island, instead of keeping the direct course to the north of it. In doing this, the ship first made the promontory of Salmone on the eastern side of the island, which they passed with difficulty, and took shelter at a place called Fair-Havens, near to which was the city Lasea. But, after spending some time at this place, and not finding it as they supposed sufficiently secure to winter in, they resolved, contrary to the advice of St. Paul (the season being far advanced), to make for Phœnicæ, a more commodious harbour on the western part of the island, in attempting which they were driven far out of their course by a furious east wind called Euroclydon, and wrecked on the island of Melita (Acts xxvii.)—J. K.

CRIMSON. [COLOURS.]

CRISPUS (Κρίσπος), chief of the Jewish synagogue at Corinth (Acts xviii. 8), converted by St. Paul (1 Cor. i. 14). According to tradition (*Constitut. Apost.* vii. 46) he was afterwards Bishop of Ægina.—J. K.

CRITICI SACRI. 'The first edition of this immense work,' says Orme (*Biblioth. Bibl.* p. 128), 'was printed at London by Bee, in 1660, in 9 vols. folio. It was designed to be a companion to Walton's Polyglott, published shortly before. The editors were Bishop Pearson, John Pearson, Anthony Scattergood, and Francis Gouldman. It was reprinted at Frankfort, under the care of Gurtler, in 1695, in 7 vols. In 1698 it re-appeared at Amsterdam, in 9 vols.; and a supplement of 2 vols. more was published in 1700 and 1701; and a second supplement appeared in 2 vols. fol., Amst. 1732. This collection contains all, or most of the books of the O. T., the entire annotations of Munster, Vatablus, Castalio, Clarius, Drusius, and Grotius; brief annotations of Fagius on the Chaldaic Paraphrase of the Pentateuch, and his larger exposition of the first four chapters of Genesis; the commentaries of Masius on Joshua; the annotations of Codurcus on Job; of Pricæus on the Psalms; and of Bayne on the Proverbs; the commentary of Forerius on Isaiah, that of Lively on Hosea, Joel, Amos, Obadiah and Jonah; of Badwell on the Apocrypha, and Hoeschel on Ecclesiastes, etc. On the N. T. it contains the collations of Valla, with the animadversions of Revins; the annotations of Erasmus, Vatablus, Castalio, Clarius, Zegerus, and Grotius; on particular places and subjects of the N. T., Munster, Drusius, Scaliger, Casaubon, Cameron, Lud. Capellus, Gualtperius, Schultetus, and Pricæus. There are also a number of philological tracts and dissertations; such as John Gregory's Notes and Observations, Fagius's Comparison of the principal Translations of the O. T., Cartwright's *Mellificium Ebraicum*; Drusius on the Mandrakes, Jos. Scaliger and Amama on Tythes; Lud. Capellus on the Vow of Jephtha and Corban; Pithæus *De Latinis Bibliorum Interpretationibus*; Urstius *De fabrica Arce Noë*; Rittershusius *De Jure Asylorum*; Allatins *De Engastrymutho*; Montanus on Jewish Antiquities; Bertram and Cunæus on the Hebrew Republic; Waser on the Ancient Coins and Measures of the Hebrews, Chaldeans, and Syrians; and many others of a similar description.'

CRITICISM, BIBLICAL. This phrase is employed in two senses. Some take it to signify not only the restoration of the text of Scripture to its original state, but the principles of interpretation. This is an extensive application. It is better, perhaps, to confine it to the *text* of the Bible. We shall limit it to those principles and operations which enable the reader to detect and remove corruptions, to decide on the genuineness of disputed readings, and to obtain as nearly as possible the original words of Scripture. Its legitimate object is thus to ascertain the purity or corruption of the text. It judges whether an alteration has been made in a passage; and when it discovers any change, labours to restore the primitive readings that have been displaced. There are *five* sources from which biblical criticism

derives all its aid, both in detecting the changes made in the original text, and in restoring genuine readings.

1st. MSS. or written copies of the Bible.

2d. Ancient translations into various languages.

3d. The writings and remains of those early ecclesiastical writers who have quoted the Scriptures.

4thly. Parallels, or repeated passages.

5thly. Critical conjecture.

Such are the sources which criticism employs. To attain its end it must use them with skill and discrimination. They afford wide scope for acuteness, sobriety, and learning; and long experience is necessary that they may be used with efficiency and success.

The present article will contain a brief historical sketch of biblical criticism, or a history of the texts of the O. and N. T.; the condition in which they have been at different periods; the evidences on which our knowledge of their purity or corruption rests, and the chief attempts that have been made to rectify or emend them. A history of criticism must describe the various stages and forms through which the texts have passed. It will be expedient to reserve an enumeration of the *causes* which gave rise to various readings to a future article [VARIOUS READINGS]; and, on the present occasion, to detail the phases which the Hebrew and Greek texts of the O. and N. T. have presented both in their unprinted and printed state, in connection with the labours of scholars to whom such texts have been an object of interesting attention and diligent inquiry.

We shall commence with the text of the O. T. There are four marked periods in the history of the Hebrew text.

1. *That period in the history of the unprinted text which preceded the closing of the canon.*—Of this we know nothing except what is contained in Scripture itself. The Jews bestowed much care on their sacred books. They were accustomed to hold them in great veneration even in the darkest times of national apostasy from Jehovah. How often the separate books were transcribed, or with what degree of correctness, it is impossible to tell. We cannot suppose that the O. T. writings were perfectly free from alterations in the earliest times. It is probable that they had been deteriorated even in the interval between their origin and the completion of the canon. All analogy confirms this supposition. In favour of it reference may be made to the differences in proper names, and to parallel sections in various books. We do not believe, however, that the text had suffered *much* from the carelessness or rashness of transcribers. It is necessary to examine singly and minutely all parallel places that narrate the same things more or less verbally, before a conclusion be drawn from them as to their original form and relation. They are, indeed, very perplexing in some cases. All the evidence they afford is presumptive. It appears to us that the treatment which the separate books experienced at the hands of the early Jews was favourable on the whole. The Palestinian Jews cannot be accused of reckless caprice or officious meddling in this respect.

The most important thing in this part of the history is the Samaritan recension of the Pentateuch [PENTATEUCH]. This *edition* (if so it may be called) of the Pentateuch is indeed uncritical in

its character. While we freely acquit the *Jews* of tampering with the text of the Mosaic books, the *Samaritans* cannot be so readily exonerated from the imputation. As far as the *latter* are concerned, we are compelled to believe that the words of the original were not always treated by them with sacred respect. Additions, alterations, and transpositions, are very apparent in *their* copy of the Pentateuch. A close alliance between the text which lies at the basis of the Septuagint Version and that of the Samaritan Pentateuch has been always noticed. Hence some think that they flowed from a common *recension*. One thing is certain, that the LXX. agree with the Samaritan in about 2000 places in opposition to the Jewish text. In other books too of the O. T., besides the five books of Moses, the Seventy follow a recension of the text considerably different from the Jewish. Thus in Jeremiah and Daniel we find a different arrangement of sections, as well as diversity in single passages. The books of Job and Proverbs present a similar disarrangement and alteration, which must be attributed in part to the account of the Alexandrian Jews. Far different was the conduct of the *Palestinian* Jews in the treatment of the sacred books. They were very scrupulous in guarding the text from innovation; although it is impossible that they could have preserved it from *all* corruption. But the errors or mistakes which had got into the O. T. text were rectified to a great extent during the time the books were arranged and revised by Ezra, Nehemiah, and their successors. These men endeavoured to make the text as correct as possible. Autographs and the best copies within reach were employed for this purpose. They proceeded, therefore, in much the same way as a critical editor does. But, as they were not infallible, the text of the books they collected was not *perfect*. All that can be affirmed with safety is, that the canonical writings were in a tolerably pure state about 300 years before Christ, at the time of Simon the Just; who, according to the later Jews, completed the canon. By Eusebius's chronology, Simon died about 292 B.C.; though Zunz makes the date 202. We do not suppose that the canon was fixed by Simon. Hengstenberg and Hävernick are undoubtedly wrong in supposing the canon to have been closed about 400 B.C. The books were in the same condition after 300 B.C., till the time of Christ.

2. *From the close of the canon till the destruction of Jerusalem.*—The state of the Hebrew text at the time when the Alexandrine version was made, cannot be accurately determined, because of the condition in which the version now exists. At present that translation is very corrupt. We only possess copies of the text of the *kovh* in its deteriorated state. Under existing circumstances all that can be done is to take a certain text of the LXX. as approaching nearest to the original one, and from it to judge of the Hebrew text when first translated into Greek. With all the variations of the Septuagint from the Hebrew that must be attributed to transcribers, many should be taken as *original*.

3. *From the downfall of the Jewish state till the final establishment of the Masoretic text.*—Aquila, Symmachus, and Theodotus, though departing from the Masoretic text, do not disagree with it to the extent of the LXX. Josephus appears to have commonly used the Septuagint, not the Hebrew.

The text lying at the basis of the Peshito is *substantially* the Masoretic one. Yet there are many departures from it. Not a few readings better than the present Hebrew text exhibits, are sanctioned by the Syriac. In some cases it approaches the text of the LXX.

From correct Palestinian copies flowed the Chaldee versions of Onkelos and Jonathan. The copies which were the source of the *Masoretic* text were also the basis of these paraphrases. In the Hebrew column of Origen's *Hexapla* we find a text allied to the Masoretic. In the fourth century Jerome employed Jewish teachers of Palestine. MSS. of the same land formed the basis of his Latin version, whose text is very nearly conformable to the recension we now have.

From the second century and onward an increasing number of writers busied themselves with oral explanations of the law and the systematic collection of them, afterwards called *Mishna*, from שנה, *to repeat*. It is supposed that Rabbi Judah, surnamed *the holy* (died 191), wrote out the Mishna for the first time. The two *Genaras* subsequently appended to the Mishna by way of commentaries, viz., the Babylonian and the Jerusalem, make up with it the Talmuds known as the Babylonian and Jerusalem Talmuds. They belong to the fifth and fourth centuries respectively. In them we discern many traces of critical skill applied to the preservation of a pure text. Different readings in MSS. are mentioned; precepts are given respecting biblical calligraphy; and true readings are restored. By far the most important fact which they present is certain kinds or *classes* of critical corrections made at an earlier period, and which Morinus (*Exercitationes Biblica*, p. 408) justly calls the *fragments* or *vestiges* of recensions. These are—(1) עמור סופרים *Ablatio scribarum*. (2) תיקון סופרים *Correctio scribarum*. (3) *Puncta extraordinaria*. (4) קרי ולא

כתיב *K'ri v'lo K'thib*. (5) כתיב ולא קרי *K'thib v'lo K'ri*. (6) The Talmud also mentions different readings which the Masoretes call קרי וכתוב *K'ri ukt'hib*.

The writings of Jerome afford evidence, that, in the fourth century, the Hebrew text was without vowel-points and even *diacritic* signs.

The learned Jews, especially those at Tiberias, where there was a famous school till the eleventh century, continued to occupy themselves with the Hebrew language and the criticism of the O. T. The observations of preceding Rabbis were enlarged, new remarks were made, and a vowel-system was invented, the origin of which can hardly be placed earlier than the sixth century. The name *Masora* has usually been applied to that grammatico-historical tradition, which, having been handed down orally for some centuries, became afterwards so extensive as to require its committal to writing. Much of what is contained in the *Masora* also exists in the Talmud. Part of it, however, is older than the Talmud, though not reduced to its present form till a much later period. The various observations comprised in the *Masora* were at first written in separate books, of which there are MSS. extant. Afterwards they were put in the margin of the Bible MSS.

When we speak of the *Masoretic recension* of the text, it is not meant that the Masoretes gave

a certain form to the text itself, or that they undertook and executed a new revision. They made the *textus receptus* of that day the basis of their remarks, and gave their sentiments concerning it. Had the text been altered in every case where they recommend; had it been made conformable to their ideas of what it should be, it would have been appropriate to have called it the *Masoretic recension*. The designation, however, though not applicable in strictness, is customary.

The most important part of the Masora consists of the marginal readings or *K'ris*, which the Masoretes always preferred to the textual, and the later Jews have commonly adopted. The *K'ris* are critical, grammatical, orthographical, explanatory, and euphemistic. It has been a subject of dispute among scholars from what source the Masoretes derived the *K'ris*. It is highly probable that they were generally taken from MSS. and tradition, though they may have been in part the offspring of conjecture. It is but reasonable to suppose that these scholars sometimes gave the result of their own judgment. In addition to the *K'ris* the Masora contains an enlargement of critical remarks found in the Talmud. Besides, the verses, words, and consonants of the different books of the Bible are counted; a task unparalleled in point of minute labour, though comparatively unprofitable. The application of the Masora in the criticism of the O. T. is difficult, because its text has fallen into great disorder. Some pages of it first appeared in the Rabbinical Bible of Bomberg superintended by Felix Pratensis. In the second Rabbinical Bible of Bomberg, R. Jacob Ben Chayim bestowed considerable care on the printing of the Masora.

At the end of this second Rabbinical Bible there is a collection of *oriental* and *western* readings, or, in other words, *Babylonian* and *Palestinian*, communicated by the editor, and the result of an ancient revision of the text. The number is about 216. Of the sources from which the collection was drawn we are entirely ignorant. Judging by the contents, it must be older than many observations made by the Masoretes. It should probably be referred to a period anterior to the introduction of the vowel system, as it contains no allusion to the vowels. It is certainly of considerable value, and proves that the *oriental* no less than the *western* Jews had always attended to the state of the sacred text. In addition to this list, we meet with another in the Rabbinical Bibles of Bomberg and Buxtorf, and in the sixth volume of the London Polyglott, belonging to the eleventh century, which owes its origin to the labours of Ben Asher and Ben Naphtali, the respective presidents of academies in Palestine and Babylon. These readings, with a single exception, refer to the vowels and accents. The vowel system had therefore been completed when this collection was made.

4. *From the final settlement of the Masoretic text and the departure of the learned Jews from the east, till part of the Bible first appeared in print; or from A.D. 1040 till A.D. 1477.*—The learned men belonging to the academies in Palestine and Babylon were obliged by the Arabs, at the commencement of the eleventh century, to leave their places of abode and settle elsewhere. They fled to Europe, especially to Spain, which country became in consequence the seat of the critical study of the Bible. But the studies of the learned Jews

in Spain had comparatively small influence on the state of the text, because its general character had been already fixed. In their time transcribers allowed few departures from the Masora.

History of the printed text.—The psalter was the first part of the Hebrew Scriptures which was printed; A.D. 1477, 4to (probably at Bologna). There are three early editions, from which all others have been taken.—1. That published at Soncino, A.D. 1488, which was the first entire copy of the Hebrew Scriptures ever printed. The text is furnished with the points and accents, but we are ignorant of the MSS. employed by the editor. 2. The second great edition was that in the Complutensian Polyglott, 1514-17, taken from seven MSS. 3. The third was the second Rabbinical Bible of Bomberg, superintended by R. Jacob Ben Chayim, Venice, 1525, 4 vols. fol. The text is formed chiefly after the Masora, but Spanish MSS. were used. A second edition of Ben Chayim's Bible was printed in 1547-49, 4 vols. folio, being the third Rabbinical Bible issued from Bomberg's press. This is more copious and correct than the preceding. The Antwerp Polyglott (1569-72) has a text formed from the Complutensian and Bombergian.

Among editions furnished with a critical apparatus, that of Buxtorf, published at Basle, 1619, occupies a high place. It contains the commentaries of the Jewish Rabbis, Rashi, Abenesra, Kimchi, Levi Ben Gerson, and Saadiah Haggaaon. The appendix is occupied with the Jerusalem Targum, the great Masora corrected and amended, and the various readings of Ben Asher and Ben Naphtali. The most recent and complete Rabbinical Bible is the Amsterdam edition superintended by Moses Ben Simeon of Frankfurt, 4 vols. fol., 1724-27. It has various Rabbinical commentaries not included in prior Bibles.

The principal editions with various readings are those of Seb. Münster, Jablonski, Van der Hooght, J. H. Michaelis, C. F. Houbigant, and Benjamin Kennicott.

Münster's edition appeared at Basle in 1536, 2 vols. 4to. The text is supposed to be founded upon that of Brescia, 1494, 4to, which resolves itself into the Soncino edition of 1488.

Jablonski's edition was published at Berlin in 1699, 8vo, and again at the same place in 1712, 12mo. It is founded on the best preceding editions, but chiefly the second of Leusden (1667). The editor also collated various MSS. The text is remarkably accurate.

Van der Hooght's edition appeared at Amsterdam, 1705. The text is taken from Athias' (1667). The Masoretic readings are given in the margin; and at the end are collected the various readings of the editions of Bomberg, Plantin, Athias, and others.

The edition published by J. H. Michaelis in 1720, is accompanied with the readings of twenty-four editions which the editor examined, besides those of five MSS. in the library at Erfurt. There is a want of accuracy in his collations.

In 1753, C. F. Houbigant published a new edition in 4 vols. folio. The text is that of Van der Hooght, without the points. In the margin of the Pentateuch, the Samaritan readings are added. For it the editor collated, but hastily, twelve MSS. He has been justly blamed for his rash indulgence in conjectural emendation.

The first person who seemed to have a right idea of what was required, and did much towards its accomplishment, was a learned Jew of Mantua, Salomon Norzi. His work, containing a copious critical commentary on all the O. T. books, the fruit of many years' labour, was published after his death at Mantua, in 1742, 4 vols. 4to. This critical commentary was the result of much reading and collation of MSS.

Dr. Kennicott's edition, which is the most important yet published, appeared at Oxford—the first volume in 1776, the second in 1780. The number of codices collated by himself and his associates, the chief of whom was Professor Bruns of Helmstadt, amounted to 694. This includes MSS., editions of the Hebrew Scriptures, and Rabbinical works, particularly the Talmud. In addition to his collation of MSS. and printed editions, he followed the example of various editors of the Greek Testament in having recourse to Rabbinical writings. The immense mass of various readings here collected is unimportant. It serves, however, to shew that, under the influence of the Masora, the Hebrew text has attained a considerable degree of uniformity in all existing MSS.

In 1784-88, John Bernard de Rossi published at Parma, in 4 vols. 4to, an important supplement to Kennicott's collection. These various readings were taken from 88 MSS. used by Kennicott and collated anew by De Rossi, from 479 in his own possession and 110 in other hands, from many editions and Samaritan MSS., and also from ancient versions. In 1798 a supplemental volume appeared at Parma, in 4to, containing extracts of the same kind from new sources. De Rossi's collection of various readings is superior to every other.

In 1793, Doederlein and Meisner published at Leipzig, 2 vols. 12mo, an edition intended in some measure to supply the want of the extensive collations of Kennicott and De Rossi. It contains the more important readings.

Of much greater value is the edition of Jahn, published at Vienna in 4 vols. 8vo, 1806. The text is Van der Hooght's, with the exception of nine or ten places. The value of the edition consists in the select various readings found below each page, with the authorities distinctly given, MSS., versions, and printed editions. Only the principal accents are retained in the text.

In 1821 appeared Hamilton's *codex criticus* of the Hebrew Bible, which was the first attempt, properly so called, to form a standard text of the O. T.

In 1855 was published Davidson's work, entitled *The Hebrew text of the O. T. revised from critical sources; being an attempt to present a purer and more correct text than the received one of Van der Hooght, by the aid of the best existing materials, etc., etc.*, 8vo. This author not only goes beyond Hamilton's plan, but departs from it in various ways. It is an attempt to do for the Hebrew text what Griesbach did for the Greek of the N. T.

The most accurate edition of the Masoretic text is that of Theile, Leipzig 1849, 8vo (stereotype edition).

The text of Van der Hooght is now regarded as the *textus receptus*. (See Le Long's *Bibliotheca*, edited by Masch; Rosenmüller's *Handbuch für die Literatur der biblischen Kritik und Exegese*, vol. 1; Davidson's *Treatise on Biblical Criticism*, vol. 1; the last edition of De Wette's *Einleitung*

in das alte Testament; Bleek's *Einleitung in das alte Testament*; and Davidson's *Text of the O. T. revised, etc.*, 1855, 8vo.)

We shall now give a brief history of the N. T. text in its *unprinted* and *printed* form. The criticism of the N. T. is rich in materials, especially in ancient MSS. But, although the history of N. T. criticism records the industrious collection of a large amount of materials, it is not equally abundant in *well-accredited facts*, such as might be of essential benefit in enabling us to judge of the changes made in the text. History is silent respecting the period when the two parts of the N. T., viz., the *εὐαγγέλιον* and *ἀπόστολος*, or, in other words, the four Gospels and the Pauline, and remaining epistles, were put together, so as to form *one whole*. About the beginning of the 3d century, it is certain, that all the books of the N. T. which we now possess were commonly regarded as canonical. The parts of the N. T. not usually included in the collection at that time, were the Epistle to the Hebrews, the Apocalypse, the Second Epistle of Peter, that of Jude, the Second and Third Epistles of John. These were known and quoted. They were probably looked upon as authentic and canonical by some persons in all countries where they were circulated; but they had not attained to the position of the others. They were not considered of equal authority. Although, therefore, the canon was *virtually* formed in the early part of the 3d century, it was not *fully* and *finally* settled in all its parts. Six books or epistles were not established in public estimation as *sacred* or *inspired*. Origen did not revise the text of the N. T., though it was corrupt in his day. Neither did Hesychius or Lucian, though Hug thought that they were the authors of recensions. It would rather appear from the language of Pope Gelasius that Hesychius and Lucian interpolated the Gospels. It is probable, however, that Gelasius, relying on Jerome's unfavourable opinion of what they did, and examining no farther, wrote accordingly.

At a comparatively recent period, certain internal marks were observed to belong to documents containing the same text. A similarity in characteristic readings was noticed. Bengel appears to have been the first to whom the idea suggested itself of dividing the materials according to the peculiarities which he faintly perceived. It was afterwards taken up by Semler, and highly elaborated by Griesbach. Later editors and critics have endeavoured to improve upon Griesbach's system. The different forms of text observed by Semler and Griesbach they call *recensions*; although the appellation *family* is more appropriate. Perhaps the data that have been so much regarded in classifying the documents containing the N. T. text are insufficient to establish any system. The subject of recensions, though frequently discussed, is not yet settled. In the history of the *unprinted* text it is the chief topic which comes before the inquirer. Reserving it for future notice [RECESSIONS], we pass to the history of the *printed* text, and the efforts made to emend it.

The *whole* of the N. T. was first printed in the Complutensian Polyglott, 1514, though not published till 1517. The first *published* was that of Erasmus, at Basle, in 1516. Both were issued independently of one another, and constitute the basis of the *received text*. Yet the best materials

were not employed in preparing them, and on both the Vulgate was allowed to exert an undue influence. Even critical conjecture was resorted to by Erasmus. No less than five impressions were published by Erasmus, into the *third* of which 1 John v. 7 was first put. In the last two he made great use of the Complutensian Polyglott.

The third place among the early editors of the Greek Testament has been assigned to Robert Stephens, whose first edition was printed at Paris, 1546, 12mo, chiefly taken from the Complutensian, and generally stiled the *Mirifica* edition, from the commencement of the preface. His second edition was published in 1549; the third in 1550, in folio. In this last he followed the fifth of Erasmus, with which he compared fifteen MSS., and the Complutensian Polyglott. In 1551 appeared another edition, accompanied by the Vulgate and the Latin translation of Erasmus. It is remarkable for being the first into which the division of verses was introduced.

The next person who contributed to the criticism of the Greek Testament was Theodore Beza. The text of his first edition, 1565, folio, was the same as that of the third of Stephens, altered in about fifty places, accompanied with the Vulgate, a Latin version of his own, and exegetical remarks. In his second edition, 1582, he had the benefit of the Syriac version, an Arabic one of some books, and two ancient codices, the Clermont and Cambridge ones. A third impression appeared in 1589, and a fourth in 1598. The *Elzevir* editions exhibit partly the text of the third of Stephens, and partly that of Beza. The first appeared at Leyden in 1624. The second edition of 1633 proclaims its text to be the *textus receptus*, which it afterwards became. Subsequently five other editions issued from the same press. The editor does not appear to have consulted any Greek MSS. All his readings are either in Beza or Stephens.

Brian Walton, the learned editor of the London Polyglott, gave a more copious collection of various readings in the sixth volume of that work than had before appeared, which was further enlarged by Dr. Fell in his edition published at Oxford in 1675; reprinted by Gregory in 1703, folio.

Dr. John Mill, encouraged and supported by Fell, gave to the world a new edition in 1707, folio. The text is that of Stephens' third edition. In it the editor exhibited, from Gregory's MSS., a much greater number of readings than is to be found in any former edition. He revised and increased the extracts formerly made from ancient versions. Nor did he neglect quotations from the fathers. It is said that the work contains thirty thousand various readings. This important edition, so far superior to every preceding one, cost the laborious editor the toilsome study of thirty years, and excited the prejudices of many who were unable to appreciate its excellence. It commenced a new era in the criticism of the Greek Testament. Ludolph Kuster reprinted Mill's Greek Testament at Amsterdam in 1710, enriching it with the readings of twelve additional MSS.

The first real attempt to emend the *textus receptus* was made by John Albert Bengel, abbot of Alpirspach. His edition appeared at Tübingen, 4to, 1734, to which was subjoined his 'Introductio in crisin Novi Testamenti.' An *apparatus criticus* contains his collection of various readings, chiefly taken from Mill, but with important additions.

Dr. John James Wetstein contributed, in no small degree, to the advancement of sacred criticism by his large edition of the Greek Testament, published at Amsterdam in 1751-52, 2 vols. folio. In 1730 he had published *prolegomena*. It was his desire to give a new and corrected text, but he was compelled by circumstances to exhibit the *textus receptus*. Yet he noted, partly in the text itself, partly in the inner margin, such readings as he preferred. His collection of various readings, with their respective authorities, far exceeds all former works of the same kind in copiousness and value. He collated anew many important MSS. which had been superficially examined, gave extracts from many for the first time, and made use of the Philoxenian version, hitherto uncollated. For convenience, he marked the *uncial* MSS. with the letters of the alphabet, and the *cursive* with numerical letters. His exegetical notes are chiefly extracts from Greek, Latin, and Jewish writers. The edition of the Greek Testament under consideration is indispensable to every critic; and will always be reckoned a marvellous monument of indomitable energy and unwearied diligence. The *prolegomena* contain a treasure of sacred learning which will always be prized by the scholar. They were reprinted, with valuable notes, by Semler, in 1764, 8vo.

The next scholar who is pre-eminently distinguished in the history of the N. T. criticism is Dr. John James Griesbach. He enriched the materials collected by Wetstein with new and important additions, by collating MSS., versions, and early ecclesiastical writers, particularly Origen, with great labour. The idea of *recensions*, recommended by Bengel and Semler, he adopted, and carried out with much acuteness and sagacity. His first edition appeared at Halle in 2 vols., 1774-75. The first three gospels were synoptically arranged; but in 1777 he published them in their natural order. The text is founded on a comparison of the copious materials which he possessed. Nothing was adopted from conjecture, and nothing received which had not the sanction of codices as well as versions. A select number of readings is placed beneath the text. In his *Symbolæ Criticæ* (1785, 1793) he gave a full account of his collations. Such was the commencement of Griesbach's literary labours.

Between the years 1782-88, C. F. Matthæi published a new edition of the Greek Testament in 12 parts or vols. His text was founded on a collation of more than 100 Moscow MSS., which he first examined. It is accompanied with the Vulgate, *scholia*, and *excursus*. He avowed himself an enemy to the idea of *recensions*, despised the ancient MSS. (especially cod. Bezae), and quotations in the Fathers, while he unduly exalted his Moscow MSS. His chief merit lies in the careful collation he made of a number of MSS. before unknown. A second edition appeared in Germany in 3 vols. 8vo, 1803-1807. Several MSS. in Germany were examined by the editor previously to this edition.

Before the completion of Matthæi's first edition, appeared that of Alter, 1786-87, 2 vols. The text is that of the Vienna MS. (Griesbach, 218), with which he collated 22 others in the Imperial library. To these he added readings from the Coptic, Slavonian, and Latin versions.

In 1788, Professor Birch of Copenhagen enlarged the province of sacred criticism by his

splendid edition of the four Gospels in folio and 4to. The text is a reprint of Stephens' third; but the materials appended to it are highly valuable. They consist of extracts made by himself and Moldenhauer, in their travels, from many MSS. not examined by Wetstein; and of Adler's selections from the Jerusalem-Syriac version discovered in the Vatican. Birch was the first who carefully collated the *Codex Vaticanus*, except in Luke and John, where he used a collation formerly made for Bentley. The publication of the second volume was prevented by a fire that destroyed many of the materials. In 1798 he published his various readings on the remainder of the N. T., except the Apocalypse. In 1800 he published those relating to this book also.

In 1796 appeared the first volume of a new and greatly-improved edition of Griesbach's New Testament; for which he made extracts from the Armenian, Slavonic, Latin, Sahidic, Coptic, and other versions, besides incorporating into his collection the results of the labours of Matthæi, Alter, and Birch. The second volume appeared in 1806, both published at Halle. At the end of the second volume is a dissertation on 1 John v. 7. The work was reprinted at London in 1809, 1810; and again in 1818. The prolegomena are exceedingly valuable. This edition is indispensable to every critic and intelligent theologian. In 1805, Griesbach published a manual edition, with a selection of readings from the larger one. The text of this does not always agree with the other. It presents the learned critic's latest judgments, and is therefore of peculiar worth. It was reprinted, but inaccurately, in 1825.

In 1827 many new materials having been procured since the date of Griesbach's last edition, it was thought necessary to publish a third. It appeared, accordingly, under the superintendence of Dr. Schulz. The first volume contains the prolegomena and Gospels. It exhibits various readings from about 20 new sources, many corrections of Griesbach's references and citations, besides considerable improvements in other respects. The second volume has not been published.

The editions of Knapp, Schott, Tittmann, Vater, etc., etc., are chiefly based on that of Griesbach. Of these the most esteemed is that of Knapp, which has passed through five editions, and is characterised by sound judgment, especially in the punctuation and accents.

In 1830 appeared the first volume of a large critical edition, superintended by Dr. J. Martin Augustus Scholz, professor at Bonn, containing the Gospels. The second volume in 1836, completed the work. Both are in 4to. The editor spent 12 years of incessant labour in collecting materials for the work; and travelled into many countries for the purpose of collating MSS. The prolegomena prefixed to the first volume occupy 172 pages, and contain ample information respecting all the codices, versions, fathers, acts of councils, etc., etc., which are used as authorities, together with a history of the text, and an exposition of his classification system. In the inner margin are given the general readings characteristic of the three great families. The total number of MSS. which he described and used is 674, of which 343 had been collated by others, so that 331 were first examined by himself, *i. e.*, 210 of parts of the N. T., and 121 Evangelistaria. Little reliance

can be placed on the accuracy of the extracts which he has given for the first time. His researches raised the *textus receptus* higher than Griesbach placed it. In consequence of his preferring the *Constantinopolitan* family, his text comes nearer the Elzevir edition than that of Griesbach. The merits of this laborious editor are considerable. He greatly enlarged our critical apparatus. But in acuteness, sagacity, and scholarship, he is far inferior to Griesbach. His collations appear to have been superficial. They are not to be depended on. Hence the text cannot command the confidence of Protestant critics. We cannot believe, with the editor, that the Byzantine family is equal in value or authority to the Alexandrine which is confessedly more ancient; nor can we put his junior codices on a level with the very valuable documents of the Oriental recension. His text is inferior to that of Griesbach.

The edition of Lachmann, though small in compass, deserves to be mentioned. It was published in 1831, 12mo. The editor says that he has nowhere followed his own judgment, but the *usage of the most ancient Oriental churches*. The text of Lachmann was well received, and much importance was attached to it. In 1842 appeared the first volume of an 8vo edition, and in 1850 the second and last, by Lachmann. The younger Buttman assisted him in appending the Greek authorities. The object of Lachmann in this important work was to present the text which was most general in the 4th century, from eastern (in his sense of the word) and western sources. The text of the small edition is wholly based on *Oriental* sources, and where these differ among themselves he adopts the readings approved by the consent of Italian and African evidence. Of course his authorities are the most ancient, since he does not come down later than the 4th century. The Vulgate, as edited by him, is principally taken from two MSS. The only version he takes into account is the old Latin in its two forms, that prior to Jerome, and Jerome's revised form. The value of this edition is great, though it was not intended to present the *original text* as nearly as possible, but rather to exhibit the traditional text as it existed in the 4th century. Hence it was meant to be a *contribution* towards the original authentic text: that was all. Lachmann himself pointed out readings in it which could not have been the original ones. The tendency of the work has been to raise the value of the most ancient authorities as testimonies for the best readings. But Lachmann's horizon was too limited; his range of authorities too circumscribed. His plan resembles that of Bentley, whose edition was not published. It is matter of regret that the learned critic should speak of the opponents of his work in language uncourteous and unbecoming (see preface to vol. i.) For strictures on his edition we refer to Tischendorf's *isagoge* to his editio critica septima, p. cii. *et seq.*, where its imperfections and defects are correctly represented. It is singular that some critics in England should have undertaken the almost unqualified laudation of Lachmann, his railing and all.

Before the appearance of the first volume of Lachmann's large edition, that of Tischendorf had been published at Leipzig, 1841, containing a selected text taken from the best MSS., with the variations of the leading critical editions. The text was mainly based on ancient Alexandrine and

western authorities, being formed after those of Griesbach and Lachmann, particularly the latter. His second German edition appeared at Leipzig in 1849, greatly superior to the first, and professedly based on ancient authorities.

The most recent edition of Tischendorf is that which he calls the *seventh*, completed and published in the year 1859, 2 vols., large 8vo. Prefixed is a Latin introduction of 278 pages, which gives a full account of the authorities used, the principles pursued, and the chief editions published prior to his own. These prolegomena are exceedingly valuable, containing information which cannot be got in any other work. The text is formed solely from ancient witnesses, chiefly from Greek MSS., without neglecting the testimonies of versions and the fathers. When witnesses disagree, the first regard should be paid, according to the editor, to the readings of the most ancient Greek MSS., i.e., those written from the 4th to the 9th centuries (*Isagoge*, pp. 27, 28). On the whole, this is by far the best critical edition of the Greek Testament. The text is generally superior to that of any other, and the authorities are clearly given in the margin both for and against the readings. Tischendorf has been singularly fortunate in bringing to light and collating a large number of uncial Greek MSS., so that he has access to more sources of evidence than any other critic. He has neglected the collation of no codex which could contribute to the purity of the text. Such as have this edition will feel the want of none else; nor can it be superseded by any other till the learned editor himself sees fit to publish a better. The indefatigable critic has no rival in the field of N. T. criticism, in which he has already achieved results singularly successful.

In 1846 Von Muralt published a small edition of the Greek Testament at Hamburg, professing to give the text of the Vatican MS. as nearly as possible. This was followed in 1848 by a larger edition, with 115 pages of prolegomena. The text professes to be that of the codex Vaticanus, which it does not, however, exhibit. The same remark applies to the text of Buttmann's edition (1856), which professes principally to follow codex B, and to exhibit the various readings of the received text entire, together with all the readings of the editions of Griesbach, Lachmann, and Tischendorf. The work professes more than it performs, and is inaccurately printed. We cannot rely on it for the readings of B. Indeed, even in Cardinal Mai's new work we cannot believe that the MS. has been accurately given.

The critically revised text, with various readings given by Alford in his testament is an eclectic one, taken from the editions already published, and based upon the ancient evidence of MSS., versions, and fathers. It is inferior, on the whole, to that in Tischendorf's last edition.

A new and critical edition of the Greek Testament, accompanied by the old Latin version, has been begun by Dr. Tregelles, and issued in *fasciculi*, of which the gospels have appeared, 4to. The editor aims at great accuracy in his authorities. His text, however, shews defective judgment. What can be expected of one who gives as the original reading, $\delta \muωνογενής \thetaεός$ (John i. 18)?

The operations of sacred criticism have established the genuineness of the O. and N. T. texts in every matter of importance. All the doctrines and duties remain unaffected by its investiga-

tions. It has proved that there is no material corruption in the inspired records; that during the lapse of many centuries the Holy Scriptures have been preserved in a surprising degree of purity. The text is substantially in the same condition as that in which it was found 1700 years ago. Let the plain reader take comfort to himself when he reflects that the received text which he is accustomed to peruse is *substantially* the same as that which men of the greatest learning and the most unwearied diligence have elicited from an immense heap of documents.

For a copious account of the various editions of the Greek Testament the reader is referred to Le Long's *Bibliotheca*, edited by Masch; to Rosenmüller's *Handbuch für die Literatur der biblischen Kritik und Exegese*, i. pp. 278-422. Davidson's *Treatise on Biblical Criticism*, vol. ii.; the prolegomena of Tischendorf to his edition of 1849, and especially the introduction of the edition of 1859; Bleek's *Einleitung in das neue Testament*, 1862; as also to the 6th edition of De Wette's *Lehrbuch der Einleit. in das Neue Testament*, edited by Messner and Lünnemann, 1860.—S. D.

CROCODILE. Of the two names in the Bible that apply to the greater saurians, one appears to be general, and the other almost always designate a particular animal. The former, תַּנְיִן, *tanneer*, may be best rendered 'reptile,' although the reptile intended is sometimes the crocodile. The latter, לִיָּוִתָן, 'leviathan,' in every place but one can be rendered 'crocodile,' and in some places, as in the famous description in Job, must bear that meaning. The present article contains a description of the crocodile of Egypt, with the addition of some historical particulars connected with the animal. Its object is to illustrate the biblical notices when they come to be discussed under later heads [LEVIATHAN; TANNEEN; WHALE; see also TAN].

196.

'The crocodiles which we have to notice at present consist of three varieties, or perhaps species, all natives of the Nile, distinguishable by the different arrangement of the scutæ or bony studs on the neck, and the number of rows of the same processes along the back. Their general lizard-form is too well known to need particular description; but it may be remarked that of the whole family of crocodiles, comprehending the sharp-beaked gavials of India, the alligators of the west, and the crocodiles properly so called, the last are supplied with

the most vigorous instruments for swimming, both from the strength and vertical breadth of their tails, and from the deeper webs of the fingers of their paws. Although all have from thirty to forty teeth in each jaw, shaped like spikes, without breadth so as to cut, or surface so as to admit of grinding, the true crocodile alone has one or more teeth on each side in both jaws, exerted, that is, not closing within but outside the jaw. They have no external ear beyond a follicle of skin, and the eyes have a position above the plane of the head, the pupils being contractile, like those of a cat, and in some having a luminous greenish tinge, which may have suggested the comparison of the eyes of leviathan to 'the eyelids of the dawn' (Job xli. 10 [A. V. 18]). The upper jaw is not movable, but, as well as the forehead, is extremely dense and bony; the rest of the upper surface being covered with several rows of bosses, or plated ridges, which on the tail are at last reduced from two to one, each scale having a high horny crest, which acts as part of a great fin. Although destitute of a real voice, crocodiles when angry produce a snorting sound, something like a deep growl [or rather grunt]; and occasionally they open the mouth very wide, remain for a time thus exposed facing the breeze, and, closing the jaws with a sudden snap, cause a report like the fall of a trap-door. It is an awful sound, which we have heard more than once in the stillness of the night in tropical South America; and we are informed that the same phenomenon occurs on the Ganges, and on the west coast of Africa. The gullet of the crocodile is very wide, the tongue being completely tied to the lower jaw, and beneath it are glands exuding a musky substance. On land the crocodile, next to the gavia, is the most active, and in the water it is also the species that most readily frequents the open sea. Of the immense number of genera which we have seen or examined, none reached to 25 feet in length, and we believe the specimen in the British Museum to be one of the largest. Sheep are observed to be unmolested by these animals; but where they abound no pigs can be kept, perhaps from their frequenting the muddy shores; for we have known only one instance of crocodiles being encountered in woods not immediately close to the water's side: usually they bask on sandy islands. [They rarely attack men, but women are sometimes seized by them: in Nubia they are much more dangerous than in Egypt (See Sir G. Wilkinson's *Modern Egypt and Thebes*, ii., p. 127)]. As their teeth are long, but not fitted for cutting, they seize their prey, which they cannot masticate, and swallow it nearly entire, or bury it beneath the waves to macerate. Having very small excretory organs, their digestion requires, and accordingly they are found to possess, an immense biliary apparatus. They are oviparous, burying their eggs in the sand; and the female remains in the vicinity to dig them out on the day the young have broken the shell. Crocodiles are caught with hooks, and they seldom succeed in cutting the rope when properly prepared. Though a ball fired point blank will penetrate between the scales which cover the body, the invulnerability of these great saurians is sufficiently exemplified by the following occurrence.* One

being brought well bound to the bazaar at Cawnpore on the Ganges, it was purchased by the British officers on the spot, and carried further inland for the purpose of being baited. Accordingly, the ligatures, excepting those which secured the muzzle, being cut asunder, the monster, though it had been many hours exposed to the heat, and was almost suffocated with dust, fought its way through an immense crowd of assailants, soldiers and natives, armed with staves, lances, swords, and stones, and worried by numerous terriers, hounds, and curs; overturning all in its way, till, scenting the river, it escaped to the water at a distance of two miles, in spite of the most strenuous opposition!'

'With the ancient Egyptians the crocodile was a sacred animal, not, however, one of those revered by the whole nation, but only locally held in honour. Of old it was found in Lower as well as Upper Egypt, now it is restricted to the latter region, never descending as low as Cairo, and usually not being seen until the traveller approaches the Thebais. In hieroglyphics it bears the name MSUH, literally 'in the egg,' as though expressing surprise that so great an animal should issue from so small an egg. From this name the Coptic and Arabic names take their origin. The crocodile was sacred to the god SEBAK, represented with the head of this animal and the body of a man, and of uncertain place in the Egyptian mythology. It was not only not worshipped throughout Egypt, but was as much hated in some as venerated in other parts of the country: thus in the Ombite nome it was worshipped, and hunted in the Apollinopolite and Tentyrite nomes. The worship of this animal is no doubt of Nigritian origin, like all the low nature-worship of Egypt. It is not certain that the crocodile was an emblem of the king with the Egyptians, but it seems probable that this was the case.'

There is evidence that the crocodile was found in Syria at the time of the Crusades. A reptile of this kind has lately been discovered in the Nahr-el-Kelb, the ancient Lycus.

'The exploit of Dieudonné de Bozon, knight of St. John, who, when a young man, slew the dragon of Rhodes, an exploit which Schiller has celebrated in his 'Kampf mit dem Drachen,' must be regarded as a combat with a crocodile, which had probably been carried northward by the regular current of the eastern Mediterranean; for so the picture still extant in the harem of a Turkish inhabitant represents the Hayawán Kebér or Great Beast—a picture necessarily painted anterior to the expulsion of the knights in 1480.* As De Bozon died Grand Master of the Order at Rhodes in 1353, and the spoils of the animal long remained hung up in a church, there is not, we think, any reason to doubt the fact, though most of the recorded circumstances may be fabulous. All the ancient Greek and the later Mediterranean dragons, as those of Naples, Arles, etc., where they are not

in the soft parts of the body, even by a rifle-ball, speaking of thirteen years since when rifle-shooting was not what it is now.—R. S. P.

* Other paintings by the same artist, said to have been Sebast. de Firenze, pupil of Cimabue, shew that he did not represent grand masters later than Gio. de Lartin, who was elected 1437, and died 1454.'

* We do not remember any instance in Egypt or Nubia of a crocodile being wounded excepting

allegorical, are no doubt derived from crocodiles.*

'That crocodiles and alligators take the sea, and are found on islands many leagues distant from other land, we have ourselves witnessed; and the fact is particularly notorious at the Grand Caymans in the sea of Mexico, which is almost destitute of fresh water. It is indeed owing to this circumstance that the same species may frequent all the rivers of a great extent of coast, as is the case with some found in Africa, whence they spread to India and the Malayan islands.'—C. H. S.—R. S. P.

The zoological portion of the article, denoted by marks of quotation, is retained from the previous editions.

CROSS. This word is derived from the Latin *crux*. Respecting the origin of its Greek representative there is some diversity of opinion. According to Eustathius and Hesychius, the Greek *σταυρός* is so called *παρὰ τὴν εἰς ἀέρα στάσιν, ἢ παρὰ τὸ εἰς εὐρος ἰστᾶσθαι*, from its standing erect, or from its standing with its arms horizontal. Latin etymologists also derive the word from *ἰσσημι*, to place. In its general acceptation the cross is an instrument of punishment, and metaphorically, punishment itself, as well as the pain which it inflicts, and generally any severe suffering or heavy trial. Instead of *σταυρός* the Greek word *σκόλοψ* is sometimes found as equivalent to the Latin *crux*. Both are in frequent use on the part of the writers who transferred the events of Roman history into the Greek tongue.

In its simplest form, consisting of two pieces of wood, one standing erect, the other *crossing* it at right angles, the cross was known at an early age in the history of the world. Its use as an instrument of punishment was probably suggested by the shape so often taken by branches of trees, which seem to have been the first crosses that were employed. It was certainly customary to hang criminals on trees—*arbor infelix*; Cicero (*Pro Rabir.* 3) appears to consider hanging on a tree and crucifixion as of the same import, and Seneca (*Ep.* 101) names the cross *infelix lignum*, which may with no undue liberty be rendered 'the accursed tree.' Trees are known to have been used as crosses (Tertull. *Ap.* cap. 16), and to every kind of hanging which bore a resemblance to crucifixion, such as that of Prometheus, Andromeda, etc., the name was commonly applied. Among the Scythians, Persians, Carthaginians, Greeks, Romans, and the ancient Germans, traces are found of the cross as an instrument of punishment. The sign of the cross is found as a holy symbol among several ancient nations, who may accordingly be named, in the language of Tertullian, *crucis religiosos*, de-

votes of the cross. Among the Indians and Egyptians the cross often appears in their ceremonies, sometimes in the shape of the letter T, at others in this shape +. At Susa, Ker Porter saw a stone cut with hieroglyphics and cuneiform inscriptions, on which in one corner was a figure of a cross, thus †. The cross, he says, is generally understood to be symbolical of the divinity or eternal life, and certainly a cross was to be seen in the temple of Serapis as the Egyptian emblem of the future life, as may be learned in Sozomen and Rufinus. Porter also states that the Egyptian priests urged its being found on the walls of their temple of Serapis, as an argument with the victorious army of Theodosius to save it from destruction. From the numerous writings on this subject by La Croze, Jablonski, Zoega, Visconti, Pococke, Pluche, Petit Radel, and others, the symbol of the cross appears to have been most various in its significations. Sometimes it is the Phallus, sometimes the planet Venus, or the Nilometer, or an emblem of the four elements, or the seasons (Creuzer's *Symbolik*, pp. 168-9). It is not therefore surprising that ancient and even modern Christian writers should on this subject have indulged in some degree of refinement and mysticism. Justin Martyr (*Apol.* i, sec. 72) says, 'The sign of the cross is impressed upon the whole of nature. There is hardly a handicraftsman but uses the figure of it among the implements of his industry. It forms a part of man himself, as may be seen when he raises his hands in prayer.' In like manner Minutius Felix (c. 29): 'Even nature itself seems to have formed this figure for us. We have a natural cross on every ship whose sails are spread, in every yoke that man forms, in every outspreading of his arms in prayer. Thus is the cross found both in the arrangements of nature and among the heathen.'

According to Lipsius (*De Cruce*, i. 5-9) and Gretser (*De Cruce Christi*, vol. i. c. 1) there were in general two kinds of crosses:—1. *Crux simplex*; 2. *Crux composita* or *compacta*. The first consisted of a stake on which the criminal was fastened or by which he was impaled. For the first kind of punishment a tree or a specially prepared stake was used, on which the criminal was bound, and either left to perish, or immediately put to death. For *impaling* (*infixio*) a long and sharpened piece of wood (*pale*) was employed, on which the criminal was put as on a spit. Seneca describes this kind of execution (*Consolat. ad Marc.* c. 20): 'I behold these crosses, not of one kind, but made differently by different people. Some suspended the criminal with his head turned towards the earth: others drove a stake through his body.' This cruel mode of execution was formerly very customary in Russia, China, Turkey, and other countries, and is not yet universally abolished by law.

Of the *crux composita* or compound cross there were three sorts: 1, *crux decussata*; 2, *crux commissa*; 3, *crux immissa*. The *crux decussata* is also called Andrew's cross, because tradition reports that on a cross of this kind the Apostle Andrew suffered death. Jerome (*Comment. on Jerem.* c. 31) describes this cross in the following terms:—*Decussare est per medium secare velut si duæ regulæ concurrent ad speciem literæ X quæ figura est crucis*: saying in effect that the name indicates two lines cutting each other after the manner of the letter X. So Isidorus Hisp. (*Orig.* i. i. 3) says

* It has been suggested to us by M. Salzmann, French Consul at Rhodes, that the dragon slain by De Bozon was the descendant of some escaped crocodiles that had been transported to the island in imperial times for the games. He remarked that the places at which tradition speaks of dragons admit of this theory, or, like Arles, almost suggest it. Certainly Col. Hamilton Smith's explanation is inapplicable in some cases, and notably in those of British dragons, which, however, may be purely fanciful.—R. S. P.

that the letter X denotes a cross and the number ten (in Roman numerals).

The *crux commissa*, Lipsius states, was formed by putting a cross piece of wood on a perpendicular one, so that no part of the latter may stand above the former. This form is found in the figure T. Of the *crux inmissa*, or as others prefer to term it, *crux capitata*, the following is given as the description:—‘a cross in which the longer piece of wood or pale stands above the shorter piece which runs across it near the top. It is distinguished from the preceding by the part of the longer beam which is above the shorter or transverse, thus †. This form

is found in paintings more frequently than any other, and on a cross of this kind our Saviour is believed to have suffered death.

It is unnecessary here to do more than refer to the legend of the finding of the cross on which our Lord suffered; the reader will find a full view of the authorities bearing on this point in Tillemont (*Memoires Eccles.* vii. 8-16); and the whole subject discussed by Baronius (*Annal. Eccles.* A.D. 326, No. 42-50), Jortin (*Remarks* ii. 238-48), Mahon, cited by Milman (*Gibbon* iv. 94), etc. That the cross was of wood is certain, but of what wood no adequate evidence remains. No value can be attached to the tradition that the true cross consisted of three kinds, cypress, pine, and cedar, or of four kinds, cedar, cypress, palm, and olive.

Quatuor ex lignis Domini crux dicitur esse;—
Pes crucis est cedrus; corpus tenet alta cypressus;
Palma manus retinet; titulo lætatur oliva.

Lipsius (*De Cruce* iii. 13) supposes that the cross was made of oak, since it is likely it would be constructed of such wood as was most abundant, and therefore probably nearest at hand, and oak grew plentifully in Judæa.

According to Ambrosius (*Oratio de Obitu Theodor.* p. 498), the piece which bore the title stood on the top of the cross of our Lord (John xix. 19-22, ἐπὶ τοῦ σταυροῦ; comp. Matt. xviii. 37; Mark xv. 26; Luke xxiii. 38): the form then would be somewhat thus ☩. But all that can with any certainty be determined as to the shape of the Saviour's cross is, that the prevalent form was that of the *crux capitata*, and that this form is generally found on coins and in the so-called monogram (Munter's *Sinnbilder*, l. iv.)

Much time and trouble has been wasted in disputing as to whether three or four nails were used in fastening the Lord to his cross. Nonnus affirms that three only were used, in which he is followed by Gregory Nazianzen. The more general belief gives four nails, an opinion which is supported at much length and by curious arguments by Curtius, an Augustine friar, who wrote a treatise *De Clavis Dominicus*, in the beginning of the seventeenth century. Others have carried the number of nails so high as fourteen. Of the four original nails, the Empress Helena is reported to have thrown one into the Adriatic, when furiously raging, thereby producing an instant calm. The second is said to have been put by Constantine into either his helmet or crown. This nail, however, was afterwards to be found in a mutilated state in the church of Sta. Croce. In the Duomo of Milan is a third nail, which Eutropius affirms was driven through one of Jesus' hands, and which Constantine used as a

bit, intending thereby to verify the prophecy of Zechariah (xiv. 20): ‘In that day shall be upon the bells (margin, *bridles*) of the horses, *Holiness unto the Lord.*’ Treves possesses the fourth nail, which is alleged to have been driven through the sufferer's right foot. Those who maintain the number of nails to have been more than four have had no difficulty in finding as many nails as their hypothesis in each case needed, and as many sacred places for their safe keeping.

Another dispute has been agitated relative to the existence of a *hypopodium* or tablet whereon the feet were supported. Gregory of Tours, who had seen the alleged true cross, affirms that it had such a footstool; but his dictum has been called in question. It is, however, doubted whether the hands alone, without a prop beneath, could sustain the weight of the body, and some have supposed that a kind of seat was placed, on which the sufferer may be said to have in some way sat. The controversy is treated at length in the first of the four *Hypomnemata de Cruce* of Bartholinus. [CRUCIFIXION.]—J. R. B.

CROW. [ŌREB].

CROWN (עֶטְרָה). Crowns are often mentioned in Scripture, and in such a manner as in most cases to indicate the circumstances under which, and the persons by whom, they were worn; for crowns were less exclusively worn by sovereigns than among modern nations. Perhaps it would be better to say that the term ‘crown’ was applied to other ornaments worn for the head than those exclusively worn by royal personages, and to which modern usage would give such distinctive names as coronet, band, mitre, tiara, garland, etc.

The royal crown originated in the diadem, which was a simple fillet fastened round the head and tied behind. This obviously took its rise among a people who wore long hair, and used a band to prevent it from falling over the face. The idea oc-

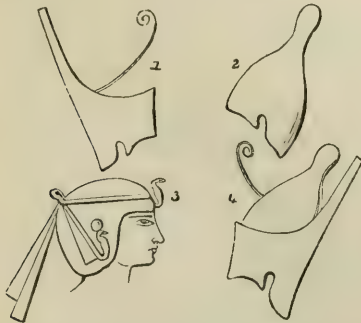

197. Ancient Asiatic Crowns.

curred of distinguishing kings by a fillet of different colour from that usually worn; and being thus established as a regal distinction, it continued to be used as such even among nations who did not

wear the hair long, or was employed to confine the head-dress. We sometimes see this diadem as a simple fillet, about two inches broad, fastened round the otherwise bare head, we then find it as a band of gold (No. 197, figs. 2, 5). In this shape it sometimes forms the basis of raised ornamental work (figs. 6, 7, 8, 10), in which case it becomes what we should consider a crown; and indeed the original diadem may be traced in most ancient crowns. Fig. 10 is curious, not only from the simplicity of its form, but on account of the metallic loop to be passed under the chin—a mode of securing the crown probably adopted in war or in the chase. Then we find the diadem surrounding the head-dress or cap (figs. 3, 9, 13), and when this also is ornamented, the diadem may be considered as having become a crown. The word *נֶזֶר* *nezzer* is supposed to denote a diadem. It is applied to the inscribed plate of gold in front of the high-priest's mitre, which was tied behind by a ribbon (Exod. xxix. 6; xxxix. 30), and which was doubtless something of the same kind that we see in figs. 8, 11. This word is also employed to denote the diadem which Saul wore in battle, and which was brought to David (2 Sam. i. 10), and also that which was used at the coronation of the young Joash (2 Kings xi. 12); and, as another word is applied elsewhere to the crown used in this ceremonial, the probability is that the Hebrew kings wore sometimes a diadem and sometimes a crown, and that the diadem only was accessible to the high-priest, by whom Joash was crowned, the crown itself being most likely in the possession of Athaliah. As Psalm lxxxix. was certainly composed by David, the lexical use of the diadem is further indicated in ver. 39.

The more general word for a crown is *עֲטָרָה* *atarah*? and it is applied to crowns and head ornaments of different sorts, including those used by the kings. When applied to their crowns, it appears to denote the state crown as distinguished from the diadem. This, the Rabbins allege, was of gold set with jewels; such was the crown which David took from the king of the Ammonites (2 Sam. xii. 30), and afterwards wore himself, as did probably his successors. Of its shape it is impossible to form any notion, unless by reference to the examples of ancient crowns contained in the preceding cut. These figures, how-

198. Ancient Egyptian Crowns.

ever, being taken mostly from coins, are not of that very remote antiquity which we should desire to illustrate matters pertaining to the period of the

Hebrew monarchies. In Egypt and Persia there are sculptures of earlier date, representing royal crowns in the shape of a distinguishing tiara, cap, or helmet, of metal, and of cloth, or partly cloth and partly metal. Such are the Egyptian crowns as represented in the above engraving (No. 198). Fig. 1 is the crown of Lower, and fig. 2 that of Upper Egypt; and when both kingdoms were under one sovereign, the two crowns were united, as in fig. 3. Such union of the crowns of different countries upon one head is matter of historical record. Thus when Ptolemy Philometer entered Antioch as a conqueror, he placed on his head the crowns of Egypt and of Asia. This would, in fact, form *three* crowns, as his previous one was doubtless the double crown of Upper and Lower Egypt. The diadem of two or three fillets (figs. 3, 4, No. 197) may have been similarly significant of dominion over two or three countries. There are allusions to this custom in Scripture (Rev. xii. 3; xix. 12). These Egyptian tiaras were worn in war, and on occasions of state; but on ordinary occasions a fillet or diadem was used, affording corroboration of a previous remark.

199. Modern Asiatic Crowns.

It is important to observe that the mitre of the high-priest, which is also called a crown (*נֶזֶר* Exod. xxxix. 30), was of similar construction, if not shape, with the addition of the golden fillet or diadem. [Comp. Bähr, *Symb. d. Mos. Cult.* ii. 110]. Similar also in construction and material, though not in form, was the ancient Persian crown, for which there is a distinct name in the book of Esther (i. 2; ii. 17; vi. 8), viz., *כֶּתֶר* *keter*, which was doubtless the *cidaris* or *citaris* (*κίδαρις* or *κίταρις*), the high cap or tiara, so often mentioned by the Greek historians. From the descriptions given of it, this seems to have been a somewhat conical cap, surrounded by a wreath or fold; and

this would suggest a resemblance to fig. 12, No. 197; which is in fact copied from a Parthian or later Persian coin. This one is worthy of very particular attention, because it forms a connecting link between the ancient and modern Oriental crowns, the latter consisting either of a cap, with a fold or turban, variously enriched with agrettes, as this is; or of a stiff cap of cloth, studded with precious stones. It must often occur to the student of biblical antiquities that the modern usages of the East have more resemblance to the most ancient, than have those which prevailed during that intermediate or classical period in which its peculiar manners and institutions were subject to much extraneous influence from the domination of the Greeks and Romans. So, in the present instance, we are much impressed with the conviction that such head tires and caps as those represented in Nos. 198 and 199, more correctly represent the regal 'crowns' of the O. T., than those figured in No. 197 (with the exception of fig. 12, and the simple diadems); which, however, may be taken to represent the style of the crowns which prevailed in and before the time of the N. T.

Crowns were so often used symbolically to express honour and power, that it is not always safe to infer national usages from the passages in which they occur. Hence we would scarcely conclude from Ezek. xxiii. 42, that crowns were worn by Jewish females, although that they wore some ornament which might be so called is probable from other sources. Mr. Lane (*Arabian Nights*, i. 424) mentions that until about two centuries ago a kind of crown was worn by Arabian females of wealth and distinction. It was generally a circle of jewelled gold (the lower edge of which was straight, and the upper fancifully heightened to a mere point), surmounting the lower part of a dome-shaped cap, with a jewel or some other ornament at the summit.

It is certain that 'crowns' of this or some similar kind were worn at marriages (Cant. iii. 11; Is. lxi. 10); and it would appear that at feasts and public festivals 'crowns of rejoicing' were customary. These were probably garlands (Wisd. ii. 8; iv. 2; Eccus. i. 11). The 'crowns' or garlands which were given to the victors in the public games are more than once alluded to in the Epistles (1 Cor. ix. 25; 2 Tim. ii. 5; iv. 8; 1 Pet. v. 4).—J. K.

CROWN OF THORNS. [ATAD.]

CRUCIFIXION—in Greek *ἀνασταυροῦν*; in Latin *cruci affigere*, in *crucem agere* or *tollere*, in later times *cruci figere*, whence our crucifixion. To describe this punishment the Jews used the general term תלה, for crucifixion is a kind of hanging; whence Christ in the polemical writings of the Jews is designated תלוי, 'the hanged one.' Crucifixion was a most cruel and disgraceful punishment; the terms applied to it by ancient writers are, 'the most cruel and disgraceful' (Cic. *Verr.* [ii. 5, 64]; Lactan. *Instit.* iv. 26); 'the worst possible punishment' (Ulpian); 'the worst punishment in the world' (Paull. v. 17). It was the punishment chiefly of slaves; accordingly the word *furcifer*, 'cross-bearer,' was a term of reproach for slaves, and the punishment is termed *seculo supplicium*, 'a slave's punishment' (*De Infami quo Chr. adfectus est cru. supp.*, in C. H. Lange's *Observatt.*

Sacr.) Free-born persons also suffered crucifixion, but only *humiles*, those of low condition and provincials. Citizens could not be crucified (Cic. *Verr.* i. 5 [ii. 1, 3]; Quintil. viii. 4; Suet. *Galb.*) This punishment was reserved for the greatest crimes, as robbery, piracy (Sen. *Ep.* vii.; Cic. *Petron.* 71); assassination, perjury (Firmic. vi. 26); sedition, treason, and (in the case of soldiers) desertion (Dion. v. 52; Joseph. *Antiq.* xiii. 22; Apul. *Asin.* 3). Its origin is ancient. In Thucydides (i. 110) we read of Inarus, an African king, who was crucified by the Egyptians. The similar fate of Polycrates, who suffered under the Persians, is detailed by Herodotus (iii. 125), who adds, in the same book (159), that no less than 3000 persons were condemned to the cross by Darius, after his successful siege of Babylon. Valerius Maximus makes crucifixion the common military punishment of the Carthaginians. That the Greeks adopted it is plain from the cruel executions which Alexander ordered after the capture of Tyre, when 2000 captives were nailed to crosses along the sea-shore (Q. Curtius, iv. 4; Justin, xviii. 3). With the Romans it was used under their early monarchical government, and was the death to which Horatius was adjudged for the stern and savage murder of his sister (Liv. i. 26), where the terms employed shew that the punishment was not at that time limited to any rank or condition. It appears also from the passage that scourging (*verberato*) then preceded crucifixion, as undoubtedly was customary in later times. The column to which Jesus was fastened during this cruel infliction is stated by Jerome (*Epist. ad Eustach.*) to have existed in his time in the portico of the holy sepulchre, and to have retained marks of his blood. The Jews received the punishment of crucifixion from the Romans (Joseph. *Antiq.* xii. 14, 2; xx. 6, 2; *De Bell. Jud.* ii. 12). Though it has been a matter of debate, yet it appears clear that crucifixion, properly so called, was not originally a Hebrew punishment (Bormitti *de cruce num. Ebraic. supp. fuerit*). The condemned, after having been scourged (Liv. xxxvi. 26; Prud. *Enchir.* xli. 1), had to bear their cross, or at least the transverse beam, to the place of execution (Plut. *De Tard. Dei Vind.* 9; Artemid. 11, 41), which was generally in some frequented place without the city (Cic. *Verr.* v. 66). The cross itself, or the upright beam, was fixed in the ground (Cic. *ad Quint. Fr.* i. 2; *Pro Rat.* iv. 2). Arrived at the spot, the delinquent was supplied with an intoxicating drink, made of myrrh and other bitter herbs (Pipping, *Exercit. Acad.* lv.), and having been stripped of his clothing, was raised and affixed to the cross, by nails driven into his hands, and more rarely into his feet; sometimes the feet were fastened by one nail driven through both (Tertull. *Adv. Jud.* x.; Sen. *De Vita Beat.* 19; Lactan. iv. 13). The feet were occasionally bound to the cross by cords, and Xenophon asserts that it was usual among the Egyptians to bind in this manner not only the feet but the hands. A small tablet (*titulus*), declaring the crime, was placed on the top of the cross (Sueton. *Cal.* 38; *Dom.* 10; Euseb. *Hist. Eccles.* v. 1). The body of the crucified person rested on a sort of seat (*πίτυμα*) (Iren. *Adv. Her.* ii. 42). The criminal died under the most frightful sufferings—so great that even amid the raging passions of war pity was sometimes excited. Josephus (*De Bell. Jud.* v. 11. 1) narrates of captives

taken at the siege of Jerusalem, that 'they were first whipped, and tormented with all sorts of tortures, and then crucified before the walls of the city. The soldiers, out of the wrath and hatred they bore the Jews, nailed those they caught one after one way and another after another, to crosses, by way of jest, when their multitude was so great that room was wanting for the crosses, and crosses wanting for the bodies. This miserable procedure made Titus greatly pity them.' Sometimes the suffering was shortened and abated by breaking the legs of the criminal—*crura fracta* (Cic. *Phil.* xiii. 12). After death, among the heathens, the bodies commonly remained on the cross till they wasted away, or were devoured by birds of prey (Horat. *Epist.* i. 16, 48; *Non pasces in cruce corvos*; Plaut. *Mil. Glor.* ii. 4, 19; Plin. *Hist. Nat.* xxxvi. 24). A military guard was set near the cross, to prevent the corpse from being taken away for burial (Plut. *Cleomen.* 39; Petron. *Satyr.* iii. 6; Sen. *Ep.* 101). But among the Jews the dead body was customarily taken down and buried. Josephus says (*De Bell. Jud.* v. 2), 'the Jews used to take so much care of the burial of men that they took down those that were condemned and crucified, and buried them before the going down of the sun.' In order that death might be hastened, and the law might not be violated, the Jews were accustomed to break the legs (John xix. 31; Casaubon, *Exercitationes Antibar.* p. 537; Lipsius, *De Cruc.* lib. iii.) There was a bare possibility in some cases of those who had suffered this punishment recovering after being taken down, under medical treatment. Josephus thus writes (*Vit.* 75), 'I saw many captives crucified, and I remembered three of them as my former acquaintance. I was very sorry at this, and went with tears in my eyes to Titus; so he immediately commanded them to be taken down, and to receive the greatest care in order to their recovery; yet two of them died under the physician's hands, while the third recovered.' Compare Bretschneider, in the *Studien u. Krit.* for 1832, p. 625. The execution took place at the hand of the *caruifex*, or hangman, attended by a band of soldiers, and in Rome, under the supervision of the *Triumviri Capitales* (Tac. *Ann.* xv. 60; Lactan. iv. 26). The accounts given in the Gospels of the execution of Jesus Christ are in entire agreement with the customs and practices of the Romans in this particular (Tholuck, *Glaubwürdigkeit der Evangel.* Gesch. p. 361). The punishment continued in the Roman empire till the time of Constantine, when it was abolished through the influence of the Christian religion. Examples of it are found in the early part of the emperor's reign, but the reverence which, at a later period, he was led to feel for the cross, induced him to put an end to the inhuman practice. (Aur. Vict. *Cæs.* 41; Sozom. i. 8; Niceph. vii. 46; Firmic. viii. 20). There is a classical work on the subject by Lipsius, Antwerp, 1594 and 1637. Other valuable works, besides those which have been named in this and the article CROSS, are by Vossius, Gretser, Calixtus, Salsmasius, and Kipping. Sagittarius, Bynæus, Dilherr, etc., have treated specially on the application of this punishment in the case of our Lord. The more ancient literature on the subject is detailed in Fabric, *Bibliogr. Antiquar.* Hamb. 1760, p. 755, sq.—J. R. B. [CROSS.]

CRUCIFIXION, DEATH BY (physically considered), is to be attributed to the sympathetic fever which is excited by the wounds, and aggravated by exposure to the weather, privation of water, and the painfully constrained position of the body. Traumatic fever corresponds, in intensity and in character, to the local inflammation of the wound. In the first stage, while the inflammation of the wound is characterized by heat, swelling, and great pain, the fever is highly inflammatory; and the sufferer complains of heat, throbbing headache, intense thirst, restlessness, and anxiety. As soon as suppuration sets in, the fever somewhat abates, and gradually ceases as suppuration diminishes and the stage of cicatrization approaches. But if the wound be prevented from healing, and suppuration continue, the fever assumes a hectic character, and will sooner or later exhaust the powers of life. When, however, the inflammation of the wound is so intense as to produce mortification, nervous depression is the immediate consequence; and if the cause of this excessive inflammation of the wound still continues, as is the case in crucifixion, the sufferer rapidly sinks. He is no longer sensible of pain, but his anxiety and sense of prostration are excessive; hiccup supervenes, his skin is moistened with a cold clammy sweat, and death ensues. It is in this manner that death on the cross must have taken place, in an ordinarily healthy constitution. The wounds in themselves were not fatal; but, as long as the nails remained in them, the inflammation must have increased in intensity until it produced gangrene. De la Condamine witnessed the crucifixion of two women of those fanatic Jansenists called *Convulsionnaires*. One of them, who had been crucified thrice before, remained on the cross for three hours. They suffered most pain from the operation of extracting the nails; and it was not until then that they lost more than a few drops of blood from their wounds. After they were taken down, they seemed to suffer little, and speedily recovered (*Correspond. de Grimm et Diderot*, ii. 75). The probabilities of recovery after crucifixion would of course depend on the degree of constitutional irritation that had been already excited. Josephus (*Vita*, 75) relates that of three of his friends, for whom he had obtained a release from the cross, only one survived. The period at which death occurred was very variable, as it depended on the constitution of the sufferer, as well as on the degree of exposure, and the state of the weather. It may, however, be asserted that death would not take place until the local inflammation had run its course; and though this process may be much hastened by fatigue and the alternate exposure to the rays of the sun and the cold night air, it is not completed before forty-eight hours, under ordinary circumstances, and in healthy constitutions; so that we may consider thirty-six hours to be the earliest period at which crucifixion would occasion death in a healthy adult. Many of the wounded at Waterloo were brought into the hospitals after having lain three days on the field, and even then sometimes recovered from severe operations. It cannot be objected that the heat of an Eastern climate may not have been duly considered in the above estimate; for many cases are recorded of persons having survived a much longer time than is here mentioned, even as long as eight or nine

days. Eusebius (*Hist. Eccles.* iii. 8) says that many of the martyrs in Egypt, who were crucified with their heads downwards, perished by hunger. This assertion, however, must not be misunderstood. It was very natural to suppose that hunger was the cause of death, when it was known that no food had been taken, and when, as must have happened in lingering cases of crucifixion, the body was seen to be emaciated. But it has been shewn above that the nails in the hands and feet must inevitably have given rise to such a degree of inflammation as to produce mortification, and ultimately death; and it is equally certain that food would not, under such circumstances, have contributed to support life. Moreover, it may be added that after the first few hours, as soon as fever had been fully excited, the sufferer would lose all desire for food. The want of water was a much more important privation. It must have caused the sufferer inexpressible anguish, and have contributed in no slight degree to hasten death. As-Sujuti, a celebrated Arabic writer, gives an interesting account of a young Turk who was crucified at Damascus A.D. 1247. It is particularly mentioned that his hands and feet were nailed, and even his arms (but not as if it was in any way remarkable). He complained of intense thirst on the first day, and his sufferings were greatly increased by his continually seeing before him the waters of the Baradâ, on the banks of which he was crucified. He survived two days, from the noon of Friday to the noon of Sunday (Kosegarten, *Chrestomathia Arabica*, p. 63, sq.)—W. A. N.

CRUDEN, ALEXANDER, the second son of Thos. W. Cruden, one of the bailiffs of Aberdeen, was born in 1701. At the age of fifteen he went to Marischal College, and four years afterwards took his degree. A disappointment in love, attended by some peculiarly painful circumstances, shortly afterwards affected his intellect, and led to eccentricities of manner and expression which remained with him through life. He lived for some time as a private tutor, but he mainly earned his livelihood by the correction of books for the press, which caused him, in his various fantastic pamphlets, to assume the title of Alexander the Corrector. At one time he set up as a bookseller; but, as he met with little success, his eccentricities became so marked, that on two several occasions he was confined in a lunatic asylum. This seems to have been a harsh measure, as his peculiarities were very harmless. He used, for instance, to go about with a sponge, effacing from walls all inscriptions offensive to good morals, and shewing his abhorrence of Wilkes by rubbing out the number 45 wherever he found it. He died in the year 1770, in the sixty-ninth year of his age, being found dead upon his knees, in a posture of prayer. Throughout life he had been a simple-minded, earnest, inoffensive Christian man.

His only claim to notice in these pages is his admirable Concordance, of which the first edition was published in 1737, and dedicated to Queen Caroline. As the queen died a few days after it was presented to her, Cruden obtained no reward beyond the barren title of bookseller to Queen Caroline. It was a work of enormous labour, and occupied, before it reached its complete form, many years of the author's life. Not only is it a remark-

ably comprehensive and faithful concordance, but also, the various explanations and notices prefixed to the more curious and important words are very clear and useful, and, considering the state of biblical learning in England at that time, are highly creditable to the author's learning. Many of his definitions are deeply marked by the spirit of Calvinism. Cruden's Concordance still continues to be the most useful book of the kind, but his other works have long been forgotten. The only two worth mentioning are, *A Brief Compendium of the Bible* (1750), often printed with the Concordance; an Index to Bishop Newton's edition of Milton's works; and *A Scripture Dictionary or Guide to the Holy Scriptures*, 2 vols. 8vo.—F. W. F.

CRUSE. Three Hebrew words are thus translated in the A. V., צִפְתָּה (for holding water, 1 Sam. xxvi. 11, 12, 16; 1 Kings xix. 6; for oil, xvii. 12) בִּקְבוּק (for honey, 1 Kings xiv. 3; of earthenware, Jer. xix. 1, 10, A. V. bottle); and צֶלֶהָ, or צֶלְחִית, or צֶלְחָת (2 Kings ii. 20; xxi. 13, A. V. dish; 2 Chron. xxxv. 13, A. V. pans; Prov. xix. 24; xxvi. 15, A. V. bosom), probably a deep dish; and the word is from צָלַל to hollow; comp. the figurative use of it in Prov. with the Gr. Βαθύ-κολπος, and the word itself with σκάφη from σκάπτω. [BASON; BOWL; DISH; PITCHER.]—W. L. A.

CRUSIUS, CHRISTIAN AUGUST, a theologian of the 18th century, was born near Merseburg, Jan. 10, 1714, and prepared in Zeitz for the university of Leipzig, to which he repaired in 1734. In 1744 he was chosen professor of philosophy; and in 1750 ordinary professor of theology. His death took place on the 18th October 1775. Crusius was a learned, acute, and pious man, a strong opponent of the Wolfian philosophy. In his time the university of Leipzig was for the most part divided into two parties, the Ernestian and Crusian, of which the former held more correct principles. His chief works are, *Hypomnemata ad theologiam prophetiam*, in three parts, 1764; and *Begriff der Moralthologie*, 2 parts, 1772. Most of his theological writings have passed into oblivion; and the two we have just specified as the most important can hardly now be rescued from obscurity.—S. D.

CRYSTAL. There seems to be no doubt that crystal is intended by the Greek word κρύσταλλος in Rev. xxi. 11, as indeed the phrase of comparison 'clear as crystal' would seem naturally to suggest. Theophrastus (54) reckons crystal among the pellucid stones used for engraved seals. In common parlance we apply the term *crystal* (as the ancients apparently did) to a glass-like transparent stone, commonly of a hexagonal form, which, from being found in rocks, is called by mineralogists rock-crystal. It is a stone of the flint family, the most refined kind of quartz.—J. K. [There are three Hebrew words which have been supposed to mean crystal, viz., כְּבִיבִית, Job xxviii. 17, A. V. and Symm. *crystal*; גְּבִישׁ, Job xxviii. 18, A. V. *pearls*, Gesen. and Fürst *crystal*; קֶרֶן, Ezek. i. 22, LXX. κρυστάλλου, A. V. *crystal*. But in all of these there is doubt as to their having this meaning.]

CUBIT. [WEIGHTS AND MEASURES.]

CUCKOW. [SHACHAPH.]

CUCUMBERS. [KISHUIM.]

CUMBERLAND, RICHARD, was born in London in 1632, and died in 1718. After spending twenty years, first as rector of Brampton, Northamptonshire, and afterwards of All-Hallows at Stamford, he was, in 1691, elevated to the bishopric of Peterborough, a dignity which he neither anticipated nor sought. He was a man of research, of accurate scholarship, and exact if not profound thinking. Besides his great work *De Legibus Naturæ*, 4to, 1672, of which a translation into English, with additions by John Maxwell, appeared in 1726, he wrote an *Essay towards the Recovery of the Jewish Weights and Measures*, etc., 8vo, 1686, of which an abbreviation is frequently appended to editions of the A. V.; *Sanchoniatho's Phœnician History*, translated from Eusebius de præp. *Evangel.*, etc., 8vo, 1720; *Origines Gentium Antiquissimæ; Attempts for Discovering the Times of the Planting of Nations*, 8vo, 1724. These last two publications were edited from the author's papers by S. Payne, M.A., rector of Barnack. Bishop Cumberland left behind him a lofty reputation as a scholar, a thinker, and a man of piety, 'blessed with a mind free from every evil passion' (Payne).—W. L. A.

CUMMIN or KAMMON (כַּמְמוֹן; N. T. κύμινον) is an umbelliferous plant, mentioned Is. xxviii. 25, 27; Matt. xxiii. 23, and which, like the dill and the coriander, continues to be cultivated in modern, as it was in ancient times, in Eastern countries. These are similar to, and used for many of the same purposes as the anise and caraway, which supply their place and are more common in Europe. All these plants produce fruits, commonly called seeds, which abound in essential oil of a more or less grateful flavour, and warm stimulating nature; hence they were employed in ancient as in modern times, both as condiments and as medicines. So we find the Cummin mentioned by Hippocrates, and also by Dioscorides, under the name of κύμινον. The latter writer distinguishes several

varieties, but the principal is called ἡμερον, or sativum, which the Arabs, following Dioscorides, describe under the name of *kumoon baghee*, a gar-

den that cultivated cummin. The Arabic name كُمُون kumoon, is too similar to the Hebrew Kammon to allow us to doubt their identity, especially as we find it, in the Greek form of κύμινον, employed as early as the time of Hippocrates.

Notwithstanding the numerous distinct notices of the cummin, and its difference from caraway, it is strange that Celsius (*l. c.* p. 516) should have adduced the *carum* of Theophrastus and Dioscorides as identical with the *cuminum*. So in the translation of Rosenmüller (*Bibl. Bot.* p. 99) we have *carum Carvi* given as the systematic name of cumminum, making the latter the caraway plant, which it is not.—J. F. R.

CUNAEUS (VAN DER KUN), PETER, was born at Flessingen in 1586, and died at Leyden, where he was professor of law, in 1638. Besides some treatises on subjects connected with classical literature, and the famous *Satyra Menippea* (Lugd. Bat. 1612), he wrote *De Republica Hebræorum Lib. III.*, 8vo, Lugd. Bat. 1617, 12mo, Amst. 1666, of which a new edition, revised and augmented by Nicholai, appeared in 4to in 1703. This work was translated into English, Dutch, and French; and for many years served as the text-book from which professors lectured on the political and legislative part of Jewish archaeology. It is now superseded by more copious and correct works.—W. L. A.

CUP. There are three Hebrew words chiefly rendered cups (or bowls) in the English version.—1. כַּסִּי; LXX. ποτήριον, calix. This is the commonest word, and is derived from כָּסַת, *collegit*, Gen. xl. 11; 2 Sam. xii. 3; Ps. xxiii. 5. 2. קִישוֹת; LXX. σπονδία, phialæ ad libandum, Exod. xxv. 29; Num. iv. 7. 3. גִּבְעֵי; LXX. κύβητος, scyphus, or crater, a large bowl or cup (ποτήριον βασιλικόν, Hesych.), Jer. xxxv. 5. The derivation of both these words implies a circular shape. The latter is also used of flower-cups, Exod. xxv. 31. Other terms are כַּפָּרוֹת, a covered vessel (1. Chron. xxviii. 17; Ezra i. 10); and קַבְעֵת, which only occurs in the curious phrase כַּסִּי קַבְעֵת (Is. li. 17, 22) = calix poculi, or Germ. Becherkelch. The word mainly used in the N. T. is ποτήριον.

The cups of the Jews were no doubt generally made of earthenware or* metal, like those of other Oriental nations ancient and modern (Layard's *Nineveh*, ii. 304; Wilkinson's *Anc. Egypt.* iii. 258; Lane's *Mod. Egypt.* i. 205). Of their shapes and distinctions we know nothing, and no doubt there was a large variety of shapes, which gave room for individual fancy. In Esth. i. 7, the cups used in the Persian feast are not only of silver and gold (materials used in cups from very early days, Gen. xlv. 2; Num. vii. 13; 1 Kings x. 21), but are all of different patterns. That the Jewish cups were usually circular or lotus-shaped, we may safely

* We can only conjecture what kind of cup our Lord used at the Last Supper. By an order of the Council of Rheims the chalices used at the eucharist were only to be of gold, silver, or tin; not of glass, because it is brittle; of wood, because porous; of brass, because of its smell; or of copper, because it rusts.

infer from 1 Kings vii. 26; Exod. xxv. 33; and the phrase כוס קבעת, already referred to (Is. li. 17), implies the same thing, because the word כוס means properly the calyx of a blossom. Such cups are seen in the ruins of Persepolis, etc. (Jahn, *Arch. Bibl.*, E. T., sec. 352).

The word 'cup' is used in both Testaments in some curious metaphorical phrases. Such are the *cup of salvation*, Ps. cxvi. 13, which Grotius, after Kimchi, explains as 'poculum gratiarum actionis,' a cup of wine lifted in thanksgiving to God (cf. Matt. xxvi. 27). That it alludes to a paschal libation cannot be proved; and that it was understood by the Jews to be expressive of gratitude, we may see from 3 Macc. vi. 27, where the Jews offer 'cups of salvation' in token of deliverance. In Jer. xvi. 7, we have the term '*cup of consolation*,' which is a reference to the wine drunk at the *περιδεια* or funeral feasts of the Jews (2 Sam. iii. 35; Prov. xxxi. 6; Joseph. *de Bell. Jud.* ii. 1). In 1 Cor. x. 16, we find the well-known expression, '*cup of blessing*' (ποτήριον τῆς ευλογίας) contrasted (v. 21) with the '*cup of devils*.' The sacramental cup is called the cup of blessing, because of the blessing pronounced over it (Matt. xxvi. 27; Luke xxii. 17; v. Lightfoot, *Hor. Hebr. in l.*) No doubt St. Paul uses the expression with a reference

to the Jewish 'cup of blessing' (כוס ברכה), the third of the four cups drunk by the Jews at their Paschal feast (Schoettgen *Hor. Hebr. in 1 Cor.*; Jahn, *Arch. Bibl.* sec. 353), but it is scarcely necessary to add, that to this Jewish custom our Lord, in his solemn institution of the Lord's supper, gave an infinitely nobler and diviner significance (Buxtorf, *De Sacra Canâ*, sec. 46, p. 310). Indeed, of itself, the Jewish custom was liable to abuse, and similar abuses arose even in Christian times (August. *Serm. cxxxii. de tempore*; Carpov, *App. Critic.* p. 380, sq.) In Ps. xi. 5; xvi. 5, 'the portion of the cup' is a general expression for the condition of life, either prosperous or miserable (Ps. xxiii. 5). A cup is also in Scripture the natural type of sensual allurements (Jer. li. 7; Prov. xxiii. 31; Rev. xvii. 4; xviii. 6).

But in by far the majority of passages, the cup is a 'cup of astonishment,' 'a cup of trembling,' the full red flaming wine-cup of God's wrath and retributive indignation (Ps. lxxv. 8; Is. li. xvii; Jer. xxv. 15; Lam. iv. 21; Ezek. xxiii. 32; Zech. xii. 2; Rev. xvi. 19, etc.) There is, in fact, in the prophets, no more frequent or terrific image; and it is repeated with pathetic force in the language of our Lord's agony (Matt. xxvi. 39, 42; * John xviii. 11; Mark x. 38). God is here represented as the master of a banquet, dealing the madness and stupor of vengeance to guilty guests (Vitringa in Is. li. 17; Wichmannshausen *De ira et tremoris Calice*, in *Thes. Nov. Theol. Philol.* i. 906, sq.) The cup thus became an obvious symbol of Death (ποτήριον . . . σημαίνει καὶ τὸν θάνατον. Etym. M.); and hence the oriental phrase, to 'taste of death,' so common in the N. T. (Matt. xvi. 28; Mark ix. 1; John viii. 52; Heb. ii. 9), in the rabbis (Schoettgen, *Hor. Hebr. in Matt. xvi.*), in the Arabian poem *Antar*, and among the Persians (Schleusner, *Lex N. T.*, s. v. ποτήριον;

Jahn, *Arch. Bibl.* sec. 203). The custom of giving a cup of wine and myrrh to condemned criminals (Otho, *Lex. Rabb.* s. v. Mors) is alluded to in Matt. xxvii. 34; Mark xv. 22.

Finally, we may notice Joseph's *cup of divination*, Gen. xlv. 5. The various attempts made by Parkhurst and others to explain away this verse by translating it in accordance with preconceived prejudices, belongs to that idle and exploded method of biblical criticism which has so much obscured our knowledge of Scripture. Undoubtedly it was a cup of *supposed magic properties* by which Joseph (deeply stained with Egyptian customs) pretended to divine (οἰωνίζεται ἐν αὐτῷ, LXX.; in quo augurari solet, Vulg.); and κλικομαντεία, an attempt to discover the future from the radiation of water, or by sounds coming out of it, is a universal superstition, and was well known in Egypt; and, in having a royal divining-cup, Joseph only imitated other rulers. Κόνδυ, the word here used by the LXX., occurs in Hipparchus, ap. Athen. 478, A, and is curiously, like the Indian *kundi*, a sacred Indian cup (Bohlen on *Gen.*, p. 403; Kalisch, p. 673).—F. W. F.

CUP-BEARER (כֹּשֶׁת, properly the Hiphil part. of שָׁקַע, Hab. ii. 15; Sept. οὐνόχοος; *po-cillator*, *pinerna*). The office of cup-bearer is one of great antiquity. We find *several* in the court of Pharaoh (שֹׁר מִשְׁקִים, Gen. xl. 20), as well as in the courts of Solomon (1 Kings x. 5; 2 Chron. ix. 4), of Sennacherib king of Assyria (2 Kings xvii. 17, etc.), of Artaxerxes Longimanus (Neh. i. 11), and of Herod (Jos. *Ant.* xvi. 8. 1). They were generally eunuchs; and there is no reason to suppose that Rabshakeh or Nehemiah were exceptions to the general rule, particularly as Rabshakeh (whose name, or rather title, means 'chief of the cup-bearers,' rendered '*der Erzschenke*' by Luther) is mentioned in connection with Rabsaris, 'chief of the eunuchs.' If Rabshakeh was (as there is some reason to believe) an apostate Jew, it will shew how largely the captive Jews were employed in domestic service at ancient courts (cf. Dan. i. 4). As the cup-bearer had the highly-valued privilege of access to the king's presence, and that, too, at his most merry and unbending moments, the office was one of high value and importance. This explains the enormous wealth which Nehemiah, during his term of service in the Persian court, had been able to amass. Cup-bearers are frequently represented on the Assyrian monuments (Layard's *Nin.* ii. 306). It may be worth observing, that when Pharaoh's butler or cup-bearer (Gen. xl. 11), speaks of pressing *grapes* into Pharaoh's cup, this may merely belong to the imagery of his dream; but, at the same time, it is not impossible that the king, under the control of a scrupulous hierarchy, may, at some period, have been forbidden to drink the juice of the grape except in its unfermented state.—F. W. F.

CURCELLÆUS, STEPHEN (*Etienne de Courcelles*), a celebrated Swiss theologian at the time of the Arminian controversy, was born at Geneva in 1586 and died in 1659. He studied under Theodore Beza and was appointed pastor of Fontainebleau in 1614. In 1621 he removed to Amiens. He refused to sign the acts of the Synod of Dort, and was compelled, in consequence, to

* Matt. xx. 22, singularly resembles the saying, 'Ut senex eodem poculo quo ego bibi biberet.' Plaut. *Casin.* v. 2, 42.

withdraw to Amsterdam, where he was very kindly received by Episcopius, and on his death in 1634 was appointed professor of theology. He was a thorough Arminian, and has even been accused of holding Socinian and Antitrinitarian opinions. He wrote several works on the Arminian controversy, which, except in relation to the history of the struggle, have no particular value now. One of his most interesting works is an edition of the N. T. with various readings, to which he paid considerable attention. His works were published in 1675 by the Elzevirs, with an account of his life by Arnold Poëlemburg.—H. W.

CURTAIN. [TABERNACLE.]

CUSH, כּוּשׁ, as the name of an individual, is mentioned among the sons of Ham, together with Mizraim, Phut, and Canaan (Gen. x. 6, and 1 Chron. i. 8). Being the first-named, he may be presumed to have been the eldest son. The sons of Cush are called Seba, Havilah, Sabtah, Raamah, and Sabtechah; the sons of Raamah, Sheba, and Dedan. Afterwards Nimrod is also mentioned as the son of Cush. It may, however, only be meant that he was his descendant. Cush was the progenitor of the people known afterwards by his name. Like Mizraim and Canaan, he also gave his name to a country as well as to a people. With respect, however, to the situation of the particular country denominated Cush, various opinions have been held. Bochart (*Phaleg*. iv. 2) maintained that Cush was exclusively Arabian. Michaelis and Rosenmüller were in favour of an African as well as an Arabian Cush. The first to advance the suggestion that Cush was exclusively African was Schulthess in his *Paradies*, p. 11. He was followed by Gesenius, and most moderns agree with him. Indeed we cannot but think that it is difficult to understand how Cush should ever have been supposed to be other than African; if, indeed, not exclusively, at least in addition to one of which the locality might be fixed elsewhere. The A. V., wherever it translates the word, invariably renders it by 'Ethiopia,' and doubtless with reason; and there is not a single passage in the Bible in which Cush cannot fairly be understood to mean Ethiopia. Ezek. xxix. 10, even mentions Syene as the border of Cush according to the marginal version, which is to be preferred. Moreover, in the prophets Mizraim and Cush are frequently named together, which they probably would not have been had the countries themselves not been contiguous (Ps. lxxviii. 31; Is. xi. 11; xx. 4; xliii. 3; xlv. 14; Nahum iii. 9). The first mention of Cush in connection with Mizraim, Gen. x. 6, seems to shew that there is at least no antecedent improbability in a geographical as well as ethnological affinity having existed between the two nations. The Lubim and Sukkiim, doubtless African peoples, are found united with the Cushites (2 Chron. xii. 3), in the army of Shishak (cf. also 2 Chron. xvi. 8; Jer. xlv. 9, and Dan. xi. 43), in all of which passages Cush can only be supposed with violence to mean an Asiatic people. In Is. xxxvii. 9, Tirhakah, who is known to have belonged to the 25th or Ethiopian dynasty of Egyptian kings, is called king of Cush. In Esther i. 1 and viii. 9, the dominion of Ahasuerus is said to have extended from India even unto Cush; and as this king, whoever he was, probably belonged to the 27th dynasty of Egyptian kings, it is likewise certain that Ethiopia

would have been the southernmost province of his kingdom. In Isaiah, Cush, as above remarked, is frequently mentioned in connection with Egypt, and at ch. xviii. 1, the phrase 'rivers of Ethiopia' (see the same words, Zeph. iii. 10) seems to point to the White and Blue Nile, which irrigate the country probably answering to the Scripture Cush. If such, then, are the reasons on which we ground the supposition that Cush was a country to the south of Egypt corresponding to 'Ethiopia,' how is it that the opinion can be entertained that the region of Cush is to be sought either in the south of the Arabian peninsula, or even, as some suppose, in a district in the neighbourhood of Mesopotamia? In the first place, the mention of Cush as watered by the Gihon, one of the rivers of Eden (Gen. ii. 13), has been thought to prove the existence of an Asiatic Cush. It is a sufficient answer to this, that, seeing it is utterly hopeless to understand the geography of this passage, it cannot be held to furnish any argument as to the position of Cush, more particularly, if by Gihon is intended the river Nile, as some have thought. Again, in Num. xii. 1, Moses is said to have married an Ethiopian (Cushite) woman. From this it has been inferred that Zipporah, the daughter of the priest of Midian, is the person meant, and that, as thus Midian and Cush appear to have been used indifferently, we may conclude that they were contiguous countries, and that, therefore, there was an Asiatic Cush. But there is no reason whatever for supposing the person here spoken of to have been Zipporah, for it is extremely improbable that Miriam and Aaron should have reproached Moses at this time with an alliance which must have been contracted at least forty years before. It is far more likely either that Zipporah was by this time dead, and that Moses had married again, or that he had taken this Cushite in addition to her. Again, in Job xxviii. 19, mention is made of the topaz of Ethiopia פְּטֶרֶת כּוּשׁ, and we are reminded that Diodorus speaks of a topaz island in the Red Sea (iii. 39); as also Pliny, *Nat. Hist.* xxxvii. 8; and Strabo, xvi. 4, 6. But an island in the Red Sea, even if this is the place referred to by Job, might with as much reason be considered as belonging to Ethiopia or Africa as to Asia and Arabia. And lastly, in 2 Chron. xxi. 16, it is said, in somewhat remarkable words, that 'the Lord stirred up the spirit of the Philistines and of the Arabians that were near the Ethiopians,'

עַל יְדֵי, which have been thought to furnish a valid argument for the existence of an Asiatic Cush. But here again, we suppose the words 'that were near,' or 'by the side of,' to refer to the Arabians alone, and thus surely it must be admitted that they express as accurately the position of Arabia with regard to Ethiopia as they could, if there had been an Arabian or Asiatic Cush, have described the position of it with respect to that. Niebuhr found in Yemen a tribe calling themselves Beni Chusi, and the Targum of Jonathan at Gen. x. 6, explains Cush by Arabia, so does another paraphrast (1 Chron. i. 8), but it must also be borne in mind that the Targum of Jonathan at Is. xi. 11 explains Cush by India. The fact appears to be that Cush was used in a somewhat vague way as *Albion* by the classics (Hom. *Od.* i. 22; cf. also *Herod.* vii. 69, 70); and that though Ethiopia was probably the country meant by Cush, yet the people inhabiting it may have extended themselves by

colonies and settlements in various other regions, in Arabia *e.g.*, and elsewhere, and gained such hold as to cause the localities where they abounded to be recognised as Cushite, and so denominated. We have proof that the Himyaritic Arabs were called by the Syrians Cushæans in the 5th century (Asseman, *Bib. Orient.* i. 360; iii. 568).

The Egyptian name for Ethiopia in the inscriptions is Kesh; cf. also the modern Geez. It may lastly be remarked that the inhabitants of the biblical Cush were black (Jer. xiii. 23), which would not have been the case had Cush been an Arabian or Mesopotamian country.

Besides כּוּשִׁי, we find כּוּשִׁית a Cushite, כּוּשִׁיתים a Cushite woman, and the plurals כּוּשִׁים and כּוּשִׁיִּים.—S. L.

CUSHAN (כּוּשָׁן). Supposed by some to be the same as Cushman Rishathaim of Judg. iii. He is mentioned by the prophet Habakkuk (iii. 7), in connection with Midian, which fact is thought to lend probability to the supposition. This fine poem or 'prayer' of the prophet recounts the mercies shewn by God to the chosen race throughout the more miraculous portion of their history. After speaking of the delivery of the law in terms very similar to those in which the same event is alluded to (Deut. xxxiii. 2), 'God came from Teman, and the Holy One from Mount Paran,' the prophet has been thought to refer to the history of the Israelites under the Judges, particularizing the two deliverances of Othniel and Gideon. There appears to be an allusion afterwards to the passage of the Red Sea, etc. (v. 8). Gesenius, however, as we think better, considers Cushman but another form of Cush, by which he understands Ethiopia: the LXX. also translate it *Aithiopes*. Cushman Rishathaim is mentioned as a king of Mesopotamia (Aram Naharaim), who was the first oppressor of the Israelites after the death of Joshua, and from whose yoke, after a servitude of eight years, Othniel delivered them. See also Joseph. *Ant.* v. 3. 2.—S. L.

CUSHI (כּוּשִׁי) occurs, in a variety of forms, no less than twenty-seven times in the Hebrew Bible; in the majority of instances as a *Gentile* appellative noun.—1. In Num. xii. 1 it occurs in the feminine form כּוּשִׁית (*Aithiopissa*, *Ethiopiassa*) twice to designate Moses' wife [concerning her, see ZIP-PORAH], the first time with the art., the second anarthrous. 2. The plural form, כּוּשִׁים (*Aithiopes*, *Ethiopes*), is found in 2 Chron. xii. 3, descriptive of a part of Shishak's great army; and in xiv. 12 (*twice*), 13, and xvi. 8, designating the Ethiopian army which invaded Judah in the reign of Asa. In xxi. 16, it occurs as a general term of the *Ethiopian* nation [ETHIOPIA]; so also in Zeph. ii. 12, and Dan. xi. 43; and lastly in Amos ix. 7, where, however, the MSS. present the word in three various shapes, besides the Masoretic reading כּוּשִׁים. Five of Kennicott's MSS. read כּוּשִׁים, eight כּוּשִׁים, and no less than twenty-one כּוּשִׁיִּים. 3. The masculine form (as an adjective only) in Jer. xiii. 23 has a general sense, and is without the article. In all other passages, except one, it has the article; in 2 Chron. xiv. 9 הכּוּשִׁי (*Aithiops*, *Ethiops*) describes Zerach, the com-

mander of the Ethiopian host above mentioned; in Jer. xxxviii. 7, 10, 12, and xxxix. 16, הכּוּשִׁי (*Aithiops*, *Ethiops*) is applied to Ebedmelech, the prophet's friend, [With which compare the *ἀνθρ* *Aithiops*, *εὐνοῦχος* κ.τ.λ. of Acts viii. 27, and the '*Te ex Ethiopia ancillulam*' of the *Eunuchus* of Terence, i. 2. 85.] In the remaining passages the word is treated as a PROPER NAME, in A. V. Septuagint and Vulgate ('Cushi,' *Χουσί*, *Chusi*). 1. In Jer. xxxvi. 14, Cushi is mentioned as the father of Shelemiah and great-grandfather of Jehudi, one of the courtiers of Jehoiakim, king of Judah [JEHUDI]. 2. In Zeph. i. 1, Cushi appears as the father of the prophet and the son of Gedaliah, who must not be confounded with the governor of that name. 3. In 2 Sam. xvii. 21, כּוּשִׁי (*Cushi*) occurs *once* without the article, as the name of one of Joab's messengers, who broke the sad tidings of Absalom's death to David. As, however, the word occurs in seven other places (xviii. 21, 22, 23, 31, *twice*, 32 *twice*) with the article (הכּוּשִׁי) descriptive of the same man, it is probable that we have here not the messenger's name, but only his *nation* (So Kimchi); as if an 'Ethiopian' foreigner would have more hardihood to make so miserable a communication to the distressed king than a neighbour like Ahimaaz the son of Zadok, who actually faltered and failed in his self-chosen office when the moment came for discharging it. (See Grotius on 2 Sam. xviii. 21.) P. Martyr's conceit, that the swarthiness of the messenger induced Joab to select him because of the dark import of his message, can only be accepted as a pretty fancy. Josephus throughout writes the messenger's name with an article, ὁ Χουσί.—P. H.

CUTHAH (כּוּתָה; Sept. *Χουθά*), a district in Asia, whence Shalmaneser transplanted certain colonists into the land of Israel, which he had desolated (2 Kings xvii. 24-30). From the intermixture of these colonists with the remaining natives sprung the Samaritans, who are called Cuthites (כּוּתִיִּים) in the Chaldee and the Talmud, and for the same reason a number of non-Semitic words which occur in the Samaritan dialect are called Cuthian. The situation of the Cuthah from which these colonists came is altogether unknown. Josephus places it in central Persia, and finds there a river of the same name (*Antiq.* ix. 14. 3; x. 9. 7). Rosenmüller and others incline to seek it in the Arabian Irak, where Abufeda and other Arabic and Persian writers place a town of this name, in the tract near the Nahr-Malca, or royal canal, which connected the Euphrates and Tigris to the south of the present Bagdad. Winer seems to prefer the conjecture of Stephen Morin and Le Clerc, which identifies the Cuthites with the *Cossæi* in Susiana (Arrian, *Indic.* xl.; Plin. *Hist. Nat.* vi. 31; Diod. Sic. xvii. 111; Mannert, ii. 493). All these conjectures refer essentially to the same quarter.—J. K.

CUTHITES. [SAMARITANS.]

CUTTING OFF FROM THE PEOPLE. [ANATHEMA.]

CUTTINGS IN THE FLESH. Amongst the prohibitory laws which God gave the Israelites there was one that expressly forbade the practice embraced in those words, viz., 'Ye shall not make

any cuttings in your flesh for the dead' (Lev. xix. 28). It is evident from this law that such a species of *self-inflicted* torture obtained amongst the nations of Canaan; and it was doubtless to guard His people against the adoption of so barbarous a habit, in its idolatrous form, that God led Moses to *reiterate* the prohibition: 'They shall not make baldness upon their heads, neither shall they shave off the corner of their beards, nor make any cuttings in their flesh' (Lev. xxi. 5; Deut. xiv. 1).

Investing his imaginary deities with the attributes of *cruelty*, man has, at all times, and in all countries, insinuated a form of religion consisting in cruel rites and bloody ceremonies. If then we look to the practices of the heathen world, whether of ancient or modern times, we shall find that almost the entire of their religion consisted of rites of *deprecation*. *Fear* of the Divine displeasure would seem to have been the leading feature in their religious impressions. The universal prevalence of *human* sacrifices throughout the Gentile world is, in itself, a decisive proof of the light in which the human mind, unaided by revelation, is disposed to view the Divinity.

It was doubtless such *mistaken* views of the character of God that led the prophets of Baal (1 Kings xviii. 28) to cut their bodies with lancets, supposing that, by mingling their own blood with that of the offered sacrifice, their god must become more attentive to the voice of entreaty. Agreeably to the inference which all this furnishes, we find Tacitus declare (*Hist. i. 4*), 'Non esse curæ Diis securitatem nostram, sed ultionem.' In fact it was a current opinion amongst the ancient heathen that the gods were *jealous* of human happiness; and in no part of the heathen world did this opinion more prevail, according to Sanchoniathon's account, than amongst the inhabitants of those very countries which surrounded that land where God designed to place his people Israel. Hence we see why God would lay them under the wholesome influence of such a prohibitory law as that under consideration: 'Ye shall not make any cuttings in your flesh for the dead.' The ancients were very violent in their expression of sorrow. Virgil represents the sister of Dido as tearing her face with her nails, and beating her breast with her fists:—

'Unguibus ora soror fœdans et pectora pugnis.'
Æn. iv. 672.

The present writer has seen in India the same wild exhibition of grief for the departed relative or friend. Some of the learned think that that law of Solon's, which was transferred by the Romans into the Twelve Tables, *that women in mourning should not scratch their cheeks*, derived its origin from this law of Moses (Lev. xix. 28). But however this opinion may be questioned, it would appear that the simple tearing of their flesh out of grief and anguish of spirit is taken, in other parts of Scripture, as a *mark of affection*: thus (Jer. xlviii. 37), 'Every head shall be bald, every beard clipped, and upon all *cuttings*.' Again (ch. xvi. 6): 'Both the great and the small shall die in the land: they shall not be buried, neither shall men lament for them, *nor cut themselves*.' So (ch. xli. 5): 'There came from Samaria fourscore men having their heads shaven and their clothes rent, and having cut themselves, with offerings to the house of the Lord.'

The spirit of Islam is less favourable than that of heathenism to displays of this kind: yet examples of them are not of rare occurrence even in the Moslem countries of Western Asia, including Palestine itself. The annexed figure is copied from one which is represented in many of the books of travel in Egypt and Palestine which were printed in the seventeenth century. It is described by the missionary Eugene Roger (*La Terre Sainte*, etc., 1646, p. 252) as representing 'one of those calenders or devotees whom the Arabs name Balhoava,' and whom the simple people honour as holy martyrs. He appears in public with a scimitar stuck through the fleshy part of his side, with three heavy iron spikes thrust through the muscles of his arm, and with a feather inserted into a cut in his forehead. He moves about with great composure, and endures all these sufferings, hoping for recompense in the Paradise of Mohammed—'Aveuglement digne de larmes (adds the monk), que ces misérables commencent ici une vie pleine de souffrance, pour la continuer éternellement dedans les gehennes de l'Enfer!' Add to this the common

201.

accounts of the gashes which the Persian devotees inflict upon themselves in the frenzy of their love and grief, during the annual mourning for Hassan and Hossein (Morie, Malcolm, etc.), and the curious particulars in Aaron Hill's *Account of the Ottoman Empire* (ch. 13), respecting the proceedings of young Turks in love:—'The most ridiculous and senseless method of expressing their affection is their singing certain amorous and whining songs, composed on purpose for such mad occasions, between every line whereof they cut and slash their naked arms with daggers, each endeavouring in this emulative madness to exceed the other by the depth and number of the wounds he gives himself.'

From the examples which have been produced, we may very safely conclude that the expression '*cuttings in the flesh*,' in these passages of Scripture, was designed, as already intimated, to declare the feeling of *strong* affection; as though the living would say, 'See how little we regard the pleasures of life, since now the object of our affection is removed from us!' We must therefore come back to our former position, that it was against those self-inflicted tortures, by which the unhappy devotees vainly thought to deprecate the wrath of their angry gods towards their deceased relatives and friends, this law of Moses was *especially* aimed.—J. W. D.

CYAMON (Κυαμών, *Chelmon*, Judith vii. 3). The site of this place, which is mentioned nowhere else, has been supposed to be *Tell Kaimôn*, which

has been identified with the *Cammonā* of Eusebius and the *Cimana* of Jerome. Dr. Robinson ingeniously suggests, that Cyamon is a translation of the Hebrew *Pol*, meaning *bean* or *place of beans*, corresponding to the Arabic *Filleh*, the name of a place which was known to the Crusaders as the castle *Faba*, or in French *la Fève*, and which is exactly in the position described, 'over against Esdraelon' (Jezreel). CYMBALS. [MUSICAL INSTRUMENTS.]

CYPRESS. [BEROSH, TIRZAH.]

CYPRUS (Κύπρος), the modern *Kebris*, one of the largest islands in the Mediterranean, and next to Sicily in importance. It is about 140 miles in length, and varies in breadth from 50 to 5 miles. From its numerous headlands and promontories, it was called *Κεραστis*, *Kerastis*, or *the Horned*; and from its exuberant fertility, *Μακαρία*, *Macaria*, or *the blessed* (*beatam Cyprum*: Hor. Carm. iii. 26. 9). Its proximity to Asia Minor, Phœnicia, and Egypt, and its numerous havens, made it a general rendezvous for merchants. 'Corn, wine, and oil,' which are so often mentioned in the O. T. as the choicest productions of Palestine (Deut. xii. 17; 1 Chron. ix. 29; Neh. x. 39; Jer. xxxi. 12), were found here in the highest perfection. The forests also furnished large supplies of timber for ship-building, which rendered the conquest of the island a favourite project of the Egyptian kings. It was the boast of the Cyprians that they could build and complete their vessels without any aid from foreign countries (Ammian. Marcell. xiv. 8, sec. 14). Among the mineral products were diamonds, emeralds, and other precious stones, alum, and asbestos; besides iron, lead, zinc, with a portion of silver, and, above all, copper, the far-famed *æs Cyprium*. The principal mines were in the neighbourhood of Tamassus (Strabo, xiv. 6, vol. iii. p. 245, ed. Tauchn.) 'In Cyproubi prima fuit æris inventio' (Plin. *Nat. Hist.* xxxiv. 2).

Cyprus was originally peopled from Phœnicia [CHITIM]. Amasis I., king of Egypt, subdued the whole island (Herod. ii. 182). In the time of Herodotus the population consisted of Athenians, Arcadians, Phœnicians, and Ethiopians (vii. 90). Under the Persians and Macedonians the whole island was divided into nine petty sovereignties. After the death of Alexander the Great it fell to the share of Ptolemy, the son of Lagus. It was brought under the Roman dominion by Cato. Under the Emperor Augustus it was at first an imperial province, and afterwards, with Gallia Narbonensis, made over to the senate (Dion Cass. liv. iv.). When the empire was divided it fell to the share of the Byzantine emperors. Richard I. of England conquered it in 1191, and gave it to Guy Lusignan, by whose family it was retained for nearly three centuries. In 1473 the republic of Venice obtained possession of it; but in 1571 it was taken by Selim II., and ever since has been under the dominion of the Turks. The majority of the population belong to the Greek church; the archbishop resides at Leikosia. Cyprus was one of the first places out of Palestine in which Christianity was promulgated, though at first to Jews only (Acts xi. 19), by 'those who were scattered abroad' after Stephen's martyrdom. It was visited by Barnabas and Paul on their first missionary tour

(Acts xiii. 4), and subsequently by Barnabas and John Mark (Acts xv. 39). Paul sailed to the south of the island on his voyage to Rome (Acts xxvii. 4). [ELYMAS; PAPHOS; SERGIUS PAULUS; SALAMIS.] (Mannert, *Geographie der Griechen und Römer*, vi. 2, pp. 422-454; Stanley, *Sinai and Palestine*, 115, 406, Lond. 1858; Conybeare and Howson's *Life and Epistles of St. Paul*, 2d ed., Lond. 1858, vol. i., pp. 164-188; Dr. R. Pococke's *Description of the East*, etc., Lond. 1745, vol. ii. book iii. ch. i. pp. 210-235; Wilson's *Travels in the Holy Land, Egypt*, etc., Lond. 1831, vol. ii. ch. xii. pp. 174-197.)—J. E. R.

CYRENE (Κυρήνη; *Ghrene*, in modern Arabic), a city in Libya, founded about the year B.C. 632, by a colony of Greeks from Thera (Santorini), a small island in the Ægean Sea (Thirwall's *History of Greece*, vol. ii. ch. 12). Its name is generally supposed to be derived from a fountain (but according to Justin, *Hist.* xiii., a mountain), called *Κυρή*, Cyre, near its site. It was built on a table-land, 1800 feet above the level of the sea, in a region of extraordinary fertility and beauty. It was the capital of a district, called from it Cyrenaica (Barca), which extended from the Gulf of Platea (Bomba) to the Great Syrtis (Gulf of Sidra). With its port Apollonia (Musa Soosa), about ten miles distant, and the cities Barca, Teuchira, and Hesperis, which at a later period were named Ptolemais, Arsinoe, and Berenice (Strabo, xvii. vol. iii. p. 496, ed. Tauchn.), it formed the Cyrenaic Pentapolis. For above 180 years the form of government was monarchical; it then became republican; and at last, the country became tributary to Egypt, under Ptolemy Soter. It was bequeathed to the Romans by Apion, the natural son of Ptolemy Physcon, about 97 B.C. (Tacitus, *Annal.* xiv. 18; Cicero, *De leg. Agrar.* ii. 19), and was then formed into a province with Crete (Strabo, xvii. 3). Strabo (quoted by Josephus, *Antiq.* xiv. 7) says, that in Cyrene there were four classes of persons, namely, citizens, husbandmen, foreigners, and Jews, and that the latter enjoyed their own customs and laws. At the commencement of the Christian era, the Jews of Cyrene were so numerous in Jerusalem that they had a synagogue of their own (Acts ii. 10; vi. 9). Some of the first Christian teachers were natives of Cyrene (Acts xi. 20; xiii. 1). Simon, who was compelled to assist in bearing the cross of the Saviour, was a Cyrenian (Matt. xxvii. 32; Mark xv. 21; Luke xxiii. 26).

The ruins of Cyrene and the surrounding country have been diligently explored within the last few years; in 1817 by Dr. Della Cella, in 1821-22 by Capt. Beechey, and in 1826 by M. Pacho, a French traveller.—J. E. R.

CYRENUS (Κυρήνιος, or, according to his Latin appellation, P. Sulpitius Quirinius), governor of Syria (Luke ii. 1, 2). The mention of his name in connection with the census which was in progress at the time of our Lord's birth, presents very serious difficulties, of which, from the want of adequate data, historical and critical inquiry has not yet attained a satisfactory solution. The passage is as follows:—*αὐτῆ ἡ ἀπογραφῆ πρώτῃ ἐγένετο ἡγεμνεύοντος τῆς Συρίας Κυρήνιου*, translated in the A. V. thus:—'Now this taxing was first made when Cyrenius was governor of Syria.' Instead of 'taxing' it is now agreed that the rendering should

be 'enrolment, or 'registration' (of which use of the word *ἀπογράφεται* many examples are adduced by Wetstein), as it is clear from Josephus that no taxing did take place till many years after this period. The whole passage, as it now stands, may be properly read—'This enrolment was the first while Cyrenius was governor of Syria.'

This appears very plain, and would suggest no difficulty, were it not for the knowledge which we obtain from other quarters, which is to the effect—
1. That there is no historical notice of any enrolment at or near the time of our Lord's birth; and
2. That the enrolment which actually did take place under Cyrenius was not until ten years after that event.

The difficulty begins somewhat before the text now cited; for it is said that 'in those days there went out a decree from Caesar Augustus that the whole world should be taxed' (enrolled). But since no historian mentions any such general enrolment of the whole empire, and since, if it had taken place, it is not likely to have been mentioned in connection with the governor of Syria, it is now usually admitted that Judæa only is meant by the phrase rendered 'the whole earth' (but more properly 'the whole land'), as in Luke xxi. 26; Acts xi. 28; and perhaps in xxi. 20. The real difficulties are thus reduced to the two now stated. With regard to the enrolment, it may be said that it was probably not deemed of sufficient importance by the Roman historians to deserve mention, being confined to a remote and comparatively unimportant province. Nor was it, perhaps, of such a nature as would lead even Josephus to take notice of it, if it should appear, as usually supposed, that no trace of it can be found in his writings.

Of the remaining difficulties various solutions have been offered, and some, despairing of any satisfactory solution, have supposed the verse in question to have been a marginal gloss which has crept into the text, while others have even ventured to suggest that St. Luke must have been mistaken. The following explanations are, however, those which are the most generally received:—

1. Assuming, on the authority of Luke, that an enrolment actually did take place at the time of our Lord's birth, the hypothesis proceeds to make out a probability that Cyrenius was then joint-governor of Syria along with Saturninus. It is known that a few years previous to this date Volumnius had been joined with Saturninus as the procurator of that province, and the two, Saturninus and Volumnius, are repeatedly spoken of together by Josephus, who styles them equally governors of Syria (*Antiq.* xvi. 9, 1; xvi. 10, 8). Josephus does not mention the recall of Volumnius, but there is certainly a possibility that this had taken place before the birth of Christ, and that Cyrenius, who had already distinguished himself, had been sent in his place. He would then have been under Saturninus, a *ἡγεμών*, 'governor' of Syria, just as Volumnius had been before, and as Pilate was afterwards of Judæa. That he should here be mentioned as such by Luke, rather than Saturninus, is very naturally accounted for by the fact that he returned ten years afterwards as procurator or chief governor, and then held a second and more important census for the purpose of registration and taxation, when Archelaus was deposed, and Judæa annexed to the Roman province of Syria. The only real objection to this solution is the silence of all other history.

But although profane history does not affirm the fact of Cyrenius having formerly been procurator of Syria, yet it does not in any way deny it, and we may therefore safely rest upon the authority of the sacred writer for the truth of this fact, just as we do for the fact of the existence of the first enrolment itself.

2. Another explanation would read the passage thus:—'This enrolment was made *before* Cyrenius was governor of Syria.' The advocates of this view suppose that Luke inserted this verse as a sort of parenthesis, to prevent his readers from confounding this enrolment with the subsequent census made by Cyrenius. The positive, or rather the superlative, *πρώτη*, is thus understood in the sense of the comparative *πρωτέρα*, and is made to govern the following genitive. That both the positive and superlative are sometimes used in place of the comparative is doubtlessly true; but such a construction would in the present case be very harsh, and very foreign to the usual simplicity of Luke.

3. Another mode of getting over the difficulty is sanctioned by the names of Calvin, Valesius, Wetstein, Hales, and others. First, changing *αὐτῇ* into *αὐτῆ* they obtain the sense:—'In those days there went forth a decree from Augustus, that the whole land should be enrolled; but the *enrolment itself* was first made when Cyrenius was governor of Syria.' The supposition here is that the census was commenced under Saturninus, but was not completed till two years after, under Quirinus. Dr. Robinson (*Addit. to Calmet*, in 'Cyrenius') objects to this view the entire absence of any historical basis for it. But he must at the time have been unmindful of Hales, who, in his *Chronology*, has worked out this explanation with more than his usual care and success.

Hales reminds us that a little before the birth of Christ, Herod had marched an army into Arabia, to redress certain wrongs which he had received, and this proceeding had been so misrepresented to Augustus that he wrote a very harsh letter to Herod, the substance of which was, that '*having hitherto treated him as a friend, he would now treat him as a subject.*' And when Herod sent an embassy to clear himself, the emperor repeatedly refused to hear them, and so Herod was forced to submit to all the *injuries* (*παραινουλίας*) offered to him (*Joseph. Antiq.* xvi. 9). Now it may be collected that the chief of these injuries was the performance of his threat of treating him as a subject, by the degradation of his kingdom to a Roman province. For soon after Josephus incidentally mentions that 'the whole nation of the Jews took an oath of fidelity to Cæsar and the king jointly, except 6000 of the Pharisees, who, through their hostility to the regal government, refused to take it.' The date of this transaction is determined by its having been shortly before the death of Pheroras, and coincides with the time of this decree of enrolment and of the birth of Christ. The oath which Josephus mentions would be administered at the same time, according to the usage of the Roman census, in which a return of persons, ages, and properties was required to be made upon oath, under penalty of confiscation of goods, as we learn from Ulpian. That Cyrenius, a Roman senator and procurator, was employed to make this enrolment, we learn not only from St. Luke, but by the joint testimony of Justin Martyr, Julian the Apostate, and Eusebius; and it was made while Saturninus was president of

TOMB OF CYRUS.—Ruins of Pasargadae.

(Flandin and Coste's *Voyage en Perse*.)

Syria (to whom it was attributed by Tertullian) in the thirty-third year of Herod's reign, corresponding to the date of Christ's birth. Cyrenius, who is described by Tacitus as 'impiger militiæ et acerbis ministeris,' 'an active soldier and rigid commissioner,' was well qualified for an employment so odious to Herod and his subjects, and probably came to execute the decree with an armed force. The enrolment of the inhabitants, 'each in his own city,' was in conformity with the wary policy of the Roman jurisprudence, to prevent insurrections, and to expedite the business, and if this precaution was judged prudent even in Italy, much more must it have appeared necessary in turbulent provinces like Judæa and Galilee.

At the present juncture, however, it appears that the census proceeded no further than the first act, namely, of the enrolment of persons in the Roman register. For Herod sent his trusty minister, Nicholas of Damascus, to Rome, who, by his address and presents, found means to mollify and uedecesse the emperor, so that he proceeded no further in the design which he had entertained. The census was consequently at this time suspended, but it was afterwards carried into effect upon the deposal and banishment of Archelaus, and the settlement of Judæa as a Roman province. On this occasion the trusty Cyrenius was sent again, as president of Syria, with an armed force, to confiscate the property of Archelaus, and to complete the census for the purposes of taxation. This taxation was a poll-tax of two drachmæ a-head upon males from fourteen, and females from twelve to sixty-five years of age, equal to about fifteence of our money. This was the 'tribute-money' mentioned in Matt. xvii. 24-27. The payment of it became very obnoxious to the Jews, and the imposition of it occasioned the insurrection under Judas of Galilee, which Gamaliel describes as having occurred 'in the days of the taxing' (Acts v. 37).

By this statement, connected with the slight emendation of the text already indicated, Hales considers that 'the Evangelist is critically reconciled with the varying accounts of Josephus, Justin Martyr, and Tertullian; and an historical difficulty satisfactorily solved, which has hitherto set criticism at defiance.' This is perhaps saying too much; but the explanation is undoubtedly one of the best that has yet been given (*Analysis of Chronology*, iii. 48-53; Lardner's *Credibility*, i. 248-329; Robinson, *Addit. to Calmet*, in 'Cyrenius;' Wetstein, Kuinoel, and Campbell, on Luke ii. 2, etc.—J. K.

CYRIL, BISHOP, or, as subsequently styled, PATRIARCH of Alexandria, from A. D. 312 to A. D. 344 (Socrates *H. E.* vii. 7; *Conc. Chalced.* Act. iii.; Harduin *Acta. Conc.*, vol. ii. p. 331). During the greater part of this period he was engaged in a stormy controversy with Nestorius of Constantinople and others holding the same or similar opinions. Although, in consequence, involved in an extensive correspondence, and a writer of numerous theological treatises, Cyril was the author of a large number of exegetical works. Of these, until recently, the following only were known to be extant. 1. *De adoratione et cultu in spiritu et veritate Libb.* xvii. This is an elaborate treatise, in the form of dialogues, on the precepts and institutions of the laws of Moses, their figurative signification, and their fulfilment in the Christian economy. It has been described as a 'treasure of allegorical

interpretation.' 2. *Glaphyra in Pentateuchum*, or Polished Discourses on the Pentateuch. This is not a continuous commentary, but a series of expository dissertations on topics suggested by the Scripture narrative. Although each exposition, with a few exceptions, closes with the doxology, it is clear from the prefatory remarks to books i. and ii. that they were not oral discourses. 3. *Commentarius in Isaiam Libb.* v. 4. *Commentarius in duodecim Prophetas minores.* 5. *Commentarius in Joannis Evangelium Libb.* xii. By the researches of Cardinal Mai, several other works by Cyril have been brought to light and published in the *Bibliotheca Patrum Sanctorum Nova*, Romæ, 1844-45. Amongst these are *Explanatio in Psalmos*, containing expositions of Ps. 1 to 118 inclusive; *In Pauli Epistolas quatuor*, containing considerable portions of commentaries on Romans, First and Second Corinthians, and Hebrews; and *Commentarius in Lucam*, consisting of fragments gathered from twelve different catene. More recently still the commentary on Luke has been discovered in Syriac, and published both in Syriac and in English by Payne Smith (Oxford 1859). It is in the form of short sermons, which were preached extemporaneously (see Sermons 3, 68, 88). Various fragments also are given by Mai, of *Commentaries on Kings, Proverbs, Canticles, Jeremiah, Baruch, Daniel, Matthew, Acts, Galatians, Colossians, and the Catholic Epistles*. Cyril was unacquainted with Hebrew, and in the interpretation of the O. T. follows the allegorizing method of the Alexandrian School. In his commentaries on the books of the N. T., he is commonly literal and practical; that on the Gospel of John is marked by a strong doctrinal bias. The most complete edition of his works is that published by Migne in his *Patrologia Cursus, Series Græca*. Paris 1859, in 10 vols.—S. N.

CYRUS (כּוּרֶשׁ, כּוּרֶשׁ, Kūros), the celebrated Persian conqueror of Babylon, who promulgated the first edict for the restoration of the Jews to their own land (Ezra i. 1, etc.) We are informed by Strabo that his original name was Agradates (xv. 3, p. 320, ed. Tauchn.); but he assumed that of Kouros, or Khouresh (whichever was the most accurate Persian form) doubtless on ascending the throne. For Ctesias tells us (Photius, *Epit. Ctes.* ch. xlix.) that the word means the Sun. We may perhaps compare it with the Hebrew כּהרֶשׁ kheres, which bears the same sense; and with the name of the Egyptian deity *Horus*, or Apollo.

The authorities on which we have to rest for our knowledge of the life of Cyrus are chiefly three. *First*, Herodotus, who reported the tales concerning him current in Asia a century later; but selected from them with the taste of a Greek epic or romance writer. *Secondly*, Xenophon, who has made the life of Cyrus the foundation of a philosophical novel, written in a moral spirit, as unhistorical as that of Fenelon's *Télémaque*. *Thirdly*, The epitome of Ctesias, preserved for us by the patriarch Photius. Ctesias was a Greek physician, who stayed seventeen years at the Persian court towards the end of the reign of Darius Nothus, about B. C. 416-400. (See Bähr's *Ctesias*, p. 15.) According to Diodorus, he drew his histories from the royal archives; and, in part, that may be true. But a large number of the facts recorded by him would certainly never have been allowed a place in

them; and several great *anachronisms* which he commits are mistakes of a kind which can scarcely ever occur in books written in the form of annals. It would seem then that his sources of knowledge were not much better than those of Herodotus; but his lengthened stay in Persia so familiarized him with Persian institutions, and multiplied his opportunities of access to those sources, that, *ceteris paribus*, he appears to be a better authority. Unfortunately, nothing remains to us but a mere epitome of his work.

From these and a few subordinate authorities, we must endeavour to give as good a reply as we can to the chief problems concerning the life of Cyrus.

On the parentage of Cyrus.—Herodotus and Xenophon agree that he was son of Cambyses prince of Persia, and of Mandane daughter of Astyages, king of the Median empire. Ctesias denies that there was any relationship at all between Cyrus and Astyages. According to him, when Cyrus had defeated and captured Astyages, he *adopted* him as a grandfather, and invested Amytis, or Amyntis, the daughter of Astyages (whose name is in all probability only another form of Mandane), with all the honours of queen dowager. His object in so doing was to facilitate the submission of the more distant parts of the empire, which were not yet conquered; and he reaped excellent fruit of his policy in winning the homage of the ancient, rich, and remote province of Bactria. Ctesias adds, that Cyrus afterwards married Amytis. It is easy to see that the latter account is by far the more historical, and that the story followed by Herodotus and Xenophon is that which the courtiers published in aid of the Persian prince's designs. Yet there is no reason for doubting that, on the father's side, Cyrus belonged to the Achæmenidæ, the royal clan of the military tribe of the Persians.

On the elevation of Cyrus.—It was the frequent practice of the Persian monarchs, and probably therefore of the Medes before them, to choose the provincial viceroys from the royal families of the subject nations, and thereby to leave to the vanquished much both of the semblance and of the reality of freedom. This will be sufficient to account for the first steps of Cyrus towards eminence. But as the Persian armies were at that time composed of ruder and braver men than the Medes—(indeed, to this day the men of Shirâz are proverbially braver than those of Isfahân)—the account of Xenophon is credible, that in the general wars of the empire Cyrus won the attachment of the whole army by his bravery; while, as Herodotus tells, the atrocious cruelties of Astyages may have revolted the hearts of the Median nobility.

On the transition of the empire from the Medes to the Persians.—Xenophon's romance omits the fact that the transference of the empire was effected by a civil war; nevertheless, the same writer in his *Anabasis* confesses it (iii. 4, 7, 12). Herodotus, Ctesias, Isocrates, Strabo, and, in fact, all who allude to the matter at all, agree that it was so. In Xenophon (*l. c.*) we find the Upper Tigris to have been the seat of one campaign, where the cities of Larissa and Mespila were besieged and taken by Cyrus. From Strabo we learn that the decisive battle was fought on the spot where Cyrus afterwards built Pasargadæ, in Persis, for his native capital. This agrees with Herodotus's account of

two armies being successively lost, which may mean that the war was ended in two campaigns. Yet Ctesias represents Astyages as finally captured in the palace of Ecbatana. Cyrus (says Herodotus) did Astyages no harm, but kept him by his side to the end of his life. This is like the generosity of the Persian kings to vanquished foreigners, but very unlike the conduct of fortunate usurpers, east or west, towards a fallen superior. The tale in Ctesias is more like the current imperial craft. There we read that Cyrus at first made Astyages ruler of the Barcanians (see Tzetzes, in Bähr's *Ctes.* p. 222), and afterwards sent for him by the eunuch Petisacas to visit his daughter and son-in-law, who were longing to see him. The eunuch, however, put him to death on the road; and Cyrus, indignant at the deed, gave up the murderer to the cruel vengeance of the queen. Astyages had certainly lived long enough for the policy of Cyrus; who, by the Roman Cassius's test of *Cui bono?* 'Who gained by it?' cannot be accounted innocent.

The Medes were by no means made subject to the Persians at first. It is highly probable that, as Herodotus and Xenophon represent, many of the noblest Medes sided with Cyrus, and during his reign the most trusted generals of the armies were Medes. Yet even this hardly explains the phenomenon of a Darius the Mede, who, in the book of Daniel, for two years holds the government in Babylon, after the capture of the city by the Medes and Persians. Indeed, the language used concerning the kingdom of Darius might be explained as Oriental hyperbole, and Darius be supposed a mere satrap of Babylon, only that Cyrus is clearly put forward as a *successor* to Darius the Mede. Many have been the attempts to reconcile this with the current Grecian accounts; but there is one only that has the least plausibility, viz., that which, with Xenophon, teaches that Astyages had a son still living (whom Xenophon calls Cyaxares), and that this son is no other than Darius the Mede; to whom Cyrus, by a sort of nephew's piety, conceded a nominal supremacy at Babylon. Objections to this likewise are evident, but they must be discussed under 'Darius the Mede,' or the book of 'Daniel.'

In the reign of the son of Cyrus the depression of the Medes probably commenced. At his death the Magian conspiracy took place; after the defeat of which the Medes doubtless sunk lower still. At a later time they made a general insurrection against the Persian power, and its suppression seems to have brought them to a level with Hyrcanians, Bactrians, and other vassal nations which spoke the tongue of Persia; for the nations of the poetical *Irân* had only dialectal variations of language (Strabo, xv. 2, p. 311).

Conquests and Wars of Cyrus.—The descriptions given us in Ctesias, and in Plutarch's Artaxerxes (which probably are taken from Ctesias), concerning the Persian mode of fighting, are quite *Homeric* in their character. No skill seems to be needed by the general; no tactics are thought of; he does his duty best by behaving as the bravest of common soldiers, and by acting the part of champion, like a knight in the days of chivalry. We cannot suppose that there was any *greater* advance of the military art in the days of Cyrus. It is agreed by all that he subdued the Lydians, the Greeks of Asia Minor, and the

Babylonians: we may doubtless add Susiana, which must have been incorporated with his empire before he commenced his war with Babylon; where also he fixed his military capital (Susa, or Shushan), as more central for the necessities of his administration than Pasargade. Yet the latter city continued to be the more sacred and beloved home of the Persian court, the place of coronation and of sepulture (Strabo, xv. 3, p. 728; and Plut. *Artax.* init.) All Syria and Phœnicia appear to have come over to Cyrus peaceably.

In regard to the Persian wars, the few facts from Ctesias, which the epitomator has extracted as differing from Herodotus, carry with them high probability. He states that, after receiving the submission of the Bactrians, Cyrus made war on the Sacians, a Scythian (*i. e.*, a Slavonic) people, who seem to have dwelt, or perhaps rather roved, along the Oxos, from Bokhara to Khiva; and, that, after alternate successes in battle, he attached the whole nation to himself in faithful allegiance. Their king is called Amorges by Ctesias. They are undoubtedly the same people that Herodotus (vii. 64) calls *Amyrgian* Sacians; and it is highly probable that they gave to the district of Margiana its name. Their women fought in ranks, as systematically as the men. Strabo has cursorily told us of a tradition (xv. 2, p. 307) that Cyrus escaped with but seven men through the deserts of Gedrosia, fleeing from the 'Indians'—which might denote an unsuccessful war against Candahar, etc., a country which certainly was not reduced to the Persian empire until the reign of Darius Hystaspis.

The closing scene of the career of Cyrus was in battle with a people living on one or both banks of the river Iaxartes, now the Syr-deria. Herodotus calls the enemy the Massagetans, who roamed along the north bank of the river; according to Ctesias it was the Derbices, who seem to have been on the south. Both may in fact have combined in the war. In other respects the narrative of Ctesias is beyond comparison more credible, and more agreeable with other known facts, except that he introduces the fiction of Indians *with elephants* aiding the enemy. Two battles were fought on successive days, in the former of which Cyrus was mortally wounded, but was carried off by his people. In the next, the Sacian cavalry and the faithful Amorges came to support him, and the Derbices sustained a total and bloody defeat. Cyrus died the third day after his wound; his body was conveyed to Pasargadæ, and buried in the celebrated monument, which was broken open by the Macedonians two centuries afterwards (Strabo, xv. 3; Arrian, vi. 29). The inscription, reported by Aristobulus, an eye-witness, is this:—'O man, I am Cyrus, who acquired the empire for the Persians, and was king of Asia. Grudge me not, then, this monument.'

Behaviour of Cyrus to the Jews.—The kings of Assyria and Babylon had carried the Jews into captivity, both to remove a disaffected nation from the frontier, and to people their new cities. By undoing this work, Cyrus attached the Jews to himself, as a garrison at an important post. But we may believe that a nobler motive conspired with this. The Persian religion was primitively monotheistic, and strikingly free from idolatry; so little Pagan in its spirit, that, whatever of the mystical and obscure it may contain, not a single

impure, cruel, or otherwise immoral practice was united to any of its ceremonies. It is credible, therefore, that a sincere admiration of the Jewish faith actuated the noble Persian when he exclaimed, in the words of the book of Ezra, 'Go ye up, and build in Jerusalem the house of Jehovah, God of Israel; *He is God!*'—and forced the Babylonian temples to disgorge their ill-gotten spoil. It is the more remarkable, since the Persians disapproved the confinement of temples. Nevertheless, impediments to the fortification of Jerusalem afterwards arose, even during the reign of Cyrus (Ezra iv. 5).

Perhaps no great conqueror ever left behind him a fairer fame than Cyrus the Great. His mighty achievements have been borne down to us on the voice of the nation which he elevated; his evil deeds had no historian to record them. What is more, it was his singular honour and privilege to be the first Gentile friend to the people of Jehovah in the time of their sorest trouble, and to restore them to the land whence light was to break forth for the illumination of all nations. To this high duty he is called by the prophet (Is. xliv. 28; xlv. 1), and for performing it he seems to be entitled 'The righteous man' (xli. 2; xlv. 13).—F. W. N.

D.

DAAH (דָּאָה), the name of a species of unclean bird (Lev. xi. 14). In the corresponding passage, Deut. xiv. 13, the name is written דָּוָה. That this difference has arisen from a permutation of the ו and the ד is evident; but which is the original form of the word is not certain. Bochart decides for דָּוָה, on the ground that, assuming the bird to be the kite or glede, it is more probable that it would receive its name from דָּוָה, *to fly swiftly*, than from דָּאָה, *to see*; whilst others, presuming that it is the vulture, prefer the latter derivation, and the reading, consequently, דָּאָה. Thus far the evidence is equal, nor do the versions help us to a decision; for while the LXX. give in both pas-

202. *Milvus ater.*

sages ῥορα, the Vulg. has *milvus* in both. The Cod. Samar., however, reads דָּוָה in Deut. xiv. 13, which favours the supposition that this is the proper reading; but it still remains uncertain

whether, by this term, we are to understand the glede or the vulture. The A. V. makes it the one in the one passage and the other in the other. As the דַּבְרָת is distinguished from the דִּבְרָה (Deut. xiv. 13), and as the latter is probably one of the vulture genus (comp. Is. xxxiv. 15), it is probable that the former belongs to the kites. It may be the *milvus ater*, the Konlich of the Arabs. This 'bird has the head, neck, and back, dark rusty grey; scapulars bordered with rusty; wing-coverts and primaries black, the last mentioned tipped with white; tail rusty grey above, white beneath; bill dark; legs yellow' (C. H. S.)—W. L. A.

DABERATH AND DABAREH (דַּבְרָת; Sept.

Δαβριώθ, Δεββά, and Δεβερί), a Levitical city of Issachar, situated close to the south-eastern border of Zebulun, and not far from Chisloth-Tabor (Josh. xxi. 28; xix. 12). Eusebius mentions a Δαβερία on or at Mount Tabor, which is doubtless the same as Daberath (*Onomast.* s.v. *Dabira*). Josephus calls it Dabaritta, and says it lay in the great plain, on the confines of Galilee (*Vita*, lxii.; Relandi, *Pal.* 737).

At the western base of Tabor, on the side of a rocky ridge overlooking the plain of Esdraelon, stands the village of *Deburieh*. There can be no doubt that it marks the site, as it bears the name, of the ancient Daberath. It is small, poor, and filthy. It contains the bare walls of an old church, based on massive foundations of a still older date. The situation is beautiful. The wooded heights of Tabor rise immediately behind, while in front Esdraelon expands like a vast sea of verdure, till it touches the hills of Samaria and laves the base of the distant Carmel. Daberath is of some importance in a geographical point of view, as marking the boundary of Zebulun. 'It turned from Sarid eastward . . . unto the border of Chisloth-Tabor, and then goeth out to Daberath, and goeth up to Japhia' (Josh. xix. 12). The minute accuracy of the description is worthy of note. Japhia, now *Yafa*, lies among the hills near Nazareth; hence it is said the border 'goeth up.' It thus appears that the territory of Zebulun terminated in a point near Daberath (Robinson, *B. R.* ii. 351; Maundrell, *Early Travels in Pal.* 479; Ritter, *Pal. und Syr.* iii. 679).—J. L. P.

DAGAN (דָּגָן). This word which properly means *sprout* or *shoot* (from דָּגַן, *to grow*, *to produce fruit*), and is rendered grain, 'corn,' and sometimes 'wheat' in the A. V., is the most general of the Hebrew terms representing 'corn,' and is more comprehensive than any word in our language, seeing that it probably includes not only all the proper corn-grains, but also various kinds of pulse and seeds of plants, which we never comprehend under the name of 'corn' or even of 'grain.' דָּגָן may, therefore, be taken to represent all the commodities which we describe by the different words corn, grain, seeds, pease, beans. Among other places in which this word occurs, see Gen. xxvii. 28-37; Num. xviii. 27; Deut. xxviii. 51; Lam. ii. 12, etc. In the last cited passage it probably is used in the sense of *bread* as made from corn.—J. K.

DAGON (דָּגוֹן; Sept. Δαγών) is the name of a national god of the Philistines at Gaza and Ashdod (Judg. xvi. 2, 23; 1 Sam. v. 1, 5; 1 Chron. x. 10). As to the meaning of the name,

the expressions of Philo Byblius, Δαγών, ὅς ἐστι Σίτῳν, and Δαγών ἐπειδὴ εὖρε σίτον καὶ ἀροτρον, ἐκλήθη Ζεὺς Ἀρότρος (*Sanchoniathon*, ed. Orelli, pp. 26, 32, shew that he assumed the word to be derived from דָּגָן, *corn*. This derivation is admitted by Bochart, who argues that the fields of the Philistines were laid waste by mice, in order to shew that Dagon was not the true god of agriculture, as he was thought to be (*Hieroz.* ed. Rosenm. i. 381); and by Beyer, who makes the extraordinary assertion that we may conclude, from the sending of the five golden mice (to the God of Israel! 1 Sam. vi. 4), that golden mice were offered to Dagon as an acknowledgment of his care in freeing their fields from mice (*Addimenta ad Selden.* p. 285). Each of these arguments is open to the objection that the five golden piles—which were sent at the same time, and which, if they bore any reference to Dagon, would possibly not be reconcilable with his character as the god of agriculture—are here altogether disregarded; when yet it is evident that no conclusions can be legitimately drawn from the one unless they apply with equal force to the other. There are much better arguments, however, for the other etymology, which deduces the name from דָּג, *fish*, with the ending *on* (Ewald, *Hebr. Gram.* sec. 341). This derivation is not only more in accordance with the principles of formation (for if Dagon comes from the root דָּגָן, it must belong to the adjective formation in sec. 322, c, which does not appear so suitable for the force of a proper name), but it is most decisively established by the terms employed in 1 Sam. v. 4. It is there said that Dagon fell to the earth before the ark, that his head and the palms of his hands were broken off, and that 'only Dagon was left to him.' If Dagon is derived from דָּג, *fish*, and if the idol, as there is every reason to believe, had the body of a fish with the head and hands of a man, it is easy to understand why a *part* of the statue is there called *Dagon* in contradistinction to the head and hands; but not otherwise. That such was the figure of the idol is asserted by Kimchi, and is admitted by most modern scholars. It is also supported by the analogies of other fish deities among the Syro-Arabians. Besides the ATERGATIS of the Syrians, the Babylonians had a tradition, according to Berosus (Berosi *Quæ supersunt*, ed. Richter, p. 48, 54), that at the very beginning of their history an extraordinary being, called Oannes, having the entire body of a fish, but the head, hands, feet, and voice of a man, emerged from the Erythraean sea, appeared in Babylonia, and taught the rude inhabitants the use of letters, arts, religion, law, and agriculture; that, after long intervals between, other similar beings appeared and communicated the same precious lore in detail, and that the last of these was called Odakon (Ὀδάκων). Selden is persuaded that this Odakon is the Philistine god Dagon (*De Diis Syris*, p. 265). The resemblance between Dagon and Atergatis, or Derketo, is so great in other respects, that Selden accounts for the only important difference between them—that of sex—by referring to the androgynous nature of many heathen gods. It is certain, however, that the Hebrew text, the Sept., and Philo Byblius, make Dagon masculine. The temple of Dagon at Ashdod was destroyed by Jonathan the brother of Judas the Maccabee, about the year B.C. 148 (1 Mac. x. 84).—J. N.

DAHL, JOHANN, CHR. WIL., D.D., and professor of theology and Greek literature at Rostock, was born 1st September 1771, and died April 1810. He is the author of a commentary on Amos (Gött. 1795), of a *Chrestomathia Philoniana*, Hamb. 1800-2; and of *Obs. Philol. etc., ad quædam prophet. minor. loca*, 1798, etc.—†.

DAHLER, JOHN G., a German philologist and divine. He was born at Strasburg in 1760, and died there in 1832. He was educated there and at other German universities. His first work was called *Exercitationes in Appianum*, and was written for the assistance of Schweighæuser, who was preparing an edition of Appian; and it was some years before he devoted himself very much to theology. But, soon after 1807 he was appointed professor of theology at Strasburg. In addition to his theological knowledge he was a man of great general learning, and, besides Greek and Latin, was well acquainted with Hebrew, Chaldee, Syriac, and Arabic. His theological works are, *De Librorum Paralipomenon auctoritate atque fide historica*, Strasburg, 1819. [CHRONICLES.] *The Prophecies of Jeremiah*, translated into French, Strasburg, 1825 and 1830.—H. W.

DAILLÉ, JEAN, esteemed in his own day the greatest writer of the Reformed Church since the time of Calvin, was born at Chatellerault, Jan. 6, 1594. After studying at Poitiers and Saumur, he became (in 1612) tutor to the grandsons of M. du Plessis Mornay, and he travelled with them for two years. He was ordained in 1623; married, and was made minister of the church at Saumur in 1625; in 1626 he was promoted to a church in Paris, where he laboured till 1670, in which year he died, at the age of 77. Further particulars respecting him, and especially his disputes with Des Marets and Spannheim about the ideal Universalism of Amyraut, may be seen in the *Abrégé de la Vie de Daillé*, by his son, and in the article about him in Bayle's *Dictionary*. Daillé, an indefatigable student, published no less than twenty volumes of sermons; an *Apologie des Synodes d'Alençon et de Charenton* (1655), and a book *De objecto cultûs religiosi*, written in his 70th year. Some of his volumes of sermons are expositions of books of Scripture, an exercise in which he excelled. That on the Colossians and that on the Philippians have been translated into English; the former appeared in 1672, with a preface by John Owen. A new edition was issued in 1841, revised and corrected by the Rev. J. Sherman, who also translated the volume on Philippians. But Daillé's *chef d'œuvre* was his earliest work *Du Vrai Emploi des Pères*, 1631, translated into English by T. Smith, 1651. In this remarkable work, which was most favourably received among all English divines, and which is well known to every theological student, he shattered by irrefragable arguments, the unreasonable prestige of 'the Fathers,' shewing the corruptions which crept into the Christian religion after the first three centuries, and proving not only that the writings of 'the Fathers' were full of forgeries, corruptions, and interpolations, but that their authority was incompetent, and often in particular cases 'their evidence loose, their reasoning erroneous, and their interpretations of Scripture contradictory and absurd' (Bishop Warburton).—F. W. F.

DAIYAH (דַּיָּה). The name of an unclean bird found among ruins (Deut. xiv. 13; Is. xxxiv. 15). Bochart concludes that it designates the black vulture, comparing דַּיָּה, *ink*, as an allied word. Gesenius prefers rendering it *kite*, and tracing it to the same root as דַּהָה. But this word, instead of supporting his conclusion, is adverse to it, for, in Deut. xiv. 13, the דַּהָה is a *different* bird from the דַּיָּה; and, besides, Bochart's objection to this rendering, that the kite is not a gregarious bird, and therefore cannot be the bird referred to in Is. xxxiv. 15, seems fatal to it.—W. L. A.

DALMANUTHA (Δαλμανουθά). This place is only once mentioned in Scripture. Our Lord was in Decapolis, on the eastern shore of the sea of Galilee. After feeding the multitude there, 'He straightway entered into a ship with his disciples, and came into the parts of Dalmanutha' (Mark. viii. 10). Matthew says, speaking of the same event, 'He came into the coasts of *Magdala*' (xv. 39). The two places must consequently have been near each other. The site of Magdala is known; it is at the little village of Mejdol, on the shore of the lake, three miles north of Tiberias. Dalmanutha could not have been far distant. We find no reference to it elsewhere, unless we adopt the opinion of Lightfoot that it is the Greek form of Zalmon (זלמון), a town mentioned in the Talmud, and situated close to Tiberias (*Opera*, ii. 414).

About a mile south of Mejdol, on the road to Tiberias, at the mouth of a narrow but fertile glen, is a copious fountain called Ain el-Barideh, around it are several smaller springs, with reservoirs, and ruins. A village evidently stood here in former days; and this may probably be the site of Dalmanutha (Robinson, *B. R.* ii. 396).—J. L. P.

DALMATIA (Δαλματία). It appears that during Paul's second imprisonment at Rome several of his old friends and companions left him. Among these was Titus, who, the apostle states in his letter to Timothy, went into *Dalmatia* (2 Tim. iv. 10). The object he had in view in going there is not stated; nor do we know what he did, or how long he remained.

The strip of land along the deeply-indented eastern shore of the Adriatic was inhabited in ancient times by a number of warlike tribes, among which the *Dalmatæ* were the chief. The whole region constituted the kingdom of Illyricum. It was divided into two provinces; that on the north was called Liburnia, and that on the south Dalmatia. The latter extended along the coast from the river Titus to the borders of Macedonia (Pliny, *Hist. Nat.* iii. 26). About the year B.C. 180 the Dalmatæ revolted against the last of Illyrian monarchs, declared themselves free, and made Delminium their capital. A few years afterwards they were attacked by the aggressive power of Rome; and after a long and fierce struggle were at length subdued by the Emperor Tiberius. In the age of the apostles Dalmatia and Liburnia were again united, and formed a province of the empire, which was usually called Illyricum, although the name Dalmatia was also sometimes applied to it. We learn from Rom. xv. 19, that Paul had preached the gospel in Illyricum; and probably that fact may account for Titus' journey to Dalmatia. He may have gone to repress rising

error, or advance truth. Paul may even have sent him thither, though the passage in 2 Tim. iv. 10 will scarcely admit of that supposition (Tacitus, *Ann.* ii. 53; Conybeare and Howson, *Life of St. Paul*, ii. 127, sq.)—J. L. P.

DAMARIS (Δάμαρις), a woman of Athens, who was led to embrace Christianity by the preaching of St. Paul (Acts xvii. 34). Some suppose she was the wife of Dionysius the Areopagite, who is mentioned before her; but the construction in the Greek will not sanction this conclusion. The name Damaris does not occur elsewhere, whence some suppose it a corruption of Damalis (Δάμαλις), which was not an uncommon name; but the *r* and *l* are in Greek so constantly interchanged as to render this emendation superfluous.

DAMASCUS (דַּמָּשְׁקַיִם; Δαμασκόσι). Few cities possess greater interest for the sacred historian and antiquary than Damascus. It is the oldest city in the world. It was closely connected during a long period with the kingdoms of Israel and Judah. It occupies a place of considerable prominence from the time of Abraham to that of Paul; and it became the seat of one of the most flourishing of the early Christian churches. Damascus has besides been a witness of the stirring events of full four thousand years, and has in succession been ruled by the mightiest monarchs and dynasties of the earth.

Some derive the name *Damascus* from an unused root דַּמָּשַׁק, signifying 'to be active,' and explain it as indicating the commercial activity for which the city has always been noted (Gesenius, *Thesaurus*, s. v.) The Arabic name is the same as the ancient Hebrew, דַּמָּשְׁקַיִם. Some modern writers affirm that the name of the city is شام, *Sham*, or الشام with the article. This, however, is the proper name of Syria, though it is sometimes in conversation applied to the city as a contraction of the full name دِمَشْقُ الشَّامِ, given to it by all native writers.

I. *Situation*.—Damascus occupies the most beautiful site in Syria, or perhaps in all Western Asia. At the eastern base of Antilibanus lies a vast plain having an elevation of about 2200 feet above the level of the sea. It is bounded on the south by the river Awaj, the ancient Pharpar, which separates it from Iturea. On the east a little group of conical hills divides it from the great Arabian desert. Its form is triangular, and its area about 500 square miles. Only about one-half of this is now inhabited, or indeed habitable; but in richness and beauty this half is unsurpassed. It owes all its advantages to its rivers. Without them it would be an arid desert; by them it has been made a paradise. While one looks from the brow of Lebanon over that matchless scene of verdure, he cannot but acknowledge the truth and appropriateness of Naaman's proud exclamation—'Are not Abana and Pharpar, rivers of Damascus, better than all the waters of Israel?' (2 Kings v. 12.) The Abana, now called *Barada*, descends through a sublime ravine from the very centre of Antilibanus, intersecting several parallel side ridges. The last of these it passes by a narrow gorge, and

on entering the plain flows due east across it for twenty miles, when it empties its waters into two lakes, or rather marshes. Both before and after it enters the plain a number of dams are built across the channel at different elevations, turning a part of the abundant waters into large canals, some of which are tunneled through the rock along the sides of the ravine. By means of these not only is there an unlimited supply of water conveyed to the innumerable fountains of the great city, but the whole surrounding plain is irrigated. The ravine of the Abana is a real cornucopia, pouring out a perennial flood of fruit and flowers upon the broad plain. The Pharpar takes its rise high up on the side of Hermon. After descending into the plain it flows eastward across it, passing about seven miles south of the city, but sending out several large streams which irrigate the plain almost up to the gates. It falls into Lake Heijaneh about twenty miles south-east of Damascus. It may be right here to state that the description given of the plain and rivers of Damascus in Mr. Rawlinson's valuable essay on the geography of Mesopotamia and the adjacent countries, in his edition of Herodotus (i. 547, sq.) is altogether inaccurate. The canals taken from the Barada do not again unite with the main stream, nor does the Awaj at any point join that river. The lakes into which the Barada and Awaj empty their waters are not the same, nor do they ever unite. It seems strange that Mr. Rawlinson should have embodied such statements in his text, while, as it appears from a note, he had before him the results of the explorations made by the writer of this article, as communicated to the Royal Geographical Society (*Journal R. G. S.* xxvi. 43, sq.)

The first view of Damascus obtained by those who approach it from the west can never be forgotten. It is not surpassed for beauty by any landscape in the world. The road winds through the defiles of Antilibanus, then across a broad steppe or terrace, bare, barren, and stony. The ridge which forms the supporting wall of this terrace is naked limestone, almost as white as snow. Over its crest the old road is carried by a deep cutting. On passing this the whole plain and city of Damascus burst in a moment on the view. The brilliant verdure is rendered more striking by contrast with the painful barrenness of the desert behind. The wild gorge of the Abana is close on the right. The city stands on the banks of the main stream about two miles distant, and 500 feet below the pass. The modern architecture of the East does not bear close inspection, but when seen from a distance it is singularly imposing. Tapering minarets and swelling domes, tipped with golden crescents, rise up in every direction from the confused mass of white terraced roofs; while in some places their tops gleam like diamonds amid the deep green foliage. In the centre of the city stands the great mosque, and near it are the massive towers of the castle. Beneath our feet lies the Merj, the *Ager Damascus* of the early travellers—a long green meadow, stretching from near the mouth of the gorge to the western end of the city. The Barada winds through it; and at its eastern end, on the banks of the stream, is one of the most beautiful of the mosques. The gardens and orchards, which have been so long and so justly celebrated, encompass the whole, sweeping along the base of the hills, and extending on both sides of the river more than ten miles

THE EAST GATE OF DAMASCUS.—From Sketch made on the spot by Rev. J. L. PORTER.

eastward. They cover an area about thirty miles in circuit, not uniformly dense, but with open glades at intervals, and villages like white specks among. Beyond this circuit are clumps of trees and groves dotting the vast plain as far as the eye can see. The varied tints of the foliage add greatly to the beauty of the picture. The sombre hue of the olive, and the deep green of the walnut, are relieved by the lighter shade of the apricot, the silvery sheen of the poplar, and the russet tinge of the pomegranate; while lofty cone-like cypresses appear at intervals, and a few palms raise up their graceful heads. In early spring the blossoms of the fruit-trees give another charm to the scene—lying like foam upon that verdant sea. The gorgeously coloured foliage thus surrounding the bright city; the smooth plain beyond, now bounded by bare hills, and now mingling with the sky on the distant horizon; and the wavy atmosphere quivering under a shower of sunbeams, that make forest, plain, and mountain tremble, give a softness, an aerial beauty, to the whole picture, that ravishes the mind of the beholder.

The ridge from which this view is obtained culminates on the right in the snow-capped peak of Hermon; on the left, it stretches away till lost in the distance. The plain at its base is as productive as it is beautiful. The principal fruits of the world grow there luxuriantly—apples and bananas, cherries and oranges, dates, figs, grapes, quinces, apricots, plums, and peaches, are found side by side. The olive and mulberry are extensively cultivated; and the almond and walnut everywhere abound. In a word, Damascus occupies one of those sites which nature appears to have specially formed for a great perennial city. Its supply of water is unlimited, its richness has passed into a proverb, its climate is salubrious, and its beauty is unrivalled.

II. *History.*—The first notice of Damascus occurs in Gen. xiv. 15. The city must then have been well known, as it is taken as a mark to indicate the position of another place. We read that Abraham pursued the kings of the East from Dan 'unto Hobah, which is on the left hand of Damascus.' In the succeeding chapter (ver. 2), Abraham calls his steward 'Eliezer of Damascus,' which appears to indicate that he was descended from a Damascene family. The city must consequently have existed a considerable time before the age of Abraham. Josephus states that Damascus was founded by Uz, the son of Aram, and grandson of Shem (*Antiq.* i. 6. 4); and the incidental references in the Bible tend to confirm this statement. In the 10th chapter of Genesis there is an account of the origin and planting of the various nations by the posterity of Noah. Canaan peopled the country subsequently called by his name. His colonies were chiefly settled between the Mediterranean and the Jordan. North of the fountain of the Jordan, they were, with the single exception of Hamath, confined to the west of Lebanon, afterwards known as Phœnicia. They did not occupy either the eastern slopes of Lebanon, or the plain of Coelesyria. The regions colonized by the posterity of Shem are not so clearly defined. *Aram* was one of his sons, and gave his name to a large district extending from Lebanon to the banks of the Tigris (*ARAM*), which, as Josephus informs us, was peopled by his family, (*Antiq.* i. 6. 4). When Aram took possession of north-eastern Syria, Damascus would unques-

tionably be one of the first sites chosen for the erection of a city. The rich plain, the abundant waters, and the delicious climate could not escape the notice of emigrants seeking a settlement. Josephus gives the following interesting quotation from Nicolaus, the great historian of Damascus:—'Abraham reigned at Damascus, being a foreigner who came with an army out of the land of Babylon; but after a time he removed from that country with his people, and went into the land called Canaan. The name of Abraham is even still famous in the country of Damascus, and there is shewn a village called after him the *Habitation of Abraham*' (*Antiq.* i. 7. 2). The Scriptures contain no direct allusion of this fact, but it is singularly confirmed by a very ancient tradition. In the village of Burzeh, three miles north of the city, is a highly venerated shrine, which has been called for at least eight centuries the *House of Abraham*.

The territory of Damascus was not included in the land allotted to the Israelites, probably because it was peopled by Shemites; Canaan alone was promised to Abraham (Num. xxxiv.; Gen. xii. 5-7; Josh. xiv. 1-6; Joseph. *Antiq.* v. i. 22). The tribe of Naphtali bordered upon it on the south-west and south. During the eight centuries which elapsed between Abraham and David the name of Damascus is not once mentioned in Scripture. It appears, however, to have continued prosperous, for when David marched against the King of Zobah, we read that the Arameans of Damascus united with Hadadezer against him. The Israelites were victorious, 'And David put garrisons in Aram of Damascus (בְּאַרְמֵי דַמְשֶׁק)'; and the Arameans became servants to David, and brought gifts' (2 Sam. viii. 6; Joseph. *Antiq.* vii. 5. 2). Josephus says that the King of Damascus was then a powerful monarch, and reigned over a large territory, which his descendants inherited for ten generations, retaining the name Hadad as the title of the dynasty. In the time of the first Hadad, Rezon, a refugee from Zobah, settled in Damascus, and attained to great power. From 1 Kings xi. 25 one might conclude that he had for a time superseded Hadad, but that passage may perhaps only mean that he became a successful general, and obtained such influence at court as to be virtual ruler. According to Josephus, he was just a powerful chief of bandits, who was permitted to settle in the kingdom and to attack and plunder at will all the enemies of the state (*Antiq.* viii. 7. 6).

The next notice of Damascus is during the reign of Asa. When threatened by the King of Israel he made a treaty with Benhadad. The latter immediately invaded the kingdom of Israel, pillaged the border cities of Dan, Ijon, and Abel, and laid waste the whole of Naphtali (1 Kings xv. 19, 20; Joseph. *Antiq.* viii. 12. 4). At this period Damascus assumed the first place among the powers of Western Asia, and exercised great influence over the affairs of both Judah and Israel, whose jealousies prevented them from uniting against a common foe. Fifty years later another Benhadad invaded Israel, and invested Samaria. He was accompanied in this expedition by no less than thirty-two kings or princes, and a vast army. His insulting message to King Ahab, and the submissive reply of the latter, are striking evidences of the power of Damascus; but God fought for Israel, and by the instrumentality of a little band defeated their proud foes

(1 Kings xx). A second time Benhadad tried his fortune in the field, but with still worse success, his army was overthrown, and he himself taken prisoner. The King of Israel, however, foolishly released him, and a few years later was slain in battle by the Syrians on the heights of Gilead (1 Kings xx. 31-43; xxii. 35). Naaman the leper was at this time 'captain of the host of the King of Syria' (2 Kings v. 1). The romantic story of his interview with Elisha, and his cure, forms a pleasant episode in the history of war and bloodshed. Under Benhadad Damascus reached the pitch of its greatness. The kingdom now embraced the whole country east of the Jordan, the ridge of Anti-Libanus, and the valley of Coele Syria, while the princes of Maachah, Hobah, and Mesopotamia, were either subjects or close allies. Benhadad for some reason concentrated all his forces against Israel, and when defeated through the instrumentality of Elisha, he sought the prophet's life. The incidents of these campaigns, and the miraculous interpositions of Elisha, constitute some of the most interesting and remarkable chapters of Jewish history (2 Kings vi. vii.).

A few years later Damascus was honoured by a visit from Elisha. Benhadad was sick, and in his sufferings he sought the aid of his old enemy. The messenger he sent to meet the prophet was that Hazael, whom God had commanded Elijah to anoint king (1 Kings xix. 15). Elisha knew him at once, read his character, exposed his guilty designs, and drew such a harrowing sketch of his future cruelties that Hazael cried, 'Is thy servant a dog that he should do this thing?' Hazael returned to Damascus, murdered his master, and mounted the throne (2 Kings viii., B.C. 885). During his reign the armies of Syria marched victorious to the borders of Egypt. Gath was taken, and Jerusalem was only saved by paying a heavy ransom (2 Kings xii. 17, sq.). After a prosperous reign of forty years, Hazael died, and left the kingdom to his son Benhadad (2 Kings xiii. 24). Under the new prince the power of Damascus rapidly declined, and the city was taken by Jeroboam, King of Israel (2 Kings xiv. 28). During the anarchy which followed the death of Jeroboam, Damascus appears to have regained its independence, and some years afterwards we find Syria and Israel allied against Judah, and besieging Jerusalem (2 Kings xvi. 5). This act, however, led to the final overthrow of the kingdom of Damascus. Ahaz, King of Judah, sought aid from the Assyrians. Their powerful monarch, Tiglath-pileser, marched at once against Damascus, captured the city, slew Resin the last of the kings, and took the inhabitants captive to Kir (2 Kings xvi. 7, sq.). This was the first great revolution in the affairs of Damascus, and the close of the first period of its history. The independence it now lost was never regained. Isaiah's prophecy was fulfilled 'The kingdom shall cease from Damascus' (Is. xvii. 3; Am. i. 4, 5).

Damascus remained a province of Assyria until the capture of Nineveh by the Medes (B.C. 625; Rawlinson's *Herodotus*, i. 411), when it submitted to the conquerors. Its wealth and commercial prosperity appear to have declined for a considerable period, probably on account of the ravages of Tiglath-pileser, and the captivity of the most influential and enterprising of its people. In the beautiful language of Jeremiah, written more than a century after its fall, a description of its existing state appears to be mixed

up with prophetic judgments yet to come. 'Damascus is waxed feeble, and turneth herself to flee, and fear hath seized on her. . . How is the city of praise not left, the city of my joy' (xlix. 24, 25). The city was afterwards held in succession by the Egyptians, Babylonians, and Persians. We have no particulars of its history for a period of three centuries. Under the rule of the Persians it was the capital of the province of Syria, and the residence of the Satrap. When Darius, the last king of Persia, made his great effort to repress the rising power, and bar the progress of Alexander of Macedon; it was in this city he deposited his family and treasures. The fate of Damascus, with that of all Western Asia, was decided by the battle of Issus, in which the Persian army was almost annihilated. Damascus now became the capital of a province which Alexander gave to his general, Laomedon (Plutarch, *Vit. Alexand.*) During the long wars which raged between the Selucidæ and the Ptolemies, Damascus had no separate history; it sometimes fell to the one, and sometimes to the other. Antioch was founded, and became their favourite residence, and the capital of the Seleucidæ, but when the Syrian kingdom was divided, in B.C. 126, Damascus was made the second capital. Its territory embraced Coele Syria, Phœnicia, and the country east of the Jordan, and it was afterwards governed in succession by four princes of the family of Seleucus. Damascus and Antioch thus became the seats of rival factions, and aspirants after complete sovereignty (Appian, *Syriac.*; Joseph. *Antiq.* xiii. 13, 4, and 15, 1). The last of these, Antiochus Dionysus, was killed in battle against Aretas, King of Arabia, and the Damascenes forthwith elected Aretas his successor (Joseph. *Antiq.* xiii. 15, 1, B.C. 84). In the year B.C. 64, the Romans, under Pompey, invaded and captured Syria, constituted it a province of the empire, and made Damascus the seat of government (*Id.*, xiv. 2, 3, and 4, 5).

For twenty years Damascus continued to be the residence of the Roman procurators. The city prospered under their firm and equitable rule, and even after their removal to Antioch, did not decline. Strabo, who flourished at this period, describes it as one of the most magnificent cities of the East. Nicolaus, the famous historian and philosopher, the friend of Herod the Great and Augustus, was now one of its citizens (Strabo, *Geogr.* xvi.; Joseph. *Ant.* xvi. 10, 8). But the strong arm of Rome was not sufficient to quell the fiery spirit of the Syrians. The whole country was rent into factions, and embroiled by the unceasing rivalries and wars of petty princes. About the year A.D. 37, a family quarrel led to a war between Aretas, king of Arabia, and Herod Antipas. The Roman governor, Vitellius, was instructed to interfere in favour of the latter; but, when he was ready to attack Aretas, who had already driven back Herod, news arrived of the death of the emperor Tiberius. The government of Syria was thus thrown into confusion, and Vitellius returned to Antioch (Joseph. *Ant.* xviii. 5, 1-3). It appears that now Aretas, taking advantage of the state of affairs, followed up his successes, advanced upon Damascus, and seized the city. It was during his brief rule that Paul visited Damascus, on his return from Arabia (Gal. i. 16, 17). His zeal as a missionary, and the energy with which he opposed every form of idolatry, had probably attracted the notice, and excited the enmity of Aretas; and, consequently, when informed

by the Jews that the Apostle had returned to the city, he was anxious to secure him, and gave orders to the governor to watch the gates day and night for that purpose (Acts ix. 24; 2 Cor. xi. 32. See Neander, *Planting and Training of the Christian Church*, iii. 1).

The Romans adorned Damascus with many splendid buildings, the ruins of which still exist. Some of them were probably designed by Apollodorus, a native of the city, and one of the most celebrated architects of his age, to whose genius we are indebted for one of the most beautiful monuments of ancient Rome, the Column of Trajan (Dion Cass. lxxix.) Christianity obtained a firm footing in Damascus in the apostolic age. It spread so rapidly among the population, that in the time of Constantine, the great temple, one of the noblest buildings in Syria, was converted into a cathedral church, and dedicated to John the Baptist. When the first general council assembled at Nice, Magnus, the metropolitan of Damascus, was present with seven of his suffragans. But the Roman empire was now waxing feeble, and the religion which, by its establishment as a national institute, ought to have infused the germ of a new life into the declining state, was itself losing its purity and its power. Damascus felt, like other places, the demoralizing tendencies of a corrupt faith. In the beginning of the 7th century a new and terrible power appeared upon the stage of the world's history, destined, in the hands of an all-wise though mysterious providence, to overthrow a degenerate empire and chastise an erring church. In A.D. 634 Damascus opened its gates to the Mohammedans, and thirty years later the first caliph of the Omeiades transferred the seat of his government to that city. It now became for a brief period the capital of a vast empire, including Syria, Mesopotamia, Persia, Northern Africa, and Spain (Elmacin, *Hist. Sarac.* xliii.) In A.D. 750 the Omeiades were supplanted by the dynasty of Abbas, and the court was removed to Baghdad. A stormy period of four centuries now passed over the old city, without leaving a single incident worthy of special note. An attack of the crusaders (A.D. 1148) under the three chiefs, Baldwin, Conrad, and Louis VII., might have claimed a place here had it not been so disgraceful to the Christian arms. It is enough to say, that the cross never displaced the crescent on the battlements of Damascus. The reigns of Nureddin and his more distinguished successor Saladin, form bright epochs in the city's history. Two centuries later came Timur, who literally swept Damascus with 'the besom of destruction.' Arab writers sometimes call him *el-Wahsh*, 'the wild beast,' and he fully earned that name. Never had Damascus so fearfully experienced the horrors of conquest. Its wealth, its famed manufactures, and its well-filled libraries, were all dissipated in a single day. It soon regained its opulence. A century later it fell into the hands of the Turks, and, with the exception of the brief rule of Ibrahim Pasha, it has ever since remained nominally subject to the Sultan.

The Mohammedan population of Damascus have long been known as the greatest fanatics in the East. The steady advance of the Christian community in wealth and influence, during the last thirty years, has tended to excite their bitter enmity. In July 1860, taking advantage of the war between the Druses and Maronites, and encouraged also by

the Turkish authorities, they suddenly rose against the poor defenceless Christians, massacred about 6000 of them in cold blood, and left their whole quarter in ashes! Such is the last act in the long history of Damascus.

Damascus is still the largest city in Asiatic Turkey. It contained in 1859 a population of about 150,000. Of these 6000 were Jews and 15,000 Christians. The Christian community has since been almost exterminated, the greater portion of the males having been massacred. The Pasha ranks with the first officers of the empire, and the city is the head-quarters of the Syrian army. It has always been a great centre of commerce: in the days of Tyre's glory, 'Damascus was her merchant in the multitude of the wares of her making, for the multitude of all riches; in the wine of Helbon and white wool' (Ezek. xxvii. 18). It afterwards became famous for its sword-blades and cutlery; but its best workmen were carried off by Timur to Ispahan. Its chief manufactures are, at present, silks, coarse woollen stuffs, cottons, gold and silver ornaments, and arms. The bazaars are stocked with the products of nearly all nations—Indian muslins, Manchester prints, Persian carpets, Lyons' silks, Birmingham cutlery, Cashmere shawls, Mocha coffee, and Dutch sugar.

III. *Topography and antiquities.*—The old city, the nucleus of Damascus, stands on the south bank of the river, and is surrounded by a tottering wall, the foundations of which are Roman, and the superstructure a patchwork of all succeeding ages. It is of an irregular oval form. Its greatest diameter is marked by the '*street called Straight*,' which intersects it from east to west, and is about a mile long. This street was anciently divided into three avenues by Corinthian colonnades, and at each end were triple Roman gateways, still in a great measure entire. In the old city were the Christian and Jewish quarters, and the principal buildings and bazaars. On the north, west, and south, are extensive suburbs. The internal aspect of the city is not prepossessing, and great is the disappointment of the stranger when he leaves the delicious environs and enters the gates. Without, nature smiles joyously, the orchards seem to blush at their own beauty, and the breeze is laden with perfumes. Within, all is different. The works of man shew sad signs of neglect and decay. The houses are rudely built; the lanes are paved with big rough stones, and partially roofed with ragged mats and withered branches; long-bearded, fanatical-visaged men squat in rows on dirty stalls, telling their beads, and mingling, with muttered prayers to Allah and his prophet, curses deep and terrible on all infidels. The bazaars are among the best in the East. They are narrow covered lanes, with long ranges of open stalls on each side; in these their owners sit as stiff and statue-like as if they had been placed there for show. Each trade has its own quarter. Every group in the bazaars would form a lively picture. All the costumes of Asia are there, strangely grouped with panniered donkeys, gaily caparisoned mules, and dreamy-looking camels. The principal *khans* or caravansaries, are spacious buildings. They are now used as stores and shops for the principal merchants. The great khan, Assad Pasha, is among the finest in Turkey. A noble Saracenic portal opens on a large quadrangle, ornamented with a marble fountain, and covered by a series of domes supported

on square pillars. Lamartine's description of it is as purely ideal as most of his eastern sketches. Many of the *mosques* are fine specimens of Saracenic architecture. Their deeply-moulded gateways are very beautiful; and the interlaced stonework round doors and windows is unique. They are mostly built of alternate layers of white and black stone, with string courses of marble arranged in chaste patterns. But they are all badly kept, and many of them are now ruinous.

The *private houses* of Damascus share, with the plain, the admiration of all visitors. No contrast could be greater than that between the outside and inside. The rough mud-walls and mean doors give poor promise of taste or beauty within. The entrance is always through a narrow winding passage—sometimes even a stable-yard—to the 'outer

court,' where the master has his reception-room, and to which alone male visitors are admitted. Another winding passage leads to the *Harem*, which is the principal part of the house. Here is a spacious court, with tessellated pavement, a marble basin in the centre, *jets d'eau* around it, orange, lemon, and citron trees, flowering shrubs, jessamines and vines trained over trellis-work for shade. The rooms all open on this court, intercommunication between room and room being almost unknown. On the south side is an open alcove, with marble floor and cushioned dais. The decorations of some of the rooms is gorgeous. The walls of the older houses are wainscotted, carved, and gilt, and the ceilings are covered with arabesque ornaments. In the new houses painting and marble fret-work are taking the place of arabesque and wainscoting.

203. Damascus.

The principal building of Damascus is the *Great Mosque*, the dome and minarets of which are seen in the accompanying engraving. It occupies one side of a large quadrangular court, flagged with marble, arranged in patterns, and ornamented with some beautiful fountains. Within the mosque are double ranges of Corinthian columns supporting the roof, in the style of the old basilicas. The walls were once covered with Mosaic, representing the holy places of Islam; but this is nearly all gone. In the centre is a spacious dome. The building was anciently a temple, with a large cloistered court, like the Temple of the Sun at Palmyra. In the time of Constantine it was made a church, and dedicated to John the Baptist, whose head was said to be deposited in a silver casket in one of the crypts. In the 7th century the Muslims took possession of it, and it has since remained the most venerated of their mosques. It is a singular fact, however, that though it has now been

for twelve centuries in possession of the enemies of our faith, though during the whole of that period no Christian has ever been permitted to enter its precincts, yet over its principal door is an inscription embodying one of the grandest and most cheering of Christian truths. It is as follows:—*Ἡ βασιλεῖα σου Χε βασιλεῖα πάντων τῶν αἰώνων καὶ ἡ δεσποτεία σου ἐν πάσῃ γενεᾷ καὶ γενεᾷ—'Thy kingdom, O Christ, is an everlasting kingdom, and thy dominion is from generation to generation'* (Ps. cxlv. 13).

The *Castle* is a large quadrangular structure, with high walls and massive flanking towers. It is now a mere shell, the whole interior being a heap of ruins. The foundations are at least as old as the Roman age. It stands at the north-west angle of the ancient wall.

The traditional *Holy Places* of Damascus are scarcely worth notice. Not one of them except

the 'street called Straight,' already alluded to, has even probability in its favour. The house of Judas is shewn, but it is not in the street called Straight (Acts ix. 11); and the house of Ananias is also pointed out. It is a cellar or vault. The guides point out the place on the wall from which Saul was let down in a basket (Acts ix. 25), but the masonry at that place is manifestly Saracenic. About a mile east of the city, beside the Christian cemetery, is *now* shewn the place of Paul's conversion; but the scene was removed to that locality only about two centuries ago. Previously tradition located it on the west of the city, on the road leading to Jerusalem.

The climate of Damascus is salubrious except during the months of July, August, and September. Fevers and ophthalmia are then prevalent, but they are chiefly engendered by filth and unwholesome food. The thermometer ranges from 80° to 87° Fah. during the summer; and seldom falls below 45° in winter. There is usually a little snow each year. The rain commences about the middle of October, and continues at intervals till May. The rest of the year is dry and cloudless.

A full description of Damascus, with historical notices, plans, and drawings, is given in the writer's 'Five Years in Damascus,' to which the reader is referred. The following works may also be consulted; Robinson's *Biblical Researches*; Wilson's *Lands of the Bible*; Addison's *Damascus and Palmyra*; and especially Pococke's *Description of the East*.—J. L. P.

DAN (דָּן, Sept. Δάν), son of Jacob and Bilhah, Rachel's maid. As in the case of Jacob's other children, the name 'Dan' was given to him on account of the peculiar circumstances under which he was borne—'And Bilhah bare Jacob a son. And Rachel said, God hath *judged* me (דָּרַנִי), and

hath also heard my voice, and hath given me a son; therefore called she his name *Dan*' (i. e., 'judging' or 'judge'; Gen. xxx. 6). There is a characteristic play upon the name in Jacob's blessing (Gen. xlix. 16): 'Dan shall *judge* his people as one of the tribes of Israel.' Though Dan was the founder of one of the twelve tribes, we have no particulars of his personal history. He had but one son called Hushim or Shuham (Gen. xlv. 23; Num. xxvi. 42); yet at the exodus the tribe contained 62,700 adult males, ranking in numbers next to Judah (Num. i. 39). It increased slightly in the wilderness; and at the census taken on entering Palestine it still held the second place among the tribes (xxvi. 43). It is remarkable that so powerful a tribe always remained in a subordinate position. It appears never to have attained to even a moderate amount of influence.

The territory allotted to the tribe of Dan was border land between the hill country of Judah and Benjamin, and the *Shephelah* or plain of Philistia. It extended from the parallel of Japho or Joppa on the north, to a point some distance south of Bethshemesh. It embraced a large section of the plain, including Ekron, one of the five great cities of the Philistines. Its seventeen cities, however, so far as can now be ascertained, appeared to have been chiefly grouped along the sides and base of the mountains. The valleys that here run far up into the Judæan ridge are rich and picturesque; such as Ajalon, over which Joshua commanded the
